regarded as a planet revolving about the central fire. The first elaborate geometrical model, operating, for each one of the planets, with a set of homocentric (geocentric) spheres revolving about different poles inside one another, was devised by Eudoxus. His model, improved by Callippus, was wrought into a comprehensive (physical) system by Aristotle (Metaph. 8, 1073 b 38-1074 a 17), whose aim was to represent and to explain the celestial motions as a whole, from the fixed stars down to the Moon, by the combination of acting and reacting ("unrolling") spheres. This physical model, because of its incapability to account for the varying brilliancy of the planets (above all Venus and Mars, see Simplicius, Comm. on De caelo, ed. Heiberg (Berlin, 1894), 504) was later replaced by a new purely geometrical model, based mainly on two theorems of Apollonius (ca. 200 B.C.), in which an eccentric deferent carries around the centre of an epicycle in the circumference of which the planet revolves. This device, which is the governing principle of planetary motion in Ptolemy's Almagest, takes into account only the planes (inclined to one another as well as to the ecliptic) of the deferent and of the epicycle, expressly renouncing any attempt at a physical interpretation. In the Hypotheses, however, composed after the completion of the Almagest, Ptolemy interprets the circular motions as sections through globes of spherical shells contiguous with one another in such a way that the outer limit of one planetary sphere coincides, without leaving any void, with the inner limit of the next one, counting from the Earth outwards (see Hypotheses, Book II, 6, in Cl. Ptolemaei Opera II, Opera astron. minora, ed. Heiberg, Leipzig 1907; the text of Book II, preserved only in Arabic, is not complete and contains errors). In II, 4, Ptolemy states that it is not necessary to assume complete spheres since it suffices (in accordance with the Creator's principle of economy) to postulate, for each one of the planets, the existence of "sawn pieces" or "disks" (Ar. mawdj_uuddt, prob. = Gr. πρόκλητα) comprised between two circles parallel to and equidistant from the equator of a sphere, in which the wheel is anchored, whereas the planetary motion is contained. For this reason, Ptolemy's Hypotheses, otherwise called K. al-Ilṭisās, are often quoted by Islamic authors under the title K. al-Mangūrāt (see W. Hartner, Mediaeval views on cosmic dimensions and Ptolemy's Kitāb al-Mangūrāt, in Mélanges Alexandre Koyré, Paris, to appear in 1963 or 1964).

It is, however, the complete, contiguous, spheres, not the spherical prisms (mangūrāt) that prevail in Islamic astronomy, starting at the latest by the time of, and with, al-Farghani (II. ca. 830 A.D.), whose Elements of Astrology were among the first works translated into Latin and served to transmit the late Greek and Islamic views on the structure and the dimensions of the universe to the Latin Middle Ages (Dante, Regimontanus, etc.). It was not before the end of the 16th century that Tycho Brahe, on the basis of new observations, demonstrated the untenability of the system of contiguous solid spheres (see W. Hartner, Tycho Brahe et Albumasar, in La science au seizième siècle, Paris 1960, 135-67). Bibliography (apart from the references given above): K. Kohl, Über den Aufbau der Welt nach Ibn al-Hasām, in Sitzungsberichte d. Physik. Med. Sozietät in Erlangen, I/IV (1922-3), Erlangen 1925, 1829. It seems then more probable to regard it as a piece of squared wood (i.e., not unworked wood). Certain Greek scholars have also considered a Greek etymology (Μεγάλη Ελληνική Γραμματική, Athens 1933, s.v.). This etymology seems to be ruled out by the fact that there is no evidence either of the object or the word before the time of the Turkish conquest. The etymology of the word clearly poses a problem. An Arabic derivation from the root FLK, which means to cleave or split, suggests itself at first. The classical Arabic dictionaries (LA, TA, etc.) all givejalakjalaka as meaning khashaba, a piece of squared wood (i.e., not unworked wood).
the Semitic, but also from the Turkish and Iranian angles.

**AL-FALAKI, MAHMUD PASHA,** was born in 1230/1815 at al-Hissa (province of al-Gharbiyya), and received his early schooling in Alexandria. He subsequently attended, firstly as a pupil, and then as an officer-instructor, the polytechnic school at Bülâk (Muhandishânine) founded by Muhammad Ali. In 1850-1 he was sent to Paris, to specialize in astronomy and geodesy. He returned to Cairo in 1859. Afterwards he directed the team which, on the orders of the Khedive Sa'âd, mapped Egypt. He completed, and the section on Lower Egypt in print. The Egyptian government at the Geographical Congress in Paris (1875) and Venice (1881). A high proficiency in ten sciences, he knew the mystery of the heavens, says Khâkânî.

**FALASIFA.** pl. of *falâsîf*, formed from the Greek ϕαλάσιφος. By its origin this word primarily denotes *the philosophi*, namely, the Muslims who professed the *falsafah* and the beginning of wisdom (*ikhmâa*), then Thales, Anaxagoras, Anaximenes, Empedocles, Pythagoras, Socrates, Plato, Plutarch, Xenophanes, Zeno the elder, Democritus, the philosophers of the Academy, Heraclitus, Epicurus, Homer (the poet whose wisdom inspired Greece for the Greeks, poetry preceded philosophy), how Hippocrates, Euclid, Ptolemy, Chryssippus and Zeno, Aristotle (whose philosophy is described according to Themistius), Porphyry, Plotinus (al-shaykh al-'aynâni), Theophrastus, Proclus and Alexander of Aphrodisias. The doctrines attributed to these thinkers are often incorrect or anachronistic, perhaps under the influence of the systematization of Aristotle and the Egyptians. Thus, the list of the seven Sages is named. The list is somewhat long; we may mention al-Kindî, Hunayn b. Ishâk, Abu ’l-Farajî al-Mufassîr, Tâbit b. Kurra, al-Nisâbirî, Ibn Miskawayh, al-Fârâbî, etc. But, he writes, the true representative of the *falâsîf* (al-damât al-bawm) is Ibn Snâî, and it is his philosophy alone that he expounds. From this point of view the Muslim *falsafa* appeared merely as the successors of the Greeks: “They followed Aristotle in all he thought . . . except for unimportant expressions on which they adopted the views of Plato and the earlier philosophers”. This judgment needs to be radically revised.

a). The word *falsâsâ* has retained in Arabic the general sense of the Greek equivalent. It is thus synonymous with *shâkâni* or *'ulamâ*; this is the meaning it has in al-Djâbi (K. al-Bayawân, introd.) where *falâsîf* 'al-'ulamâ' al-bâghar is compared with *hâshâd al-riyâl al-ra'î*, in a passage in which human reason and skill, which in the signs of nature discern the wisdom of God, are compared with animals’ instinct, the immediate expression of this wisdom. b). If the general idea of wisdom (which occurs both in the Kur’ân and in the Greek philosophical tradition) remains attached to the term *falsâsâ*, there is justification for describing as *falsâsâ* those Muslim theologians who gave a place to human reason and ra’î. Indeed, from the very start of *Mu’tazili* thinking there can be discerned, in the...
exposition of problems and in methods of reasoning, a Greek influence, transmitted indirectly by the Christian philosophers of Syria (John of Damascus, Theodore Abu Kurra). Later, the influence of Greece is even more positive. Al-Ghazali, despite his opposition to the falsafa, the influence of Greece is even more positive. Al-Bakillānī's theory of simple substances (atoms) and accidents, the Mu'tazilī doctrines concerning essence and existence, or the knowledge that God has of created things before and after their creation, derive among other things from pure philosophy. Moreover the falsafa properly speaking are acquainted with these theological schools and sometimes refer to them in the construction of their own. As for the absolute distinction between them cannot be made.

c) As for the falsafa in the restricted sense of the word, it is not possible to give a clear-cut, exclusive definition. In general, they are the successors of Neo-Platonism, which is itself an eclecticism in which are combined Platonic, Aristotelian, Stoic, Pythagorean and many other kinds of ideas. This Neo-Platonism had been sufficiently flexible to integrate Alexandria, as P. Duhem has shown. In this multiplicity of influences, that of Aristotle is distinguished by the part played by his logic. Seen from this point of view, falsafa was a consequence of the translation of Greek writings, and certain translators were themselves the first falsāsfas. Orientalists, following Renan, have regarded falsafa as a sect, and this is the opinion of Muslims in general. But if there is a common body of doctrine and strong resemblances, the originality of each thinker and the existence of different tendencies must not be denied.

The sources of the falsāsfa are no doubt essentially Greek—Plato, Aristotle and the commentators, especially Alexander and Theophrastus. But we must also observe the influence of scientific thought, particularly of Galen, the scholar and philosopher, and also that of an intellectualist mysticism deriving from Plotinus, and combining theological and cosmological ideas of gnostic type, the theology and angelology of Proclus, the Theology of the pseudo-Aristotle, doctrines of Hermetic origin. All the gnostics of the Alexandrian period, which even then were tinged with Iranianism, find an echo in Arabo-Muslim thought. The Sabaean, with their astrology that was at once scientific and religious, and with their conception of an intermediate world of spirits (cf. the exposé of al-Shahrastānī), played a large part. In this situation, Persian-inspired dualism was able to infiltrate without difficulty, either directly or through the Shi'i sects, especially Ismā'īlism. From the theoretical aspect, it is difficult entirely to isolate falsāfa esoteric mysticisms such as Suhrawardī's whose speculative thinking is Peripatetic and who speaks of light as Aristotle speaks of substance. The thinking of the falsāsfa is thus very complex; Ibn Sīnā, a scholar and the disciple of Galen, a logician and follower of Aristotle, a Neo-Platonist, exponent of a mysticism that gave rise to that of Suhrawardī, illustrates in a single harmonious entity the complexity of falsāfa.

But this description is only entirely true of the first falsāsfa, al-Kindī and in particular, al-Fārābī and Ibn Sīnā. What characterizes them is their belief, deriving from Greek electicism, in the harmony in the thinking between the "two sages", Plato and Aristotle (cf. the treatise of al-Fārābī on this subject). Reason, the instrument of truth, can produce only a single system. Instead of the falsāsfa concentrated on defining and developing this single system which came to them from Greece, they do indeed form a single school or sect. But al-Ghazālī, under the inspiration of al-Dīwānī, denounces this mistake: reason is not the supreme arbiter (ḥakam); there are as many divergencies (ḥikāyā) between philosophers as between theologians. He thus marks the beginning of a second period which is characterized by a better knowledge of Aristotle's works and exemplified in the West by Ibn Bājadija and, more particularly, by Ibn Rushd upon whom al-Ghazālī was not without influence in spite of their obvious differences, and who reacted against Arab Neo-Platonism. In the East, Fākhr al-Dīn and Naṣīr al-Dīn al-Tūsī returned to Ibn Sīnā's doctrine on various important points, while also observing the influences of Aḥmad ibn Sīnā's theology with it, in the case of the former, or of mystical esoterism in the case of the latter.

Finally, side by side with this main stream (Ibn Sīnā, al-Ghazālī, and then Ibn Rushd in the West, al-Rāzī in the East), a further, and Neo-Pythagorean, stream must be pointed out, represented by the Ḥuwān al-Ṣā'ī whose esoteric and mystical character is more clearly marked. They, as other philosophers or theologians of having only partially observed the rhythms of the universe, are not consonant with Wisdom that should go only in multiples of two (matter and form, substance and accident, etc.), or of three (the three dimensions, the three modes of existence—necessary, possible and impossible, etc.), or of four, five, six, seven (doctrines of the septimanians), etc. The Pythagoreans (al-huḵumāt al-fīṭḥāqāฏiyān) "accept the right of everything which has a right"; since the number includes everything, measures and balances everything, so their thought takes everything exactly into account. In their eyes, Pythagoras was a sage adoring the single God; they connected him with the philosophers of Harrān.

How are the falsāsfa as a whole to be characterized?

a) By their vocabulary. It is composed of ʾisīlādāl words that are Arabic or calques from the Greek which have assumed a technical meaning. For the expression of the truth, strictly orthodox theology only allows words of divine origin (texts from the Qur'an and from Tradition). However, a large proportion of this vocabulary has been accepted by the mutakallīmān. The distinguishing feature of the falsāsfa is therefore merely the more systematic and independent use which they make of this conventional vocabulary.

b) By logic. As with Aristotle, logic became a true organon (ālā). It shows from what known starting-point one can reach a certain unknown point, and by what course. It is based on the study of concepts and categories, judgment, syllogism and induction. This analytical and constructive use of logic to discover the structure of truth is not accepted by strict theologians. Al-Ghazālī, however, recognizes that it has a certain value, although not
absolute. On the other hand the *falasifa*, indirectly following Aristotle, have taken account, in their studies of concept and judgment, of principles enunciated by the Arab grammarians. With logic can be connected the division of the sciences, inspired by the Greeks but varying according to the authors (*Ikhwan al-Ṣafā*; al-Fārābī: *Iḥṣāʿ al-sulām*; Ibn Sīna: *Aḥṣām al-sulām al-ṣāhiyya*). Its basis is the tripartite division into sciences theoretical, practical and creative.

d). By their study of natural science. The *falasifa* were all scholars, sometimes of originality. They integrated astronomy, physics, chemistry and medicine with their general metaphysics which was the source of their fundamental concepts. Nevertheless a spirit of experiment, not unrelated to the Muslim tendency to attach value to the experience of the senses, is clearly revealed.

d). By metaphysics. Here the divergences between authors are more marked. But for all of them, metaphysics is a theory of being, built on the distinction between the necessary and the possible (being necessary in itself, being necessary through another or possible) or the eternal and the contingent. The pure being of all matter is at once the intellect, the agent which intellectualizes, and intelligible. The interplay of these ideas explains the constitution of medicine with their general metaphysics which was the source of their fundamental concepts. Nevertheless a spirit of experiment, not unrelated to the Muslim tendency to attach value to the experience of the senses, is clearly revealed.

Thus the *falasifa* often break away from orthodox Islam, but thanks to *tawīl* they could still believe that they were in harmony with the Qurʾān, from which they quoted unfaithfully. But they quoted it purely as evidence, without incorporating it in the body of their argumentation. Thus the theologians, so far as they depart from the revealed texts, are opposed to them. This is how Abū Ḥayyān al-Tawhīdī speaks of the *Ikhwan al-Ṣafā* (*K. al-ʾImām*, 17th Night). According to them, the Law has been profaned by foolish ignorance and confounded by error. It must be purified by philosophy. By harmonizing Greek philosophy and Arab law, perfection is reached. But their *Epistles* are no more than “ramblings” consisting of “scraps strung together in a kind of patch-work”. They have “woven a philosophy in secret” out of the science of the stars and spheres, the *Almagest*, the knowledge of the great and works of nature, music, logic. Now there is no question of these sciences in the Revelation. The Muslim community is divided into sects, but none of them has had recourse to the *falasifa*. “What is the relation between religion and philosophy? (ayna *ī-l-dīn min al-falāsafa*)”, between what is derived from a heavenborn revelation and what is derived from fallible personal opinion? The prophet is superior to the philosopher. As for reason, it does not pertain in its entirety to any one man, but to mankind as a whole. And al-Tawhīdī proclaims the ambition of philosophers: their wish is, not to cure men of their maladies, the task to which the prophets confine themselves, but rather to preserve the health of those who possess it. They aspire to the most exalted happiness and to a dignity, thanks to which man becomes worthy of the divine life. But in that case, what purpose would the Revelation serve?

For al-Ghazālī (*Munkhīb; Māsālīd*), certain parts
of philosophy are without danger to the faith, provided that good is made of them: these are sciences which, if not forgotten that the only causality is that of God. The useful sciences such as medicine are the 'ulûm al-dînîyya, and ought to be studied, at least by some (fard kifaya) for the general good, since life in this world contains the germ of the future life and it must not be neglected (cf. ʾIsyâ' 'ulûm al-dîn, ch. on Science). Certain sciences are harmful, like mathematics and the science of talismans (which still come into Ibn Sinâ's classification); they must be rejected. As for the theology of the falsâsâfa, this is frankly bad, since it teaches that bodies are not resurrected, that it is disembodied spirits that are rewarded or punished, and that penalties are spiritual, not bodily. Moreover, the theories of the eternity of the world and of the knowledge of God who knows only the universal is complete heresies (kufr). On the other hand, the doctrine which reduces the divine attributes to essence is not kufr in the eyes of al-Ghazâlî since the Muʿtaṭzila, who cannot be charged with infidelity, adhered to it. Finally, the political theory of the falsâsâfa is taken from the ancient prophets (ṣulûk al-anbiyâ), a very ancient idea which Philo of Alexandria had already rejected, and which is a moral philosophy inspired by the mystics. From the end of the period of antiquity the opinion was widespread that Plato was an initiate and inspired. For al-Sjahristâni (6th/12th century), philosophers are men of passions (ahl al-aḥwâl), that is to say men who follow their own judgment and who must be distinguished from those who follow a revelation (arbâh al-ʾiṣâbâ), to whom they are diametrically opposed (takbût al-iṣâbâ). Later, Ibn Taymiyya (7th-8th/13th-14th centuries), in the K. al-Radd 'ala ʾl-manṭîkîyyin, denounces the uselessness and inconsequence of the logic of the falsâsâfa. Finally we may mention Ibn Khaldûn (8th/14th century) who attacked philosophy in his Mukaddima (Ibâd al-falsâsâfa). Philosophers think that it is reason, not tradition, which confirms the truth of the foundations of the faith. They proceed by successive abstractions, reach the first intelligibles and then integrate them to establish sciences in the manner of second intelligibles. The soul which, in purifying itself, comes to the sciences, experiences joy and has no need of the illumination of the Law. The soul that is ignorant is in affliction. Such is the meaning of the rewards and punishments of the other world. But this opinion is false: when they relate all beings to the first intellect and find this a satisfactory means of reaching the necessary, they reveal a lack of vision in regard to the actual organization of the divine Creation, which surpasses any representations of it that they give. Existence is too vast for man to be able to embrace it in its entirety.

These criticisms make it possible to place the falsâsâfa in relation to orthodox Muslim ideals. But they give too sharp a definition of outline to falsâsâfa. In reality, the philosophers of Islam remain truly Muslim, in touch with the theologians and with the mystical elements which have not tried to break away from the teaching of the Kurʾân. As for the legacy of Greece, this was first acquired by the Muslim world as a whole, in spite of the opposition raised by strict orthodoxy. If it appears to be systematized in their structure, it is not in fact limited to the falsâsâfa alone. It is therefore impossible to regard falsâsâfa as a sect sharply differentiated from the general cultural and spiritual movement which is the pride of Muslim civilization. 

FALCONRY [see BAYZARA, ĖS cuddî-baṣîlì, DOĞANDIJ]\n
FALLAH [see FILÂSHA]\n
FALLÂHÎYA [see DAWRAK]\n
FALLÂK, an Arabic word used particularly in the Beduin dialect form fellâg, pl. fellâgâ (in the western press principally in the pl., with the spelling: fellâga, fellâgah, fellâgha), and denoting in the first place the brigands and subsequently the rebels who appeared in Tunisia and Algeria.

A connexion with fellâsha [q.v.] “instrument of torture”, of which the etymology is, in any case, obscure (see Arabîca, 1954/3, 342-36), is certainly to be ruled out. On the other hand, the Arabic root FLK (comp. FLID, FLH, etc.) seems worthy of retention; Tunisian rural and nomadic dialects make use of fellâg “deflower, violate”, fellâg “split, cleave (wood), split in two (skull)”, etc. (M. Beussier, who gives feïléeg “split” as well as the 5th and 7th forms and other derivatives of the root, is acquainted with a fellâg in the Algerian South meaning “of which the stone is easily detached (peach)”, while G. Boris, Lexique du parler arabe des Marâzis, Paris 1958, has only recorded the 7th form, and it is to this root that the Tunisians (who have coined a toth form stuffâg “to split, to break”) relate the intensifying adjective fellâgâ). Originally the term was applied to individuals who wished to escape punishment, to deserters, and to fugitive offenders, who eventually formed bands supporting themselves by brigandage. The first lexicographer to have noted fellâlâ is E. Bochor, who may well have created it himself in order to translate the French word pour-fendeur; H. Wehr, Wörterbuch, on the other hand, lists it with the sense of “bandit, highwayman”, but this is obviously a recent usage of the Arabic press, which, moreover, finds the term too pejorative to use it as freely as does the European press.

The real popularity of the word, however, dates from the beginning of the first world war, and the uprising brought about by Ḫulâlī b. Ḥaskâr [q.v.] in southern Tunisia. These rebels were designated by the name of fellâghâ, less perhaps by the Tunisians themselves, than by the French troops. Somewhat forgotten between the wars, the term was resurrected on the occasion of the incidents which occurred in Tunisia between 1952 and 1954: the whole of the western press used it to describe the rebels who, for political reasons, formed armed groups fighting against the French army. When the Algerian rebellion broke out in 1954, the term was quite naturally applied to the outlaws, and then to the combatants of the rebel army. It is thus that a Tunisian colloquialism was borrowed by the French army and then by the French press, subsequently spread into western newspapers and the Algerian dialect of Arabic, and made its appearance in the Arabic press in the classicizing form fellâlâ.

(C. PELLAT)

FALLÂTA, although strictly signifying the Fullân [q.v.], is used in the Nilotic Sudan generally for Muslim immigrants from the western Bilad al-Ṣâdîn, and in particular for those from northern Nigeria. The term has largely superseded the older Takârîr or Takârîn (which had a similarly loose application), presumably after the Fullân conquests under ʾUṯmân b. Fodîo. The Takârîr/Fallâta immigrants are primarily pilgrims en route to Mecca: their first appearance in the Nilotic Sudan can hardly have been before the establishment of
Muslim sultanates in Dār Fūr (q.v.) and Waddāl during the 11th/12th century. Many have become domiciled in the territories which now compose the Republic of the Sudan. Takārīd founded a border state in the Kallābāt (Sudanese-Abyssinian marches) in the 16th century; its ruler, Shāykh Mīr, submitted to the Turco-Egyptian governor of Sinnār in 1245/1830-90. A Fallāta settlement exists at the southern end of Dājbal Marra in Dār Fūr. Some Fallāta-Takārīd settlers in Dār Fūr and Kurdufān have intermarried with local Bākērā, become arabilized, and now constitute tribal sections. More recent immigrants form an important element in the labour-force of the Republic of the Sudan, as domestic servants, and as labourers employed by the tenants of the Geizira (cotton-growing) Scheme; see Saad Ed Din Fawzi, The Labour Movement in the Sudan, London, 1957, 5-8.

Bibliography: An important account of the Takārīd pilgrims in the early 19th century is given by J. L. Burckhardt, Travels in Nubia, London 1859, 406-14; more generally, see Fellāta (and also Takārīd) in the Indexes of H. A. Mac-Michael, The Tribes of northern and central Kordofan, Cambridge 1912; and idem, A History of the Arabs in the Sudan, Cambridge 1922. (P. M. Holt)

Fallāta, name of two districts (jāttā) of the Arab-Byzantine: Immediately following the Arab conquests the Arabs continued to strike copper coins almost exactly as they found them—religious formulae, obsolete dates and all. These imitations, frequently barbarized, are probably the earliest extant Islamic coins. While the basic Byzantine types were maintained until 'Abd al-Malik's reforms, various modifications of an Arabizing nature were introduced before that date. Among the most important of these are the addition in the margin of abortive religious formulae, indication of the mint in Arabic characters, the addition of words such as baraka, tayyib, etc., as well as the occasional mention of the governor or local 'āmil under whose authority the coin was issued. The most interesting departure from the Byzantine style is to be found in the "Standing Caliph" type, on the obverse of which the sword-girt figure of the Caliph dressed in typical Bedouin garb displaces the likeness of the Emperor with his cross, crown and orb, while maintaining a modified form of the reverse Byzantine type. The stance of the Caliph appears to be an attempt to portray him in the posture of leading the prayer service. The fact that all five extant dināris of this type, as well as most of the fulās, date from the early part of 'Abd al-Malik's reign, and immediately precede his armament reforms, is an indication that these coins are to be considered as a transitional type through which the emerging Islamic state was attempting to find an appropriate iconographic form for its coinage (cf. John Walker, A Catalogue of Muhammadan coins in the British Museum, ii, London 1956, pp. xxviii-xxxi, 22-43).

Arab-Sasanian: These copper coins are very rare. They have the regular Sasanian bust on the obverse, and some modification of the fire altar and attendants on the reverse. (For examples cf. Walker, Catalogue, i, 73, 125, 161, 170-2, and G. C. Miles, Excavation coins from the Persepolis region, New York 1959).

Byzantine-Pahlavi: This type exists only in copper. These coins represent a unique combination of Byzantine and Sasanian elements, with the obverse usually following the Byzantine model, and the reverse the Sasanian one (cf. Walker, Catalogue, ii, pp. li-liii, 81-3). The purely epigraphic, non-pictorial coin which resulted from 'Abd al-Malik's reforms appeared in copper somewhat later than in gold and silver. The earliest preserved dated epigraphic fals is of the year 87/705-6 struck at Damascus. The effect of the reform was that the coin, which was purely epigraphic with no metrological aspects as in the case of gold and silver (cf. Ph. Grierson, The monetary reforms of...
Neither the size, weight or epigraphic content of the copper coins was uniform. They all contained some religious formula, and sometimes the mint, date and names of the issuing official or officials.

Unlike the centralized system of copper minting in Byzantium, its emision in Islam was highly proliferated and decentralized. In the period immediately preceding the conquests there were twelve known copper mints in the entire Byzantine Empire, only three of which were in Syria, Egypt and Africa. Under the Umayyads there were fifty-three known copper mints, thirty-three of them in the former Byzantine provinces. The number of mints increases to eighty-three under the Abbāsids, with most of the new mints in the eastern part of the Empire. Copper coinage was a token currency issued to fill the need for petty commercial transactions, and passed by tale and not by weight. Its emission was left to the discretion of governors and local authorities, without any centralized control. As a result, the fals varied greatly in weight, size, and probably value from one district to another. The weight variation was sometimes as much as five grams between contemporary fals from different mints (e.g., a fals from al-Mawṣil dated 157 weighs 10.63 grams, whereas another fals of the same year weighs 5.42 grams). It is for these reasons that the circulation of the fals, unlike that of the dinār or dirham, was limited to the near vicinity of its emission.

This may help to explain why small sums of money are so infrequently expressed in the written sources in terms of fulūs, but rather in terms of minute weights of gold and silver. Such small sums as 1/144th or 1/1288th of a dinār mentioned in the Arabic papyri, or the fractional division of the dirham into kīrat, dānṣik and ḥabbā have no counterpart in actual gold or silver coins. These are rather monies of account pegged to the fluctuating and diversified value of the fals, and were the only standard way to express small sums of money.

Fals — falsafa

During the first half of the 3rd/9th century there was a sudden cessation of copper minting throughout the Islamic world. This scarcity of coinage lasted for several centuries. That the absence in our collections of falsūs for this period is not a mere coincidence is confirmed by the results of excavations at such important Islamic sites as Rayy, Persepolis (Iṣṭaḵṭar) and Antioch. From among the large number of copper coins found at these sites only one dates after 207/822. The only exception to this general pattern are the mints of Transoxiana. The mints of Buḫkārā and Samarkand have a continuous series of copper coins throughout the late ninth and tenth centuries. The absence of copper coinage in western Europe during most of the Middle Ages is ascribed to the self-sufficient nature of the feudal system and to the negligible volume of petty trade, an explanation which is eminently unsuitable for the Islamic world of the 3rd/9th to 6th/12th centuries. An explanation of this phenomenon may be connected with the inflationary trend created by the greatly increased production of silver and gold which occurred at this period, and which would have made the production of copper coins more expensive and less necessary.

The plural form fulūs persisted in use as the designation of the autonomous copper coins of Persian localities in the eighteenth and nineteenth centuries (e.g., R. S. Poole, The coins of the Shāhs of Persia, London 1887, 212-61). To the present day fals designates the petty coin of ʿIrāq and Jordan, and the plural falsūs (flus) is a general term for money in colloquial Arabic in Egypt, Morocco and elsewhere.

Miles, The early Islamic bronze coinage of Egypt, in Centennial Volume of the American Numismatic Society, New York 1958, 471-502; H. Sauvaire, in JA, vii/15 (1880), 257-70. See also síkka.

(A. L. U dovitch)

Falsafa, 1. Origins. The origins of falsafa are purely Greek; the activity of falsafa (q.v.) begins with Arabic translations of the Greek philosophical texts (whether direct or through a Syriac intermediate). Thus falsafa appears first as the continuation of φιλοσοφία in Muslim surroundings. But this definition leads at once to a more precise formulation: since strictly orthodox Sunni Islam has never welcomed philosophic thought, falsafa developed from the first especially among thinkers influenced by the sects, and particularly by the Shīa; and this arose from a certain prior sympathy, such sects having absorbed gnostic ideas, some related to Hellenistic types of gnosticism, others to Iranian types—for Persia is known in any case to have been an influence on religious and philosophic speculation throughout the Eastern Mediterranean since the Alexandrian epoch.

But it is more difficult to give precise significance to the concept of a Greek legacy; Greek thought is far from unified. Though falsafa may be called a continuation of Greek thought there is no perfect continuity, since the Arabic-speaking Muslims were not part of the movement in which φιλοσοφία was developing. They were forced to integrate themselves into it as if foreign bodies: they could not simply follow on; they had to learn everything, from the pre-Socratic teachings to the writings and commentaries of Proclus and John Philoponus. They started therefore from an acquired knowledge of a con-
spectus of Greek thought, comprehensive and abstract, which they envisaged as a separate culture lacking any links that of Heroism. They were not unaware that thought had a history but this knowledge came almost exclusively from their reading of Aristotle, and in practice, for them, he seems the culmination of this movement; after him, they only see commentators or works written under his direct inspiration. Even Neoplatonism itself is not viewed as an original system but in the light of a generalized Aristotelian influence.

It would be an easy solution of this difficulty to describe falsafa as having assumed one particular form of post-classical Greek thought: eclecticism, which had already appeared in the middle period of Stoicism and exercised considerable influence in the development of Neoplatonism. Certainly this school, in spite of its internal diversity, favoured the development of falsafa and contributed to the spread of the belief that Greek philosophy was unified. A text such as the Theology of the pseudo-Aristotle would confirm this belief. Nevertheless it is difficult to suppose that the falsafa failed to notice the differences, not only between Aristotle and Plato, but also between the commentators, or that they passively took over eclecticism, which is itself a synthesis and in any case necessarily varies from one writer to another. Primate philosophy could not establish itself as a "sect" (to use the term employed by Renan) except insofar as it borrowed from Hellenistic and post-Hellenistic philosophy a common form, a general concept of the world, a comprehensive theory of the spirit, the soul, man and human knowledge, with a technical vocabulary to become the familiar jargon of the schools. In detail, beyond the standard uniformity, each faqârasîf made his own choice, and the first falsafa is much more original than one would suppose if it were described as nothing but Arab Neoplatonism.

2. — Utilization of Greek sources. — Ibn al-Kiftî (568-646/1172-1248), though remote from the beginnings and later than al-Ṭabâṣârî, provides some interesting information. He enumerates seven sects of Greek philosophy, adding that the two principal ones are that of Pythagoras and that of Plato and Aristotle. He considers in fact two great sections of Greek philosophy: natural philosophy, which is that of the ancients, exemplified by Pythagoras, Thales of Miletus, the Sabaeans and the Egyptians; and "political" philosophy, which characterizes the moderns, with Socrates, Plato and Aristotle. He explains that this division comes from Aristotle. But he does not separate them absolutely, since he goes so far as to say that Plato achieved the level of Pythagoras in the study of intelligible realities (fi 'l-'umûr al-'abiṣiyâ) and the level of Socrates in the questions of the constitution of the perfect city (fi siyāṣâ al-maḍīna al-fâdiya). Thus in the eyes of the Muslims philosophy, culminating in Aristotle, the disciple of Plato, is a synthesis which studies the universe in relation to human life, which views man in the whole and which conceives of the whole man, while in which moral and intellectual knowledge and virtue realise his ultimate goal in re-discovering the principle of his being. The philosophy of nature opens out into a mystical cosmology in which the central concept is the Stoic cosmopolis. It is comprehensible that in this light Neoplatonism, which embodies all these viewpoints in one system, should have appeared to them as the final form of a philosophic ideal in harmony with the religious ideal put forward by a more or less heterodox form of Islam. It is clear that the primary motive for the choice of falsafa is religious by nature, since the falsafa always rejected with horror that type of thought also offered by ancient Greece, known as the ḍabriyyâ (q.v.), of whom Ibn al-Kiftî also says: "This is a sect of ancient philosophers who deny the Creator, the director of the Universe. They assert that the world has not ceased to be what it is in itself, that it has no creator who made it and freely chose to do so; that the circling motion has no beginning, that man comes from a drop of sperm, and the sperm from man, the plant from the seed and the seed from the plant. The most famous philosopher of this sect is Thales of Miletus; those who follow him are called sandîsî." Since Thales was classed among the "physicists" (labīsîyûn), it is clear that there are in fact two kinds of physicists: those who are purely materialist and rejected, and those who may be taken over by the "metaphysicists" (lākîsîyûn) as Pythagoras is by Plato. It may be argued that Aristotle, in spite of his metaphysics, does not lend himself to use by religious thought: God, nûsîs nûsîes, is not the efficient cause of the world; He is the end, but not the principle. In reply it could be said that the Uṯrâlîgîyâ intervened here most aptly, "since it seemed to present the theodicy absent from the Metaphysics, though itself brief on the divine attributes and silent on the creation" (A. M. Goichon, La Philosophie d'Avicenne et son influence en Europe médiévale, Paris 1951, 12). But it should not be forgotten that Porphyry, the disciple of Plotinus, had steeped himself in Aristotelian thought and saw no opposition in it to that of Plato. Equally, the Neoplatonic commentator Simplicius (6th century), educated both in Alexandria and Athens, had already attempted to harmonize the systems of Plato and Aristotle (as al-Fârâbî was to do). Now Simplicius, who had emigrated to Persia upon the closure of the School of Athens by Justinian in 529, was well known to the Muslims (cf. Ibn al-Kiftî: art. Samîsî). Syrianus also (ibid., art. Sûrûnsâsî) was as frequently quoted by the specialists; and he, though he did not believe that the two sages of antiquity were in agreement, at least saw the study of Aristotle as a preliminary to the understanding of Plato. The Muslims therefore did not lack precedents authorizing them not to make too great a gulf between the two great masters of Greek thought. Nevertheless it would appear that the "Plotinus source", as F. Rosenthal calls it ("Al-Šāhî al-Yânâni and the Arabic Plotinus sources", in Orientalia, xxi (1952), xxii (1953), xxiv (1955), played very much a major rôle, together with the Uṯrâlîgîyâ which is related to it. On this point P. Kraus, Plotin chez les Arabes, Remarques sur un nouveau fragment de la paraphrase des Ennéades, in BÉ, xxii (1940), 41, may also be consulted. Thus everything combined to give a Neoplatonic form to the meeting of Plato and Aristotle in Muslim thought. P. Duhem (Le système du monde, iv, 322) observes that Neoplatonism permitted the conservation in a single harmonious whole of what could be saved of the Aristotelian theory of the universe together with what theology claimed. At the same time certain elements of the Greek inheritance could not be absorbed with comfort in this synthesis. On the one hand, the whole Gnostic, or, rather, theurgic tradition as it developed from Iamblichus to Proclus, becoming burdened with Egyptian and Hermetic ideas, preoccupied with every religion and every god, developing a fantastic
angelology, was ready to fuse with the mystic concepts of Persia and India and revivify that esoteric cult which is still alive. These tendencies, subjugated by falsafa. Avicenna, were to flourish freely in the philosophy of Fikhr. On the other hand, an Aristotelianism which had remained more faithful to Aristotle, confining itself to the correction of those points where he displayed weaknesses, difficulties, obscurities or incoherence, had never ceased to be represented in the post-Hellenistic period up to the 6th century. Alexander of Aphrodisias (2nd century) tries to explain Aristotle and defend him against the doctrines of other schools. In doing so, he insists on the naturalist aspect of his teaching and professes a nominalism. The universal exists only in human thought; “separated from the intellect which thinks it, it is destroyed.” Thus it neither preexists particular things nor is drawn from them; it appears only as a consequence of the experience which thought has of these things: thus the soul is a form of the body and cannot subsist without it. As for the doctrine of the intellect, a distinction must be drawn between the νοης φυσικός or υλικός (natural or material, which is potential), the νοης ἑπίκτητος or καθ' ἐξίν (acquired and possessing the habitus of intelligible thought), and the νοης ποιητικός which makes the transition from the former to the latter. “As for the habitus of the latter but which does not belong to the human soul, coming to it from outside (θοράκιν). This theory of the intellect was to be the constant subject of consideration in the falsafa of every age. But the Aristotelianism of Alexander was especially to characterize the Western philosophers: Ibn Bāṣīlīja (Aventpace) and particularly Ibn Rūshd (Avemaro) and the intention is to study the influence of the Stoa. In psychology, he follows the Platonic teaching of the tripartite division of the soul. Though concentrating on the study of positive sciences, he believed in the possibility of theab, which he regarded logic and physics as merely the intellectual substance of the body and in Providence, which is mani

The Greek heritage is therefore a very varied body of doctrines and trends of whose multiplicity the Muslims were not unaware. Thus falsafa had to make a choice, and this explains the varied forms it assumed from time to time, reflecting no doubt different philosophical temperaments but also religious attitudes to dogma and theology and to the history of the sects and of kalām. 3. — The establishment of falsafa. — The influence of translations is of prime importance. But that falsafa was born at all is due to the fact that most of the translators were original thinkers. Original work was often linked to the translation by the intermediary of commentary. Thus Kūstā b. Lūkā made use of technical language gleaned from translations to produce individual work, as shown in the Book of characters (ed. P. Brath, in BIE, xxiii (1940-1)). Ibn al-Nadim (d. 386/995) appreciated his value as a philosopher. Kūstā reveals great subtlety in analysis, and a spirit of synthesis which enables him to borrow from the different sciences whatever material he needs to deal with his subject. It is important to note that a thinker like al-Kīfi, who is revered by posterity as a philosopher and savant, is also a translator. Moreover, all the great falsāsfa applied themselves to commentaries on Greek texts. Thus, falsafa does not follow from works of translation and commentary; it is born among them and continues them; its lexicon (lisiqāt) was not written as a purely philological exercise unrelated to it; falsafa gained definition by an undertaking which combined translations, commentaries, personal reflections and practical examples. 4. — The first period of falsafa. — This could be called Avicennan. It takes shape in the East between the 3rd/9th and the 5th/11th centuries, with al-Kīfi, al-Ṭārābī, and Ibn Sinā (Avicenna). It is a synthesis of the universal foundations of a system of natural science and mysticism: Plotinus enriched by Galen and Proclus.
This first falsafa is quite distinct from the kalām which preceded it (Muʿtazili kalām); although it takes pleasure in the rediscovery of Kur'anic texts or ideas, it does not make them a starting point, but is presented as a method of research independent of dogma, without, however, rejecting the dogma or ignoring it in its sources. Nevertheless, its problems are not unrelated to those of theology. The Muʿtazila, in order to preserve the absolute transcendence of the divine unity, had distinguished essence from existence in created beings. For them, there was in God no paradigm (mathal) for the essence of the creature, and creation consisted simply in bestowing existence on essences which were in "a state of nothingness". The creative act was conceived in a positive sense as what causes essences to pass from non-existence to existence (lām yakun fayakun). God, Whom nothing resembles, was ignoring it in its sources. Nevertheless, its problems of the essence and existence of the divine unity, had distinguished essence and existence in all beings other than the Godhead. For God alone, existence is identical with essence. But for this reason He is the unifying and unique Creator, and creation consisted simply in producing from it the world from which it came; on the one hand there is a First Principle in whose unity are rooted both the essences and the existences of all beings, and in consequence a continuity is postulated between the Being and beings, which is not interrupted by any creative act; on the other hand, there is an absolute discontinuity between the modes of being of the Principle and of that which proceeds from the Principle. Thus it is possible to speak of a cosmological continuity between the universe and its source (theory of emanation), tending to a form of monism, and of an ontological discontinuity between the necessary and the possible, tending to re-establish the absolute transcendence of God. Furthermore, the God of One who transcends time and space, is possible only if considered in themselves. But they are necessary if considered in relation to the Principle: granted a Being necessary on its own account, everything else is necessary because of it. As was to be the case with Spinoza and Hegel, the possible is always real. Hence we return to monism. Is that a reason for considering that this falsafa is incoherent? Up to now we have considered only the cosmology and the ontology of the first falsafa, which means that this falsafa needed to be completed by a third attitude to Being: the mystical. Falsafa of the Avicennan type may be analysed as regards its system in the following manner: a first upward movement going from beings to the Being, which seeks an ontological foundation for given reality; this is human intelligence in search of a principle of intelligibility in the universe; then a second, downward movement going from the Being to the universe on the basis of a declared principle, which should provide a total explanation of it; these two movements involve only human thought; but in the first, the principle is attained so to speak in perspective, as the limit where conditions of intelligibility converge; thus there may well be some lack of continuity of thought, since it is logically impossible for thought to reach this limit; whilst in the second movement, thought starts from the idea which corresponds in it to this Principle, and tries to produce from it the world from which it came itself; this is a difficult task, since it is beyond the scope of logical deduction, and recourse must be made to images (metaphors of light) through which the continuity which is postulated but not demonstrated can be re-established. Then comes the third movement, which is a second ascent, but this time no longer a simple discursive procedure, since it is by intelligible intuitions of the spiritual realities themselves, already identified, that progress is made. Man first sees himself in his contingency, separated from his Principle, endowed with a precarious existences. But ontology has taught him that his whole being is rooted in God, and cosmology supplies him with a spiritual itinerary, whose postulated continuity will be verified by mystical experience. The last word therefore is with this experience.

A second theme which Greek philosophy had touched on, and which Muʿtazili kalām had studied very closely, is that of the knowledge God has of particular things. The first falsafa, in its theory of the possible, considerably simplified the problem posed by the theologians who believed that contingent things could be or not be. However, there still remained the difficulty of the knowledge of the particular as such: God could not make contact with this in itself in its materiality, but only in His universal knowledge of that which is. This is human intelligence in search of a principle of intelligibility in the universe; then a second, downward movement going from beings to the Being, which seeks an ontological foundation for given reality; this is human intelligence in search of a principle of intelligibility in the universe; then a second, downward movement going from the Being to the universe on the basis of a declared principle, which should provide a total explanation of it; these two movements involve only human thought; but in the first, the principle is attained so to speak in perspective, as the limit where conditions of intelligibility converge; thus there may well be some lack of continuity of thought, since it is logically impossible for thought to reach this limit; whilst in the second movement, thought starts from the idea which
future life. The union of members of the earthly community foreshadows the union of souls with souls, and of souls with God, in the after life. Whatever value one may place on the falsafa, as criticized by al-Ghazali. The historical significance of his work demands recognition. Even if he conceived his religious system only for political ends associated with the gnostic trends opposed to the Qur'anic spirit, no doubt he remained an Ash'arist and criticized the falsafa. Whatever value one may place on the thought of al-Ghazali, the historical significance of his work demands recognition. Even if he conceived his religious system only for political ends associated with the gnostic trends opposed to the Qur'anic spirit, no doubt he remained a mu'takallim; it would be an abuse of language to say that he created a Sunnī falsafa. He simply allowed falsafa, and mysticism too, to detach itself from Shī'ī heterodoxy and to become acclimatized in an orthodox environment.

The principal points of his criticism (which were to be taken up again by Ibn al-Kifti) may be brought together under three headings: against falsafa he maintains (a) the resurrection of the body and the materiality of the rewards and punishments of the after life, (b) the creation of the cosmos in a finite period in which he was living, yet he introduced Greek philosophy into the realm of Sunnī thought, through the way he developed Ash'arī and criticized the falsafa. In falsafa, as in esoteric mysticism, he denounced Gnostic trends opposed to the Qur'anic spirit. No doubt he remained a mu'takallim; it would be an abuse of language to say that he created a Sunnī falsafa. He simply allowed falsafa, and mysticism too, to detach itself from Shī'ī heterodoxy and to become acclimatized in an orthodox environment.

The second period of falsafa. — This may be called post-Ghazālī. It is distinguished geographically by having one centre in the East with Falāhr al-Dīn al-Rāzī and another in the West with Avempace (Ibn Bāḍīṣa), Ibn Tufayl and Averroes (Ibn Rushd). The period is characterized by the hosts of mystics; mysticism in both by Avicenna and al-Ghazālī. Averroes, in his refutation of the Tahāfut al-falsafa, was led to take up again the problems with which Avicenna faced, and found himself in a dogmatic and theological context, reappear in another context as late as Ibn Khaldūn. It may be said that falsafa wished to support shariʿa, fikhr, and ahkām sulṭāniyya, and that it is thus opposed to the spirit of the Kur'ān. This is true as far as rigorously orthodox Islam is concerned. But falsafa developed in more liberal surroundings, where there was a desire for a less legalistic view of religion and for an Islam which would be cultural and universal in character.

6. — The reaction of al-Ghazālī. — If Avicenna is a much discussed figure, al-Ghazālī is discussed much more. Some see him as a reactionary who brought to an end the blossoming of the rational thought of the philosophers, and made supreme a theology which was itself the slave of dogma. For others he clipped the wings of mystical thought by fighting the Bāṭinīyya, whose teachings were in harmony with the great spiritual constructions of falsafa. Whatever value one may place on the thought of al-Ghazālī, the historical significance of his work demands recognition. Even if he conceived his religious system only for political ends associated with the gnostic trends opposed to the Qur'anic spirit, no doubt he remained a mu'takallim; it would be an abuse of language to say that he created a Sunnī falsafa. He simply allowed falsafa, and mysticism too, to detach itself from Shī'ī heterodoxy and to become acclimatized in an orthodox environment.

Falsafa

The meaning of Averroism has been much discussed. Some, with Renan, view him as a pure rationalist. According to L. Gauthier, Ibn Rushd only rejects the kind of theology which encloses itself in the revealed texts and desires to comprehend them dialectically; but he allows literal belief to the uneducated, who react to the rhetoric of images, while philosophers should submit everything to apodictic proof. It appears that this explanation can be partially accepted. Al-Ghazālī was led to take up again the problems with which Avicenna faced, and found himself in a dogmatic and theological context, reappear in another context as late as Ibn Khaldūn. It may be said that falsafa wished to support shariʿa, fikhr, and ahkām sulṭāniyya, and that it is thus opposed to the spirit of the Kur'ān. This is true as far as rigorously orthodox Islam is concerned. But falsafa developed in more liberal surroundings, where there was a desire for a less legalistic view of religion and for an Islam which would be cultural and universal in character.

The second period of falsafa. — This may be called post-Ghazālī. It is distinguished geographically by having one centre in the East with Falāhr al-Dīn al-Rāzī and another in the West with Avempace (Ibn Bāḍīṣa), Ibn Tufayl and Averroes (Ibn Rushd). The period is characterized from now on as late as Ibn Khaldūn. It may be said that falsafa wished to support shariʿa, fikhr, and ahkām sulṭāniyya, and that it is thus opposed to the spirit of the Kur'ān. This is true as far as rigorously orthodox Islam is concerned. But falsafa developed in more liberal surroundings, where there was a desire for a less legalistic view of religion and for an Islam which would be cultural and universal in character.

Of the three who most adorned Western falsafa, Avempace displayed the least religious spirit. His Rule of the solitary (Tadhkīr al-mutawāḥhid) has as its ideal isolation from the mass of mankind in a purely intellectual contemplation of the intelligible. In his Risālat al-Ītīsālī (a reinterpretation of the problems of creation and the nature of the after life, philosophy has no real privilege, and risks indeed encouraging doubt, while revealed knowledge, though in itself inferior, gains the advantage because it brings assurance. To the fundamental problems of the first falsafa as criticised by al-Ghazālī, Averroes replies like a mu'takallim: he gives up the postulate that from the One nothing but the one can emerge; God moves the world by His amr which permits Him to act while remaining unmoved (cf. the unmoved prime mover of Aristotle); God has no will resembling the human will, since He has nothing to desire, having all; but the idea of a voluntary act better represents what creation is than the idea of an involuntary emanation (a viewpoint to be found in al-Rāzī in his commentaries on the divine attribute of life, hayāt); God does not know particular things in a sentient manner; but the knowledge He has of them resembles the sentient knowledge by which man grasps them rather than our abstract and general knowledge. These few observations suffice to show that Averroes took note of the theological criticisms of al-Ghazālī.

In the East, Falāhr al-Dīn al-Rāzī is an Ash'arī
like al-Ghazālī, whom he takes for guide, while remaining attached to the thought of Avicenna. He criticizes the Mu'tazila but he borrows from them what he can use, and he attacks the extremist sects without breaking down the bridges to them. Ironic in outlook, in spite of his polemical vigour, he is endowed with great powers of synthesis and it is perhaps in him that the richest, widest and most open system is to be found. He explains Avicenna while correcting him. He achieves a profound union of kalām and falsafa. Thus, like his adversary al-'Ṭusi, he studies the Mu'tazila not for the sake of a conflict but in relation to the problem of the divine attributes. For him, philosophical reason may well collect ideas into coherent systems, but it is for revelation to pronounce upon their truth. Finally, the sacred text is a stimulus for philosophical thought. Al-Rāzī therefore clearly differs from Averroes in his approach; he does not limit recourse to dogma and kalām to certain difficult cases: with him philosophy and theology are co-extensive and interpenetrating.

7. — The tradition of Avicenna in the philosophy of ʿIṣḥāq. — The work of al-Ghazālī was not accepted by the whole of Islam; in particular those circles, of Shi'ī tendencies, who resisted his criticism developed the most mystical aspects of Avicenna's thought in order to produce a union of Avicenna's type falsafa with a mystical kalām of Gnostic inspiration.

Here we must mention the philosophical corpus of Abu 'l-Barakāt al-Baghdādī (d. 550/1155), which develops into an angelology. But the great representative of ʿIṣḥāq is al-Suhrawardī (d. 578/1181), who was influenced philosophically by Avicenna but gives an important position to Aristotelian concepts in the exposition of his mystical ideas. On the philosophical plane, it was Naṣīr al-Dīn al-Tūsī (d. 672/1273) who was to undertake the Shi`ī defence of Avicenna's thought against al-Rāzī, a defence which is not, however, accompanied by absolute fidelity: the real distinction between essence and existence is denied, and one finds in the end an explicit monism in al-Suhrawardī, al-'Ṭusi and Sa'dr al-Dīn al-Sīrāżī (d. 1050/1640). This monist philosophy developed above all in the Iranian areas, which is often expressed in Persian. It remained alive and flourishing for a long period.

8. — Falsafa as scholasticism. — In spite of the great names which adorn even the last period of falsafa, it must be recognized that from now on thinkers are in possession of received ideas and that they develop them in variations which offer interest but without real invention. The union of falsafa and kalām was completed: the stages of this process are marked by Tustarī, Kuṭb al-Dīn al-Rāzī (d. 765/1364) and al-Ījālī (d. 756/1355), for whom kalām includes metaphysical questions and logical procedures while offering the greater security of reason founded on tradition. Al-Ījālī appears in this period as the leader of a school whose disciples were to diverge in different directions, some attaching themselves to Ash'arī orthodoxy, such as al-Djurjānī (d. 816/1413); others remaining in the fold of Avicenna, like Sayf al-Dīn al-Abharī (8th/14th century), al-Fanārī (d. 886/1481), al-Siyālātkūfī (d. 1065/1659). Thus the earlier discussions over the opposition of Avicenna and Ghaṣāʾīl are taken up again: these the partisans and continuers of Avicenna are ʿIṣṬālū al-Dīn al-Ḥilli (d. 726/1320), a leading theologian of the Imāmīyya, and Kuṭb al-Dīn al-Rāzī (d. 749/1348); while those who attacked Avicenna's school in the spirit of Ash'arī, ʿIṣṭālū al-Dīn al-Hāfīz (d. 726/1320), and in the tradition of al-Ghazālī included al-

9. — Supplementary and conclusion. — To enumerate here all the theological philosophers of the last period would be tedious. We ought rather to mention those works of previous centuries which, though philosophical, do not exactly fit into the categories we have outlined. We should first recall that theologians like the Ash'arīs al-Bākīlānī and al-Duwaynī or the Zāhīrīs Ibn Hazm, wrote purely philosophical questions from a point of view which was properly that of kalām (e.g., al-Bākīlānī's theory of causality and atomism). On the other hand, the Rashīdūlī of the Ḳhwān al-Sufīā deserve mention; these develop Pythagorean ideas, frequently with remarkable originality, on the fringes of the school of Avicenna but in an analogous spirit, in spite of the polemics and the characteristic of their writings. Ibn Masarrā, who has been studied by Asin Palacios, was influenced by the philosophy of Ṣamīdūkī, and was by the philosophy of Ẓābīfī mysticism (cf. Ibn al-Kūtī, art. ʿAbīdābī). Further, it should be noted that in order to study not falsafa as such but the philosophical ideas current in Islam one should also consider the use of Greek concepts by sages such as ʿAlī b. Rabban al-Ṭabarānī and above all ʿAbū Bakr Muhammad b. Zakariyya al-Rāzī and many others. The corpus of al-Djurjānī also, in the analysis of it by P. Kraus, should not be neglected by those seeking to establish the function of Pythagoreanism in the alchemical concepts of Islamic scholars. In another field, the examination of the theories of the grammarians, particularly Ibn ʿIṣḥāqī, would supply very interesting information. We should also consider the character of Greek ideas in Arabic grammar. In special philosophical disciplines such as ethics, Ibn Miskawayh should be mentioned, whose thought extensively overlaps pure questions of morals and reflects the life of his age. The literary circle of Baghdād made known to us by ʿAbū Ḥāyān al-Tawḥīdī, is very representative of philosophical culture in the Muslim East of the 4th/10th century. To sum up, falsafa was a focus of reflection on the legacy of Greek thought. It was not at the beginning a matter of Muslim apologetics utilizing Hellenic philosophy to explain and justify the faith. Falsafa began as a search by Muslims with Shi`ī leanings for a coherence in their intellectual and spiritual life, that is, the quest for a religious humanism, with all that humanism implies in freedom of spirit. Later it evolved, grew closer to orthodox kalām and ended by fusing with it. Only then did falsafa begin to burden itself with apologetic elements: fides quaerens intellectum or, conversely, faith illuminating and fortifying knowledge. Only the mysticism of ʿIṣḥāq retained the primitive humanism of Avicenna (cf. al-Insān al-kāmil). In the course of its development, falsafa spread Greek ideas in every realm of thought. But it concluded by becoming a school activity. It is perhaps this decline which inspired the disillusioned observations of Ibn Khaldūn on the pernicious effects of education in the Muslim world.
This great thinker of the 8th/14th century, who spared nothing and no-one in his scientific criticism, indeed saw in these great systems concepts inspired purged of all Neoplatonic metaphysics. Ibn Khaldun, as with a true scientist, was not content to maintain the view of the universal church, but he attempted to synthesize new systems of his own. He aspired to the scientific criticism of fundamentals, to the accomplishment of a positive all-embracing science, the science of human societies.

This person is Ibn Khaldun, a great Islamic thinker and historian. He was born in 1332 and died in 1406. His works, especially the *Mukaddima*, are considered to be the first modern historical work. He was known for his critical approach to the past and for his emphasis on the importance of research and the study of human societies.

**FAMAGUSTA** [see MAGHOSHA].

**FAMILY** [see *S.L.1*].

**FAN** [see MIRWAḤA].

**FANĀ’** [see BARĀ’].

**FANAK** (pl. *fanāk*; from Pers. *fanak*/*fanādγ*) may refer to other terms and with different authors, to various animals of different orders or families. In the Muslim west *fanāk* is commonly applied to the fennec-fox, *Fennecus zerda*, a small wild member of the genus *Vulpes* of the Canidae with very large ears, a pale dun coat, and a spreading bushy tail. The nocturnal habits of this puny carnivore, and its essentially desert habitat, have contributed to its being ignored by Arabic writers, naturalists, encyclopaedists and poets; al-Dīḥīḥī, for example, frankly confesses his ignorance of the real *fanāk* (*Hayawān*, vi, 32). For a better knowledge of the fennec it is necessary to turn to the desert tribes; one finds, for example, six terms at least in the various dialects of Tamāb which refer to this animal (see Ch. de Foucauld, *Dictionnaire Touareg-Français*, Paris 1953, ii, 962, s.v. *akhōrī*; H. Lhote, *La chasse chez les Touaregs*, Paris 1951, 133). In the eastern countries which do not know the fennec proper of the Sahara fauna, *fanāk* is used for the Corsac or Karagan Fox, *Vulpes corsac* (from Turk. *harsāh*), found from Turkestan to Mongolia; this little animal when domesticated enjoyed a great vogue as a lady’s pet in Europe in the 16th century, when it was known as “adive”.

However, neither of these two foxes is meant by the term *fanāk* in the imagination of all the authors who have used the word; all mean a member of the Mustelidae whose pelts were greatly esteemed in the luxury fur-trade and which ranked with such fur-bearing animals (*ghawāl al-wabar wa l-fird*), the ermine (*bbidam*), sable (*sammar*), Siberian squirrel (*ingāb*) and the pelt of the *fanak* was imported, at great expense, from central Europe and Asia (*min arḍ Khāriżm, min biḥl al-Sakāliba*).

Although the identification of this animal has troubled many translators, there is no doubt that it must be the mink, *Mustela lutreola*; sufficient proof of this is given by Ibn al-Baytār (tr. L. Leclerc, *Traité des simples*, Paris 1879-83, iii, no. 1708), who says of this fox that it is a small species of marten, and its fur is brought from the land of the Slavonians, or from the lands of the Turks and Russians”. It is difficult to understand how the *fanak*, worn in cloaks (*farsaw*) by the young Andalusian dandies and poets of the 4th-5th/10th-11th centuries, could have been identified with the weasel (see H. Peres, *La poesie andalouse ... au Xème siecle*, Paris 1951, 34) and the “fennec” of the eastern countries which do not know *fanak*; it is a matter of conjecture, however, that in the eyes of the jesters the *fanak* cannot belong to the Canidae, the canine species, domestic or wild, being absolutely impure, on the authority of many traditions of the Prophet.

**FANĀR** [see FENIR and MANAR].

**AL-FANĀRĪ** [see FENIR-EDE].

**FANN** (the modern) Arabic name for art. Individual treatment of aspects of the art of Islam will be found in articles under the following headings;
the examples are given as a guide and are not intended to be exhaustive.

1. Techniques, e.g., ARCHITECTURE, BINA\(^2\) (building), KIRK \(=\) KIRMAN \(=\) (the potter's craft), FUSAPIS\(^3\) (mosaic), KALI (carpets), KHATT (calligraphy), KUSMA\(^4\) (textiles), METALWORK, TSAWIR (painting), etc., as well as description of materials in the articles on techniques.

2. Materials, e.g., A\(^5\) (ivory), BILLAWR (crystal), DJIS (plaster), KMAZA\(^6\) (pottery and ceramics), \(\text{'IRE AL-LU'TU'}\) (mother-of-pearl), LIM\(^7\) (costume), etc., passim.

3. Objects, types of buildings, artistic features, e.g., KALAM\(^8\) (pencaoses); BAN (gates), BAL\(^9\) (well-sells), BURG\(^10\) (towers), BUSTAN (gardens), HAMMA\(^11\) (baths), HIN (fortification), KANTARA (bridges), MAKARA (tombs), MANARA (minarets), MASPI (mosques), SABIL (fountains), etc.; AMUD (capitals), ARABESQUE, IWAN (arcs), MUKARNAS (stalactites), etc.

4. Artists, e.g., BINE\(^12\), MANSUR, SINAN, etc.

5. Music, theatre, etc., e.g., MO\(^13\) (articles) on individual musical instruments, e.g., DUFF, TANB\(^14\), CINEMA; MAGRAHYYYA (drama); LAM (games).

6. Countries and cities, passim. (Ed.)

7. Dynasties, and in some cases individual rulers passim.

The idea of a specifically Islamic art can hardly have been without preliminary reference to the idea of an Islamic civilization which allows the bringing together, across the apparent contradictions of form, style and material, of monuments widely separated in time and space and objects produced according to widely different techniques. If it be indeed commonly admitted that a new faith and a new idea of an Islamic civilization which allows the perpetuation of certain modes of life and thought, in a society dominated by a rigid legalism of a religious character and faithful until the dawn of the modern era to the principles established in the Middle Ages, has produced a similar fixeness of artistic traditions, as seen in the most diverse natural surroundings from the moment when they were first incorporated into the heart of Islam; thus we may group under a common heading, in spite of all the exterior reasons for differentiation, works produced according to widely different techniques. If it be indeed commonly admitted that a new faith and a new idea of an Islamic civilization which allows the perpetuation of certain modes of life and thought, in a society dominated by a rigid legalism of a religious character and faithful until the dawn of the modern era to the principles established in the Middle Ages, has produced a similar fixeness of artistic traditions, as seen in the most diverse natural surroundings from the moment when they were first incorporated into the heart of Islam; thus we may group under a common heading, in spite of all the exterior reasons for differentiation, works produced according to widely different techniques.

In this sense one can speak of the unity of Islamic art, the principal factor of which was without doubt the constitution, in the first centuries of Islam, of that immense empire of the Caliphate, Umayyad and later 5ABB\(^15\)S\(^16\), which brought together under a single authority many regions formerly independent of one another; it thus provided an environment favourable the elaboration of a primitive “classicism” which was to serve as a point of reference for the later developments, and to bring into being, according to clearly discernible lines of affiliation, local or national flowerings which could not fail to develop individually in the years that followed.

Sprung therefore from the conjunction of several inheritances, in the first rank of which were a Hellenistic heritage from the southern provinces of the Byzantine empire and an Iranian heritage which shortly before had been crystallized under the aegis of the powerful S\(\text{S}\)\(\text{A}\)\(\text{n}\)\(\text{d}\) dynasty, this first Islamic art deserves primarily to be described as profoundly eclectic, through its having gathered and mingled without restraint, while the conquerors were willingly susceptible to the atmosphere of the arts around them, structural or decorative elements borrowed from the practices of the conquered countries, with the one proviso that these elements be adapted, in conformity with the observance of certain rules, to the needs of the new Muslim society.

This practice was to be perpetuated in the ensuing periods, and although the first phenomena of absorption and transformation, particularly noticeable in the Near Eastern regions which might be called the heart of the empire, marked Islamic art as such with Syro-Mesopotamian features, it must not be forgotten that other influences, sometimes transmitted throughout the Muslim world, more often integrated in lands on the periphery where they could have but a weak diffusion—this is exemplified in North Africa or Spain just as in K\(\text{u}\)\(\text{r}\)\(\text{s}\)\(\text{a}\)\(\text{s}\)\(\text{n}\) or in India—continually influenced here and there the traditional modes which had gradually spread from the active capitals of Damascus or Bagdad. The receptivity, demonstrated very early, to trends coming from the East, which brought into \(\text{'Ir}\)\(\text{k}\)\(\text{l}\) sculpture the characteristic rhythms and scrolls of that Asian art known as “Steppic”, was thus soon to be surpassed by the facility with which, from the Sal\(\text{g}\)\(\text{s}\)\(\text{h}\)\(\text{g}\) era onwards, modifications of taste and feeling directly attributable to the Turkish invaders were to be imposed. Similarly the reception by Persia of a decorative repertoire of Chinese origin, which had considerably diversified and was to stimulate the imagination of its miniaturists, was to have as a counterpart that extraordinary perfection of architectural techniques accomplished in 10th/16th century Ottoman Turkey by artists who applied themselves to the school of the Byzantine masters and who were to succeed in equaling, if not surpassing, Byzantine chefs-d'oeuvre by erecting the great series of imperial mosques in Istanbul.

One may also understand in this perspective the multiplication of regional styles (see articles on the relevant countries or dynasties) within an art whose faculty of assimilation remains its dominant characteristic and whose various stages develop within varying ethnic groups and as a result of borrowings which are undisguised; these borrowings have, however, in the course of their transmission undergone a subtle transformation which makes it impossible—even in a creative milieu as clearly individualized as that of Iran, for example—to confuse works anterior to Islam and those which belong, after the lasting triumph of the new religion, to a differently orientated cycle of aesthetic experience.

Indeed, whatever be the type of monuments or objects under consideration, it would appear that the artistic production of Muslim countries has always conformed to a double set of requirements; the one imposed by the material organization of a society in which artistic patronage was bestowed principally by princes and sovereigns, impressing on the art an aulic, sumptuary and dynastic character whereby the taste for richness and brilliant ornament was necessarily developed; the other, and more important, inspired by the particular form of intellectual and religious outlook which came into being in the 7th century with the preaching of Muhammed and which, far from becoming more tractable, became more and more rigid in its claims to model the life of the Muslim community according to the dictates of the holy law and the opinions of its practitioners, providing the dominant themes of architecture and encouraging the increasingly systematic employment of decoration in accordance with stereotyped formulas, remote from all realism and spontaneity.
Indeed, it is this deliberate impoverishment of plastic imagination, with its aniconic tendency, which most frequently comes to mind when one attempts to define the basic originality of Islamic art, whether the emphasis is put only on the abstract character of the surface ornamentation which it uses in such profusion, or whether this characteristic is more precisely related with the religious prohibitions peculiar to Islamic doctrine or with a system of theologico-philosophic opinions which dwells on the illusory and precarious character of the visible world as contrasted with God Who alone endures. This may be a somewhat simplified view of a very complex problem, all the more since the exclusion of images was not observed with the same rigour in every region or period; to deny this would be to ignore some of the most beautiful Muslim achievements, starting with those of the schools of illuminators who were well able to portray or transpose with delicate touch the scenes which surrounded them. Yet one should not disregard the large share of truth which such an axiom contains.

As a general rule, indeed, artists working in the Muslim milieu have remained unaffected by a concern to reproduce faithfully the forms of the living world, forms which certainly served them as sources of inspiration, but which became relegated to an accessory role in larger compositions — an effort is necessary to discover, for example, the medallions with human or animal representations which are on so many objects enmeshed by networks of arabesques, and the miniatures themselves were conceived solely as an appendage to the manuscript page which they were to enrich — or else recourse was had to them merely for the guiding lines of stylisations which were to be repeated, divorced from all direct contact with nature. This is not unrelated to the lack of favour with which work in high relief was regarded, a technique which more than any other was likely to disturb the rigorists by producing from its medium an image so close to its original; it is connected also with the growing disregard, which visibly asserts itself, for the feeling for the third dimension: it disappears in the interplay of flat colours with which the surfaces of monuments were covered, as in the productions of the artistic workshops or in the grisaille of moulded interlacing work which filled the previously compartmented borders and panels.

Thus it is justifiable to define Islamic art as a whole as an art of decorators and ornamenters, concerned to decorate every surface with a multiplicity of figures springing from their own imagination in accordance with a repertoire of motifs which had long passed to the stage of studio prescriptions, motifs often executed in relief or in shallow patterns which were vibrant with light and shade effects, but to which was frequently added the refinement of notes of colour, obtained from very different media according to the period or the region. This art of the ornamenters thus corresponded to a peculiar regard for agreements and harmonies, founded, not without some aridity, on the observation of rules such as the horror of the void and the continuation of the line, in a climate which had introduced also the beauty of the rhythmic line of Arabic music and the cadences of its poetry.

It is also true to say, however, that this precious art was first and foremost a scholarly and intellectual art, which grew from a continual recourse to geometrical design and to complicated calculations, permitting decorative forms which were sometimes of a rudimentary nature to be used effectively. This is admirably illustrated by the use of stalactite corbelling, with straightlined or curvilinear cells [see MUKARNAS], which were ultimately used in the adornment of domes or semi-domes (for example in the coping of portals) according to extremely complex constructional schemes, and which demanded a very specialized technique from the artisans who carried them out, empirical though this may have been. This is revealed also by the study of the basic lines of so many opulent arabesques [q.v.], whose value lies in the convolutions of their stylized vegetal stems which are in other respects rather poor; or by analysis of the innumerable combinations of star-shaped polygons on which are based systems of interlacing which often serve as the starting-point for further stylizations. This is also expressed by the variations developed from the angular or cursive letters of the Arabic script, letters which had the double advantage of offering continually fresh themes to the invention of artists, and of being in themselves shapes with an inherent meaning and embodying the results of a long development [see KHIAT]. The growing development of ornamental compositions of this genre, apparently without regard for calligraphic form or legibility, is certainly to be included among the most typical aspects of art in Islamic countries.

It goes without saying, however, that such considerations alone do not suffice to characterize the creative vigour of an art which was not content merely to impress its sign manual on certain modes of aesthetic expression, notably in the field of ornament, but was also able to demonstrate, in the field of architecture, its ability to respond, with new programmes, to the situation resulting from the development of Islam and its establishment in regions where there was an older civilization—regions already so enriched with past monumental glory as to prevent the conquerors from being content with the primitive constructions of Mecca or Medina. In this connexion it is necessary to stress the ability of Islamic architects to adapt the results of a rudimentary nature to be used effectively. This is also expressed by the variations developed from the angular or cursive letters of the Arabic script, letters which had the double advantage of offering continually fresh themes to the invention of artists, and of being in themselves shapes with an inherent meaning and embodying the results of a long development [see KHIAT]. ors or other rich persons in building tombs designed to glorify their memory.

It is no less significant to notice, on a different level, the various interpretations taken, from the beginning of Islam to the present day, by royal palaces [see KASR], for which there has been a continuous need since the early conquests, and the building of which has been the principal care of each Muslim dynast. Nor are the less grandiose aspects of civil and military architecture to be overlooked, as illustrated by, for example, works of public utility such as water works, fountains [see SABIL], baths [see HAMMĀM], warehouses [see KAYSARĪYA] and covered markets [see SMK], simple private houses, or the various types of fortification [see BURDJ, HISN] represented as much by town walls as by the defence systems of isolated strongholds. Here also one may see the preservation of constant traditions, which it is difficult to separate from the strictly mediaeval historical conditions within which they have been perpetuated, but which nevertheless deserve to be described as Islamic inasmuch as the limits of the geographical region in which they appear correspond exactly with those of the territories characterized by adhesion to Islam.

(J. SOURDELL-THOMINE)

**PÃO [see AL-FARABI]**

**FĀRĀB**, a small district on both sides of the middle Jaxartes at the mouth of its tributary, the Aris, which flows from Isfīḍāb. It is also the name of the principal settlement in this district. The older Persian form Pārāb occurs in Ḫudūd al-Īslām, (72, 118 ff., 122), the form Bārāb in Ḫistāḥr (346) and Mukaddasī (273; but also Fārāb) as well as in the later Persian sources. The extent of the district in both length and breadth was less than a day's journey (Ibn Hawḵāl, 390 ff.). According to Masūdī (Tābīḵ, 366) the region was flooded annually at the end of January, and traffic between the settlements was suspended for ten days by his death (in fact the Jaxartes is usually frozen at that season).

The principal settlement of the district was originally apparently Kadar (Kadr?), with a Friday mosque and lying about half a parasang east of the Jaxartes (Ḫistāḥr, 346). Near there but of later origin (according to Barthold) was a new centre, called after the district Fārāb, set up by Mukaddasī (262, 273). According to the latter it was an extensive fortified city of 70,000 (?) inhabitants (mostly Šāfīis, according to Samʿānī, GMS, xx, fol. 415b), with a Friday mosque, a citadel and a marketplace. Kadar and Fārāb fought for pre-eminence in the area. Also worthy of mention in the district of Fārāb is Wasīlī, a small village on the left bank of the river somewhat below the mouth of the Aris and, according to Ibn Hawḵāl, the birthplace of the philosopher al-Fārābī [q.v.], who got his name from the district where he was born.

Fārāb is rarely mentioned in historical sources. In 121/738 for example the prince of Čāḍ (Ṭashḵent), owing to the pressure of the Arabic provincial government, had to banish to Fārāb an Arab who had taken refuge with him (Ṭabīḥ, ii, 164; the only mention of Fārāb by this historian). Islam did not penetrate Fārāb apparently until the Sāmānīd period [q.v.], after the conquest of Isfīḍāb [q.v.] in 225/839-40 (see Ballāḏurī, Futūḥ, 422; Samʿānī, fol. 286b, lines 11-13, s.v. Sāmānī). Wasīlī was mentioned as late as the 12th century as a fortress. For a long time Fārāb lay on the north-east border of Islam territory, until 340/950 when the neighbouring Turks were also converted to Islam. One of the overland routes which led to the land of the Kimāk Turks had its point of departure in Fārāb (Ḡardīz, 83).

According to the common view of the Islamic sources the city of Fārāb corresponds to the later Otrār (for evidence see that article) which, according to Šaraf al-Dīn ‘Ali Yazdī (Ẓafarmand, Calcutta edition, ii, 668), lay two parasangs from the right bank of the Jaxartes. For the further development of the town see OTRĀR. (The ruins of Otrār are in fact about 10 km. from the river.)

**Bibliography:** Le Strange, 484 ff.; Barthold, Turkestän, 176-9; Ḫudūd al-Īslām, index, and 358. See also the bibliography to OTRĀR. (W. Barthold—[B. Spuler])

**AL-_FARĀBĪ, ABŪ NĀṢR MUḤAMMAD B. MUḤAMMAD B. TĀRḤĪN B. AWZĀLĀḠ (UZUGI?),** referred to as Alfarabius or Avenasar in medieval Latin texts. One of the most outstanding and renowned Muslim philosophers, he became known as the "second teacher", the first being Aristotle.

i. — Life

Very little is known of al-Fārābī's life. There neither exists an autobiography nor do we have any report by contemporaries. Al-Fārābī was of Turkish origin. He was born in Turkestan at Wasīlī in the district of the city of Fārāb [q.v.] and is said to have died at the age of eighty or more in 339/950 in Damascus. His father, described as an officer (ḵādīḏ gāyīn), may have belonged to the Turkish body-guard of the Caliph, and al-Fārābī may have come to Baghdad with him early in life. He settled down there for many years as a private individual; he did not belong to the society of the court nor was he a member of the secretarial class. For reasons unknown he accepted in 330/942 an invitation of the Shīʿ Ḥamdānī ruler Sayf al-Dawla [q.v.] and lived in his entourage, mainly in Aleppo, together with other men of letters, until his death in 358/970.

His teacher in philosophy was a Christian, the Nestorian Yūbānā b. Haylān. Al-Fārābī himself...
AL-FARABI 779

(Ibn Abi Usaybi'a, ii, 135, 8 ff.) and al-Mas'udi (Tanbih, 122 ff.) connect him ultimately with a branch of the Greek philosophical school of Alexandrian descent which somewhat continued to exist after the Arab conquest; some of its representatives are supposed to have come to Antioch, and the school subsequently spread to Marw and Harran and from there to Bagdad. Yuhanna is reported to have come from Marw to Bagdad after 295/908. The possibility that he had taught al-Farabi in Marw cannot be ruled out. Apart from this, we learn that al-Farabi was somehow in touch with the great translator and commentator Abu Bighir Matta' b. Yûnus (d. 329/940), a prominent figure in the Bagdad school of Christian Aristotelians, and that he had a great influence on Yahyà b. 'Adi (d. 362/972), its main representative in the next generation. Al-Farabi's extant philosophical works bear out his dependence on the 10th century syllabus of Christian Aristotelian teaching in Bagdad and the impact of the late Alexandrian interpretation of Greek philosophy on his thought (cf. M. Meyerhof, Von Alexandrien nach Bagdad, in Sitzungsber. d. Preuss. Akad., Phil. hist. Klasse, 1930, xxiii).

ii. — Thought

Al-Farabi was convinced that philosophy had come to an end everywhere and that it had found a new home and a new life within the world of Islam. He believed that human reason is superior to religious faith, and hence assigned only a secondary place to the different revealed religions which provide, in his view, an approach to truth for non-philosophers through symbols. Philosophical truth is universally valid whereas these symbols vary from nation to nation; they are the work of philosophers—prophets, of whom Muhammad was one. Al-Farabi thus went beyond al-Kindî (q.v.), who naturalized philosophy as a kind of appropriate handmaiden of revealed truth; on the other hand, he differs from al-Razi (q.v.) by not condemning the prophets as impostors but allotting, like his master Plato, an important and indispensable function to organized religion. There is some evidence to suggest that al-Farabi reached this view gradually.

Al-Farabi set out to explain how Greek philosophy—which had reached him as an almost closed system of truth and an established method of reaching felicity—could provide valid explanations of all the important issues raised in contemporary Islamic discussion. Greek natural theology shows the truth about God as the first cause of emanation, about divine inspiration (wakû) as the outcome of the supreme perfection of the human mind, about the true nature of creation and divine providence as it manifests itself in the hierarchic order of the universe and about immortality, which is by no means granted to every human being. As magistra visae, philosophy gives the right views about the freedom of moral choice and of the good life altogether. The perfect man, the philosopher, ought also to be the sovereign ruler; philosophy alone shows the right path to the urgent reform of the caliphate. Al-Farabi envisages a perfect city state as well as a perfect nation (umma) and a perfect world state.

Apart from building up a philosophical syllabus for different levels of study, al-Farabi had to rethink the existing Islamic sciences and to give them a new meaning and a new function in his novel theistic philosophy: a grammar adaptable to every language (cf. P. Kraus, Fabir et la science grecque, Cairo 1942, 251, n. 2); a dialectical theology (kalâm) and a jurisprudence (fiqh) restricted to the service of a particular religion, its "legal theology," and using the forms explained in Aristotle's Topics and Sophistici Elemyci (cf. Gardet-And&s, Introduction à la theologie musulmane, Paris 1948, 102 ff.); the metaphysician is also the true lawyer, as Plato has shown in his Laws, which were translated into Arabic a second time by al-Farabi's contemporary Yahyà b. 'Adi (see ARAÎN). Rhetoric and Poetic provide the best method for bringing home the truth to non-philosophers, i.e., the majority of men, by working on their imagination; no Greek philosopher would ever have envisaged that Rhetoric and Poetic could be applied to Muslim scripture, and to the Muslim creed (cf. R. Walzer, Greek into Arabic, Oxford 1962, 129 ff.).

Only a few characteristic tenets of al-Farabi can be mentioned here. Like many later Greek thinkers, he believed in the ultimate identity of Plato's and Aristotle's views. He based himself on Aristotle, as understood by the Greek commentators of late antiquity, in logic, natural science, psychology, metaphysics (these metaphysics however understood and developed on moderate Neoplatonic lines). In political science he preferred to follow Plato's Republic and Laws, as understood by middle Platonic thinkers, convinced that Plato's theoretical framework had by Aristotle and the Neoplatonists, but that his analysis of the imperfect states and his solution of the problems of politics remained valid and compatible with the changed political conditions. The Greek antecedents of this particular branch of later Platonism—which also appealed strongly to Ibn Rushd (q.v.)—are lost and can be reconstructed only from al-Farabi's writings and those of his successors (cf. R. Walzer, Aspects of Islamic political thought, in Oriens, 1963).

According to al-Farabi, the first cause is at the same time the Plotinian one, the eternal creator of an eternal world, and the Aristotelian Divine Mind, a conception which is probably of middle-Platonic origin. Aristotle's ψυχή σοματική is for Al-Farabi neither identical with the Aristotelian soul situated within the human soul but has become a transcendental entity mediating between the higher and the sublunar world and the human mind—probably another later Greek interpretation of the difficult Aristotelian chapter De an., III 1. Very remarkable is the theory of imagination and prophecy adopted by al-Farabi; it may also derive from some otherwise lost Greek original (cf. R. Walzer, Greek into Arabic, 206 ff.). Prophecy, though being an indispensable ingredient in man's perfection, is auxiliary to his rational faculty, being confined to the inferior faculty of representation. It is neither described as a state of possession by supernatural powers nor understood as a mystic 'state'. Divine inspiration may be granted to the perfect man who has reached the highest philosophical level together with the highest form of prophecy.

The Christian-Arabic Aristotelian teaching in 4th/5th century Bagdad is the immediate background of al-Farabi's thought. His proximate ancient sources are within the orbit of the Greek philosophical schools in 6th century Alexandria. To a large extent, he appears to continue a tradition which became distinct during the later tenth century. Introduction of Byzantine civilization and whose original form may now be reconstructed from Arabic versions and imitations only. His particular variation of Neoplatonic metaphysics and his full acknowledgment of the
political aspects of Plato's thought distinguish him from Proclus and his followers. Much more of Porphyry's thought may be preserved in al-Farabi's work than is apparent to us today. His ultimate roots seem to lie in a pre-Platonist platonic tradition.

Al-Farabi's importance for subsequent Islamic philosophers is considerable, and would well deserve to be described in detail. His impact on the writings of 4th/10th century authors such as the Ikhwan al-Safa', al-Mas'udī, Miskawayh, and Abu 'l-Hasan Muhammad al-Āmīrī is undeniable. Ibn Sīnā seems to have known his works intimately and Ibn Rushd follows him in the essentials of his thought. Maimonides appreciated him highly. His political ideas had a belated and lasting success from the 13th century onwards (cf. T. W. Arnold, The Caliphate, Oxford 1924, 125 ff.). A few of his treatises became known to the Latin Schoolmen; more were translated into mediaeval Hebrew.

iii. — Works

More than one hundred works of varying size are attributed to the Arab bibliographers to al-Farabi, not all of them genuine. One, the Risālā known as al-Fusūs fi 'l-bikma, is most probably by Ibn Sīnā (cf. S. Pines, in REI, 1951, 121 ff.), and its wrong attribution to al-Farabi has made it unnecessarily difficult to realise how fundamental the differences between these two most influential Islamic philosophers are, in spite of many obvious similarities.

a. First to be mentioned among the genuine works are the great scholarly commentaries on a number of Aristotle's lecture courses; they continue the tradition of the late Greek schools without a gap (cf. the twenty-two volumes of the Commentaria in Aristotelica graeca published by the Berlin Academy); they seem to have been used by Ibn Bāḍijīa [q.v.] and especially by Ibn Rushd [q.v.] and have to a large extent been superseded by their commentaries. One of them, on the Ilīsī ḫ ṭūrīya, has just been edited for the first time, with valuable and copious indexes, by W. Kutsch and S. Marrow (Beirut 1960); it is based on a Greek original different both from the 6th century A.D. commentary by Ammonius [q.v.] and from the Greek work used by his Latin contemporary Boethius; all three seem somehow to depend on a lost commentary by Porphyry. We learn about similar commentaries on all the remaining parts of the Organon, including the Rhetorica (widely, I think, used by Ibn Rushd), on the Physics (which al-Farabi read more than forty times), the De caele, the Meteorology and parts of the Nicomachean Ethics (depending probably on a lost commentary by Porphyry). There may well have been more. A commentary on Alexander of Aphrodisias' De anima is mentioned. A commentary on Porphyry's Isagoge attributed to al-Farabi is in fact by Abu 'l-Faraqī b. al-Tayyib (cf. S. M. Stern, in ASCSA, xix (1957), 119 ff.). I assume that Ibn Rushd's Commentary on Plato's Republic (ed. E. I. J. Rosenthal, Cambridge 1950) depends on a similar work by al-Farabi.

b. A number of relatively small introductory monographs 'tōsī ḫūṣaynīyanīn'.

The very titles of three not yet traced refutations of philosophically difficult topics help to circumscribe Al-Farabi's position among the philosophers of his time. One is against Galen (Dāllūs)—known to the Arabs not only as a physician but as a philosopher as well—and rejects Galen's attacks against Aristotle's first cause, most probably in the wake of Alexander of Aphrodisias' refutation of Galen [see Dālīnūs]. Another is against John Philoponus (again in defence of Aristotle) and, by implication, al-Kindī [q.v.], who both adhere to the creation of the world from nothing (cf. R. Walzer, Greek into Arabic, 193 ff.). In a third treatise al-Farabi set out to refute Muḥammad b. Zakariyyā al-Rāzī [q.v.], presumably because of his belief in atoms and the creation of the world in time. A treatise against Ibn al-Rawandi may have been concerned with his radical rejection of prophecy altogether (ed. F. Kraus, Beitrag zur islamischen Ketzergeschichte, in RSO, 1932).

d. There is finally a group of important major works which sum up the results of philosophical research and al-Farabi's further reaching intentions. They all are concerned with the sovereign position to be given to philosophy within the realm of thinking and with the organization of the perfect society and the philosopher-king. Their right understanding provides, in my view, the key to al-Farabi's

A critical edition, with English translation and commentary, is being prepared by R. Waizer.

IV. On political government (al-siyasa al-madawiyya), a similar survey of the whole of philosophy, written with the same definite political purpose in mind. Edited Hyderabad 1346/1927. Ger. trans. (Die Staatsleitung), by F. Dieterici, Leiden 1904. A critical edition and an English translation are being prepared in Chicago.

J. Rosenthal, Political thought in medieval Islam (later atabeg [see ATABAK AL-‘ASAKIR], and Taghiri Birdi al-Bashbughawi. On 25 Rabî 1 I 808/20 September 1405, upon report that Faradi had fled in the company of Taghiri Birdi to Syria, it was Yashbak and Baybars who arranged the accession of ‘Abd al-‘Azîz. After the restoration of Faradi, Djakam and Nawruz revolted in Syria, the former proclaiming himself Sultan, with the regnal name Al-Malik al-‘Adil (11 Shawwâl 809/21 March 1409), but was killed soon after in his siege of Âmid. Syria, however, remained in the hands of Nawruz, who succeeded in winning over Shaykh al-Mahmûd, now viceroy of Damascus, Baybars (later atabeg [see ATABAK AL-‘ASAKIR], and Taghiri Birdi al-Bashbughawi. On 25 Rabî 1 I 808/20 September 1405, upon report that Faradi had fled in the company of Taghiri Birdi to Syria, it was Yashbak and Baybars who arranged the accession of ‘Abd al-‘Azîz. After the restoration of Faradi, Djakam and Nawruz revolted in Syria, the former proclaiming himself Sultan, with the regnal name Al-Malik al-‘Adil (11 Shawwâl 809/21 March 1409), but was killed soon after in his siege of Âmid. Syria, however, remained in the hands of Nawruz, who succeeded in winning over Shaykh al-Mahmûd, the amir sent by Faradi to replace him. Despite three expeditions against them, Faradi was unable to break the power of these two amirs, who defeated him finally at Lajdijin (Dhu ‘l-Hijjâdja 814/March-April 1412), and forced his deposition at Damascus whither he had fled. After a brief reign of six months by his puppet, the Caliph al-Musta’in, Shaykh himself became Sultan, taking the regnal name Al-Mu’ayyad (q.v.).

The only exception to the bleak rule of amirs’ rivalries in this period is provided by the appearance in Syria of Timur (q.v.). Although Faradi, after some hesitation and refusals of aid to the Dâlà’irid and Ottoman rulers against the threat from the East, did make a stand at Damascus against Timur, it would not be true to assert either that the external challenge provoked any real degree of internal consolidation within the Mamluk Sultanate, or that fear of defeat at the hands of Faradi made Timur turn north to Anatolia and Bâyazid I rather than south to Egypt, after plundering Damascus (Radjab 803/March 1401). The chronicler Abu ‘l-Maḥbûsî b. Taghiri Birdi (q.v.) does, however, report Timur’s respect for the Egyptian army, whose effectiveness he considered reduced
only owing to the youth of the Sultan and the lack of unity among its commanders (Nudium, vi, 46). The brief encounter between the two rulers at Damietta also provided, in the opinion of the chronicler, an interesting if inconclusive meeting between Timur and Ibn Kathaldun who, though out of office, had been prevailed upon to accompany Faradj to Syria.

With regard to the rôle of Faradj in Mamluk history the two Egyptian chroniclers al-Makrizi and Ibn Taghri Birdi represent diametrically opposed opinions. Whereas the former ascribes to him the ruin of Egypt and Syria because of poor administration, debased coinage, corrupt officials, and oppressive taxation (Khitai, cited Nudium, vi, 271-3), the latter gives Faradj a most favourable obituary despite his observation that the Sultan had brought about the financial ruin of his family and indirectly the death of his father (Nudium, vi, 270-4). In fact the remarks of Ibn Taghri Birdi must be considered with the greatest care, owing to the involvement of his family's affairs with those of Faradj, who had married a sister of his and, during an acute crisis, appointed his father atabeg (810/1407-8). His son's portrayal of Taghri Birdi as a loyal and self-sacrificing subject of the Sultan may not be inaccurate, but it is bound to have affected the chronicler's view of the recipient of such loyalty and sacrifice. Such observations on the finery and extent of commercial records of Western powers then active in Egypt and Syria would suggest that al-Makrizi's evaluation of Faradj as one addicted to arbitrary fiscal policies and indifferent to the importance of a sound and consistent administration, is not unfounded.

AL-FARAFRA, an oasis in the eastern Libyan desert, in Egypt, situated approximately on lat. 27° N. and long. 28° E., equidistant from the Nile and the Libyan frontier. It is a halting stage between the oases of al-Dāhla and al-Bahrīyya 160 km. to the north-north-east; the routes are motorable only with difficulty. Al-Farafra is a single village of about 1,000 inhabitants. Its mud huts surround a slightly raised fortification. Village and oasis are situated in a vast plain 70 to 90 m. high, partially covered with sand and surrounded by an immense barren plateau of Lower Eocene limestone extending all round, some 300 m. in height; the depression includes a score of wells and springs, the most abundant of which are Ayn al-Bellad and Ayn Ebsay. They provide the irrigation for a plantation of palms with a few olive-trees, pomegranates, and some barley, wheat, sorghum and onions. Groups of wild palms mark other areas with water. The inhabitants sell dates and a few olives, and buy in particular grain.

Al-Farafra is said to be the T3-šew (land of oxen) of Pharaonic times and the T3-maṣūrān of Classical sources (E. Mayer). R. N. Frye (1951) has suggested that the name Farah is not mentioned in Arabic works dealing with the conquests, but it is mentioned (as Faraj) by the geographers Istakhri (247), Ibn Hawkal (420), and al-Mukaddasī (306). The bridge over the river, and the road from al-Birna to the oasis are both noted. Although the town is mentioned by later geographers (Rudād al-šalām, Yākūt, etc.) it never had any historical importance. It was abandoned in the time of the Mongols, rebuilt, and sacked by Nādir Shāh, and today has ca. 15,000 inhabitants.

Bibliography: Classical sources are discussed in Pauly-Wissowa, xx, 738; xxiii, 817. Arabic sources are summarized in Le Strange, 341. Upon the present town see E. Caspian and E. Cagnacci, Afghānistan crocevia dell' Asia, Milan 1953, 256.

FARAH ANTUN, (Antūn being the family name; 1874-1922), Arab author and journalist. Trained in a Greek-Orthodox school near Tripoli (now in Lebanon), he migrated to Egypt, and published a journal in Alexandria. He then migrated to the U.S.A. but, following the Turkish revolution of 1908, went back to Egypt and became active in the national movement.

Well versed in French literature (and translations) he was attracted mostly by social-political-ethical and philosophical-religious themes, but he lacked method, system, and consistency. His adherence to Westernism in the spirit of the French Revolution, as well as his lucid exposition, felicity of expression and a ceaseless search for new ideas and the 'latest word' marked him as a representative of enlightenment. He was essentially a gifted eclectic, translator and excerpter, exponent of Western ideas and of their conflicts in his mind. Thus he brought to the Arab reader Renan's ideas on the origins of Christianity and on Ibn Rushd; discussions of Nietzsche and Tolstoy, of socialist theories. A pr vincity for polemics caused him to clash with literary and public figures (notably with Muh. ʿAbduh, on Ibn Rushd).

His New Jerusalem (1904) is a novel set in the time of the Arab conquest, and, though it suffers from lengthy ideological monologues, has a place in the history of the novel in Arabic. He was also a playwright.

His influence was considerable and he was used to be styled in schools as a classical author, mainly on account of scope and style.

Bibliography: Brockelmann S III, 1924;
FARAH ANTÜN — FARA'IDIYYA

(M. PELLMANN) FARAHĀBĀD, the name of a place in Mażandārān, situated 35° 50' N, 53° 2' 38" E., 17 m. north of Sārī and 26 m. north-west of 'Aṣgar [q.v.], near the mouth of the Tīgīn (or Tīgīn, or Tīgīna) river. Formerly known as Tāhān, the site was renamed Farahābād by Shāh Ābās I, who in 1020/1612-1 or 1021/1612-3 ordered the construction of a royal palace there. Around the palace were built residences, gardens, baths, bazaars, mosques, and caravanserais. The new town, according to Pietro della Valle, was peopled by Shāh Ābās with colonies of different nationalities—including many Christians from Georgia—transplanted from territories overrun by Šafāwī forces. Farahābād was linked to Sārī by Shāh Ābās's famous causeway (completed in 1031/1621), and until his death in 1038/1629 Shāh Ābās regularly spent the winter either at Farahābād or 'Aṣgar, usually not returning to his capital Isfahān until after Naw-rūz. The Ta'rikhi 'Alamārā-yi Ābbāsī uses the terms dār al-saltana and dār al-mulk with reference to Farahābād; this suggests that it had become virtually a second capital (cf. also A Chronicle of the Carmelites in Persia, London 1939, i, 282).

Pietro della Valle, who visited Farahābād in 1628, declared that the circuit of the walls was equal to, if not greater than, that of Rome or Constantinople, and that the town contained streets of more than a league in length, and Chardin, who saw it forty years later, stated that the palace housed a vast treasure (including half-brothers on the mother's side), the palace housed a vast treasure of all this see MIRATH, (local Indo-Persian pronunciation farā'idiyya). Hādīdī Shari'ī Allāh was born at an uncertain date in a humble family in the pargana of Bandarkhola, a district of Faridpūr (eastern Bengal); when hardly 18 years old he went to Mecca, where he remained for a long time (about twenty years apparently) and is said to have been the pupil of Shāykh Tahir al-Asbār, a Shāfi'i scholar. The date of his return to Bengal varies in the different sources, which give it as 1807, 1822 or 1828, while certain writers affirm that he made two journeys to Mecca, returning home to his country in the interval. If we accept the latest date, it is unquestionable that Shari'at Allāh was in touch with the Wahhābī reformers in Mecca. A specific Wahhābī influence is in no sense indispensable for an understanding of the orientation of Shari'at Allāh's activities in Bengal, which are to be explained above all by the contrast he so vehemently resented between a certain type of Islam in his own country and the "Arab" Islam of the Prophet's native land; mutadis mutandis, other Muslim reformers in India (beginning with Shāh Wali Allāh of Delhi himself) had had the same experience. On returning to his native country,
Sharfī'at Allāh launched a reform movement which mainly attracted the lower classes of Muslims in Bengal, and in substance of a legal rather than mystical nature, shining with the widespread application of the sharfī'a so often spoken of in Islam, but so laxly applied. The very name of the movement (from *fārāḍīd* “religious duties”) underlines this aspect. To Western observers today, some of the reforms envisaged by Sharfī'at Allāh might seem to be of little interest; thus, besides various para-Hindu customs, he rejected the celebration, with funerary lamentations and special ceremonies, of the martyrdom of Husayn at Karbalā, the pomp and ceremonial that had been introduced into the very simple, austere rites of Muslim marriage and burial, the offering of fruit and flowers at tombs, etc.; moreover, he prohibited the use of the mystical terms *pīr* and *murīd* (“master” and “disciple”), which at that time conveyed an almost Brahmin-like implication of total devotion of the disciple to his spiritual master, out of keeping with the sturdy Islamic tradition, and instead proposing the two terms *ustādād* and *shāghīrd* (also Persian, but more “secular”); the initiation ceremony common to the various Muslim confederacies, the *bay'a*, was also prohibited and replaced by a simple statement of repentance (*tauba*) and a changed life made by the *pir* or *shāghīrd*. Another significant precept of Sharfī'at Allāh was the prohibition of various nocturnal prayers on Fridays or feastdays, based on the exclusion of British India from the *dar al-Isālm*. But Sharfī'at Allāh does not seem to have gone so far as to preach the *dhikr*, the holy war. His preoccupations, more concretely, were with the wretched condition of the oppressed Bengal peasants (especially as their lack of financial means prevented them from turning to the courts, which in certain cases could have given them justice). He tried to alleviate their miserable state by living among poor peasants as one of them and by making efforts to organize them to escape from the unjust demands of the land-owners, whom he revealed as transgressors of the pure holy law of Islam.

Sharfī'at Allāh's son Muhammad Muhsin, known as Dūdūh Mīyān (1819-60), had a more vigorous temperament, a talent for organizing and a natural authority; under his direction the Farā'idiyya became a homogeneous and disciplined organization with Dūdūh Mīyān himself at its head; by a curious violation of the founder's precept he was called *pīr*. The territory of eastern Bengal (especially the region of Bākgaradgī, Dacca, Farīdpūr and Fābana where the sect was most active) was divided into districts entrusted to special agents whose duty it was to make converts and to organize resistance to the rich proprietors. An especially effective and important measure was the prohibition made by Dūdūh Mīyān of recourse to the ordinary courts; disputes between the Farā'idiyya themselves had to be settled by him personally. Since in many cases the impossibility of the poor peasants securing justice sprang from their individual lack of resources, as has been said, “collections” were organized in order to aid the *sāmīndārs* in the courts in cases of injustice to peasants unable to defend themselves without help. In other words, the Farā'idiyya did not restrict themselves to upholding the beauty of the theoretical principles of “ancient” Islam, like “The earth is God's” (as Dūdūh Mīyān in fact used to proclaim), but, on the contrary, they took effective and practical steps toward putting them into practice. Since the taxes and forced labour imposed by landlords on peasants

were illegal from the point of view of the *shā'ī'a*, Dūdūh Mīyān advised landless peasants to leave the privately-owned estates and settle on the *makhāl*, that is, State property, thus avoiding all taxes other than those owed to the government. It is certain that, faced by a movement so efficiently organized, the rich *sāmīndārs* and indigo planters united and tried to destroy it. As in similar cases, two methods were used: firstly, they tried violence, both privately and officially (Dūdūh Mīyān was even prosecuted on charges, which were more or less pretexts, for piracy, etc.); numerous disturbances broke out in the areas controlled by the Farā'idiyya and the landowners resorted to barbarous tortures; secondly, on the strength of certain religious juridical statements by the Farā'idiyya, they tried to demonstrate their “heterodoxy” and at the same time, placing the discussions on a theoretical-religious basis, they tried to turn the Farā'idiyya aside from practical action. To a certain extent this second method became effective, while the Farā'idiyya lost the sympathy of some neutral Muslims of the neighbourhood (easily persuaded by the Muslim landowners) on account of the mistakes made by them and by Dūdūh Mīyān who, from Bahādūrpūr where he generally lived, “excommunicated” by declaring “non-Muslim” those who were not willing to accept all the doctrines of the sect. Disturbances became more and more serious and frequent and, in 1856, the enemies of the Farā'idiyya succeeded in having Dūdūh Mīyān sent to prison in Allīpūr. The movement continued to vegetate under the direction of Dūdūh Mīyān's sons, who were lacking in energy and whose qualities of organization were very inferior to those of their father. Dūdūh Mīyān died in 1860 and was buried in Bahādūrpūr, but a subsequent flood has left no trace of his tomb. The sect dwindled, to become one of the very many purely religious communities in India, while its social effectiveness was lost.

**Bibliography:** Abdul Bari, *The reform movement in Bengal*, in *A history of the freedom movement (being the story of Muslim struggle for the freedom of Hindo-Pakistan, 1797-1947)*, 1, Karachi 1957, 542 ff. (with copious bibliography). (A. Bausani)

**FARAS (A.)** (pl. *frās*, *furās*, *furān*) denotes the Horse (*Equus caballus*), in the sense of saddle-horse; philologists further restrict the meaning of the word to “saddle-horse of the Arabian breed”. This original name is applied to both sexes without distinction, and serves as a noun of unity for the collective of the species *khayyī* (*Equus*); hence this term is found in agreement with either gender, the feminine, however, seeming the more usual, in ancient Arabic (see Ch. Pellat, *Sur quelques noms d'animaux en arabe classique*, in *GLECS*, viii, 95-9). The word *faras*, pronounced *fras*, pl. *frāsāt*, with the meaning “thoroughbred horse”, has survived in the Bedouin dialects on the borders of the Sahara, whereas the Maghribi dialects only really recognise *hikān* (Tunisia) and *'awd* (Algeria, Morocco) to denote the horse (for the etymology of *'awd*, see Ph. Marquis, *Documents de dialectologie maghrébines*, in *AIEO-Alger*, vi (1947), 206-7). The immense interest taken by the Arabs in their breed of horses, both before and after Islam, and the considerable part which this animal played in Muslim expansion have endorsed the language with a great number of terms, many of them qualifying words, to complete all that *faras* left unspecified as to sex, origin, extrinsical peculiarities and temperament; from it sprang the philology of the
horse which, in amplitude, is in no way inferior to that of the camel. For example, to distinguish the sex, the pure-bred stallion (fabi) will be called khidr, that is to say "one who reserves his seed jealously", and the pedigree brood-mare (faraa) will be kahil, that is "forbidden to all comers", while the mare of mixed breed will be merely ramaka, that is "the offspring of misalliance". The age of an animal is determined by the stage of development of the teeth, as is the present practice; at birth the foal is called muhr, then, up to the year of age filâha = weaned, up to two years old, to three thanî, to four râbai, to five kârib, after which it becomes musdakhân for the rest of its life.

The origin of the so-called "Arabian" breed of horses has been the subject, in the written document-ation of the Arabs, of a multitude of traditions, from which we must exclude those of a purely religious character as well as works of natural history strongly influenced by Greek thought. Pre-Islamic poetry alone can provide some information on this subject, for it represents the least distorting medium for the oldest Arab traditions. Without hoping to find in these archaic poems any precise expositions on the subject, we can nevertheless glean from them the names of celebrated horses and great horsemen which can be tolerably well placed in history, and by means of a genealogy in its general outline, can supply the gaps in the genealogy of ancient families of Arabian horses. The first of these is said to have sprung up among the Azd in the Yemen and the Taghlib in Bahrain, descended from Zâd al-Râkıb (= "the horseman's vaticium"), a famous stallion given by king Solomon to the Azd's delegation on the occasion of their visit to that illustrious monarch and his celebrated stud (hijam). The mother of this sire was the sire al-'Ardwâdî, owned by Hudjir, king of Kinda who had emigrated from the Hadramawt in the 5th century B.C. to the borders of the Syrian desert. The son of this Hudjir is none other than the great poet Imru' al-Kays whose lines giving a description of his steed "with its fine-haired coat" (munsurud) in his classic Mu'allâba (lines 51 ff.) have remained unequalled, though, Of the seven other families of horses known to tradition, four are also connected with Zâd al-Râkıb. To one of these strains was attributed the stallion Dâbis, the fruit of an accidental mating of the noble pure-bred Dhu 'l-koshâl. This degrading origin caused Dâbis, as the outcome of a race, to become the cause of the famous war of Ghâṣafân which lasted for forty years; consequently his strain soon became extinct since it was thought to bring bad luck. Of the three remaining strains, one is purely Persian and the other two of forgotten origin. The story of Dâbis demonstrates the importance which the Arabs originally used to attach in the pedigree to the stallion, whilst after Islam the genealogy was traced through the mares; there is here a curious contra-diction.

With Islam, a new version of the facts comes to light; we now go back to Ismâ'il, to whom is attributed the domestication of the horse, the special gift of Allâh, though without omitting the episode of Solomon's stallion. Then we leap over the centuries of the Djihihîyya and start again with an authentic historical event, the breaching of the dam of Ma'rib, in the Yemen, which occurred in the middle of the 6th century A.D., to explain the origin of the Arabian breed. The flooding of the country is said to have driven the horse population into the desert where they became wild; five mares from these wandering herds were seen by the people of Najd and captured in a curious manner. Five lines of descent sprang from these five mares and one of their descendants, taken to Syria, in her turn bore five thoroughbred strains. From one of these the celebrated mare Kuhyalât al-'Âdâjûz became the eponym for every pure-blooded creature; the term kuhâyân, with its variations khabînâ, khubayl, and kâhîl, even now still denotes the thoroughbred Arab.

In reality, the greatest confusion reigns among the horse-breeds of Arabia and Syria on the matter of these "five strains" (al-kâhâl al-kham), in which they take such pride and to which they claim that their own stock is related. Inquiries undertaken in the interests of historical and scientific truth by trustworthy travellers like Niebuhr (1779), Burkhardt (1836), Blunt (1882), von Oppenheim (1900) and in particular Major Upton (1881) (see Bibl.) have not succeeded in establishing logical connexions between the statements of the various parties consulted; nor could it be otherwise, as the Bedouins have never kept any written pedigrees and entrust the recol-lection of their prized lines of descent to memory alone.

After the Kûrânic revelation, the victorious Muslims created a corpus of mythical traditions making the horse the chosen mount of Allâh, of the Prophet, of the warrior king and of the Prophet. Then emerged the multiplication of traditions bearing witness to the great prestige of the horse, attesting the animal's highly aristocratic origins: they owed their victorious expansion to that animal. Together with the angels' winged horses and those of king Solomon, and al-Burâk, the Prophet's celestial steed, the charger (dhâ'âd) of the warrior for the Faith (al-mudhâqâdî) became, on earth, a powerful agent for ensuring the final reward in the hereafter; that explains what solicitude and care the Muslim rider had to devote to his beast, which in times of shortage was often given precedence over his wife and family. Among certain tribes in Morocco, popular superstition even went so far as to make the horse a mascot and bringer of luck. On the other hand, the time has now long passed when the horse received so much attention from its master in Arabia; the ignignant testimony of all the investigators (see above) bears witness to this.

In the countries of the Near East we can still today find pedigrees (hujidîa) drawn up when there is a sale of horses, in the form of official deeds and attesting the animal's highly aristocratic origins: these are merely the inventions of horse-copers. But, like the medieval treatises on hippology, they betray a preoccupation with the classification of horses, according to the purity of their breeding, in four degrees; thus we have—(a) al-'arâbi or al-suhbî, the "thoroughbred", well-proportioned, of moderate size, and with a flat forehead; its parents are noble, and the belief is that the devil will not approach its owner; (b) al-haqîn or al-shâhârî, the "mixed breed", whose sire is better bred than the dam; (c) al-mubrîf, the "approacher", whose dam is of better breeding than the sire; (d) al-irkhamân, of common parentage: this is the draught-horse or pack-horse. According to the etymologists, it is from this term that the French have derived the words "bardot" or "bardeau" to describe the offspring of the union of the she-ass and the horse. The horse, other than the saddle-horse, is still called kahdi (in Persian kîshâd), or khârdîl, "bastard". A gelding (ghâ'î) can be a thoroughbred, but its sterility deprives it of all estimation in the eyes of the Muslims, the Prophet having disapproved of castration.

Leaving aside those Arab traditions which do not stand up to historical criticism, the origin of the
Arabian breed of horses has been the subject of extensive research by such discerning historians and mammalogists as Piétrement, Ridgeway, von Oppenheim and S. Reinach (see Bibl.), whose conclusions prove irrefutably the very recent character of this breed. Assyria and the Caspian region, long before Arabia, possessed horses very closely resembling the Egyptian and the Barb, and very clearly distinguished from the type of the steppes of central Asia and the Przewalski. Syria first of all became acquainted with this source, which must have been crossed with certain Libyan horses imported during the reigns of David and Solomon, while northern and central Arabia for many centuries remained unaware of the existence of this noble beast. Strabo, writing at the start of the Christian era, testified (Geography, XVI, 268, 284) to the absence of the horse from Arabia in his day. It was only later, in the 4th century, that the large migrations of tribes from southern Arabia towards Syria and ‘Iraq brought a new reinforcement to the horse population of those countries with the Dongola breed; the Yemen had for some centuries had the benefit of Ethiopian exports from this Egypto-Libyan source. From the contact of the two existing stocks, that of Syria-Palestine in the north and that of Naglī-Yemen in the south, both of them of Libyan origin, the Arabian type began to become fixed; the nomadic element, and in particular the tribe of ‘Anaza, by their seasonal migrations for pastureage in effect created a permanent link between the two centres. The great Islamic conquests in the 1st and 2nd/7th-8th centuries further increased the infusion of new blood, first Assyrian, later Caspian, into Arab breeding, horses being one of the forms of booty most highly prized by the Muslim warriors. Furthermore, their rapid advance in the west, with the occupation of the Maghrib, made them appreciate the excellence of the Barb horse and Berber cavalry, the inheritors of the reputation of the ancient Numidian cavalry; in them they found an inexhaustible source of supply for remounting their squadrons; in fact, in the view of Ibn Khallikan (K. Sifāt al-faras, K. Khābl al-faras, and K. Sifāt al-khayl, Paris 1953, 235-6), in prose, the number of works dealing with the horse would be well over a hundred had they all survived; there are frequent mentions of titles such as K. al-Faras, K. al-Khayl, K. Khābl al-faras, and K. Sifāt al-khayl in the lexicographers and encyclopaedists devoted to adab; Ibn al-Nadim, in his Fihrist, gives quite a long list of them. Of the various manuscripts of this sort preserved in the libraries, very few have been published, in view of the fact that many of them became lost or were destroyed. In all periods, the chief preoccupation of the writers of these treatises was to reproduce the terminology relating to the horse, very often at the cost of scientific reality. Moreover, the large place given in these works to superstitious interpretations of the physiognomy of the faras deprives them of what technical value one might wish to find in them; every anatomical detail, when considered from this angle, implies consequences either good or ill for the animal’s owner; in this attitude we can see the mark of the nomad, with his excessive credulity, and similarly in the curious nomenclature of the horse borrowed from the names of desert birds. It is sufficient to consult the classic K. Hilyat al-fursdn wa-shi^dr al-shud/fdn (M. G. de Slane, trans. M. G. de Slane, Paris-London 1843-71, iii. 476), we know that, in the 12th century, a dozen Berber cavalry who disembarked in Spain under the command of Tārik, there were only twelve Arab horses. The theory of the introduction of the Arab horse into the West by Islam is therefore no longer tenable since, on the contrary, it was on the Barb stock, of Libyan breed and perfectly unified, that the Muslims drew so constantly; they hastened to introduce a number of fine stallions to the Barb stock, of Libyan origin, the Arabian type being one of the forms of booty most highly prized by the Muslim warriors. The principles of rearing, teaching and training (tadmir, idmdr) specified in these writings and in general use among the Muslims are very often...
completely contrary to the nature of the horse and differ sharply from modern scientific methods; they served as "manuals of instruction" for the use of the warriors of the Caliph's cavalry squadrons [see FURUSIYYA].

Allah gradually lost the passion for the race-course, in proportion as the number of horses declined. The other Muslim countries have remained quite interested in racing, but the sport is at present governed by rules imported from the west, and the Anglo-Arab thoroughbred is everywhere supplanting its illustrious ancestors. We may add that, but for the judicious and praiseworthy intervention of English horsemen, the pure-bred Arabian would long since have been extinct.

To sum up, we may say that the horse reached its apogee, in the Near East, between the 5th and 1st centuries A.D., and that Arab horsemanship was in its prime. It is possible, in view of mediaeval Arabic literature on subjects concerning the horse regarded from the military viewpoint of military usefulness; they served as a basis for modern methods. But the lack of rational methods in breeding, on the one hand, and the replacement of the breed by new methods of breeding and selection by the Thoroughbred, on the other, have condemned the Arab cavalry to an inevitable decline. Those Bedouins who still ride horses today use only violent and cruel methods to breed them, and it is not unbelievable that the breed is declining at a rapid rate. It is not without reason that the Breton, gifted with rare qualities of intelligence; it must be realised that these horsemen are not and never will be as close to the horses as were their mediaeval ancestors. We may add that, but for the judicious and praiseworthy intervention of English horsemen and breeders, the breed of the pure-bred Arabian would have been extinct.

FARASAN (FARSAN), a group of islands in the Red Sea opposite Abū ‘Arish. They are not mentioned in the Periplus. In the Martyrology of St Arthes the Φαράσιον islands are said to have contributed seven
The name is tribal. According to Hamdani, the Banu Shuwa to the Christian expedition against the Yaman. The name is tribal. According to Hamdani, the Banu Shuwa was equally well received at Kufa (see Aghdni1, xix, 2, n f.). There is no doubt that it is from this time that al-Farazdak entertained pro-

Cawiya; Ali and Muawiya; Abu Numayy II seized them but was ejected by the Turks. According to Ovington "Farazdak" exported corn to Arabia and the inhabitants were employed by Banians in pearl mining. Despite Yamani claims the islands became part of Idrisi, and later, Saudi territory. Philby found a few troops there. They were visited by Ehrenberg and Hemphirch (1825), by Bové (1830-1), and later by oil geologists. Bibliography: J. Boissonade, Anecdota graeca, v, 44: Hamdani, Diwata, 23, 119; Yākūt, iii, 873-4; Albuquerque, Cartas, 1, 268; W. Foster, The Red Sea and adjacent countries, 178; Philby, Arabian Highlands, index. (C. F. BECKINGHAM)

AL-FARAZDAK, "the lump of dough", properly Tammān b. Ghālib (Abū Fīrās), famous Arab satirist and panegyrist, died at Basra about 110/728 or 112/730. Born in Yamama (Eastern Arabia) on a date which is uncertain (probably after 20/640), this poet was descended from the sub-tribe of Mudjashi of the Dārīm group of the Tamīl. His father, Ghālib [q.v.], is said to have played some part, in the Basra area, in the conflict between ʿAllī and Muʿawiyā; to this fact must be attributed the later idea that al-Farazdak entertained pro-ʿAlī sympathies which, however, are not very apparent in his works. The tale that verse does not seem to have been widespread in his family; however al-Farazdak, endowed with a prodigious memory and precocious talent, seems very soon to have made himself known in his tribe by laudatory and epigrammatic compositions in the Bedouin style. The accession of the Umayyad dynasty must have been a decisive factor in the career of the young poet, because of the choices to which it limited him. By the bonds of affinity as much as by obligation, al-Farazdak was first led to choose himself protectors in Yamama, then at Basra, amongst people more or less close to the fortunes of the family ruling in Syria. This attitude is particularly noticeable in the relations he maintained, for example, with the Banū Bakra, who were secretly flirting with the ʿAlīds, though supporting the Umayyads.

The satire attributed to al-Farazdak against the caliph Muʿawiyā, contrary to what Nallino maintains, is far from being definitely authentic. Nevertheless circumstances, fortuitous or contrived, must have affected his behaviour occasionally: it is known, for example, that al-Farazdak, as a result of some rather obscure proceedings, had to flee from ʿIrāk and seek refuge in Medina to escape the threat that Ziyad, the governor of Basra, laid upon his life (in 49/669). At Medina the poet was welcomed most warmly by the local authorities, and he remained in this town till 56/675-6; he then returned to ʿIrāk immediately after the death of Ziyad to attach himself to the latter's son, ʿUbayd Allāh. In 67/686, the panegyrist confirmed his attachment to the Umayyad branch of the Marwānid which was in power, by celebrating prince Bishr, who had come to ʿIrāk, and his brother ʿAbd al-ʿAzīz, whose praises he sang in a threnody in 85/790 (Dīwān, ed. Šāwī, 225 ff.). There is no doubt that under the governorship of al-Ḥādīdī [q.v.], probably because of the intrigues of his enemy Djarīr, who was in the good graces of this powerful personage, al-Farazdak was less in disgrace. Nevertheless he dedicated a number of laudatory poems to al-Ḥādīdī and to some members of his family. Perhaps his delicate position in relation to the governor of ʿIrāk prevented al-Farazdak from obtaining the protection of the caliph ʿAbd al-Malik and it is to be noted that no ode was addressed by him to this ruler. On the other hand, under Wazlī, al-Farazdak was the official poet of the caliph, as witness numerous panegyrics dedicated to him and to his two sons. Under Sulaymān he enjoyed the same favour. It was otherwise on the accession of ʿUmar II in 99/717, when al-Farazdak was rather in the shade. However, the insurrection of Yazīd b. al-Muhallab gave the poet the chance to recover favour and, under the caliph Yazīd II, he violently attacked the rebel whom he had celebrated several years before, at the time of his power (see the panegyrics to Yazīd II and to Maslama, dated 101/720 and 102/720-1 in Dīwān, 262-7 and 201). At this time, al-Farazdak, who was eighty years old, hardly ever left Basra. Caught up in the whirlwind of conflicts between the "Yemeni" and ʿAyṣāf factions, he experienced many difficulties with governors of Arabia who belonged to one or other of them. Twice he was thrown into prison because of this, but succeeded in getting out thanks to local support.

In his career, struggles against rivals occupied a prominent place. Political attitudes, notably attachment to the "Yemeni" or the ʿAyṣāf faction, provoked or aggravated these enmities. In the background one can also sense some tribal partisanship. This is the reason for the implacable hostility nursed by al-Farazdak for Djarīr, also a Tamīl, but of another branch. There is no doubt that the contents between these two rivals have been a fruitful source for anecdotal literature (as one can ascertain from Kūūb al-ghānī, viii, 32-7). Moreover, it is certain that this opposition inspired al-Farazdak—and his enemy likewise—with the poems which most clearly characterize his work. These diatribes should not however, allow us to forget those other relationships, of a different kind, maintained with al-Abwās [q.v.], at Medina, with the "reader"-grammarians Abū ʿAmr ibn al-ʿAlāʾ [q.v.], or with al-Ḥasan al- Баsīr (cf. Aghdānī, xix, 14).

Al-Farazdak seems to have been too unusual a figure not to have stimulated the imagination of the "logographers" who interested themselves in him. In the biographical facts we have, there often comes to light a tendency to exaggerate the eccentricities of his personality, to accentuate his cowardice, bawdiness, drunkenness, and venality. This harsh approach is in fact of little concern because it does not touch on the essentials. What is important in reality is to discover in al-Farazdak the traits which are of relevance for the panegyrist, the satirist, and the representative of a generation torn between bedouin culture and the new ethics. On these lines might be explained certain traits of his character, his recantations and his final impotence, all to be found echoed in his poetry.

The greater part of his poetry has survived, because of Tamīl particularism on the one hand, and also because of the favour al-Farazdak still retained in learned circles in Basra. After an oral transmission about which we have few facts, his poetry was equally well received at Kūfa (see Aghdānī, xix, 2, 3 ff.).

There is no doubt that it is from this time that al-
Farazdak, along with Djärlr and al-Akhtal [q.v.], becomes one of a trio who for several centuries furnished his own lifetime, al-Farazdak did not hesitate to adopt the verses of his contemporaries (cf. Ibn Saläm, 126 and Aghânî1, ii, 266-7, vii, 96); there is also reason to doubt the authenticity of many of the poems which appear in al-Sukkarî's recension in the 3rd/9th century. The Dlwdn, in Sâwi's edition, numbers about 7,630 verses, which is the largest total that is known in the whole of Arabic poetry. His work is presented in the form of fragments or complete poems of 20 to 30 verses, rarely more. Many poems are in kasîda form. With al-Farazdak this form had a tripartite structure with a short nasîb (e.g., Dlwdn, ed. Sâwi, 7, 8, 74-6, etc.), but usually—and this is remarkable—this elegiac prelude is omitted (so ibid., 84-7, 99 f., 228-33 etc.), and very frequently the kasîda is reduced to the laudatory elements alone (so ibid., 57-9, 63-7, 70-1, 99-101, 109-14, etc.). The thematic sequence in the kasîda with nasîb often anticipates the sequence which imposed itself on the "classical" theoreticians (so ibid., 219-24, 302-8 etc.). Too often the thronoid form is difficult to find in this poet, but we have a good specimen of it in the threnody composed on Bishr (ibid., 268-70). The various types of poem are unequally represented in al-Farazdak. He omitted the laudatory themes made up of the traditional stereotypes, among which should be pointed out the traditional theme of the greatness as caliph and the religious value of the Caliph-Imâm (so ibid., 63-7, 89-92 lines 12 ff., 219-24 lines 18 ff. etc.). Naturally enough, tribal and personal fâhûr is frequent in this poet. Like his contemporaries, al-Farazdak treated the epigram in short impromptus or developed it as a thematic element in a kasîda. In this latter case he obtains an effect of contrast with the laudatory elements (so ibid., 115-23 where the glories of the Dâirim are contrasted with the "shames" of the Kulaib, Djârlr's tribe). In al-Farazdak, more than in his contemporaries, the satirical genre has a rare vigour and obscurity (e.g., the parody directed against al-Tirimmah, in Dlwdn, 155-7). The poet, who probably, poorly represented in this panegyrist and satirist, is of a distressing banality, and the Islamic ethic has in no way enriched in depth a spirit completely impregnated with Bedouin culture. Sometimes, however, the poet seems to have been able to strike a moving tone, in lamentation, for example, the death of a child (so Dlwdn, 764 and Aghânî1, xix, 12-3). It is worth noting that, dissolute as al-Farazdak is supposed to have been, he did not to all intents and purposes write in the Bacchic genre (cf. Ibn Kutayba, 294). Likewise this epicurean hardly felt the need to celebrate his loves, and the ode composed on a gallant adventure confirms this deficiency in his sensibility (ibid., 253-62). Similarly in the fragments, in any case suspect, on his separation from his wife Nawâr, the poet is without deep emotion and reduced to repeating banal formulas (see Aghânî1, xix, 9).

The language and style of the works ascribed to al-Farazdak are of a remarkable homogeneity: very rarely does one find a laboured effect due to the use of rare terms or hâfûs legomena. In this poet as in his contemporaries of the 'Irâkî tribe, the only five current metres are employed; nadîâ is employed only sporadically. From this point of view, his work is well worth attention, in the sense that it enables us to assess the prosodic resources available in this epoch to a poet dependent on the Tamiîl tradition.

Put beside the poetry of Djârlr, it is thoroughly representative of the poetry of the great nomads of Eastern Arabia at its height, at the very moment when, in contact with the big 'Irâkî cities, it was to yield before new influences.

(R. Blachère)

**FARD** (adj.), can be taken as a substan., pl. afrâd, used of the individual, and so with the meanings of only, solitary, unique, incomparable; the half, that is to say one of a pair or couple (pl. firdûd, Kûmût root fr.d); and other derivative meanings. The word has been used to denote Allah, as the single Being who has no parallel: al-fard fi sifât Allah (al-Layth, Lisân, iv, 327f, iii, 331a), but it does not occur in the Kur'ân or in hadîth as an epithet of Allah. It is for that reason that al-Azhâr (ibid.) found fault with this usage. There is every reason for believing that al-fard was at that time simply used as an equivalent of ahd, in accordance with the verse huwa'lladhâ hâd (Kur'ân, CXI, 1) "Oo so résume le dogme de l'unicité divine", as R. Blachère said (Le Coran, Paris 1940, ii, 123). In addition, al-fard serves as a technical term in different sciences: (a) in poetry it denotes a line of verse taken in isolation...
FARD — FARGHĀNĀ

(intact or reduced to a single hemistich); (b) in lexicography, the afrḍd are the words handed down by a single lexicographer (see al-Suyūṭī, Mushwrī, ch. v, distinct from ḥaṭaddīb, ibid., ch. 15); (c) in grammar, al-fard has been said to signify “the singular” by de Sacy (Gr. Ar. 5, i, 149), Fleischer (Kleine Schriften, i, 97), Wright (Ar. Gr. 3, i, 52B). This can only be a recent or exceptional meaning of the word, which should be dropped and replaced by the traditional terms al-wḍīd or (more often used today) al-mufrad;

(d) in the science of ḥadīth, fard is synonymous with gharīb mutlaq: a tradition in which the second link of the chain of those who have transmitted it is only represented by a single tābī; (e) in astronomy, al-fard denotes the star αHydra (al-ṣuṭād), and hence the most brilliant (idea of isolation);

(f) in arithmetic, al-ʿadad al-fard is “the odd number” (from 3 upwards, inclusive), as opposed to al-ʿadad al-zawdi “even number” (al-Kh. al-ʿadad al-zawdi, w. 111, 114, lines 8-12); (g) for theologians and philosophers, al-fard denotes the species, as restricted by the bond of individuation.

AL-FARD [see NUDĪM]

FARD (A), also farḍa, literally “something which has been apportioned, or made obligatory”, and as a technical term, a religious duty or obligation, the omission of which will be punished and the performance of which will be rewarded. It is one of the so-called al-ʿakhām al-ḥamsa, the “five qualifications” by which every act of man is qualified in religious law [see ʿAḴMĀ]. A synonym is ṭawḍīb. The Ḥanafi school makes a distinction between fard and ṭawḍīb, applying the first term to those religious duties which are explicitly mentioned in the proof texts (Kūrān and sunna) as such, or based on ṭājmūd, and the second to those the obligatory character of which has been deduced by reasoning. This distinction is not made by the other schools, and as a norm for action fard and ṭawḍīb are equally binding. Individual duties (fardʿāyin), such as ritual prayer, fasting, etc., and the collective duty (fard ḥifāya), the fulfilment of which by a sufficient number of individuals excuses the other individuals from fulfilling it, such as funeral prayer, holy war, etc.

(TH. W. JÜYNEBOLL)

FARGHĀNĀ, Fergānā, a valley on the middle Jaxartes (Sr-Daryā), approximately 300 km. long and 70 km. wide, surrounded by parts of the Tian-shan mountains: the Čatkal range (Ar. Diādgahal, up to 3,000 m. high) on the north, the Fergānā mountains (up to 4,000 m.) on the east, and the Alai mountains (up to 1,000 m.) on the south. The only approach (7 km. wide) accessible in all seasons is in the west, at the point where the Jaxartes leaves the valley and where the trade-route (and since 1899 the railway from Samarkand to Ťash) enters it. The Farghānā valley covers approximately 23,000 km.2; the irrigated land (9,000 km.2) has increased during the last decades, owing to the constant extension of irrigation. The interior of the area consists of a desert.

The Farghānā valley has always been fairly densely populated since the earliest irruption of Islam, and even in pre-Islamic times, according to Chinese sources. As a consequence, the indigenous population has been able to withstand the Turks, who have pressed in repeatedly ever since early Islamic times; thus the Turks have only settled in one part of the district (cf. the present political distribution below). Since the end of the nineteenth century the Russians have also settled almost exclusively in the towns, leaving the agricultural areas in the hands of the indigenous population.

Evidently Farghānā became known to the Chinese in 122 B.C., from the description of an envoy who had travelled through it. But the connexion of the Chinese accounts with individual areas or persons cannot be established with any certainty. After the spread of the second (western) Kūk-Turkish kingdom Farghānā was exposed to Turkish attacks and, after continued fighting between 627 and 649 A.D., came under Turkish dominion. A Turkish prince took up residence in Kāsān (Chinese K'ū-tai), the capital of that time. After the overthrow of the first west-Turkish kingdom by the Chinese, in 657, the whole district was governed from Kānān by a Chinese governor. The indigenous Iranian dynasty, whose influence had for some time been weakened by a succession of local princes (as reported by the Chinese envoy Hsian-tsang in 630), was evidently supplanted by a Turkish ruling family, after the elimination of Chinese rule in about 680. In 739 Arslan Khān is mentioned as ruler of Farghānā.

An Arab-Muslim advance into Farghānā, alleged to have taken place in the time of the Caliph 'Uthmān under the leadership of Muhammad b. Djarīr, who is said to have fallen at Safīd Bulān at the head of 2700 warriors (according to Djamāl Kargar apud Barthold, Turkestan, 160), certainly belongs to the realm of legend. The legend formed the basis for a Persian folk-tale (said to have been translated from Arabic) which later spread throughout Central Asia, and was finally translated into Turkish (cf. Protokol Turkest. Kırška Lyubilele Arkeologi, iv, 149 f.).

In fact the Muslim invasion of Farghānā is connected with the occupation of Transoxania by Kutya-b. Muslim [q.v.]. He first advanced into the country in 94/712-3 and attempted a revolt from there against the Caliph in 96/715, but was killed by his own soldiers (Tabari, ii, 1256 ff., 1275-81; S. G. Klyashtorny, Iz istorii bor'il narodov Sredney Azii protiv arabov [Remarks on the history of the struggle of the peoples of Central Asia against the Arabs], in Epigrapha Vostoka, ix (1954), 55-64; this treats mainly of the events of 712). Kutya-b.'s grave is still pointed out today close to the village of Djalāl Kuduk, near Andīṣan (Protokol, iii, 4). This revolt and the battles which followed in Persia in the next decades, finally leading to the downfall of the Umayyads in 749-50, prevented for some time the consolidation of Arab-Islamic rule over Farghānā. The Muslims apparently had to leave the country again and in 103/721-2 the indigenous Sogdian prince was able to recall and resettle in part of his country those Sogdians who had migrated further eastwards to avoid the summons to adopt Islam (Spuler, Iran, 37, 254 f.). At that time the local nobility (gentry: Dīkhāns [q.v.]) played the leading rôle in Farghānā, as in the rest of Transoxania. The local prince also bore this title before that of Ikhshīdī (cf. Nūqūrdīs, and Ol'ga I. Smirnova, Sogdīyskie monety kak nostnātstvo dnyi istorii Sredney Azii [Sogdian coins as a
new source for the history of Central Asia], in Sovetskoe Vostokovedenie, vi (1949), 356-67; further, A. Yu Yakubovskiy [ed.]: Trudy sogdiansko-te⽅shiyskoy ekspe-

dtii, [Works of the Sogdian-Tadik expedition . . .], i, Moscow-Leningrad 1930, 224-31; further as sources: al-Baladhi, Futak, 420; al-Tabari, ii, 1442, 2142; al-Hudud al-Islam, ed. Minorsky, 115-17, 355; idem in BSOAS, xv/i (1955), 265.—In the year 121/739 the Arabs were once more able to send a governor to Farghana (al-Tabari, i, 1694), but there was still continued opposition to Islam, especially as the permanence of Arab rule had again been put in doubt by the advance of Chinese armies into Western Central Asia as far as Transoxania, between 745 and 751 (cf. Spuler, Iran, 302 and the sources and studies given there). An envoy sent to the Caliph al-

Manṣūr by the local prince, who had evidently fled to Kāḥshahr, was held prisoner for a long time owing to his refusal to adopt Islam (Yaḵūbī, i, 645). The Caliphs al-Mahdi, Hārūn al-Raṣīd (175/6-791), and al-Maṭrūn were also forced to send troops to Farghana to overcome the opposition to Islam and Arab rule (Yaḵūbī, ii, 465 f.; Gardēš, 19; further Spuler, Iran, 31 f.).—The only inclusion of Farghana in the dominions of the Šamānids [q.v.] in approximately 205/820-1, under the administration of the governor Nūh b. Asad (d. 227/841-2), opened the last chapter of Karakhoj, Yaḵūbī, 420, Geogr., 204, al-Yaḵūbī, ii, 478; al-Tabari, ii, 1257), the centre of administration, and Ürast. The indigenous dynasty had in the meantime disappeared. From then on, the inhabitants of Farghana supplied soldiers for the guards of the Caliph al-Mu탈ašīm (218/833-42: al-Baladhi, 431; Spuler, Iran, 137, 185, fn. 8). They thereby strengthened the influence of the Khwarizm (al-Tabari, ii, 1694), but the indigenous dynasty, which from now on increased considerably under the Šamānids. Farghana in the time of the Šamānids has been amply described by Arab geographers. At that time a change in the economic importance of the several parts of the country appears to have taken place. According to Ibn Khurraḍaḵbih, 30, the road leading into the country from the west crossed the country in the Khānd (q.v.), now Lenina, and continued to Akhsikat (q.v.), along the right bank, then to Kūbā, Šah and Özkānd (Üzgānd) along the left bank. Al-Ṯaṣkhirī, 335, on the other hand considers the road running south of the river to be the main one and lists several populated places along it; only a secondary road led to Aḵṣhikāl at that time. The Farghana valley then formed the frontier district against the (still unconquered) Turks, who had recently been driven back north-eastwards in several places. There were strong garrisons in Šah and some neighbouring forts, used as observation posts against them. Aḵṣhikāl (al-Ṯaṣkhirī, 333) was the capital at that time, a position it held as early as the middle of the seventh century, according to Chinese reports and al-Baladhi, Futak, ed. de Goeje, 420). On the other hand Kūbā is designated as larger, and as the actual capital of the country by al-Mukaddas, 272, though its period of prosperity was certainly short.—In the tenth century Farghana was divided into three provinces and many administrative districts, which are listed by the geographers. They stress the fact that the villages of the country were bigger than elsewhere in Transoxania and occasionally exceeded the length of a day’s journey. Islam (of the Hanafi school of law) had already set itself successfully in the meantime, and converts (Ḵānḵāh) of the Karrāmiyā (q.v.) are also mentioned by al-

Mukaddas, 323. Nothing else is reported about adherents of other religions, such as Christians, Manicheans and Zoroastrians. Nevertheless an Arabic inscription dating from 433/1041-2 was discovered in the gorge at Wārōghāk (in the south), showing a Sassanian and Christian (rāmī) date beside the Muslim one (Protokoll, viii, 46 f.). A further Arabic inscription (without this peculiarity in the dating) from the year 399/940-1 was found in Šah in 1855 (Ost. Imp. Akhīb. Komissii za 1882-

1888 godih, p. LXXIII). Buildings from Šamānids times, on the other hand, have evidently not been preserved. The mountain ranges surrounding the valley supplied gold, silver and coal (already then used for heating), al-Istakhri, 334, and furthermore petroleum, iron, copper, lead, turquoise, sal ammoniac and a medicament called Kū’ilkān (cf. BDG, iv, 344; parti-
culars in Spuler, Iran, 387, 399, with sources, especially al-Muḵaddas, 326; Ibn ῾Awhak, 384). Turkish slaves, iron and copper, swords and armour as well as textiles were exported from Farghana and Istāḏ (Ḥudud al-Islam, 116; Spuler, Iran, 407 f.). Judging by the growth in revenue the country’s prosperity increased greatly in Šamānids times. According to Ibn Khurraḍaḵbih, 38, it amounted to 280,000 dirhems; Ibn ῾Awhak, 470, writing about 130 years later, in 977, puts it already at one million (Spuler, Iran, 407 f.).—After the collapse of the Šamānids state in 389/999, Farghana came under the dominion of the Karakhoj (q.v.) and thus of the ruling dynasty of the Ilīq-Ḵāns or Karakhanids (q.v.). Özkānd (q.v.), where twelfth-century buildings and tomb-stones are still preserved, now became the centre of administration. It was there that most coins were minted (often bearing the province name under the dominion of the Gūrkhāns) but other minting-places also occur. The whole of Transoxania was originally administered from Özkānd. After the divisions which soon took place within the Karakhanid dynasty (cf. O. Pritsak, in Iš, xxxvi (1953), 17-68), the princes of Farghana settled in Özkānd, where they witheld a Salṭik advance in the years 482/1090-9. In 536/1141 Farghana came under the dominion of the Gūrkhāns (q.v.) of the Karakhtīyā (q.v.), but the indigenous dynasty was still tolerated, as elsewhere within this state. Until 560/1165-79, this dynasty seems also to have ruled over Šamārḵānd, which later again came under the rule of a separate branch of the Karakhanids. From 1212 to 1218 Farghana was disputed between the Khīrḵānḵā Muhammad II (q.v.) and first the Nāyman prince Kūlīgīn, who had fled westwards, then the Mongols; with the sub-

}
at different times, up to the time of Timur. As Farghana belonged to Mogholistan during the greater part of this struggle, its administration shared certain aspects of the 'Germanic' tradition of the Turco-Mongols; the tax districts in both countries were called Urtin, not Tumän (Mongolian түмэн: unit of ten thousand) as in the rest of Transoxania.

Under the Timurids (q.v.) Farghana mostly belonged to Khusrušān (i.e., to the dominion of Shahrūkh (q.v.) and his son Ulugh Beg (q.v.) and from 873-99/1469-94 had its own ruler in ‘Umar Shahrūkh (q.v.), a great-grandson of Timur. He was succeeded by his son Bābur, who from Farghana moved against the intruding Shāybanids (q.v.) and advanced as far as Samarḵand; but in 909/1504, after frequent battles he saw himself forced to surrender Farghana, and finally fled altogether to India (for details see Bābur). It is to him that we owe a more exact description of Farghana at a time when power-relations in Central Asia were undergoing a decisive change, through the fall of the Timurids, the advance of the Shāybanids at the head of the Šīfī Saʿāvids (q.v.) as well as the establishment of the Šīfī Saʿāvids (q.v.) in Persia. At that time there were nine larger towns in Farghana, to which Bābur also adds Khojašān. Khojašān, the later capital, was only a village at the time. The capital was Andīzān, which was already completely Turkicized. (According to H. de G. Boer, it was here that Caghatay, raised to a literary language by ‘Aṭī Shīr Nawawī, was spoken). Marghānān was then still Iranian.—At the time of Bābur there were numerous orchards and gardens in Farghana and various kinds of wood used for making quivers, bird-cages and similar articles; also a reddish-white stone, discovered in about 1492 and used for making knife-handles and articles of that kind. Iron and turquoise (q.v.) were obtained from the mines; but Bābur makes no mention of coal-mining or the manufacture of weapons, two formerly important branches of the economy. According to his estimate the country was only sufficiently rich to support an army of 5,000 men.

After the final expulsion of the Timurids, Farghana belonged to the Šīfī Saʿāvid state of the Shāybanids; Andīzān was taken by the sea in a local dispute over Agra (i.e., the mine) which gave its name to the whole valley (cf. Māhmod ibn Wall, Bahār al-asrār, MS India Office 575, fol. 102b). After the collapse of the Shāybanids state in 1598-9, several Khoja families divided the country up among themselves. They lived within the nominal dependency of Būghār, in Čadak, north of the Jaxartes, and had to submit to a number of arrangements with the Kuzaks and Kurgiz, who repeatedly pressed into the valleys of the mountains surrounding Farghana. In 1121/709-10 the Farghana valley became a separate Šīfī Saʿāvid Khanate under Shahrūkh Bi (Mullā Niyāz Muḥammad, Taʾrīḵ-i Shahrūkhī, ed. N. N. Pantusov, Kazan 1885, 21; cf. Ivanov, 178-214). From then until 1876 the Farghana valley was the centre of the Khanate of Khojašān (q.v. for details about the name and history of the town).

In 1876 the Khojašān was annexed by the Russians: and became the centre of the "Farghana district" (Ferganskaia Oblast'?), an area of 160,141 km² (according to Brockhaus-Efron) with 5,160,411 inhabitants (in 1897). The seat of the military government was the town New Margelan, founded by the Russians, called Skobelev from 1907-24, and subsequently Farghana (pop., 1931, approx. 50,000) and still today the centre of administration of the "Farghana Oblast'", an area of approximately 720,000 inhabitants (in 1951). The towns of Khokhand and Nangamān were, however, considerably larger and of greater economic importance (Khokhand had approximately 115,000 inhabitants in 1912; and Nangamān 70,000; in 1951, in contrast, approximately 93,000 and 115,000 respectively).

The Russians forthwith raised Farghana's cotton-production considerably, introduced new American kinds of cotton and made Farghana (as Central Asia generally) one of their main providers of cotton and silk. The most important source of uranium of the Soviet Union is also situated in the Farghana valley (especially near Kizyl-Yuning); petroleum and coal are also extracted.—The ancient system of irrigation has been expanded and improved and, as the "Farghana system", it has gained significance for the entire irrigation economy of the USSR: construction of the great Farghana canal in 1939; Farhat dam on the Jaxartes.—The sudden economic advance caused an inflation which led to a revolt in 1898. From 1916 to 1922 Farghana was involved in the fighting between the indigenous Turkish Basmachi associations and the Russians, and later the Bolsheviks. After the October revolution the Farghana valley was no longer a single administrative unit. Instead the central and eastern areas—essentially according to the nature of the majority of the population—were handed over to the Uzbekistan republic, and the west to Tajikistan. The knowledge of Farghana valley belong for the most part, however, to Kirgizistan: this division demonstrates the result of the gradual advance of Turkish tribes into this area and, since the sixteenth and seventeenth centuries, into the mountains, as well as the retreat of the Iranians. This political organization has had no significance for the development of the valley's economy or system of communication. The knowledge of Russian has increased greatly in the last decades among the indigenous population, but without supplanting the indigenous languages.

Islamic period: Barthold, Turkestân, 155-65, 186-202 and index; idem, Zwölf Vorlesungen über die Geschichte der Türkischen Mittelastas, Berlin 1935; idem, Four Studies, ed. V. Minorsky, i, Leiden 1956; idem, Die Geschichte der Turken Mittelasiens, Berlin 1935; idem, Wiesbaden 1952, index; P. P. Ivanov, Oletki po istorii Sredney Asii (Sketches in the history of Central Asia), Moscow 1958, passim, especially 178-213.

he went to Egypt where his son, it seems, was born, and he and his family remained there. He wrote a continuation of al-Tabari’s historical work, entitled al-Ši’a or al-Mu’tadidiyya, a text which has not survived. Both works are known only from quotations in the works of other historians, though it has been suggested that a papyrus leaf containing the account of a battle from the reign of al-Muktafi may derive from the Śi’a; they were probably much more widely used than extant manuscripts under their names indicate. The younger Farghani also wrote biographies of Kāfār al-Khusdī and the Fātimid al-Aziz, both of which, unfortunately, have been lost along with most of the historical literature written under the Fātimids.

Farḥād wa-Shirīn [see Ferdād wa-Shirīn]

Farḥād wa-Shirīn. A. Christensen (Sassanides, 469 and index) has collected together the information relating to Shirin (Pehlavi ‘the victorious’, 590-628). Moreover Christensen (Gesta, 116-9) has noted certain features in the Persica of Cesias in which he sees elements which helped to form the legend of Farhād and Shirīn—Semiramis creating a garden near Mount Bagistanon (Bisutun), having a way cut through the Zagros mountains to allow for the passage of a canal, and having a royal castle built for her own use.

After the occupation of Iran by the Arabs, the first text in their language to mention Shirin and Farhād (Pehlavi Frahadār) became the subject of a series of romances in verse, in Persian, Turkish (see below) and Kurdish (Duda, 3, n. 7 and 8). Moreover Christensen (Gesta, 116-9) has noted certain features in the Persica of Cesias in which he sees elements which helped to form the legend of Farhād and Shirīn—Semiramis creating a garden near Mount Bagistanon (Bisutun), having a way cut through the Zagros mountains to allow for the passage of a canal, and having a royal castle built for her own use.

After the occupation of Iran by the Arabs, the first text in their language to mention Shirin and her lovers is the Chronicle of al-Tabari; in its Persian adaptation by Balʿami, we read: “Shirin was loved by Farhād whom Parvīz punished by sending him to prison (Gestes, 116-9).” Moreover Christensen (Gesta, 116-9) has noted certain features in the Persica of Cesias in which he sees elements which helped to form the legend of Farhād and Shirīn—Semiramis creating a garden near Mount Bagistanon (Bisutun), having a way cut through the Zagros mountains to allow for the passage of a canal, and having a royal castle built for her own use.
built for her, named Kasr-i Shirin [q.v.]. In the Persian language Firdawsi, when writing the history in verse of the reign of Khusraw, tells briefly at the appropriate point, the relations with Shirin, though without giving them in his epic the importance which they were later to assume in the eyes of other poets: Parviz had parted from this childhood friend; meeting her again while hunting, he took her to the palace and decided to marry her, in spite of powerful opposition; then Shirin poisoned her rival Maryam whose son Shiruya was cast into prison; some time afterwards, released him and proclaimed him king, while Parviz was held prisoner in his palace, only accepting food prepared by Shirin; the leaders had him stabbed to death. Later, Firdawsi gave reign to his imagination: Shirin, on Shiruya's orders, consented to appear before an assembly of the nobility; she justified herself in respect of all the accusations brought against her, returned to her palace, made her final dispositions, asked Shiruya for permission to see Khusraw once more, in his tomb, and there she took a violent poison and died at his side.

It was Nizami who, in his Khusraw wa-Shirin (completed in 576/1280), created the romance of Farhad and Shirin, a notable part of this vast poem, from which it can be detached to form a complete work in itself. It would be superfluous to analyse the contents of this and the following poems, which have been studied by H. W. Duda; but a brief analysis of this romance, from which all the others are derived, is indispensable (leaving aside the first part): Shirin wishes to construct a canal; Farhad is assigned to dig it, Farhad came across a vein of gold; Farhad brought before him and, finding his passion unshaken, gives him orders to cut a way through the mountains to keep him away from Shirin; but when digging a tunnel, Farhad came across a vein of precious stones; he managed to escape and was then recaptured. The inspiration of Wahshi, in his Farhad and Shirin (966/1558-9, completed by Wisal, 1265/1848-9), some details of which were taken from Amr Khusraw Dihlawi, is lyrical rather than narrative: the sentimental incidents are in later respects reminiscent of the inspirations of Western poets of love and chivalry. In the short Farhad and Shirin (about 400 lines of verse) of Urif (d. about 1390), which is even more lyrical than the work of Wahshi, the hymn to the beauty of nature and the meditation on the diverse emotions of love form the essential parts of this poem in which sentiment is personified by Shirin, the author refraining from repeating the legend itself which he assumes will already be familiar to the reader. Finally, in 1920 Dhabbeh Behruz published the script of a film "The king of Iran and the Armenian princess".

Bibliography: Faruk K. Timurtsa, Iran edebiyyatinin ve Farhad ve Farhad-ndme: Harimi (Prince of China, an exile who has become an artist; after his death, the leaders had him stabbed to death. Later, the troops mutinied, released him and proclaimed him king, only accepting food prepared by Shirin; the poems of Farhad and Shirin are a notable part of this vast poem, from which it can be detached to form a complete work in itself. The poet Amir Khusraw Dihlawi is the author of this romance, which has been studied by H. W. Duda; but a brief analysis of this romance, from which all the others are derived, is indispensable (leaving aside the first part): Shirin wishes to construct a canal; Farhad is assigned to dig it, but one day, visiting Kari Shirin on the pretext of hunting, the king meets Shirin again; after a long discussion, reminiscent of that between Wis and Ramin [see Gurğan], they are reconciled and marry; the end of the reign and Khusraw's assassination correspond, in essentials, with the records of the historians; after his death Shirin, scorning Shiruya's attentions, kills herself in Khusraw's tomb.

The poet Amr Khusraw Dihlawi is the author of a Shirin and Khusraw in which the narration is more lively and the style simpler than in Nizami's romance; his account of the reign and the amorous exploits of Khusraw (apart from the romance with Shirin) is different from Nizami's; Farhad is no longer a simple engineer but is a son of the emperor, a widower, he met Shirin and fell in love with her; then Arifi follows his predecessors quite closely, until Farhad dies, poisoned by the mother of a young man whom Gulistan had promised to Haffif (about 1520) for the most part kept to the traditional account, but he added various episodes: for example, Khusraw had Farhad imprisoned in a pit in the mountains to keep him away from Shirin; but when digging a tunnel, Farhad came across a vein of precious stones; he managed to escape and was then recaptured. The inspiration of Wahshi, in his Farhad and Shirin (966/1558-9), completed by Wisal, 1265/1848-9), some details of which were taken from Amr Khusraw Dihlawi, is lyrical rather than narrative: the sentimental incidents are in later respects reminiscent of the inspirations of Western poets of love and chivalry. In the short Farhad and Shirin (about 400 lines of verse) of Urif (d. about 1390), which is even more lyrical than the work of Wahshi, the hymn to the beauty of nature and the meditation on the diverse emotions of love form the essential parts of this poem in which sentiment is personified by Shirin, the author refraining from repeating the legend itself which he assumes will already be familiar to the reader. Finally, in 1920 Dhabbeh Behruz published the script of a film "The king of Iran and the Armenian princess".

This theme penetrates very early into Turkish literatures. There exist two very old versions of the poem Khusraw and Shirin, dating back to the first half of the 8th/14th century: one adapted by Kuth (ca. 741/1341) in the territories of the Golden Horde (ed. A. Zajczkowski, Najstarsza wersja Turecka (ed. A. Zajczkowski, Praque 1933), another written by Fakhr al-Din Yahy"a in Western Anatolia, in the principality of the Aydin Oghullari (ca. 707/1306; Ms: Marburg, Westdeutsche Bibl., Or. Q. 1609). There is also a fairly close Turkish translation of Nizami's poem by Shemykh [q.v.], made early in the 9th/15th century.

In Eastern Turkish literature the theme was first treated by Nawâî, who gave first place to the person of Farhad; Farhad, possessed with love for Shirin, pierces a mountain and dies on hearing the false news of Shirin's death. Many subsequent Turkish poets elaborated this theme, for example: Farhad and Shirin: Ahmed Ridwan, Şadri, Hayâtî, Âh, Dişliî; Farhad and Shirin or Farhad-nâme: Harîml (Prince
FARHAD wa-ShIRIN — FARHAT

Korkud), Shami, Nakam, etc. (see Faruk K. Timurtas, Tiirk edebiyatinda Husrev u Shirin ve Ferhad u Shirin hikayesi, in Ist. Un. Tiirk Dili ve Edebiyati, iv (1959), 65-88).

There exist also some versions presenting the story in the form of a dramatic play, e.g., the Farhad wa-Shirin by the Azerbeyzandan poet Samed Vurgun (d. 1956) and that by the modern Turkish poet Nazim Hikmet (d. 1963), translated into Russian as "A Legend of Love".

(A. Zajaczkowski)

FARHANG [see KAMÜS and MAŞIRF].

FARHANGISTAN [see MARJIMA].

FARHAT, DIJAMMUS, Arabic philologist and poet, forerunner of the nineteenth century literary renaissance in the Arab countries, born at Aleppo on November 18, 1630, and died there on June 1732. He was Maronite archbishop of his native town from 1725 to 1732, but we are not concerned here with his activity as an organizer, which was of the greatest importance to the Maronite church, nor with the majority of his dogmatic and polemic writings and his works of edification and history; he must however be mentioned in the history of Arabic literature as a lexicographer, grammarian and poet.

Aleppo was one of the few Arab towns which after the Ottoman conquest had retained and to a certain extent developed a literary tradition. This tradition had been fortified by certain European influences, particularly among the Arabic-speaking Christians. The establishment of the Maronite college at Rome in 1584, and the presence at Aleppo of a large colony of European merchants played an important part in this; it must not be forgotten that J. Golius (1624-6) and E. Pococke (1630-6) both spent some time there. Some literary activity flourished in all the Christian communities, and the Orthodox patriarch Makarius b. al-Za'im al-Halabi (d. 1672) is only one example out of many.

Born of a prosperous Maronite family, the Matar, Farhat received an excellent education from the Christian and Muslim scholars of Aleppo: Butrus al-Tlaawi, a pupil of the Maronite college of Rome (d. 1745; cf. Manash in Machrik, vi (1903), 769-77; idem, Mustatırât, 7; Cheikho, Catalogue, 76-8, no. 270; Mas'ud, Dibra, 9-11), Ya'qub ibn Dibsi, a great authority on rhetoric (cf. Cheikho, op. cit., no. 344), and the famous Muslim scholar Shavkh Sulayman al-Nahwi al-Halabi (d. 1745; cf Manash in Machrik, ii (1902), 396-405), and provided the resulting dictionary under the title: Bulugh al-arab fi Him al-adab (only in manuscript; see P. Sbath, "Uarrive'e aubut Christian and Muslim scholars of Aleppo: Butrus al-Tlaawi, who settled in Lebanon where he sat at the feet of the Maronite archbishop and the Orthodox patriarch Makarius b. al-Za'im al-Halabi (d. 1672) is only one example out of many.

As a philologist, Farhat understood above all the need to make available to his fellow countrymen textbooks which would facilitate for them the study of Arabic. In almost all fields—lexicography, grammar, rhetoric—he wrote such textbooks, some of which have remained until recently in common use among Syrian Christians. Although they are based mainly on Arabic tradition, here and there, particularly in grammar, can be detected traces of European influence, especially of the Roman Maronites and of the school of Erpenius. Among his works of lexicography we have: Muthallathât al-lugha al-^arabiyya (Tâmirh Lebanon) 1867, and Odtân, pp. 2-106), an imitation in verse, composed in 1705, of the famous Muthallathât of Kutrub (q.v.), and provided later with a commentary (manuscripts of it are not uncommon: one, of 1712, is in the Asiatic Museum in Leningrad; see v. Rosen, Les manuscrits ar. de l'Inst. des Langues Or., St. Petersburg 1877, 71, no. 156). His dictionary, Ishâh bâl al-i`rdb, which was completed in 1718, is of greater importance; it is based for the most part on the Kámus of al-Flurâzâbdâl (q.v.), but contains many modern words and terms used by Christian Arabs; the Maronite patron of learning, the emirugh Rûshâd al-Dâhdâl (1813-89), collated five manuscripts of it with the Kâmus and published the resulting dictionary under the title Dictionnaire arabe par Germanos Farhat, évoqué d'Alep. Revu, corrigé et considérablement augmenté sur le manuscrit de l'auteur par Rocharm de Dahdah, sœur maronite, Marseilles 1849, with portrait of the author (Arabic title: Ishâh bâl al-i`rdb); as an appendix to the dictionary is printed the treatise al-Fâsî al-mu`addî fi `awâmîl al-i`rdb. Among Farhat's grammatical works, the Bahût al-ma`lîlîb (cf. Manash in Machrik, iii (1902), 1077-83; idem, Dibra, 111-2) was particularly successful; written on a very large scale, in 1705, and provided the following year with notes, it was abridged in 1707 by the author himself, and it is this abridged form which has been published in many editions with commentaries by Fâris al-Shidyâdî (q.v.), Malta 1856; by Butrus al-Bustânî, Beirut 1854; by Sa`îd al-Sartûnî, Beirut, 1865, 1883, 1891, 1896, 1899, 1913 etc.).

As the zealous pupil of Ya'qub ibn Dibsi, Farhat compiled also a manual of rhetoric and poetical texts under the title: Bulûgh al-arab fi `lim al-i`rdb (only in manuscript; see P. Sbath, "L'arrivée au but
Dans l'art de la littérature : Ouvrage sur la rhétorique par Germanos Farhat, in BTE, xiv (1932) 275-9 with portrait; cf. Diwan, 89; Chehko, Catalogue, 151, no. 6. In the field of prosody two small treatises of his are known: 

\[ \text{Tadkira fi 'l-ba'i} \] (printed with the Diwan, 13-22) and a Risala al-fasli'lid fi 'l-sar'ad (cf. Chehko, Catalogue, 161, no. 7).

Farhat is famous not only as a scholar but also as a poet. He himself collected the poems of his Diwan under the title of al-Tadkira, and it is in this form that the Diwan has been published three times (Beirut 1850—lithog. 1856, 1894)—with the commentary of Sa'd al-Sharti', but in two manuscripts; on the last edition cf. C. F. Seybold, in Litterarisches Zentralblatt, 1895, col. 1447). This collection does not contain all his poetic works, many of which were later printed separately (cf. for example Chehko, Shu'arda', 463-8, and also in Machrîq, vii (1904), 268, xxiv (1926), 397 and passim). His work is interesting from the point of view of literary history as representing a systematic effort to apply the forms of Arabic poetry to specifically Christian themes: the form of the ghâṣal to hymns to the Virgin, the khamisîyyât to the Eucharist, etc. Farhat was of course not the first to do this: as early as the 8th/14th century we have the Diwan of a certain Sulaymân al-Ghazî (cf. Chehko, Shu'arda', 404-24) devoted to the same religious themes, but his name and these works are almost forgotten, and he did not find a school. The Christian element is largely predominant in the Diwan of Farhat, although it cannot be denied that he possessed a fairly deep knowledge of Arabic poetry in general; we find in it vigorous polemics directed against Abu l-'Alâ al-Ma'ârifî (248, 420, 439), many traces of the influence of Ibn al-Rûmî (257), Ibn al-Fârîd (295), al-Suhra'î (248, 420, 439), many traces of the influence of Farhat, although it cannot be denied that he possessed a fairly deep knowledge of Arabic grammar, impressed even the specialists. He introduced the 

\[ \text{Awdrif al-ma'drif} \] into the mystic syllabus of those days, taught it to his disciples and himself prepared a summary of it.

His mastery of Arabic grammar, impressed even the specialists. He introduced the 

\[ \text{Awdrif al-ma'drif} \] into the mystic syllabus of those days, taught it to his disciples and himself prepared a summary of it. A student of the great Shaykh Baha'î, who belonged to a ruling house of Khurasan, and an important mystic centre for the people of Afghanistan, is Shykh Farîd al-Mas'ûdî of Kalyar—

\[ \text{Farîd al-Dîn Mas'ûdî} \text{GANDJ-I-SHAKAR} \]

one of the most distinguished of Indian Muslim mystics, was born some time in 571/1175 at Kâshâwî, a town near Multân, in a family which traced its descent from the caliph Umar. His grandfather, Kâdi Shu'â'î, who belonged to a ruling house of Kâshul, migrated to India under the stress of the Ghuzz invasions. Shaykh Farîd's first teacher, who exerted a lasting influence on him, was his mother, who kindled that spark of Divine Love in him which later dominated his entire being, and moulded his thought and action. Shaykh Farîd received his education in a madrasa attached to the mosque of one Mawlâna Minhâdî al-Dîn Tîrmîghi at Mûtân where, later, he met Shykh Kuth al-Dîn Bikhîyâr Kâkî (q.v.), khalifa of Shykh Mu'în al-Dîn Cîstî (q.v.), and got himself admitted into the Cîstî order. According to Shykh Shatîri, Shaykh Farîd excelled all other saints in his devotions and penitences. At Ush he performed the salatî mîrâs by hanging head downwards in a well, suspended from the boughs of a tree. He observed fasts of all types, the most difficult of them being Dâ'âdî and Tasyî. He had committed to memory the entire text of the Qur'ân and used to recite it once in twenty-four hours. Accounts of his visits to foreign lands by later writers are hardly reliable because no early authority refers to them. Besides Shaykh Kuth al-Dîn Bikhîyâr Kâkî, he received spiritual bedictions from Shaykh Mu'în al-Dîn Cîstî also. For nearly 20 years he lived and worked at Hânsî, in the Hîsâr district. Later on he moved to Adjodhan (now called Pîk Pantan on his account) from where his fame spread far and wide. He died at Adjodhan on 5 Muharram 664/17 October 1265. During the last 700 years his tomb has been one of the most venerated centres of pilgrimage for the people of the subcontinent. He is venerated in Afghan Sikhism alike hold him in high esteem. Numerous rulers, including Timur and Akbar, have visited his grave for spiritual blessings. The town of Farîdkhâît was named after him. He left a big family which spread in the country and many of his descendants (e.g. Shaykh Bâhâ al-Dîn of Radjâpur, near Amroh, and Shaykh Salîm Cîstî of Fatehpur Sikri) set up important mystic orders.

To Shaykh Farîd belongs the credit of giving an all-India status to the Cîstî silsila and training a number of eminent disciples—like Shaykh Dîmâl al-Dîn of Hânsî, Shaykh Nîza'm al-Dîn Awlîyâ'î of Dîhil and Shaykh 'Alâ al-Dîn Sâbir of Kalyar—who disseminated its teachings far and wide. By establishing close personal contact with people, he transformed the Cîstî order—which was, till then, limited in its sphere of influence—into a powerful movement for the spiritual culture of the masses. He attracted towards Islam many of the Hindus tribes of the Pandîb. The impact of his teachings is discernible in the sacred book of the Sikhs, the Guru Granth, where his sayings are respectfully quoted. His knowledge of tafsir, hûrâtî and fiqh, besides his mastery of Arabic grammar, impressed even the specialists. He introduced the 

\[ \text{Wâ'arîf al-ma'drif} \] into the mystic syllabus of those days, taught it to his disciples and himself prepared a summary of it.

Since all sorts of people—djogls and kdfirdn-i siydh posh, Hindus ... districts of lower Bengal.

FA RID [see FAR 'ID, FARO].

FA RIDKOT, formerly a small feudatory princely state in the Fardub, now merged with the Furdup Division of the Indian Fardub, and lying between 27° 32' and 27° 5' E. with an area of 642 sq. miles. Both the State and the principal town of the same name are unimportant. The town, lying in 30° 40' N. and 74° 49' E., 20 miles south of Furdup [q.v.], has a fort built by Râdja Muchul, a native Râdjudt chief, in the time of Fardub-ud-Din Ganj-Shakar (q.v.), popularly known as Bâwâ (Bâbî) Fardub, after whom the fort was named Fardubkoh (koh = fort). The founder was apparently an admiral and devotee of the saint, who was equally popular with the Muslims and the non-Muslims. The former ruling family belonging to the Sdhdhd-Bhr clsn of the Dlids [q.v.], who later embraced Sikhism, occupied the town and the neighbouring territory during the time of Akbar [q.v.]. They were, however, involved in several petty quarrels with the surrounding Sikh states belonging to the same family, badly disturbed during the communal riots of 1947 which followed in the wake of Partition, and is now without any Muslims who have all migrated to Pakistan.

Bibliography: Aitchison, Engagements and Samads . . ., s.v.; Imperial Gazetteer of India, Oxford 1905, xii, 521.

FARID, or Faridkot, a name frequently used among the people of the same name in East Pakistan. The district was created in 1807 out of the older division of Dacca-Dhailupur. It embraces an area of 2,372 square miles and has a population of 2,709,711 (1951 census). The city (pop. 25,287), which is named after that of the local Dîr Shaykh Farid, is situated on an old channel of the Padma. It is generally identified with the Fardubahd of the Muslim period. The A'în-i Abhâr mentions Sarkar Fardubahd, and this name is believed to originate from that of Djalal-ud-Din Fadl Shâh, the Bengal Sultan (886-92/1481-6). But Fardubahd as a mint town is known to have been first started by Djalal-ud-Din Muhammad (818-31/1415-35) after his conquest of the Hindu Râdjaig of south Bengal. Since then Fardubahd maintained its integrity, rising to an almost independent status in the time of the Dihli emperor Akbar under the local zamindar Mâqîl Shâh, who was finally subjugated in about 1013/1609 by Islam Khan, the Mughal of Bengal. It is popularly known as Bawâ (Babî) Fardub, after whom the fort was named Fardubkoh (koh = fort). The founder was apparently an admiral and devotee of the saint, who was equally popular with the Muslims and the non-Muslims. The former ruling family belonging to the Sdhdhd-Bhr clsn of the Dlids [q.v.], who later embraced Sikhism, occupied the town and the neighbouring territory during the time of Akbar [q.v.]. They were, however, involved in several petty quarrels with the surrounding Sikh states belonging to the same family, badly disturbed during the communal riots of 1947 which followed in the wake of Partition, and is now without any Muslims who have all migrated to Pakistan.

FARIDPUR — FARIGHONIDS

45-60; L. S. S. O'Malley, Bengal district gazetteers: Faridpur, Calcutta 1925; A. H. Dani, History of the Farighoni movement in Bengal, to be published by the Asiatic Society of Pakistan, Dacca. (A. H. Dani)

FARIDUN (Pahlavi, Firdun; ancient Iranian, Thraetaona), the son of Abityan or Abtin, one of the early kings of Iran. The most complete text on the subject is the account of his reign by Firdawsī, in verse; some of the sources for it will be found in pre-Islamic texts. §130-3 of the Yasha of the Avesta reveals the names of the first kings of Iran in their original order (the first being Yima [see qmishmid], whose conqueror and murderer, Azhi-Dahaka, was overthrown in his turn and put to death by Thraetaona; the latter was rewarded by a share of the aureole of glory (haureno) which, from the throne of Ahura-Mazda, descends upon the heads of saints and heroes, and which as the result of a grave transgression had forsaken Yima (Yasht 19); Thraetaona the son of Athwya, the priest responsible for preparing the sacred potion known as haoma, saved the world from the domination of the monstrous dragon Azhi-Dahaka, liberated Arnavak and Sahavak (Firdawsī: Arnavāz and Shahrnaz), the daughters of the dead Yima, became king of Iran and lived in peace in the land; three sons, one of whom, Iradj, was assassinated by the other two, leaving a daughter; Thraetaona married her, with the object of procreating an avenger for his son (J. Darnesteter, Zend-Avesta, i, 131, n. 15, sees in this consanguineous union, subsequently transferred by national tradition, an early instance of khetuk-dasi; cf. the same author, Études iraniennes, ii, 217 ff., and al-Masʿūdī, Muridūs, ii, 145). According to religious tradition, Thraetaona fought against the demons of Mazandaran (national tradition describes him as an expert in magic). In the national tradition, handed down by the Shāh-nāma of Firdawsī, Azhi-Dahaka (Persian: Zahhāk) retains only one feature of his monstrous appearance—two serpents which sprang from his shoulders at the kiss of the devil, and which he has to feed by demanding the daily sacrifice of a group of his subjects; one night, in a dream, he sees the young warrior who overthrows him; he consults his soothsayers and learns that Farīdūn will be born and will overthrow him; he orders the execution of the father of Farīdūn, for whom he has a vigorous search made from the time of his birth, though in vain, aided by partisans led by the blacksmith Kavāh, Farīdūn defeats Zahhāk’s troops and imprisons him, in a cave on Mount Damawānd [q.v.]; he is a proclaimed king of Iran, he established justice and peace in the land; three sons were born to him and, in due time, he divided his empire between them; the two eldest, jealous of their younger brother, put him to death—a murder which gave rise to innumerable wars; from the union of Iradj and a slave-girl married to a nephew of Farīdūn was born Manuchīr who succeeded his father on the throne of Iran, overthrew and put to death his two uncles whose heads he sent to Farīdūn; the latter ended his life in solitude, mourning his sons, his eyes fixed on their three skulls.—To this narrative, Arab and Persian historians (Ibn al-Athir, Rashīd al-Dīn, Ibn Khaldūn, etc.) have been followed by the later historians (Ibn al-Athir, Rashīd al-Dīn, Ibn Khaldūn, etc.). The list as usually given includes:

(a) Aḥmad b. Farīdūn, amīr of Gūzgān, about 970. He was a prince of importance, who according to Nasrakhī refused the friendship of the amīr of Marw, whereupon the latter turned to Ismaiʿīl, the Sāmānid ruler of Transoxiana. Aḥmad b. Farīdūn subsequently did homage to ʿAmr b. Lāyīh, the
FARIGHONIDS

After 380/990 Abu ‘l-Harith as Saffarid amir of Gurgan was ordered to oppose Fāʾik, the amir of Harāt, who was then in rebellion. He assembled a large force and advanced from Gurgan against Fāʾik, last heard of at al-Tirmidh across the Oxus. Fāʾik sent a cavalry force of 500 men, Turks and Arabs, who routed the army of the Farīghunid and returned to Gurgan with all its spoils. Abū ‘l-Harith Muhammad b. Abū Farīghun evidently gave his daughter in marriage to the young Saffarid sovereign Nūb b. Mansūr, some time after the latter’s accession in 365/976 (Gardzī, ed. M. Nāzīmī, 48), and in 372/982 he received the dedication of the geographical work Hudud al-‘ilm, possibly written by another Ibn Farīghun (see Minorsky in A Locust’s Leg, 189–90).

It is somewhat striking that Abu ‘l-Harith Muhammad b. Abū Farīghun is apparently never named by ‘Utbī. In his formal account of the Farīghunids (‘Utbī-Maṭnī, ii, 101–5) he states that Abu ‘l-Harith Ahmad b. Muhammad was the father of Abū Naṣr, who in the sequel appears as the head of the family (below, (c)). It seems feasible that some time after 372/982 Abu ‘l-Harith Muhammad, who had already enjoyed a career of perhaps as long as 50 years, was succeeded by a son with the same kunya, Abu ‘l-Harith Ahmad, who would then be the Farīghunī who engaged in the various campaigns mentioned by ‘Utbī between 990 and 995. But the texts of the passage vary: Minorsky has already pointed out that in ‘Utbī-Maṭnī (ii, 101) Abu ‘l-Harith Al-Bawāqī b. Muhammad is succeeded by his son Abu Naṣr Ahmad b. Muhammad, apparently an impossible, from which he concludes that Abu ‘l-Harith Ahmad b. Muhammad never existed (Hudūd al-‘ilm, 176), and although in the same passage the Delhi (1842, p. 283) and Lahore (1930, 188, p. 227) editions of ‘Utbī give, as the son of Abu ‘l-Harith Ahmad b. Muhammad, Abu Naṣr Muhammad b. Al-Bawāqī b. Muhammad, no positive conclusion is afforded. Edmonds ‘Utbī al-Bawāqī is Abu Naṣr Al-Bawāqī b. Muhammad al-Farīghunī (‘Utbī-Maṭnī, ii, 84, also Delhi, 271, Lahore, 218). The successor of b. Abu ‘l-Harith Muhammad b. Ahmad is usually said to be

(c) Abū Naṣr Ahmad b. Muhammad b. Farīghunī. In 385/995, when Mahmūd destroyed the Saffarid power in Khorasan and established himself at Balkh, the local rulers who had previously acknowledged the Saffarids, submitted to him, including Aḥ-ḥi Farīghun, rulers of Gurgan (‘Utbī-Maṭnī, i, 316, cf. Ibn al-Aṭḥir, sub anno 385). Thus when the Ḳānsī crossed the Oxus to attack Mahmūd, Abū Naṣr al-Farīghunī the governor of Gurgan fought in the centre with the Sultan’s brother Naṣr against the Ḵara-Ḵhānsī at the battle of Ḳarhiyān in 389/January 1008 (‘Utbī-Maṭnī, ii, 84, cf. Ibn Khādī̀dūn, iv, 288). Later in the same year, or in the following year, Mahmūd invaded India. His brother-in-law Abū Naṣr al-Farīghunī accompanied him, and played a prominent part (‘Utbī-Maṭnī, ii, 98, cf. Ibn Khādī̀dūn, iv, 789). Abū Naṣr had been confirmed in the possession of Gurgan at his father’s death, and continued to enjoy all his rights there till his own death (‘Utbī-Maṭnī, ii, 102, cf. Ibn al-Aṭḥir, sub anno, Ibn Khādī̀dūn, iv, 790). (d) Hasan b. Farīghunī, once mentioned by Bayhaḵī (Ṭaʿlīḵī, ed. Morley, 125, cited Minorsky, Hudūd, 177), apparently did not succeed to, or did not retain, the governorship of Gurgan, which was ruled by 408/1017–8 as a Ghaznawī fief by Abū Ahmad Muhammad b. Mahmūd (married to a daughter of Abū Naṣr al-Farīghunī) (‘Utbī-Maṭnī, ii, 230).

Nothing can be gleaned concerning the Farīghunīs from the portion of the Taḥābāt-i Nāṣīrī of al-Ḳarīḏḏānī translated by H. G. Ravery, who in his notes mentions a Maḥmūd b. Muhammad Farīghunī, i.e., Maḥmūd b. Muhammad [q.v.] of Khārīḏāzīm. This man is called Farīghunī also by the late (17th century) writer Ǧaffārī (Ǧīfḏārī) (cf. Hudūd al-‘ilm, 174; Cahār makdāla, ed. Mirzā Muhammad Ḳaẕwīnī, GEMS, 1920, 243), and this is usually reckoned a mistake. It is possible, however, that Maḥmūd b. Muhammad (whose genealogy is still unknown) belonged to a collateral branch of the family of the Khārīḏāzīm Shāhs whom he dispossessed in 386/996, in which case he might claim descent from the Afrīqī or Farīghī of Khārīḏāzīm mentioned earlier in this article.

In the 10th century under the Farīghunīs Gurgan appears to have possessed greater importance than at other times in its history. Apart from their political activity, the Farīghunīs were also patrons of learned men and poets, including Bāḍīʿ al-Ẓamān al-Hamāḏānī and Abu ‘l-Fath al-Bustī (‘Utbī-Maṭnī, ii, 102–5, cf. Ibn al-Aṭḥir, sub anno 401; Ibn Khādī̀dūn, iv, 790) and of course the author of Hudūd al-‘ilm. Bibliography: V. V. Barthold, Preface to Hudūd al-‘ilm, 47; V. Minorsky, ibid., 173–8 (the best and most complete account); idem, Ibn Farīghunī and the Hudūd al-‘ilm, in A Locust’s Leg, Studies in honour of S. H. Taqizadeh, London 1962, 189–96; E. Sachau, Ein Verzeichnis muhāmedanischer Dynastien, in Abhandlungen der preussischen Akademie der Wissenschaften, Phil.-hist. Klasse, 1923, i, 5, p. 5 (based on the 17th century author Mūnedīḏḏīm-Bāshī; D. M. Dunlop, The Jawsīnīs al-‘ulamī of Ibn Farīghunī, in Z. V. Togān’s armaṇān, Istanbul 1955, 348–53; Muḥam-
it was necessary to have performed deeds of prowess on the battle-field and, in single combat, to have shown courage above the ordinary. When warring armies came face to face, the farsā stepped forward from the ranks and, after certain preliminaries, issued a challenge to the foe: ‘Is there a champion (mulḥārīz) [ready to prove himself against me]?’. In the wars waged by the Arabs, single combats often formed the first phase of the battle; historians give the names of the fursān and describe with satisfaction the deeds that they accomplished, a notable feature being that they did not always belong to the military aristocracy and often held only a very subordinate rank; their feats of arms nevertheless won them generous rewards. In battle, the farsām remained composed, encouraged his comrades in arms, hastened to the rescue of those who were hard pressed, was ready to give up his mount for an unmounted officer and to continue the combat on foot, etc. When the army was put to flight, he stayed on until the end to fight a delaying action, once again brought solace to his companions, gave aid to the footsore, and finally sacrificed himself to minimize the results of the defeat. The farsā wore a light coat of mail and carried a sabre, a javelin and also a lasso (sakād) which, in single combat, was used to unhorse his adversary and make him bite the dust (for later developments of this use of a lasso, see [sakād]).

Works of adab and history enumerate the fursān of the various tribes, some of whom have become proverbial; in particular, there is the saying afras min Summ al-fursān “a better fursān than Summ al-fursān” (=? Uyatyba b. al-Hārith of the Tamīm), afras min Mulāzib al-asinna (=? Amīr b. Mālik of the Kays), afras min Asīr (= b. al-Tufayl), afras min Bistām (= Kays b. Shaybānī), etc. Hamāma b. Abd al-Muṭṭāb is regarded as the farsā par excellence of Kurayyah, Umayr b. al-Hubbāl al-Sulāmi as the farsā of Islam; Antara is called ‘Antar al-fawāris, etc. Some of these fursān have become the heroes of “romances of chivalry” which in Arabic bear the name Sīra [see 'Antar, Bāṭṭal, Dhu l-Himm, Sīra].

(Ed.)

FARS AL-MUḤAMMAD, alias HUSĀM AL-DIN ABD AL-SHAWAQ [see 'ANNAZĪD].

FARS AL-SHIDYĀK, Lebanese writer, lexicographer, journalist and poet, born at 'Ashkūt in 1804 (B. al-Bustānī, Dā‘īra, x, 428; T. al-Shidyaq, Aḥhāb al-d-yān, 194; Zaydān, Maqālik, ii, 74; al-Dībā, al-Dīmā‘i al-muṣaffal, 353; Tārāzī, Ta’rīkh al-ṣīḥāfa, i, 96), and not at Beirut (as Brockelmann, ii, 505), nor in 1805 (as Masʿād, Fāris al-Shidyāq, 16; Y. Yāzībīk, in al-Maḥkām, n. 172, 8). In 1809 his parents moved to Hadath (14 km. from Beirut, fāsat al-Butn), where Fāris received his early education, later going on to the seminary of ‘Ayn Warāqā (Kisrāwān, Lebanon: see al-Sāḥ, 14-7; Dā‘īra, x, 428; Masʿād, op. cit., 17). As the result of a political clash and the death of his father (in 1820: Masʿād, 17; al-Sāḥ, 32-2), he embarked on the profession of his brother Ṭunnūs (1791-1861), the copying of manuscripts (Aḥhāb, 193, 197; al-Sāḥ, 31-2, 45-8, 68), finding the necessary materials as large as those of the plain foot-soldier [see 'Akhā, Ghāmīma], but to rank among the true fursān
his talents—the passion and martyrdom of his brother Ascad (1798-1830), who, because of his conversion to Protestantism, was arbitrarily imprisoned, and tortured to death by the Maronite Patriarch Yussuf Hubayysh (d. 1845, see Khabarayat As'ad al-Shidyak, in B. al-Bustanl, Kitabat As'ad al-Shidyak, 31-59, 93-104, 106, 109, 120-1). Fâris's conversion to Protestantism is to be dated towards the end of 1825 (Cheikho, Addb, ii, 79, Tarrazi, Sihâfa, i, 96, and Mas'âd, 18, who allege that he was converted in Malta, i.e., between 1834 and 1848, are to be rejected: see al-Shidyak, 377-8 and the dispute between Khârdji and Sîkî; pages 130-2 confirm that he attached himself to the Protestant Evangelical Mission before his departure for Egypt).

His stay in Egypt (1825-34) was marked by his first marriage (his wife, a Maronite born at al-Sülî, was the mother of his two sons Salim, 1826-1906, and Fâyz, 1828-56), and by his coming under the influence of men of learning and of letters as such Nasr Allâh al-Târâbîlûsi (1770-1840) and Sihâbb al-Dîn Muhammad b. Ismâ'îl al-Mâlikî (1803-57). He found there an environment conducive to the study of Arabic, of logic, of theology, of halâm and of prosody. Winning the favour of Muhammad 'Ali, he was appointed Arabic editor of the official gazette, the Wa'âdî' al-Mursîyya, in place of Rif'â'a al-Dîn Muhammad b. Mahfûz (see ibid., x, 428, 'Abûbîd, 135-6; Dâghîr, Masîdîr, ii, 472-3).

At the request of the head of the Protestant Evangelical Mission, he moved to Malta, where he spent several years (1834-48: see Wâsîsâ, 3) teaching Arabic, writing text-books and correcting manuscripts; he interrupted this austere existence only twice: al-Shidyak, al-Sâbî, 157-62 c (zdrat Su'dd, v, 249 ff.; Diwdn, 633-41). Two of the Bible was completed (in less than 20 months), of prosody. Winning the favour of Muhammad 'Ali, he found there an environment conducive to the study of Arabic, of logic, of theology, of halâm and of prosody. Winning the favour of Muhammad 'Ali, he was appointed Arabic editor of the official gazette, the Wa'âdî' al-Mursîyya, in place of Rif'â'a al-Dîn Muhammad b. Mahfûz (see ibid., x, 428, 'Abûbîd, 135-6; Dâghîr, Masîdîr, ii, 472-3).

In 1848 he was invited to London (Kashf al-mukhabbd, 67) to assist in the translation of the Bible (Kanz al-raghdâbî, i, 168-70); there, divorcing his first wife, he married an Englishwoman, who came to England in 1845 (see Najm, Thesis, 61).

In 1848 he was invited to London (Kashf al-mukhabbd, 67) to assist in the translation of the Bible (Kanz al-raghdâbî, i, 168-70); there, divorcing his first wife, he married an Englishwoman, who came to England in 1845 (see Najm, Thesis, 61).

But it was in Istanbul (end of 1857) that Fâris was to reach the summit of his fame. In favour with Sultan 'Abd al-Majîd in 1854 (see al-Sâbî, 665-72), to return secretly to Lebanon in 1837 and to visit England in 1845 (see Najm, Thesis, 61). He found there an environment conducive to the study of Arabic, of logic, of theology, of halâm and of prosody. Winning the favour of Muhammad 'Ali, he was appointed Arabic editor of the official gazette, the Wa'âdî' al-Mursîyya, in place of Rif'â'a al-Dîn Muhammad b. Mahfûz (see ibid., x, 428, 'Abûbîd, 135-6; Dâghîr, Masîdîr, ii, 472-3).

In 1854 (see al-Sâbî, 665-72), to return secretly to Lebanon in 1837 and to visit England in 1845 (see Najm, Thesis, 61). He found there an environment conducive to the study of Arabic, of logic, of theology, of halâm and of prosody. Winning the favour of Muhammad 'Ali, he was appointed Arabic editor of the official gazette, the Wa'âdî' al-Mursîyya, in place of Rif'â'a al-Dîn Muhammad b. Mahfûz (see ibid., x, 428, 'Abûbîd, 135-6; Dâghîr, Masîdîr, ii, 472-3).

When the translation of the Bible was completed (in less than 20 months), he took up residence in Paris (ibid., 633-41). Two panegyrics, the one addressed to Ahmad Pasha, Bey of Tunis (usrat Su'dd, 1851: see ZDMG, v, 249 ff.; H. Pèrès, in-Mahk thouf, no. 341, 2, the other to Sultan 'Abd al-Majîd in 1854 (see al-Sâbî, 665-72), to return secretly to Lebanon in 1837 and to visit England in 1845 (see Najm, Thesis, 61).

In 1854 (see al-Sâbî, 665-72), to return secretly to Lebanon in 1837 and to visit England in 1845 (see Najm, Thesis, 61). He found there an environment conducive to the study of Arabic, of logic, of theology, of halâm and of prosody. Winning the favour of Muhammad 'Ali, he was appointed Arabic editor of the official gazette, the Wa'âdî' al-Mursîyya, in place of Rif'â'a al-Dîn Muhammad b. Mahfûz (see ibid., x, 428, 'Abûbîd, 135-6; Dâghîr, Masîdîr, ii, 472-3).

In 1854 (see al-Sâbî, 665-72), to return secretly to Lebanon in 1837 and to visit England in 1845 (see Najm, Thesis, 61). He found there an environment conducive to the study of Arabic, of logic, of theology, of halâm and of prosody. Winning the favour of Muhammad 'Ali, he was appointed Arabic editor of the official gazette, the Wa'âdî' al-Mursîyya, in place of Rif'â'a al-Dîn Muhammad b. Mahfûz (see ibid., x, 428, 'Abûbîd, 135-6; Dâghîr, Masîdîr, ii, 472-3).
In the religious sphere no faith satisfied him, and in search of honours and pleasures. Yet he rebelled, both Oriental and European circles (al-Mufrtabas, 68-9, 235) and wrote two text-books of Arabic grammar, in French (with G. Dugat, Paris 1854) and in English (Practical Arabic grammar, 2nd ed. London 1866). Drawing on the old lexicons, he undertook the translation of a work on the nature of animals (Malta 1841), assisted in the translation of the Bible, borrowed extensively from Western journals, and composed a trilingual (Persian-Turkish-Arabic) dictionary (Beirut 1876).

Extensive though it is, al-Shidyak's poetical production (Diwan of 22,000 lines: Maqdhir, ii, 82; Darih, x, 430; selections published Istanbul 1291/ 1874; various poems in al-Sah, al-Wasat, Kasfi, see especially Kasn al-raghadib, iii and introduction to the Diwan) remains on the whole linked with the classical tradition. Besides the quatrains in which he expressed his pious feelings, there are some satirical effusions and some lyrical outbursts (Kans, e.g. 8, 11, 56-7, 80, 85, 87 and passim; Diwan, 11, 12, 15, 16, 22, 30, 33, 43, 80, 84, 88, 89). The rest is a more or less servile imitation of the older writers, most of it occasional verse.

The Kans al-raghadib (7 vols.), selections from al-Diwasib, reflects the results of his reading, his travels, his translations and his personal contacts. It is a mixture of ethics, sociology, politics (i and ii), history (v-vii), literature and linguistic discussions, composed of numerous diverse elements and assorted pieces of information which have aroused interest in both Oriental and European circles (al-Muktubas, vi).

In the religious sphere no faith satisfied him, and he remained a sceptic, a cynic, a realist, a materialist forerunner, if not actually the first, of the progressive thinkers of the 19th century. Born 288/900 at Fasa century. Born 288/900 at Fasa (called by Ibn Khallikan al-Adudi, iii, ii). He died at Baghdad in 377/987.

Despite this ambivalence of culture and outlook, we can discern in his works some of the features which characterize the writings of his contemporaries, and the seeds of a literature of innovation which blossom-ed after him. Concerned with the everyday problems of the century, he is the creator of the genre of the Maqala, the newspaper article (see Maqala), and the forerunner, if not actually the first, of the progressive reformers. Conservative and radical, traveller, linguist, man of learning and journalist, this humanist is undoubtedly one of the chief representatives of 19th century Arabic literature.

Bibliography: M. AL-FARISIYYA — FARMAN 803

Athir, ix, 36; Ibn Taghrlbird I, 533-4; Ibn al-\clrnad, Shadhardt, iv, 88-9; Suyuti, Bughya, 216.

(\text{C. \text{RABIN}})

FARISIYYA \[\text{see IRAN.}\]

AL-FARISIYYA, DIZAHRAT, island in the Persian Gulf in Lat. 27° 59' N., Long. 50° 10' E., about midway between the shores of Saudi Arabia and Iran. Like Dizahrat al-\Arabiyya, 14 statute miles to the south, al-Farisiyya is low and less than one square mile in area. The island is administered by Iran which maintains a meteorological station there (although Kuwait and Saudi Arabia have also advanced claims on it), and the Persian Gulf Lighting Service maintains a navigation light.

(W. E. MULLIGAN)

PARK \[\text{see FASL.}\]

AL-FARKADAN* \[\text{see NUJUM.}\]

Ancient Persian framdn (fra = "fore", Greek προ, modern Persian farman through dropping the ending α and insertion of a vowel owing to the initial double consonant (still fra- in Pahlavi). In the derived verb framndan the 8 of the stem became ℓ (after the third century: far-midan, analogous to az-midan "to try", pay-midan "to measure", nu-midan "to show", etc.).

In Firdawsi framdn is found with the following meanings: command, authority, will, wish, permission; and framdnad accordingly: to command, to regulate, to have something done, to say, to announce, as well as "to permit"; in those meanings mentioned first it is construed with (i) the content of the command as direct object, (2) a following infinitive, (3) with tā "that", or (4) kī "that", and (5) with kī introducing direct address. In addition the forms framdn dālān (or kardān) "to command" and framdn būrdān "to obey" are also found in Firdawsi. Among composite forms Firdawsi has framndinad "commander", "master", framndnārāvād (one whose commands are accepted), "commanding", "powerful", and framndnābar "servant", "slave", as well as framndnāpāhār "submissive", "yielding". In the Farchvan-i Nafṣi the other hand such expressions as "composing a formula" are to a degree identical with those mentioned above and which may be divided into the same two groups according to meaning: f-dāh, f-ramā, f-farmā, f-goḍāh (to command), and f-bār, f-bārdār, f-pādār, f-gōnā, f-nīyād (to obey). There are in Firdawsi isolated examples of the Arabic equivalents of framān: hūkm (sentence, decision, command) and amr (command), although the "Command of God" is called framān-i yāsidān.

Framān in the sense of "document" does not, however, occur in Firdawsi, who uses only the three Arabic (1) expressions rakam (sign, script, writing, decree), manṣūbār (diploma, decree, investiture) and barādī (diploma, assignment). Firdawsi also uses the word nīyād only in the sense of "sign", "emblem", "trace", "target", etc., though in the Aṣbaḥ al-kalahā (mid 12th century) nīyād is already a common term for edicts and diplomas in the broadest sense of the word. But framān as a designation: command for the writing itself came only very slowly into usage and became part of the official language of administration at a very late date. Thus we find in the earlier period framān in the sense of "document" in examples of language which is not quite official, such as the Seyyednāma of Nizām al-Mulk, where framān is employed occasionally as a parallel to mithāl (ed. Hubert Darke, Tehran 1962, 90), clearly designating two different kinds of document, one of which (framān) was issued by the ruler himself, and the other (mithāl) by authorities of lower rank (cf. \text{Ist., xxxvii (1962), 195-8}). A diploma, which would later be called officially framān or nīyād, is designated by Nizām al-Mulk (ed. Darke, 191), still dependent upon Arabic usage, ṣahād-nāma, a term which more accurately applies to treaties in a narrower sense. In religious matters of course a treaty is (now) called ṣahād-nāma. Framān in the strict sense of "document" cannot be unquestionably established before the 13th century, when it occurs as "... dar framān (here in the Arabic broken plural) masta' ati", "... (as is) written in the documents" (Busse, Untersuchungen, Document No. 3).

Until well into modern times expressions such as hūkm, māṣūrān, nīyād, etc. are used beside framān with very little difference, occasionally in the combination hūkm-i framān or hūkm-i mithāl, and it is not always possible to establish without reservation whether by framān the actual command or the writing of it is meant. In this double application of the term framān an echo of an older juridical concept is perceptible, according to which the document was only the writing down of an originally oral (which alone was authoritative) decree. During the Safavid period the edicts of subordinate authorities were designated framān or rakam and (presumably) in the Kāḏār period the terminology had become consolidated to the extent that framān was reserved for the ruler's edicts, while those of governors were called according to their rank either rakam or hūkm (cf. Diplomatic, iii, Persian, 309).

Like rulers' titles the various designations for edict and document are distinguished by epithets: nīyād (framān, hūkm)-i humāyūn "royal edict" (Firdawsi: diraftāh-i humāyūn "felicitous, glorious, royal banner"); akhūm-i mutāf-i humāyūn "royal edicts, which are obeyed"; arāhām wa-akhamān-i mutāf; farāmān-i muṭāfī lāsim al-ādāt-ī-i humāyūn "royal edicts which are and must be obeyed"; hūkm ùfāhmānāt wa-āfāhmānāt "edict, obeyed by the world and shining (like) the sun's rays"; framān-i a‘lā muḥāfīzān-yi a’lām-yi 'abd-llāhī opinion most high, lordly, royal, composite "most high, lordly, royal, composite edict"; rakam mubārāk-i aṣka‘f "blessed and most honoured edict". In comparison to the elatives are the basic forms ālī and šarīf, which were employed for edicts not originating from the ruler himself in the highly developed nomenclature of the Kāḏār period, and to some extent even earlier. A formula of benediction likewise follows mention of the edict or command: a‘lākā ūlā ra‘īn ākālādā naṣīfākāhū "May God elevate it and make abiding its effect"; lā sāla muṣafād** "* l-āḣād wa-l-ārābā "may it be always effective in the regions and quarters of the earth", and other formulae of the kind.

In the Dispositio, that part of the document containing the resolution of the ruler, firmly established formulae are employed: (1) Substantive plus framān: ḥūkm, mīthāl, māṣūrān, framān, hūkm, kūnā (to make an assignment), māṣūmad (to proclaim praise); (2) Arabic verbal noun II plus framānād: tabīrī, taṣfīdī, etc.; (3) Arabic passive participle II plus framānād: mukkarrārī, etc. In the first group of formulae framānād can be replaced by dādan, in those of the second and third groups by kūnān or dāṣhtān and gardānādān. Very frequently two formulae are combined: māṣāramān framānādān ("most exalted favour") (in Firdawsi arzānī means "worthy" or "poor"); in Vullers arzānī dāṣhtān is "dignum putare, tanquam
FARMÂN

digno largiri, concedere, conferre'; thus also in Steingass). In the Dispositio impersonal formulae are also favoured: ُ farmer* naqṣāq anqādīmdīl 'a... command has found the path of issue'; ُ farmer* ُ ُ isdār yafī 'a... command has found the honour of issue and the esteem of promulgation'. Out of these and the equally current formulae with ُ shūd ('had to enable them to issue ُ tughrās for various purposes by a following substantive or adjective, thus: according to the promulgating authority (mīthkālī al-sadārā) for an original document or a confirmation (rākām-ī muḥāmmād, muqaddād, ُ farmer*-ī imād) or taqāddīmīdīl yafī (nishān-ī), and ُ farmer*-ī ُ ُ šāhānmutāl shūd, with the later distinction also here between 'ālī and 'ālī as adjectives for ُ farmer* and ُ šāhām. The issuing authorities and the rank of the originator can be determined by the various introductory formulae, which to some extent, however, depend upon the content of the document or the addressee. Directly related to the introductory formulae are the seals affixed and parts of the protocol (invocation) sometimes used.

The designations for edict and command can in addition be made more precise for various purposes by a following substantive or adjective, thus: as its 'bearer' (inscriptio) or by the authorities (ulak [q.v.]) etc.). The persons in whose favour a ُ tughra was made up by its ُ tughra the office, and often also the name and rank, of the addressee preceded by his honorific titles and composed in a certain form which was abolished by the Grand Vizier Kemānḵesh Muṣṭafā Paşa (1638-44) (Taʻriḵ-i Naʿtimād, 1147, ii, 11). The Grand Vizier and certain other viziers when away from the capital and the Deputy Grand Vizier in Istanbul were often provided with blank papers on which the ُ tughra was drawn before hand to enable them to issue ُ farmāns on the spot. The completed ُ farmān was put in a small bag (bīše, kese) and used to be conveyed to its destination either by government couriers (ulāb [q.v.]) or by the permanent representative of the addressee (provincial governors, etc.) in Istanbul (kāpt ketkūdāsī) or the person who had submitted a petition and asked for the decree. The latter is frequently referred to in the document as its 'bearer' (dārēndē, hāmīl, rāfīs, etc.). The persons in whose favour a ُ farmān was issued were often explicitly allowed to keep it after it had been shown to its addressee (and copied into the local kādī's register), so that they could present it in case of a violation of their rights in future.

Internal structure. In its composition, which changed surprisingly little over the centuries, the ُ farmān bears much similarity to certain occidental documents. It opens with an invocatio (da'wēl, taḥmīd) of God, the shortest form of which is ُ hūwa. Beneath a considerable blank space, a sign of respect, there follows the ُ tughra, which, particularly in later periods, is sometimes richly decorated. The text begins with the address (inscription) which mentions the office, and often also the name and rank, of the addressee preceded by his honorific titles (ulāb) and followed by a short benediction (da'wēl) (see TOEM, i, 1330, suppl., 30-2; Feridūn, Munṣūqātī, i, 2-23). The addressee is not a private citizen but mostly a
government official in the capital or the provinces, a dependent Christian ruler, and the like. Many fermands are addressed jointly to two or more such persons, others to a class of officials in a certain province, along a given road or in the whole Empire.

Following an introductory formula, such as tezkir-i resfi-i humâyûn waşîl oldûqar ma'tâm ola ki ('when the exalted imperial cipher arrives, be it known that...'), most fermands then relate the facts that caused the order to be issued (narratio, iñâbah). Usually this section is a summary, partly verbatim, of an incoming report or petition.

Thereupon follows the main part of the fermand, the dispositio (hükûm, emr), which may open with the words yâley olsa, îmdâ (geherdî ki), etc. In many fermands it consists of two parts. The first, ending in emr edûb, fermandînîm (sadîn) omlûhdîr, and the like, states the sultan's decision in the form of a short, impersonal order. This clause seems to be the 'documentary commission' which, as mentioned above, was generally written by a high official or the sultan himself in the upper margin of the incoming communication or on a separate piece of paper and was sometimes reproduced verbatim in the fermand. The second (or only) part of the dispositio, which sets forth the sultan's command to the addressee in greater detail, mostly begins buyurdum ki. The space left empty after these words in many fermands, the address, a short reference to the contents, examined and approved, the peculiar signature with a wide range of subjects—administration, or khatt-i sherif—ments are called mudiebindjî-e standard formula is amel oluna, which contained rules of general applicability.

The later words in his own hand near the end, the signature, the address, a short reference to the contents, examined and approved, the peculiar signature with a wide range of subjects—administration, or khatt-i sherif—ments are called mudiebindjî-e standard formula is amel oluna, which contained rules of general applicability.

The composition and form of the Ottoman fermand were certainly influenced by oriental (Sadîbîk, Mamûlûk, etc.) and, possibly, occidental models, but this question has not yet been adequately studied. Originals and copies. Original fermands are preserved in the archives and libraries of Turkey, other parts of the former Ottoman Empire and many European countries. A number of them have been published (see Bibli.). Other fermands have survived in the two well-known collections of fermand copies, often legalized by a kâdi (see MOG, ii, 138 ff.). Innumerable fermand texts, generally without the 'protocol' at the beginning and the end, are found in various registers, such as the Mûkimme Defteri [q.v.], Şâhiyet Defteri, Aşkâm Defterî and a few others, most of which are kept today in the Başvkedât Arşivi [q.v.] in Istanbul. Collections of such copies have been published by A. Borchardt (especially for Istanbul), H. T. Dağlıoğlu (for Bursa), D. Sopova (for Macedonia), U. Heyd (for Palestine), I. H. Uzunçarşılı (for Ottoman history and institutions in general), and others. The registers (sîdijî [q.v.] of the şâri'a courts also contain a large number of fermand copies (see publications by J. Grzegorzewski, H. Inalcik, M. Ç. Uluçay, H. Ongan, J. Kâbrda, H. W. Duda-G. D. Galabov, etc.). Finally, many copies of fermands, including many others, are found in indel works by Ferîndûn and others, collectanea (meşâ'îmâ) and chronicles.

iii.—India.

The authentic texts of many formal written royal orders have survived from the Mughal period, in originals located in the archives of former princely states, of the descendents of great merchants or of religious communities. From the references collected in I. H. Qureshi, The administration of the sultanate of Delhi, Lahore 1942, 86, it would seem that the procedures of Mughal times designed to ensure that farmans were intentional, authentic and effective were founded on long-established Indo-Muslim precedent, though in the absence of extant texts from the sultanate period, many details are lacking. The formalizing of the discourse of the Mughal pddshah into a state document could, the A^in-i Akbari suggests, be stately and elaborate. First, the speech and actions of the pddshah were recorded daily by two wazir-nawis, the record being confirmed by the wazir before the pddshah; the pddshah and the officers who had placed it before the pddshah for a second approval. Farmans, which were distinguished from parawans in point of force and generality of application by the attachment of a royal seal, were often, but not always, prepared from a ta'lika or abridgment of the yad-darghi, particularly in the granting of money or of an office entailing the grant of money. Although the pddshah was bound by no invariable rule, farmans were usually issued for appointments as wakil, wazir, sadr, mir bakhshi or naim or for the grant of a mansab, di^agar or sayydarshah. They were also sent to tributary princes, to foreign rulers and used to grant privileges to religious communities and trading organisations.

The procedure for a farman appointing to a di^agar or mansab involved many checks against inaccuracy, fraud and caprice. The farman was drafted both on the basis of a sarkhat or certificate specifying the salary being granted (the details of which were copied in the bakhshis' department from the ta'lika), and on the basis of a ta'lika-yi tan or certificate of salary which went to the di^win or finance minister. These preliminary documents went before the pddshah for continuing approval at various stages and were signed and sealed by such officials as the mir bakhshi, the mustawfi-i di^win and the sabb-i ta'likhi (accountant in the bakhshis' department). The farman of grant or appointment called farman-i ^ahbit received the seals of the bakhshis, the di^win and the wakil before receiving a royal seal. Confidential and important farmans, not involving sums of money, received only a royal seal and were folded and dispatched in such a way that their contents remained private to the recipient. They were called farman-i bayad'i.

The two most important royal seals were the wuzk seal (a 'priy' seal), kept often either by one of the royal ladies or by a trusted official, and a large linear seal (a 'great' seal), the muhir-i mudaddas-i kalim, on which was engraved the name of the pddshah and of his ruling ancestors from Timur. This was particular but not exclusively used for farmans to foreign rulers and to tributary princes. Besides the seal, a tughra or 'sign manual', giving the full name and titles of the pddshah himself, written in naskh, was superscribed. The pddshah might favour the addressee of a farman by adding his own signature to the seal, or by writing a few lines in his own hand, or by impressing the mark of the royal hand (pandia-yi mubarak) upon the farman. Shah Djahân sometimes wrote out the entire farman himself.

FARMASUN [see MA'SUNIYYA].

FARMING [see PILÎHA].

FARMING OF TAXES [see BAYT AL-MAL, DARBA, ILTIZAM, MUKATA].

FARMUL (also FARMSUL). A town east of Ghazna in Afghanistan near Gardêz. It is mentioned by al-Mu^addasi (296), and the !Hudud al-^alam (251). The exact location of the town is unknown and it no longer exists. (R. N. Fays)

AL-FARRA\(^2\), the sobriquet of the grammarian of al-Kûfa, Abû Zakairiyâ' Yahyâ b. Ziyâd, who died in 307/918 according to al-Samânî, Ansâb, f 420a (quoted by Ibn Khâliqân, ii, 229, l. 34), as one of the "grammatical school of al-Kufa"; the fact is that he remained as a dependent of an Arab clan, either the Asad or the Minkâr (see !Fîhrîst, 66 and !Tarîh al-Badî'îyya). He was born at al-Kûfa in about 144/761, of a family that were natives of Daylam and that had moved to Basra. He is not attested after 860/1459, but he remained as a dependent of an Arab clan, either the Asad or the Minkâr (see !Fîhrîst, 66 and !Tarîh al-Badî'îyya). He received an education in Baghdad that went back to the well-known traditionists (!Tarîh al-Baghdadîyya, al-Samânî, loc. cit.) and it is on the subject of his grammatical education that he possesses the fullest particulars, but these must, however, be used with discretion, on the authority of the "Kûfan" Thâlabi (d. 291/904) (q.v.), he is on the subject of his grammatical education that we possess the fullest particulars, but these must, however, be used with discretion, on the authority of the "Kûfan" Thâlabi (d. 291/904) (q.v.). It has been customary to regard al-Farra\(^2\) as one of the masters and indeed one of the founders of the "grammatical school of al-Kûfa"; the fact is that al-Farra\(^2\) holds a place in the list of Kûfans who were influenced by al-Ru'âsî (q.v.) and al-Kisâ'î (q.v.) (see anecdotal material in !Fîhrîst, 64, l. 16, repeated by al-Anbârî, 65, in which the customary must be read, not asannu); in any event, al-Farra\(^2\) would only have met al-Kisâ'î in Baghdad when in his years of maturity, and what is more, it is not admissible to accept that at that time the division between the "School of al-Kûfa" and that of al-Baṣra had already assumed the intensity which it later attained during the grammarians' polemics at the end of the 33rd/9th century and in the following century (cf. Pleisch, 14 and al-Maghrûmi, who refer to Weil, !Mujâfî, Introduction); like his contemporaries,
al-Farra\(^3\) seems in fact to have made wide use of direct inquiry among Bedouin informants; to some degree he was influenced by other Barzanī scholars such as \(\text{Yākūt}\), al-
\(\text{Tha\^{a}f\^{a}}\), perhaps also al-
\(\text{Aṣmā'ī}\), Abu \(\text{Zayd}\) al-
\(\text{Anārī}\) and Abu \(\text{Ubaydā}\) (cf. Abu \(\text{Ib\text{'} t-Tayyib}\) al-
\(\text{Lughawi}\) \(\text{?}\) \(\text{ayd} \) al-
\(\text{Su\^{u}yīt}\), \(\text{Mūti\^{r}}\), ii, 403); like most if not all the Kūfān, al-Farra\(^3\) had an intimate knowledge of the Book of Sībawīyah (cf. the information going back to al-
\(\text{Dhāhib}\), in Ibn Khālikān, i, 385, 1, 21, where the polygraph says a gift was made to the vizier Ibn al-
\(\text{Zayyāt}\) of a copy of this work, originating from the library of al-Farra\(^3\) and executed by the latter himself); in fact the problem of the Baṣrān influences on al-Farra\(^3\) remains partly obscure since the evidence is contradictory (cf. \(\text{Yākūt}\), \(\text{Udābā}\), xx, 10 and al-
\(\text{Su\^{u}yīt}\), \(\text{Bughya}\), 411 and also the summary by al-
\(\text{Māzhūmī}\), 146 ff.); in any case, he does not seem to have undergone direct influences of master on disciple. By his personality, the austerity of his habits, his disinterestedness, and also as a result of his position in relation to the caliph al-
\(\text{Rashīd}\) (see Zubaydī, 143; Ibn Khālikān, ii, 228, l. 12) and especially al-
\(\text{Māzmūn}\) who appointed him tutor to his two sons (see \(\text{Tā'rikh Bhagdad}\), xiv, 150, repeated by al-
\(\text{Anābīrī}\), 130-1), al-Farra\(^3\) appears to have largely deserved the renown which his erudition had won. His knowledge was encyclo-
\(\text{pedic} and derived simulaneously from hadith, ḥikāḥ, astrology, medicine, the "Days of the Arabs", and, naturally from grammar (cf. \(\text{Tā'rikh Bhagdad}\), xiv, 151, condensed in \(\text{Yākūt}\), \(\text{Udābā}\), xx, 11 and al-
\(\text{Anābīrī}\), 132-3); his Mu\(\text{tazīlī} leantings are certain but, according to al-
\(\text{Dhāhib}\), al-Farra\(^3\) had no real gift for kalām (see Ibn Khālikān, ii, 229, l. 13; cf. \(\text{Yākūt}\), loc. cit.). It is above all as a grammarian of the Kūfan school of al-
\(\text{Bughya}\) that he came to be recognised as the leader of the "School of al-
\(\text{Kūfa}\)" (cf. the in-
\(\text{formation given by Ibn Khallikan, ii, 228, l. 12) and especially al-
\(\text{Māmūn}\) who appointed al-
\(\text{Farrā}^3\) to the vizier Ibn al-
\(\text{Nadīm}\) consisted of four volumes; the work is in process of being edited (i, Cairo 1374/1955) by Ahmad Nadjati and Muh. Nadjīdār (for the MSS see Brockelmann, S I, 179); other Kūfan had written works bearing the same title, among them al-
\(\text{Ri\'āsī}\), al-
\(\text{Kūfān}\), (sic) the list of works given in the \(\text{Tā'rikh Bhagdad}\), 67, enumerating 13 titles (cf. \(\text{Mā\text{\^{a}}}nī al-
\(\text{Kūfān}\)), introd. by the editors, to-1, who include 17 titles; this initial list serves as the basis for those given by \(\text{Yākūt}\), Ibn Khālikān, and al-
\(\text{Su\^{u}yīt}\), \(\text{Bughya}\) which includes only 11 titles); a number of these works appear to be lost; note also that certain titles appear to apply to chapters of the \(\text{Hudūd}\). His work consists of: (a) writings on grammar such as — 1. \(\text{K. Ma\text{\^{u}}\text{zīdīm} (}\?\text{)}\) (see \(\text{Yākūt}\), xva, 14; Ibn Khālikān, ii, 229, l. 30; the \(\text{Fīrist}, 67\), gives a \(\text{Haddā mulūsamāt radqān} (sic) among the chapters of the \(\text{Hudūd}\)) — 2. \(\text{K. al-
\(\text{Hudūd}, \text{"Definiiones grammaticae"}, thought by some to have been dictated at the instance of al-
\(\text{Māznūm}\), after 204/819 (cf. \(\text{Tā'rikh Bhagdad}\), xiv, 149) or, more probably, before that date (see Cairo ed., i; cf. al-
\(\text{Ma\text{\^{a}}}nī al-
\(\text{Kūfān}\)), 151); according to the \(\text{Fīrist}, 67\), we possess the list of 45 chap., but al-
\(\text{Su\^{u}yīt}, \text{Bughya}, \text{gave it as 46 and al-
\(\text{Zubaydī}, 150, speaks of 60; the work was imitated by the Kūfan Ibn Sa\text{\d{a}dān} (d. 231/ 845; cf. \(\text{Fīrist}, 70, l. 5) — 3. \text{K. Fa\text{'}ala (}\?\text{) wa-
\(\text{af\text{'}ala (see \(\text{Fīrist}, 67); the K. al-
\(\text{Hudūd} contains a chapter with the same title; a work possibly quoted by al-
\(\text{Su\^{u}yīt}, \text{Mūtīr}, ii, 95 — 4. \text{K. al-

\(\text{Farrā}^3\) by the published part of the K. \text{Mā\text{\^{a}}}nī al-
\(\text{Kūfān}\). The work is highly disappointing and without any general theme, being confined for the most part to argumentation on casual syntax; if here and there certain
interpretations of a Mu'tazili character are to be observed (as in i, 353: nur-imdn) or lexicographical remarks which are not devoid of subtlety (i, 385 on fataha "to judge"), on the other hand the comments on the "lectures" are curious rather than convincing (i, 455). Bearing in mind that this work has not come down to us in the form which the master gave to it, we reach the conclusion that al-Farra' mainly owes his importance to the influence which he exerted over his pupils, either through writings received from him or through his personal authority. In general his followers have, without exception, been distinguished by the same grammatical anomality, of which so many instances are to be found in the K. Mu‘āní al-Kur‘ān, based upon respect for usage particularly when aberrant (see the discussions on certain "readings", op. cit., i, 353, 355, 375-383, 363, 375, 460).

FARRUKHĀBĀD, name of a town and district in the Uttar Pradesh state of India; situated between the Ganges and the Yamuna (Diamna) between 26° 46' and 27° 43' N. and 78° 8' and 78° 8' E., with an area of 1,685 sq. miles. Before the establishment of Pakistan the Muslims were in a majority but many of them later migrated to Pakistan. While the district can boast of an ancient past, the town itself is of comparatively recent growth, having been founded in 1126/1714 by Muhammad Khān Bangash (b. c. 1076/1665), an Afghan military adventurer belonging to the Ma‘ūν-Raghībdābād (now a mere name), a village near Kā‘limangūr, where his father ‘Ayn Khān was employed as a trooper by one ‘Ayn Khān Sarwānī. A dashing soldier, Muhammad Khān had collected about him a band of Afghan mercenaries. When Farrukh-Siyar (q.v.) contested the title to the throne of Dīhlī, he joined him and helped him to win the throne by providing a force of 12,000 men on the battle-field of Samuqārā (1124/1713), nine miles east of Āgra (q.v.). Soon afterwards Kāsim Khān Bangash, father-in-law of Muhammad Khān, was killed in a clash with the local Rādjīptas, and the king, as a token of gratitude, granted his daughter (Muhammad Khān's wife) five mābdīs by way of blood-money. He also ordered the building of a town, named after him, in memory of the slain Bangash chieftain. Thus was founded the town of Farrukhābād, which soon grew in prosperity: and an Imperial mint was established there at which coins (mostly silver rupees) continued to be minted even for the later Mughal emperors. The coins of ‘Alamgīr II, Shāh Durraitī, and Shāh ‘Alam II have the name of the town—Ahmadnāgar—derived from Nawwāb Ahmad Khān, younger son of Muhammad Khān, who had defeated the forces of Sa‘dār-Dīnj, the Nawwāb-Wāzīr of Awadh, in 1163/1750 and recovered from him his lost patrimony, Farrukhābād, which had been captured by the Awadh forces in 1161/1748. This second name appears for the first time on coins minted at Farrukhābād in 1170/1756. Even after the British occupation of the town in 1191/1777 the Farrukhābād mint continued to function for the East India Company, which used it up to 1835, minting silver rupees in the name of Shāh ‘Alam II, although he had died years earlier in 1221/1806. These rupees bore the legend (sikka) of Shāh ‘Alam II in Persian and were known as the Farrukhābād Sīcā rupee.

The earliest account of the district is that of the Chinese traveller Huien Tsang, who mentions some of its ancient sites including that of Sankṣa. The historic Kanawājī, capital of the empire of Hardha Vardhānī in the 7th century A.D., which was plundered and sacked by Maḥmūd of Ghaznī in 409/1018, captured by the Ghūṭrī Sultan Shāhāb al-Dīn Muḥ. Ibrahim, Suyūtī, Buḥyghayn, 411 (probably summarizes Yākūt or Ibn Khallīkān); Abu ‘l-Tayyib al-Lughawī, Marāṭīb al-nawwiyin, ed. Muḥ. İbrāhīm, Cairo 1375/1955, 88 and passim; Zubaydī, Tabakāt al-nawwiyin, 60 ff., 143-6, passim; Sam‘ā‘nī, Anṣab, f° 4204; Suyūtī, Musḥir, Cairo 1942, i, 19 quotations or mentions, ii, 33 quotations or mentions, particularly p. 410. Articles or studies by Ahmad Amin, Dā‘ūd al-Islām, iii, 309-8 (biographical synthesis); Makhzuml, Madrasat al-Kufa, Baghdād 1374/1955, 99 ff., 144-71 (important); H. ... numerous poets imitated his manner.

FARRUKHISTAN, Abru 'l-Hasan 'Ali b. DqrolGh, the celebrated Iranian poet, a native of the town of Sistán (cf. Yákût, s.v.; Karwint, Nuzhat, s.v.), as he says in a hemistich: "I place how two of his most beautiful poems (Dinwan, 177 and 331) which he recited in the presence of the amir governor of Saghaniyán (Barthold, Turkestan, index s.v.) won him the favour of that prince, Fakhir al-Dawla Abú 'l-Muzaffar, the last of his line (cf. Niżāmī 'Arūdī, Cikār makāla, trans. E. G. Browne, 122-3; ed. Mu‘in, Tehran, 176-80), and then a little later (cf. ibid., 331) which he recited in the presence of the sultan's first two successors, whose praises he celebrated without fulsome ness, mentioning their bounty in several of his kasidas; he also wrote poems in honour of leading court dignitaries. On several occasions he accompanied the sultan on his expeditions against India (witness these lines: 'Three times was I with you on the immense sea ...', the trials and fatigue embittered, journey home has broken me'). The collected edition of his poems (diwan) contains more than 9,500 lines of verse; while the treatise on rhetoric Tardījman al-balāgha, often attributed to him, is in reality the work of Muhammad b. Umar al-Radūyānī (end of 5th/11th and beginning of 6th/12th centuries; ed. Ahmed Atész, Istanbul 1949—important introduction). He died probably in 429/1037-8, while still young, according to the lines of his contemporary Labī (quoted by Radūyānī): "If Farrukh died, why did not Unsürl die? The old man lingered on; the young man went so soon" (Tardījman, 32). His kasidas, which are panegyrics, are characterized by the ease and vigour of their style; uncomplicated ideas and sentiments are expressed in sober, clear and fluent language which gives his poetry a particular charm. According to Rāghdh-i Wātān (Haddākh al-sābīr), his talent is reminiscent of that of the Arab poet Abū Fīrās. His shorter poems (a small number only: kīfa, ghasal, rubā’) are remarkable for their freshness and spontaneity of feeling, and for the occasionally ironical and pungent subtlety of thought which sometimes transforms a kīfa into an excellent epigram; in short, the delicacy he shown in the ghasal is just as great as the rhetorical force in the hasida. His mastery was universally acclaimed, and numerous poets imitated his manner.

Matters being dominated by the orthodox elements outside the court against them. As a result, the court became divided into two opposing factions, the administration suffered, and the prestige of the central government was undermined. However, it does not seem correct to identify the court factions as "Mughals" and "Hindustânis", with the Sayyids acting as the leaders of the latter. A close study shows that the factions were not based on any religious or ethnic groups in the Mughal nobility, personal and family attachments and considerations being the main factor. Taking advantage of dissatisfaction at Farrukh-Siyar's patronage of unworthy favourites, the Sayyids gradually succeeded in winning over to their side or in neutralizing most of the important nobles—Radja Diay Singh Kâzwâlâ of Âmber remaining a notable exception. Matters rapidly came to a head. In February 1719, Husayn 'Ali, who had assumed personal charge of the Deccan in May 1715, re-entered Delhi at the head of a large army, which included a force of 15,000 Marâthi horsemen under the command of the Peshwa, Bâldji Wishwanâth. After a proffered compromise had been rejected by Farrukh-Siyar, he was deposed and blinded on 9 Rabi' II 1131/28 February 1719, and a new prince, Râffi' al-Dardjat, was proclaimed. Soon afterwards, in the night of 9 Dhu'mâdâ 1131/ 27-28 April 1719, Farrukh-Siyar was strangled.

The chief importance of Farrukh-Siyar's reign lies in a clear breach with Awrangzbâd's policies in a number of spheres. The dzîya was abolished even while Farrukh-Siyar was in Bihâr. After his victory, an effort was made to conciliate the leading Râdjâts by granting them high munsâbâs and appointing them to important posts. The marriage of Farrukh-Siyar to the daughter of Maharâjâ Adît Singh of Dijdhpur, which was celebrated with great pomp and ceremony in December 1715, was intended as a symbol of the reconciliation. Under the stress of the factional struggle at the court, the Sayyids also befriended the Dîa't Râdja, Čurâman, acquiescing in his usurpation of many areas in the neighbourhood of Âgra, and made far-reaching concessions to the Marâthas, recognizing Radja Shah's right to levy causâs and receiving in return a commission of 35% of the revenue, in the six šâhas of the Deccan. Farrukh-Siyar actively opposed the concessions to the Dîats and the Marâthas. He also sought, belatedly, to rally the orthodox elements to his side by reviving dzîya in 1129/1777. The impost was again abolished by the Sayyids after his deposition.

Another development, which marked an important phase in the growth of the English East India Company, was the grant to it in 1129/1777 of fardmânsecureing the right to carry on trade free of duties in Bengal, Bihâr and Orissa, and at Sûrat and Madras, besides sundry other privileges. There is, however, little justification for the view that these grants were made by Farrukh-Siyar out of gratitude to the English surgeon, Dr. William Hamilton, who had successfully treated him. Dr. Hamilton's services were rewarded by the grant of a robe, a horse, five thousand rupees and other costly gifts. But it was not within the power of Farrukh-Siyar to make grants of the nature desired by the English without the agreement of 'Abd Allah Khân, the wzâir, whose domination over the affairs of the state was almost complete at this time. The English realized this only when two successive applications made by them through their agent, Farrukh-Siyar's personal favourite, Khân-i-Dawran, proved fruitless. Finally, they approached 'Abd Allah Khân, and he sanctioned their petition, over-

Farrukh-Siyar accordingly, and inciting the nobles and elements outside the court against them. As a result, the court became divided into two opposing factions, the administration suffered, and the prestige of the central government was undermined. However, it does not seem correct to identify the court factions as "Mughals" and "Hindustânis", with the Sayyids acting as the leaders of the latter. A close study shows that the factions were not based on any religious or ethnic groups in the Mughal nobility, personal and family attachments and considerations being the main factor. Taking advantage of dissatisfaction at Farrukh-Siyar's patronage of unworthy favourites, the Sayyids gradually succeeded in winning over to their side or in neutralizing most of the important nobles—Radja Diay Singh Kâzwâlâ of Âmber remaining a notable exception. Matters rapidly came to a head. Farrukh-Siyar actively opposed the concessions to the Dîats and the Marâthas. He also sought, belatedly, to rally the orthodox elements to his side by reviving dzîya in 1129/1777. The impost was again abolished by the Sayyids after his deposition.

Another development, which marked an important phase in the growth of the English East India Company, was the grant to it in 1129/1777 of fardmân securing the right to carry on trade free of duties in Bengal, Bihâr and Orissa, and at Sûrat and Madras, besides sundry other privileges. There is, however, little justification for the view that these grants were made by Farrukh-Siyar out of gratitude to the English surgeon, Dr. William Hamilton, who had successfully treated him. Dr. Hamilton's services were rewarded by the grant of a robe, a horse, five thousand rupees and other costly gifts. But it was not within the power of Farrukh-Siyar to make grants of the nature desired by the English without the agreement of 'Abd Allah Khân, the wzâir, whose domination over the affairs of the state was almost complete at this time. The English realized this only when two successive applications made by them through their agent, Farrukh-Siyar's personal favourite, Khân-i-Dawran, proved fruitless. Finally, they approached 'Abd Allah Khân, and he sanctioned their petition, over-
ruling the objections advanced by the officials of the revenue ministry (Early annals of the English in Bengal, ed. C. R. Wilson, iii, 235, li/2, p. xxiv-xxvii, 42-73). 4Abd Allah Khan accepted no personal gratification, and his motives in approving the grants can only be guessed at.

Though Farrukh-Siyar possessed none of the qualities of greatness, his deposition and death made him a martyr in popular eyes, and contributed to the subsequent downfall of the Sayyid brothers. He was apparently survived by only one daughter who married the emperor Muhammad Shah [q.v.] in 1131/1720-1.

**Bibliography:** Documents as well as contemporary and secondary works for the reign of Farrukh-Siyar are very numerous. For details, see Later Mughals, by W. Irvine, ed. J. Sarkar, Calcutta and London 1921; Satish Chandra, Parties and politics at the Mughal court, 1709-1740, Aliqar 1959; from detailed personal enquiries I have learnt that no Ms. of the type described in the Oriental College Magazine, i1a (Aug. 1926), p. 58, no. 70, and referred to by Storey (sec. II, no. 276) exists in the Punjab Univ. Lib. See also M. Mu'imin b. Muhammad Kâsim al-Šârâ'i al-Šârézâl, Khatam al-khayâli, J.R. Lib., ff. 152a-152b (summarized by A. Mindana, in Bull. J.R.Lib., xix (1924), 150-65); Jâhed al-sháh al-Muhammad al-Ma'mûn b. Muhammad, I.D. no. 1711, ff. 520a-524b, 647-8; 'Uthmâd Khân, Mirâd al-hakâ'îb, Bod. Lib., Fraser no. 124, ff. 124a-124b (contents summarized by R. Singh, in Proc. IHRC, xvii (1941) 356-62); Early annals of the English in Bengal, ed. C. R. Wilson, 3 vols., London 1895-1917; Home Misc. Series, Ikix; Satish Chandra, Jisjaz in the post-Anurângp period, in Proc. Ind. Hist. Cong., 1946, 320-6; idem, Nafis, Early relations of Farrukh Siyâr and the Sayyid brothers, in Med. Ind. Quart., Aliqar 1957, 135-46; B. N. Reu, Letter of Maharajah Ajit Singh relating to the death of Farrukh Siyâr, in Proc. 9th A.I. Or. Conf., 1937, 839-42; A. G. Pawar, Some documents bearing on imperial Mughal grants to Raja Shah, in Proc. IHRC, xvii (1941), 204-15; S. H. Ashkari, Bishar in the first quarter of the 15th century, in Proc. Ind. Hist. Cong., 1941, W. Basque, and J. Sarkar, The Magna Carta and after, in Proc. IHRC, vii (1925), 79-87. For works dealing with the revenue and administrative history of the period, see N. A. Siddiqi, Mughal land revenue system in Northern India in the first half of the eighteenth century, (unpublished thesis, Aligarh University). For the career of conquest which culminated in the establishment of the greatest empire of the ancient world. Two centuries later, Farrukh, together with the rest of Persia, was overrun by Alexander the Great. Little is known of the province in Seleucid and Parthian times save that it was ruled by a native of Farrukh of which he became king in 280 A.D. His grandson and father had both been tenders of the sacred fire in the temple of Anahit (Venus) at Isfâl (A. Christensen, L'Iran sous les Sassaôides, Copenhagen 1944, 86). In 224 A.D. 'Amrrevolted, killed Artavan, the last Arsacid, in battle, and thus threw off the Parthian yoke. In this way the Sasanian dynasty and empire were founded. Not without reason did E. C. Browne (ii, 92) describe Farrukh as the 'cradle of Persian greatness'.

In Sasanian times Farrukh was divided into 5 districts, namely, Ardashir-Khurra, Shâpûr-Khurra, Arradjân, Isfâl, and Dârâgbîrd.

It was during the caliphate of 'Umar that the Muslim Arabs made their first attempt to conquer Farrukh (or Farrukh, as they called it), when al-'A'la b. al-Hadrâmî, the governor of Bahrayn, sent 'Arfaqâ b. Harâmâ to attack it from the sea, but the enterprise proved unsuccessful. When 'Uthmân b. Abî 'l-As succeeded 'A'la b. al-Hadrâmî as governor of Bahrayn, he sent his brother al-Hakam to effect the conquest of the province. Al-Hakam, after seizing some islands off the coast, landed on the mainland, but was unable to penetrate far into the interior. During the caliphate of 'Uthmân [q.v.] the Arabs made a further attempt to overrun Farrukh. At Tawwadjî (or Tawwaq), near Râshâh, 'Uthmân b. Abî 'l-As and his men fought a desperate battle with the Sasanian forces under the command of the marshâb Shahrâk; victory at length went to the Arabs after Shahrâk and many of his men had fallen (Balâghûr, 386). Simultaneously, another Arab army, under the command of Abî Mûsâ al-Ashâ'î, set out from Basra and invaded Farrukh from the west. The two generals, having joined forces, penetrated deeply into Farrukh, capturing Shîrâz; in the north the town of Simûz (the ruins of which are near Ganâfâ (Djânânbâ) also fell into their hands. 'Uthmân then detached his forces and captured Dârâgbîrd (which then became arabisized as Dârâgbûd), Pasâ (Fašā [q.v.]) and Shâpûr (Sâbûr). In 286/69-8 the army under Abî Abd Allah b. 'Amir besieged and captured the city of Isfâl; he then marched southwards and took Fârûṣzâbâd and Fars was watered by a number of rivers of Fars. The land-tax (khârûdh) was fixed first at 33 million dirhams; later, in the reign of al-Mutawak-
kil, it was raised to 35 million. The poll-tax (diržya) brought in a revenue of 18 million (diizya). With the decline in the temporal authority of the Caliphate in the 3rd/9th century, Fars came under the sway of Yaʿṣūb b. Layth, the founder of the Saffārīd dynasty. He made Shīrāz his capital city, where his brotherʿAmr b. Layth built the great cathedral mosque on the site of which the present Masjīd-i ʿDāmī stands. The Buwayhids later obtained possession of Fars, one of whom, ʿAḍud al-Dawla, extended his power over most of Persia and part of Mesopotamia; one of his notable achievements was the construction of the great barrage over the river Kurr which was called the Band-i ʿAmir or the Band-i ʿAḍud after him. The Buwayhids were succeeded as rulers of Fars by the Saljūqs [q.v.]; when the power of the latter was on the wane, Sunjkūr, the first of the Salghurid Atabegs, gained possession of the province in 543/1148-9 and refused to acknowledge the suzerainty of the Saljūqs. The Salghurid Atabegs maintained themselves as rulers of Fars until that remarkable woman Abīṣ Khatūn, after ruling for a year, married Manūg Ţumīr, a son of the Il-Khan Hūlegū Khan, in 667/1268 (Hamd Allāh Mustawfī, Taʾrīḵ-i ʿUstāda, 509); thenceforward her authority was only nominal.

Mubārak al-Dīn Muhammad, the founder of the Muzaffarid dynasty, added Fars to his dominions in 754/1353. The Muzaffarids ruled over Fars until Mubārak al-Dīn's grandson Shāh Maṣrūṣ was defeated and killed outside Shīrāz in a fierce encounter with the forces of Timūr in 795/1393. Shah Ismāʿīl I, the first of the Šafavīd line of rulers, who was enthroned at Tabrīz in Muḥarram 907/July 1501, established his authority in Fars two years later. Under him and his successors both Fars and its capital Shīrāz prospered. During the reign of Shāh Abāb I [q.v.] ʿImām Kull Khān, the great Governor-General of Fars, maintained almost regal state in Shīrāz where, in March 1628, he sumptuously entertained the English envoy, Sir Dodmore Cotton, and his suite (see Sir Thomas Herbert, Travels in Persia, 1627-1629, edited by E. Denison Ross, London 1928, 74-85).

Shīrāz, in common with many other places in Fars, suffered severely in the fighting between the Persian forces under Nādīr Kull Begg (Tahmāsp Kull Khān, the future Nādīr Shāh) and the Ghāzīzād Afghāns under Ṭabrīz. This fighting ended with the complete defeat and virtual annihilation of the Afghāns in 1730 (see L. Lockhart, The fall of the Safavid Dynasty and the Afghan occupation of Persia, Cambridge 1938, 336-9). Fars suffered again in the disturbances which occurred after the assassination of Nādīr Shāh in 1760-1747, but the accession to power of the beneficent Karim Khān Zand [q.v.] who made Shīrāz his capital, soon resulted in a return of peace and prosperity. After Karim Khān's death in 1193/1770 Fars suffered once more during the struggle for supremacy between various members of the Zand family and, subsequently, between the gallant Lutf ʿAll Khān Zand and his relentless foe Agha Muḥammad Khān Kāḏjār.

In more recent times the history of Fars has been comparatively uneventful except on the following occasions: In 1250/1834, following upon the death of Fath ʿAll Shāh, his brother ʿAlī Muḥammad, the Governor-General of Fars, had himself enthroned in Shīrāz, but was soon after defeated and forced to relinquish his claims by his nephew Muḥammad Shāh (for details of the battle, which was fought near Kumūshā, see Baron de Bode, Travels in Luristan and Arabistan, London 1845, 1, 61-2; see also Ḥādījī Mīrzā Ḥasan ʿFarsāy, Fars-Nāma-yi Nāṣīrī, Tehran 1133/1723, 111-2). Four years later, in consequence of Muḥammad Shāh’s insistence on maintaining the siege of Herāt despite protests by Great Britain, that power occupied the island of Kharg, 35 miles north-west of Būghār, and threatened to declare war on Persia. The Shīrāz thereupon gave way, and the troops were subsequently withdrawn from Kharg. On 5 Džumādā I 1260/23 May 1844 Sayyīd ʿAll Muḥammad announced in Shīrāz that he was the Bāb or ‘Gateway’ (to the divine Truth), a development which led to very serious disturbances not only in Fars but throughout the country (see bāb, bābāh). In 1273-4/1856, when the seizure by Persia of Herāt involved her in war with Great Britain, the latter power again occupied Kharg and then landed a force on the coast of Fars. This force, after taking Būghār, advanced upon Shirāz; the occupation of the latter, the operations of the British troops, and the disturbances which occurred after the accession of Nādir Shāh in 1160/1747, but the accession to power occupied the island of Kharg, 35 miles north-west of Būghār, and threatened to declare war on Persia. The Shīrāz thereupon gave way, and the troops were subsequently withdrawn from Kharg. On 5 Džumādā I 1260/23 May 1844 Sayyīd ʿAll Muḥammad announced in Shīrāz that he was the Bāb or ‘Gateway’ (to the divine Truth), a development which led to very serious disturbances not only in Fars but throughout the country (see bāb, bābāh). In 1273-4/1856, when the seizure by Persia of Herāt involved her in war with Great Britain, the latter power again occupied Kharg and then landed a force on the coast of Fars. This force, after taking Būghār, advanced upon Shirāz; the occupation of the latter, the operations of the British troops, and the disturbances which occurred after the accession of Nādir Shāh in 1160/1747, but the accession to power occupied the island of Kharg, 35 miles north-west of Būghār, and threatened to declare war on Persia. The Shīrāz thereupon gave way, and the troops were subsequently withdrawn from Kharg. On 5 Džumādā I 1260/23 May 1844 Sayyīd ʿAll Muḥammad announced in Shīrāz that he was the Bāb or ‘Gateway’ (to the divine Truth), a development which led to very serious disturbances not only in Fars but throughout the country (see bāb, bābāh). In 1273-4/1856, when the seizure by Persia of Herāt involved her in war with Great Britain, the latter power again occupied Kharg and then landed a force on the coast of Fars. This force, after taking Būghār, advanced upon Shirāz; the occupation of the latter, the operations of the British troops, and the disturbances which occurred after the accession of Nādir Shāh in 1160/1747, but the accession to power occupied the island of Kharg, 35 miles north-west of Būghār, and threatened to declare war on Persia. The Shīrāz thereupon gave way, and the troops were subsequently withdrawn from Kharg. In 1273-4/1856, when the seizure by Persia of Herāt involved her in war with Great Britain, the latter
FARSAKH — AL-FARDKI

4.375 km. Both terms, farsakh and farsak, continue to be used in Iran today, but faršak is the more usual. It has now been fixed at precisely 6 km.

(F. Hinz)
minism and Free-will), ed. with Eng. transl. and notes by 'Ali Mahdi Khan, Allahabad 1934. A treatise on the kinds of women and a dā'īn of Persian poems is also attributed to him.

**FĀRKĪDS,** the Fārūkī dynasty (so-called because of claimed descent from the ḥalīfāʾ ʿUmār al-Fārūk) established and ruled the semi-independent Muslim principality of Ḍīlī between the rivers Ṭaptī and Narbāda for two centuries, until, in 809/1409, his way to the court of Firuz Shah Tughluk of Dīlī, led by the latter's nephew Bahram Khan Mazandānī, and fled to Dawlatabad. Thence he made a further open clash between Gūḍiṟāt and Ahmadnagar over Khandesh, with Mahmud Baykara supporting another Ālam Khan, which waited on Firuz, in an effort to persuade him from exercising any authority at Thānīn. Unreconciled, however, to the supremacy of Firuz, in 833/1429 Nasir concluded a marriage alliance between his daughter and Ḍalāʾī al-Ādīm Ahmād, son of Ḍalāʾī Ahmād Bāḥmān. This move did not save Khandesh from being overrun in the following year by Gūḍiṟāt forces, agreeing to pay tribute to the Bahmani and Khandesh forces on the Gūḍiṝāt border district of Nandūrbār. In 839/1435, disillusioned with the connexion with the Bahmanis, Nasir Khan attacked Berār with the approval of Ḍalāʾī Shāh of Gūḍiṝāt. But this was severely defeated by the Bahmani general Malik al-Tūḏqīrānī, suffering the plunder of his capital Būrḥānpur before the threatened invasion of Ahmad Shāh Bāḥmanī's forces. These persuaded Malik al-Tūḏqīrānī to withdraw. Nasir Khan died in Ṣaḵbī Augustine 1437. Nasir Khan's immediate successors, ʿAḍī Khan (died Ḏuʿl-Ḥijjah 844/1441) and Mubārak Khan (died ḎuṬb-i Thādiwa ascent 1457) accepted Gūḍiṟāt's overlordship without apparent stir, but ʿAḍī Khan (died 907/1504). Then, the death of Dawūd Khan (Djumda I or Ḏuţb-i Thādiwa capture 1441) precipitated a further open clash between Gūḍiṝāt and Ahmadnagar in support of a mythical Mahāmūd Shāh Fārūḵī against Mahāmūḍ Bāyḵārā. This is probably a garbled version of efforts by ʿAḍī Khan II to loosen the ties with Gūḍiṟāt, garbled, as Haigh (op. cit., 120) suggests, to disguise the discomfiture of Ahmad Niẓām Shāh.

Following the death of ʿAḍī Khan II, the political life of Khandesh was torn by dynastic rivalries which invited the intervention of the stronger neighbouring powers. First, a struggle occurred between Dawūd Khan, brother of ʿAḍī Khan, who had succeeded to the throne (though not without first having to overcome opposition by some of the āmirūn), and an unspecified relation, ʿĀlām Khan Fārūḵī, a protégé of the ruler of Ahmadnagar, Ahmad Niẓām Shāh. Dawūd successfully sought aid from Māwā rather than provide Mahāmūḍ Bāyḵārā with further opportunity for intervention in Khandesh, and the Ahmadnagar forces were forced to withdraw (907/1504). The death of Dawūd Khan (Ḍuḍ中介机构 A 914/Agustus 1508) precipitated a further open clash between Gūḍi rượ and Ahmadnagar over Khandesh, with Mahāmūḍ Bāyḵārā supporting another ʿĀlām
Khán, a descendant of Hasan Khán the brother of Nasír Khán (see above), against the Nizam Shah’s Farukid client, the previously-named Álam Khán, invading Khandesh in Shádán 984/November-December 1508, Mahmúd captured Thalhné and Burhánpur from the forces of the Nizám Shah and his supporters and in Dhu ‘l-Hijja 947/April 1509 installed the Gujárát candidate as ‘Ádil Khán III of Khandesh. The latter married the daughter of the later Muṣaffar II of Gujárát. ‘Ádil Khán III’s son Muslim Khán (reg. Shádán 997/December 1532-3. Mahmúd I died, however, before he could consolidate the Farukid claim to succeed Bahádúr Shah in Gujárát.

The reign of Muḥammad I’s successor in Khandesh, Múbárak Sháh II (died Dúmádá II 972/December 1566) witnessed the first encounter of the Farukids with the Mughals. In 962/1562, Akbar’s general Pír Muḥammad followed Báz Bahádúr (q.v.) into Khandesh burning and killing Bahádúr’s defeated forces by a combination of the forces of Múbárak, Báz Bahádúr and Tufál Khán of Bélí and drowned in the Nárbadá. In 972/1564, Akbar himself marched to Málwa and compelled Múbárak to accept Mughal overlordship and a marriage alliance. At first Mughal overlordship did not prove any more restrictive than that of Gujárát and the Farukids remained free to pursue their alliances with other powers, subject to the obligation to give military and other support to the Mughals in their enterprises. In 975-6/1568-9 Mírán Muḥammad II (died 984/1576) invaded Gujárát to take advantage of the discontents of its amirs under the puppet Muṣaffar III, but after some initial success was obliged to retie rebuffed. In 982/1574 Muḥammad II in collusion with the rebel Bahádúr Shah and Mínáma attempted to win Berár, newly annexed by Murtuẓá Nizám Sháh I, but the forces of the Nizám Sháh overmatched those of the Farukid ruler and the latter was obliged to buy off a siege of Asfír for 900,000 or 1,000,000 muṣaffaris.

From c. 993/1585, however, with Akbar rounding out his empire in the north, Mughal pressure to the south began seriously to be felt and in 994/early 1586, Rádžá ‘Álī Khán (or ‘Ádil Khán IV, killed Dúmádá II 1005/February 1597), the last Farukí with any ability for successful diplomatic manoeuvre, was desired to give passage and aid to a Mughal army appointed to intervene in Ahmádánágra. Overtly complaisant, Rádžá ‘Álī Khán covertly engaged the support of the Berár forces against which the Mughals wished to move, and Mírán ‘Azíz Kóka, Khán-i Aṣam, Mughal governor of Málwa, retired from the Deccán discomfited. In 999/1591, however, Rádžá ‘Álī Khán actively furthered Akbar’s policy of aiding Bérún Nizám Sháh II (to become ruler of Ahmádánágra, being mainly responsible for the victory of Rohankhé, Dúmádá II or Raqab 999/April or May, 1591. Rádžá ‘Álī Khán now probably assisted indirect Mughal intervention in the Deccán in hope of staving off direct Mughal intervention, but the death (Shádán 914/ April 1515) of Búrún Nizám Sháh II, followed by appeals from one of the Ahmádánágra factions for Mughal aid, precipitated the direct Mughal military interference which Rádžá ‘Álī had tried to head off. Rádžá ‘Álī, bending with good grace before the wind, joined Akbar’s forces in the siege of Ahmádánágra (Rábí’ II to Raqab 1004/ December 1595 to March 1596) which ended in the negotiation of the cession of Bérár to Akbar. An uneasy peace was soon broken by disputes over the limits of the ceded area and in Dúmádá II 1005/February 1597 Rádžá ‘Álī Khán, supporting the Mughals against the forces of Ahmádánágra, Búránpur and Golkóná, was killed at the battle of Ašhí. Unfortunately, practice of impious influence by the other male members of the ruler’s family under Hábshí guard enabled Akbar, following their capture in Asfír, easily to send the entire dynasty into exile, without
The fear of subsequent local opposition finding a focus in a Farukid claimant. (According to Firishta, ii, 568, Bahadur died at Agra in 1033/1623-4).

The extant evidence for the history of the Farukids mainly displays them in their dealings with outside powers and not with their own servants and subjects. From the references given in hagiographical literature (e.g., Gulzar-i Abrar, available to me only in the Urdu translation Adhkar-i Abrar) it appears that Burhanpur (q.v.), the Farukid capital, was a favourite burial place for Shah, and that the Farukids provided madrasa lands for the disciples of Shaykh Burhan al-Din Qarib, said to have foretold the foundation of the later Burhanpur and the rule of the Farukids there. The details and the significance of this apparent association between the Farukids and the madrasa have yet to be critically established. C. F. Beckingham, Anwa Selon and Asgarh, in JSS, ii (1937), 182-5, has noted the parallels between Ethiopian and Khânêdês custom in keeping imprisoned the male members of the ruling dynasty in an attempt to avoid dynastic quarrels. Habshîs became prominent in Gudjarat under Bahadur Shah and his successors and it may be suggested that Habshî prominence in Khânêdês as amirs and as guardsians of imprisoned relatives of the ruler also dates from this period. C. F. Beckingham, Tabakdt-i Akbari, Nizamat al-Dîn Ahmad, Gulzdr-i abrdr, iii, 151-2, index, as having their madfan at Burhanpur or Asir; T. W. Haig, The Farukid dynasty of Khânêdês, in Indian Antiquary, viii (1918), 113-24, 141-9, 178-86; Cambridge History of India, 1928; the account of Khânêdês in (ed.) R. C. Majumdar, The Delhi Sultanate, Bombay 1960, 169-73, 238, has been written in apparent ignorance of much contemporary or near-contemporary evidence and of important iconographical material. FARUKIDS — FARW

(A.) or FARWA (pl. farā), 'a fur; a garment made of, or trimmed with, fur.' Although farwa can mean also a cloak of camel-hair, it is likely that when this term is encountered in ancient poetry it refers to sheepskins with the wool left on (what in Morocco are called haydûra), used as carpets, to cover seats, or for protection against the cold; the farwa which Abu Bake had with him and which he spread on the ground in the cave or the Parwâdi, and the rest on (what in Morocco is called the parwâdi) was presumably a sheepskin. The wearing of costly furs was introduced only after the Arabs had reached a fairly advanced stage of civilization, at which time the name farà?
The furs most often mentioned are grey squirrel (sīnḏāb), sable (samāmjīr), ermine (ḵājum), fox (ḵošaḵāb), beaver (ḵundus or Ḵošūd, khowz), mink [? see ḵanak], lynx (wāgšāk) and weasel (inb ḵeš). The geographers and travellers provide information on the origins of these furs: they came chiefly from dealers in furs and pelts who used the skins of sheep and thisba battled Caspian is more highly prized than the red and the irs). There were establishments for their manufacture in addition to those given in the article: B. Schier, Wege und Formen des altesten Pelzhandels in Europa, Frankfurt 1951, 21-45; Th. Lewicki, Il commercio arabo con la Russia e con i pasi slavi d'Occidente nei secoli IX-XI, in ATUON, n.s. vii (1958), 57-8; cf. ibid. 47-8, where other writings on Arab trade with Eastern Europe are cited; C. E. Dubler, Abā Ḥāmid al-Ǧarandūn . . ., Madrid 1953, index and glossary, s.vv. samāmjīr, sinḏāb, ḵājum, etc.; L. A. Mayer, Mamluk costume, Geneva 1952, 23, 25, and index, under the names of the individual furs; Makrīzī, ḵaṭṭāt, i. 103 (on the furriers' market: cf. Dozy, Dictionnaire . . . des noms des vêtements chez les Arabes, Amsterdam 1845, 357).

Farwān, also Farwān, ancient town in the Hindu-Kush mountains and a modern administrative district of Afghanistan, the capital of which is Charikar.

The modern town of Dījābal al-Sirā digit. 1751 m.) is located near the site of the ancient Farwān, ca. 69' 15" E., 35° 7' N. by the Panjūrīr valley near its junction with the Ghūrābān river. Farwān may have occupied the ancient site of Alexander's Alexandria of the Caucasus or Alexandria-Kapisa. It was conquered by the Arabs ca. 176/792 (Ibn Rusta, 289) and included in the province of Bāmiyān. Coins were struck in Farwān by the Ghāznawī rulers, and it was the centre for silver mining of the Panjūrīr valley. Many geographers mention the town, but it achieved prominence only under Dījābal al-Dīn Ḵbārīzamēkh when he defeated the Mongols there in 618/1221. The site of the battle, however, may be another Farwān (Ḫuḏād al-ṯīlam, 348). The site was the scene of a battle in the first British-Afghan war in 1840, but there is no indication of a settlement. In 1937, with the construction of a textile factory in the modern town of Dījābal al-Sirāḏī, the area began a new history.

Farwardīn (see taḵrīgh).

Faryāb (also Fārīyāb and Faryāb), name of several towns in Iran:

1. A town in northeastern Afghanistan, now called Daulatabad, formerly in the province of Dūrūndān. It was conquered by al-ʿAṭaf b. Kāyā in 65/685 (al-Baladhrūr, 407). Many geographers mention the town as large and flourishing until the Mongol conquest: when it was destroyed. It never regained its former importance.
2. A small town in southern Fars province (Le Strange, 257, 296).
3. A village in Kirmān (Le Strange, 317).

(R. N. Frye)

_FAS_ (Fēs, Fez), a town of Northern Morocco situated at 4° 34' W., 34° 6' N. It stands at the north-east extremity of the plain of the Sā'īs, at the exact place where the waters of the eastern side of this plain go down into the valley of Sebou via the valley of the Wāḍī Fās. It is therefore on the easiest route between the Atlantic coast of Morocco and the central Maghrib. Furthermore, one of the least difficult roads across the Middle Atlas to the south passes by way of Sefrou, 30 kms. south of Fās, and the communications between this last town whether with the Mediterranean coast (Bādīs or Vélez) or with the Straits of Gibraltar (Tanger) are relatively easy, too. It might be said that Fās is clearly situated at the point of intersection of two great axes of communication, indicated by the general contours of the country: one axis north-south between the Mediterranean or the Straits of Gibraltar and the Tāfīllāt and so beyond to the negro countries; the other west-east between the Atlantic coast and central Maghrib.

Moreover, the site of Fās is rich in water; apart from the river itself and its tributaries, which it has been easy to canalise, and to which a very later use, numerous springs rise from the steep banks of the water-courses, especially from the left bank, which is actually inside the town. In the immediate vicinity there are quarries which provide building stone, sand and lime, while the cedar and oak forests of the Middle Atlas are not far away and offer wood of very good quality. Finally, for considerately distances around, the neighbouring country is favourable to all types of farming. Cereals, vines, olives and various kinds of fruit-trees grow here, while not only sheep and goats but cows also can be raised here.

Nevertheless it seems that no urban centre existed on this privileged site before the Muslim town came into being. Archaeology has not confirmed the vague legendary tradition of the "Founder of Fās" according to which a very ancient town existed long ago on the site of Fās. It can therefore be regarded as likely that Fās came into being at the end of the 2nd/8th century at the desire of the Idrīsids. When Idrīs b. Idrīs, had it destroyed with the exception of the principal sanctuary of the left bank area, the Karawīyyīn mosque (Djami [q.v.]), it and the original ones. The Almoravid conquest marks a very important date in the history of Fās, since Yūsuf b. Tāṣhūfīn combined the two towns into one and made it his essential military base in Northern Morocco. There is therefore good right to consider the Almoravid conqueror as the second founder of Fās: it was he who did away with the duality which had for so long prejudiced the city's development; it was he also who marked out for it the direction in which it was to develop in the future by building to the west of the two original towns and on the very edge of the plain of the Sā'īs, an important fortress, now disappeared, which stimulated the growth of more new quarters between it and the original ones. The Almoravids were also responsible for the construction of the principal works in the Wāḍī Fās, thanks to which the city has possessed a system of running water from a very early date, to back to the Almoravid epoch. Fās lived thus under the Almoravids for almost three-quarters of a century (457-540/1062-1145), one of the most prosperous periods of its existence, but a period about which unfortunately we have all too little detailed information.

The Almoravid conquest [see AL-MUWAHHIDUN] marks a brief pause in the history of Fās. When ʿAbd al-Muʿāmin [q.v.] attacked it in 540/1145, the city, which had every good reason for remaining faithful to the Almoravids, put up a violent resistance. The Almohad only conquered it after a hard siege, and punished the town by razing the Almoravid kasaba and the city ramparts. But like the Almoravids, the Almohads had need of Fās and the town grew afresh in its proportions of which al-Idrīs's account gives a fair idea. It is a city in full development and at the height of economic progress that he describes
in his work, The fourth Almohad Caliph, al-Nasir, even ordered on the very day after the defeat of Las Navas de Tolosa (1212), that the ramparts of Fâs should be reconstructed. The general outline of these and a good part of their masonry date from this period (Pl. XIII). Thus the old city of Fâs attained the proportions that we now know. Its surrounding wall is pierced by eight huge gates, four on each bank, and it seems certain that empty spaces, gardens and orchards, once existed within this enclosure.

A century later, Fâs changed masters anew and once more under the authority of the Marinids [q.v.]. Though badly received at first, the new masters succeeded in raising the city's prosperity to a height as yet unknown. Unlike the Almoravids and the Almohads, they did not come from the south but from the east, and Fâs was the first large town which they had succeeded in conquering; hence they made it their capital and relegated Marrakush to second place. Because of this the fortunes of Fâs were assured for several centuries. The new court lived at first in the kasaba which the Almohads had constructed on the site of the ancient Almoravid kasaba, in the district now called Bû Djulûd (probably a popular corruption of Abu l-Djumâd). They soon found themselves cramped for space here; hence the Marinid sovereign Abu Yusuf (1258-1286) decided to found a new kasaba close by, which he called al-Madînâ [i.e. the white city], but has been known for a very long time and still is known as Fâs al-Djâdîli (New Fâs). It consisted essentially of the palace, a great mosque to which were added little by little various other sanctuaries, barracks, the homes of various important Marinid dignitaries, and later, in the 9th/10th century, a special quarter in which the Jews were compelled to live. From the beginning, this town was surrounded by a double city wall, broken by only a few gates. In the 10th/11th century, these were reinforced and decorated with a number of bastions capable of supporting cannon. Thus Fâs became again a double urban centre, with a middle-class and commercial town, Fâs al-Bâli (Ancient Fâs), known locally as 'al-Madinâ' (i.e. the 'town' proper) and an administrative and military centre which complemented rather than entered into competition with the first. The description which Leo Africanus gives of Fâs at the beginning of the 16th century gives the impression of an active and heavily populated city, so heavily populated indeed that several areas of lightly constructed buildings had been established outside the ramparts, especially to the north-west of the ancient city. It was a commercial and industrial city (notable for its textiles and leather-goods), but also a city of religion and learning, where around the Karawiyyn Mosque flourished what J. Berque has called 'the School of Fâs' (Ville et Université. Aperçu sur l'histoire de l'École de Fâs, in Rev. hist. de Droit fr. et étr., 1949), and finally a centre of art, thanks to the country palaces built by the Marinids on the hills which dominate Fâs to the north, thanks above all to the colleges (madrasas) built mainly in the 8th/14th cent by various Marinid princes around the Karawiyyn Mosque, the Mosque of the Andalusians in the upper part of the old town, and in Fâs al-Djâdîli. These colleges are almost all ornamented with good taste and variety and form one of the greatest adornments of Fâs. This favourable situation lasted for three centuries during which Fâs enjoyed political, economic and intellectual priority throughout Morocco as well as in the western regions of what is now Algeria, and was in economic and cultural relations with the western Sahara as far as the loop of the Niger. In 870/1465, the city was the scene of an attempt to restore the Idrisids, which hung fire; the Wattâsîds, successors of the Marinids, do not seem to have been very hard in their treatment of those concerned, as is shown by the description of Leo Africanus who describes an active and flourishing city.

Nevertheless the Sa'dî [q.v.] sharîfs, masters of Marrûkûsh since 931/1524 (R. Le Tourneau, Les débuts de la dynastie sa'dîenne, Algiers 1954) gradually extended their influence over the rest of Morocco, threatened Fâs from 954/1547 on, and thanks to inside intrigues, managed to get hold of it on 28 Du'tu 'l-Hijdîja 955/28 January 1549. This change of dynasty was not a good thing for the city, for the Sa'dîs, a southern people, had already made Marrûkûsh their capital. Fâs became once again the second city of the Sharîfian empire. At first it accepted this situation very unwillingly and welcomed the Wattâsîd pretender, Abu Hassûn, when he put the Sa'dîs to flight on 2 Ša'âr 601/19 January 1554 with the promise of freedom and pardon to all that had accompanied him from Algiers. But this venture was not to be successful for long; the Sa'dîs returned in force in Ša'wâl 601/September 1554. Abu Hassûn, who had been forced to discharge his over-enterprising Turkish allies, was killed in battle beneath the walls of Fâs, and the city came back into the possession of the conquerors. These did not long continue to treat the opposition harshly, reinforced its defences, perhaps in order to hold it more strongly, and put in hand works of improvement and embellishment at the Karawiyyn Mosque. A diminished but still prosperous situation was the lot of Fâs in the second half of the 10th/16th century.

When the Sultan Aḥmad al-Mânsûr [q.v.] died at Fâs on 16 Rabû‘i ‘1 1012/25 August 1603, his sons fought savagely to tear up the succession. There was a state of anarchy in Morocco which lasted more than sixty years (R. Le Tourneau, La décadence sa'dîenne et l'anarchie marocaine au XVIIe siècle, in Ann. de la Fac. des Lettres d'Aix, xxxii (1958), 187-225). Fâs was caught up in this whirlwind of violence, conquered by naked force, and despoiled in various reconquests; very grave internal disputes added to its misfortunes and for more than fifty years it suffered the darkest period of its history. It was an exhausted city of which the 'A-launch pretender, Mawlây al-Râghid, took possession in 1061/1656.

Under the power of this energetic prince, the wounds of Fâs began to heal and it began to come to life again with the help of a sovereign who was putting in hand great works of public utility (construction of a bridge over the neighbouring Sebou, of two fortresses to the west of the ancient town, restoration of a bridge over the Wadî Fâs, creation of a new madrasa in addition to those built by the Marinids) when he was killed accidentally in 1082/1672. His brother, Mawlây Ismâ'îl [q.v.], who replaced him, was also a remarkable man but he detested Fâs; he had a new capital constructed at Meknès and continued to insult and offend the people of Fâs throughout his long reign of fifty-five years, to such a degree that the city was becoming depopulated. On the death of Mawlây Ismâ'îl (1139/1727) matters became even worse; several of his sons
fought over the succession and, just as in the preceding century, Morocco fell back into a grave state of anarchy. Once again, for a period of thirty years, the end of the 19th century, the capital, Fas, was desolate and the country was a scene of ephemeral rulers, among them Mawlay 'Abd Allāh who detested its people, and to the pillaging of the soldiery, especially that of the military tribe of Udaya. At last, when Sayyidī Mūhammad (1171-1204/1757-1790) succeeded his father, 'Abd Allāh, Fas was granted a long period of respite, which was disturbed only briefly by the disorders which darkened the end of Mawlay Sulaymān's reign (1207-1230/1792-1824). Its position as capital was restored and it shared this with Marrākush up to the beginning of the 20th century. Then Mawlay 'Abd al-'Azīz [q.v.], freed from the tutelage of his Vizier, Bā Aḥmad, adopted a policy of modernization which raised a large part of the Moroccan population against him.

In the course of the second half of the 19th century, many Fās merchants had entered into contact with various European or African countries (England, Spain, France, Italy, Germany, French West Africa) and the city was gradually being drawn into international trade. Moreover a number of Europeans and Americans (soldiers, diplomats, clergy, doctors, businessmen) came and settled in the city of Fas. The discovery of Fas, like that of other parts of Morocco, was beginning to take a new turn. Furthermore, the Sultan Mawlay al-Hasan (1290-1311/1873-1894) [q.v.] had undertaken important public works in this city where he normally lived when he was not travelling around the country at the head of his army: he set up a small-arms factory near his palace, the Makma; he connected by long walls the two urban areas of Fas al-Djallīd and the Madīna, which had remained separated so far, and had a new palace built at Bū Djulud, on the edge of the Madīna.

From 1901 on, Fas once again faced disturbed conditions; it was threatened in 1903 by the pretender, Bū Ḫmāra [q.v.]; then when Mawlay 'Abd al-'Azīz was forced to abdicate in 1908, Fas put into power a descendant of its founder Idrīs, the Shāriṭ Mūhammad al-Kattānī; but he did not succeed in raising an army and could not prevent the Sultan proclaimed in Marrākush, Mawlay 'Abd al-Hāfīz, from installing himself in the city. Unrest continued, however, and the new sovereign, threatened in his capital by Berber tribes from the Middle Atlas, finally appealed to the French army for help in 1911. A column commanded by General Moinier came and encamped under the walls of Fas, the first time that a European army had been in contact with the city; the troops established themselves south of Fās al-Djallīd, at Dār al-Dubbaybaḥ (colloquial pronunciation: Dār ad-Dibābah), a country house built by Mawlay 'Abd Allāh in the 18th century. On 30 March 1912, in the following year, the Protectorate treaty between France and Morocco was signed in a room of the palace of Bū Djulud. A few days later (16 and 17 April 1912), Moroccan troops revolted and massacred a number of Europeans, while at the same time others were rescued by the people of Fās. A little later, General Lyautey, the first French Resident-General of Morocco, was besieged in Fas by rebelling Berber tribes; the town was set free by a column under General Gouraud (end of May - beginning of June, 1912). From that time onwards, Fas was able to live in peace and organize itself for a new type of life.

A European town soon began to rise on a vast flat area in the region of Dār ad-Dibābah; it was called Dār ad-Dibābah in Arabic and the 'Ville Nouvelle' in French. The palace of Bū Djulud became the seat of the Resident-General, and the Bū Djulud district began to fill up with many Europeans. Behind the city walls of Mawlay al-Hasan, there arose administrative buildings adapted to their mediaeval style. The merchants of Fās quickly accommodated themselves to the new economic conditions of the country. Very early on, some of them went and established themselves at Casablanca, without however breaking off all contact with their ancestral city. A system of modern education was organized alongside the traditional religious teaching.

Perhaps startled by so many novelties, the city of Fās retired into its shell for a few years, but soon began to take an attitude of discreet opposition to the new régime. The Rif war and the first successes of 'Abd al-Karīm (1925) raised fear of pillage and hopes of liberation. Little by little, a young people's party turned towards political action hostile to the Protectorate, and led the opposition against the sāhir on the organization of justice in Berber regions (16 May 1930). In 1937 and 1944, at the time of political crises which ended finally in the demand for independence of 11 January 1944, Fas was the scene of important demonstrations. Nevertheless the political centre of gravity of Morocco was shifting towards Rabat and Casablanca, and Fas played no more than a secondary part in the events which, between 1953 and 1956, led to the proclamation of Morocco's independence. At present, Fas is the capital of a province and ranks as the third city of Morocco after Casablanca and Marrākush.

The city, whose population is 279,400 (census of 1952) of whom 15,800 are Europeans, is made up of four main centres: (1) the Madīna, in which empty spaces have almost disappeared, but where certain areas on the outskirts have been opened to motor traffic; (2) Fās al-Djallīd, itself composed of three elements: a little Muslim town of rather humble people which is called Fās al-Djallīd; the palace and its dependencies; the Jewish quarter or Mellāḥ; (3) the New City (Ville Nouvelle), where many Jews and some Muslim families live; (4) a new Muslim town situated to the north-west of the palace and created since 1950 according to modern standards. Around these urban areas, general areas of lightly constructed buildings have sprung up, inhabited by poor people recently come from the country, and these are generally nicknamed 'bidonvilles'.

Fās is connected with the outer world by excellent roads and by a railway which connects the Atlantic coast and Tangier with Oujda on the Algerian frontier. It has also an aerodrome of moderate importance.

Its economic life is founded above all, just as in the past, on its relations with the neighbouring countryside. Its industry has to a great extent remained traditional (textiles, leather-goods, industries connected with food) and has been only partly modernized; the adaptation of its artisans to modern economic conditions is one of its principal problems. By contrast, its agricultural hinterland has grown considerably into a wide belt around the city. The main business city of Morocco at the beginning of the century, it has been dethroned by Casablanca where, however, a good number of its inhabitants have settled.

Not less than as the economic metropolis, Fās has
long been the intellectual metropolis of Morocco, thanks to its great centre of traditional learning, the Djami al-Karawiyyin. In modern Morocco it seems to have been overtaken by the departure of many French and Jews. In the political arena it seems to have been having some difficulty in keeping this priority, since the modern Moroccan University of traditional and modern learning and of intellectual life.

All in all, it seems questionable whether Fás, despite to be having some difficulty in keeping this role of outstanding importance which it has played so many times in its long history. At the moment, the population seems stationary or has perhaps even slightly diminished since independence, following the departure of many French and Jews. In the political arena it seems to have been overtaken by Rabat, the capital, as well as Casablanca. In brief, events in Morocco since the beginning of the 20th century do not appear to have been favourable to Fás.

The actions of the Umayyads in the Maghrib were hardly ever concerned with the spread of artistic influence: the ancient minbar of the mosque of the Andalusians, detached from a more recent one in the course of a restoration of the sanctuary, bears witness to the persistence of oriental influences. Made in 396/986 at the time of the occupation of Fás by the Zirid, Bulukkín, this pulpit of turned and carved wood is of a completely Fātimid style. When in 375/986 an Umayyad expedition retook the town, they began by destroying this Shī‘ī pulpit; but once this pious fury had passed, they saw that the ancient minbar, repaired and provided with a new seat-back to the greater glory of orthodoxy, could very well continue to be used, and an artist was found to make the repairs and additions in the original style. This pulpit, after that of Kayrawán the oldest of all the minbars which have come down to us, is the only monument which remains as a witness of the struggles between the Fātimids and the Umayyads in Morocco.

Thus Fás awakened little by little to artistic life under the prevailing influence of Kayrawán, and in the middle of the 4th/10th century had also received some influences from Andalusian sources.

Monuments

Under the Idrisids.—We know of the two places of prayer which formed the origins of the two great sanctuaries of the city only from brief accounts. The mosque of Fátima in the quarter of the Karawiyyin (243/859) and the mosque of the Andalusians in the quarter of the same name (245/859-60) were buildings of medium size, with naves parallel to the kibla wall, with šāhs planted with trees, and minarets of very modest height. Some rubble remains of the surrounding wall exist in the quarter of the Karawiyyin but, in the absence of all traces of doors or towers, these are not sufficient to allow us to plot the main lines of this first rampart.

The two monuments founded by the two Idris attained urban status only very gradually, and there can have been few monuments built during this period. Under the Zenāta Emirs.—After a troubled period, the city began to develop a certain amount of artistic activity under the Zenāta Emirs, who were allies and vassals of the Umayyads of Cordova. After a Fātimid incursion, the mosque of Fátima, from that time on called the Karawiyyin, and that of the Andalusians became the cathedral-mosques of the two quarters (321/933). The two structures were rebuilt and enlarged under the Maghrāwā Emirs: their naves, still parallel to the wall of the kibla, were made of rows of horseshoe brick arches; the axial naves were bordered with bastions of stone with a four-sided plan. The two stone towers resembling the Andalusian type of minaret, but their copings of projecting string-courses and cupolas belong to the Ifrīkiya type. Andalusian influences were only beginning to be added to the African and oriental elements which had come from Aḥlabīd Tunisia.

The two monuments founded by the two Idris attained urban status only very gradually, and there can have been few monuments built during this period. Under the Zenāta Emirs.—After a troubled period, the city began to develop a certain amount
and new naves of the hall of prayer. A row of rich cupolas—above all domes with stalactites—covered it. The Almoravid enlargements were made of glazed or bonded brick, which on the outer wall of the minbar formed a very beautiful interlacing design. Inside the building, in the great axial nave, rich sculptured decorations, heightened with colour, had been covered with plaster by the Almohads in the period of their rigorous puritanism. These magnificent ornaments, mainly epigraphic and floral, were uncovered in the course of a restoration of the whole of the building directed by the author of this article.

The work of the Almohads, who kept Marrakušh as their capital, was slower to interest themselves in Fas. They gave a cathedral-monastery to the Karawiyn and a house of the Almoravids to the Kasba of Bu Jlud. Under Muhammad al-Nâsir, the mosque of the Andalusians was reconstructed, with the exception of its minaret. The ancient Zirid and Amrid minbar was covered, except for its seat-back, with a new sculptured decoration. At the Karawiyn, which was given a great ornamental chandelier and a room for ritual ablutions, some works of detail were carried out. But the greatest work of the Almoravids was the reconstruction of the great city wall (PI. XIII) which still to-day surrounds Fas al-Ball. Bab Gisa (Djisa) and Bab Mahruk, more or less repaired or altered, date for the main part from this period.

During the whole period of the Almohads, Fas was very prosperous, and Andalusian influences continued to prevail there without rival.

The Marinids. — The Almorahids, who kept Marrakušh as their capital, were slower to interest themselves in Fas. The Almoravid and Almohad monuments were planned and decorated by artists who came from Spain, but towards the end of the 7th/13th century they had its own workshops, closely linked with those of Granada. From the beginning of the 8th/14th century on, beautiful houses were erected both in Fas al-Djadid and Fas al-Ball, which, like the madrasas, were adorned with floors and facings of faience mosaic, plaster and carved wood. The same decorative style prevailed in sanctuaries, palaces and rich homes.

The Masonry, also very homogeneous in style, is less beautiful but almost as delicate as the ornament. In the walls, stone gives place to bonded or glazed brick, and often also to cobwork. Cedar wood plays a large part in all the architecture of Fas. Whether in beams, lintels, corbeling, ceilings or artesonados domes, it provides both roof beams and cover for all types of buildings. In the framework of doors and openings and in joinery, it is moulded, decorated with pieces of applied ornament, or carved. At the tops of walls and court-yards, it is worked into friezes and projecting porches resting upon carved and painted corbels. This wide use of wood, the frequency of pillars and the rarity of columns, are the only characteristics which distinguish the Marinid monuments from contemporary Nasrid buildings.

Vaulted architecture is to be found only in the great store-houses of Fas al-Djadid and in the hammâms which follow the very simple plans of the Andalusian baths.

Thus under the Marinids Fas received not only its shape as two distinct agglomerations, but also its architectural appearance. From then on it was, second only to Granada, the most active centre of Hispano-Moorish art. Once Muslim Spain had disappeared, all the processes of masonry, techniques and ornament inherited from the 14th century continued to be used in Fas up to our own
times, in a slow decline and with a touching fidelity.

Under the Sa'dis.—The end of the Marinid dynasty and the reign of the Banū Waṭṭās produced no great monuments in Fās. Nevertheless, its buildings maintained the same architectural and decorative traditions as those of the art which preceded this period. Relations with Granada had become more rare, and from the end of the 8th/14th century onwards, the latest innovations in ornament of the Alhambra of Muḥammad V had not been passed on to Fās. And in 966/1462, Granada was reconquered. In the victorious thrust of the emir who had previously been defeated, art in Spain, Hispano-Moorish art became confined by the 10th/16th century to its African domain.

Under the Sa'dīs, who struggled for a long time against the Banū Waṭṭās for the possession of Fās, the city went through difficult times. Mārākūṣh once again became the capital of Morocco and the sultans distrusted the metropolis of the North. They reinforced the ramparts of Fās al-Djādīd, which remained the headquarters of government, with bastions for the use of cannon. Two works of the same kind but even more powerful, the northern burdż and the southern burdż, dominated and overlooked Fās al-Bālī. The Karawīyīn was enriched with two fountain kiosks, jutting out of the southern façade. For a long time, which the Sa'dī dynasty went down, Fās passed through terrible times and in such a troubled period no monuments could be constructed.

Under the 'Alawīs.—The founder of the dynasty, Mālāwī al-Raşḥŏd, hastened to give Fās al-Bālī a new madrasa, that of the Ṣḥārātīn (1081/1670). His successor, Mālāwī Ismā'īl, transferred his capital to Mīkān, near Mālāwī, his Abū al-Raḥmān (1237/1822-25) and Mālāwī al-Ḥāsān (1289-1311/1873-94). The ramparts were repaired many times and one of the great gates, Bāb al-Futūḥ, was entirely rebuilt by Mālāwī Sulaymān.

Numerous sanctuaries, whether cathedral-mosques or simple places of prayer, were built in Fās under the 'Alawī sovereigns and very often through their initiative. The most important of these were the mosques of Bāb Gisā (Dīlās), of al-Raşḥ and of al-Siyād at Fās al-Bālī, and the mosque of Mālāwī 'Abd Allāh at Fās al-Djādīd. Local mosques, places of prayer dedicated to saints, headquarters of brotherhoods, were built in great numbers. Sanctuaries of reasonably large dimensions consisted according to local tradition of naves parallel to the wall of the bidā, the minarets were square towers surmounted by turrets but the decoration of a network of interlacing and falence was almost always omitted and the walls of brick, glazed or not, were ornamented with simple blind arcades. Some little sanctuaries still keep their 'platform' minarets of a very archaic type. An occasional madrasa was built: those of Bāb Gisā and al-Wād preserve very nearly the traditional arrangement.

Most of the houses of Fās date from the 'Alawī period but continue the Marinid tradition. The walls are made either of cobwork or more commonly of brick, and sometimes of coated rubble. In the old town, the houses rise vertically, mostly on two floors around narrow court-yards. These houses, though poor in light and ventilation, are nevertheless sometimes sumptuous; the pillars of the court-yard and the bases of the walls are panelled in faience mosaics; carved plaster often ornaments the door and window frames and the tympanums of the openings, and sometimes even the walls themselves. A cornice of moulded or even carved cedar-wood crowns the whole. The ceilings and the joinery—also of cedarwood—are worked with care. In the less dense outlying districts, there are lower houses around vast court-yards and even gardens.

The fundūqs, with several storeys and galleries, follow the same arrangement as that of the Marinid hostels, and are, in this city of commerce, very often beautiful buildings.

Thus in the work of these last centuries there is nothing new, but a remarkable fidelity to a great architectural and decorative tradition. Despite the baldness of the ornamental detail, both the civil and the religious architecture of Fās preserves, sometimes not without-grandeur, a sense of balance which does not exclude the picturesque. Above all, a perfect unity of style, maintained by guilds of artisans, knowing and loving their work, has given Fās al-Bālī and even more, Fās al-Djādīd, an astonishing harmony. A perfect arrangement of town and country has succeeded in preserving in Fās as in other ancient cities in Morocco, their originality and beauty. In Fās, more than elsewhere, there has been preserved the architectural and decorative climate of Muslim Andalusia.

Bibliography:

F. Mā (formerly Fasa), is situated in 28° 56' N. and 53° 39' E. Long. (Greenwich); it is 1,565 metres above sea level. Fās is 164 km. from Shīrāz, 55 from Dārābjird and 70 from Djaḥrum. The district (qāhristān) of which Fās is the capital forms part of the seventh Ustūn (Fārs). The Muslim Arabs under Uγmān b. Abī 'l-'Aṣ captured Fās in 236/644. According to Ḥṣām Allāh Mustawfī (Nāsha, 124), it was originally called Saʿān and was triangular in shape. Ibn al-Baʾbīlī (Fara-norma, 130) stated that Fās was as large as Iṣfāḥān; it had been destroyed by the Ṣḥābānḵara tribes, but was rebuilt by the Atabeg Čawīl. The climate was temperate and the surrounding district produced the fruits of both the cold and hot regions. The abundant water supply was entirely from Ḥuṣn, there being no wells. The cathedral mosque was of burnt brick and rivalled that of Mālīnā for splendour (Mūkaddas, 431). Fās was famous for its carpets and brocades and also (according to the Ḥudūd al-ʾĪlam, 127) for its rose-water. In 1951 the population was 8,300. 4 km. to the south of the town is the ancient mound known as the Tell-i Daḥāk.

FASA — FAŠAHA

Southern Persia, in Eastern Persia, i, 109; Le Strange, 290, 293, 294; Rāhnama-yi Iran, 170 (with plan on 177). (L. LOCKHART)

FAŠAD [see FASÄT, KAWN].

FAŠĀHA, an Arabic word, properly "clarity, purity", abstract noun from fašīh, "clear, pure". To summarize the definitive analysis of the concept as it was achieved in the work of Djalal al-Dīn al-Kazwini, the Khasīt Dimaghk (666-739/1267-1338), and his commentator, Sa'd al-Dīn al-Taftāzānī (742-751/1342-80), in Arabic rhetoric fašīh is applied to: (1) a single word or phrase; if it is not difficult to pronounce, it is not a foreign or rare word and its form is not an exception to the usual; (2) a whole sentence, when it does not contain an objectionable construction, a discord, an obscurity (through a confusion in the arrangement of the words) or a metaphor too far-fetched and therefore incomprehensible. The first kind of fašāha is called fašhāt al-mufrad, the latter fašhāt al-kalām. There is also (3) a fašhāt al-mutakallim. This is peculiar to a person whose style conforms to the above conditions (Kazwini, Tálkhis al-Miṣfāt, Cairo 1342/1923, i, 70-6, with Taftāzānī's Muḥāṣar). The adjective fašīh denotes a word or a sentence only when free from objection in itself; it is distinguished from baligh, which also implies that the expression is necessary for its meaning.

From its inception Arabic theory gravitated towards a strict separation between the stylistic areas where the ideal accomplishment is represented by fašāha and balāgha respectively; in practice, the dividing line between the two concepts was not always clearly drawn. A number of critics tended to enlarge the scope of fašhāha at the expense, as it were, of balāgha. In the 5th/9th century Khafadjī, the Khatib Dimashq (666-739/1267-1338), writing on the arrangement of the words, when actually the expression is necessary for its meaning, is called fašhāt al-mutakallim. This is peculiar to a scientific language such as the Kur'an from which the wording and not on the idea, ma'nā. Hence a parrot could be called fašīh, but never baligh. An isolated kalām, however, may be described as fašīh baligh provided it is clear in concept and smoothly fluent, sahl, in style (ibid., 7; some authorities require in addition a certain stateliness, ḥakhamā, without which a discourse may qualify as baligh but not fašīh; this reversal of the usual terminology deserves to be noted).

Abū al-Kāhir al-Djurjani (d. 1078 or 1081; cf. Ritter, Asrār, German translation, Wiesbaden 1959, 5*) clearly felt dissatisfied with the treatment accorded fašāha. The more he studied what scholars had to say about it the more he realized that their statements failed because of their all too general character. Characteristically, nothing much is gained from explanations where fašāha is merely described as a peculiar trait in the putting together of words, ḥusūṣiyat bi fi nāzim al-kalim (Dālā'il al-i'dās, Cairo 1310/1913, 30). Specifically, he is critical of those who maintain that fašāha has no meaning beyond the "harmony within the words and the adjustment of the sequence of the letters so that the real meaning is not lost because of tongue will be avoided", al-talā'āt al-lajf wa-ta'dīl misād al-hurūf ḥattā lā yatalābā bi l-'nawāt hurūf tathkulu 'ala l-tisān. This view would lead to separating fašāha from balāgha (as a separate science or approach) and would constitute euphony the only criterion of rhetorical perfection and the 'ādāt al-Kur'ān, or at least lend it too much importance against such virtues as huṣn al-tarīb, good organization.

The reason why the ancients, al-budama', maintained the strict division between lajf and ma'nā and stressed the function and merits of lajf is that the ma'nāni are manifested by words only. Hence the custom of attributing to the word what has no meaning (ibid., 45-58).

From these remarks one is led to conclude that Durjani did not know al-Khafadi's (d. 465/1073) Sīr al-fašāha (completed 2 Sha'bān 454/11 August 824 FASA — FASAHA
FASAHÁ 825

1062; cf. Sirr, Cairo 1932, 276), perhaps the most thorough examination of the concept. KhafadJI, too, was, ostensibly at least, motivated by a desire to neglect the study of phonetics; the grammarians that of the principles, al-ajs wa 'l-tuss; the critics, ahl nafs al-kaldm, do not rise above the aheru, ibid., 5. KhafadJI is deeply concerned with the phonetic aspect. He observes that Arabic disposes of 29 (or according to al-Mubarrad, who does not count the hansa, 28) huruf; actually, the language has 14 more for which there does not exist any graphic representation. Of these, six add to the fasdh (e.g., the imdla, the z for s in the pronunciation 'masdar' in lieu of 'masdar'), whereas eight detract from it (e.g., the sh for d in the pronunciation 'kharashat' for kharadjal; 19, 21-2). Other languages have in part different huruf; thus Armenian has 36 against the Arabs' 29 (53). The putting together of huruf into words is guided by aesthetic principles; three consonants of the same phonetic category are avoided in the formation of any given word. The best procedure is to combine sounds with distant bases of articulation (53-4).

Fasdh is, then, as a property confined to individual words (55), can be attributed to the al-lafs if certain requirements, shurut, are met. (A) Some of these are manifest in the isolated word, (B) others when the words are connected one with the other (60). The shurut of the first type (A) are the following: (1) the words must be composed of sounds whose bases of articulation are varied; (2) over and above this conformity their sequence must be acoustically pleasing; (3) the words must be neither 'raw' nor barbarous, mutawaddir and waqsh (Suyu'tl, Muzhir, Cairo 1282, i, 114-15, offers a definition of the waqsh and a listing of [near-]synonyms of this term); (4) nor must they be low and vulgar, sad bif and 'ammi (both these requirements are to be found in Djubba, KhafadJI observes); (5) the words must conform to Arabic usage; (6) here objections may arise from fourteen causes, such as (a) the un-Arabic origin of a word; (b) the wrong use of an Arabic word; (c) the unwarranted shortening or (d) lengthening of a word; (e) the extreme rarity of a word or the particular form of a common word as, e.g., an unusual plural; etc. Trespasses of this kind do not impair fasdha very badly yet had better be avoided. (6) The word must not have a second meaning which brings to mind something one does not wish the hearer to think of; (7) the word should be "well-balanced" and not composed of (too) many huruf; (8) if the word is a diminutive it should be used only where a diminutive is directly appropriate: KhafadJI dislikes the tasghir bi-ma'ma al-tashim.

Of these shurut, nos. 1 to 6 apply also to (B) al-alldJI al-mu'allafa, i.e., they constitute requirements for a sequence of words exactly as for a sequence of huruf within the individual word; in fact, nos. 2 to 4 depend on ta'lti entirely on their occurrence in the lasfa mutrada. Az and A8 do not bear on B. To be fasdh, ta'lti must instead fulfill these additional shurut: (1) the words must be placed exactly where they belong; no unjustified changes of the customary word order are allowable (thus ta'ldm and ta'shir as well as the kalb al-kaldm are to be avoided); (2) they must exhibit wasm al-its'ara, appropriate metaphors; (3) they must be free from hashw, padding; in opposition, however, to both the Mu'tazill al-Djubba'T (d. 303/915) and his orthodox critic al-Rummani (d. 387/994), KhafadJI admits (140-x) that some hasg enriches the meaning and adds lustre to the discourse; (4) there must not be any unnecessary repetitions; (5) the words must be properly selected according to the purpose; this includes the use of kinaya, metonymy, where tasrih, plain speech, would be out of place; (6) technical terms are inadmissible (60-161).

There is another set of properties of fasdha which KhafadJI treats separately (162 ff.) even though they could be subsumed under the requirements of (B). These are: (1) munadsaha or tanansab, correspondence between words in regard either (i) to their pattern or (ii) to their meaning. It is under (i) that KhafadJI deals with sadji and isdawddi, bawdji, lusum mā lam yatasm and tasri (internal rhyme), tarsī, haml al-ajs 'ala 'l-ajs 'il-tasī (an unusual name for al-ajs wa 'l-nasr; bokh), al-tanansab fi 'l-misād (requirements concerning the relative length of the various cola in a sadji passage), al-muđijānas (covering both figura etymologica and paronomasia) and, as the lowest form of tanansab, al-taškid (paronomasia based on modifications of the graphic representations of two words and not on sound).

By introducing category (ii) of tanansab, which is concerned with closeness and contrast of the meaning of two lasfa, KhafadJI leaves definitely the area which Arabic theory is generally willing to assign to fasdha. Considering that tibāh, antithesis, for instance, clearly derives from meaning and not from the word pattern or its huruf, it can hardly be viewed as a component of fasdha which, after all, KhafadJI himself had explicitly tied to the word while leaving the meaning to balāgha. KhafadJI goes on to consider tafsī, concision, as a shurut of both fasdha and balāgha. The same applies to clarity, an yakāna ma'ma al-kaldm wādī** sāhir** djālīyy**. KhafadJI justifies its connexion with fasdha by pointing to six reasons for obscurity of discourse (210), two each inherent in (a) the isolated word: the unusual expression; the use of homonyms; (b) the composition of words, ta'lti al-alldJI ba'da-ka ma'na ba'd; concision; (c) the accuracy of tanansab fi 'l-misād; and (c) the ma'ma as such: over-subtlety; too much advance knowledge required for understanding. In this context KhafadJI (212-5) takes sides in a controversial issue by asserting that some parts of the Kur'ān are more aljah than others. Since everybody agrees that Torah, Gospels and Psalms although kalām Alāh are less fasdh than the Kur'ān, there is no reason why all of the Book should be on the same level of fasdha. Additional characteristics, mu'āl, of balāgha and fasdha (not integrated in any classification by KhafadJI) are (1) the designation of an idea not by its usual name but by an expression implying it, and (2) the rendering of an idea through a simile, tanmik. Only at this point does KhafadJI definitely turn to the examination of the ma'ma and their properties such as (224 ff.) soundness, sīkah (eight sub-categories), completeness, or emphatic presentation.

Fakhr al-Dīn al-Rā'īsī's (d. 606/1209) motivation in discussing fasdha is the same as KhafadJI's: its fasdha makes the Kur'ān mu'dījī (Nihayat al-miżār, Cairo 1317, 5). This fact makes its investigation research into the noblest of all religious subjects, viz. the manner in which the Holy Book indicates the veracity of Muhammad (7). But although Rā'īsī follows his predecessor in overextending the content of fasdha his presentation is much more orderly
and shows the progress of scholastic disciplining of scientific thinking in the intervening century.

Fāsāḥa is defined (9) as ǧūlūs al-kālim min al-ṭāʿākīl, the freedom of the discourse from obscurity, or confusion, from anything that "ties" thought and mind. (This definition recurs, e.g., in Ibn Kayyim, Fawāʾid, 9; the concept of ʿtaʿākīl is discussed by Kāzinwī and Taftazānī, Talkhsī, i, 102-108). The purpose of kālim, the conveying of meaning, is achieved on the verbal and the intellectual level. Neither fāṣāḥa nor bāldgha can be predicated of the connection, established between word and meaning, the signifier and the signified. Were it otherwise, fāṣāḥa would have to inhere in the individual ʿurūṭ or in their agglomeration which, however, could not possess any ʿiṣa lacking in the individual ʿarb. Also in this case, a person ignorant of the Arabic tongue would have to be able to recognize al-kālim al-ʿarabī al-fāsfaḥ. Besides, fāṣāḥa is a "plus" achieved by the free choice of words; the qualities of the individual words, on the other hands, are due to the wadʿ al-wāṭiʿ, not to the speaker. Furthermore, a word will be fāṣiḥ in one, ṭakhī, "weak," in another context. The Prophet challenged the Arabs to match the fāṣāḥa of the Book; had this fāṣāḥa rested on the individual words the challenge could easily have been met. Metaphor, ʿiṣiḍā, ʿatšāw, ṭaṣṣāfī, and ṣ̄aṣhī, fāsfaḥa, al-ʿabādī al-fāṣiḥa; since these figures of speech have reference to the maʿnā, not to the laʃz, fāṣāḥa cannot, in its entirety, be word-bound (12-4). The objection (15-6) that everybody speaks of laʃz fāṣiḥ and nobody of maʿnâ fāṣiḥ is countered by the observation that the attribution of fāṣāha to the laʃz refers to its dašāla maʿnawīyya (not its dašāla laʃziyya). In disposing of the criticism that since the same maʿnâ may often be expressed by two laʃz, one fāsfaḥ, the other ṭakhī, fāṣāḥa cannot refer to the maʿnā—nor would it if it did the ṭafsīr al-mufassir be inferior to the speaker's power which it explains—, Rāzī gropes for the concept of the emotive etc. associations surrounding the different terms, Ibn al-Athīr's treatment of "composition" is concerned with removing the subjective element in ascribing fāṣaḥa to a given expression. The frequently proposed definition of the fāsfaḥ as al-ṣāhir al-bayyīn is inadequate. For it is open to three objections: (1) a laʃz would be judged ṭafsīr when clearly understood and ṭaʃiḍ when not clearly understood by the hearer; thereby a subjective element enters, become decisive; (2) consequently an expression would become ṭafsīr to ṣṣiḥ and ḍhāṭir ṭafsīr to ʿArm, whereas the ṭafsīr is uncontroversially so for everybody; (3) an ugly word would be ṭafsīr as long as it was ẓāhir and ṣṣiḥ, evident and clear; yet fāṣāḥa is ṣ̄aʃī ṣ̄uṣn al-laʃz ̀ā wāʃiḥ ḥubh, i.e., it indicates the properties which make a word beautiful, not those that make it ugly. Unfortunately, Ibn al-ʿAṭīr, 82-3, is in the actual discussion replaced by two: al-muḍaʃala al-ṭafsīyīya, the "crowding of one part of kālim upon another" (cf. Lane, 2086a), and, again presented as an original contribution, al-muḍuʃara ṣ̄uʃn al-ʿalāʃ ̀ā ʿl-saʃī (18-9), the juxtaposition of words that do not fit together in the particular context.
the *fasāha* pertaining to a whole sentence. Usage would appear to be for Suyūṭī the decisive factor constituting an expression *fāṣūḥa*. *Fāṣāha* allows of grammatical changes, in an ease not having in another, thus *būr* in relation to *kāmūh* and *hīnūl* (i., 105; cf. Ibn al-Athīr, 26-7 and 59-60 with Ibn al-Hadīd, 40, on *muṣna* and *dīmā* as *āfṣāḥ* than *būr*); so of course are some speakers, and the Prophet is *āfṣāḥ* of all (103).

To be fully understood, the distinction between *fasāha* and *baladgā* must be seen, on the one hand, in the context of the dualism of form and content that dominates the critical thought of the Arab-Muslim theorist and, on the other, in the context of the dualism which the Muslim philosophy of language predicates of its subject. When the activity which results in language is analysed into its two components, *fasāha* emerges as the "virtue" co-ordinated with man's physiological, phonetic effort and *baladgā* as the "virtue" registering the realization of his mental endowment (for the Ikhwān al-Ṣafā as representatives of this "dualism of language" cf. J. Lecert, *Stud. Isl.*, xi (1960), 22-3).

---

**AL-FĂŠHIR (EL-FASHIR)**, the capital of Dār Fur [q.v.], formerly a sultanate, now a province of the Republic of the Sudan. The term *fāšir*, meaning a royal residence, more precisely signified an open space, serving for public audience by a sultan, or as a market-place, and was also used in Sinnār under the Fundjī [q.v.], and in Waddāl, where *warā* appears as a synonym (see J. L. Burckhardt, *Travels in Nubia*, London 1819, 486). The *fāšir* of the Fūrī sultan was established in 1206/1791-2 at Wādí Tandālīt, on a sandy ridge, overlooking a seasonal lake. Around this royal residence, the town developed. It was visited between 1793-6 by W. G. Browne, who has left a plan and description of the palace area, but says nothing of the town. Fuller information, and an elaborate but schematized plan of the palace area, were given by al-Tūnūsī, who spent eight years in Egypt and Fūrī from 1818 to 1826, and by Khalīl Zūkal, the first Mahdist governor of Dar Fur. His book, which was surrounded by a triple thorn-fence (ṣarība), were the houses of royal officials, holy men (fakārā) and others. The inhabitants were divided into two groups, the people of Warrādāy (the Men's Gate of the palace), and those of Warrābāya (the Harīm Gate). The houses of the poor were built of millet straw, those of the ruler and notables of mud. Al-Fāšir remained the capital of the sultanate until the annexation of Dar Fur to the Egyptian Sudan in 1291/1874. Sporadic Fūrī resistance continued, and on one occasion Al-Fāšir nearly fell to the troops of the shadow-sultan Harūn. In January 1884, the khedivial garrison surrendered to Muhammad Khalīl Zūkal, the first Mahdist governor of Dar Fur. When the Mahdist state was overrun in 1898, Al-Fāšir became the capital of the revived Fūrī sultanate of All Dinār. In 1926 Dar Fur was annexed to the Anglo-Egyptian Sudan, and Al-Fāšir became again a provincial capital. Although Al-Fāšir has long superseded Kubbayb (Cobbē), which in Browne's time was the trade-centre of Dar Fur, its difficulty of access from the east has led in recent years to a shift of road-traffic southwards to Nyala, to which town a railway-line was opened in 1959. The population of Al-Fāšir, of varied origins, was estimated at c. 2,650 in 1875, and c. 10,000 in 1905. In 1959 it was 26,161.
Bibliography: for the following principal sources, see under Dar Fur: Browne, al-Tunusi, Nachtigal, Slatin, Shukayr. Also K. M. Barbour, The republic of Fashoda, London 1955; R. Capot-Rey and P. M. Holt, FASHODA proper, the royal village of the Shilluk, lies near the west bank of the White Nile at 9° 50' N., 32° 28' E. It is the principal site of the elaborate ceremonies by which a Reth of the Shilluk is invested with his 'divine' attributes. An Egyptian expedition under the Hübner's All-Khorjan reached Fashoda in 1850. In 1853, a government post was founded on the river some 28 kms. downstream, at 9° 53' N., 32° 07' E., and was named after Fashoda as the nearest place of importance. In 1863 this post became the headquarters of the newly-created mudiriyat of the White Nile. Its garrison contributed to the suppression of the riverain slave-trade, but Fashoda acquired an evil reputation as an unhealthy 'punishment station' for criminal and political exiles. Heavy taxation and forced recruiting led to conflict with the Shilluk. Although the Egyptians were sometimes able to procure the election of friendly Reths, in 1866 and again in 1875 the post was almost overwhelmed by Shilluk risings. The republic of Fashoda, 1850; J. the waqf deed for his works contained the stipulation that they be not lent to a Meccan.

His numerous works included an abridgment of the Ḥayāl al-hayawān of his teacher, al-Dāmirī, and a number of writings on ḥadīth and other religious subjects, of which two are preserved, Dhawiq al-usūl fi ʿl-ḥadīth and al-ʿArbaʿān al-ḥadith al-mubāyīnīd al-ṣundā. Biographical works on religious scholars included his Supplement to Ibn Nukṭa's Taṣāwīf (which contains an autobiography of himself) and a negative appreciation of Ibn ʿArabī. Of general historical titles, we may mention the Munākhāb al-Mukhtār, an abridgment of Ibn Rāfīʿ's supplement to Ibn al-Najdīḍār's supplement to the Taʾrīkh ʿAbbās (Baghdād 1357/1938; another old ms. in Mecca, cf. Shīrīʿa, ii, 452, n. 2); a partly preserved supplement to al-Dhahābī's Nakaba (Berlin 1873); a supplement to the same author's Ṭabāra and a History of the Rasūlīds (not preserved).

Al-Fāsī's fame, however, rests upon his works on the history of Mecca, a subject which had been strangely neglected practically since the times of al-Azraqī and al-Fākhrī (q.v.). His basic works are Shīrīʿa al-ḍarāṣāt bi-ʿl-bādhā al-ḥalām (Mecca-Cairo 1905; some chapters in Wüstenfeld, Die Chroniken der Stadt Mekka, Leipzig 1857-61, ii, 181 f., cf. 185, 52, 55 f., and ii, 17; and cf. al-Udīd al-ṣanīfī fi ʿl-ḥalām al-ʿālim (Cairo 1289-90; Mecca 1314; additional mss. Cairo Taymūr, ʿaḥrīq 495; Yale L-305 [Cat. Nemoy 1179]; Kattānī, cf. Revue Inst. Miss. ar., v [1959], 184; Istanbul Feyzullah [not Faith] 1482; al-Azhār, cf. Fāshīd al-masāqawārā, ii, 1, 181 f., ii, 106, etc.). The Shīrīʿa contains (1) the description and history of the physical features, both natural and man-made, of Mecca and environs, including a discussion of the holy places and the rituals connected with them; (2) the ancient pre-Islamic history of the city; (3) a chronological list of its governors and rulers; and (4) a selection of historical events connected with it. The ʿIbad, on the other hand, although it starts out with the holy topography of the city (abridged from the Shīrīʿa and entitled al-Zakīʿah al-maktāba min taʾrīkh Makkah al-musawwara), is a collection of biographies of persons connected in some way with the city, beginning with a biography of the Prophet (entitled al-Dhawiq al-ṣanīfīya fi ʿl-sīra al-nabawīyya) and biographies of the other Muḥammads and Aḥmads, including a lengthy autobiography of the author in the third person, and then using an alphabetic arrangement. Of the Shīrīʿa, Al-Fāsī produced five or six successive abridgments, among them Taḥfīz al-ḥarām bi-ʾkhabār al-ḥalām al-ḥarām and, as an abridgment of the Taḥfīz al-ṭarīq al-arḍ, it is the principal characteristic of the Hanafi theory of nullity. In the doctrine of these schools, the two terms are synonymous, the synonymity reflecting their notion of a single sanction. However, we must state at the outset that for the Shīrīʿa and the Hanbal āl this uniform nullity corresponds to the ʿbāṭil form of nullity in Hanafī law, while for the Mālikīs its incidents coincide almost exactly with those of the fāsid type of nullity as expounded by Hanafī law.

If the practical application of the principles we have just expounded does not present serious difficulties, even in Hanafī law, when it is only a question of dealings with property (sale, hire, pledge, etc.), it appears, on the contrary, singularly complicated in relation to the contract of marriage. In this sphere, the fluctuations of the classical doctrine, as it grappled with a contract arbitrarily classified in the same category as sale or hire (fāṣīʿī), and which, in fact, is radically distinct from them, have reverberated down the course of the centuries in the works of authors and have reappeared at the present time—always on the same point—in the codes and laws of personal status recently promulgated in numerous Arab countries. It is therefore necessary to study the theory of nullity in the sphere of marriage separately in a second section.

I. Hanafī Doctri ne. (A) Non-existence, al-buṭlān. This, as has just been explained, is the sanction for the lack of any of the essential elements of a legal act, e.g., free will of the two parties (in
contracts), which, furthermore, must be expressed by the use of a verb in the past tense and which must be declared in those conditions of time and place which are called the false assumption of the contract or the madāḥīs. Free will is presumed impossible (thence occasioning the non-existence of the act) in the case of a mentally defective person, a minor of tender years, and even in the case of a minor who has reached the age of discretion, when this latter performs an act, such as gift, which must necessarily cause him a material loss. Further elements included fundamental are the actual existence of the object, its quality of legal property and the possibility of its delivery (the sale of fish in the sea and birds in the air is bāṭil).

The bāṭil act, since it is considered non-existent, cannot have any legal effect, whether there has been delivery or not. Reasoning on the classical hypothesis of sale—the same rules applying mutatis mutandis to all legal acts—it follows that the purchaser, who has not become the owner, cannot constrain the vendor to deliver to him the sale object, no more than the vendor can require the purchaser to pay him the agreed price. If, in fact, there has been a performance of the agreement reached between them (which is no more than the semblance of a sale) the status quo must be restored, i.e., the vendor must return the property perceived and the purchaser the object delivered, without any need of recourse to law, at least to establish the non-existence of the act. Suppose, now, that after a bāṭil sale followed by delivery the transferee in turn alienates the object, either for a consideration or gratuitously, or that he subjects it to some kind of lien, or that he hires it out or constitutes it as a waqf. In either event, the original vendor will not be deprived of the right to regain his property from the hands of a third party, whether this latter be a purchaser for value, a lessee, or the beneficiary of a waqf. The property, in fact, has never left his ownership because the sale concluded by him was legally non-existent—so much so, the Ḥanāfī authors state, that his heirs will release him; (b) the transferee is a guarantor of the object sold. The property, in fact, has never left his ownership because the sale concluded by him was legally non-existent—so much so, the Ḥanāfī authors state, that his heirs will release him.

There is one case where the application of the principles outlined above may possibly result in injustice. This is where the object sold has perished when in the possession of the transferee.

Strict logic would require that the risks should lie with the vendor: he has remained the owner, since, by reason of the bāṭil character of the sale, transfer of ownership has not been effected. The transferee, after having taken possession of the object, can only be considered, at most, as a trustee; and risks, in the case of a trust, lie with the owner. There exists on this point some uncertainty in the doctrine. In general, authors confine themselves—without taking one side or the other—to expounding two applicable arguments: (a) the transferee is simply a trustee (amanah), and the loss of the object releases him; (b) the transferee is a guarantor of the object, for this has been delivered to him not in the interests of the owner, but in his own interests. His taking of possession more closely resembles ḡāṣib (usurpation) than a trust (amanah).

It would seem that this latter argument prevailed. In the bāṭil sale, therefore, the risks will lie with the purchaser, when this latter has taken possession of the sale object, what is called in his possession. He becomes liable for its value if it is a specific object, and where it is a fungible commod-

ity, he will be bound to restore its equivalent (mahših).

(B). Fundamental nullity, fāsid, is the sanction for the infringement of conditions of validity which do not have the character of constituent elements of a legal act. Such are held to be the precise determination of the object, as regards both its nature and its value, the absence of any illicit gain (ribād) and of the majority of accompanying conditions, and the exclusion of any prejudice which would be occasioned by the delivery of possession. As for the act obtained by duress, this also is regarded as fāsid in Ḥanafi law; but this kind of fāsid nullity is regulated in a particular fashion which distinguishes it from the fāsid nullity of common law.

As a general proposition, we may say that the great majority of fāsid acts derive their character, in Ḥanafi law, from the fact that they contain accompanying conditions: an uncertain term or a suspensive condition (in the majority of the tamālikhāq), immoral or illegal stipulations, or simply conditions which are not in harmony with the nature of the act to which they are attached. This extends considerably the sphere of fāsid nullity, which can thus be regarded as parallel with the nullity of common law, as opposed to the bāṭil nullity whose rôle is most often confined to those theoretical arguments of a school which have no real practical interest.

The effects of fāsid nullity are less extreme than those attached to bāṭil nullity. This is easily explained inasmuch as the fāsid act, although void, is nevertheless constituted; juridically speaking, it exists, although it is vitiated and therefore needs to be negated. The difference between the two kinds of nullity is especially apparent after the delivery of possession or voluntary performance. (a) Before delivery of possession (or, for certain contracts, voluntary performance) the fāsid act is not greatly distinct from the bāṭil act. As is the case with the latter it does not give any of the parties the power to compel performance from the other. Each of them has the right, and the duty, to avail himself of the nullity. A judicial decree is not at all necessary, and the nullity will be established by the declaration of one of the parties or even by the simple act, of the vendor, for example, in alienating the object for the benefit of a third party. The judge who has knowledge of such an act, must, by virtue of his office, pronounce its nullity. It is self-evident that fāsid nullity cannot be removed by confirmation. The act must be performed again in its entirety. However, if the nullity does not stem from a defect in the sale object, but results from the presence of a prohibited condition, the elimination of the offending condition will validate the act, which, thenceforth, will produce its normal effects. A usurious sale, from which the parties, by common agreement, have eliminated the clauses which gave it this character, will transfer ownership from the moment that the forbidden clause disappeared. (b) After the taking of possession authorized by the vendor (reasoning always on the basis of a sale), the fāsid act will produce certain effects which the bāṭil act can never have. It is not that the taking of possession transforms it into a valid act (saḥḥih): this is certainly not so. It continues to be tainted with an absolute nullity, although the vendor has authorized the purchaser to take possession; and this latter is bound to restore the object received and to take back the price he has paid. Delivery of possession, then, following upon a fāsid sale, does not transfer ownership in Ḥanafi law, although such an assertion is often made without the necessary reservations.
According to the opinion which prevails in the school, delivery of possession does not in reality transfer ownership, or at least ownership in the normal sense, since the vendor always reclaim his property as long as it is in the possession of the transference. Furthermore, this transference cannot enjoy or use the thing which he has received (with the agreement of the vendor). "He cannot eat it, nor wear it (if it is a garment), nor ride it (if it is a beast of burden), nor live in the house (which he has bought), nor avail himself of the services of the slave girl that he has acquired" (al-Kásâānî). What does result from delivery of possession following a fâsid sale is solely the transference's power validly to dispose of the object delivered to him, either gratuitously or for a consideration—e.g., he may sell it, give it away, constitute it as a waâfî, or, if it is a slave, set him free. This fiction of ownership, albeit an odd ownership (khabîthâ, bad, defective) in that it confers upon the one in whom it vests the abusus, but not the usuus or the fructus, is quite obviously designed to protect subsequent transferences against a claim for restitution by the original vendor, in so far as their title cannot be impugned on the ground that they acquired the property from one who was not the owner. It is this Hanâfi system, perhaps, which appears the least complicated, the result, vital for the protection of future transferences, delivery of possession or performance following a fâsid contract operates to produce two other effects, less important but not altogether devoid of interest. In the first place, where fâsid nullity is solely the result of the incorporation of a prohibited term within the transaction (an uncertain period, for example), the party in whose interests the term was stipulated has the option of relying upon the nullity or, on the other hand, validating the transaction by renouncing the benefit of the term; whereas, prior to delivery of possession, confirmation of the transaction by repudiation of the offending term could only have been effected by the mutual agreement of the two parties. The second result of the fâsid character of a legal transaction is more significant. The transference has in fact utilised the property delivered to him, or, in case of a contract for services, these services have been performed, or, of course, where the first transference has alienated the property sold. In this case, in order that nullity may not result in unjust enrichment, the price, rent or wages which become due will not be the agreed price, rent or wages (since the contract is null), but will be the market value of the property, or the rent customarily payable, or the usual wages.

II. The doctrine of the other schools. The three other schools refuse to admit degrees of invalidity. To fail to observe the conditions required by the Shi'îa for the validity of an act is equally serious whether it is a question of a fundamental condition or of an attribute (waâfî), which, although it does not have an essential character, is nevertheless imposed by the law. In both cases there is "disobedience" to the rules of the Shi'îa which must be sanctioned by the same nullity.

For the Shi'îa and the Hanâballah, this single nullity corresponds with the bâtit nullity of Hanâfallah law, at least as far as concerns the invalidity of acts of disposition effected by the transference in a valid sale: subsequent transferences cannot be protected against the claim of the original vendor. On this point the texts are explicit. However, outside contracts which operate to transfer ownership, the Shi'îa and the Hanânballah sometimes accept the distinction between bâtit and fâsid in order to avoid, as far as possible, the injustice which would be entailed by the voluntary performance of a void contract if the status quo ante was purely and simply restored as the principle of butuld would require. Finally, the possibility, admitted by both these schools, of the partial annulment of a composite contract concluded by a single legal transaction (saâbâ), which contains both valid and invalid components (the sale, at the same time, of a free man and a slave), fortunately serves to relax, to some degree, the rigidity of their principles.

The Mâlikîs, on their part, regulate the single nullity which sanctions invalid acts (termed fâsid or bâtit) in a different way, with the result that their system is closely parallel to the system of fâsid nullity in Hanâfi law, at least as far as concerns sale, the prototype contract of Islamic law. Recovery by the original vendor in a void sale is impossible, state the Mâlikî authors, when the purchaser has disposed of the property to the profit of a third party, whether by way of sale for a consideration or by gift, or when he has set free a slave, or even when he has merely made the property a pledge or has transferred it to a bailee. In these last two cases the original vendor is bound by the pledge or the bailment for their full duration. Equally, recovery by the original vendor is inadmissible when the form (sûra) of the sale-object has been changed, by "increase or decrease", while in the possession of the first transference. In this case the vendor will have to be satisfied with monetary compensation.

III. Nullity of marriage. Certain Hanâfi authors of authority assert that the distinction between bâtit and fâsid which, for reasons readily understandable, does not apply to ritual obligations (tâbahhâ), is equally alien to the contract of marriage, where all defects, whether they attach to the essence of the contract or to its external conditions of validity, are sanctioned by the same single nullity which is neither exactly a fâsid nullity nor exactly a bâtit nullity. In point of fact, the thought of the classical authors and the transference by the pledge or the bailment for their full duration, the question is bound up with a problem peculiar to Islamic penal law—that of ghubba, or semblance, which is one of the grounds for avoidance of the fixed penalties. The doctrine of each school —and, in the Hanâfi school, the two doctrines there adopted concerning nullity in marriage—are directly influenced by the position taken by the jurists in regard to this theory of ghubba. Indeed, it must not be forgotten that the annulment of a marriage, with its retrospective effect, results in the assumption that the spouses have never in fact been married; if, therefore, there has been consummation, this will, in principle, be held to be fornication, punishable by the severe fixed penalty (kâdd) prescribed in cases of zinât. This penalty, like all the other fixed penalties (bulzâd), is avoided whenever there exists a ghubba, or semblance, which, or the doctrine that the accused is charged and another deed of the same nature which is indisputably not criminal. According to Abû Hanîfa, such a semblance is found in three
sets of circumstances: firstly, when the act with
which the accused is charged resembles an action
which is normally permissible (gshbha fi 'l-fil'),
although text (gshbha fi 'l-makhlu') which precludes
any unani of juristic opinion on the point con-
cerned,—a Hanafi, for example, could believe
that the presence of witnesses at the moment
of the conclusion of a marriage is not indispensable
since they are not required, at that moment,
by the Malikis; finally, when the act has been
done as the result of a contract which observed
merely the conditions of formation (gshbhat al-'akd).
This third category of gshbha is admitted by Abu
Hanifia alone, and is rejected by his two pupils (Abu
Yuṣuf and al-Shaybānī) and by the three other
Imāms: its result is the avoidance of the hadd for
fornication in every case where the dissolution of a
marriage has taken place for any reason what-
soever, even where it is a case of a contract vitiates its essences. Accordingly, in the opinion of Abu
Hanifia—and in his opinion alone—"if the
contract of marriage is ostensibly valid because it
fulfills all the necessary conditions of formation,
but its nullity is nevertheless manifest because there
exists an impediment to marriage between these
two spouses (too close a blood-relation-
ship, foster relationship, the husband already having
four wives, the wife already being married to
another man who has not repudiated her, etc.)
then, in these cases, the penalty for fornication will not be
applied after the separation of the couple; and this
will be so whether or not the spouses acted in good
faith, i.e., whether they knew, or did not know, of
the prohibition they were infringing. The two
pupils of Abu Hanifia, and all the jurists of the three
other schools, did not admit the gshbhat al-'akd, and
accordingly the act of fornication would lapse only if one, at least,
of the two spouses believed that the law was not being
broken by their contract of marriage—this, by
applying the gshbha fi 'l-fil'. In other words, the
dissolution of a marriage on the ground that there
exists a legal impediment between the spouses will
entail the application of the hadd only where the
two spouses acted in bad faith, knowing that they were
being married in contravention of a legal prohibition.
In seeking to reconcile the preceding solutions,
which are of a penal nature and are strictly concerned
only with the offence of fornication, with the rules
relating to the conditions of formation and validity of
a marriage, the authors arrived at two systems of
nullity. The Hanafi school always hesitated between
the two, while the three other schools adopted the
second. It is necessary, at the beginning, to stress
that if the ground for nullity is established before
consummation, the marriage is deemed, purely and
simply, never to have existed: there is no dower,
no maintenance and no rights of succession should one
of the spouses die before the declaration of nullity.
Any Muslim has the right to invoke such a declaration
by the court, if the spouses themselves have not made it:
the trial of the action as such in the civil law includes
no formalities are required. On this point there is a
consensus of opinion. When nullity is established
after consummation, Abu Ḫanifia distinguishes
between the fact that it results from the absence of
a condition of the existence of marriage (legal
capacity, mutual agreement in the
course of the same contractual session) and the fact
that it results from any other cause external to the
formation of the contract. In the first case the
marriage does not exist. It is bāṭil and it pro-
duces no effect, neither entitlement to succession,
nor legitimacy of children, nor the obligation of the
wife to observe the 'waiting period' (īdād). However,
the act—a husband, for example, has had sexual
relations with his wife, believing them to be permis-
sive though the two spouses should be aware of the
illicit nature of their union: (a) firstly, there is no
longer any question of the hadd, the spouses
being relieved therefrom by the gshbhat al-'akd: (b)
that the penalty is avoided, the woman has
the right to a dower—the proper (customary) or
stipulated dower, whichever is less; (c) the woman
will be bound to observe the period of retirement,
which will last until the completion of three menstrual
periods (būrā'); (d) the issue born of this sexual
relationship will be the legitimate children of their
father; (e) finally, the fāsid marriage will raise a bar
to marriage between the relatives of the spouses
whose union has been terminated.
According to the two pupils of Abu Ḫanifia and
the three other Imāms (al-Shafi'i, Mālik and Ibn
Ḥanbal), when nullity is incurred on the ground
that the marriage has been concluded in defiance
of some prohibition concerning blood relationship,
affinity, fosterage, religion, or the fact that the
woman was already married or in her period of
retirement, or that the husband already had four
wives etc., in all cases enquiry must first be made
as to whether the ground of nullity is or is not
disputed. Where there is no unanimity of the
jurists that an impediment in fact exists, the
spouses will benefit from the gshbha which arises
from such disagreement. And even when it is
admitted that the sīma2 condemns the union, still
enquiry must be made as to whether the spouses
were acting, at the moment of the conclusion of
the marriage, in good or in bad faith. Where
they acted in good faith, the marriage, although
naturally null or fāsid, will nevertheless give rise
the limited effects which, in Abu Ḫanifia's
view, follow the dissolution of a fāsid marriage—
although certain schools hold that the wife is
necessarily entitled to the proper dower, even if
this exceeds the agreed dower.
Where the two spouses acted in bad faith, they
are liable to the hadd for fornication, and none of
the normal effects of marriage follows the dissolution
of their union (except the istibrid of one menstrual
period in Mālikī law).
One cannot help drawing a parallel between this
system and the institution of putative marriage in
Christian canon law. In any event, those who adopt
it are remaining, without acknowledging it and,
indeed, without mentioning it, to the distinction
between fāsid and bāṭil.
avoid extending the term fasik to the believer who is guilty only of "lesser sins" (şafik).

The "name and status" (kasab) of the fasik is one of the cardinal points discussed by the kalâm. Its origin goes back to the battle of Siffin and to the question which believers then raised, as to the destiny on earth and the future destiny of the Muslim leader, and hence of all Muslims who sinned.

Two initial trains of thought: a) the Ḥanafis purely and simply condemned the unrepentant fasik to eternal hell and, on earth, denied his right to stand at the head of the Community. To commit an act of fasik rendered the imām unable to hold his office. (N.B.: for the Šī'a, the lawful imām is inherently sinless). b) The Ṣūfis made the unjust man subject, on earth, to the fixed legal penalties (šu'da); but once this debt to the Community was paid, he remained in full exercise of his status as a believer, and, for the life to come, every believer is saved in hope.

These extreme solutions were to undergo certain modifications in the course of scholastic controversies, but were also to be a source of inspiration for them. It was on this theme that the Muʿtazila elaborated the thesis of the so-called "intermediary status", one of their particular characteristics which is attributed to Wāṣīl ibn ʿAṭā. The fasik is not entirely a believer (muʾāmin) nor entirely an infidel (kāfir), but "in a position between the two", fi mansīlatuš* bayna l-mansīlatayn. On earth, he is answerable to the laws of the Muslim Community; but if he does not repent, he will be punished with eternal hell (e.g. Kurʾān, XXXII, 20)—though his punishment, it is true, will be less severe than that of the kāfir. This reply is entirely dependent on the conception of faith (imān) which is involved. In the eyes of the Muʿtazila indeed, to be a believer signifies at once adhering in one's heart, professing with the tongue, and witnessing "with the limbs" by performing the actions prescribed by the Law. Whoever does not fulfill the third condition cannot truly be a believer, and so cannot be saved.

In the İslām (Cairo 1948, ii) and the Maḥālāt (ed. Ritter, 1953): Allah conceives the faith as "words and deeds", kawl and ṣamāl, thereby appearing to integrate the "witness of the limbs" with it, like the Muʿtazila. But his Kitāb al-Lumaʿ (ed. McCarthy, Beirut 1953, 75/104) states: "faith in God is tāṣđīk (adherence) to God". And he taught clearly that it was impossible for a fasik to be neither a believer nor an unbeliever; if he was a believer before becoming a sinner, he said, the "great sin" committed will not invalidate his standing as a believer (Lumaʿ, 75-6/104-6). And al-ʿAshʿarī upholds this opinion with the tradition of the ahl al-taṣītkāmā ("people of Rectitude", in R. J. McCarthy's translation). The later ʿAshʿarītes were to maintain the same principle even more forcibly since, for them, faith came to be identified solely with tāṣđīk, adherence, inner judgement.—The same solution appears in the Hanafi-Maturidī line of thought from which defines faith as tāṣđīk and its avowal in the spoken word (thus Fikh Akbar I, 1; Wasīyyat Abī Ḥanīfa, 4; Fikh Akbar II, 14). The fasik is a sinner, but a believer. In its apparent sense, verse XXXII, 18 of the Kurʾān certainly seemed to open the way to the Muʿtazila solution: "Is then the man who is a believer like him who is fasik? (No), they are in no way the same." But from the 14th-15th century, the dominant tendencies of ʿim al-kalām taught that the fasik would be saved in the Hereafter. He can be punished by a certain time in the (eternal) hell:
Aşqarî; or he will certainly be punished in that way: Maturdîls (Fiqh Akbar II, 14). But finally ... to the references in the text, for āfsīla of carud, LA, xiv, 38/xi, 523b; writers on Arabic prosody, D. Vernier.

Imdn, its expression; to fail in a prescribed duty does not mean to do it without the intention for which it was prescribed. Good deeds become one of the articles of the Wahhabi profession, for faith in his heart, professed it in his words, performed certain prescribed actions, but who committed "great sins".

The Ashârî solution is, in short, that of the akh al-sunna taken as a whole, including the Hadîth. The opponents of kalâm. It will be found for example in Ibn Taymiyya, and subsequently it became one of the articles of the Wahhabi profession of faith (cf. H. Laoust, Doctrine sociale et politiques de Tabi'-Dîn Ahmad b. Tasmî, Cairo 1939, 621).

Two problems. — 1) Can a prophet be said to be āfsîk? Literalists (called haqîqiyâ by their adversaries), have been of the opinion which became generally accepted, good deeds as the Muslim who adhered to the profession and bodily actions (cf. Ihyâ*, Cairo 1352/1934, 71-3), nor even the personal observance of the Law by the prophet is concerned. Moreover, certain acts which appear to be sins have been performed by prophets merely "by way of teaching". The Shî'a (e.g., Naṣr al-Dîn al-Tûsî, Hillî) were to teach the absolute sinlessness (al-sunna) of the prophet, and their doctrine was to influence their adversaries themselves. Thus the "modern" Fâbrîq al-Dîn Râdî (q.v.), who nevertheless maintains the possibility of trivial errors arising from involuntary forgetfulness or from obscurities in the regulations; but still more the Hanbalî Ibn Taymiyya who adopts the Shî'a thesis in its entirety, though making the 'isma a gratuitous (and no longer "obligatory") favour of God (cf. Laoust, op. cit., 191).

2) Is it lawful to rise against an imâm who is āfsîk? Yes, answered the Khârijîs and Mu'tazîs, who even regarded insurrection as a duty in that event. The same attitude is found with the Zaydis (moderate Shî'a) and various Shî'a trends, but the dogma of the imâm's sinlessness widely prevailed among the Shî'a.—Certain jurists make a distinction: no revolt against the imâm who is āfsîk, but refusal to obey the agents who are enforcing the injustice. Common Sunnî doctrine calls for obedience to the imâm (and his agents), even if he be āfsîk in his private life, so long as he orders nothing contrary to Kur'ânic law. But if a command of his runs counter to a precise Kur'ânic or traditional precept, disobedience is permitted and even obligatory; if there is a guarantee of success, he must be deposed, if necessary by force.

In legal terminology, āfsîk is the opposite of 'adl. —

Bibliography: in the article; and all the treatises on 'im am al-kalâm under the heading al-akhâm wa 'l-asma' (e.g. Bâkîllânî, Djuwaynî, Dîrnânî, Bâdîjîrî, etc.); A. J. Wensinck, The Muslim Creed, Cambridge 1932, index s.v.; L. Gardet, Les noms et les statuts, in Stud. Isl., iii, Paris 1910/11, 133ff. (L. Gardner). —

FÂSILA in its original usage indicates a separative: "a pearl (kharasa) which effects a separation between two other pearls in the stringing of the latter" when a necklace or piece of jewellery is being made (see Lane s.v.); āfsîla, with this sense of separative, has received two technical usages, one in Arabic prosody, the other in Kur'ânic terminology.

In Arabic prosody (warâd [q.v.]), āfsîla denotes a division in the primitive feet, meaning three hurâf muthabartha followed by one harâf sâkin, e.g. : katalat (al-āfsîla al-suqâra), or else four hurâf muthabartha followed by one harâf sâkin, e.g. : katala-hum (al-āfsîla al-kubrâ), al-Kâallî (according to LA, xiv, 38, l. 21-2xî, 523b, l. 27 ff.) used āfsîla for the first group and āfsîla for the second. The first denotes the series two short syllables + one long syllable, the anapaest of Graeco-Latin prosody; the second denotes the series three short syllables + one long syllable, the fourth paceon in the said prosody. But there is an important difference: the anapaest and the fourth paceon denote rhythmical units, whilst āfsîla suqâra or kubrâ relate to divisions, groups, within primary rhythmical units (the sâfâfî), in order to express the possibility of trifling errors arising from involuntary forgetfulness or from obscurities in the regulations; but still more the Hanbalî Ibn Taymiyya who adopts the Shî'a thesis in its entirety, though making the 'isma a gratuitous (and no longer "obligatory") favour of God (cf. Laoust, op. cit., 191).

The Kur'ânic text carries rhymes. The question was raised in the Muslim world, by what technical term are these rhymes to be designated? There was no hesitation in rejecting the kâfîya of shîr, for the Kur'ân is not a work of shîr (poetry). Was the Kur'ân sâfî [q.v.]? Many of those who did not profess Ashârîsism (this must refer to the Mu'tazîs) adopted and defended this point of view. But after Al-Asqarî and Al-Bîkîllânî it was abandoned: in fact, on the one hand the verses of the Kur'ân, in general, are not balanced according to the rules of sâfî and the rhymes are given a freedom not permitted by the latter (see Th. Nöeldeke, Geschichte des Qorans, i, 37-41); on the other hand, Muslim religious sentiment was reluctant to apply to the Kur'ân, kharasa and kalama, a description which had been derived from Him, and which was moreover taken from a human source, namely the sâfî of the soothsayers, whom Muhammad disliked. The solution was to consider the Kur'ânic text as prose of a particular kind and to designate its rhymes by a special term, āfsîla, pl. āfsiya, which could be compared with the Kur'ânic expression fassâlir n-šâlîl (VI, 97, 98, 126). Ibn Khaldûn repeats the opinion which for long had been common, when he writes on the subject of the Kur'ân: wa-in kâma min al-manâfrur 'ilâ annahâ ... laya yusumâ mursalî** tilâk** wa-la musâsîfâ** sma** "although it is prose, it is however not free prose, nor rhymed prose (sâfî)** and he expounds its particular character (Muhammad, iii, 332; Eng. tr., Rosenthal, i, 358).

The technical designation of rhyme is thus established according to a triple division: kâfîya for shîr (poetry), āfsîla for Kur'ânic prose, and karâma for sâfî, and the Kur'ânic āfsîla was explained by comparison with its partners: al-āfsîla kalimat ašhîr al-âyâ ka-kâfîyât al-shîr wa-karâmat al-sâfî, "al-āfsîla is the word at the end of the verse, like the kâfîya in poetry and the karâma in sâfî" (al-Suyûtî, Itkân, beginning of Ch. 59); see also Kâmûs, root fâ.$
FASILA — AL-FASIYYUN

Gr. Ar., ii, 515; S. de Sacy, Gr. Ar., ii, 619, etc. For the Kur'anic fdsila, see particularly ch. 59 of the Ibnab of Suyufi; for both, the Dict. of tech. terms, ed. A. Sprenger, ii, 1140-1 (cf. i, 672-3).

(H. FLIRICH)

FASILA, verbal adjective of the fa'il type in the passive sense, as the Arab lexicographers record, denoting an object which is "separated", like the young animal when weaned (young camel or calf), in the feminine faṣila; and the same feminine form is used for a palm-tree sucker when transplanted. It is no doubt the same semantic derivation which explains the meaning of the smallest "section" of a tribe, the closest relatives: thus ʿAbbās, according to the LA, is called faṣlat al-Nabi "close kinship with the Prophet". However, Arabic philological doctrine advances one meaning of faṣila "fragment of the flesh of the thigh" by virtue of the principle which makes every term of this tribal nomenclature correspond with the name of one part of the body. Robertson Smith has, not without probability, claimed to discern in the origin of this series various allusions to the female organs such as baṭn "belly" (starting with ḥayy which seems to be connected), upon which the denominations of male organs would be superimposed when the patriarchal organization was substituted for the matriarchy. (J. L. CLERR.)

FASILA — AL-FASIYYUN or A'H FAS, a name given to the inhabitants of Fās. In the local dialect this name does not apply to all those who live in Fās, but to those who were born there and have right of citizenship of the city and its code of good manners.

The population of Fās was formed little by little from many diverse elements. The original basis was certainly made up of Berbers and some Arab companions of the Idrissids. From the beginning of the 3rd/9th century on, the population grew through the coming of political refugees from Cordova and Rayyāwān, who brought the traditions and techniques of long-rooted urban peoples to the new town. Even though the people of Rayyāwān did not continue to swarm into Fās, the Muslims of Andalusia came in after the fall of the Caliphate of Cordova to establish themselves there, at any rate up to the conquest of Granada by the Catholic Kings (1492).

In addition, various groups were added to the original kernel of the population through the circumstances of Morocco's dynastic history: Berbers from South Morocco under the Almoravids and the Almohads; Berbers from East Morocco and members of Arab tribes under the Marinids; Berbers from the oases of the Sahara and negroes under the Sa'dīs; Fillāls and negroes under the 'Alawīs. At different periods, the Muslim population of the town was augmented by a number of families of Jewish converts to Islam who several, the Cohens for example, have preserved their original names. It must also not be forgotten that, at any rate in the 19th century, groups of Muslims came to Fās from outside for the purpose of practising various specialized trades, Berbers of the High Guir, for instance, who are porters, the people of Tuwat who handle fatty substances, those from the Dra' who are gardeners, those of Sās who are dealers in fatty substances, and those of the Rif who take part in the pressing of the olives. It is interesting that the Middle Atlas, although so near, has provided Fās with very few immigrants.

Since the French conquest of Algeria, Fās has formed a refuge for a number of families from the Oran area, notably Tlemcen, who preferred emigration to foreign domination. This was the case especially first in 1835 and then in 1912.

Before the 20th century the population scarcely ever seems to have passed the 100,000 mark, if it was as high, but no reliable document exists on this subject. Since the Protectorate, the number of Muslim inhabitants has grown, but in modest proportions compared with many other Moroccan towns: 163,000 in the 1952 census. This relative stagnation means that the traditional citizens have not been swamped in an enormous mass of new arrivals but preserve their personality and preeminence. This personality is characterized by a happy balance between economic activity, intellectual activity, and the religious life of the city, and by the existence of an etiquette (bā'īda) which rules most stringently the relationships of the people of Fās amongst themselves. Only those whose roots are truly in the city follow this etiquette, and they alone have a right to the name of Fāsiyyūn. They can be divided into several social strata which complement rather than compete with each other: at the top of the social ladder are the big merchants, the high functionaries and the religious leaders who form the middle-classes; then come the small tradesmen and the artisans; finally there are the workers settled in the city or about to become a part of it. Each of these strata has its own ideas which they form the middle-classes; then come the small tradesmen and the artisans; finally there are the workers settled in the city or about to become a part of it. Each of these strata has its own ideas which they...

Apart from those Jews installed there since the city's beginnings, whose exact origin it is impossible to discover, it is well known that the Jewish community has been enriched on a number of occasions by families or individuals emigrating from Spain; in the 19th century Spanish was still the daily language as was the case in April 1912, at the time of the revolt of the Moroccan troops. More rarely, the government has persecuted the Jewish community, notably during the short reign of Mawlay al-Yazid (1790-1792). Even more than the Muslims, the Jews of Fās have been affected by European influences since the beginning of the 20th century; many have left the Mellāḥ for the New Town (Ville Nouvelle).

FASKH—The term faskh, in the language of the Islamic jurists, has a very wide meaning. It serves in a general way to designate the dissolution of any contractual bond whatever (Ibn Nudjaym, al-Afzikhir, ii, 114). Whether or not the contract was validly formed, the intervention of faskh will reduce it to nought. But faskh presupposes a contract which at least fulfills all the conditions necessary to its formation, i.e., a mun'akid contract. A non-existent contract cannot be the object of faskh. On the other hand, a formed contract which happens to be vitiated by some irregularity (fasl), can be dissolved only by means of faskh, even though in the meantime it does not produce any of its legal effects. Faskh, in this case, is equivalent to annulment. In cases of error or injurious misrepresentation Islamic doctrine does not regard the contract as fasil. It is nevertheless subject to faskh, under certain conditions. Fashk in this case constitutes the sanction of an express or implied condition included in the contract. Generally speaking, faskh or annulment is procured in the case where the contracting parties fail to fulfill one of the express or implied conditions stipulated in the contract. It is by the application of this principle that a sale is annulled in cases of redhibitory defect or eviction. In this sense faskh can be identified with rescission. But the domain of rescission is singularly restricted in Islamic law. In effect, in the absence of an express or implied rescissory clause, it is impossible in Islamic law to obtain the rescission of a contract by reason of the failure of the other party to discharge his obligation. The only remedy available is compulsory performance (Chafik Chehata, Théorie de l'obligation en droit musulman, 147, 204).

Faskh is not only annulment or rescission. The revocation of a gift, or of any other contract revocable by its nature, takes place equally by way of faskh. Likewise, a contract by nature irrevocable becomes susceptible of faskh, or revocable, whenever it includes a right of option (khiydr).

Finally, an irrevocable contract can be dissolved by mutus dissensus (ikba). This dissolution effected by a mutual agreement is equally termed fashk by the jurists—at least with regard to relations inter partes.

Thus the term faskh comes to embrace also the cases of revocation and cancellation.

In every case faskh is effected, as a rule, by means of a declaration of intention pronounced in the presence of the other contracting party. This is why fashk is regarded by the jurists as a juridical act in its own right. However, in certain cases faskh must be obtained by judicial process. This is so in the case of redhibitory defects discovered after the delivery of the object sold. Likewise, the revocation of a gift must, as a rule, be pronounced by the judge. It should be mentioned here that the judge can pronounce officially the fashk of a vitiated contract when one or other of the parties has not requested it.

Moreover, faskh is clearly distinguished in the texts from infashk, which comes about without the need of any declaration or judicial decree. An example is provided by the case of impossibility of performance. If the object sold perishes before delivery to the buyer, the contract is dissolved by the normal operation of the law. Here the authors are fond of the term nullity or bakhsh (Sarakhsh, xii, Mabksh, xii, 174). Likewise in the case where proof of the contract is held impossible by reason of the conflicting oaths sworn by either side, the contract is dissolved by the normal operation of the law: nufasakh (Kasen, Badahi, v, 238).

Once faskh is effected the contract stands dissolved, and things must be restored to their former condition: the status quo ante. This is why fashk becomes impossible if the thing representing the object of a contract happens to perish in the meantime. As a rule, faskh has a retro-active effect (Kasen, v, 239): the contract is held never to have existed. The effects of the contract disappear as from the day it was formed. However, with a view to protecting the rights of third parties, the mutus dissensus (ikba) is considered a new alienation with respect to third parties. As far as they are concerned it does not have a retroactive effect. Likewise the alienation of a thing to the profit of a third party prevents the operation of faskh. Thus the right to dissolve the contract is destroyed, and the thing is established in the ownership of the third party who has acquired it.

We must notice, finally, that in family law faskh is distinguished from taldk. Taldk, which is the exclusive right of the man, brings about the dissolution of the marriage by a simple unilateral declaration. It always presupposes a validly formed contract. Dissolution of marriage by way of faskh takes place at the instance of the wife or her relatives. It generally comes about by judicial process. Like any other faskh, this dissolution embraces cases of failure to fulfill an express or implied condition, as well as those cases where the contract is vitiated by some irregularity. The grounds for dissolution of marriage by way of fashk are defined by the law, and faskh constitutes the legal means open to the wife of dissolving the conjugal tie in case of serious cruelty (Egyptian laws, no. 25 of 1920, no. 25 of 1929).

(Chafik Chehata)

FAŠL etymologically, like fars, expresses the general meaning of separation or disjunction (for the various meanings, see L, xiv, 35-9 for fasil; xii, 174-82 for fars; Abu 'l-Bakr, K. al-Kuliybah, 275). In logic, fašl signifies "difference" and especially "specific difference", the diafora of the five predicables of Porphyry (x. γένος, διάμε, genus; 2. ειδος, nae, species; 3. διαφορα, fašl, difference; 4. τοιχ, kai, property; 5. συμφράστης, tarsad, accident. The iθζων al-Sab'i add, in the tenth risala, shahkh, person). For the logicians, fašl has two meanings: the first covers every attribute by which one thing is distinguished from another, whether it be individual or universal, the second, in transposition (αλα nasl), covering by which a thing is essentially distinguished. In transposition in this way, fašl is used, per prorsus et posterioris (bi-hasan al-tak{m w'il-mkhedh), to designate a term common dii erence (al-fasali al-'^imina), particular difference (al-
fast al-khāṣ), and the particular of the particular (khāṣ al-khāṣ). Common difference (al-faṣl al-dāmm) is what allows a thing to differ from another and that other from the former; equally it is what allows a thing to differ from itself at another time. This is the case of separable accidents. Particular difference (al-faṣl al-khāṣ) is the predicate which is necessarily associated (lāsim, comitans) with accidents, e.g., the difference between a horse and a man constituted by the whiteness of the latter’s skin. Finally, specific difference or that of the particulars (khāṣ al-khāṣ) is what constitutes the species. It is the simple universal attributed to the species in reply to the question: what is it (in quale quid) in its essence in relation to its genus (fi dhawāb ayyuN Shayyā’ huewa fi ḍārithi min dhinshī bi), e.g., rationality for man.

The Platonic method of analysis or division (διάταξις) is distinguished by the name of fārāb al-khīṣa from the Aristotelian (fārāb al-khiṣa wuṣūl-yuṣūl) (al-Fārābī, Abhandlungen, ed. Dieterici, 2). For the metaphysical difference between the incorporeal and the body, fārāb (γνωστικός) is used. God is mufrāb, that is, separated, free of all that is material or corporeal. In the essence of God, there is neither fārāb nor faṣl (Theology of Aristotle, ed. Dieterici, 40). Purely spiritual beings (+wūl), the intelligences of the spheres and the heavenly bodies are mufrābūn (futtaqūn).

Bibliography: I. Pollak, Die Hermeneutik des Aristoteles, Leipzig 1913, glossary; the major text for faṣl is that of Ibn Sinā, Siḥfā’ al-Madkhal, pub. Cairo 1952, ch. XII, 72-82; the Latin translation of this text was used by Prantl, Geschichte der Logik, ii, 345-8; cf. also A. M. Goichon, Lexique de la langue philosophique d’Ibn Sinā, no. 504, and Fikih, L’Organon d’Aristote dans le monde arabe, Paris 1934, 70-133; see also Qīns and Ḥadd. (T. de Boer.[G. C. Anawati])

FASL [see ḤILĀ, MAṢGOL].

FASTS [see ṢAWM].

FAṬA, pl. fīṣāyān, strictly “young man”, has assumed a certain number of meanings in Arabic [see futūwa]: here we confine ourselves to one exclusively Andalusian usage. In Muslim Spain the slaves, who were youths or not very experienced in the service of the prince and his household, and then of the bābāyī [q.v.] at the time when the latter was in practice taking over the reins of power, were in fact called ghulmān (sing. ghulm [q.v.]), whilst those who held an elevated rank in the palace hierarchy bore the title faṣla, the entire management of the household being placed under the control of two majordomos or “high officers”, al-fataydn al-kabirdn (q.v. or “high officers”, al-faṣl al-khāṣ). In the course of the history of al-Andalus a certain number of these slaves, generally of European origin (see ṣaḥāliba), after obtaining the status of free men, were promoted to the highest positions in the social hierarchy and played an outstanding political part, even succeeding in creating independent principalities for themselves, like the ‘Amīrī fāṣl Muḥājīd [q.v.] of Denia. Their elevation inevitably gave rise to disputes with the aristocratic Arab families, with whom they came to blows, not without sometimes resorting to arguments of a Shī‘ī character (see I. Goldzijler, in ZDMG, 1898).

FASL [see ḤILĀ, MAṢGOL].

FASTS [see ṢAWM].
Bibliography: O. Pinto, al-Fatfi b. &dquo;dn, favorito di al-Mutawakkil, in RSO, xiii (1932), 133-49; D. Sourdel, Le vissariat &apos;abdisde de 749 &agrave; 936, i, 182-3; First, Nid. Poëtie, 116-7; Y&amp;#501;kt, Uda&dquo;ab, vi, 116-7 (O. PINTO).

AL-FATH B. MUHAMMAD B. UBAID ALLAH B. KHAKAN, Ab&amp;#501; NA_SR AL-KAYS! AL-!SHB!LI, an Andalusian anthologist whose history is some-what obscure. We do, however, know that he studied seriously under well-known teachers and that he led an adventurous life, travelling through much of Muslim Spain and enjoying to the full pleasures strictly forbidden by the laws of Islam. Despite this, he obtained a position as secretary to the governor of Granada, Ab&amp;#501; Yusuf Tashfin b. &apos;All, but did not keep it and went to Marr&amp;#501;kh where, at the in-stigation of an Almoravid prince or even perhaps of Sultan &apos;All b. Yusuf b. Tashfin, he was assassinated in a &amp;#126; junkub &amp;#126; at a date which, in various sources, varies between 528/1134 and 555/1160, the year 529/1134 being the most probable.

When he decided to compile the first of his antho-logies, dedicated to the brother of the above-mention-ed sultan, Ab&amp;#501; Isha&amp;#501; Ibrahim b. Yusuf b. Tashfin, he wrote to a certain number of prominent person-alities who were reputed to be also men of letters, informing them of his project and asking them to send him some of their own documents; those who accepted and included gifts as well as documents were made the subject of panegyrics, while the others were passed over in silence or criticised adversely. This was the treatment accorded to Ibn Badjida [q.v.] in particular, except that it was his privilege to have two notices, one of blame, the other of praise (text in Yakut). For the earlier writers, Ibn &apos;Ayn, and anthologists show unconcealed pleasure in and the rest, however, in the &amp;#126; junkub &amp;#126; of the 5th/nth century.

However, we do not know whether he was included in the &amp;#126; junkub &amp;#126; of the study of Arabic literature in Spain, principally in the 5th/11th century.

FATH &apos;ALI AKHUND-ZADA [see A&amp;#501;HUND ZAD,A, MIRZA FATH &apos;ALI].

FATH-'ALI SHAH, the second ruler of the K&amp;#501;d&amp;#501;r [g.v.] dynasty, was born in 1185/1777 and bore the name B&amp;#501;a Khan. He was made governor of Fdr, Kirm&amp;#501;n, and Yazd by his uncle, A&amp;#501; Mu&amp;#501;hammad Khan, and heir apparent in 1211/1796. He succeeded to the throne in 1212/1797. He died in 1250/1834 and was buried at Kurnah. Much of his reign of 38 years and 5 months was spent in military expeditions against internal rebels and external foes.

On the assassination of A&amp;#501; Muhammad Khan in 1212/1797 B&amp;#501;a Khan hastened from Sh&amp;#501;rez to Tehr&amp;#501;n, where Mirza Muhammad Khan K&amp;#501;d&amp;#501;r had closed the gates pending his arrival. On reaching Tehr&amp;#501;n he ascended the throne as Fath &apos;All on 4 Safar 1212/30 July 1779, but was not crowned until 1 Sh&amp;#501;w&amp;#501;wl 1212/21 March 1798. S&amp;#501;i&amp;#501; Khan Sh&amp;#501;k&amp;#501;, who opposed his succession, was defeated near Kazvin. Various attempts at rebellion by Fath &apos;All's brother, Husayn Kull Mirza, S&amp;#501;i&amp;#501; Khan Sh&amp;#501;k&amp;#501;, and Muhammad Khan b. Zaki Khan were defeated; and in a series of expeditions to Khur&amp;#501;san Fath &apos;All succeeded in establishing his nominal authority over most of that province. Relations with Europe were actively joined. In 1798 Lord Wellesley, the Governor General of India, sent Mihdi 'All Khan, the East India Company's resident at Bushire, to the Persian Court to induce it to take measures to keep the Afghan ruler, Zam&amp;#501;n Khan Durr&amp;#501;n, in check. A subsequent mission sent under Captain (later Sir) John Malcolm resulted in a political and commercial treaty concluded in 1801. In 1802 France made unsuccessful overtures to
Persia for a Franco-Persian alliance against Russia. In 1804 the Perso-Russian war was resumed. Fath 'Ali sent an envoy to India to seek aid under the British alliance but his request was coldly received. In 1805 a French envoy, Romieux, reached Tehran, and urged Persia to repudiate the British alliance. Disappointed of British help, Fath 'Ali sent Mirzâ Muhammad Ridâ to treat with Napoleon. A treaty was signed at Finkenstein (1807), but was nullified almost immediately by the Franco-Russian treaty of Tilsit. Renewed French activities and the possibility of Franco-Russian activities in Persia induced the British Government to send a mission under Sir Harford Jones to the court of Fath 'Ali. In March 1809 a Preliminary Treaty was concluded. This was followed by a Definitive Treaty in March 1812, which was superseded in 1814 by the Treaty of Tehran. Under this treaty Persia undertook not to allow any European army to advance on India through Persia and Britain undertook in the case of a European nation invading Persia to send a military force or in lieu thereof to pay an annual subsidy. The subsidy articles were abrogated in 1828. The long war with Russia was concluded by the peace of Gulistân [q.v.] (1813), by which Georgia and a number of other districts were acknowledged as belonging to Russia, Russian vessels of war were given the exclusive right of navigation of the Caspian Sea, and a 3% ad valorem duty on Russian imports into Persia was fixed. A rebellion in Khûrâsun fomented by Mahmûd Şâh of Afghanistan gave Fath 'Ali an opportunity to seize Herât (1813), but he failed to keep it. A war with the Porte (1821-3) was concluded by the Treaty of Erzurum (1813). In 1826 war broke out again with Russia and ended disastrously for Persia. In addition to the territory going to Russia under the Treaty of Gulistân, Persia lost Fârûqân and Nağchûdefân; and the exclusive right of Russian vessels of war to navigate the Caspian was reaffirmed. A commercial treaty signed on the same day gave Russian subjects extra-territorial privileges and established the pattern of the capitulations enjoyed by Europeans in Persia under the Kâdîrâ dynast. Fath 'Ali died in 1834. He was succeeded by fifty-seven sons and forty-six daughters. His favourite son was Abbas Mirzâ [q.v.], who had been declared wali 'ahd, died in 1833. Abbas Mirzâ's son, Muhammad Mirzâ, was proclaimed wali 'ahd and succeeded to the throne on Fath 'Ali's death.

The rule of Fath 'Ali was arbitrary and autocratic. pomp and ceremony distinguished his public audiences, but much of his time was spent in camp on military expeditions. Military reform was begun during his reign, first under French officers accompanying General Gardane, who came to Persia as envoy in 1806, and later under British officers, when an attempt was made to introduce European methods and discipline into the army in Ağhabâygân commanded by 'Abbas Mirzâ. Fath 'Ali is described by some European travellers as being intelligent and having a lively and curious mind, by others as being ignorant and vain. Like many of the Kâdîrâ princes he had a great love of hunting. His besetting sin was avarice. He made, or repaired, a number of buildings in Tehran, Kumm, Kâzîmayn, Karbalâ and elsewhere.

FATHNÂME, an official announcement of a victory. This definition excludes large numbers of 'fathnames' written by private persons as literary exercises, such as the Mahrûsû-i Istanbul Fathnâmes of Tâdjîzâde Dja'far Celebi [q.v.], which was composed at least a generation after the conquest (TOEM, nos. 20-1) and works such as Murâdî's Fathnâmest-i Khûsyr al-Dîn Pâsha (A. S. Levend, Osmanlî-nâmeler, Ankara 1956, 70-3), a versified narrative of the exploits of Barbarossa and his brother Oruç. According to Uzuncârşîlî (Osmanlı devletinin saray teskîldî, Ankara 1945, 288), a fathnâmeh consists of 15 elements: (1) praise to God, (2) encomia on the Prophet, (3) the sovereign's duty to relieve oppression, (4) reasons for ending the wrong-doing of the tyrant in question, (5) the Sultan's departure, (6) the multitude of his troops, (7) the position of the enemy, (8) the boldness of the enemy, (9) description of the battle, (10) the Sultan's victory, (11) thanks to God, (12) occupation of the enemy's territory, (13) this success to be proclaimed by land and sea (only in fathnâmehes addressed to the Sultan's own dominions), (14) the names of the place to which the fathnâmeh is sent and of the bearer, (15) the Sultan's joy at the victory, his communication of the good tidings to the recipient and his request for prayers. Although this scheme may well have served as a model to literary men, there is some reason to suppose that it was not closely followed by the official (usually the nishândî?) entrusted with composing the fathnâmeh after a battle. It is difficult to be precise on this subject because of the dearth of original fathnâmehes available for study. In the dozens of examples of fathnâmehes there is none of whose genuineness we can be sure, nor do they seem to bear out Fakâlin's statement (s.v. Fetihname) that fathnâmehes are of great historical importance as being short histories of battles. What Ferîdûn describes as the fathnâmeh on the conquest of Eger in 1005/1596, for instance (Madîjmâ'-i münjdâ'î al-salâdin, Istanbul 1265, ii, 2-3), contains no mention of the massacre of the garrison (see G. L. Lewis, The Utility of Ottoman Fetihnames, in Bernard Lewis and P. M. Holt, Historians of the Middle East, Oxford 1962, and cf. Našîmâ, Ta'ârîkh, Istanbul 1281, i, 131). Nor does Ferîdûn's text bear any relation to Našîmâ's statement (ibid., 173) that the Nishândî Lâm 'Ali Celebi was dismissed for exaggerating, in this same fathnâmeh, the part played by his army. On the other hand, we do have one published fathnâmeh which appears to be the genuine article and not a literary exercise: the Uygar account of Mâhemmed II's victory in 878/1473 over Uzun Hasan (R. Rahmeti Arat, Fârsî Sultan Mehmed'in yarhî, in TM, vi (1939), 283-322; cf. idem, Un yarîhî de Mehmed II, le Conquérant, in Annali del R. Ist. Sopr. Orientale di Napoli, n.s. i (1940), 25-58). It is laconic in style and full of information, including a consummate order of battle with the names of the principal
commanders on both sides. There is none of the verbosity and sanctimonious self-justification which we see in the literary fathnámēs; the occasion for the campaign is refreshing: as stated thus: 'Uzun Hasan having burned the city of Tokat, we came to fight him'. The most suggestive feature of the document is its conclusion: the Șultān is coming to winter in Istanbul and adjures various officials there to be steadfast in their work and not to neglect the business of the diāwān; the chief men of all towns are to keep the mosques in a flourishing state, to perform the five daily prayers in congregation and to fulfil the ordinances of the shari'ā and the commandments of God. Yet the fact that the document is in Uygur shows that it was intended only for the eastern territories. The inference is that for this victory, at any rate, there was only one fathnâmē, of which copies and, in this special case, a translation were sent to all parts of the Șultān's dominions. Feridūn (op. cit., i, 283-6) gives the texts of three accounts of the victory: a bektashi sharif to Prince Djem, a letter (nâme-i humâyûn) to Husayn Baykarâ and a fathnâmē 'to the Guarded Dominions'. None contains any useful details of the campaign; compared with the Uygur yarîlk their historical value is negligible. For the victory of Çaldîrân, 41 years later, Feridūn gives no fewer than ten different fathnâmēs, none of them giving a full account of the battle (for a partial analysis see Lewis's article cited above). A working hypothesis is that there was only one true fathnâmē for each victory, which would add greatly to our knowledge of Ottoman military history if only we could lay hands on it. Other so-called fathnâmēs are merely elegant variations on a theme, their value being mainly literary, though they may be of some interest as early specimens of war-propaganda. The last word cannot be said on this subject until more work has been done in the Ottoman archives, particularly perhaps on the ordu muhîmmesî registers (see Uriel Heyd, Ottoman documents on Palestine, Oxford 1960, 5).

Bibliography: Works cited in text. Pakahn's article consists mainly in a lengthy quotation from M. F. Köprüülü, Bizans müesesselerinin ... tesiri, in Türk Hukuk ve İlişkisî Tarihî Mecmuası, i (1931), 243-277; ibid., i (1934), 107-139; ibid., i (1936), 75-105; ibid., ii, in Orjentnegi, xiv-1 (1948), 87-102; L. Fekeste, A fethnemeri, in A Magyar Tudományos Akadémiá Nyelv- és Irodalomtudományi Osztályának Közleményei, xiv-1 (1965), 65-101 (a fathnâmē of Uzun Hasan); Adnan Sadîk Erzi, Türkiye Kütüphanelereinde nöfaret ve vesikalâr, ii, in Belleten, xiv-56 (1950), 612 ff.

G. L. Lewis

FATHPâR-SIKRÎ, a deserted city, 23 miles from Agra, situated in 27° 5' N. and 77° 40' E., on a ridge of sandstone rocks near the ancient village of Sikri. In 1569 when Akbar visited Shaykh Salim Cîght, who was living on this sandstone ridge, the saint foretold the birth of a son to the childless monarch, and in 1570 Sultan Sûlaimân, afterwards known as the Emperor Diâhânghrâ (q.v.) was born there. Akbar then commenced building a city, covering an area of about 1½ sq. m. and enclosed by a wall (still standing) 3½ ft. long. On his return from his campaign in Gudjarat in 1574, he found his new capital ready for occupation and named it Fathpâr (the City of Victory); he resided here until 1586, when he abandoned it as a capital, probably on account of the brackish nature of the water obtainable there, and shortly after his death it began to fall into ruin. Many of the buildings, however, still remain in an excellent state of preservation; among these may be mentioned the official buildings, such as the mint, the treasury, the record office, and the hall of public audience, and the royal palace, including the private apartments of the Emperor and the residences of several of his wives. The house of the Türkî Sultân is remarkable for the elaborate carving with which it is covered, both within and without; the interior is decorated with a dado, 4 ft. high, divided into eight oblong panels, richly decorated with carvings representing forest and garden scenes. The two-storied building, known as Bîrbal's house (though it was undoubtedly the palace of one of Akbar's queens), is similarly covered with carving exhibiting a profuse variety of patterns executed in minute detail. In close proximity to the royal apartments are some curious buildings, of a unique design, e.g., the Pânâc Mahâlj, a five-storied pavilion, each storey of which is smaller than the one on which it rests, and the so-called Dîwân-i Khâs (or private audience hall), a building consisting of one room only, in the centre of which rises an octagonal column surrounded by an enormous circular capital, from the top of which radiate four narrow causesways, each about 10 ft. long, to the four corners of the building; the top of this capital is thus connected with a gallery, running round the upper part of the room and communicating by staircases (made in the thickness of the wall) both with the roof and the courtyard below. It is not possible to enumerate here the many other buildings connected with the emperor and his court, but special mention must be made of the great mosque, which is one of the finest monuments of Mughal architecture. It covers an area of 438 ft. by 542 ft., having a central court (360 ft. by 439 ft.) enclosed by cloisters, except at the three gateways, of which the Bulând Darvâza (facing the south), erected by Akbar in 1602 to commemorate his victories in the Dâkkân, ranks as one of the noblest gateways in India. In the court of the mosque stands the tomb of Shaykh Salim Cîght, a single-storied building, enclosed by a white marble and surmounted by a dome; the marble lattice screens which enclose the veranda of this building are of extraordinary delicacy and intricacy of geometrical pattern; over the cenotaph is a wooden canopy inlaid with mother-of-pearl arranged in beautiful geometrical designs.

Among the noteworthy features of the buildings at Fathpâr-Sikri are the evidences of the influence of Hindu architecture, in construction and decoration, and the frescoes painted on the walls of the Khâbâgh and the Sûnâhrâ Makân, and the colour decoration of the Hammâm and other buildings.

FATIHA

FATIHA, "the opening (Sūra)", or, more exactly, Fātihā al-Kirāt ("the Sūra") which opens the scripture (of revelation)", designation of the first Sūra of the Qur'ān. Occasionally the terms ʿumm al-Kirāt (according to Sūra III, 7; XII, 30; XII, 4) and as-sab al-mafhdnl (according to Sūra XV, 87) are also found. With reference to the last-named term one must count the Basmala which comes before the Sūra as a verse on its own, to make up the total of seven verses (= mathānī).

While the other Sūras are arranged fairly accurately according to length (that is to say, the longer they are the nearer the beginning they are to the end), the shorter they are, the nearer the end) the Fātihā, despite its shortness, is prefixed to the Qur'ān as a sort of introductory prayer. Like the last two Sūras (al-muṣawwiḍhātīn), it is said not to have been preserved originally in the Codex of Ibn Mas̱ūd. It is markedly liturgical in character, as is also shown by the use of the first person plural (verses 5 and 6). Its chronological position (within the Meccan period) cannot be established more precisely. The Fātihā is an indispensable component of the prayer-ritual. It must be recited at the beginning of every rakā', that is to say at least seventeen times a day (twice at the morning ṣalāt, three times at the sunset ṣalāt, and four times at each of the other three hours of prayer). It is often said at other times too; it is recited in the Muslim prayer-ritual, not only at the hour of prayer, but at other important resolutions, almost all prayer formulae at the holy places are closed, and all joyful news is welcomed: while tradesmen who cannot come to terms over the price of goods seek in the united recitation of the fātihāh new strength for a decision" (Snouck Hurgronje, Mekka, 1931, 29). On many tombs there is an inscription asking the traveller visiting the spot to pray a ṣalāt for the soul of the dead man (H. Ritter, Meeer der Seele, 1955, 317). In some respects, therefore, the fātihā may be compared with the Lord's Prayer in Christian practice. However, H. Winkler's attempt to show that the one is derived from the other must be said to have failed (ZS, vi, 1928, 238-46). M. Gaster's guess that the Fātihā is an imitation of the Samaritan Ḥiṣā (XI, iv, 14, Samaritans) is equally unconvincing.

Bukhārī and Muslim tell of a sick man who was cured by exorcism with the ʿumm al-Kirāt. There are numerous examples of the fātihā being used as a powerful prayer in the making of amulets. The sawwīḥ al-fātihā, that is, the seven letters which are significant by their absence from the ṣalāt, play an important part in this. Al-Ḥusayn gives the requisite instructions in his book of magic Shams al-muḍārif.

In certain Arab countries, particularly in North Africa, the term fātihā (or fathā) is used to mean a prayer ceremony in which the arms are stretched out with the palms upwards, but without any recitation of the first Sūra (Snouck Hurgronje, Mekka, 1931, 29, note; E. Westermarck, Ritual and belief in Morocco, 1926, i, 186, note). Phillip Vassei gives as a translation "prayer with open hands" (MSO, iv, 1902, ii, 188). But it seems probable that even this prayer-ceremony is called after the first Sūra, and that originally it involved a recitation of the fātihā which only subsequently and as a result of much repetition disappeared to be replaced by a silent prayer.

AL-FATIK [see NADĪH, BANU]

FĀTIMA, daughter of Muḥammad and Khādīja, wife of ‘Ali b. Abī Talib, mother of al-Ḥasan and al-Ḥusayn, was the only one of the Prophet's daughters to enjoy great renown. She became the object of great veneration by all Muslims. This may be because she lived closest to her father, lived longest, and gave him numerous descendants, who spread throughout the Muslim world (the other sons and daughters of Muḥammad either died young or, if they had descendants, these soon died out); or it may be because there was reflected upon her, besides the greatness of her father, the historical importance of her husband and her sons; or because, as time went on, the Muslims attributed to her extraordinary qualities. Throughout the Muslim world, as is well known, it is customary to add to her name the honorific title al-Zahrā, "the Shining One", and she is always spoken of with the greatest respect; but it was above all the Shi‘īs who surrounded her with a halo of beliefs and glorified her some centuries after her death. That Fāṭima—a woman who, unlike other women associated with the Prophet, remained on the fringe of the great events of the early years of Islam and hence receives little attention in the historical sources—should be exalted to the level of legend, presents no problem to the believer: Western scholars, on the other hand, have set themselves to recover the real Fāṭima from the haze which envelops her. Did she really possess merits so special as to explain her posthumous fame, or is this fame to be attributed to the human tendency to render extreme veneration to Woman? Two eminent European orientalists, Father Henri Lammens and Louis Massignon, have presented diametrically opposed judgements of Fāṭima. The former, in Fātima et les filles de Mahomet, has sketched, in sparkling and lively style, ingeniously but not without malice, a thoroughly gloomy portrait of the daughter of the Prophet: as he describes her, Fāṭima becomes a woman devoid of attraction, of mediocre intelligence, completely insignificant, little esteemed by her father, ill-treated by her husband, "caractère chagrin et perpétuellement voile de deuil", "ombre gemissante de femme", anaemic, often ill, prone to tears, who died perhaps of consumption. It is in certain respects, therefore, the Fāṭima, despite its shortness, is prefaced to the Sūra as a sort of introductory prayer. Like the last two Sūras (al-muṣawwiḍhātīn), it is said not to have been preserved originally in the Codex of Ibn Mas̱ūd. It is markedly liturgical in character, as is also shown by the use of the first person plural (verses 5 and 6). Its chronological position (within the Meccan period) cannot be established more precisely.
is only this method", he says, "which allows us to understand how Fátima's intuitive actions (hardly consciously performed) have, throughout the collective history of Islam, penetrated the tangle of deceptions, accommodations and theories". Fátima, as he conceives her, is the Woman whose soul was unappreciated during her lifetime, who enjoyed privileges (ḥassā'īs) accorded her by her father; she is Mistress of the Tent of hospitality, the Hostess of the Prophet's freedmen and of the non-Arab converts, and, as such, she represents the beginnings of universal Islam (La notion, 118 f.). To avoid any misrepresentation of Massignon's conception, we reproduce verbatim some of the concluding sentences of his ʿMuḥākala. According to him, Fátima had a "vie secrète ... voilée bien au delà de la jalouse de Ayisha, par une autre Jalouse, celle de Dieu. Vie de compassion intérieure, de larmes, prières pour les morts (al-ʿUḥd) et dans les citernes, veux de jalousie, choses de peu de poids pour des théologiens philosophes ou canonistes. Vie qui les survole et les surplombe en Islam, comme une menace, de plus en plus imminente, de la Grâce de Dieu: du Voeu secret de la Femme, Vierge ou Mère qui transcende tous les axiomes et serments des hommes. L'hyperrude des âmes en douleur, en Islam, pour Fátima, n’est selon le Coran lui-même qu’une figure de l’hyperrude mariale ...." This interpretation of the figure of Fátima is so illuminating, so satisfying the mystic who lives in a world of extraordinary religious experiences and, perhaps, the scholar concerned with religious problems, because it gives a psychologico-religious explanation for the origin and development of the legend of the daughter of the Prophet and bridges the gap between legend and reality, as Lammens's book fails to do; but it cannot escape the objections of the historian, who will consider that the author subordinates the facts to beliefs about Fátima which appeared only later.

In the following survey will be found, placed in chronological order, arranged schematically, and accompanied sometimes by a commentary, the references to Fátima which can be collected from the sources belonging to the 2nd/8th and 3rd/9th centuries and the first half of the 4th/10th century (particularly al-Baladhuri, ʿAnṣār, Ibn Saʿd and collections of ḥadīths regarded as canonical by the Sunnīs, for Ibn Ḥīṣām and the historians had little occasion to concern themselves with Fátima, so obscure was the life that she led; later sources such as Ibn ʿAbd al-Barr’s Istīḥāb, Ibn al-Aṯlr’s Usd al-Ḡaba, Ibn Ḥadīlar’s Ṣāra, the Taʾrīḥ al-Ḥamīs, and the Taʾrīḥ al-Ḥamīs, have purposely been ignored, the aim being to get as near as possible, if not to the reality, at least to the time when Fátima lived). In the survey some apparently trivial facts have been mentioned: this is because they had, particularly among the Shīʿīs, unforeseen developments; Fátima's trousseau, for example, became the subject of Persian religious dramas, the famous ṭawāṣyūs.

### The Historical Fátima

**Birth and childhood.** The date of Fátima's birth is uncertain; however that indicated as most probable is the year of the re-building of the Kaʿba, i.e., five years before the beginning of the Prophet's mission. This implies, as will appear, that the girl was married when she was over 18, a rather unusual age for an Arab bride. But if we take her birth as being a few years later (see al-Yaʿqūbī, li, 19) we encounter another difficulty—that when she was born her mother Khadijā would have been over fifty. The question of Fátima's age is treated at some length in Lammens’s book (8-14). There is also some uncertainty as to Fátima’s place in the sequence of Muhammad’s daughters, who are generally listed in the order: Zaynab, Ruqayya, Umm Kulthūm, Fátima. Of her childhood and her life at Mecca two episodes only are related: (1) she was overcome by grief at her mother's death, and the Prophet consoled her by saying that Dībrill had come down to tell him that God had built for Khadijā in Paradise a pavilion of brilliant pearls (ḥasāb; see Lane, s.v., 2529 f.), free of weariness and noise (al-Yaʿqūbī, ii, 35); (2) she removed the refuse which ʿUṭba b. Abī Muʿayt, one of the Kuraysḥ most hostile to Islam, had flung over the Prophet while he was at prayer, and her indignation led her to curse the offender (al-Bukhārī, ed. Kerehī, ii, 300).

**Journey from Mecca to Medina and betrothal.** After the Ḥijra, Muhammad moved his daughter Fátima with Umm Kulthūm and his wife Sawādah bint Zama’s (from Mecca to Medina, charging his adopted son Zayd b. Ḥārīta (q.v.) and Abū Rāfī to go and fetch them, giving them two camels and a sum of money. There is a completely different version of this: al-ʿAbbās escorted these women to Medina and the departure was not a peaceful one, for al-Ḥuwarrīrī b. Nūṣayb b. Waḥbprodled their camels, causing them to be thrown to the ground, for which act, it is said, he was killed after the occupation of Mecca. On the betrothal of Fátima and ʿAli the sources give much information, but, as usual, they do not completely agree. Both Abū Bakr and ʿUmar had asked for Fátima’s hand, but Muhammad had refused, saying that he was waiting for the moment fixed by destiny (ḥasāb: Ibn Saʿd, viii, 11). ʿAli did not dare to put forward his proposal because of his poverty, and it was Muhammad who made his task easier; he reminded him that he owned a breast-plate which, if sold, would provide him with enough money for the bridal gift (mahr). ʿAli, adding to the breast-plate some other objects and a camel or a ewe, raised the very modest sum of 480 dirhams or thereabouts. Of this money he spent, on Muhammad’s advice, one-third or one-fourth on perfumes, and the rest on objects necessary for the household. When Muhammad informed his daughter of the promise which he had made to ʿAli, Fátima (according to Ibn Saʿd) said nothing, and her silence was interpreted by the Prophet as consent (according to other sources, she protested and her father had to console her by saying that he had married her to that member of the family who was the most learned and wise, and who had been the first to embrace Islam).

**Marriage.** The accounts are at variance concerning the year and the month of the marriage and its consummation: the first or second year of the Ḥijra, more likely the latter. According to some sources the consummation was postponed for a few days or for a few months, and some say that it did not take place until ʿAli's return from the expedition of Badr. To celebrate their marriage, the bridegroom prepared a feast, Muhammad having told him that this was necessary; the ʿAnṣār gave their contributions in dūra, and ʿAli killed a sheep. Two wives of the Prophet, ʿAṣima and Umm Salama, arranged the house and prepared the wedding-feast. It is said that at this time ʿAli was 25 and Fátima between 15 and 21. The sources give a rather long account of a rite inaugurated by the Prophet: having warned the bridal pair to expect him, Muhammad went to their
house on the wedding-night, asked for water in a jar, washed his hands in it (or spat in it, or spat back into it before) and sprinkled it with water on the breast (the shoulders and the forearms) of All and Fātimā; finally he invoked God's blessing on them.

Poverty of the household. At night the newly-married pair lay on the fleece of an untanned sheepskin, which contained camel fodder during the day; for covering they used an old piece of striped Yemeni cloth, which was not large enough to cover both feet and head. The pillow was of leather stuffed with alf (palm fibres); the trousseau was indeed meagre: a goatskin bottle, a sieve, a duster, a cup. Muḥammad had made some wedding-gifts: a velvet garment (khāmla or khāmil), two pitchers, a leather bottle, a pillow and some bunches of fragrant herbs. Fātimā, having no maid-servants, ground the corn herself, which gave her blisters; ʻAll, to earn a little money, drew water from the wells and watered other people's land; because of this hard work he complained of pains in the chest. One day, the Prophet having received some slaves, ʻAll sent Fātimā to ask for one, and, as his wife lacked the courage to make this request, he went with her himself but met with a refusal. "I cannot allow the ʻahl al-qubba [q.v.] to be tormented with hunger", exclaimed the Prophet. "I shall sell the slaves and spend the money to help them!". To console his daughter and son-in-law, Muḥammad went later to their house and taught them some litanies (so many repetitions of Allāh akbar, so many of al-ḥamd lillāh, so many of subḥān Allāh), and ʻAll did not fail to repeat them every night before going to sleep.

There seems no reason to reject the ʻaddārīs which speak of the poverty of the household of ʻAll and Fātimā; only its duration must be limited to the first years of their marriage; many members of the community were just as poor and it was only after the occupation of Khaybar that the situation improved for ʻAll and Fātimā, as for a good number of Muslims, for they then received shares in the produce of the rich oasis and ʻAlī could exclaim: "Now we shall eat our fill of dates".

Fātimā's house after the marriage. ʻAll built a dwelling not far from that of the Prophet but, as Fātimā wanted to live nearer to her father, the Medinan al-Hārīqa b. al-Nuṣān gave up his own house to them.

 Sons of ʻAll and Fātimā. Al-Ḥasan was born in 3/624 (but in this case the consummation of the marriage cannot have taken place after Bādri) or in 4/625, in Ramadān; al-Ḥusayn was conceived 50 days after the birth of al-Ḥasan and born in 4/626, in the first days of Shaʿbān. Besides these two sons and a third, Muḥassin (or Muḥsin), still-born, Fātimā had two daughters, who were called by the names of two of their aunts: ʻUmm Kūlqūm and Zaynab [see furūj, ʻalādā].

Disputes between ʻAll and Fātimā, and Muḥammad's intervention. ʻAll and Fātimā did not always live in harmony. ʻAll treated his wife with too much harshness (ghidda, ghīda), and Fātimā went to complain to her father. There are some ʻaddārīs which are real vignettes of family life, describing in a vivid and fresh manner how the Prophet intervened and how his face shone with satisfaction after the reconciliation of those dear to him. The most serious disputes between the pair arose when the Banū Ḥāšām b. al-Muqḥira of the Kuraysh suggested to ʻAll that he should marry one of their women. ʻAll did not reject the proposal, but Muḥammad, when some of the tribe came to sound him on the matter, came to the defence of his daughter, and said: "He who marries me (or my daughter to whom any ʻaddārīs refers) and whoever offends her offends me" (al-Baladhuri, Ansāb, i, 403; al-Tirmidhi, ii, 319, etc.) or "what angers her angers me also" (this ʻaddārī has many variants which, however, do not much change the meaning). It seems that at the same time ʻAll was asking in marriage a daughter of Abū Dāḥi nicknamed ʻAwra (the One-eyed). Muḥammad protested from the minbar against ʻAll, who proposed to shelter under one roof the daughter of the Apostle of God and the daughter of the enemy of God (i.e., Abū Dāḥi). On this occasion also the Prophet pronounced the phrase: Innahd bacPa (she is indeed a part of me), and added that if ʻAll wanted to accomplish his project he must first divorce Fātimā (Ahmad b. Hanbal, Musnad, Cairo 1373, iv, 326; al-Bukhari, ed. Kreidl, ii, 440, etc.). Some authors have deduced from this that monogamy was one of the khasāṣīs of the daughter of the Prophet.

The name Abū Turāb, "the man of dust", given to ʻAll has, among other explanations, one connecting it with the disputes between ʻAll and Fātimā: instead of answering his wife in anger, ʻAll would go out of the house and put dust on his head; Muḥammad, seeing him do this, gave him the famous nickname.

Historical events in which Fātimā was involved during the life of Muḥammad. The following is all that can be collected: (1) After the battle of Uḥd Fātimā tended Muḥammad's wounds and was charged by him and by ʻAll to clean their bloodstained swords; after this it became her custom to go to pray on the graves of those killed in this battle; (2) Abū Sufyān, foreseeing the occupation of Mecca, sought her and ʻAll's intercession with Muḥammad (al-Tabari, i, 1623); (3) she received a share of the products of Khaybar and ʻAll another, separate, share; (4) she went to Mecca while the town was being occupied, and on this occasion Abū Sufyān begged her to give him her protection, but she refused and suggested also to allow her child to do so, the Prophet having prohibited this (al-Wākidī, 324); in 10/632 she performed the ʻumra; (5) with her husband and her sons, Fātimā played an important part in the mubahala, an episode which had strong repercussions among the ʻAshīfī [see mubahala].

Fātimā as one of the five members of the Aḥl al-bayt. A verse of the Kur'an (XXXIII, 33) says: "God wishes only to remove from you the uncleanness, O People of the House" (Aḥl al-bayt [q.v.]). The preceding verses contain instructions to the wives of the Prophet, and there the verbs and pronouns are in the feminine plural; but in this verse, addressed to the People of the House, the pronouns are in the masculine plural. Thus, it has been said, it is no longer a question of the Prophet's wives, or of them alone. To whom then does it refer? The expression Aḥl al-bayt can only mean "Family of the Prophet". The privilege accorded by God to the latter (originally entirely spiritual, but later not merely so) naturally led all the relatives of Muḥammad—those nearest to him, those belonging to the collateral branches of the family, and beyond this such groups of the community as the Ansār, or indeed the whole of the community—to claim a place in the Aḥl al-bayt. But there is a story given in many traditions according to which Muḥammad sheltered under his cloak (or under a covering or under a sort of tent), in varying circumstances
FAJIMA

(including the occasion when he was preparing for the musâbahah), his grandchildren al-Hasan and al-Husayn, his daughter Fâtima and his son-in-law 'Ali; and so it is these five who are given the title 'Ali al-khâdîjî (q.v.) or "People of the Mantle". Efforts have been made to include among the latter Muhammad's wives; in general however the number of the privileged is limited to these five. Now according to the Shi'a, without exception, but also according to the pro-'Ali Sunnîs, the Ahl al-bayt are identical with the 'Ali al-khâdîjî. The verse quoted above (XXXIII, 33) is associated with Fâtima and 'Ali on one other occasion: it is related that Muhammad, rising early in the morning to perform the subûb, was in the habit of knocking on their door and using this verse to remind them of the duty of prayer.

During the Prophet's illness. Fâtima, who loved her father greatly, was much grieved by his illness and wept and lamented. During this period she received a confidence from Muhammad. It is 'A'isha who relates the episode in many badîlîs: she saw Fâtima weep when her father spoke to her in secret and then smile. After the Prophet's death, she asked her what her father had said to her on that occasion; Fâtima replied that Muhammad had told her that Diibril came down once a year to bring possessions included the property which Mukhavrik. that occasion; Fatima replied that Muhammad had which he was holding. It is not clear whether these were transferred to Abu Bakr. The verse quoted above with A hi al-kisd*.

After his election, Abu Bakr made his way with some Muslims; consequently they have tried to minimize the number of Ansar and of the Shi'a, without exception, but also according to choice of a successor to the Prophet in the capacity of head of the community: she went on horseback with 'Ali to the meeting-places of the ânâr to ask them to support her husband; but the ânâr replied that 'Ali had come to them too late, when they were already committed to Abu Bakr. We have spent some time on these episodes because (i) even if they have been expanded by invented details, they are based on fact; (2) they represent Fâtima's only political action; (3) to the motives for the hatred felt by the Shi'a for 'Umar they add one more, true or false: his treatment of the daughter of the Prophet.

Fâtima's claim to Muhammâd's estate. After the death of her father, Fâtima asked Abu Bakr to hand over the possessions of Muhammâd which he was holding. It is not clear whether these possessions included the property which Mukhayrik, the Jew converted to Islam, had given to the Prophet at Medina (see 'Umar al-basîs, p. 366): probably there was no dispute about this. It was over the land of Fadak [q.v.] and over the share of Khaybar [q.v.] that Abu Bakr met Fâtima's claims with a flat refusal, asserting that he had heard the Prophet say that he had no heirs and that everything that he left would be fadâka [q.v.]. Nor is it known whether the claim to the inheritance was put forward by Fâtima alone or together with al-'Abbas; the examination of many badîlîs leads us to believe that the attempt to gain possession of this property was made twice and with different arguments, on the first occasion probably by both of them, on the second by Fâtima alone. This dispute between such a prominent person as Abu Bakr and the daughter of the Prophet has always been disagreeable to Muslims; consequently they have tried to minimize its gravity by maintaining, for example, that Fâtima claimed Fadak intending to give the rents of it to the poor [Shi'a sources add: to the mawdûlîs]; they like to depict Abu Bakr as grieved by the duty of refusing a request of the daughter of the Prophet, but forced to act thus by the conduct of Muhammâd himself. The Shi'a naturally do not forgive the Caliph for having disbelieved Fâtima, who maintained that she had received Fadak as a gift from her father, and have continued for centuries to argue about this question.

Illness and death of Fâtima. Fâtima fell ill soon after her father's death. According to some sources she was reconciled during her illness with Abu Bakr, who had asked to visit her, but, according to the majority she remained angry to the end. There is an oft-repeated story about the last moments of her life: she prepared for death by washing herself, putting on coarse garments and rubbing herself with balm, and she charged her sister-in-law, Asmâ', b. 'Umays, the widow of Di'a'far b. Abî 'Umayr, who was helping her with these tasks, that no-one should uncover her after her death; then she lay down on a clean bed in the middle of the room and awaited the end. As she had complained about the custom of covering the dead with a material which revealed their forms, Asmâ' prepared for her a bier made, in the manner of the Abyssinians, of wood and fresh palm-leaves.
Fatima was content with this. Unfortunately these accounts which would allow us to assume that Fatima was healthy and of not too advanced age at death are contradicted by others: according to al-Ya’qubi (ii, 128-30), she rebuked severely the Prophet’s wives and the women of the Kuraysh who came to visit her during her illness; through Asmâ she prevented ʿAisha from entering; her anxiety to hide her form from people’s gaze was prompted by shame at her extreme thinness (al-Tabari, iii, 2436); it was ʿAll who washed the body, and it was she herself who begged her husband to perform this task. It is difficult, if not impossible, to choose among these different accounts.

There is the same uncertainty over the date of her death as surrounds other events of her private life: it was certainly the year 11, but the month is doubtful; the commonest report is that she died six months after the Prophet. Her death was kept secret and her burial took place by night. According to most versions, neither Abū Bakr nor ʿUmar was informed; but there are accounts which relate that Abū Bakr recited the ritual prayers over Fatima’s grave. Nearly all the sources agree that Fatima was buried in the Bakhâ, and some specify the place of her grave: near the mosque called, from the name of the woman who built it, ʿAisha Rukayya, at the corner of the dâr of ʿAkkîr (ʿAll’s brother), seven cubits from the road etc., but according to other sources, either immediately after the burial or some time later, the exact position of the grave was no longer known. Al-Masʿudi (Mauridi, vi, 165) asserts that there was a tomb which bore an inscription giving as the names of those buried there Fatima and three ʿAīds (he is however the only one to give this detail), but al-Mukaddasi (BiGâ, iii, 46) includes the tomb of the daughter of the Prophet in the list of places on which there is disagreement, for it was also possible that Fatima had been buried “in the room” (fi ʾl-budira). Nowadays ʿshr pilgrims, to pay homage to the sayyidat al-nisaʾ, visit three places: house her (IRT, 8), near the road called ʿAisha Rukayya, and of al-Bahram’s wife of Musa. Ten houris came with a bowl and a jug filled with water from the Kawthar, and the first of

Fatima was gentle, modest, and calm in the face of difficulties, if not impossible, to choose among these different accounts.

As no systematic study of this subject exists, we have limited ourselves to selecting the main themes of the Fatima legend from three early Shi’i works (see Bibli.) in which some chapters are devoted to the daughter of the Prophet. The authors are: (1) Ibn Rustam al-Ṭabarī who, according to the editor of his Dâlîʾ al-arâb, died in the 4th/10th century (siglum: IRT); (2) Husayn b. ʿAbd al-Wahhab, who began to write in 448/1056-7 the work which we have used and which was one of the sources of al-Madjli’s Bītār al-anwâr and of al-Bahram’s Madīnāt al-maṣâdi; he presents some stories about Fatima which differ strikingly from those of the other sources (siglum: H ʿAW); (3) Ibn Shahrashûb (he died in 585/1192). Of the three works, his Manâkib Āl Abī Ṭalîb yields the most information and quotes form the largest number of sources (siglum: ISh).

Khadija’s pregnancy and accouchement. Khadija was despaired of by the Kuraysh because of her marriage with a poor man from a social class lower than her own (IRT, 8). On going in to her, Muhammad told her that ʿIṣâr had informed him that she would bear a daugther, a pure and blessed soul, and that from this daughter would spring his posterity and the imāms destined to be the rulers on earth when his own inspiration ended (IRT, 8). Fatima, while still in her mother’s womb, conversed with her (IRT, 8; H ʿAW, 45, 51; ISh, 119). Because of their contempt for Khadija, the women of the Kuraysh refused to help her during her confinement. So four women came toPassword: Sâra, ʿAṣiya, Mary and Safūrâ, daughter of Shuʿayb and wife of Mūsâ. Ten houris came with a bowl and a jug filled with water from the Kawthar, and the first of
them washed the new-born child, wrapped her in perfumed fine linen, and handed her, pure, purified, fortunate, blessed also in her posterity, to Khadija, who suckled her (IRT, 9; H'AW, 48; ISh, 119). Fatima was given her children in a year (IRT, 9; ISh, 119). The women who had come to assist her mother departed as soon as they had completed their task, but before they went the new-born child was greeted by them with perfumed fine linen, and handed her, pure, purified, fortunate, ... In a dream
Fatima saw the bed, which now again had four feet (ISh, 118). After the death of her father, Fatima

Fatima in order to leave the

husband of Fatima, for God had already commanded

predicted future events (IRT, 9,AW, 48, 51; ISh, 119).

When Muhammad learned this, he called to him 'Ammār b. Aws and the Oxus. The tree

that the marriage had already taken place in heaven, according to two of our sources, (ibid.)

revealed also the reason for the union: light must be

created them for Fatima beneath His throne from the

Fatima wished for a ring, and asked it of God during

for the marriage of Fatima and 'Ali (IRT, 14, 20).

Fatima on his mule and pushed the animal, while

the marriage ceremony. During the marriage ceremony on earth, Djibril cried from heaven

"Allāhu akbar"; Muhammad heard him, and he too, with his Companions, cried "Allāhu akbar". This was the first takbir to be called during a wedding pro-

cession (tef'if) and from that day onwards it became

sunnah (H'AW, 51). But there is another and stranger

story concerning this takbir: Muhammad mounted Fatima on his mule and pushed the animal, while

Salmān led it; suddenly there was great confusion in the street: Djibril and Mikhāl, all, each at the head

of 70,000 angels, had come down for the ceremony and raised with Muhammad the cry "Allāhu akbar!"

(IRT, 23, 25).

Gifts from heaven. Djibril brought to Muhammad a clove and an ear of corn from Paradise, announcing that God had commanded him to adorn Paradise for the marriage of Fāṭima and 'Allāh (IRT, 12; ISh, 123).

Marriage of Fāṭima and 'Allāh. The Kurāvsh women criticized Fāṭima's marrying 'Allāh, a poor man, but Muhammad had destined her for him because he had learned through Djibril (or through an angel named Maḥmūd) not only that this was the will of God but that the marriage had already taken place in heaven, with God as wālī, Djibril as khitāb, and the angels as witnesses. The maḥr on earth was only about 500 dhūrāms because it had to serve as sunna for the community. Perhaps in order to save the expense and save the trouble, there are some references to a mithāl from 'Allāh, consisting of a fifth of the earth, two-thirds of Paradise, and four rivers: the Euphrates, the Tigris, the Nile and the Oxus. The tree Ṭūbā or the Sidrat al-
muntakhāb, at God's command, covered itself with

robes, pearls and precious stones, and scattered them in vast quantities; the houris gathered these jewels and will keep them until the Day of Resur-

rection, for they are Fāṭima's nīghtān. The same tree, according to some accounts, let fall also missives

written in light, which the angels gathered up because they are the safe-conducts of the supporters of the 'A自习s (IRT, 12 f., cf. also 14, 18, 19 f., 23 f.; H'AW, 48 f.; ISh, 109, 123, 128, 134 f.). When Muhammad learned this, he called to him 'Ammār b. 'Yazīr, Salmān, and al-'Abbās and in their presence told 'All what God's will was; on his advice, 'All sold his breast-plate to Dīhya [q.v.], who then made him a present of it (Dīhya = Djibril: IRT, 14). The marriage in heaven, according to two of our sources, took place forty days before the marriage on earth (or on the night of the isrā'). The angel Maḥmūd revealed also the reason for the union: light must be joined to light (ibid.).

Trouseau. Muhammad charged Asma bint 'Umayr, Umm Salama and a freedwoman, 'Ammār,

Abū Bakr and Bīlāl to make the purchases necessary for the household of Fāṭima and 'Allāh. The list of their purchases is recorded, in some cases with the prices (ISh, 123). Umm Salama bought the mattress-

cover of Egyptian cloth which was to be filled with lif; Bīlāl or 'Ammār saw to the perfumes (IRT, 14 f., 26).

The marriage ceremony. During the marriage ceremony on earth, Djibril cried from heaven "Allāhu akbar"; Muhammad heard him, and he too, with his Companions, cried "Allāhu akbar". This was the first takbir to be called during a wedding pro-

cession (tef'if) and from that day onwards it became

sunnah (H'AW, 51). But there is another and stranger

story concerning this takbir: Muhammad mounted Fatima on his mule and pushed the animal, while

Salmān led it; suddenly there was great confusion in the street: Djibril and Mikhāl, all, each at the head

of 70,000 angels, had come down for the ceremony and raised with Muhammad the cry "Allāhu akbar!"

(IRT, 23, 25).

Gifts from heaven. Djibril brought to Muhammad a clove and an ear of corn from Paradise, announcing that God had commanded him to adorn Paradise for the marriage of Fāṭima and 'Ali (IRT, 14, 20). 'Ali, told by Muhammad to look up into the sky, saw richly-clad maidens bringing presents: these were his own and Fāṭima's future servants in Paradise (IRT, 26). When 'Ammār brought to Fāṭima the perfume which Muhammad had sent him to buy for her, Fāṭima announced that the angel Rīdān had sent her some from heaven, brought by houris each of whom had in her right hand a fruit and in her left some basil; these gifts were intended for the people of her House and for her supporters (IRT, 26). Like Mary who, according to the Kurān (III, 52/57), received a necessary provision (rizāq), Fāṭima received pomegranates, grapes, apples, quinces, etc., and ate besides things which other creatures had never tasted since the fall of Adam and Eve (ISh, 135). One day Muhammad entered Fāṭima's house while she was at prayer, and saw behind her a steaming cauldron; he asked what this was and she replied: "Divine Providence" (ISh, 135). Another day 'Ali invited Salmān to the house because Fāṭima and two of her companions wished to share it with him. Three hours had brought it to her, with a message of sympathy from God while she was weeping for the death of her father. These three hours were called Dharra, Mikdādā and Salmā, because they had been created for Abū Dhār [q.v.], Mikdād [q.v.] and Salmān [q.v.] respectively. The gift was a dish of white dates, cooled and so fragrant that Salmān was asked, as he was taking five of them home, whether he had perfumed himself with musk. The dates had no stones; God had created them for Fāṭima beneath His throne from the prayers which Muhammad had taught her (IRT, 29).

Fāṭima wished for a ring, and asked it of God during the night-prayer, Muhammad having taught her that she should make her requests at those times. A mysterious voice informed her that the ring was under the prayer-rug. In a dream Fāṭima saw castles destined for her in Paradise and noticed that the ring had been made from the foot of a bed which was in one of these castles and which had had only three feet; but next day Muhammad told her that the family of 'Abd al-Mu'tālib should set their attention on the next world and not on earthly things, and ordered her to put the ring back under the rug. In a dream Fāṭima saw the bed, which now again had four feet (ISh, 118). After the death of her father, Fāṭima...
received from heaven a book with covers of red chrysolite and pages of white pearl, which contained nothing from the Kur'an, but instruction on all that had been and would be until the Day of Resurrection. No angelic books were given as a pledge to a Jew by the wife of Zayd b. Haritha, who died about 25 years after the death of Muhammad (IRT, 10 f.). The book was given as a pledge to a Jew by the wife of Zayd b. Haritha, who died about 25 years after the death of Muhammad (IRT, 10 f.).

**Physical privileges.** Having been born pure and purified (she was a houri from heaven: HAW, 50), Fátima was exempt from the physiological troubles of women: she did not menstruate, and lost no blood during her confinements. She gave birth through the left thigh, while Mary gave birth through the right thigh (HAW, 45, 51). Her pregnancies lasted only nine hours.

**Miracles.** Several miracles were worked by Fátima: the stone for grinding corn turned without anyone in contact with it: the tenth (Kūf) stone from Diibril, rocked her baby’s cradle. One of her garments, given as a pledge to a Jew by the wife of Zayd b. Haritha, gave forth light, and the Jew and eighty other people, astonished at this miracle, embraced Islam (ISH, 16 f.). When, after the election of Abú Bakr, those who wanted to tempt Ali to offer the bay’a made him leave the house, Fátima went to the mosque and, standing near her father’s tomb, threatened to uncover her head; at that moment Salámán saw the walls of the mosque rise up: “My mistress and my patroness”, he cried, “God sent your father in His mercy: you should not bring us misfortune!” The walls then returned to their place (ISH, 118). When Fátima was weeping for her father’s death, it was Diibril himself who consoled her. The miracles continued even after Fátima’s death, benefiting one of her servants and the descendant of one of her servants (ISH, 16 f.).

Fátima in Paradise. Fátima will be the first person to enter Paradise after the Resurrection (ISH, 110). All will have to lower their gaze when she crosses the Bridge (sīrāf) which leads across Hell to Paradise. She will be escorted by seventy houris. In Paradise she will proceed, mounted on a wondrous camel with legs of emerald, eyes of ruby, etc., under a dome of light. It will be Diibril who leads the camel up to the throne of God. There she will descend and the heavens were illuminated. Fátima was called al-Zahra’ because the horizon took its light from her (HAW, 45). This story is of particular interest because, with its description of successive divine emanations, it contains some features characteristic of Ismā’īlī beliefs. Another story collected by ISh (106) also speaks of light, but in a different way: God created Paradise from the light of His countenance; He took this light, and threw it; with a third of it He created Paradise; with another third Fatima, and with the latter bore Fátima, who was of that light: she knew what was, what would be and what was not (HAW, 47). This last account (the Light of Fátima lodged in the loins of Muhammad) would explain her kūnayy Umm Abīhā.

The Light and Fátima. Muhammad explained thus the reason for the preference accorded to the People of the House: God, he said, created me and Ali as light, and separated off from our light that of my descendants; then He separated from our light the light of the Throne, and from that of my descendants the light of the sun and of the moon. We teach the angels the tasbīḥ, the ṭakhkīl and the tahrīmd (i.e., the formulas for the praise of God). God then said to the angels: “By My power, My majesty, My generosity. My mercy, My bounty, I say it!” The angels repeated it. God then said, “I placed the light of Fatima in a tree of Paradise, and it is through her that the heavens were illuminated. Fátima was called al-Zahra’ because the horizon took its light from her (HAW, 46). This story is of particular interest because, with its description of successive divine emanations, it contains some features characteristic of Ismā’īlī beliefs. Another story collected by ISh (106) also speaks of light, but in a different way: God created Paradise from the light of His countenance; He took this light, and threw it; with a third of it He struck Muhammad, with another third Fátima, and with the remaining third Ali and the People of the House. Whoever is thus struck recognizes the wāliyya [q.v.] of the family of Muhammad.

Fátima’s names. Attempts have been made to see a significance in the name Fátima. As the root has the meaning of “weaning a child”, “breaking someone of a habit”, she has been said to be so called because she, her descendants and supporters, will be spared from Hell, or because she was exempt from evil (ISH, 110, cf. 107), or because she was removed from polytheism (IRT, 10). The list of her names in IRT (10 f.) consists of nine: Fátima, al-Siddika, al-Mubarakā, al-Tāhira, al-Zakīya, al-Radiyya, al-Muhaddathah, al-Zahra’. She was called al-Muhaddathah because the angels spoke to her as to Mary, and she to them; they told her “God has chosen you and purified you; He
FAJIMA

has chosen you from among the women of the world”. According to H\(^{2}\)AW (46), her names on earth are: Fāțimah (sic, in the masculine), Fāṭīr, al-Zahrā; al-Batūl, al-Hasan, al-Hawra; al-Sayyida, al-Šiddīqah, and Maryam al-Kubrā. Ibn Bāḥḍa (d. 379/991), who records in his work an account of 16 names for Fāțima on earth and three in heaven, and Ibn Shahrābūsh (133) who records them appends a list of 69 names and attributes which must have served as a litany, for they are linked by the rhymes in groups, usually of three. Among the names listed by H\(^{2}\)AW should be noted Fāṭīr, i.e., Creator, for not only is it masculine, but it is carried with it a glorification of Fāțima, which seems to be characteristic of the extreme Ismā’īlīs and of aberrant sects such as the Nasrūyīs (Bausani, 189) rather than of the Imāms. Have we here a borrowing by the latter from the former? The belief that Fāțima is Fāṭīr, Creator, would also explain her kunya Umm Abīhā.

References to Fāțima in the Kurān; her other merits. The Kurān too is made to contribute to the glorification of Fāțima, thanks to the exegesis of Shi‘i writers, who maintain that many verses allude to ‘Allī and his wife. When the Book speaks of women in general, a hidden reference to Fāțima is intended: thus in III, 193/195, “I shall not permit to be lost the work of one who works [well] among you, male or female”, the “male” is ‘Allī and the “female” Fāțima at the time of the hīdāra. Similarly they identify with ‘Allī and Fāțima the reference to the creation of man and woman in XCII, 3.

Twelve women are alluded to in the Kurān without their names being mentioned (e.g., Eve, Sarah, Pharaoh’s wife, etc.). There is such an allusion to Fāțima in LV, 19, which speaks of two seas which God has caused to flow together: this confluence is the reconciliation of ‘Allī and Fāțima after a dispute, for he is the sea of knowledge and Fāțima the sea of prophecy; the barrier between them, mentioned in the following verse, is the Apostle of God, who prevents ‘Allī from distressing himself over the life of this world and Fāțima from quarrelling with her husband over earthly things; the pearls and the coral of verse 22 are, since they come from these seas, a symbol of the reconciliation of ‘Allī and Fāțima. Ibn Bāḥḍa (d. 381/991) among the names of Fatima lists 11 names and attributes. Some information on Fatima can be drawn from the works of Massignon, and some more.
from the writings of Ivanow and of Corbin. Here some general observations may be made: Among the Imamis the Fatimah of legend preserves almost always with the Isma'is a host of other gnostic or semi-gnostic elements, and she is then to some extent overshadowed by these and all links with her historical self are generally lost. Among the Isma'is and the deviant sects there appear other beliefs, of which we have found no trace in the Imam sources, e.g., the identification of Fatimah with al-Masqijid al-Aqsa in Jerusalem, with the Cave of the Seven Sleepers, with the rock of Moses which gushed forth miraculous water (the ancestral motif of Water), and the idea that she conceived through the ear and gave birth through the navel, etc. Among the Isma'is and the deviant sects there has been a more extensive assimilation of the themes of the Christian devotion to Mary, the Mother of God. There is also, according to Massignon (La notion . . . , 151 f.), a tendency to identify the figures of Mary and Fatimah in the style of depicting them in icons (Fatimah enthroned in heaven, with a diadem, a sword, and ear-pendants).

Although the Umm al-kitsah, the curious holy book of groups of Isma'is of Central Asia (published and analysed by Ivanow, REI, 1932, 419-82; Isl., xxii [1936], 1-12), is of limited importance—it is almost unknown to the other Isma'is—we may summarize here its account of the Creation, noting that it bears a certain resemblance to that of Husayn b. Abd al-Wahhab summarized above. God, a being of light (shakhsh nurdni) before the Creation, with five limbs: hearing, sight, the senses of smell and taste, and speech (which on earth were to become Muhammad, 'Ali, Fattima, al-Hasan and al-Husayn), manifested Himself when the world began in 'Ali, and then in successive theophanies; that of Fattima took place in Paradise after the creation of primordial men as a figure adorned with thousands of colours and seated on a throne with a crown on her head (Muhammad), two ear-rings in her ears (al-Hasan and al-Husayn), and a sword carried in a shoulder-belt ('Ali); all the garden of Paradise shone upon the appearance of this radiant figure.

Conclusion. In preparing this article we have taken note of the gaps left unfilled, and therefore indicate here the course that should be followed by future students of the legend of Fattima. It would be advisable to collect all the references to the daughter of the Prophet in the Shi'i hadith-collections (e.g., that of al-Kulayni) and in the abhbar Fattima, which Agha Buzurg has listed in his Diirba (i, 243 f., 331) and, if they no longer survive, to reconstruct them, at least in part, from the numerous quotations from them in later texts; it will be necessary to establish, from al-Majdhisti, the beliefs accepted by the Safawids, to collect together the ideas of the Isma'is, and finally, with the help of al-Khaj al-Nu'man or other authors, to establish the esoteric beliefs of the Fattimids. Use should be made of the Persian lithographs (excluded from this study as being confused and difficult to consult) as a source for other information, e.g., in the case of Fatimah, the themes developed as time went on. Parallels in Sufi anecdotes should also be studied. Finally, the investigator will have also to interpret the themes, and to trace what connection they have either with beliefs which existed long before Islam, of which they could be a recreation, or with ideas which, although incompatible with Islam, survived in the countries conquered by the Muslims, or with details preserved in hadiths and with genuinely Islamic ideas.

In our view the last is likely in most cases to prove to be the real connection, even when the themes have expanded into stories which are completely fantastic.

FATIMIDS, dynasty which reigned in North Africa, and later in Egypt, from 297/909 until 567/1171. 'Ubayd Allah al-Mahdi, 297-322/909-34. Al-K'am, 322-34/934-46. Al-Mansur, 334-41/946-53. Al-Mu'izz, 341-65/953-75. Al-Aziz, 365-86/975-96. Al-Hakim, 386-411/996-1021. Al-Zahir, 411-27/1021-36. Al-Mustansir, 427-87/1036-94. Al-Musta'in, 489-95/1094-1103. Al-Amir, 495-525/1101-30. Al-Hafiz, 525-44/1130-49. Al-Zahir, 544-9/1149-54. Al-Fazz, 549-55/1154-60. Al-A'zid, 555-67/1160-71. The dynasty takes its name from Fatiima, for the Fatimid caliphs traced their origin to 'Ali and Fatiima. It is also possible that another Fatiima, the daughter of Husayn, who transmitted some hadith of her grandmother and had foreknowledge of the Mahdi, played a part in the attribution of this name (see L. Massigon, Fatiima bint al-Husayn et Vorigine du nom dynastique "Fatimites", in Akten des XXIV. Intern. Orientalisten-Kongresses, Munich 1957, 368). It should also be mentioned that the mother of 'Ali was a Hashimite called Fatiima bint Asad (Ibn Hajar, Isaba, Cairo 1328, iv, 380) and that among the Abi-l Hasan she is connected with the legend of Salman (see al-Mokri, Le secret indicible . . .), in JA, ccl (1962), 375), who plays an important part in Fatimid tradition. According to W. Ivanow (Ismaili traditions concerning the rise of the Fatimids, Bombay 1942, Is. Res. Ass. Series, no. 10, 80), the Fatimid dynasty, which, according to al-'Tabari (iii, 2219, sub anno 280), had been adopted by the Bedouin Banu 'A'shagh of the Syrian desert whose leader was the Karma-

to Fatimids. But Massignon (op. cit.) reminds us that the name is already found in Bashshar b. Burd, Fatimita, a poem in a pejorative sense. The origin of the Fatimid movement, which in North Africa brought the Fatimids to power in the person of 'Ubayd Allah al-Mahdi, must be sought in Isma'ilism (see Isma'il-liyya), a Shi'i doctrine which was at the same time political and religious, philosophical and social, and whose adherents expected the appearance of a Mahdi descended from the Prophet through 'Ali and Fatiima, in the line of Ism'ili, son of Difa'far al-Sadiq. (L. VECCIA VAGLIERI)

GENEALOGY OF THE FATIMIDS

The Fatimids trace their origin to Ism'ili, but as they did not announce their genealogy publicly and officially for some time, and as, during the period of the Hidden Imams, the satr [q.v.], the names of the imams between Muhammad b. Ism'ili and 'Ubayd Allah al-Mahdi were intentionally left in the dark, several different genealogies became current: with the result that, even today, the origin of the Fatimids is still wrapped in obscurity. The enemies of the Fatimids denied their descent from 'Ali and declared that they were impostors. Following the ancient Arab habit of giving a Jewish origin to people they hate (Goldziher, Muh. St., i, 204), 'Ubayd Allah has even been presented as the son of a Jew.

According to the traditional Fatimid genealogy, 'Ubayd Allah was the son of Husayn b. Ahmad b. 'Abd Allah b. Muhammad b. Ism'ili b. Difa'far al-Sadiq. The general anti-Fatimid tradition has it that he was the son of Husayn b. Ahmad b. Muhammad b. 'Abd Allah b. Maymun b. Kaddah, that he was really called Sa'id, and that it was only in North Africa that he took the name of 'Ubayd Allah (or 'Abd Allah) and claimed to be of 'Alid descent and to be the Mahdi (on Maymun al-Kaddah and his son 'Abd Allah and their relations with Difa'far al-Sadiq and his grandson Muhammad b. Ism'ili, see 'ABD ALLAH B. MAYMUN').

On the genealogy of the Fatimids, the different forms, both anti-Fatimid and Ism'ili, in which it has been presented, and the complex problems which it raises and which seem to defy a satisfactory solution, information is to be found in various works: S. de Sacy, Exposé de la religion des Druses, Paris 1838; Wüstenfeld, Gesch. der Fatimidischen-Chalifen, Göttingen 1881; C. H. Becker, Beiträge zur Geschichte Ägyptens, Strasbourg 1902-3; De Goeje, Mémoire sur les Carmalites, Leiden 1886; P. H. Mavour, Polémics on the origin of the Fatimis Caliphs, London 1924. The question has been studied afresh in more recent works: W. Ivanow, Ismaili traditions concerning the rise of the Fatimids, 1942, 154 f., 223 f.; idem, Isma'ilis and Qarmatians, in JBRAS, 1940, 70 f.; idem, The alleged founder of Isma'ilism, Bombay 1946, 169 f. (Ism. Soc. Series, no. 1); B. Lewis, The origins of Isma'ilism, Cambridge 1940 (Arabic translation, Baghdad 1947). Still more recently have appeared: Husayn F. al-Hamdi, On the genealogy of Fatimid Caliphs, Cairo 1958, and W. Madelung.

We can do no more here than glance at the questions which are discussed in these works and the difficulties which are encountered in studying the origin of the Fātimids, considering the many divergences which are found in the sources and the very different standpoints taken by the authors who concern themselves with these questions—even by the Isma‘īlī writers, in considering whose works we must account for the different treatment they give to a question according to whether the work is exoteric or esoteric.

Here are a few of the difficulties which arise:

In the Isma‘īlī sources the series of imams preceding ‘Ubayd Allāh is not everywhere the same and the names do not always agree (see Ivanow, *Rise,* 46 f.).

Even the name of the father of ‘Ubayd Allāh varies; there is one tradition which presents him as the son of Husayn but of one Ahmad. ‘Ubayd Allāh appears sometimes as ‘Ali b. al-Husayn, but on the other hand another ‘Ali b. al-Husayn is considered as a fourth Hidden Imām, not found in the list given above. Was Husayn, the father of ‘Ubayd Allāh, the regular imām or was the imām not rather Muhammad b. Āhmād, uncle of ‘Ubayd Allāh? In that case the uncle would not have been able to hand down the imamate to ‘Ubayd Allāh, since the doctrine decrees that, apart from the case of Hasan and Husayn, it is transmitted only from father to son.

This Muhammad b. Ahmad bears also the name of Abū ‘Ali al-Ḥākim with the kunya Abu ‘l-Shala‘la‘ (or Shala‘la‘gh) and the surname Sa‘īd al-Khayr. He is also presented as the father of ‘Ubayd Allāh. As ‘Ubayd Allāh is also Sa‘īd, it can be seen what a source of confusion these different names have been (see *Rise,* 31, Madelung, *Imamat,* 56, 71, 75, and similarly S. de Sacy and De Goes).

‘Ubayd Allāh himself gave other versions of his origin than that of the Fātimid tradition mentioned above. In a letter to the Isma‘īlī community of the Yemen (see Madelung, 70), he claims to be descended not from Isma‘īl b. Dja‘far, but from another son of Dja‘far, Abū ‘l-Mahasin. In the interview which he had with Abūdān, the emissary of Ḥamdān Karmat, as it is reported by Aḥkāḥ Muḥsin (admittedly a strongly anti-Fātimid šarī‘a), ‘Ubayd Allāh claimed a Kaddābī descent (Madelung, 60).

A further uncertainty lies in the relationship between ‘Ubayd Allāh and the second Fātimid caliph, Muhammad Abu ‘l-Kāsim al-Kā‘im bi-amr Allāh. The latter bears the name attributed by tradition to the expected Mahdī who must have the same name as the Prophet; the Kā‘im is strictly the Mahdī (the two names are used interchangeably).

‘Ubayd Allāh took the title of al-Mahdī, but did he really in his heart consider himself as the expected Mahdī, given that he did not have the necessary characteristics? Al-Kā‘im may not have been the son of ‘Ubayd Allāh, although the latter always considered him officially as his son. According to the Ghayat al-mawdū‘id of al-Ḥāṣṭāb b. al-Ḥasan (6th/12th century), he was the son of that fourth Hidden Imām ‘Ali mentioned above (see Ivanow, *Rise,* texts, 37, and Madelung, 77).

‘Ubayd Allāh’s attitude to Abu ‘l-Kāsim al-Kā‘im in conferring on him when he entered Raḵkāda a rank apparently superior to his own (see the facts in Madelung, 66, and see also 72) seems to imply that he considered Abu ‘l-Kāsim as the awaited Mahdī. Similar doubts are raised by various other details concerning al-Kā‘im (see Ivanow, *Rise,* 50, 204 and the *Strat Dja‘far al-Ḥākim,* 304, tr. in *Hespérisc,* 1952, 120). However it is difficult to do more than speculate on this point.

Another difficulty is that arising from the contradiction between the official genealogy and that which links the Fātimids with Maymūn al-Kaddābī. Even in the reign of al-Mu‘izz, the fourth Fātimid caliph, an attempt was made in certain heterodox Isma‘īlī circles to reconcile the two genealogies by identifying ‘Abd Allāh b. Maymūn al-Kaddābī with the ‘Abd Allāh b. Muhammad b. Isma‘īl b. Dja‘far of the Fātimid genealogy and thus introducing a non-alid into the family (see Ivanow, *Rise,* 140; S. M. Stern, *Heterodox Isma‘īlism at the time of al-Mu‘izz,* in *BSOAS,* xvii (1955), 12 f.). B. Lewis resolves the contradiction by showing, on the evidence of Isma‘īlī and Druze works, how it was possible to consider the Kaddābī as Fātimid imām, as the result of a spiritual adoption. Among the Isma‘īlīs spiritual paternity holds an important place beside physical paternity. (It may be recalled that in his letter to the community of the Yemen, ‘Ubayd Allāh, who included in the list of the imāms his uncle Muḥammad b. Āhmād, stated that he himself was called ‘Abd Allāh b. Muhammad because he was fi‘l-bājnīn the son of this Muḥammad b. Āhmād, who transmitted the imamate to him: see Husayn F. Ḥamdāni, in *Madelung,* 71, 72-73.)

Apart from the real, true imāms, descended from ‘Ali and Fāṭima, and called mustawdār (literally ‘permanent’), there were, says B. Lewis, imāms called mustasada‘, trustees or guardians of the imāmate (on these two terms see Stern, *op. cit.,* 10), whose function was to “veil” the true imām in order to protect him, and who acted by right of an assignment (‘inṣafī) which so to speak allowed them to enter the family of the true imāms. Maymūn al-Kaddābī, who had received from Dja‘far al-Ṣadīq the charge of his grandson Muḥammad b. Isma‘īl, said that his own son ‘Abd Allāh was the spiritual son of Muḥammad b. Isma‘īl and his heir, and it is by virtue of this that he proclaimed him imām. Thus a series of Kaddābī imāms is found side by side with a series of alid imāms. The last Kaddābī of the series was ‘Ubayd Allāh Sa‘īd, the mustasada‘ of al-Kā‘im, the alid and mustawdār imām. Thus, in the person of al-Kā‘im, the imāmate returned to the alid family.

For all the questions which arise and which cannot be dealt with here, reference should be made to the very detailed and fully documented article of Madelung on the imāmate in early Isma‘īlī doctrine, to which we shall return when discussing the religious policy of the Fātimids.

From the historical point of view, that which concerns us directly in this question of the genealogy is the attitude of the Abbāsid, who naturally contested the alid origin of their rivals the Fātimids, to whom it gave great prestige. ‘Arīb (*sub anno* 302, 51 f.), following al-Soll, reveals that at Baghdad at this time it was said that the master of the Maghrib was descended from a freedman of Ziyād b. Abīlī’s [g.v.] chief of police. All the same, it was not until later that official documents appeared, signed by jurists and alids, one of 402/1011 and the other of 444/1052, which denied that they were of alid origin (see Ibn al-Djawzī, *Muntazam,* vii, 225; Ibn al-ʿAšír, *sub annis* 402, 444; Ibn Khālidīn, *Proleg.,* tr. de Siane, 276, tr. Rosenthal, i, 45, and *Hist. des Berberès,* ii, 55; al-Maḥārizī, *Ittiḥād,* Cairo ed., 58 f.; Abu ‘l-Mahāsinī, Cairo ed., iv, 229, v, 53; cf. Goldziher,
Die Streitschrift des GazdH gegen die Bdtinijja-Sekte,
Leiden 1915, 15).

The SunnI historians are in general not well disposed
towards the Fāṭimids. Hardly any of them except
al-Makrīzī and Ibn Ḥālūdīn pronounce their ‘Alī
descent to be authentic. Moreover, the argument
advanced by these two writers that ʿUbayd Allāh
would not have been persecuted by the ʿAbbāsids if
they had not been convinced of the ‘Alī descent of
the Fāṭimids is not very convincing, for, ‘Alī or not,
he represented ideas which were dangerous to those
in power and it was natural that the authorities
should harry him. While the supporters of the
Fāṭimids refer to their dynasty as ‘Alīd (al-dawla
al-Salawīyya: see e.g. al-Muʿayyяд fī l-Dir, Sīra,
passim), several Sunnī historians speak of them only as
ʿUbaydīds and the ʿUbaydī dynasty. Ibn Ḥamādū (Ḥammād [q.v.]) calls them mulūk Banī
ʿUbayd. Similarly Abu ʿl-Muḥāsib speaks of al-Muʿizz
al-ʿUbaydī, al-ʿAḍzī al-ʿUbaydī.

FOUNDATE OF THE DYNASTY

Whoever ʿUbayd Allāh-Saʿīd may have been, he
laid the foundations of the dynasty in North Africa.
He lived at Salamīyya in Syria, a centre of ʿĪsāʾī
propaganda. The way had been prepared for him by
the ʿālīs [q.v.], the ʿĪsāʾī missionaires. Ibn Ḥawgāb
Maṣʿūr al-Yaman, the ʿālī of the Yemen, where he
was firmly established, had sent missionaires into
North Africa, the last and most important of whom
was Abū ʿAbd Allāh al-Shīrī [q.v.]. When ʿUbayd
Allāh decided to leave Salamīyya, either to escape
ʿAbbāsīd investigations, or as the result of the obscure
affair of a conspiracy against him within the ʿĪsāʾī
movement (that of the “three Karmaṭī brothers” as
Ivanov puts it in Rīs, 75 f.), he could have gone
either to the Yemen, or to North Africa, where the
missionaire Abū ʿAbbās Allāh al-Shīrī had been working
successfully among the Kutāmā Berbers since 280/893.
He went first to Ramlā in Palestine, thence to Egypt,
probably in 297/903; then when he was harassed by
the ʿAbbāsīd governor, and when his followers expected him to set off for the Yemen, he
decided to go to North Africa where Abū ʿAbbās Allāh
al-Shīrī was occupied in undermining the Aḥlabī
domination. Being unable to join the missionaire at
once, he went to ʿṢijdīlmasa where he was put under
house arrest, if not actually imprisoned, by the amīr
of the country. It was there that Abū ʿAbbās Allāh,
after having made himself master of the Aḥlabī
capital Raḵkāda and expelling Ziyādāt Allāh in Raḡāb
296/13 March 909, came to seek him to lead him
in triumph, on 29 Rābiʿ I 297/15 January 910, to
Raḵkāda where he publicly took the titles of Mahdī
and of Amīr al-Muʿāminīn (on all this, see, besides
the historians, the Sīrat Diaʾfar al-Ḥādījīh, one
of the faithful companions of ʿUbayd Allāh, mentioned
above).

THE AFRICAN PERIOD OF THE FĀṬIMID CALIPHATE

The first four Fāṭimid caliphs, ʿUbayd Allāh al-
Mahlī, al-Maṣṣūr and al-Muʿizz, lived in North
Africa, the last until, in 362/973, he left for
Egypt, which had been conquered by his general
Diaḥawār [q.v.].

During the African period, the Fāṭimid caliphs
encountered many difficulties. In North Africa, split
between Sunnīsm, mainly in its ʿĪsāʾī form, and
Khāriǧism, in its ʿĪbāḍī and Ṣufī forms, the new
dogma could not fail to bring trouble. The existence
in the Maghrib of two rival Berber groups, the Zenātā
in the west and the Ṣanḥāḍā (who included the
Kutāmā) in the east, was a further disrupting factor.
Settled in the centre and the west of the country were
two dynasties of eastern origin, the Khāriǧī Rusta-
mīds of Tāhirt and their principal (al-ʾĀṣid), the new
dynasty could not allow to remain independent.
The Umayyads of Spain were in possession of a
part of the Maghrib territory lying nearest to the
Iberian peninsula. Finally, if we consider that, from
the very beginning, the new masters of Ifriqiyya had
considered it only as a base from which to move on,
that they intended one day to move to the East,
to supplant the ʿAbbāsīd caliphs there, that in order to
this they had to keep up a powerful and expensive
army and a navy of some consequence, and that apart
from this they were to come into a troubled in-
heritance in Sicily, the full scope of the difficulties
with which they were faced becomes clear. To solve
all the problems which the situation presented to
them, Fāṭimid caliphs could rely only on a fairly
restricted number of supporters, apart from the
Kutāmā, who were not always tractable, and on
their own political skill and their energy. It is a wonder
that they succeeded.

Within his own party, ʿUbayd Allāh was not long
in coming into conflict with the dāʾī Abū ʿAbd Allāh,
either because the latter had doubts of his really
being the Mahdī, or because his master had limited
his power. When one day the ʿAbbāsīd dynasty to the
brink of ruin.

In the religious and politico-religious field, the
Fāṭimid had to struggle in North Africa against
both Sunnī and Khāriǧī opposition. The Mālikī
Sunnī opposition has been well explained by G.
Maqrīzī in his work La Berbérie musulmane et l’Orient
au Moyen Age, Paris 1946, in the chapter Les causes
du divorce, 136 f., which, although based on prejudiced
Sunnī sources, gives a striking picture of the mani-
festations of this opposition, which was sometimes
sterility quelled and at other times extinguished by
bribery. In M. Bencheneb, Classes des sarants de
l’Ifriqiyya, 288-304, is to be found the curious story
of a doctrinal controversy between some jurists and
the brother of the Dāʾī. This opposition, however,
bereaved those in power only when Kay-
rawān, although very orthodox, made a temporary
alliance with the Khāriǧī Abū Yazīd [q.v.]. Indeed,
on the Khāriǧī side, the opposition took a very
dangerous form with the revolt of this curious
personality, who took possession of several important
towns, laid siege for a year to Mahdīyya, and was not
defeated until 336/947. The revolt, which began in
332/943-4, exhausted al-Kāʾīm, who succumbed to
the fatigues of war at Sās, and it did not end until
the reign of al-Maṣṣūr. Abū Yazīd, supported by the
Umayyad ruler of Cordova, brought the Fāṭimid
dynasty to the brink of ruin.

The Zenātā of the west were another source of
difficulty. The Khāriǧī Rustamīds of Tāhirt had
been expelled in 296/909 by Abū ʿAbd Allāh al-Shīrī,
but a revolt broke out and the place had to be re-
taken in 309/920, then of Sidjilmasa in 310/921. After the death of Maslla, his lieutenant and successor, Mūsā b. Abī 'l-ʿAṭiya, effectively subdued the Maghrib, taking Fez from the Idrisids, but he ended by defec-
ting to the Umayyad ruler in 320/932. Also al-
Kāʾīm, who had already conducted campaigns in the Maghrib during his father's lifetime and founded the fortress town of Maslla (Muḥammadīyya) in the Zāb, was obliged, after his accession, to send an ex-
pedition to reconquer Fez and all the western Maghrib from Ibn al-ʿAṭiya, as well as Tāhtēr. He re-
established the Idrisids in their domains, but under Fāṭimid authority. It was only al-Muʿūzī who,
through his wise and prudent behaviour and the military skill of his general Dīwāhār, subdued all the west and re-established peace there, as the result of a great campaign by Dīwāhār, extending as far as the Atlantic. The same caliph had also pacified the Aurès and defeated the maritime offensive of the Umayyads ʿAbd al-Rahmān III in 344/955.

In order to have a window open onto the East, ʿUbayd Allāh founded on the eastern coast of Ifriqiyah the town of al-Madhiyya, which he made his capital in 308/920. A few years after his accession he tried to establish himself in Egypt. But the two expeditions which his sons, al-Kaʾīm and explains, made in 301/913-5 and 307/919-21 were unsuccessful and, after initial successes which led him at one time as far as the gates of al-Fustāt and at another time to Fayyūm, they ended in heavy defeats. In the second expedition, the Fāṭimid fleet was destroyed. Barka, however, remained in Fāṭimid hands. After his accession, al-
Kāʾīm tried a third time in 323/925 to conquer Egypt, but again without success.

In none of these operations does the Fāṭimid ruler seem to have been helped by any campaign undertaken on their side by the Karmāṭī of Bahrain; this is contrary to the opinion advanced by De Goeje (on this subject see W. Madelung, Fatimidien und Bahrain-
garmeinen, in Isl. xxiv (1959), 46 f., who denies that there was a collaboration between Fāṭimids and Karmāṭī which maintains that the letter of ʿUbayd Allāh to Abū Tāthir after the taking of the Black Stone—for which see the historians sub anno 317—
is no proof of an alliance between Fāṭimids and Karmāṭīs.

The new power, as successor of the Aghlabids, could not be indifferent to Sicily. But two successive governors sent to Sicily had to withdraw, and the inhabitants elected a governor of their own, Ibn Kur̲ub. He declared for the ʿAbūsādīs caliph and twice sent a fleet against Ifriqiyah, but the second time the fleet suffered a serious defeat; finally the Sicilians rid themselves of Ibn Kur̲ub by giving him up to ʿUbayd Allāh, who had finally to pay death in 304/916. It was only after this that a new Fāṭimid governor was able to take possession of the island. But Sicily was later to suffer disturbances. In 336/946 al-Manṣūr sent as governor al-Ḥasan b. ʿAll b. al-
Kalbī, and from then on it was from this family that the governors of Sicily were taken, tending more and more towards autonomy.

The Fāṭimid caliphs of North Africa were naturally driven to fight against the Byzantines who were settled in Sicily and to exchange embassies with them. Several times his fleets and fleets were sent from Ifriqiyah against the Byzantines in Italy and in Sicily. During the time of ʿUbayd Allāh, at a date which is uncertain (between 914 and 918) the Byzantin
e emperor concluded a treaty with the governor of Sicily, by which he undertook to pay annually a tribute of 20,000 gold pieces; some years later the caliph reduced this to 2,000, to thank the emperor Romanus Lecapenus for having freed the African ambassadors whose ship had been captured when they were travelling to the court of the king of the Bul
gars, in the company of Bulgar emissaries who had come to Africa to propose to the Fāṭimid ruler an alliance against Byzantium. Because of this the projected alliance between Fāṭimids and Bulgars fell through. At about the same time an expedition was sent from Africa against Genoa, Corsica and Sardinia. In the time of al-Kāʾīm, during the revolt of Girgenti (see G. Wiet, L'imperialisme des Fāṭimides et leur propagande, in Revue des Études Byzantines, xix (1961), 284 f., and on the embassy of 346 and related events, S. M. Stern, An ambassador of the Byzantine Emperor to the Fāṭimid Caliph al-Muʿūzī, in Byzantion, xx (1950), 239-58; on other Byzantine embassies, see Amari, Storia, i, 314-22.

Some years later, in the time of Nicephorus Phocas, who had refused to continue to pay the tribute and had resumed hostilities in Sicily, the Fāṭimid army and fleet inflicted two defeats on the Byzantines (Battle of Rametta and Battle of the Straits) at the beginning of 965. The resulting negotiations ended in a peace treaty in 356/967, and this treaty was concluded all the more easily as al-Muʿūzī was engaged at the time in preparing his Egyptian expedition.

The conquest of Egypt

The success of al-Muʿūzī in North Africa had al-
lowed him to devote himself to the pursuit of an eastern policy, and to undertake the conquest of Egypt in which ʿUbayd Allāh and al-Kāʾīm had failed. The conquest, carefully planned in its practical aspects, and psychologically by skilful political propaganda (see G. Wiet, L'Égypte arabe, vol. iv of Hist. de la Nat. Égypt., 147 f., and M. Canard, L'impérialisme des Fāṭimides et leur propagande, in AIEO-Alger, vi, 167 f.) in a country which was in a state of internal chaos and ravaged by famine, was achieved without much difficulty by Dīwāhār, who entered al-Fustāt on 12 Shaʿbān 356/1st July 969. Egypt then became for two centuries a Shiʿī country, at least so far as the civil power was concerned. The ʿAbbāsid caliph suppressed in the kbūtha, but intro-
duced Shiʿī formulae only very gradually. He concentrated at first on taking measures against
the famine and on restoring order, and acted with considerable generosity. To house his troops he built a new town—Cairo—and laid the first stones of the al-Azhar mosque on 24 Džumādā I 359/1 April 970.

The Fatimids in Egypt

1. Territorial expansion: its vicissitudes.

Diawhar made great efforts to extend Fatimid domination beyond the frontiers of Egypt over the countries which were dependencies of the Ikshšidid emirate. The two holy cities of Mecca and Medina, where the gold liberally distributed by al-Muizz had achieved its propagandist purpose, surrendered readily in 359/970, and remained under Fatimid suzerainty, apart from a few interruptions over questions of money, until the reign of al-Mustansır. It was more difficult to establish a foothold in Syria, for there the Ikššidid governor had made a pact with the Karmatls of Bahrayn, who in turn had the support of the Buwayhid ruler of Baghdad. Diawhar’s lieutenant, Dja shameful Fatimid army was able to seize Damascus, but he was killed in a battle against the leader of the Karmatls, al-Hasan al-ʿAṣam, at the end of 360/1 August 971 (on the attitude of the Karmatls to the Fatimids see al-Maklawi, Ihjā, 248 f.; De Goeje, op. cit., 183 f.; Hasan lbrahīm Ḥasan and Tahā Sharaf, al-Muʾizz, 115 f.; Madelung, Fat. und Bahrainqarm., 62 f. and al-Ḥasan al-ʿAṣam). al-Husayn b. ʿAlī, the Karmati intended to proceed without delay as far as Syria, but he encountered a successful defense by Diawhar (end of 361/December 971) and fled. All the same Diawhar was able to re-occupy only a part of Palestine. Al-Hasan al-ʿAṣam returned to attack Cairo in 363/ beginning of 974, while al-Muʾizz, who had left Ifrīqiyah on 21 Shawwal 361/5 August 972, entrusting the government of the Maghrib to the Şāhīd al-Muʾizz Dja hilāl Dżawhar, was already in Cairo, which he had entered on 7 Ramadan 362/11 June 973. But the Bedouin auxiliaries of al-Ḥasan al-ʿAṣam, won over by Fatimid gold, abandoned him and he was routed. Following this the Fatimid army was able to reoccupy Damascus, but shortly afterwards Damascus fell into the hands of a Turkish adventurer, Altekīn, against whom al-Muʾizz, on the eve of his death in 365/975, was preparing to march.

The new caliph al-ʿAzīz succeeded in re-taking Damascus in 368/978, but in order to procure the withdrawal of the Karmatls, who supported Altekīn, he was obliged to pay them tribute. Possession of Palestine and Syria was necessary to al-ʿAzīz, whose ultimate plans also required the seizure of Aleppo, but there was continued trouble in Palestine and Syria, fomented either by rebels like the powerful ʿAYl family of Palestine, the Şāhīdīs (asv.), or by dissident governors or generals. The attempts of al-ʿAzīz failed in 373/983, 382/992-3 and 384/994-5, and his power barely extended as far as Tripoli. Nevertheless it was then that Fatimid sovereignty was recognized from the Atlantic to the Red Sea, in the Ḥijāz, in the Yemen (by the Yaʿfurī ʿAbd Allāh b. Kaḥṭān in 377/987 [see 447/28]), in Syria and even for a time as far as Mūsul, in the time of the ʿŪṣaylīd Abu Ṭ-Dawād b. al-Musayyib. But they were unable to reach any understanding with the Buwayhid of Baghdād, although he was a Shīʿī.

The troubles in Syria continued, and it is possible to say that this country was never a solidly Fatimid possession. In the time of al-Ḥakīm the amirate of Aleppo fell under Fatimid rule in 406/1015, and in 408/1017 received a Fatimid governor; but he was sometimes in revolt. In Palestine the Şāhīdīs of al-Muʾizz b. Dja hilāl Altekīn, who was able to have an anti-caliph proclaimed in the person of a šarif of Mecca, and it was only by buying Mufarrīdī off that al-Ḥakīm could rid himself of the danger which he had stirred up. Under al-Ẓahir, Fatimid domination was endangered by the alliance between the Şāhīdīs, the Kalbīs of central Syria and the Kilābīs of northern Syria. Aleppo fell into the hands of the Kilābī ʿAlī b. Mīdās [asv.] in 415/1025. The fact that the Kalbīs changed sides allowed the Fatimid general Anūṣhtekīn al-Duṣbarī to win the battle of al-ʿUkhwāna in Palestine, to re-occupy Damascus and to re-take Aleppo from the Müḥammadīs (in the reign of al-Mustansır). Thanks to Anūṣhtekīn, Fatimid domination extended as far as Ḥarrān, Şarādī and Raḵṣa, but he fell a victim to the intrigues of the vizier al-Djārdjarātī; his successor was a descendant of the Hamdānīs, Nāṣir al-Dawla [asv.], and Aleppo fell again to a Mīdāsī in 433/1041. In spite of two attempts to re-take it in 440/1049 and 441/1050 and its surrender to the Fatimids in 449/1057-450/1058, it returned into Mīdāsī hands in 452 and was then irrevocably lost to the Fatimids, for it surrendered to the caliph of Baghdād and to the Şāhīdī Sultan Alp Arslān in 452/1069-70, and had a Şāhīdī governor from 479/1086-7.

Nor did Syria and Palestine remain for long under Fatimid domination in the 5th/11th century. There was continual unrest in 455/1065-456/1066 and again in 458/1066-460/1068 to maintain Fatimid sovereignty in Damascus. In 461/1069, in the course of fighting between Muhribī and Eastern elements of the army, the Umayyad mosque was burned. In 468/1076 Damascus was occupied by a former Fatimid officer, the Tūrco Man Ṭasū, who threatened even Cairo in 466-70. The Armenian general Badr al-Djamālī [asv.] tried vainly in 455/1065-456/1066 and again in 458/1066-460/1068 to maintain Fatimid sovereignty in Damascus. In 461/1069, in the course of fighting between Mahribī and Eastern elements of the army, the Umayyad mosque was burned. In 468/1076 Damascus was occupied by a former Fatimid officer, the Tūrco Man Ṭasū, who threatened even Cairo in 466-70. The Armenian general Badr al-Djamālī [asv.] tried vainly in 455/1065-456/1066 and again in 458/1066-460/1068 to maintain Fatimid sovereignty in Damascus. In 461/1069, in the course of fighting between Mahribī and Eastern elements of the army, the Umayyad mosque was burned. In 468/1076 Damascus was occupied by a former Fatimid officer, the Tūrco Man Ṭasū, who threatened even Cairo in 466-70. The Armenian general Badr al-Djamālī [asv.] tried vainly in 455/1065-456/1066 and again in 458/1066-460/1068 to maintain Fatimid sovereignty in Damascus. In 461/1069, in the course of fighting between Mahribī and Eastern elements of the army, the Umayyad mosque was burned. In 468/1076 Damascus was occupied by a former Fatimid officer, the Tūrco Man Ṭasū, who threatened even Cairo in 466-70. The Armenian general Badr al-Djamālī [asv.] tried vainly in 455/1065-456/1066 and again in 458/1066-460/1068 to maintain Fatimid sovereignty in Damascus. In 461/1069, in the course of fighting between Mahribī and Eastern elements of the army, the Umayyad mosque was burned. In 468/1076 Damascus was occupied by a former Fatimid officer, the Tūrco Man Ṭasū, who threatened even Cairo in 466-70.
At the beginning of the reign of al-Zahir, in 414/1025, the regent Sinn al-Mulk ([q.v.], d. 415/1024-5) had re-opened negotiations but without success. They were not resumed until 423/1032, and were soon broken off because of the caliph's refusal to accept the return of Hassân b. al-Mufarrij (see ABBÂSHIYYA), when agreement had been reached on the rebuilding of the church of the Holy Sepulchre. It was not until 429/1038 that a peace of thirty years could be signed, at the beginning of the reign of al-Mustansîr: the Byzantines obtained permission to rebuild the church, and sent architects and money for this purpose.

From this time on begins a period of friendly relations between Fatimid and Byzantine. Although Byzantium had agreed to support a rebel Sicilian amir and had given him the title of magister in 1033-6 (Amari, ii, 434), yet when in 443/1051-2 the Zirid Mu'izz b. Badis had recognized 'Abbâsîd suzerainty, his ambassador returning from Baghêd was arrested in Byzantine territory and sent to al-Mustansîr. In 439/1048 the treaty of 1038 had been renewed.

Constantine Monomachus (1042-54) maintained excellent relations with al-Mustansîr, who asked him to supply Egypt with wheat after the famine of 446/1054. But the death of the Emperor and the demands of his successor, the empress Zoe, who wanted in return for a treaty with the Fatimids, the destruction of Tyre, and the conquest of its environs, led to a cooling of relations and even a resumption of hostilities. The rupture was aggravated when a Fatimid ambassador, al-Khâlîfâ at Tyre, whereas the Byzantines helped al-Abdhîkînsî to Fâtimid territory and sent to al-Mustansîr. In 439/1048 the treaty of 1038 had been renewed.

3. Relations with the Byzantine Empire. In their propaganda already in their African period the Fatimids claimed aloud that universal sovereignty was given to them by divine decree and that they were called to displace the Umayyads of Spain as well as the 'Abbâsîds of Baghêd and the Byzantine emperors (see M. Canard, L'imperialisme..., passim). We have seen above what their relations with Byzantium had been during the African period. Al-Mu'izz received several Byzantine embassies. In Egypt, in the very year of his death in 365/975, he received an embassy from John Tzimisces. Al-Azîz, in this attempt to take Aleppo, clashed with the Greeks as protectors of the Hamdânî amirate of Aleppo, who each time prevented him from achieving his object. Although al-Azîz did not succeed in his attempts, he nevertheless obtained in 377/987-8 from the emperor Basil II, who was threatened by the Fatimids and by the Sa'djîks, led to a cooling of relations and even a resumption of hostilities. The rupture was aggravated when an ambassador in Cairo that on his next visit he would find him in Baghêd. Al-Azîz b. Badîs had recognized 'Abbâsîd suzerainty, his ambassador returning from Baghêd was arrested in Byzantine territory and sent to al-Mustansîr. In 439/1048 the treaty of 1038 had been renewed.

Constantine Monomachus (1042-54) maintained excellent relations with al-Mustansîr, who asked him to supply Egypt with wheat after the famine of 446/1054. But the death of the Emperor and the demands of his successor, the empress Zoe, who wanted in return for a treaty with the Fatimids, the destruction of Tyre, and the conquest of its environs, led to a cooling of relations and even a resumption of hostilities. The rupture was aggravated when a Fatimid missionary at the mosque in the name of the Fatimid, but for the Sa'djîk sultan Toghrîl Beg, for the Emperor had entered into relations with the latter in 447/1054 in gratitude for his having freed the king of the Abhbîz, and it seems, to judge from the Siya of the Fatimid missionary al-Mu'ayyad ff 'l-Dîn (p. 95), that there had been a project for an alliance between the two against the Fatimid ruler. Relations were resumed however and the Byzantine writer Psellus states that they were excellent in the reign of Constantine Monomachus (ed. Renault, ii, 64) and were still so before the death of the Byzantine emperor in 459/1069.

The exchange of embassies continued, the more so because the same danger, the Sa'djîks, was threatening both Egypt and Byzantium. There was for example a Fatimid embassy during the reign of Romanus Diogenes in 461/1069, a letter from Alexis Comnenus to the vizier al-Afdal in about 1095, after Antioch had been taken by the Crusaders, and an embassy from the same emperor to al-Mafîj in 1105 to negotiate the ransom of Frankish prisoners. Manuel Comnenus also maintained good relations with Egypt and in 553/1158 requested the help of a Fatimid fleet against Sicily. In the same year, the vizier Taûbî b. Ruzzîf sent to Manuel the brother of the Count of Cyprus whom he had taken prisoner. Some years later however, in 1165, Manuel concluded a pact with king Amâric of Jerusalem for an attack against Egypt, which took place the following year, but failed.

4. Relations with the 'Abbâsîd East. Ibn Hâni' al-Andalusî, the eulogist of al-Mu'izz, tempts his master with the prospect of a Fatimid entry into Baghêd, and shows him, wide open, the old imperial Persian highway, the road to Khurâtân. One tradition has it that al-Mu'izz declared to a Byzantine ambassador that there was a pact on his behalf with the Fatimids, and that he would find him in Baghêd. Al-Azîz set himself to achieve this goal, but by means of negotiations, trying to
get himself recognized by the Buwayhid al-Dawla. An exchange of embassies took place in 369/979-80, but without result. Like the 'Abbasid caliph later, the Buwayhid al-Dawla, in the tradition of the 'Aliid genealogy of the Fatimids. Al-Hākim was no more successful with the Ghaznavid ruler in 403/1012-3, nor was al-Zāhir in 415/1024. The kiya sent were despatched to Baghdād and burnt. Al-Zāhir did not give up, and in 425/1034 sent missionaries to the Buwayhid capital to take advantage of the disturbances caused by the Turkish soldiery during the reign of the Buwayhid Djalāl al-Dawla [g.v.], and they made vigorous propaganda there. Al-Mustānisr [g.v.] cemented relations with several governments in the East. The activities of his missionaries spread as far as Sind (see S. M. Stern, [q.v.]). Al-Mustansir could believe that the Fatimid dream was about to become reality.

In 'Irāq the Turkish amīr al-Bāsāsār [g.v.] caused the sovereignty of the Fatimid ruler to be recognized in various places, at Mosul in 448/1057, then in Baghdād for a year in 451/1059. This extension of Fatimid sovereignty had been prepared in particular by the propaganda of the Fatimid ruler. He had fi 'l-Dīn [g.v.], who had even converted the Buwayhid Abū Kālidār [g.v.] at Şirāz to Ismā'īlīsm. The Sāljuqs, as Sunnīs, of course had no sympathy for the Fatimids. In 447/1055, Toghrīl Beg had announced his intention of marching on Syria and Egypt and of putting an end to the reign of al-Mustānisr. The affa of al-Bāsāsār strengthened the determination of the Sāljuqs to direct their policy towards Syria and the Mediterranean, especially as the vizier al-Yāsār [g.v.], who decided to abandon his support of al-Bāsāsār, had entered into correspondence with Toghrīl Beg (so at least certain sources allege). The fact remains that from then on the Sāljuqs did nothing but gain territory from the Fatimids: at Mecca the name of the Fatimid ruler was omitted from the Khutba, temporarily in 450/1059-60 and finally in 473/1080.

In his relations with the amīr Nāṣir al-Dawla appealed for help, in 462/1070-70, to the Sāljuq sultan Alp Arslān, asking him to send an army to help him to re-establish the 'Abbasid khilāfa. The Sāljuq sultan got as far as Aleppo the following year, and the Mirdāsār ruler abandoned the Fatimid khilāfa. Alp Arslān was unable to proceed further, because of the invasion of Armenia by the Byzantine emperor. Apart from this, we have already noticed the Sāljuq penetration into Syria and Palestine.

In the Yemen, the Fatimids found fervent supporters in the dynasty of the Sulayhids of San'a, which ruled from 429/1038 to 534/1139. The founder was a dā'i who established Fatimid domination in the Yemen. This dynasty included a remarkable ruler in the person of Sayyīdā Ḫurrā, and maintained uninterrupted relations with Cairo: the letters from the chancrey of al-Mustansir to the Sulayhids have survived (Al-Sīgīliīāt al-Mustansirīyya, ed. A. M. Magued, Cairo 1954).

5. The Fatimids and the Crusades. At the time when the Crusaders arrived in northern Syria the Fatimids no longer held any territory in Syria, and in Palestine they retained only 'Aškalān and a few coastal towns. They were less interested in the struggle against the Franks than in the Egyptian amirs of Syria. Ibn al-Athīīr, sub anno 491/1097-8, relates a tradition according to which the Fatimids, being uneasy over the plans of the Sāljuqs and their intentions against Egypt (for the amīr Atālā had already, in 469/1077, launched an unsuccessful attack against Cairo), requested the intervention of the Franks in the East. This does not seem very likely. Be that as it may, the Franks received a Fatimid embassy outside Antioch at the beginning of 1098 and sent delegates to Cairo, who set off with the Egyptian ambassadors. But the project for an alliance against the Turks, giving Syria to the Franks and Palestine to the Fatimids, did not come to anything, although the Fatimids were better disposed towards the Franks than towards the Turks, and in spite of the good intentions of the Franks, who were able to learn through Alexis Comnenus what was the Fatimid attitude to the Turks. In these circumstances the vizier al-Aldāl decided to take Jerusalem from Sūkāmān, succeeded in 497/August 1098 after a siege of forty days, and continued his advance to beyond Beirut. It is difficult in these circumstances to see why—for presumably he re-took Jerusalem in order to hold it—he did nothing to prevent the Crusaders from seizing it on 15 July 1099, and allowed himself to be surprised and beaten in August outside 'Aškalān in a battle which had been preceded by the capture of several places, including Yāfā (Jaffā). Following this, in 499/1099-1000, the Crusaders took in Palestine Ḫayfā, Ṭarsīf and 'Acre ('Akṭā) in 497/1104. The Egyptians took part in the struggle against the Crusaders but were unable to prevent the fall of Tripoli, which had called on them for help at the end of 503/1109, nor the fall of Beirut and Sidon (Ṣāyda) in 504/1110, nor the fall of Ṭyre in 518/1124; it is true that the Fatimid governor of Ṭyre had signed an agreement with the amīr of Damascus. The Franks were even able, at the end of 517/1122, to advance as far as Fārāmā. Yet it was not until much later that they turned their attention to Egypt and actively prepared to attack 'Aškalān [q.v.]. The Egyptian vizier, Ibn al-Sallār, entered into negotiations with Nūr al-Dīn [q.v.], master of Aleppo, in 543/1143, and the Egyptian fleet launched a great offensive against the Franks in the East. This does not seem very likely.

Next the vizier Tālāqī b. Ruzzik carried out some operations against the Crusaders and gained a victory near Ghazzā, then at Hebron (al-Khāliī) in 553/1158; but this had little result because Nūr al-Dīn, master of Damascus since 549/1154, when he was approached again, was still not willing to become involved because of the internal unrest in Cairo.

Tālāqī was assassinated at the instigation of the caliph al-'Āḍid in 556/1161; his son succeeded him and met the same fate in 558/1163. From then on, the relations of the Fatimid Egypt with the Crusaders on the one hand and with Nūr al-Dīn on the other were influenced by the rivalry between Ṣhawār, who succeeded Tālāqī's son, Ruzzik, and Dirghām [q.v.], and by the versatile and personal policy of Ṣhawār. The latter, when expelled by Dirghām, had taken refuge with Nūr al-Dīn and persuaded him to intervene in Egypt, particularly as the king of Jerusalem, 'Amlārīc I, had made a first incursion into Egypt in 1161 and exacted a payment of tribute from Tālāqī, had returned in 1162, but had had to retreat before the deliberate flooding of the Nile Delta. Nūr al-Dīn sent an army with Shirkhī [q.v.] and his nephew, Ṣalāh al-Dīn (ṢāḤālāt al-Dīn). Dirghām was killed in Rāmādān 559/August 1164.
Shawar resumed the vizierate. There is no room here to trace in detail the events which ensued, and the confused tangle of the existing indirect relations makes Shirkhūn and Afdalūrī. The main details will be found in the articles Shawar and Shirkuh. The result was Shirkhūn, finally answering a joint appeal by the caliph and Shawar, procured the evacuation of the country by the Franks in 564/1169, rid himself of Shawar by assassination, and was granted the post of vizier to the Fatimid caliph. He died soon after; Saladin succeeded, and put an end to the Fatimid caliphate in 567/1171, re-establishing Sunnism and Abbāsīd sovereignty in Egypt.

**INTERNAL POLICY OF THE FATIMIDS**

1. Caliphs and viziers. In the Sunnī system, the appointment of the caliph is the result of an election or of a nomination by the predecessor ratified by a pseudo-election. In the Ismā‘īlī system, the caliph is the successor of him who, by virtue of a Divine decree and nomination, has been chosen to be the heir (wasi) of the Prophet, namely ‘Ali, and the imāmāt is transmitted from father to son (with the exception of the case of Hasan and Husayn) within the family of ‘Ali. In these circumstances there could be no question of an election, nor of the conditions demanded by Sunnism for holding the office of caliph. This nomination of his predecessor, by the nass [q.v.], a manifestation of the Divine will (on this subject see al-Nu‘mān, Da‘ī‘tim al-Islam, i, 48 f.; the Tādī al-akhtād of ‘Ali b. Muhammad b. al-Walīd, d. 612/1215, in Ivanow, A creed of the Fatimids, Bombay 1936, paras. 30-32).

The succession of the imāms was thus governed by the nass. This nomination could be hidden from the people and known only to certain trusted persons and revealed only when desired (see examples in the Sirat al-ustadh, Dhau‘dhah). It was possible for the elder son not to be chosen. Already Dja‘far al-Šādīk had nominated Ismā‘īl, who was not the eldest of his sons. Similarly ‘Abd Allāh was preferred to Ta- nūm, the eldest son of al-Mu‘īn, mainly for moral reasons (see Ibn ‘Asim Sīrat). When ‘Abd Allāh died in 364/974-5, the successor nominated was his brother Nizār (al-‘Aṣīz). So far everything had been quite regular. But, after the disappearance of al-Ḥākim, the nominated heir, the caliph’s nephew ‘Abd al-Ḥāṣim b. Ilyās, was arrested and imprisoned on the orders of Sitt al-Mulk, who had the young son of al-Ḥākim, ‘Alī, proclaimed imām under the name of al-Ẓāhir. He was only 16, but there was no stipu-lation regarding age: al-Ḥākim himself had mounted the throne at 11 years of age. The throne often fell to a child, as in the cases of al-Mustansīr, aged 7, of al-Mustāṣir, who was only 8, al-Ḥāmid, who was 5, al-Ẓāhir, who was 17, al-Fa‘īz, who was 5, and al-‘Āḍid, who was 9 years of age. The result was that power was often in the hands of a regent (or a female regent like Sitt al-Mulk, or of a queen-mother, like the mother of al-Mustansīr), and that on various occasions it was generals or viziers who held the real authority, even after the new caliph had reached maturity, and that the caliphs were often powerless against their viziers and their generals.

The succession proceeded regularly without any serious objections until al-Mustāṣir, the first caliph whose nomination was violently contested and gave rise to disturbances. The vizier al-Afdal had caused the elder son of al-Mustansīr, Nizār, who had been nominated in the regular manner, to be passed over in favour of the younger son, al-Mustāṣir. As a result Nizār led a revolt, which ended in his death and produced a schism which still exists today in the Ismā‘īlī faith [q.v.], and which, in the case of al-Ḥāmid, the victim of a Nizārī plot in 524/1130, the succession was assured by completely irregular means. No nomination had been made, and al-Ḥāfīz [q.v.], the cousin of al-Ḥāmid, was at first only regent before he proclaimed himself caliph, following the precedent of ‘Alī, who was the cousin of the Prophet. With his reign began a tremendous crisis, with bloody periods of revolution and treachery, and with struggles of rival factions in the midst of military and civil disturbances in the capital and in the provinces.

The weakness of the caliphs showed itself as early as the reign of al-Mustansīr, who was reduced to penury and forced to sell his treasures to satisfy the demands of Nāṣir al-Dawla and of the Turkish guard which he commanded, and who only once showed a spark of energy. From the time of al-Mustāṣir, the real masters were the “Viziers of the Sword”. It could happen that the caliph was thrust aside by the vizier, and avenged himself by having the vizier assassinated when opportunity arose: it was thus that al-Ḥāmid had al-Afdal assassinated. After a certain period, even the idea of the legiti-macy of the Fatimids was less generally accepted. Already during the reign of al-Mustansīr there had been an attempt to restore ‘Abbāsīd suzerainty. In 462/1070, Nāṣir al-Dawla, at Alexandria, had the khalīfa said in the name of the ‘Abbāsīd caliph, and in 464/1072, when he was temporarily master of Cairo, he entered into relations with him. Al-Ḥāfīz had a vizier, Kutayfāt, who was openly Imamī; then followed a Sunni vizier, Ibn al-Sallār. We cannot give in detail here all the vicissitudes through which the Fatimid caliphate passed, but refer the reader to the articles on the individual caliphs. The Fatimid caliphate, beset by troubles, declined rapidly to its end, which was finally hastened by its inability to resist the Crusaders, and not only by internal disorder.

The evolution of the vizierate. In the history of the Fatimid dynasty, the viziers occupied a place of gradually increasing importance. During the North African period there were two viziers, the ministers bearing the title of vizier. In Egypt, the first to receive this title, from the caliph al-‘Azīz, was Ya‘qūb b. Killīs [q.v.], the organizer of the administration and the finances for the first two Egyptian caliphs. Thereafter the caliphs sometimes governed without the help of a vizier; sometimes they had a minister to whom they gave neither the title nor the office of vizier, but only the duty of acting as intermediary between them and their officials and subjects (safīra, wasīta, the one who fulfilled this function bearing the title of wasīta); sometimes they had a minister who did in fact bear the title of vizier. Up to a certain time these viziers, whatever their power and their influence over the caliphs may have been, were considered as agents for the ex-ecution of the sovereign’s will (called by al-Mawardi wazar al-tanfidhī), but from the second period of the reign of al-Mustansīr, when, in order to restore order and remedy a catastrophic situation, he appealed for help to the commander of the troops of Syria, Baḍr al-Dījamāl, the latter obtained from him full powers: that is to say he was the equivalent of what al-Mawardi calls wazar al-lajūfīd, vizier with delegated powers; and it is under this status he was called “Vizier of the Pen and of the Sword”, or simply “Vizier of the Sword”. From this time on all the viziers who followed, whether they were nom-
inated by the caliph or whether they had seized the position for themselves by force, had full powers and were Viziers of the Sword. The Vizier of the Sword was the head of all the armies, with the title of amir al-dawla, but the head of all the civil, the judicial and even the religious administration, for among his titles were those of chief kadi and of chief missionary. We have seen that the vizier often left no power to the caliph and even thrust him aside; from the time of Rūḍān, the vizier of al-Maḥfīz in 531/1147, it was made still clearer that the vizier had full powers by his taking the title of al-Malik, accompanied by a varying epithet, analogous to that in which the last Buwayhid amīr of Baghdaḍ had adopted in 440/1051. The importance of this event is that the title passed via Șhrkhāt, who assumed the vizierate in 564/1169, to his nephew Salādīn and hence to all the members of the Ayyūbīd dynasty.

One remarkable fact concerning the Fatimid vizierate is that several viziers, whether they possessed the title or not, were Christians. An example is ʾĪsā b. nastūr, vizier of al-ʾAzīz, and similarly Zurʿa b. ʾĪsā b. nastūr, who succeeded yet another Christian, Manṣūr b. ʾAbdūn. We do not know whether the Armanīn Yānis, who was for some months in 562/1169 the vizier of al-Maḥfīz and who was a freedman of al-Afdāl, had remained Christian. But there is yet a curious case of another vizier of al-Maḥfīz, an Armenian who remained Christian, and nevertheless was Vizier of the Sword with full powers and surnamed Sayf al-Islām [see Bahram]. On the other hand, it does not seem that Jews, al-Ṭayyib, and a new schism occurred (see Ivanov, Rise, 20, and S. M. Stern, The succession of the Fatimid imām al-ʾĀmir, the claims of the later Fatimids to the imamate and the rise of Ṣayyūbī Ismāʿīlīm, in Oriens, 1951, 193 ff.). In 543/1147 yet another rebellion was stirred up, by one who claimed to be the son of Nīzar.

There were numerous military disturbances, especially when the dynasty was declining, when factions of the army made and unmade ministers and fought continually among themselves. But long before this the very composition of the army provoked disturbances which sometimes took the form of racial rivalry. Berbers (Maṭḥūrīs, Turks who had been enrolled since the reign of al-ʾAzīz), Daylamīs (Maṭṭūrīs), and also black Sudanese slaves bought for the army (ʿabd al-ʾālār) and numerous since the regency of the mother of al-Munṣīr, herself a former black slave—all were jealous of and hated one another. These corps were generally undisciplined and they or their leaders either stirred up rebellions themselves or readily allowed themselves to become involved in them. Thus in the struggle between the Kutāmī Ibn ʾAmmār and Bardjawan at the beginning of the reign of al-Ḥākim, there were the Berbers on one side and on the other the Turks, the Daylamīs and the black slaves. The hatred between the Turks and the black slaves, stirred up by al-Munṣīr’s mother, provoked murderous battles in 454/1062 and 459/1067, in which the Berbers sided with the Turks. Nūsir al-Dawla, the commander of the Turks and victor over the black slaves, wrested all power from the caliph al-Munṣīr, who had to sell his treasures in order to pay the Turks with their ever-increasing demands. The disturbances provoked by the tyranny of Nūsir al-Dawla and aggravated by the famine (see below) lasted until the dictatorship of Badr al-Djamāl. From the reign of al-Maḥfīz onwards, the various corps of the army distributed their loyalties among the various claimants to the vizierate, some of whom, to forward their cause, raised special corps (e.g. the Barkiyya of Tālāʾī b. Ruzzīk) or recruited Bedouins (as did Ibn Maṣālī and Shāwar [pp.]).

Disturbances of religious origin arose when a certain group of missionaries wanted to have the divinity of al-Ḥākim recognized: in 411/1020 the mob massacred the missionaries, and this resulted in uproar and the burning of al-Fustāṭ on the caliph’s orders. In 531/1137, Rūḍān had no difficulty in rousing the Muslim mob against the vizier Bahram, an Armenian Christian. But it was the economic crises and famines (which Egypt has always suffered periodically when the Nile rises insufficiently) which in the Fatimid period

Under al-Ḥākim there was the revolt of Abū Rakkā, who claimed to be related to the Umayyads of Spain and whose aim was to re-establish the Umayyad dynasty. At the same time the reign of al-Muṣṭanṣīr, an impostor, al-Sikīn, claiming to be al-Ḥākim, gathered supporters and marched with them as far as the gates of the palace: they were all captured, brought to the gallows and riddled with arrows (434/1043). The revolt of Nīzar, the heir nominated by al-Munṣīr and ousted from the succession by the all-powerful vizier al-Afdāl in favour of al-Mustānṣīr, had tremendous consequences, for the famous Ḥasan-i Șabbâb [q.v.] had taken his side and started a movement which led to the foundation of the sect of the Assassins [see Ḥaṣṣa ściy, niẓārīs]. In 524/1130, the caliph al-ʾĀmir, assassinated by a follower of Nīzar, died without male issue. But some declared that he had a son, al-Ṭayyib, and a new schism occurred (see Ivanov, Rise, 2, and S. M. Stern, The succession of the Fatimid imām al-ʾĀmir, the claims of the later Fatimids to the imamate and the rise of Ṣayyūbī Ismāʿīlīm, in Oriens, 1951, 193 ff.). In 543/1148 yet another rebellion was stirred up, by one who claimed to be the son of Nīzar.

One remarkable fact concerning the Fatimid vizierate is that several viziers, whether they possessed the title or not, were Christians. An example is ʾĪsā b. Naṣīrūs, vizier of al-ʾAzīz, and similarly Zurʿa b. ʾĪsā b. Naṣīrūs, who succeeded yet another Christian, Manṣūr b. ʾAbdūn. We do not know whether the Armanīn Yānis, who was for some months in 562/1169 the vizier of al-Maḥfīz and who was a freedman of al-Afdāl, had remained Christian. But there is yet a curious case of another vizier of al-Maḥfīz, an Armenian who remained Christian, and nevertheless was Vizier of the Sword with full powers and surnamed Sayf al-Islām [see Bahram]. On the other hand, it does not seem that Jews, al-Ṭayyib, and a new schism occurred (see Ivanov, Rise, 20, and S. M. Stern, The succession of the Fatimid imām al-ʾĀmir, the claims of the later Fatimids to the imamate and the rise of Ṣayyūbī Ismāʿīlīm, in Oriens, 1951, 193 ff.). In 543/1148 yet another rebellion was stirred up, by one who claimed to be the son of Nīzar.

In 531/1137, Rūḍān had no difficulty in rousing the Muslim mob against the vizier Bahram, an Armenian Christian. But it was the economic crises and famines (which Egypt has always suffered periodically when the Nile rises insufficiently) which in the Fatimid period
caused most disorders: shortage of food, looting, crimes, acts of cannibalism, and horrors of every description. In 414/1024-415/1025, under al-Zahir, there was a famine which obliged the populace to eat all the domestic animals, so that the caliph had to forbid the slaughter of plough-oxen. This famine was accompanied by looting by the black troops, who carried off the dishes set out for the banquet of the Feast of Sacrifices in 415 (12 February 1025). But the worst crisis of all was the great famine in the reign of al-Mustansir. In 446/1054-5 the caliph was obliged to ask Constantine Monomachus to supply food for Egypt (see above). The dearth, followed by disease, was worse in the following year. For seven years from 457/1065 to 464/1072 there persisted a famine so terrible that people were reduced to eating dogs and cats, and even human flesh (see al-Maqrizi, Khita't, i, 337). Looting, and the kidnapping of men and women in order to kill and eat them, led to a general breakdown of order which was aggravated by the struggles between the Turkish and the Negro regiments of the army. The economic situation improved in the vizierate of Badr al-Djamali and his son al-Adal.

3. Religious policy. The religious policy of the Fatimids, so far as it is concerned with Isma'ilist doctrine and its evolution, cannot be treated here in all its details. Al-Nu'man, who carried off the dishes set out for the banquet of the Feast of Sacrifices in 415 (12 February 1025). But the worst crisis of all was the great famine in the reign of al-Mustansir. In 446/1054-5 the caliph was obliged to ask Constantine Monomachus to supply food for Egypt (see above). The dearth, followed by disease, was worse in the following year. The economic situation improved in the vizierate of Badr al-Djamali and his son al-Adal.

4. Organization of the State. The Fātimid state in North Africa, although it already surrounded itself by some ceremonial, was not yet a complex organization. But from the very beginning of the Egyptian period the caliphs al-Mu'izz and al-‘Adal laid the solid foundations of the power of the dynasty. The strict organization which they introduced in the administration and the finances, and which Djawhar had prepared together with Ibn Killis and Usādī, was the basis for a complex system of institutions which progressively developed, became modified, or were transformed, and whose functions have been studied in various works: Ibn al-Sayrafī, *Kāmān al-dīn al-raṣīl*, ed. Ali Bahgat, Cairo 1905, tr. Massé, in *BIFAO*, xi (1914); al-Makrīzī, *Khilāl*, i; al-Kalāqānī, *Subh*, iii (republished in *Les Institutions des Fatimides en Egypte*, Bibl. de I’Inst. d’Ét. Supér. d’Alger, xii (1937)); trans. by Wüstenfeld, *Calcasandhī’s Geographie und Verwaltung von Aegypten*, AKGW, xxv, Göttingen 1879. Some modern works also have been devoted to these questions: Dr. Abū al-Qāsim al-Maγīd (1914), *Djīdwans*, 2 vols., Cairo 1953-5; Dr. Aṭīya Muṣṭafā Musharrafā, *Naṣū‘ al-ḥukm bi-Misr fi ta‘ṣīr al-Fāṭimīyyīn*, Cairo, 2nd ed., no date. Again, one special chapter (ix) deals with the organs of the administration and another (xii) with ceremonial in *Hasan Ibrāhīm Ḥasan’s Ta‘īwah al-dīwān al-fāṭimīyya*, Cairo 1958 (revised version of *Al-Fāṭimīyya fi ṣīr tāhir al-Fāṭimīyyīn*, Cairo, 2nd ed., 1953), 264-325, 638-73.

Fātimid administration was a strongly centralized system, having at its head the caliph and the vizier, either with executive or with delegated powers (from Badr al-Djamāl onwards, the vizier is a Vizier of the Sword). Everything was under the control of the central administration, the provincial organs of government having no real autonomy although some governors, such as the governor of Kāqī for example, were able at time to attain great power. Administration was carried on through the diwāns (offices or ministries), which were assembled sometimes at the palace of the vizier (as for example under Ibn Killis and al-Afdal), sometimes at the palace of the caliph [see diwan ii].

Officials, both civil and military (arbab al-aḥlām and arbab al-syawāq) both in the personal service of the caliph (khawās al-khalīfah) and in the public service (military, administrative, financial, judicial, religious), were strictly organized in a hierarchy, the degrees of which were marked not only by differences of pay but also by the insignia peculiar to each rank and the places occupied in receptions held at the palace and in public processions. Some of the military officers belonged to the public service, like the Vizier of the Sword, the Grand Chamberlain, the Isfakālār, the Bearer of the Umbrella, the Sword-bearer, the Grooms, etc., others belonged to the private service: these were eunuchs, those most exalted in dignity being the muḥanānun eunuchs, distinguished by a special style of turban, among whom were the Master of the Audience-chamber, the Message-Bearer, the Major-Domo, the eunuch responsible for arranging the caliph’s household. The dān al-tawfah, etc., the pen included the Vizier of the Pen (when there was no Vizier of the Sword), the heads of the chancellery and the various diwāns, the Administrator of the Public Treasury, some religious officials like the Chief Ka‘fīd, the Chief Missionary, the viziers from non-Muslim sources, in *JESHO*, 1964; see further Ch. Cahen, *Histoires copues d’un cadi medieveau*, in *BIFAO*, lix (1960), 133 ff.

5. Economic activity during the Fātimid period. ʿUbayd Allāh al-Mahḍī had found North Africa in a flourishing condition, thanks to the development of town life. This prosperity permitted the first Fātimids to dispose of valuable resources and to set about the establishment of a powerful fleet and army.

In spite of disturbances, rebellions and disorders, Fātimid Egypt in general enjoyed great prosperity, thanks to the stability of its administrative and financial apparatus, its rich revenues arising from taxes and dues, the income from state-owned shops, trade and customs duties, and the inflow of gold from the mines of North Africa in the annual rise of the Nile, enriched its soil and sustained its agriculture, so that numerous different crops were produced, and, except when the river failed to rise high enough or when the dams and canals were neglected, agricultural productivity was sufficient. The crops are listed in *Hasan Ibrāhīm Ḥasan’s Op. cit.*, 576 f.: wheat, barley, various vegetables, sugar-cane, dye-plants, animal-fodder; yet wheat had to be imported. The chief industrial crops were flax, sugar-cane, and, to a lesser degree, cotton. Production of wood—and that only soft-wood (sycamore, acacia)—was inadequate. For this subject see the geographers, ʿAbd al-Lāṭif al-Baghdādī, *Al-Ifḍa wa l-iḥbīr bi-md fi Misr*, tr. S. de Sacy, *Relation de l’Egypte par Abd El-Latif Al-Baghdadi*, Müller-Wodarg, Die Landwirtschaft Aegyptens in der frühen Abbassidenzeit, in *Isl.*, xxxii (1955); Ali Bahgat, *Les fortifs en Egypte et leur administration au Moyen Age*, in *Bull. de l’Inst. d’Egypte*, 4e série, i (1901), 147-58.

Industry flourished. The first place was occupied by weaving, encouraged by the cultivation of flax and carried on in the region of Tinnis, Damietta, Dabīl [q.v.]. At Cairo also were manufactured silk-stuffs, with various names: it was into a ‘burbūlustustārī‘ silk, blue in colour, that al-Muʿizz had had the map of the various regions woven (*Khālīt*, i, 417).

For the textile industry in Egypt see *Serjeant, Islamic Textiles*, in *Ars Islamica*, xiii-xiv (1948), 110 ff.; Ali Bahgat, *Les manufactures d’étoffes en Egypte au Moyen Age*, in *Mém. de l’Inst. Egyptien*, 1903; H. Zaysāt, *Thiṣīb al-qibr*, in *Machriḥ*, xii/i, 137 ff. Among the other industries, should be noted the wood-industry (for ship-building: on the arsenals see *Khālīt*, i, 193 f.), glass and crystal at al-Fustāṭ and Alexandria, pottery, ceramics, mosaic; metalwork (iron and copper: making of knives and scissors at Tinnis), work in ivory and leather, paper-making, sugar, oil. For further details see H. Ibrāhīm Ḥasan’s chapter al-Ṣindā. In general, industry benefited from the luxury and pomp of the court, the liberal distribution of gifts and garments by the caliphs, and by the extravagance of viziers like al-Yārūrī and al-Afdal.
Trade, both internal and external, thrived, and Egypt carried on commercial relations with many countries. An important role in trade was played by the Jews, for the Fātimids do not seem to have imposed discriminatory customs tariffs, varying according to whether the traders were Jewish, Christian or Muslim. Trade with India was carried on through Kūş and Ayğhâb on the Red Sea, from whence the merchant-ships embarked. Cairo was in commercial relations with Abyssinia, Nubia, Constantinople (reached in twenty days' sailing), Italy—Amalfi, trade with which was particularly brisk (see Yāḥyā b. Sā'īd, PO, xxiii, 447; Rosen, The Emperor Basil Bulgarianos (in Russian), 293-6; Gay, L'Italie méridionale...), 585-6; Heyd, Commerce du Levant, i, 99, 104-6, Pisa, Genoa, Venice (which sent wood for ship-building, to the profound displeasure of the Byzantine Emperor)—, Sicily (twenty days' sailing), North Africa, Spain, and Europe, particularly via Sicily. These countries bought spices, clothes, etc., and sent in return the commodities which Egypt lacked or could not produce in sufficient quantities: wheat, iron, wool, silk (Fayyum produced only a little), wool, and cheese (which the Jews consumed in large quantities).

Details on trade will be found in al-Idrīṣī, in Nāṣīr-i Khusraw, in the articles by B. Lewis and S. M. Stern noted above for India, and in S. M. Stern, «Les documents de la Fātimide Chancery concernant les marchands italiens», in Méli. Levi Della Vida, ii, Rome 1956, 520-38. The studies of S. D. Goitein are particularly important in this connexion: Records from the Cairo Geniza, in Exhibition Amer. Or. Society, April 1961; From the Mediterranean to India: Documents on the trade to India, South Arabia and East Africa from the eleventh to the sixteenth centuries, in Speculum, xxix; The Jewish India merchants of the Middle Ages, in India and Israel, 1953; New light on the beginnings of the Karimi merchants, in JESHÖ, i (1958); The main industries of the Mediterranean area as reflected in the records of the Cairo Geniza, ibid., i/v (1961); The Cairo Geniza as a source for the history of Moslem civilisation, in Studia Islamica, iii (1955), 75-90; the Documents of the Cairo Geniza, in J. Mediaeval and Medieval Society, ii, 1956, 256-60; B. Lewis, «The Sūfis in the Cairo Geniza» (see the Supplement of the Cairo Geniza, 1893), 291-155; B. Lewis and S. M. Stern, «The Cairo Geniza as a source for the study of the Geniza of Fustat» (in the Cairo Geniza, 1892), 131-55; al-Majriti, Oevres, éd. by A. Schacht, Cairo 1960, 133 f., 235 f. In North Africa too the kādī Abū Hanīfa al-Nūmān (p. 70) composed his historical, juridical and esoteric works, as did Dārār b. Manṣūr al-Yaman (p. 60), who left the Yemen for North Africa after the death of his father. The caliph al-Manṣūr and al-Mu’izz took part in these activities: some works of al-Nūmān, it is known, owe much to the collaboration of al-Mu’izz.

Cultural activity in the Fātimid period was still more vigorous. Poetry was cultivated by the caliphs themselves, and their court welcomed even non-Islāmī poets, such as ‘Umrār al-Yamanī (p. 70). There was vigorous encouragement of works on religion, on the exposition of Ismā’īlī doctrines, on the allegorical commentary of the Kūrān, on philosophy, and on the popularization of scientific learning. The Fātimid period is characterized by a burst of intellectual curiosity analogous to that of the 18th century in Europe.

In Egypt, cultural activity was still more vigorous. Poetry was cultivated by the caliphs themselves, and their court welcomed even non-Islāmī poets, such as ‘Umrār al-Yamanī (p. 70). There was vigorous encouragement of works on religion, on the exposition of Ismā’īlī doctrines, on the allegorical commentary of the Kūrān, on philosophy, and on the popularization of scientific learning. The Fātimid period is characterized by a burst of intellectual curiosity analogous to that of the 18th century in Europe. See H. Ibr. Hasan, ch. xi; Muhammad Kāmil Husayn, Fi adīs Misr al-fātimiyīya, Cairo 1950; Brockelmann, S, i, 323 f., 714 f.; Ivanov, Rise; and the articles on the philosophers Abū Hātim al-Rāzī, Ḥamīd al-Dīn al-Kirmānī, Ahmad b. Ibrāhīm al-Nīsabūrī, al-Mu‘ayyad fi l-Dīn al-Shūrā, Ḥātim b. Ibrāhīm al-Hāmidī, etc., and on the Encyclopaedia of the Ikhwān al-Safā.

The Fātimid period was also distinguished by men of learning: the mathematician Ibn Haytham al-Baṣrī, invited to Egypt by al-Hākim; the astronomer described the extraordinary wealth of the treasures al-Fātimid al-Mustansir’s treasury of garments and his treasury of jewels, pearls and valuables (see the edition by M. Hamidullāh, Kuwait 1959, 249 f.). These treasures were described also in Magd, op. cit., ii, had earlier been studied by Quatremère, Mémoire sur l’histoire de l’Egypte, ii, 66 ff., by I. van Straten, Tastereynen veid fatimidskāh Khāliqof, St. Petersburg 1905, 92 ff. and by Kuhle, Die Schätze der Fātimiden, in ZDMG, xiv (1935), 329 ff. with trans. of Khaṭāb, i, 414-6. The inventory of the treasures of the palace of al-Adalī (Ibn Muyassar, 57 f.), which it took al-Āmir and his secretaries forty days to make, also testifies to the same luxury and economic prosperity.

The Fatimid period was also rich in authors on various subjects; the historians Ibn Zâlîkâ, al-Mu'sâbbîṭî, al-Kudâñî, the author of K. al-Dīyârîdî, al-Shâbûshî, the librarian of al-'Aţzî, al-Mu'ahallabî, the author of a geographical work composed for al-ʻAţzî, Ibn al-Ma'mûn al-Batâbî, son of the vizier, an important source of al-Makrîzî, the halfî al-Râqîdî b. al-Zubayr, the author of the al-Dhakhârâ wa 'l-tuhafî, Ibn al-Šâyrafl, al-Kudâsî the author of al-Mun al-Batatîhî, son of the vizier, Azîz, Ibn al-Ma'sîrî, the famous Ibn Ridwân, whose dispute with al-Marîzî and his son in the collapse of the Caliphate in 567/1171. To this period, as G. Wiet has also said, is "une des plus passionnantes de l'Histoire de l'Égypte musulmane". The dynasty, born of an original ideological movement within Shi'ite theological speculations, developed to a degree hitherto unknown and aroused extraordinary devotion for the triumph of the cause, established itself by force of arms in North Africa and formed a powerful empire in Egypt. To them were turned the eyes and aspirations of the Ismâ'îlîs throughout the whole of the Muslim world and their sympathizers. The history of this dynasty dominates the history of the Mediterranean Near East for two centuries. Having suffered from the prejudices and hostility of the Sunnis, it has not always been described by Sunni writers with understanding; but for some years now it has enjoyed a renewal of interest.

The Fatimid dynasty had periods of greatness, thanks to its administrative and financial organization, its economic development, the flourishing intellectual and artistic activity, in the production of coins and palace, which was, as William of Tyre testifies, maintained up to the end, the ceremonial and ostentatious feasts, which immediately provoke comparison with Constantinople and far surpass what had previously been known at Bagdad. But it suffered also periods of misery and famine, bloody struggles between military factions, and a disastrous end, among the intrigues of rival viziers appealing for the intervention of foreign powers. Its history is full of contrasts. Both its greatness and its decadence offer attractive material to the historian and confer upon the dynasty a niche of its own in history.

(M. CANARD)

**FATIMIDS — FATIMID ART**

The political history of the Fatimids forms an indispensable background to an understanding of the development of their art. It allows us to distinguish two successive periods in it: one Ikhâriyân period, which extends from 308/908, the date of the installation of the Mahdi in Kayrawân and of the foundation of al-Mahdiyya, until 362/973, which saw the departure of al-Mu'izz and the establishment of Cairo as the city of the Caliphs; then an Egyptian period, which lasts from 362/973 up to the collapse of the Caliphate in 567/1171. To this division in time a geographical division must be added. The art which the Fatimids transplanted into Egypt continued to flourish in eastern 'Barbary', thanks to the Zirids and the Hammadids, vassals of Cairo, and it extended its influence over both Muslim and Norman Sicily.

Al-Mahdiyya, the city of the Mahdi on the Tunisian coast, preserves, apart from the ruins of its Fatimid fortifications, a mosque and traces of the palace of al-Kâ'im. The mosque, very much altered, has a porch projecting in front whose central bay is framed on either side by two storeys of niches. The palace, which was much altered, has a porch projecting in front whose central bay is framed on either side by two storeys of niches. The motif, which reminds us of Roman triumphal arches, was to pass into the Fatimid style of Egypt. The palace, see M. Kaftory (222-34/332-44), which stood opposite the palace of the Mahdi,
his father, still keeps its beautifully constructed
walls, with an entrance jutting out from the ...
entrance of the inwād. A similar arrangement relates
this palace of Sabra, which is by Eastern
Fatimid, to the Tulūnī houses of Fustāt. It reveals
connections between Egypt and Irīkīya prior to the
departure of the Fatimid Caliph al-Mansūr.

Even before this departure took place, the Fatimid
general, al-Djwāhar, had undertaken the con-
struction in Cairo of the mosque of al-Azhār, which
was to be considerably enlarged later on and to
become the Muslim university which we know to-day.
The original sanctuary shows by its plan and deco-
rations the survival of the Tulūnī tradition; but
the influence of Irīkīya, whence the new masters of
the country came, is also to be found. The five
transversal aisles which make up the hall of prayer,
as in the mosque of Ibn Tulūn, are interrupted in the
middle by a perpendicular aisle which is wider,
bordered by small pillars joined in pairs and having
a cupola at each end, probably influenced by the
Great Mosque of Kayrawān.

The mosque of al-Hākim (384/997-1003) com-
bines in the same way elements imported from
Irīkīya and elements preserved from Tulūnī
architecture. The porch, projecting from the front
of the building and covered by a vault giving
entrance to the vast court-yard, was Irīkīyan,
inspired by the mosque of Mahdiyya. The influence
of the mosque of Ibn Tulūn shows itself in the hall
of prayer with its five transversal aisles, whose
arcs brisés rest on brick pillars cantoned with small
false columns. The two minarets which rise at the
front angles of the mosque have a cylindrical core
enveloped in a solid mass of square design. Like
that of the university, the ornamentation of these towers,
in very low relief employing geometrical and vegetal
designs marks a decisive step in the elaboration of
Muslim decorative art. One hundred and twenty-
two years later than the mosque of al-Hākim, the
little al-Akmar mosque (519/1125) is worth notice
for the ornamentation on its façade. The entrance
in the projecting forepart of the building is
ornamented with a great high-relief flanked by
two storeys of niches.

The mosque of al-Sāliḥ Tālīqān is the latest in date of
the Fatimid mosques (555/1160). Built above
shops, its façade is made up of two projecting
parts joined by a portico. The sanctuary has three
transversal aisles, the central passage which leads
up to the miṣrāb being distinguished only by a
wider separation of the pillars.

Apart from these mosques, the Fatimid period
saw the construction of a great number of mauso-
leums such as those of al-Djwāhar, Sayyida ʿĀtika,
al-Ḥasawwātī and Shawkīh Yūnūs. They consist tradition-
ally of a square chamber with a cupola. This
cupola is supported by squinches at the four corners.
In the 7th/12th century these squinches multiplied
and were superimposed upon each other, producing
corbes of mukarnas (= stalactites), whose original
model seems likely to have come from Persia.
A terrible disaster at any rate the essential element of the masjīhd of al-Djuyūsī, built in 478/1083 on the Muṣṭafām Hill by the wādir al-Djāmālī to hold his sepulchre. This building consists of four parts: a front portion, surmounted by the minaret, which terminates in a square base with a court flanked by two chambers with wagons-vaulted roofs; at the back there is a sanctuary of three aisles covered with herring-bone vaulting and a great cupola in front of the miṣrāb; finally there is the chamber of the tomb itself which is joined laterally to the sanctuary. Certain peculiarities may be observed in this monument which were to perpetuate themselves in the Egyptian art: the minaret formed of three towers on top of the other, two square in design and one octagonal which surmounts a cornice of mukarnas and is capped by a dome, a possible prototype of the future minarets of Cairo.

Equally worth noticing is the importance given to
the cupola in the sanctuary, the sharp-angled profile
of this cupola, and the outline analogous with the
so-called "Persian" arches whose two vertical sides are
to bent to form a right-angle at the summit.

Between 480/1087 and 484/1091, the same all-
powerful wādir, Badr al-Djāmālī, gave Cairo a new
city wall. Armenian by birth and surrounding
himself with Armenian troops, he brought from his
country architects to whom the Fatimid capital owes
three of its most beautiful buildings, the three gates
called Dāb al-Dawāyla, Sab al-Nṣr and Sab al-Futūḥ.
Construction started in 480/1087 and continued for six
years. The outline of the walls, the outline of the vaults and semi-
circular arches, everything in these majestic entrances to
the city springs from Hellenistic tradition.

Whereas the palaces known from manuscripts to
have been built by Fatimid Caliphs in the centre of
Cairo have disappeared, those of the ʿAlaʾ of the
Banū Ḥammad preserve, perhaps, the record of their
civil foundations. This Berber capital was built among the mountains of eastern Algeria at the
beginning of the 5th/nth century, but it profited greatly by the ruin of Kayrawān, victim of the
invasion of the Banū Hilāl, and at the end of this same century knew a brief period of splendour. A
mosque whose minaret dominates the vast field of
ruins, traces of palaces of which two, the keep of Kaṣr al-Maṣṣūr (the Castle of the Lighthouse) and the
Dār al-Bahr (the Palace of the Lake), were excavated in
1908 and a third is now being excavated, give us
knowledge of this North African architecture
nourished by oriental influences, inspired not only
by Egypt but also by ʿIrāq and Persia. It suffices
to remember the long niches which decorate the
front of the minaret and those of the palaces, a theme
deeply imprinted in the architecture of the Sasanids,
the mirror of water in the court-yard of Dar al-Bahr,
the inlaid ceramic work paving and lining the great
halls where faience with metallic reflections is used,
and finally the mukarnas ( stalactites), proved to be
an Iranian invention, whose first use in the Islamic
west is to be found at the ʿAlaʾ.

The excavations of the ʿAlaʾ have filled an
important gap in our knowledge. Bougie, to which
the Banū Ḥammad moved at the beginning of the
6th/12th century, does not provide a similar store of
riches. Only some parts of the city wall and the great
stone arch, which formed the entry to the harbour
and its boats, have survived out of the buildings of
the second Ḥammadīd capital.

Nevertheless we are inclined to regard Bougie as
an important step on the road taken by Fatimid art
in its penetration of Sicily: many indications
authorize this belief. It was from Bougie undoubt-
edly as well as from al-Mahdiyya, refuge of the last
Zirids, or from the Tunis of the Banu Khurāsān, rather than from Cairo, that Palermo received the ground-plan of the pavilions on its outskirts. The Hammadid palaces help us understand better the Ziza and Cuba of the Norman period.

Within the Maghrib and as far as Andalusia, there is no place that has not to some extent been influenced by Fatimid art. To this distant influence can be attributed the adoption by the Islamic west of mukarnas (stalactites) and inlays of enamelled clay in the Almohad period.

The propagation of these art forms can be explained by the journeys of artisans (the ruin of the cities of eastern 'Barbary' following on the invasion of the nomad Arabs must have provoked numerous departures among them) and also by the export of objets d'art from one place to another.

Fatimid Egypt produced indeed a remarkable amount of activity in the decorative arts and an amazing development of luxury. The opulence of the Caliphs and the high functionaries is vouched for by Arab authors such as al-Makrizi who describes the treasure of the Caliph al-Mustansir, or Ibn Muyassar enumerating the riches of the wāṣir al-ʾAfḍal, son of Badr al-Ijāmālī. The artistic creations of the Fatimid epoch above all in Egypt but sometimes also in Spain (the kinship between the works of the two countries leaves us sometimes in doubt of their origin) are the glory of European museums and church treasures.

In the 11th and 12th centuries techniques concerned with bronze, faience, glass and cut crystal, jewels and textiles were the most flourishing and show an extremely refined artistic taste. The same decorative elements were used as in monumental sculpture: lettering, interlacing, either star-shaped or geometrical or based on plant and occasionally animal motifs. Indeed, notwithstanding strict orthodoxy, there were many representations of living creatures both human and animal. Such in the Cairo Museum are the friezes in carved wood from a Fatimid palace displaying musicians, dancers and hunters, or the ewers and fountain motifs in bronze of which the most celebrated is the griffin in the Coptic Museum of Cairo.

Fatīn, pseudonym of Darūdī (1229-83/1814-67), Turkish biographer and poet, the last of the Ottoman tēghtkēre-writers. He was born in Drama, in Western Thrace, the son of the local notable ʿAbd Allāh Khaṭīb Bey. After spending several years in Egypt, where his uncle lived, he returned to Istanbul and occupied various minor posts in government offices.

His diwān, published posthumously by his son, shows him as a mediocre poet. His main work, the Khaṭīmat al-ṭāghkēr, is the continuation of the téghtkēr of ʾṢafāʾī (completed in 1132/1720) and that of Sālim (completed 1134/1721) and contains the biographies of poets from 1135/1722 to his own day. Completed in 1269/1852 and printed lithographically in Istanbul in 1271/1855, Fatīn's Tēghtkēr is of particular use for the biographies of his own contemporaries.
which all the “concepts” of the unique but varied “drama of love” of the classical Persian ghazal appear in the form of persons: Heart (dil), son of King Intelect (sâbî), Beauty (huzna), daughter of King Love (tâbî), Glance (nazar), Mouth (dakhân), Eyelash (mushâ), Body (badâna), Tresses (zulf), Rival (râbîb), etc., so much so that the poem has justly been called an “Index der Bildersprache der orientalischen Erotik”. The style is overloaded with rhetorical embellishments (particularly in the letters exchanged between the two lovers), and, despite its undoubted interest from the point of view of knowledge of the metaphorical language of Persian lyrics, the general effect of the poem finally becomes somewhat tedious as a result of the perpetual use of allegory. However, it is not accurate to speak of “decadence”, as certain contemporary Persian critics have done. It was a question of searching for new ways to escape from the “perfect” world of Hâfizian symbolism. The living symbol is here replaced by allegory by means of the personification of abstract concepts, a device also used by other poets of the period (e.g., Kâtîbî), which became one of the basic elements of what is called the “Indian style”. Another element of this style which was already in existence at that period and even occurs in Fâtâhî is the marked tendency to use hyperbole (in the description of the gap between the lover and his beloved) as in his famous lines: “the stones of their wall were so limpid that they reflected a hair several farsangs away”; moreover, the sophistication of the psychological study of the character (a matter in which Niçuâm excelled, but here carried to extremes), the use of bookish terms in metaphors (the letters of the alphabet, for example) or of words denoting objects and places (e.g., paradise, the ocean) in current use, are all elements which were applied in the “Indian style”, though functioning in a new way. More readable (and an excellent example of Persian prose intermingled with verse), but perhaps less interesting from the point of view of style, is the summary in prose of the same poem which Fâtâhî made under the title Ḥusn u-dil. In addition, the poet also wrote a Shabristân-i Ḧujâyî (Bedroom of Fantasy), again in verse and prose (completed in 843/1439-40), a short poem entitled Taḥrîr-nâma (Book of interpretation of dreams), a Kûdî-bî Aṣrârî wa-khumdri (unpublished, and of which only very few ms. exist); perhaps a discussion between a wine drinker and a hashish smoker, with ṭâfînîn (insertion of lines from famous poets). The titles alone suffice to show the new orientations for widening the content of poetry in this period which, far from being decadent, lays the foundations for possible new stylistic developments. But these developments continued along these lines perhaps more in “outer Iran” (meaning India, Central Asia and Ottoman Turkey) than in Iran proper. In fact, if it is true that Fâtâhî’s secluded life as a dervish left him comparatively little known in Iran, the success of his narrative, in which personified concepts took a dramatic part (this seems to be an invention and he himself was aware of its originality, as he was to state in his own poem) was very great: he was imitated in verse and prose in various Islamic literatures. For India, besides the Sabras of Wâdîn (1044/1635), in Deccan Urdu prose, we should mention Khâdja Muhammad Jâdi who, in 1046/1637, attempted an adaptation of it into elaborate Persian prose, while an unpublished matnâsî, also in Persian, is the work of a certain Dâwûd Elçi (1054/1644) and is preserved in the Bombay University Library. In addition, Dhâwkl (1108/1697),

Encyclopaedia of Islam, II

55
A mufti (1086/1675), Sayyid Muhammad Wall Allah Kadirl (about 1180/1766) imitated him in Deccan; the rapidly expanding empire was seen to demand a more unified system of legal practice, such authority was gradually conferred, in some way or another, on the holders of this office in order to influence the choice made by private individuals. Later, official posts of muftis were created, and it thus became a public office, ranking, like the judicial magistrate, in the category of religious functions. Holders of these posts, however, were still generally governed at the service of private individuals; but they were more directly attached to the public service. Thus in the Mamluk State, these muftis formed part of the Council of Justice (muḍjḏis al-muṣalām) of the Sultan and the provincial governors.

At certain periods and in certain areas, as in the Ottoman Empire, the function of muftis could be combined with that of magistrate; the holders of the office were merely forbidden to give fatawā in relation to a legal action which was brought in his court.

The public function of fudyā is without prejudice to the private exercise of the profession. However, with the introduction of codes and their provisions borrowed from European systems in almost all the Muslim states, the branches of the profession fell into disuse; even in those matters, which, like personal status and wakf, are still generally governed by the principles of Islamic law, the practice of fatawā seems to be becoming obsolete.

It remains only as a public office, rather in the manner of a historical survival, stamped with the Islamic character of the State. Furthermore, Islamic states with a modern political structure no longer have recourse to the holders of this office in order to establish the legitimacy of their legislative activities. In States where the Islamic community forms only a part of the total population—Lebanon, for example—the function of fudyā has undergone a remarkable transformation: the "Mufti of the Republic" has become "the religious leader of the community and its representative, in this respect, with the authorities"; he is the head of all the officials of the Muslim cult and the service of wakf; he is elected for life by a college composed of qualified members of the community (Legislative Decree 18, of 13 January 1955). There remain, however, muftis in the traditional sense, under the authority of the "Mufti of the Republic".

ii.—OTTOMAN EMPIRE

Among the early Ottomans the function of sfta appears to have been of the same casual nature it had hitherto exhibited in all other regions of Islamic domination: anyone prominent for his learning and piety could be asked to act as a mutually acceptable arbiter in a dispute involving a point of law and his opinion was allowed to be decisive. However, as the orderly administration of the empire was seen to demand a more unified system of legal practice, such authority was gradually con-
fined to a few individuals of public position (the kâddis, the preceptors of the Sultans, the hâtis of great cities like Bursa and Edirne, etc.) to whom appeal could be made against the decisions of lesser müttifs. But this, too, was unsatisfactory as it seemed to secularize the divine law and make it an instrument of the ruler's will; sometime, therefore, in the reign of Murâd II (824-55/1421-51) the right to issue fetwâs was vested exclusively in an individual known as the şaykh al-îslâm (q.v.), who, although appointed by the Sultan, had no part in the councils of the state, received no fees for the decisions he delivered, and was held to be above worldly considerations. He had no contact with the litigants or their advocates; every matter to be put before him was drafted in hypothetical terms by a clerk of the fetwâ odâsi known as the misâweddîni and examined as to correctness of presentation by another clerk of the same office, the mîmâyinc, so that ultimately it was only a pure question of law on which he had to decide. These decisions were recorded and preserved by the fetwâ emîni in a special records office (fetwâkhâne) where they could be referred to did the occasion arise. It was these three individuals who shared the fee charged for a fetwâ, which in the middle of the 17th century was eight âle (Paul Rycraft, The Present State of the Ottoman Empire, London 1670, section 13) and increased by an arbitrary margin according to the nature of the case. The şaykh al-îslâm expanded greatly to include numerous other departments and officials (cf. its organization under Mustâfâ Khayrî Ef. in 1914-6 as given in the 'Umiyye sâlîmîn, Istanbul 1334, 140 If.), the section concerned with the fetwâ remained substantially as described. Selections from the fetwâs of certain distinguished şayhâks were occasionally collected into book form, but neither these nor any of the decisions preserved in the fetwâkhâne were of value as legal precedents; case-law as such is unknown.

Individuals with the title of müttif are to be found acting along with the hâtis throughout all the provinces but they have no connexion with fetwâ other than in etymology. While in theory the müttif should be a man deeply versed in the canonized works of his madhâbah and of an unimpeachable character, in practice it was only the latter quality that was demanded in these provinces. For as the hâdi was usually a transient and a stranger to the district to which he was appointed, and was felt, moreover, to be the agent and the voice of the secular power, his judgments only achieved the authority of religion when they had the implicit sanction of some elderly person locally respected for his piety and somewhat above the very low average level of education. Occasionally a hâdi who had retired from office might serve in this capacity in his place of residence, as might a member of one of the local learned families in the larger cities, but otherwise the müttifs were not of the 'ulamâ class and their presence in the provinces was only necessary to satisfy the legalistic distinction between hâdi, “case judgment”, and iftâ, “interpretative judgment” (cf. Ö. N. Bilmen, Hukuki Isldmîye ve siltahats fikhiyye kamusu, Istanbul 1948-52, i, 258; vi, 487) and to avoid the expense and delay of constantly having to refer to Istanbul for rulings from the şaykh al-îslâm. Though these müttifs would hold a document of appointment from the latter, they were in no sense part of a centralized organization and their only income from the office was a share in the hâdi's fee for cases in which they participated. Such was the position in the “home-lands” of the Ottoman Empire (Rûmîli and Anatolia) where the Hanafi madhâbah was followed exclusively. However, in the Arab provinces (Egypt, Syria, North Africa) where hâtis were appointed from Istanbul only to a few prominent cities (Cairo, Damascus, Aleppo, Jerusalem, Mecca, Medina)—and these merely as sinecures on the road to higher office—earlier traditions and practices were allowed to remain in force; here the müttifs of the various other madhâbahs were frequently the chief religious and judicial dignitaries and were recognized as such by the şaykh al-îslâm who (for a price) issued their patents of office and by the civil authority who enforced their judgments.

The fetwâ document was of a conventional form and varied little over the centuries. It was headed by a pious invocation in Arabic, often written in a very involved and stylized manner and varying from period to period according to the preferences of the drafting clerk; after the middle of the 12th/18th century, however, the formula al-tauflî minhû, “guidance is from Him”, became invariable. The remainder of the document was in Turkish and was introduced by the words: bu mece'le (or hâсудî) beyâmînda el'mîne hânîfsüyenden âdâbî ve ne fîlîsîl kî . . ., “in what way is this problem answered by the Hanafi imams . . .”, and there followed an exposition of the matter in dispute, typically in the form of an answer, with the identity of the parties involved concealed behind aliases (Zayd, ‘Amr; Hind, Zaynab). The exposition concluded, the single point at issue was presented as a direct interrogative, and this was followed by some variation of the formula of petition: beyâmîn buyurulup mëhîbî ve me'dîjî oluna, “may this be explained, and may it (the explanation) be rewarded in the Hereafter”; which later was always abbreviated to beyâmîn buyurulb, “answer”, the characters of which were extended so as to mark a division between what preceded and what followed, the fallibility of all human judgement is immediately acknowledged by the phrase Allahu a'îlâm, “God knows best”, written on the same line. The title al-dâjûb, “defender”, was frequently a mere “yes” or “no” (olur, olmaz), never supported by reasons or citations from authority, and the document concludes with the signature of the şaykhî (the use of a seal was prohibited unless his physical condition made writing impossible).

The office of Şaykh al-îslâm was abolished in 1924, at the same time as the Ottoman Caliphate. It was replaced by a department for religious affairs, attached to the office of the Prime Minister, with a head appointed by him.

Bibliography: see şaykh al-îslâm.

(J. R. Walsh)
nature. Construction is of brick and stone masonry with lavish use of the locally available gypsum. Pottery indications, based on pottery, are that this settlement was in existence during the 2nd century B.C., and from other surface remains as well as from inscriptions in the vicinity it seems likely that it was once a Sabaean outpost. Surface finds also indicate that the settlement was, at least during a part of its existence, contemporaneous with that of al-Ukhdud in Wadi Nadjran.

Although subordinate to the provincial governor, the fawdjdar was a very important official. In all probability he was appointed directly by the emperor through fawjd (shikar) or the border (nahiya) fawdjdar or the commandant of a frontier outpost, consisting of several thanas, had direct dealings with the central government, and could call for help on the provincial government in cases of emergency. The duties of a border-fawdjdar were to keep watch over the frontiers falling within his jurisdiction, suppress turbulent and rebellious chiefs, punish agitators, collect tribute from the local jajdids and when possible to conquer or subjugate enemy territory. A class of border fawdjdars was known as ghaudios; but their posts were semi-military in character. They existed as late as the later part of the 12th/15th century when they were replaced by the new police force organized by Lord Cornwallis, the Governor-General of Fort William, Calcutta (1786-93). Although the district fawdjdar was a central official, yet the provincial governor had powers to appoint the fawdjdar-i gird (i.e., the fawdjdar of the environs) for the protection of the suburbs of the city. This officer in his turn appointed the fawdjdars of the nakids and the thandars. An echo of their official designation is heard in the former province of Sind in Pakistan where the city police-station is still known as the fawdjdar.

Apart from his police and administrative duties the fawdjdar also exercised judicial powers under the Sultans. He could try petty offences and take "security" proceedings, i.e., the binding over of potential or suspected criminals. In the early Mughal period he was frequently transferred from one place to another and was, like the modern Martial Law Administrators, sometimes deputed to conduct purely military operations (cf. Khiif Khan, Maw-jabah al-Lubab, i, 505). His judicial powers in criminal cases were enhanced by the later Mughals, who empowered him to try non-capital offences (cf. M. B. Ahmad, *The Administration of Justice in Medieval India*, Aligarh 1941, 165). The criminal courts in Pakistan and India are still known as 'Adilshahi-yi Fawdjdar and criminal cases as fawdjdari or fawdjdardars; the same fawdjdars were also appointed in certain parganas, as a purely temporary measure, and they enjoyed the same powers as the fawdjdar-i sarkar. In a few districts (sarkars) there were no separate fawdjdars; the same person performed the duties of the amin (controller of expenses and revenue assessor) as well as of the fawdjdar in addition to his own duties (cf. Shahnawaz Khan, *Mut'tajir al-umarah* (Bibl. Ind.), ii, 37, which mentions Dijanat Khan being appointed both as the amin and the fawdjdar of Sirhind on the reversion of Ray Khaghi Dars); while in certain cases the duties of the fawdjdar were performed either by the local shikhdar or the kowal.

**Bibliography:** Abu 'l-Fa'ðl, Â'in-i Akbari, Eng. transl. by Jarrett, Calcutta 1949, 41-2; emeritus through fawjd or fawjd-i gird, the border (nahiya) fawijdar or the commandant of a frontier outpost, consisting of several thanas, had direct dealings with the central government, and could call for help on the provincial government in cases of emergency. The duties of a border-fawjdari were to keep watch over the frontiers falling within his jurisdiction, suppress turbulent and rebellious chiefs, punish agitators, collect tribute from the local jajdids and when possible to conquer or subjugate enemy territory. A class of border fawjdars was known as ghaudios; but their posts were semi-military in character. FAWRl (FEVRl), AHMAD B. ABD ALLAH, a 17th century Ottoman poet and scholar, was born a Christian. After his conversion to Islam he was called, in accordance with contemporary custom, 'Abd Allah-oghlu in the tadkhiras (v. Lātiff, Istanbul 1374, 269; Ėssān Ėssāli, Istanbul University Library, T. Y. 304, 253b).

Fawrī was deeply influenced by Naḳḳāsh 'All Bey, the father of his master Lāmī, and also by the mūḍerīrs Dursun Efendi. Fawrī's profound knowledge of theology and of Arabic, a language in which he wrote the bulk of his works, is attested in the content of the commentary on a hadīth which he rendered after a siege, and Sura LIX, 7-10 maintains that this result was not due to the assailants' having prevailed, but to God's interposition in favour of His Apostle, so that it was faywī to him exclusively to the ultimate benefit of Muslim society. In fact the same arguments are mentioned as for the khums, but those actually held in view were the destitute muḥādīrīn (Ibn Ḥīṣām, CAro ed. 1937, iii, 193 ult.). Traditions about Khaybar and Fadak are at variance, but it is certain that Muhammad also on these occasions followed his own equity (al-Baladhurī, Fūsīb, 23:33).

The theocratic explanation based on the meaning of al-fāy, "to bring back", as by right belonging to God and consequently to Muslim society (al-Bayḍawī ad Sūra LIX, 71 cannot be supported by another Kurʿānīc passage, Sūra XXXIII, 49. Kudāma derives the word in the same way, but understands it to denote anual return, namely of revenue. Otherwise, too, theorists found it difficult to define it as a tax on unoccupied land, or as a special object of the booty which attracted him, the safīyya (pi. safīdyā). Likely enough this right was very limited, or it could have been used by the Prophet after the battle of Badr, and Sūra LIX, 7-10 maintains that this result was not due to the assailants' having prevailed, but to God's interposition in favour of His Apostle, so that it was faywī to him exclusively to the ultimate benefit of Muslim society. In fact the same arguments are mentioned as for the khums, but those actually held in view were the destitute muḥādīrīn (Ibn Ḥīṣām, CAro ed. 1937, iii, 193 ult.). in the Banu 'l-Nadir case. The term, however, stuck to state domains as sawdfi ... as a Mahdawl (see A. S. Bazmee Ansari, Sayyid Muhammad Jawnpuri and his movement, in Islamic Studies, ii/i (1963), 68, remained in office until the caliphate of al-Hadi successor of Ya'куbi (ii, 483) makes Muhammad b. al-Layth the matter concerning some land and where the poet Abu '1-Asad Nubata praises his exceptional generosity. [q.v.], Ibn al-Djawzi, in the biog. of Abu '1-Asad); Ibn al-Djawzi, in

Burhan al-Mulk continued to stay in the same wazir by al-Mahdi after the dis-...he attracted attention by his al-Mukaffa [q.v.], which gave its name to the province of Awadh (Oudh) which was of Yamani extraction; [q.v.], one of his ancestors Shaykh Musa had migrated to Agra, where he married and his first child Faydl was born in 954/1547. He soon aroused the hostility of the orthodox ideas and heretical beliefs as a Mahdawl (see

by Shudja by al-Mahdi. Dja...pursuance of a Christian father, al-Fayd...in 100 N. and 8a ro E., 4 miles from the ancient town of Ayodhya, which gave its name to the province of Awadh (Oudh) and the Shift kingdom founded by Sa'dat Khán Burhán al-Mulk [q.v.]. The town grew up around a wooden lodge (bangla), surrounded by a large and expansive compound, which Burhán al-Mulk had built for himself on his appointment in 1132/1719-20 as the Nâdâb Nâsim of Awadh. Other buildings, mostly of mud, for the karem and barracks for the troops sprang up all around the caliphate inhabited into a respectable settlement. Even after his assumption of power as the Nawwab-Wazir, Burhán al-Mulk continued to stay in the same wooden lodge. On the accession of his nephew Abu 'l-Manşûr Sa'dar Djang [q.v.] to the masnad in 1752/1739 more buildings were added to the growing township which was given the name of Faydâbâd. (To the people of Awadh Faydâbâd is still known by its earlier name Bangla). Gardens were laid out and bâdzâs sprang up all around, resulting in the decline of Ayodhya which suffered both in population and prosperity. Shudjâ al-Dawla, the third Nawwáb (1720-80/1756-75), stayed chiefly at Lucknow but after his defeat by the British at Buxar in 1764 he moved to Faydâbâd and made it his head-quarters. He added many new buildings, and in order to strengthen the defences of the town dug a moat around the citadel and also built two mud-forts. Before the end of 1189/1775 Aśaf al-Dawla, the fourth Nawwáb, abandoned Faydâbâd and moved permanently to Lucknow, which thenceforward became the seat of government. The Nawwâbs of Awadh, however, both the mother and the widow (Bahâ Bêgum) of Shudjâ al-Dawla continued to live at Faydâbâd which soon declined in importance. It was his alleged maltreatment of these two Bêgums which led to the impeachment of Warren Hastings. After the death of Bahâ Bêgum in 1732/1716 Faydâbâd lost further in importance and glory. It continued to decay till the British annexation of Awadh in 1847, when an era of development opened and the general deterioration was arrested. The Urdu poet Mir Hasan in his mathnawî, Gulsûr-i Irâm praises Faydâbâd for its well-kept streets and wide roads. Shudjâ al-Dawla was responsible for constructing many of the historic brick buildings and monuments of the city. He lies buried in a beautiful tall mauso-lemum, which became famous during his life-time, in the centre of a charming rose-garden, the Gulsûr-bâdi, laid out by Sa'dar Djang. The tomb of Bahâ Bêgum, mother of Aśaf al-Dawla, on the south of the town is a fine domed building which cost Rs. 300,000 to build. The entire amount was paid out of the queen mother's personal property. The fortress constructed by Shudjâ al-Dawla is now in ruins, and so are the palaces built by the Nawwâbs and the nobles. The town was badly disturbed during the military uprising (Mutiny) of 1857 when Mawlawi Ahmad Allâh gained prominence for the deeds of valour performed by him. He came to be known and dreaded as the 'Mawlawi of Faydâbâd'.

Shaykh Mubârak al-Mahdawi, Persian poet, commentator of the Kur'ân, one of the nine jewels (naw ratan) of the court of Akbar, younger brother of the historian Abu 'l-Fadl Allâmî [q.v.], was of Yami extraction; one of his ancestors Shaykh Mîr had migrated to Sind and settled at Bâl, a small place near Siwastiân (modern Sehwan). His grandfather Shaykh Khîdr came down to Nâgor [q.v.], where Faydî's father Mubârak was born. In 950/1543-4 Shaykh Mubârak migrated to Ägra, where he married and his first child Faydî was born in 954/1547. He soon aroused the hostility of the 'ulama on account of his un-orthodox ideas and heretical beliefs as a Mahdawi (see A. S. Bazmee Ansari, Sayyid Mubârak al-Mahdawi and his movement, in Islamic Studies, i/i (1956), 68.
The Shaykh along with his grown-up sons, Faydi and Abu '1-Fadl, had a very hard time for several years. Unable to bear any extraordinary ability and achievements (cf. Faydi's *Kasida* in *A'In-i Akbari*, Eng. transl. by Blochmann, 1901). This marks the beginning of a long and brilliant career as a court-poet, statesman and a *mansabdar*, which brought him several honours and distinctions. In 984/1576 he was created Malik al-Shu'ara' by Akbar. In order to vindicate his claim to this high-sounding title he planned to compose a *khamsa* in 987/1579, after the famous *khamsa* of Nizāmî [q.v.]. The five poems to be included were:

(i) *Marhaz-i Adwar*, mostly composed in Fatehpūr Sīkri; (ii) *Sulaymān u Bilbīs*, commenced in Lahore but never completed; (iii) *Nāl-Daman*, his best known poem (ed. Calcutta 1831); (iv) *Haft hīkāyāt* and (v) *Akbar-nāma* on the lines of the *Sikandar-nāma*. Of these only (i) and (iii) were completed several years later at the persistent urging of Akbar while the remaining three, in spite of Abu '1-Fadl's assertion to the contrary (cf. *Akbar-nāma*, sub anno 39 regnal) remained incomplete.

An accomplished scholar, physician, and poet, he was appointed in 987/1579 tutor to prince Dānīyāl; he also claims to have instructed Dāhāngīr, and Murād (cf. *Akbar-nāma*, Bibl. Ind., ii, 331). Of these Dānīyāl was also a poet in Brādī-bhākā, suggesting that his tutor was a master of that dialect as well as of classical Arabic and Persian. In 993/1585 he was sent on an expedition against the *Vāsūfāzās* of Pēshāwār. Treated as a close companion, he was included in the royal *entourage* during Akbar's visit to Kāshmīr in 997/1588. In 999/1590 he was sent as an envoy to the courts of Rādāj 'Alī Khān, ruler of Khandesh, and Burhān Nizām Shāh, the king of Ahmadnagar. After the completion of his mission he returned to Fatehpūr Sīkri, the capital, in 1001/1592.

Generous and hospitable by nature, he even helped his enemies. When his worst critic Al-Bādā'ūnī [q.v.] fell from imperial favour in 1000/1588, Faydī, who was then on a mission to Gūḍārāt, wrote a letter to Akbar strongly pleading the case of the disgraced historian (see al-Bādā'ūnī, iii, 303-5). Yet he received very harsh treatment at the hands of Bādā'ūnī, who attributes to him every possible vice and depravity and even accuses him of open enmity towards the Muslims and making fun of Islam; he also holds him responsible for Akbar's anti-Islamic activities and practices. But most of these charges are ill-founded and seem to be the result of some personal grudge, as there are in Faydī's *diwan* poems in praise of the Prophet and his Companions. He died of asthma at Agra on 10 Safar 1044/5 October 1631.

Faydī's *Latīfa-i Faydī*, a posthumous collection of his letters, was compiled by his nephew Nur al-Dīn Muhammad Abd al-Hayy, which was denounced by the *ulamd* as an *'ulamd*. Al-Bādā'ūnī, šīr to Al-Badā'ūnī, bitingly remarks that he composed this book in a state of drunkenness and ritual impurity (al-*djanda*). In view of this the claim of the Mujačedīs that Ahmad Sirhindī [q.v.] collaborated in the composition of a part of this work seems wholly untenable (see Bibliography).

He also translated Līlāvati, a Sanskrit work on arithmetical (ed. Calcutta 1826), and some portions of the epic poem *Mahābhārata* into Persian at the express command of Akbar, in collaboration with al-Badā'ūnī and Mullā Shīrī. *Latīfa-i Faydī*, a posthumous collection of his letters, was compiled by his nephew Nūr al-Dīn Muḥammad Abīllāh b. Ayūn al-Mulk (ed. Calcutta, 1261/1845). According to Shīrī these bobble were couched in a simple unornate language, in contradistinction to the high-flown bombastic style then in vogue in Persian letter-writing (*inshā*), of which his younger brother, the celebrated Abu '1-Fadl was a great master (cf. his letters to Faydī in the second *daftar* of his *Inshā*).

al-Faydi, Bombay 1324/1906, 79-81 (where his kunya is given as Abu '1-Fadl and his title as al-Fayyūm, which are both erroneous); M. FAYDI (see FAYYUД)

FAYLASFĪ, philosopher: he who studies falsafa [q.v.], thence frequently used as an epithet for deep thinkers. The Arab philosophers know the literal meaning of this word as muḥbīl al-khīma (lover of wisdom). Al-Kindī [q.v.] was known for preference as the faylāṣī al-Arab (philosopher of the Arabs), presumably because he was a philosopher of genuine Arab origin in contrast to most Muslim philosophers who belonged to non-Arab nations (cf. the correct explanation of this name given to al-Kindī by T. J. de Boer in the Archiv fur Gesch. der Philos., 1899, iii, 154 ff.).

In popular language, faylāṣī is applied in an uncomplimentary sense to freethinkers or unbelievers. Even the Jewish king Jeroboam is called faylāṣī in this sense (Revue des Études Juives, xxx, 23 ult.). An idea of contempt is associated with the forms faylāfa, fulūṣ (also fulāṣn, Syr.), plur. fālaṣī, current in the popular language; this is applied to frivolous, imprudent people, good-for-nothings and charlatans (examples in ZDMG, xxxviii, 681; Volland, ibid. ii, 300, 4) gives fulūṣ. The verbal form yufulaṣī (Bāṣīm le forgson, ed. Landberg, 38, 5) is also connected with this: “he could not wriggle out”!

(F. GOLDZIHER)

FAYȘAL [see SAĐD, AL]

FAYȘAL I, of ʻIrāq, was born at ṬAfī in 1301/1883, third son of the Ṣāḥib (later king) Ḥusayn b. ʻAllī. After a boyhood of desert and oasis life, he accompanied his father to Istanbul in 1309/1892, there to pass 18 years. He married his cousin, Ḥazīma, in 1323/1905. Returning to Mecca with Ṣāḥib Ḥusayn in 1327/1909, he took part in expeditions against the Idrīṣī of Ḳarbī, was admitted to the League of Nations in 1351/1932. Faysal died suddenly in Switzerland in September 1352/1933, succeeded by his son, Ghaźl.

Bibliography: The Arabic and European literature of the 1914-8 war, the Mandates, and Arab and ʻIrāqí affairs between 1914 and 1933 is very extensive. For British and Arab views of Faysal see T. E. Lawrence, The seven pillars of wisdom, London 1926; Amin Rihānī, Faysal al-Āṣīl, Beirut 1335/1934; Ȣāṣī al-Ḥaṣrī, Yaṣām Maysālān, Beirut 1945. For German and Turkish views of his war-time role see Līmān von Sānders, Fünf Jahre Türkei, Berlin 1920 (Eng. tr. Five years in Turkey, Annapolis 1927; Fr. tr. Cinq ans de Turquie, Paris 1923) and Ali Fudār Ėrden, Birinci Dünya Harbinde Suriye Hâtataları, i, Istanbul 1954. For French views, see L. Jovelet, L’évolution sociale et politique des «pays arabes», in REI, vii (1933), 473-81; R. de Gontaut-Biron, Comment la France s’est installée en Syrie, Paris 1922, 232 sqq.; M. Pernot, L’inquiétude de l’Orient, Oxford 1922.

In general, see S. H. Longrigg, Syria and Lebanon under French Mandate, Oxford 1958; idem, ʻIrāq 1900 to 1950, Oxford 1953.

(F. H. LONGRIGG)

FAYȘAL II, of ʻIrāq, son of King Ghaźl and grandson of Faysal I [q.v.], was born in Baghdād May 1334/1915, and, aged four, became King under the Regency of his uncle the Amir ʻAbd al-Ilāh on the accidental death of his father in 1338/1920. Educated by an English governess and at Harrow, he passed an uneventful childhood, suffering intermittently from asthma. He assumed his royal functions in May 1933, and during his five-year effective reign showed excellent intentions, accepting guidance from his veteran statesman Nūrī al-Saṭīd [q.v.] and from his uncle. He appeared generally popular and travelled widely. Recently engaged to be married to a Turkish-Egyptian princess, Faysal was, with his uncle and most of his immediate family, shot by insurgent troops during the revolutionary coup of 14 July 1958.

(S. H. LONGRIGG)

AL-FAYYŪM, a geographical region of Egypt, which today, as usually in the past, forms an administrative province. The Fayyūm, which derives its name from the Coptic, Phiom ("the Sea"), is a roughly triangular depression, about 35 miles from north to south, and about 49 miles from east to west. It is in Middle Egypt, lying in the Libyan Desert, east of the Nile valley. The cliffs separating it from the river valley are breached at one point, thereby admitting a stream which branches off from the Nile near Assūyat. Now known as Bābīr Yūsuf, this stream was caused by medieval writers ẁallāḥi al-Maḥānā. Its entry into the depression of the Fayyūm has been controlled since Pharaonic times by sluices at Ilāḥūn. On entering the Fayyūm, the waters are channelized for irrigation, the surplus escaping to

an Arab monarchy in Syria (1317-9/1918-20) failed in the face of French opposition; he was expelled from Damascus in July 1339/1920. But British favour and ʻIrāqī election secured him the throne in Baghdād (August 1340/1921), and he could for the twelve years following play a conspicuous, indeed indispensable, part in the foundation, consolidation and ultimate liberation from the British Mandate of the young and aspiring kingdom. Faysal, holding a balance between British requirements and local patriotism, showed admirable qualities of patient leadership. ʻIrāq was admitted to the League of Nations in 1351/1932. Faysal died suddenly in Switzerland in September 1352/1933, succeeded by his son, Ghaźl.
form a permanent lake, now known as Birkat Karun.

... because of underhand acts by some men of Fazara,
respective horses Dahis and Ghabra. The latter won
of Abs, and Hudhayfa b. Hish b. Hudhayfa. In Muhammad's
period at Medina 'Uyayna was the leader of Fazara and
joined in the siege of Medina (affair of the
Khandak) in 6/562 with 1000 men. Some months
later part of Fazara ambushed a Muslim trading
expedition led by Zayd b. Hāriṯa, and in 6/562 Zayd
made severe reprisals on Fazara. At the siege of
Medina, Muhammad had tried to bribe 'Uyayna
to abandon his allies, and made similar offers
during the expedition to Khaybar in 7/562, where
'Uyayna with a large force of Gaḥaṭaṇ is was supporting
the Jews. Though furious at the eventual failure of these
intrigues 'Uyayna came to terms with Muhammad,
joined the expeditions to Mecca and Hunayn (in
8/630), and received a hundred camels at al-Dīḍār
along with "those whose hearts are to be reconciled";
this seems to have been the share of the leader of
a non-Muslim contingent, though 'Uyayna is not said
to have had any following. Shortly after this he led
a Muslim expedition to the north-west and
conquered Taṃbar, but he was not a member of the deputation
(wafd) from Fazara.

After Muhammad's death most of Fazara joined
the ridda under Tulayba, but eventually had to submit
(cf. W. Hoenenbach, in Abhandlungen der Akademie
der Wissenschaften und der Literatur, Geistes-
und sozialwissenschaftliche Klasse, no. 4, 1951, 242-6.
They are later heard of in North Africa (al-Kalkashandhi, Nīkayn al-arab, Cairo 1959, 345 f.).

FAZĀR, name borne in mediaeval times by the
north-western extremity of the Moroccan Middle
Atlas. This territory lay to the south of
Fez and Meknès. It was bounded to the east by
the upper course of the Wādī Subū (= Wādī Gīgī);
westwards, it extended as far as the upper course of
the Wādī Umm-Rabīt (= Wādī Wānsīf); its
southern boundary was the so-called Tīghānlīm,
pass, where the Malwiyya rises. It coincided with
the territory now occupied by the Berber-speaking tribes
called in Arabic: Banī Mīr, Banī Mūḍīl, Gerwān,
Zemmūr and Zāyān. It is a high plateau, with an
average altitude of 1500 m./5000 ft., from which
some mountains rise. Geologically, it is of the
"causse" type, with limestone flats and
there volcanic, and cut by numerous canyons;
it is covered by forests of oaks, thujas (arbor vitae)
and cedars, where are found monkeys and panthers (and,
as late as the end of the 19th century, lions).

Northwards and westwards this high plateau
shades off into lower foothills (penelplains).
The abundant rain and snow give rise to many copious
springs; here rise the three most important rivers of
Morocco, the Malwiyya, the Subū and the Umm
Rabīt, and many left tributaries of the last two.
As in the rest of central Morocco, the oldest known
population consisted of Sanhādja [q.v.], or, more
strictly, Zanāga, the Arabic adaptation of the Berber
plural Aznāg, sing. Āznāg. Some Arabic authors

In the long war which followed Dhubyān was led by
Hudhayfa, and then by his son Hīṣn (A. P. Cauzen
de Perceval, Essai sur l'histoire des Arabes avant
l'islamisme, Paris 1847, ii, 424-43, etc.). After peace
was made with Abs, Fazāra became involved in
fighting with 'Amīr b. Sa'ṣāf, Dhuḥṣam and other
tribes, the command being latterly in the hands of
'Uyayna b. Hīṣn b. Hudhayfa. In Muhammad's
period at Medina 'Uyayna was the leader of Fazāra and

... the principal town and provincial capital is Madīnat al-Fayyūm. The Fayyūm plays an important part
in the Judeo-Islamic legend of Joseph, who is said
to have constructed the canal of al-Manāh (hence
the modern name), the sluices of Ilaḥān, and the
canals which drained the great marsh (al-djawba)
formerly covering the region. Two variants of this
legend are given by Ibīn 'Abd al-Hakam, and it also
appears in al-Makīrī's Ḥaṣāfī and other sources.
With it is connected a folk-etymology of the name
al-Fayyūm: the Egyptian king, on seeing Joseph's
achievements, said, "This is the work of a thousand
days [al-fawm]". Abī Sāliḥ derives the name also
from an eponym. The intimate association of the
Fayyūm with the Joseph legend is perhaps due to the

... traces in the assertion, recorded by 'Ali Mū añak,
that Shavīṣh al-Rūbī, the wall of Madīnat al-Fayyūm,
was a descendant of Reuben; a possible indication of
an islamanized Jewish shrine. During the Arab invasion
of Egypt, the Fayyūm was occupied without
difficulty, although it lay off the main routes of the
conquerors: Ibīn 'Abd al-Hakam gives three variant

call them also 'Banû Fazaz', as though the second element were the name of an eponymous ancestor; but this name must arise from a careless translation of the Berber eponym 'Ayt Fazaz' = A. ahi Fazaz, 'the people of the Fazaz'.

The geographers describe them as pastoral mountain-folk, raising cattle, sheep, and also very sturdy horses. They practised transhumance: they spent the summers on the high plateaus, but the winters of snow obliged them to move to the valleys of the Lower Atlas: to the north, those of Tâgrâgrâ (the Guerguerat of Leo Africanus, modern Tâgrira) and Aâsi (between Fez and Meknès), to the west, that of Aâdeghsân, on the upper Umm Rabîh. In 173/789, Idrîs I took possession of the Fazaz and applied himself to converting the population to Islam, for they had, for the most part, remained loyal to Judaism or Christianity. From the reign of his successor Idrîs II (188-213/804-28) there survive numerous dirhams, struck at Wazakkur. This mint must have been located on the present Bû-Úzeqkûr, a small tributary of the Umm Rabîh, some 3 km/2 miles south of Kinhira. When in 213/828 the domains of Idrîs II were shared out between his sons, the Fazaz was divided: the northern part was annexed to the principality of Fez whose amir, the eldest son Muhammad, struck dirhams at Tâgrâgrâ; the southern part fell to his elder brother Muhammad, who entrusted to another amir the task of subduing the rebel 'Îsa; he died in the Tâddîl, where his tomb is still venerated among the Ayt 'Îsâ ben Drls.

During the second half of the 10th/16th century, the Zenâta of the central Maghrib were pushed westwards by the Ṣâṇhâjjâ of Bulugûn, who was governing Ifrikiyâ in the name of the Fāṭimîm of Cairo; it is at this period that the Mâqrâwâna and the Banû Yafrân settled in Morocco. The latter carried out for themselves a principality whose boundaries corresponded to those of the principality of 'Îsâ b. Idrîs, with its capital at Shalla. One clan, the Banû Yâdîfîsh, occupied the Fazaz; their chief, Tâwâlâ, built there a kalâ—the famous Šaîl al-Mîdâh b. Tâwâlâ—which was inherited by his son Mahdi. In 452/1060 the Almoravid amîr Aabh Bakr b. 'Urma conquered the mountain district of the Fazaz, except for the Kalâ, which his successor Yûsuf b. Tâgûfîn was able to occupy, on terms, only after a nine-year investment (456-6/1063-72). For some months the luckless al-Mutamîd (q.v.) was held prisoner in the Kalâ before being finally interned at Aghmâût. Thereafter the Fazaz was conquered in turn by the Almohads and the Marinids. This district controlled the most direct route from Fez to Marrakush, that passing through the Tâddîl; it had also two silver-mines, at Awwâm and Wârkînâ.

From the 9th/15th century onwards the name Fazaz seems to have fallen out of use. Leo Africanus, who crossed the district in 1515, does not mention it. Indeed in the course of the 10th/16th century the land was overrun by new waves of Berbers (also belonging to the Ṣâṇhâjjâ group) who had come from the upper valley of the Malwiyya, following in the wake of the Arab tribes, the Banû Ḥâsan (ätz Bni Ḥyen) and the Zu'ayr (ätz Zê'ér) as they migrated towards the north-west of Morocco.

Thusforward the history of the Fazaz is the history of the marabouts of the šâ'īya of al-Dîlî and their Berber fellow-tribesmen the Ayt Idrîsâen (to the north) and the Ayt Ṣaṇmâlî (to the west), and their struggles against the 'Alawî sultans (especially al-Qâqîlî, Ismâîlî and Sulâymânî) and against the troops of the French Protectorate.

Two Idrîsid mints in the Fazaz, Wâskûtûr and Tâgrâgrâ, are (as has been noted) easily identified, but this is not true of the two other famous place-names of the district. As regards the silver-mine called Ma'dîn 'Awwâm, there exists nowadays a Džabal 'Awwâm, some 10 km/6 miles west of Mrîrt, and thus 120 km/75 miles south-west of Fez, where there is a mine of silver-bearing lead, but Leo Africanus, who passed that way, speaks of an iron-mine on the Bû Râgrâ. Still more difficult is the case of the famous Kalâ. Al-Bakrî does not mention it: indeed his route from Aghmâût to Fez via the Tâddîl passed some way to the west of the Fazaz; while al-Idrîsî locates it, on the same route, between Šufrîy (q.v.) and the town of Tâddîl, two stages (some 100 km/60 miles) from each, on a very high mountain.

The anonymous author of the Kitâb al-Istibsâr notes that when Al-Mu'tamîd was a prisoner there it was built of wood and the majority of its population consisted of Jewish merchants. But Leo Africanus, who saw it when it was ruined and calls it Ma'dîiyâ, says that it was built almost on the plain. He might be referring to a township built below a mountain-fortress, but he locates it 'ten miles' (15 km) from 'Ayn al-Asnâm (the present Aneour), i.e. 35 km/22 miles (barely one stage) from Šufrîy. It seems that the site of the Kalâ of Mahdi b. Tâwâlâ is to be sought for in the area between Timahdît and Mrîrt, perhaps at Timahdît itself.

The Fazaz has produced few famous men apart from the founder of the Kalâ, but the following may be mentioned: (1) the secretary of state and religious poet 'Abd al-Râhîm b. Yaqhaftân al-Fazâzî, who died in 627/1230 (see Brockelmann, I, 273, where he is called in error al-Fazâzî; S, I, 482); (2) the great historian al-Žayânî, who died in 1230/1815 (see Lévi-Provençal, Les historiens des Chorfa, 142).

FALIS HUSAYN BEY [see FADIL BEY].

FALIZ [see FADIL].

FAZULULAH [see FADIL ALLAH].

FÁZQHILÎ, a region of the upper Blue Nile, within the modern Republic of the Sudan, and near to the Ethiopian border. Its historical importance is solely due to the presence of alluvial gold. The ruler (makhk) of Fâzqîhilî was a vassal of the Fundjî (q.v.) sultan of Sinnâr, and wore the horned cap (làliyâ umm ìnna'yî) as his insignia of office. This usage long survived the downfall of the Fundjî sultanate (see A. W. M. Disney, The coronation of the Fung king of Fazqhilî, in Sudan Notes and Records, xxvii, Khartoum 1945, 37-42, describing the investiture of a makhk in 1944). In 1327/1822-23 Fâzqîhilî was conquered by Ismâîl Kâmîl Pasha, ser 'asker of Muhammad 'Alî Pasha's invading forces, and a levy of gold was laid on its merchants. Muhammad 'Alî endeavoured, with the aid of European technicians, to exploit the gold of Fazqhilî, but had little success. Under 'Abbâs I Fâzqîhilî became a place of banishment. Thereafter it lost all importance.
Fezzan has been inhabited, even in what are now the most desert regions such as the hamādas, since the old palaeolithic age. Worked stones from the mid-palaeolithic age, which are much more numerous, are already concentrated in the depressions; this is even more the case with the plentiful and fine stone relics of the age of polished stone. Fezzan shared in the great Saharan civilization of the neolithic age, to which we must certainly attribute a notable part of the rock paintings, those of the “pre-camel” period which represent, in a naturalistic style, elephants, giraffes, rhinoceroses, bovines, and men armed with bows. The most recent and diagrammatic of the rock paintings, which depict camels (dromedaries), horses, various domestic animals and men armed with shields and lances, are thought to date from the end of the neolithic period and prehistory, perhaps even from the beginning of our own era. The Garamantes who are mentioned by Herodotus and with whom the Romans were in contact, were already a mixed race composed of white Berbers like the Touareg today, half-castes and negroes, as is shown in the great number of tombs that have been excavated, particularly by Italian scholars, and whose funerary furnishings include Roman ceramics and glassware from the 2nd to the 6th centuries A.D.

The Garamantes, living over 500 km. south of the Tripolitania frontier, were still a powerful and important force that Getuli, had to endure several “punitive” expeditions by the Romans under Cornelius Balbus in 20-19 B.C. and Valerius Festus in 69-70. However, they collaborated with Roman troops in two expeditions against the “Ethiopians”, their southern neighbours, and carried produce from their country and from Sudan to the Tripolitania ports (Leptis Magna, Oea and Sabratha). Draught oxen, donkeys, horses, and carts drawn by two horses were the forerunners of camels, the use of which spread only slowly, over the desert tracks. But only dromedaries had the ability to carry to the coast sufficient quantities of dates, precious stones, ostrich feathers, ivory and, no doubt, some black slaves from the Sahara and Sudan. From the end of the 3rd century the Garamantes came on several occasions to plunder the coast. The only Roman monument in Fezzan is a mausoleum at Djarma (Garama), surrounded by cremation tombs (probably of Roman or Romanized merchants). It is likely that the technique of joggaras (underground conduits for collecting water), possibly of Iranian origin, spread towards the end of the Roman period. Being independent and ignored by the Vandal and Byzantine Maghrib, Fezzan long remained outside the sphere of Arab expansion, though conquered by ‘Ukba b. Nāfi‘ in 46/666-7. We know only that the town of Zawila was founded in 306/918 in the Shergiya by a Berber, Ibn Khattāb al-Hawwārī; it was a flourishing caravan centre, particularly for the slave trade, a small open city with a mosque and baths, and from it the Band Khattāb ruled Fezzan. The country was then prosperous, irrigated by wells and numerous joggaras; Djarma (Garama), Sebba, Tsawa, and Tmessa were the principal centres. But as early as the 12th century “the Arabs spread through the countryside, doing as much damage as possible” (al-Idrisī, trans. 135); Zawila was surrounded by walls which are now falling into ruin. In 1190 the dynasty of the Band Khattāb fell before the attacks of Karakūsh al-Ghuzzī, a Turcoman adventurer from Armenia who had the support of the Arab tribes of Sulaym and was already master of Tripolitania.

Fezzan then passed under the domination of the
The negro kings of Kanem (13th-15th centuries); they were represented by a governor (mai) who lived in the new capital, Trâghen (70 km. east of Zawila); as a result there followed a widespread immigration of negroes (not slaves) and, no doubt, closer connections with the Sudan; but the abandonment of the foggâras appears to date from this period.

The negro domination finally declined at the beginning of the 16th century as a result of the wars of Kanem against the Bornu and the long struggles with the Awlad Muhammad dynasty, the founders of Murzuk and of Moroccan and Sharîfian origin. The Awlad Muhammad, when finally they became masters of Fezzan, certainly contributed to its Islamization and Arabization; Murzuk was made the capital of the country, remaining so until the 20th century, while it was also a busy caravan centre and a stopping-place for pilgrims from the west on their way to Mecca.

The Turks, who occupied Tripoli in 1551, attempted to establish their authority in Fezzan only in 1577-8. At times they had governors there, several of whom were assassinated; they sent punitive expeditions such as that of 1679 during which Murzuk was completely sacked. But for the most part they were compelled to recognize Fezzan's de facto independence, in return for payment of tribute in gold and negro slaves in various quantities.

The Karamâf dynasty which ruled over Tripoli from 1710 until 1855 was unable to keep control over Fezzan, in spite of armed intervention in 1716, 1718, 1731-2 and 1811. In the second half of the 18th century the country was, however, reasonably peaceful, under what was in practice a ruling family that paid tribute. But in 1831 Fezzan fell into the hands of the dreaded nomads, the Awlad Slimân, under their chief 'Abd al-Djalîl Sîf al-Nasr.

The Turks, returning to Tripoli in 1835, made themselves masters of Fezzan in 1842, after killing Sîf al-Nasr and driving back the Awlad Slimân into Kanem. They remained there until 1911. The country became a sandjak subordinate to the wilayet of Tripoli and was divided into districts (bâdâl) and sub-districts (bâdyâ) with Ghât in Touargeg as its capital. The Italian Government found Fezzan a convenient place of exile for the Young Turks, both civilians and military, whom it was anxious to keep at a distance; the tombs of several of them can be seen at Murzuk.

The principal halting place for trans-Saharan trade was Zawila, Trâghen and then Murzuk. But the story was only known in detail long after, from the correspondence of the French Consuls in Tripoli and explorations at the end of the 19th and in the 20th centuries. On their way from Sudan to Tripoli came caravans, their chief merchandise being black slaves numbering from 500 to 2,000 a year, and also gold (either dust or in ingots); less important were ivory, ostrich feathers, copper (from Bornu) and hides. Fezzan exported only dates and natron (carbonate of soda). In the opposite direction the caravans carried various manufactured articles from Europe or the East; Venetian glassware, brocades and brass and bronze, coarse cloth from Naples and Marseilles, cottons from England and silks from Lyons (19th century), arms, ironmongery and pharmaceuticals from Italy and France, oriental fabrics, carpets and spices. The Fezzanese had some share in this traffic, which was mainly financed by the merchants from the oases in the north, in Tripoli and Ghadames, the Tebou of Bilma, and the Bornu negroes; and the government of Murzuk levied duties on camel-loads and slaves. The suppression of slavery, progressively observed, and the occupation of the Guinea Coast by the European Powers brought about first the decline and then the almost total disappearance of trans-Saharan trade. In addition, the Fezzan suffered greatly from the banditry of nomads during the ten years of the Awlad Slimân's domination and, much more recently, between the two Italian conquests.

The Italians actually disembarked in Tripoli on 5 October 1911—taking over from the Turks in Libya as a result of the Treaty of Ouchy (10 October 1912)—but were not able to occupy Fezzan only between January and August 1914. The Miani force, coming from Syrte through Sokna, and outflanking Gibla which was occupied by hostile nomads, took Brâk, Sebha, Murzuk, Ubârî and Ghât in succession. But owing to the opposition of the nomads who were spurred on by the propaganda of the Sandûsiyya fraternity, and also to the outbreak of the first world war, into which Italy was to make her entry, the Italian troops were withdrawn, though not without difficulty, in December 1914 and January 1915, leaving the country unprotected against the brigandage of the nomads for fifteen years. In fact, the Italians only returned in December 1929; in a combined advance of three columns, under the command of General Graziani, they passed through Derdj, al-Gueriat and Hûn (Djelfa) and had no great difficulty in reoccupying Fezzan, including Ghât and the Gatrûn region (February 1930).

It was a ruined country which had to be organized and equipped. Fezzan became a military command dependent on the Governor General of Libya; later (1936) it was transferred to the South Libya Command, set up at Hûn. The Italians started to link up the different parts of the Fezzan and Ghât with Tripoli and Miṭrâta by motor roads; they set up a number of schools and hospitals, and regularized and controlled the traditional administration of the mudîrs. Fezzan enjoyed a period of peace that was sorely needed.

The peaceful atmosphere was scarcely disturbed by the arrival of the Free French troops under the command of General Leclerc who, coming from the south in December 1942, easily occupied Murzuk on 7 January 1943, and then Sebha and the rest of the country before linking up with the British 8th Army in the advance on Tunisia. As a result of the Franco-British Agreement of January 1943, Fezzan and Ghadâmes formed a territory placed under the direct authority of the Direction des Territoires du Sud de l'Algérie, while Ghât was annexed to the territory of Djînet (Fort-Charley). The French divided Fezzan into 3 subdivisions (Ghâtî, Sebba-Ulbârî, Murzuk), maintained the administration by mudîrs and continued the educational, medical and economic work undertaken by the Italians; in addition, they dug several artesian wells.

Since 24 December 1951, the date of the creation of the United Kingdom of Libya under the sovereignty of Muhammad Idrîs al-Sanîlî, Fezzan has been one of the three autonomous provinces of this now independent country. The French forces provisionally maintained in Fezzan evacuated it, together with Ghât and Ghadâmes, by the terms of the Franco-Libyan Treaty of 20 August 1955; Ghadâmes has subsequently been added to Tripolitania. The wâls, the governor who represents the king at Sebha, the chief town of Fezzan, is assisted by an executive council composed of minor ministers (ndzir) and a legislative council, three-quarters of
whose members are elected and whose chairman shares authority with the wali. The census of 1954 recorded 54,400 inhabitants in Fezzan province, three-quarters of whom are sedentary. Agriculture is in fact the main source of livelihood, in particular the cultivation of date-palms of which there are between eight and nine hundred thousand. To be accurate, the date-palms are, for the most part, neither cultivated nor even irrigated, but merely fertilized. The underground water-table is sufficiently close to the surface for the palm trees' roots to reach the level of moisture; but the annual production of dates is hardly more than 4 to 6 kg. per tree, whilst with irrigation it reaches from 30 to 50 kg., particularly in Şātī. Another characteristic: outside the palm-groves cultivation is for the most part practised by means of a balance well (gdashna), especially in the south, and in particular by means of a well operated by a man [see bi'lit] in which the goatskin water-container (dalw) is drawn up by a donkey helped by a man. Cereals—wheat and barley in winter, millet (gsob) and sorghum (gijat) in summer—are almost the only form of cultivation: they are grown in succession on the same piece of land which is then left fallow; the rotation of crops near the wells is thus carried on from one to the next; in consequence crops are taken in turn from one to the next. Cultivation strips are protected by temporary hedges of palm leaves. Trees (pomegranates, vines) are very rare and are always planted at the side of the wells (or springs). Fertilization of the date-palms, drawing of water and irrigation are undertaken by the proprietors themselves or by hired labourers, serfs by origin, former negro slaves or tribes of very mixed origin, former negro slaves or tribes of very mixed origin, the Shwashna (sing. Shashna): these are the Hardīn of other parts of the Sahara. The sedentary inhabitants possess only a few sheep and goats; donkeys and dromedaries are used for wells and for transport. The workers are very poor. Emigration, both temporary and permanent, is by tradition made mainly to Tripolitania, but also to Tunisia.

The villages are generally of wretched appearance. The huddled buildings, partly or wholly in ruins, testify to a state of insecurity either formerly or recently. The houses, built of dry stone or baked bricks, with flat roofs and opening onto a court which is also sometimes covered (kouda), are built close together in barely two-thirds of the villages. It is only in the chief centres like Brak (Şātī), Murzuk or the oases of Sebha and al-Bwanis that they assume a somewhat more comfortable and urban aspect. There are numerous hamlets. In the poorest regions habitations are merely huts of palm leaves (zarība), and are widely spaced for fear of fire. The placing of houses, either adjoining one another or at a distance, is the result of the degree of social cohesion of the villagers and of the types of dwellings, not of economic differences. Stockbreeding is almost the sole activity of the more or less nomadic shepherds in the outlying regions of the Fezzan. The Tebou in the south-east wander in small scattered groups, from the Tibesti to the Djabal Ben Guènëma and the neighbourhood of Gatrun; they have temporary oblong huts made of the ribs of palm-leaves and matting (bâgły). The Touareg Ajjer (Imanghassaten and Ubagai), from the neighbourhood of Ghardames and the Messak, drive their flocks as far as the approaches to Şαtī, on the edge of the Wādi 'l-Adaj, and the Murzuk region. They live in tents of hides or in little round temporary huts made of matting. The shepherds from the north, the "Arabs", are far more numerous. The Gdâdja, the Urfella, the Awlabl Basîf and the Zîntân from Qliba, and the Libyans from the region of the Mūtarja at the end of the summer at the time of the date harvest. But most of the Megërâ and the Ḥasâwûna own date-palms and land which they have cultivated by the Shwâshna: they are semi-nomadic, living alternately in houses and tents: the Ḥotmân, the Zwayd and Gwâyda, formerly semi-nomadic, are today almost completely settled in western Şātī. All the Arabs' tents are of the "block type" which is to be found from Afghanistan to the Atlantic.

Fezzan sells part of its dates to all the neighbouring shepherds, and part of its cereals to the Tebou and Touareg. The nomads in the north, who grow cereals in the Gibla depressions, are the largest purchasers of dates, consuming a good part of them themselves, while by tradition they take the rest to markets in Tripolitania, to be exchanged for manufactured goods landed at Tripoli; some caravans go to south Tunisia.

But the dates and cereals, and also the water brought by the Dawâdà from the small lakes south of the râmla of Ubârî, are now almost always carried by lorry along the roads linking Misrata and Tripoli. It is also by lorry that the manufactured goods that are increasingly needed are brought from Tripoli. New roads lead to the oil-drilling centres recently opened in west and north-west Fezzan; but they are on the fringe of the country. Sebha, the capital of Fezzan, which includes a certain number of administrative and modern business buildings, has on the other hand become an important aerodrome.

FEHIM, SÜLEYMAN (1203-8/1789-1846), a minor Ottoman poet who wrote in the first half of the 19th century, during the declining decades of the classical school. A government official in Istanbul and in the Balkans, he soon retired and devoted his life to study and writing, teaching Persian occasionally.

His little diwan (Istanbul 1862) contains poems inspired by the “Indian style” of Persian poetry. He is also the author of Safinet al-shu^ara? (Istanbul 1259), an expanded translation of Dawlatshâb’s Tadhkhirat al-shu^ara?.

Bibliography: Djedvet, Ta’rîkhî, xii, 184; Fatîn, Tadhkhirî, 336; Ibnûnîm Mahmud Kemal, Son asr Türk şairleri, 379-81; A. C. Yöntem, in IA, s.v.

FEHIM, UNDÜZMÜDUSTA (known as Fehim-î Kadîm (?-1058/1648), Turkish poet, one of the most appreciated of the minor poets of the 17th century. According to scattered information found in various tadhkires and in Ewilîa Celebi, he was born in Istanbul, the son of an Egyptian pastrycook. Without a regular education or settled position, stricken by poverty he left Istanbul, joining the suite of Eyyûb Pasha, governor of Egypt. Because of a colleague’s intrigue, he lost the favour of the Pasha and decided to leave Egypt, where he does not seem to have been very happy or prosperous. Thanks to the mediation of Newâlî Bey, the commander of the Janissaries in Egypt, he was allowed to join the caravan conveying the yearly tribute from Egypt to the Capital, but he died on the way in Iğdır in 1058/1648, apparently in his early twenties.

His diwan, his only work, which according to tadhkires he completed at the age of eighteen, shows that he was an unconventional poet of great promise and although fascinated by the work of the Persian poet ‘Urfi, in his lyrics he did not always follow the latter’s precise and bombastic style, but succeeded in developing, at that early age, a personality of his own. Especially in his ghashals, in the middle of hackneyed clichés, he succeeded in finding his own way. His position as head of the order does not seem to have been very happy or prosperous. Thanks to the mediation of Newâlî Bey, the commander of the Janissaries in Egypt, he was allowed to join the caravan conveying the yearly tribute from Egypt to the Capital, but he died on the way in Iğdır in 1058/1648, apparently in his early twenties.

now in another, and who was then believed to
appearing in the Nakshbandiya. His piety contains
strongly influenced by Ibn Arabi.

Born in Bursa in 751/1350-1, the son of a certain Shams al-Din, is regarded
which, Shems al-Din Mehemmed Fenari, is regarded
man scholars and jurists, the founder of
father's mosque in Bursa (Tashkopriizade, 199;

His brother (and not his son, as stated in
and the sources which derive therefrom), Muhyi al-Din Mehemmed, attained even
greater dignity. Having been kadi of Edirne (894/1586) and
in Eyyûb. He is mentioned (as Muhyî) among the poets of his age, and is said to have
built a mosque in the Topkâhi quarter of Galata. (The sources often confuse him with his brother
and should be used with caution: Mûstâkim-zade, 22; 'Him. sîl., 361; Danismend, ii, 432; Sehl, 29; Latifi, Tâdottere-i shu'ârâ, Istanbul 1314, 307;
Huseyn Ayvansarayî, 'Hâdâtât al-çevwâmi', Istanbul 1281, ii, 66, 133). Although descendants of this line appear as teachers and kâdîs down to the 12th/18th
century, none achieved outstanding prominence. (Cf. for example, Tashkoprûza, 400 (Zeyn al-Din Mehemmed), 486 (Fir Mehemmed); 'Atâ'î, Dîvûl-i Şakârî, Istanbul 1268, 13 (Hasan b. Zeyn al-Din), 35 (Abd al-Bâqî Efendi and Yusuf Efendi), 418 (Mahnûf Efendi).

FEHER — FENER

The most famous of his numerous works is the Fushâl
a compilation on the şâhiç al-îslâm of the Empire. He was born in Bursa in
751/1350-1, the son of a certain Shams al-Din, who, despite the impossibility of the dating, is said to have
been a pupil of the famous şâfi'i scholar Şadr al-Din Könevi (d. 672/1273-4); Brockelmann, I, 449.

Having studied under some of the most distinguished scholars of his age in Anatolia and Egypt, in 770/1368-9 he was appointed teacher at the Manastir melrese in Bursa and the following year made kâdi of this capital city. What the political influence was which he could manoeuvre a youth of twenty into such a position remains unknown, but that there was a special connexion with the dynasty is to be inferred from the great wealth he was able to amass, the distinction he was accorded among the state;...
(re-built in 1720), still the seat of the Orthodox Patriarchate. At quite an early period there settled in Constantinople, in addition to the ecclesiastical and secular officials of the Patriarchate, the few old Byzantine families that had remained in Istanbul and other distinguished and wealthy members of the community; in the school of the Patriarchate, conducted by the clergy, the ancient classical studies were cultivated. The prominent Greek families resident around the Patriarchate were known collectively as the ‘Phanariots’ (T. Feneriler). Thanks to their links with and knowledge of the Christian world (many of them were educated in Italy), the Porte, particularly in the 12th/18th and early 13th/19th centuries, drew on them to fill various influential employments. Members of these families acted as dragomans of the Porte and of the Arsenal (see TAYRÜMAN), and as contractors for the supply of furs and meat to the Saray, etc. Since they were regarded as more reliable than the native princes, for some of whom they had earlier acted as ‘agents at the Porte’ (kapî ketkûbâdis), it was from the Phanariots that were appointed, for over a century, the yoovodas (hospodars) of Moldavia (from 1123/1711, see BOGDAN) and Wallachia (from 1128/1716, see EFLAŞ). The best-known families were Karkanouzenos, Skarlatos, Maurokorodataos, Gikis, Karatzas, Koutsos, Khantzeres (Handjeri), Maurogenes, Hypsilantzes, Mourouzis, Kallimakhes, Mousourou, Aristarkhes, etc. In the second half of the 12th/18th century the Phanariot families began to move from Fener to the more salubrious villages along the Bosphorus—Kurutçühme, Arnawutköy, Tarabya; after the Greek War of Independence many of them migrated to Greece. Descendants of Phanarion families are still found in modern Romania.

These attributions are without foundation. The word ‘ferdi’, appearing in a Persian poem in the 10th century, is not a proper name but bears its ordinary lexicographical meaning, ‘one person;’ the author’s mahbûlas in fact appears, in a poem at the end of the work, as ‘Bûstân’, and hence reveals him to be Mustafâ Bûstân b. Mehemmed, ‘Bûstân Efendi’, a hâdîfaster under Süleyman I, b. 904/1498, d. 977/1570 (see BOSTANZADE).

FERHAD PASHA (7—1004/1595), Ottoman Grand Vizier. One Venetian relazione of 1585 gives his then age as about 50 years, while other Venetian relazioni of 1590-4 describe him as a man of about 65 or 70 years. Ferhâd Pasha was of Albanian origin (some of the Venetian accounts refer to him as “di nazione siciliana”, “di nazione siciliana”) and, according to Lazaro Soranzo, a native of “Andronici Castello dell’Albania”. After he had gone out from the enderûn-i humâyûn towards the end of the reign of Sultan Süleyman Kânûnî (d. 974/1566), his career embraced the offices of Mir Akhor-i Kebîr, i.e., Grand Master of the Imperial Horse (while holding this appointment he was sent in 968/1563 to Budin (Buda) with orders to execute the Beglerbeg of Budin, Mustafâ Pasha, the nephew of the then Grand Vizier Mehemmed Şokollu) and also of Yehîideri Aghasl, i.e., Agha of the Janissaries (an office that he lost in 990/1582). Ferhâd Pasha became Beglerbeg of Rûmîli late in 990/1582 and not long thereafter was raised, with the rank of vizier, to the eminence of serdar, i.e., commander-in-chief, of the Ottoman forces engaged in the war which had broken out against Persia in 986/1578. During the campaigns of 991/1583-992/1584 he relieved with new supplies and reinforcements the Ottoman garrison at Tiflis in Georgia and in addition fortified Erivan, together with a number of strong positions on the routes leading into Georgia. The supreme command on the eastern front was assigned, for the year 985, to the famous ʿOthmân Pasha, then at the height of his renown as a soldier in view of the brilliant campaigns that he had waged in the Caucasus during the earlier phases of the war. After the death of ʿOthmân Pasha in Dhu ’l-Ka‘da 993/October 1585 the appointment as serdar was given once more to Ferhâd Pasha, who now retained it until the end of the long conflict with Persia in 998/1593. His solid achievement as a soldier was crowned in 996/1588, when he conquered Gandja and the region of Karabâgh in Persian Ahdarbâyân. Ferhâd Pasha became Grand Vizier in Shawwâl 999/August 1591, but a revolt amongst the Janissaries brought about his dismissal from office in Dümâdâ II 1000/March-April 1592. As second vizier, and during the first years of the long war of 1001/1593-1015/1606 between the Ottoman Empire and Austria, he was bâdî’mahbûl at Istanbul in the absence of the Grand Vizier Köşkâ Sinân Pasha on the Hungarian front. Soon after the accession to the throne of Sultan Mehemmed III in 1003/1595 Ferhâd Pasha became Grand Vizier for the second time (Dümâdâ II 1003/February 1595). His renewed tenure of the office was destined, however, to be brief—as he was preparing for a campaign against Wallachia (at that time aligned on the side of Austria), the intrigues of his bitter rival Köşkâ Sinân led to his dismissal in Shawâl
FERHAD PASHA — FERIDUN BEG

1003/July 1595 and not long afterwards to his execution, on the order of the Sultan, in Safer i 904/October 1595. Some of the sources describe Ferhad Pasha as a traitor from the plan, and an evil and profane nobleman (Kara Yllan), in the words of Lazaro Soranzo) as a rough and ignorant man, overbearing and avaricious in his conduct. None the less, on the evidence of a career not devoid of notable achievements, above all in the war against Persia, he has some claim to be regarded as one of the most able viziers of his time.

Life:— See Bibliography: Selânîki, Ta’rîh, Istanbul A.H. 1281, 67, 169, 172, 202, 204, 212 ff., passim; 220 ff., passim, 232 ff., passim, 243 ff., passim, 259-60, 268, 285-6, 295, 302, 308, 310-2, 320; Peçewî, Ta’rîh, Istanbul A.H. 1281-1283, i, 423 and ii, 19, 73, 86 ff., passim, 107 ff., passim, 122 ff., passim, 104 ff., passim; Hâdidî Khîlîfa, Fedilîche, Istanbul A.H. 1286-1287, i, 3, 46 ff., passim, 76; Na’imî, Ta’rîh, Istanbul A.H. 1281-1283, i, 66 ff., passim, 110, 117 ff., passim; Sölaküş-Zade, Ta’rîhî, Istanbul A.H. 1298, 605 ff., passim; I. H. Usunçarâ, Osmanî Tarihî, Ankara 1954, iii, Pt. 2, 347-9 and 608 (index); A. S. Levend, Gûzavat-nâmulere, Istanbul 1956, 89 ff. (information on the Ottoman campaigns of Ferhad Pasha can also be found in Iskandar Beg Munshî, Ta’rîh-i ‘alâm-i ‘Abbâdî, compiled on the order of the latter’s death (960/1553) he entered the service of Mehmed Pasha Sokollu, then begârbebi of Rûmî, as secretary. As Sokollu rose to supreme power, so Ferîdûn played an increasingly important part in state affairs, notably in the negotiations for the eleven Ottoman sultans to Sellîm II, contained 1880 documents, but no known MS approaches this length. The work has been printed twice (1) Istanbul 1264-5(1848-9), containing 735 documents, of which 259 dialects entitled Ta’rîh-i ‘l-tarassul, Ed. Fligel, no. 3790), prompt grave doubts on the authenticity of the whole collection (see J. H. Mordtmann in Isl., xiv (1925), 362n); but recent studies suggest that these were exaggerated: it is for the most part a highly reliable source.

The Munshî is introduced (i, 24-8) by a short treatise on ethics, Fıviq ê-ℇ integrates much Content and the events of the two years following; MSS: Leiden, Univ.-bibl. Warn. 277; Istanbul, Millet-Ali Emiri 330; Istanbul, Hazine 1339 (this, dated 976 and containing 20 miniatures [Karatay, no. 692], is recorded as having been given in marriage to Sokollu’s widow and promoted to service of Selâmî Pasha (q.v.) and Suleymân’s daughter Mihrîmâ (Selânîki, 162-3; the tradition that he was married to Sokollu’s widow is baseless, see Hammer-Purgstall, iv, 104, note b). He died in office, on a haemorrhage, on Wednesday 21 Safar 991/16 March 1583 (Selânîki, 172), and is buried in a türbe at Eyyûbî (Ewliyâî, i, 405; cf. Om, ii, 363-4).

Ferîdûn’s introduction to his work, Munshî al-salâlîn (chronogram for 982, the year of its completion) is a collection of state-papers—imperial letters, fermanîs, fethâmehes, berâtis, treaties, with some campaign-diaries. According to Selânîki (137), the presentation volume, of over 250 gatherings (dîwân) and divided into eleven sections for the eleven Ottoman sultans to Selîm II, contained 840 documents, many of which, however, are later than the date of presentation. From the examination of MSS in European libraries (the Istanbul MSS remain to be investigated) K. Holter concludes that Munshîî ‘alî and ii, 1-100 (525 documents) and perhaps also ii, 536-74 (30 docs.) belong to Ferîdûn’s original collection, while ii, 100-536 (282 docs. of the late 16th and the 17th centuries) reproduce a single separate collection, similar in scope to that represented in MS Göttingen Univ.-bibl. turc. 29. Mürkûmîn Khâlî’s demonstration that several of the documents purporting to belong to the reigns of 963/1654 and 964/1655 are spurious, being modelled on documents in a collection of confidential correspondence of the Khârizm-shahs entitled Ta’rassul ila ‘l-tarassul (Hâdidî Khîlîfa, ed. Fligel, no. 3790), prompt grave doubts on the authenticity of the whole collection (see J. H. Mordtmann in Isl., xiv (1925), 362n); but recent studies suggest that these were exaggerated: it is for the most part a highly reliable source.

The Munshî ‘alî is introduced (i, 24-8) by a short treatise on ethics, Fıviq ê-瘁 integrates much Content and the events of the two years following; MSS: Leiden, Univ.-bibl. Warn. 277; Istanbul, Millet-Ali Emiri 330; Istanbul, Hazine 1339 (this, dated 976 and containing 20 miniatures [Karatay, no. 692], is presumed as a presentation-copy). In 980/1572, as Fıviq ê-瘁, he caused to be translated, from French, a history of France down to the year 1563; MS: Dresden (H. O. Fleischer, Catalogus, no. 120).

Bibliography:— Ferîdûn’s introduction to his work, Munshî ‘alî (q.v.), i, 14-23; ‘Alâî, Hâdidî al-akbârî, 336-7; J. H. Mordtmann, s.v. in ETI (= IA, s.v.), followed by Babinger, 106-8 (with further references); Mûrûkûmîn Khâlî (Ymaq, 336-7).

Fida’ī (or, more often, fidowī), one who offers up his life for another, a name used of special devotees in several religious and political groups. Among the Nizārī Ismā’īlīs it was used of those members who risked their lives to assassinate the enemies of the sect. They acted also on behalf of political allies of the Nizaris, sometimes at a price. At Alamut they may have become, in later years, a special corps; but normally tasks of assassination seem to have been assigned to anyone who was fit. The mediaeval Western tradition developed an elaborate account of them as highly trained specialists, evidently based partly on Muslim tales, partly on imaginative deduction. Mediaeval Muslim legends gave rise later to the idea that ḥaḍīdik was used in motivating the fidowī, but there is no evidence for this (see M. G. S. Hodgson, The Order of Assassins, The Hague 1955). In Algeria, fidowī is a narrator of heroic deeds, and fidowīyya is a tale or song of heroic deeds. During the Persian revolution fidowī was applied in the first place to the adherents of the republican party, later to the defenders of liberal ideas and the constitution.

Fida’ī was also the pen-name of Shāykhzāda Lāhduf, who was sent by the Ṣafawī Shāh Ḫusrav al-Muṣaddik to Muhammad Ḭān Shaybānī and afterwards retired to Shiraz where he died (Rida Kūli Ḫān, Madīṣa al-fusaha’, ii, 27). It was also the pen-name of Sayyd Mūṣīd al-Muṣaddik of Ardistan, who lived at Isfahan and was the favourite poet of Muhammad Shāh Kūli Ḫān (Rida Kūli Ḫān, ii, 385).

[Cl. Huart-M: G. S. Hodgson]}

FIDA’ĪYYÂN-I İSLĀM, a small politico-religious terrorist group based in Tehran which during its two years of activity (1941-53) became notorious for its responsibility for numerous political murders. The Fida’īyyan proclaimed the government of "xenophiles" illegitimate, and called such men enemy spies whose blood must be shed. They demanded the revocation of all laws which they considered inconsistent with Shi’i law, and tried to re-establish the veil of women and other traditional Islamic practices.

The Fida’īyyan began with the abortive attempt by their young founder, Sayyid Muḥammad Mīrāwī, later called Nawāb-Ī Šafawī, on the life of the famous scholar and religious reformer, Ḥāmid Kasrawī [see KASRAWI], in March 1945. In February 1946 the Fida’īyyan assassinated Kasrawī during open court proceedings in the Palace of Justice in Tehran. Šafawī and a few associates were arrested, but none of those who had been present would testify against them and they were acquitted. Āyat Allāh Ḩāshāmī’s protection of the Fida’īyyan and their influence in the Tehran bāzīr played a part in the acquittal, as did the fear of reprisals, which now grew. In October 1949 the Fida’īyyan assassinated the Minister of Court, ʿAbd al-Ḥusayn Ḥāshābī, whom they accused of having foreign connexions and of interfering in elections to the Majlis. This murder was a factor in the annulment of the Tehran elections to the 16th session of the Majlis, and in the new elections the National Front led by Dr. Muhammad Muṣaddik made gains. The hostility of the Prime Minister, Gen. Ḥādīrz-Ali Ṣalāh-ud-Dīn, to the National Front’s proposal to nationalize oil brought about his assassination in March 1951 by a fanatical Fida’ī, Ḥallī Ṭahmābsī. Threats from the Fida’īyyan soon led to the resignation of the next prime minister, Ḥusayn ʿAlā, after which Muṣaddik became prime minister. Nawāb-Ī Šafawī was arrested in June 1951 and Muṣaddik and his government faced threats to their lives from the Fida’īyyan unless Ṭahmābsī and Šafawī were released. Ḥusayn Fāṭimī, a member of the government, was shot and wounded by a Fida’ī in February 1952. Influenced by fear and by the claim of Ḩāshāmī and his followers that Ṣalāh-ud-Dīn’s assassin was a hero, the Majlis voted to pardon Ṭahmābsī in August 1952. As threats from the Fida’īyyan continued, however, the Muṣaddik government moved against them and banished some of their members to Bandar ʿAbbās, an insalubrious port on the Persian Gulf.

After the overthrow of Muṣaddik the activity of the Fida’īyyan decreased, and for a time they restricted themselves to issuing occasional harsh statements against the new government. Then an abortive attempt on the life of the prime minister Ḥusayn ʿAlā in October 1955 gave the government a basis for prosecuting them. The arrested Fida’īyyan, among whom were Nawāb-Ī Šafawī, Ṣāḥibīdī and Ṭahmābsī, were executed and no more was heard from the group.

The Fida’īyyan had ties with the Iḥlāwī al-Muṣlimīn [q.v.] in ʿIrāq and Egypt, and like the Iḥlāwī as well as many politico-religious groups of the past they called each other “brethren”. In the Arab-Israeli dispute they gave vocal support to the Arab cause. Their members appear to have been primarily very young men with a limited and traditional education. They drew on traditional ideas of the sacredness of self-sacrifice and of using force in combating irreligion. Their programme was chimerical, but in appealing to real resentments and frustrations they had an influence beyond their small numbers, while the fear they instilled influenced the acts even of their opponents, particularly in the years 1951-3. Although defended and protected by
Kāshānī, they were not directly led by him and at least once differed with him. In support of these conflicting views alleged sayings of the Prophet are eating purposes was condemned by Muslim tradition. Kunst Persiens unter den Buyiden, ZDMG, Die during the Buwayhid regime (cf. E. Kühnel, op. cit., 6 Schwei
gergetSource(521,335)zerische Zeitschrift du VHP au X (N. F. xxxi) (1956), 83 ff.), although their use for jewellery, metalwork and decorative incrustation were absorbed by trading regions of Eastern and exploitation of silver ore (cf. D. M. Dunlop, Sources of the mint in Cairo, BSOAS, xv (1953), 429). Its economic importance arose from the fact that silver, along with gold, constituted the basis for the official Muslim coinage (see Dirham). Under normal economic circumstances the value of silver, as against gold, was established at 10:1, which ratio underlay the legal principle of the exchange rate between the silver and gold coinage (cf. C. Cahen, Problems of currency in Islam, in: iEO, x (1952), 338). During the mediaeval period the needs of Near Eastern markets were adequately met by silver supplies of local provenance. Although mediaeval sources refer to many mining areas, the argentiferous districts of Khurasan and Trans-oxania were particularly famous for an intensive exploitation of silver ore (cf. D. M. Dunlop, Sources of the 8th Century A.D., in: Stud. Isl., viii (1957), 29-49; S. Bolin, Mohammed, Charlemagne and Ruric, in: Scandinavian Economic History Review, i/1 (1953), 19-23). Near Eastern silver resources seem to have been rich enough to afford an export of this metal to Europe. This was particularly true in the course of the 4th/10th century, when large quantities of Near Eastern silver in the shape of Muslim dirhams were absorbed by trading regions of Eastern and Northern Europe. (For different viewpoints on the significance of the circulation of Near Eastern silver in the Middle Ages, see S. Bolin, op. cit.; R. P. Blake, The circulation of the musulim East down to the Mongol epoch, in: Harvard Journal of A

As in the pre-Islamic period, silver was used in jewellery, metalwork and decorative incrustation (R. Harari, Metalwork after the early Islamic period, in: Survey of Persian Art, iii, 1476-529). Luxurious silver vessels were also in demand, particularly during the Buwayhid regime (cf. E. Kühnel, Die Kunst Persiens unter den Buwayden, ZDMG, cvi, 1 (N. F. xxxi) (1956), 83 ff.), although their use for eating purposes was condemned by Muslim tradition. Silver attracted the attention of Muslim alche-
mists who referred to it by a number of different names, e.g., the moon, mother, servant (cf. E. Wiedemann, Beiträge zur Gesch. der Naturwissenschaften, xxiv, 182; A. Siggrg, Decknamen in der arabischen alchemistischen Literatur, Berlin 1951). Albeit accepting the theory of transmutation of metals (cf. G. Sarton, Introduction to the history of science, ii, 2, 1045) Muslim alchemists were well acquainted with various chemical processes aiming at the extraction and refining of silver (E. J. Holmyard, The makers of chemistry, Oxford 1934, 77; D. M. Dunlop, op. cit., 46-8; A. S. Ehrenkreutz, Extracts from the technical manual on the Ayyubid mint in Cairo, in: BSOAS, xv (1953), 429). Finally, silver was used in Muslim medicine. It was applied in the form of filings which, when mixed with drugs, were effective against melancholy, palpitation of the heart, and similar afflictions (cf. Ibn al-Baytārī, ed. Leclerc, Notices et extraits, iii, 36). See also dāl al-barāb; metalwork; sikkah.

FIDJAR "sacred glowing"; ḥarb al-fidjar "the sacredious war" is the name of a war waged towards the end of the 6th century A.D. during the holy months between the Kuraysh and Kināna on the one side and the Kays-Áyān (without the Qatāfān) on the other. There were on this occasion eight days of fighting, the first three of which were passed together as the first three wars—were mere brawls. Of real importance was only the second (or, according to the second reckoning, fourth) war which lasted four years. It started when during the holy season ʿUrwa al-Rahbāl of the Banū ʿAmir b. ʿSaʿašaʾa, whilst escorting a caravan of al-Nurāmān III (eigend name, ʿAbd al-Malik b. ʿAbd al-Rahmān) al-Harrān, was treacherously murdered by al-Barrād b. Kays al-Dāmāl al-Kināni. The patron of al-Barrād, Ḥarb b. Unayya, was at that time together with other chieftains of the Kuraysh at ʿUkāz. As soon as they heard of this misdeed, the Kuraysh and Kināna started for Mecca; they were overtaken by the pursuing Hawāzin and attacked at Nahjā, but the night enabled them to reach the sacred territory. This yaum Nahjā is generally counted as the first battle-day of the second Fidjar war, but sometimes added as the fourth day to the first war. A year later both parties—but without the Banū Kaš and Kilāb of the ʿAmir b. ʿSaʿašaʾa—not again at ʿShamā (v.i. ʿShamā) near ʿUkāz and the Hawāzin were victorious (yaum ʿShamā). The same happened next year at ʿUkāz (yaum al-ʿAbīb). It was only in the following year that the Kuraysh and Kināna carried the day (yaum ʿUkāz or yaum ʿShamār). A fifth engagement on the Ḥarrān near ʿUkāz (yaum al-Hurayya) resulted again in the victory of the Hawāzin. After this there were only some skirmishes and then peace was restored. Of the many poems which according to Wākidī (opus. Ibn Sād i/3, 81, 1) were composed about this war only a few verses have come down to us.

Whilst it is admitted that the Prophet was present at the Fidjar war, there is much controversy about the particulars. Some say that he took part in the fighting, and that at ʿShamā, where the Kuraysh were defeated, he was praised for his courage (Aghānī, xix, 75, 2). Others maintained that he only supplied his uncles with arrows (e.g., Ibn Ḥighām, l/7, 105; 177, 1, 1); but experts on the al-Arab knew that none of his uncles except al-Zubayr took part (Aghānī, xix, 81, 1). In support of these conflicting views alleged sayings of the Prophet are
adduced. Also the years given for his age range from 14 to 28 (Aghdnt, xix, 75, 1-3).

The Fidjar war was waged for four years in the holy season, when in normal times trade was flourishing unhampered by tribal feuds; it involved two great confederations including townsfolk of Mecca and al-Ta'hi, and it even gave its name to an era. The real aim of it was the control of the trade routes in the Nagid and consequently the benefit of the great gains which this trade offered. In this great contest the Kuraysh were leading; they procured the weapons for their confederates and defrayed all expenses. Amongst their opponents the Thakif together with the Banu Naṣr b. Mu'awiya offered the hardest resistance but had finally to give in and, worn out by years of war, left the victory to the Kuraysh.

**FIDYA,** (which becomes, according to the area concerned, fadu, fado, fadwa and even fâlî) is a general designation among Syro-Palestinians for a blood sacrifice made for purposes of atonement. From this point of view, its meaning is close to that of dâhiyya. Indeed, in the Negeb and other parts of former Palestine, these two terms are sometimes used to designate one and the same thing. In fact, however, while the dâhiyya is essentially an offering used to the dead made on the occasion of ‘âd al-qubî, the fâlî is used in the interests of the living, without any limitation of time. It is offered up before Allah for the delivery of a man, his family, his cattle and his goods, from some imminent misfortune, such as an epidemic. See also HADJDJ.

(J. Cheliod)

**FIEF** (see DIâmil, IQTA', TIMAR).

**FIGHAÎ (BABA),** pseudonym of a celebrated Persian poet whose patronymic, like his first name, is unknown. He was a native of Shirâz where he started by helping his brother, a cutter by trade, and it was on that account that he first took the pseudonym Sakkaki when he began to write poetry. In his youth, which was spent at Shirâz, he lived a life of debauchery, and then made a journey to Herât where he became acquainted with the great poet Dîamlî, but his poetry was not appreciated by the poets of Khurâsân. From there he went to Aqhar-baydijân, to the court of sultan Ya’kub (884-96/1479-91), the Ak-Koyunlu dynasty, one of the greatest patrons of the age. At this prince's court in Tabriz he received every favour, and his protector called him Bâbâ-ye Sâ'îrâr (father of poets). There he continued with his life of debauchery, recklessly spending everything that he earned. While he was accompanying his patron on one of his campaigns, the manuscript of his diwân together with his baggage was looted. He wrote to his brother and asked him for a copy of the poems which he had left in his native town, and made a new selection. On sultan Ya’kub’s death he left Tabriz, after spending more than seventeen years there; he went to Shirâz and then to Khurâsân, living in the towns of Nasâ' and Abîward and following the same life. At the end of his life he repented and went to live in Mashhad, where he took to a life of devotion and died in 925/1519. Fighâî is one of the best lyric poets of his time and his ghâsals were highly esteemed by poets, who continued to imitate him until the 17th century. His diwân includes in particular some ghâsals and certain bâsîdân especially dedicated to the Shâh timâns. Ten of his ghâsals have been published by Bland in his “Century” (34-37). The Iranian scholar Husayn Azâd published a French translation of some of his poems under the title Les poésies de Baba Fighâni, traduites pour la première fois du persan avec une introduction et des notes par Hocéïne-Asad, Paris 1903. There are two editions of the Persian text of his ghâsals:

2. Diwân-‘âlî Baba Fighâni-ye Shirâzi with emendations by Suhayli Khânsârî, Tehran 1316 s.

(Said Naficy)

**FIGHÂNÎ, pseudonym of RAMÂDÂN (7-9/398/1332), Ottoman poet. Very little is known of his early life, except that he was a native of Trabzon and that after spending some years in the caravan trade he became a minor clerk in government offices in Istanbul, where together with his fellow-poets and boon-companions he frequented taverns and places of amusement, leading an irregular and dissolute life. He seems to have lived in near poverty and without proper patronage, in spite of the poems which he dedicated to the great. We are told of his extraordinary memory where he stored enormous amounts of Arabic and Persian verse and all his own compositions. At the start of a very promising poetic career he met a sudden and tragic end: a Persian epigram which he wrote (or which was attributed to him) subtly attacked the Grand Vizier Ibrâhîm Pâsha for the statues which he had brought from Budin and had erected in front of his palace in the Hippodrome: “Two Ibrahîms came to this world: one destroyed pagans, the other erected them”, and the unfortunate poet was hanged after an ignominious parade.

His ghâsals and bâsîdân are scattered in various mescâmâs and unmistakably show a great talent that was liberating itself from the influence of Persian models and his Ottoman predecessors. Most telhîre-writers agree that his bâsîdân in particular are outstanding.

**Bibliography:** The telhîres of Sehi, Latîfî, ‘Ashik Celebi, Râyâdî, Khûnsârî Hasan Celebi, Kâf-zâde, s.v.; Gibb. Ottoman Poetry, iii, 34 ff.;
Although the region has certainly been inhabited for a long time, as is proved by the rock engravings, the name Fadjidj appears only in the 8th/14th century. Ibn Khaldūn (Hist., i, 240) speaks of its being active and ruled by the Banū Sīdī al-Mulkī, a family of the Matghāra of the group of Banū Fātīm. These used to form the greater part of the population of Sidjīlīmās, a caravaneers’ market and capital of Taffālīt, then already waning in importance, and to whose position as a meeting-point of caravan tracks Figuig perhaps succeeded. In the 16th century, Leo Africanus (435) praises the fineness of the woolen stuffs woven by its women, the intelligence, commercial vigour and culture of its men; in the seventeenth century, al-‘Ayāqī draws attention to the flourishing condition and richness of its libraries (Voyage, tr. Berbrugger, 159). Figuig seems always to have been an independent territory, thanks to its isolated position. The expedition which Mawly Sulaymān undertook in 1809, like that of the powerful Mawly Isma‘īl, the end of the seventeenth century, was never followed up. Nevertheless, when the French began the conquest of Algeria, the Convention of Lālā-Maghnya (18 March 1845) left Figuig to Morocco. It was the refuge of the Awlād Sīdī Shaykh who rose against France from 1864 on, of the adventurer, Bū ‘Amānā, and the pillaging Zegdu. In 1883, the Sultan Mawly Ḥassān installed a representative there, who had, however, neither authority. Even after the Franco-Moroccan agreement of 1902 the Sultan was unable to command obedience in this region, and a column of French soldiers accompanying Jonnart, the governor-general of Algeria, to Beni-Ounif was attacked on 30 May 1903; a military counter-action forced the djemā’as of Zenāga to surrender the criminals and hostages. There were no more outbreaks and Figuig came with Morocco under the French Protectorate and was incorporated into the administration of the Makhzen.

The disappearance of the slave-trade and of commerce across the Sahara and the arrival of the railway between Oran and Colomb-Béchar, which had reached Beni-Ounif by 1905, contributed to the economic decline of Figuig. Moreover the region was often at war with her neighbours, especially those who set the two principal ksars, al-‘Awدلghir and Zenāga, against each other over the possession of ‘Ayn Thaddert, and also those which divided the two Hāmmām. The walls of the ksar were for protection against neighbours as much as nomads, and watch-towers still overlook the gardens. The Marabout families have continually done their utmost to keep or restore the peace.

Although so isolated and cut up into ksars, Figuig does not ever appear to have enjoyed political unity. Each ksar has traditionally its djemā’as of administrative subdivisions which bring together the heads of families, and also its own djemā’a made up of elected notables which judges according to its khánīmās (not very differently from one ksar to another). In matters of civil law, the khádī judged according to the khár and also the ‘ārīm of the powerful Figuig has been re-united with Morocco, the meetings of the djemā’a of the ksar are presided over by the representative of the king of Morocco and the khádī is nominated by the Makhzen. The people are at the same time pious and superstitious and are fervent adepts of brotherhoods (Tayyibiyya, Kerzāziyya, Zayyānīyya, Nṣirīyya, etc.). Habous (māfy) properties are numerous but their purpose is above all to deprive women of the right of succession. Sīdī ‘Abd al-Kādīr Muhammad, patron saint of Figuig, has his khāba to the north-east of al-Hammām.

FIHL (see FASL)

AL-FIHRI, Aḥmad b. Ibrāhīm b. Abī l-Ḥasan ʿAlī b. Ahmad, composed in 632/1234 an anthology of the works of Spanish stylists and poets of the 5th/11th and 6th/12th centuries entitled Kanz al-
huttāb wa-muntakhab al-ādāb (see H. Krafft, Die ar., pers. und türk. Fäls. der k. k. orient. Akademie zu Wien, Vienna 1824, no. 147). (C. Brockelmann)

FIKH (A.), originally “understanding, knowledge, intelligence”, and applied to any branch of knowledge (as in fikh al-lughah, the science of lexicography), has become the technical term for jurisprudence, and in its widest sense covers all aspects of religious, political and civil life. In addition to the laws regulating ritual and religious observances (ibdād), containing orders and prohibitions, it includes the whole field of family law, the law of inheritance, of property and of contracts and obligations, in a word provisions for all the legal questions that arise in social life (muamallāt); it also includes criminal law and procedure, and finally constitutional law and laws regulating the administration of the state and the conduct of war.

All aspects of public and private life and business should be regulated by laws based on religion; the science of these laws is fikh.

In older theological language the word did not have this comprehensive meaning; it was rather used in opposition to ‘ilm. While the latter denotes, beside the Kur’ān and its interpretation, the accurate knowledge of the legal decisions handed down from the Prophet and his Companions (Ibn Sa’d, ii/2, 127, 17; ai-rīwāyat wa l-‘ilm, as synonyms), the term fikh is applied to the independent exercise of the intelligence, the decision of legal points by one’s own judgment in the absence or ignorance of a traditional ruling bearing on the case in question. The result of such independent consideration is ra’y (opinion, opinio prudencium), with which it is also sometimes used synonymously. In this sense ‘ilm and fikh are regarded as distinct qualities of the theologian (Nawawi, Tadhīb, ed. Wüstefeld, 703, 3); also fikh wa-rīwāya (Ibn Sa’d, v, 327, 7). The sum total of all wisdom is defined by Mudjahid (in explanation of Sūra ii, 269: man yuHa ‘l-frikma) with which fuftahd* wa-‘ulama*, i.e., those who were authorities on the transmission of hadith and āthār as well as those who were authorities on fikh and competent to give (independent) decisions, fatwād (ibd., ii/3, 126). Abū Thawr was abād ‘al-‘imām al-dunyā fikh wa-‘lim* (Dhahābī, Tabaḥāt al-buḥfas, vi, 106).

In the earliest period of the development of Islam the authorities entrusted with the administration of justice and the control of religious life had in most cases to fall back on the exercise of their own ra’y owing to the scarcity of legislative material in the Kur’ān and the dearth of ancient precedents. This was regarded as a matter of course by every-one, although they were naturally very pleased if the verdict could as far as possible be based on ‘ilm. When ‘Ata’ b. Abī Rabīḥ (d. 114/732) was giving a judgment, he was asked: “Is this ‘ilm or ra’y?” If it was founded on a precedent (athār), he said it was ‘ilm (Ibn Sa’d, v, 345). The ra’y was not, however, thereby discredited. It was considered an equally legitimate factor in the decision of a point of law and its results were destined in the near future to be regarded as the decisions of old authorities and in later times to be actually considered an element of ‘ilm. From the very beginning one could have recourse to it as soon as ‘ilm failed. According to an old story which certainly reflects the conditions of the Umayyad period, although it does not actually date from the time in which its scene is laid, Mu’awiyah finally applied to Zayd b. Thābit on a legal question, on which neither he nor other Companions to whom he propounded it could quote any ancient evidence (jalām yūgād ‘indah—or ‘indahum—fikh ‘ilm); the latter gave a verdict based on this own independent ra’y (Tabari, Taṣīr, ii, 250 ult., on Sūra ii, 228). The kūfan of Egypt asked the advice of the Caliph ‘Umar II on a point not provided for in Tradition; the latter wrote to him: Nothing has reached me on this matter, therefore I leave the verdict to you to be given according to your opinion (bi-ra’yik) (Kindī, Governors and Judges of Egypt, ed. Guest, 334; ed. Gottheil, 29) [cf. 1QTHRĀD].

This recognition of ra’y [q.v.] as an approved source of law found expression in the instructions attributed to the Prophet to the municipal governors in Egypt, in which they gave to the officials sent to administer justice in the conquered provinces, and in their alleged approval of the principles of their decisions which the judges whom they had sent out submitted to them (Goldziher, Zähirsien, 8 ff.; cf. Ibn al-Ṭāhir, Usd al-ghaṣba, i, 341; Mubarrad, Kāmil, 9 ff.; Ibn Kutayba, ‘Uyun al-ākhbār, 8). In the more elaborate versions of these reports which were developed from their original, rudimentary forms we find already mentioned explicitly the principle of deduction from decisions of similar cases (aṣbāh, nasār‘ir; cf. ‘Uyun al-ākhbār, 72), i.e., the use of analogy (biyāda, [q.v.]) as a methodological regulator of ra’y. In the investigation of the ʿišāt al-ṣāḥar, the motive of law (ratio legis), and the resulting reduction of doubtful cases to a rational point of view, we find this principle given systematic validity. At the same time—there is evidence of it at a very early period—a kind of popular element entered the number of constitutive sources for the deduction of laws: the conception of the general usage of the community (summa, [q.v.]) which had been established by general agreement or consensus (īgīma, [q.v.]) in wider circles of believers, independent of written (i.e., Kur’ānic), traditional or derived law.

This usage contained an appreciable amount of foreign elements. It was only natural that the
legal, commercial, and administrative practices which prevailed in the conquered provinces should have survived under Islam, just as ancient Arab legal and commercial practices had survived, and should have been adopted by the Muslims as far as they were compatible with the demands of the new religious ideas. That the retention of pre-Islamic legal institutions was the normal procedure is shown by a passage in Baladhuri: "Abū Yūsuf held that if there exists in a country an ancient, non-Arab summa which Islam has neither changed nor abolished, and people complain to the Calif that it causes them hardship, he is not entitled to change it; but Mālik and Shafi‘i held that he may change it even if it be ancient, because he ought to prohibit (in similar circumstances) any valid summa which has been introduced by a Muslim, let alone those introduced by unbelievers" (Futūh, 448). In this way, elements from Roman Byzantine (including Roman provincial) law, Talmudic law, the canon law of the Eastern churches, and Persian Sasanian law entered Islamic law during its formative period. The influence of Talmudic law manifested itself above all in matters of ritual and worship. Influences of Persian Sasanian law (and of the canon law of the Eastern churches) have been established in a few individual cases, but their full extent remains to be investigated. In the case of Roman law, the influence was extended not only to rules and institutions of positive law, but to legal concepts and maxims, to methods of reasoning (biyās, and conclusions a materiae ad minus and a minore ad maius), and even to fundamental ideas of legal science; for instance, the highly organized concept of the consensus of the scholars as formulated by the ancient schools of Hellenistic rhetoric had made the rationalism of the sources of legal knowledge, methodological principles from which legal rules might be legitimately derived [see USUL], the terms fiqh and jihāda gradually lost their original limitation to deductions not based on tradition. Fīkh came to mean the science which co-ordinated and included all the branches of knowledge derived from the four roots; similarly those who were masters of this science were called jihādī, i.e., jurists. Or fiqh was used for the result of deduction from the sources of positive law, the sum total of the deductions derived from them, e.g., wa-fi hādha 'l-haddīf durūd min al-fīkh (Mubarrad, Kāmil, 529, cf. WZKM, iii, 84). The Arabic sources contain numerous reports about scholars who arranged the 'ilm or summa in chapters and then deduced the fīkh inferences (Muh. Stud., ii, 211). Of 'Abd Allāh b. al-Mubārak it is said: dawān al-'ilm fi 'l-fidaw wa-'l-fīkh (Dhahabi, Tabākhat al-shufā, 21, 250); of Abū Thawr: sunna al-kutub wa-sarfā 'ala 'l-sunan (ibid., ii, 95). Little value can be attached to the statement ascribed to Ḥašām b. Uwra that many kutub fīkh of his father's perished in the flames on the day of the battle of the Harra (Biographien, ed. Fischer, 41). At that ancient period (Uwra died in 94/712, the so-called 'year of the jihādī', when many jihādīs died: Ibn Sā'īd, vi, 135) it seems improbable that Kutub still existed; the report can therefore refer, at the utmost, to rough notes only. We might also mention the statement that Zuhri's fatwās were collected in three, Ḥasan al-Bāṣrī's in seven books (asfār) arranged in the order of the ābdwāl al-fīkh (Ibn Kayyim al-Dhawāziyya, Ilām, i, 25).

In a still wider meaning, fīkh was used for religious science in general (al-Kurān wa 'l-fīkh al-Fihā in opposition to the study of poetry: Aghānī, vii, 55, 43; layasa bihim raghba fi 'l-āml wa-l raghba fi 'l-fīkh: Musnaz of Ahmad b. Hanbal, i, 155; cf. also the titles al-Fīkh al-Aḥbar and al-Fīkh al-Abat and the text of these treaties, on which see abū Manīfa). Fīkhāda was correspondingly applied to students of religion, theologians (not only students of law) e.g., Tābilī, Tāfirī, xii, 73, 78, 74; 'Abū sa‘īd ibn mādahkhiṇ (Ibn Kayyim, Al-Fihā, xii, 73), where Abū 'Ubayd al-Kāsim b. Sallām says with reference to an explanation by Abū 'Ubayda Ma‘mar of a word in the Kurān contrary to the traditional explanation: al-siyyāhā a‘īm bi ‘l-tawīl minhu, ‘the fīkhāda are more conversant with exegesis than he' (who is not a theologian but only a philologist); cf. also Ẕāhirīn, 19, 1 (I. Goldzimer/J. Schachter).

The traditional opinion of the Muslim scholars projects the origins of Islamic jurisprudence back into the generation of the Companions of the Prophet. According to it, the Caliphs of Medina and a few specialists in religious law among the Companions started to draw conclusions from the Kurān and the words and acts of the Prophet as they remembered them or as they had been reported to them, by independent reasoning; their conclusions were approved, explicitly or silently, by the other Companions and became thereby binding on the community; their Successors continued this activity and the generation following the Successors saw the foundation of the schools of religious law.

Recent historical research, however, has shown that Islamic jurisprudence came into being towards the end of the first century of the hiḍra (early 8th century, A.D.). During the last third of the 1st/2nd century, Islamic law, in the technical meaning of the term, and therefore Islamic juris-
prudence, did not as yet exist. As had been the case in the time of the Prophet, law as such fell outside the sphere of religion, and so far as there were no religious or moral objections to specific transactions or modes of behaviour, the technical aspects of law were a matter of indifference to the Muslims. Not only did Arab customary law, as modified and completed by the Kurān, survive to a considerable extent, but the Muslims did not hesitate to adopt the legal, commercial and administrative institutions and practices of the conquered territories, and even legal concepts and maxims, as far as they were compatible with the demands of the new religious ideas (see above). As supreme rulers and administrators, the Caliphs of Medina acted to a great extent as the lawgivers of the community, and they were followed in this by the Umayyad Caliphs and their governors; during the whole of the first century of Islam, the administrative and legislative activities of the Islamic government cannot be separated. The Umayyad governors also appointed the first kādīs who by their decisions laid the foundations of what was to become Islamic law. They gave judgment according to their own discretion or “sound opinion” (ra'y), basing themselves on customary practice and on administrative regulations, and taking the letter and the spirit of the law into account. Subsequent developments brought it about that the part played by the earliest kādīs in laying the foundations of Islamic law was not recognized by Islamic jurisprudence.

Towards the end of the first century of the hījra (early 8th century A.D.) only we encounter the first specialists in religious law whose activity can be regarded as historical, such as Ibn Hāthim al-Nakha'i in Kūfa, and Sa'd b. al-Musayyib and his contemporaries in Medina. They were pious persons whose interest in religion caused them to survey, either individually or in discussion with like-minded friends, all fields of contemporary activities, including the field of law, from an Islamic angle, to impregnate the sphere of law with religious and ethical ideas, and to urge upon the communities (ra'y, istihsān, iṣlāh; q.v.) the ideal practice of the local community and the

a considerable body of common doctrine but the essentials of a legal theory the central idea of which was that of the “living tradition of the school”. This idea dominated the development of Islamic jurisprudence during the whole of the 2nd/8th century. Retrospectively, it appears as sunna or “practice” (amal), i.e., the ideal practice, the practice as it ought to be, or “well-established precedent” (sunna mādiyya) or “ancient practice” (amr kadim). Synchronously, it is represented by the consensus (ijmā'1, al-amr al-mudjama'1 sālih), the common doctrine of the majesty of the representative religious scholars of each centre (cf. above). Originally, the living tradition of the ancient schools was anonymous; it was the average opinion of their representatives that counted, and not the individual doctrines of the most prominent scholars. From the first decades of the 2nd/8th century onwards, however, it began to be projected backwards and to be ascribed to some of the great figures of the past. The earliest specialists, such as Ibrāhīm al-Nakha'i, had not done more than give opinions on questions of ritual and perhaps on kindred problems of directly religious concern, cases of conscience concerning alms-tax, marriage, divorce, and the like, and technical points of law appeared only at the stage of doctrine represented by the teaching of Hāmid b. Abī Sulaymān al-Kūfī al-Madhar. This teaching, which found particular favour in Irāk, scholars used to put their own doctrines under the aegis of their masters. In this way, the main contents of the Kitāb al-Āthār of Abū Yūsuf and of the Kitāb al-Āthār of Shaybānī represent themselves as having been derived from Abū Ḥanīfah, “from” (amr) Hāmid, “from” (amr) Ibrāhīm. The Medinean followed suit, and projected their own teaching back to a number of ancient authorities who had died in the last years of the first or in the very first years of the second century, seven of whom were later singled out to form the group of the so-called “seven lawyers of Medina” (fukhād al-Madīna al-sab'a): Sa'd b. al-Musayyib, Umary b. Zubayr, Abī Bakr b. Abī al-Rahmān, Ubayd Allāh b. Abī Allāh b. ʿUthma, Khālid b. Sa'd b. Sa'd b. Dār biʿr, Yaṣār, and al-Kāsim b. Muḥammad b. Abī Bakr). The transmission of legal doctrine in Hījāz becomes ascertainable at about the same time as in Irāk, with Zubrī (q.v.); d. 124/742) and his younger contemporary Rābi'a b. ʿAbī al-Rahmān for Medina, and with ʿAtā' b. Abī Rabāḥ for Mecca. At the same time at which the doctrine of the school of Kūfa was retrospectively attributed to Ibrāhīm al-Nakha'i, a similar body of doctrine was directly connected with the very beginnings of Islam in Kūfa by being attributed to Ibn Masʿūd (q.v.), a Companion of the Prophet who had come to live in that city, and Ibrāhīm al-Nakha'i became the main transmitter of that body of doctrine, too. In the same way, another Companion of the Prophet, Ibn ʿAbbās (q.v.), became the eponym of the school of Mecca, and the school of Medina claimed as its main authorities among the Companions of the Prophet the caliph ʿUmar (q.v.) and his son, ʿAbd Allāh b. ʿUmar. One further step in the search for a solid theoretical foundation of the doctrine of the ancient schools was taken in Irāk, very early in the second century of Islam, by transferring the term “sunna of the Prophet” from its political and theological into a legal context and identifying it with the sunna, the ideal practice of the local community and the corresponding doctrine of its scholars. This term, which was taken over by the school of Syria,
expressed the axiom that the practice of the Muslims continued the practice of the Prophet, but did not yet imply the existence of positive information in the form of "traditions" (hadith) that the Prophet by his words or acts had in fact originated or approved that practice.

It was not long before there arose movements of opposition to the opinions held by the majorities in the ancient schools. In Kūfah, where Ibn Mas'ūd had become the eponym of the school, the doctrines which were put forward in opposition to it and which do not cohere the condescending teaching of any one group were regularly attributed to the caliph ʿAll (q.v.), who had made Kūfah his headquarters, not indeed on account of any Shiʿi bias, which is absent from them, but because the name of ʿAll represented an authority equal to and possibly even higher than that of Ibn Mas'ūd. These opinions generally did not prevail in the school of Kūfah, but in Medina the corresponding doctrines succeeded in gaining recognition to a considerable extent. In contrast with the opposition in Kūfah, the opposition in Medina already reflected the activity of the Traditionists. The movement of the Traditionists (ahl al-hadith, [q.v.]) is the most important single event in the history of Islamic jurisprudence in the second century of the hijra; it opposed to the "living tradition" of the ancient schools, which was to a great extent based on raʾy, the authority of individual traditions (hadith, [q.v.]) from the Prophet which his adherents put into circulation in ever increasing numbers. According to the traditionists, fiqh had to be based exclusively on traditions from the Prophet, whom they reported as having said: "Luck to the man who hears my words, remembers them, guards them and hands them on; many a transmitter of fiqh is no fiqhi himself, and many a one transmits fiqhi to a person who is a better fiqhi than he is!" (Shāfiʿī, Risāla, 55, 65). Traditionists existed in all great centres of Islam, where they formed groups in opposition to, but nevertheless in contact with, the local schools of law, and the polemics between them and the ancient schools occupied much of the religious controversy. But the ancient schools had no real defence against the rising tide of traditions; they had to express their own doctrines in traditions which allegedly went back to the Prophet and to take increasing notice of the traditions produced by their opponents, and finally the outlines and many details of Islamic jurisprudence were cast into the form of traditions from the Prophet. Later Muslim scholars, who in the nature of things were unable to acknowledge such a fundamental change in the bases of Islamic legal thought, represented this struggle as a struggle between the aḥl al-hadith and the imaginary group of the asḥab al-raʿy ([q.v.]). The Traditionsists of the 3rd/9th century attacked the ʿIrāqians and the school of Abū Ḥanīfa with particular venom, and castigated their use of the formula araʾya yāta, "what do you think of . . . supposing . . . " as typical of the casuistry of the asḥab al-raʾy.

The literary productions of Islamic jurisprudence begin soon after the middle of the 2nd/8th century (the Madāʾīn al-fiqh attributed to the Shāfiʿī pretender Zayd b. ʿAll [q.v.], who died in 122/740, though of an early date, is not authentic; cf. Bergsträsser, in OLZ, 1922, 114-24; Strothmann, in ISL, xiii (1923), 27-40, 49), and from then onwards its development can be followed step by step from scholar to scholar. For ʿIrāk, and Kūfah in particular, successive stages are represented, after Ḥammād (d. 120/738; see above), by the doctrines of Ibn ʿAbī Laylā ([q.v.]; d. 148/765), of Abū Ḥanīfa ([q.v.]; d. 150/767), of Abū Yūsuf ([q.v.]; d. 182/798), and of Shabīb ([q.v.]; d. 185/809) respectively. Outside the line of doctrine represented by the ʿAshʿarīs, Abū Ḥamīd—ʿAṣkhārī stands another scholar of Kūfah, ʿUṣayn al-Ḥawārī ([q.v.]; d. 161/778); his doctrines are known to us through the Kitāb ʿIḥšāṣ al-fuḥahāʾ of Tabarī ([q.v.]; d. 310/923), which also contains information on other early lawyers. The Syrian Awaʾī ([q.v.]; d. 157/774) represents an archaic type of doctrine, which put us very near to the beginnings of Islamic jurisprudence. Mālik b. Anas ([q.v.]; d. 179/795) in his Muwattaʾ aimed at expounding the average doctrine of the school of Medina in his time. Much information on the opinions of Mālik himself, of his disciple Ibn al-ʿĀṣim ([q.v.]; d. 191/806), and of the older authorities of Medina is contained in the Mudawwana of Ṣaḥmūn ([q.v.]; d. 240/854).

Shāfiʿī ([q.v.]; d. 204/820) belonged originally to the school of Medina, but he accepted the thesis of the Traditionists on the overriding authority of the traditions from the Prophet, identifying their contents with the sunna, defended it in vigorous polemics with the followers of the ancient schools, elaborated on its basis a new body of doctrine by which he cut himself off from the continuity of doctrine in the ancient schools, and composed in his Risāla the first treatise on the method of legal reasoning, becoming thereby the founder of the science of usūl al-fiqh (see USUL). (In contrast with the usūl, the "roots" or sources of legal knowledge, the body of positive rules derived from them is called furiʿ, plural of furʿ, "branches"; the earliest existing work of pure furʿ, presented in a didactic manner, is Shabībīn al-ʿĀṣim. Shāfiʿī's writings, which to a great extent are cast in the form of dialogues with unnamed opponents and most of which were brought together by his disciples in a collection which received the name of Kitāb al-Umm, are an important source for the history of Islamic jurisprudence in the second century. Shāfiʿī was not a mere Traditionist; on the contrary, he deplored the relaxation of their faulty reasoning, and himself excluded their reliance on traditions from the Prophet by systematic legal thought (ʾaḥl, matḥal) of exceptionally high quality, excluding raʾy and istiḥsān and insisting on strict biyās. It happened, however, that some of his disciples, and in particular Ahmad b. Ḥanbal ([q.v.]; d. 241/855), emphasized the traditionist element in his doctrine and derived their legal teaching exclusively from traditions, avoiding human reasoning as far as possible. This avoidance of drawing conclusions was erected into a principle by Dāwūd b. Khalaf ([q.v.]; d. 270/884), called al-ʿZāhirī because he relied exclusively on the literal meaning (ẓāhir) of Ḥarām and Ḥadīṣ and rejected not only raʾy and istiḥsān but reasoning by biyās as well.

About the middle of the 2nd/8th century, groups or circles within the ancient schools of law began to form themselves round individual masters, such as the "followers of Abū Ḥanīfa" within the school of Kūfah, and the "followers of Mālik" within the school of Medina. Several factors favoured this process, and by the middle of the 3rd/9th century the ancient schools of law had transformed themselves into "personal" schools, which perpetuated not the living tradition of a city but the doctrine of a master and of his disciples. In this way, the bulk of the ancient school of Kūfah transformed itself
into the school of the Ḥanafīs, another group of scholars into the school of Sufyan al-Thawri, the ancient school of Medina into the school of the Mālikīs, and the ancient school of Syria into that of Awzāwī. Although Shāfiʿī had disclaimed any intention of founding a school, his disciples, being neither mere Traditionists nor members of another school, became his personal followers, and the doctrinal movement started by him has always been known as the Shāfiʿī school. The school of legal thought originated by Ahmad b. Ḥanbal, too, became known as the school of the Ḥanbalis; this school never absorbed its parent movement, that of the Traditionists, as completely as the Ḥanafī and Mālikī schools absorbed theirs. The followers of Dāwūd b. Khalaf al-Zāhirī formed the only school of law whose name, Zāhirīyya [q.v.], is derived from a principle of legal theory. These and some other later schools of law (such as a short-lived one founded by Ṭabarī) are called madhhabī (pl. of madhhab, "way of thinking, persuasion"). Since about 700/1300 four of them only have survived in orthodox Islam, the Ḥanafī, Mālikī, Shāfiʿī and Ḥanbali schools (cf. Ḥanābilī, Ḥanafīyya, Mālikīyya, Shāfiʿīyya); they are regarded, and regard one another, as alternative and equally valid interpretations of the religious law of Islam. Notwithstanding their divergent doctrinal roots, the orthodox scholars share a common legal theory (cf. usūl), which asserted itself in the 3rd/9th century, and which accepted Shāfiʿī's (and the Traditionists') principle of the overriding authority of the traditions from the Prophet as the only evidence of sunna but subordinated its practical application to the consensus of the scholars. The theory of the usūl al-fikhl is therefore of little direct importance for the positive doctrines of the schools of law. From the middle of the 3rd/9th century, too, the idea began to gain ground that only the great scholars of the past had the right to independent reasoning in law (idīthkād [q.v.]), and in the 4th/th century a consensus gradually established itself in orthodox Islam to the effect that all future activity would have to be confined to the explanation, application, and strengthening of the usūl. This is why the doctrine of the fātahān, or the omission of tashuq, had to be laid down once and for all (tāḥīd [q.v.]). This implied the obligation to join one of the existing schools. Even under the rule of tāḥīd, Islamic jurisprudence did not lack manifestations of original thought in which the several schools competed with and influenced one another. But this original thought could express itself freely in nothing more than abstract systematic constructions which affected neither the established doctrine of positive law nor the theory of the usūl al-fikhl. New sets of facts, too, constantly arose in life, and they had to be decided by the specialists with the traditional tools of legal science; such a decision is called fatwa [q.v.], and the scholar who gives a fatwa is called muftī. Once recognized as correct by the common opinion of the scholars, the decisions of the muftis became part of the doctrine of each school. The activity of the muftis is essentially of the same kind, though carried out against a different background, as that of the first specialists in religious law.

The legal doctrines of the Khārijīs [q.v.] and of the Shīʿa [q.v.], which split from the orthodox or Sunni majority on political grounds about the middle of the first century of Islam (ca. 660 A.D.), differ from those of the Sunni in the question of the leadership of the community [see imām] and consequential questions of usūl, but on other questions they do not differ from those of the orthodox schools of law more widely than these last differ from one another. From this, it must not be concluded that the features common to Khārijīs, Shīʿa, and Sunni law are older than the schisms which split the Islamic community within its first century. For a considerable period, and during the 2nd/8th and 3rd/9th centuries in particular, these ancient sects remained in a sufficiently close contact with the Sunnis for them to adopt the doctrines which were being developed in the orthodox schools of law, introducing only such superficial modifications as were required by their particular political and dogmatic tenets. Certain doctrines which in themselves were not necessarily either Shīʿa or Sunni became adventitiously distinctive for Shīʿa as against Sunni law.

When the Umayyads were overthrown by the ʿAbbāsids in 132/750, Islamic jurisprudence, though still in its formative period, had acquired its essential features. For reasons of dynastic policy, and in order to differentiate themselves from their predecessors, the ʿAbbāsids posed as the protagonists of Islam, recognized Islamic law as it was being taught by the pious specialists as the only legitimate norm in Islam, and set out to translate their doctrines into practice. They regularly attracted specialists in religious law to their court and made a point of consulting them on problems that might come within their competence. At the request of the Caliph Hārūn al-Rashīd, Abu Yusuf wrote his Kitāb al-Kharājī, a long treatise on public finance, taxation, criminal justice, and connected subjects. The ʿkādās, who under the Umayyads had been appointed by the governors, were now appointed by the caliph, they had to be specialists in religious law, and they had to apply nothing but the sacred Law, without interference from the government [see kāf]. But this effort to translate into practice the ideal doctrine which was being elaborated by the specialists, was short-lived. The early specialists who had formulated their doctrine not on the basis of but in a certain opposition to Umayyad popular and administrative practice had become adherents of reality, and now they had to yield. The ʿAbbāsids and their religious advisers were unable to carry the whole of society with them. The ʿkūdās, theoretically independent though they were, had to rely on the political authorities for the execution of their judgments, and, being bound by the formal rules of the Islamic law of evidence, their inability to deal with criminal cases became apparent, so that the administration of the greater part of criminal justice was taken over by the police (ṣūrta [q.v.]). The administrative "investigation of complaints" [see māzālim] very soon led to formal Courts of Complaints being set up, which by the very existence show the breakdown of a considerable part of the administration of civil justice by the ʿkūdās as well. [See also siyāsā.] In this way, a double administration of justice came into being, and it has prevailed in most Islamic countries, the competence of the ʿkūdās' tribunals being restricted to matters of family law, inheritance, and washā. [See maḥkāmah.]

This is one aspect of the tension between theory and practice (ṣūda, ʿurf [qq.v.]), between jurisprudence and customary law, which existed in Islamic law from its very beginnings. The most remarkable and, for a time, the most successful effort on the part of a state of high material civilization to bridge this gulf, was made in the Ottoman Empire [see ʿarb l-suʿūd, kānnūn-nāme, šaykh al-islām]. Islamic
jurisprudence, too, took notice of the practice which it could not overcome, and tried at least to control and regulate it in the works on *amal, on *muqaddasat, and on *shari'a, which form an important branch of its literary productions.

Until the early Abbasid period, Islamic jurisprudence had been adaptable and growing, but from then onwards it became increasingly rigid and set in its final mould. This essential rigidity helped it to maintain its stability over the centuries which saw the decay of the political institutions of Islam. Taken as a whole, it reflects and fits the social and economic conditions of the early Abbasid period. If it grew more and more out of touch with later developments of state and society, in the long run it gained more in power over the minds than it lost in control over the bodies of the Muslims. The *fikr is, in the words of Snouck Hurgronje, a "doctrine of duties", the interpretation of a religious ideal not by legislators but by scholars, and the recognized handbooks of the several schools are not "codes" in the Western meaning of the term. Islamic law is a "jurists' law" par excellence: Islamic jurisprudence did not grow out of an existing law, it itself created it. [See also *GAHARIA.]

In British India and in French Algeria, Islamic jurisprudence, being fused with Western legal thought, was a recipient of Fikr legislation, Fikr being the general formal principles which were elaborated by the early Islamic jurists. Both tendencies are inspired by the desire to put a new Islamic jurisprudence in the place of the old one. [See KANUN.

FIKR, pl. *afkār, thought, reflection. The Kur'ān employs the 2nd and 5th forms of the root *fbr, to urge men "to reflect". In the vocabulary of falsafa and *ilm al-halām, the *masdar *fikhr denotes the intellectual faculty in the act of thought, reflecting upon an object of intelligibility. It is distinguished from *idrāk, the intellectual faculty of grasping, of perception. The result of the operation of *fikhr is expressed by the noun of unity *fikra.

In tasawwuf, *fikhr is used habitually in contrast to *dhikr [q.v.], recollection. *Fikhr can thus be translated by reflection or meditation. In the performance of *fikhr the *Ṣūfī, concentrating upon a religious subject, meditates according to a certain progression of ideas or a series of evocations which he assimilates and experiences; in *dhikr, concentrating on the object *fikhr is recollected as a part of the *idrāk field of consciousness. But in the reply of Iblis upon an object of intellection, he allows his field of consciousness to lose itself in this object: hence the importance granted to the technique of repetition, at first verbal, later unspoken. The "meditations" of al-Ḥallāj on the "night-journey" and "ascension" (miʿraj) of the Prophet, or on the meeting of Moses and Iblis, can be taken as examples of *fikhr. Another instance of it will be found in the "scrutiny of conscience" (*khisb) advocated by al-Muḥāṣibī.

The problem of the respective merits of *fikhr and *dhikr confronted the *Ṣūfīs of the first centuries. Al-Ḥasan al-Ṭasawi argued that upon *fikhr is, he said, "the mirror which makes you see what good there is in you, and what evil". The Muʿtazila, the Karrāmiyya and the Imāmīyya taught that reflection must precede recourse to *sunnah, scriptural or traditional authority; hence, in their view, the superiority of *fikhr to *dhikr. Al-Ḥallāj, notes L. Massignon, "does not make a decision": he considers both methods to be legitimate, since both must lead to the Goal, but only on the condition that the "initiate" (ṣīḥ) should not cling to his approach as an end in itself. In a celebrated passage of his meditation on the miʿraj̱, he speaks of the "garden of *fikhr" which Muhammad visited "without deviating", and of the "process of *fikhr" which he followed without "passing beyond".

However, al-Ḥallāj also seems to have given his preference to *fikhr rather than *dhikr. Some of these texts follow this trend. But it is evident that in these texts *fikhr must not be rendered solely by "discursive meditation", the effort of the spirit following the human method of procedure, as distinct from the "passive" state of recollection in prayer. *Fikhr is clearly distinguished from *ḥads, just as reflection is distinguished from an intellectual flash of illumination or intuition. But in the reply of Iblis to Moses, the Kitāb al-Tawāsīn contrasts al-fikra (*"pure thought", following Massignon's translation) with *dhikr: "O Moses, pure thought (*fikra) has no need of recollection (*dhikr)". The fact is, al-Kalbāḏjī explains in commenting on a passage of al-Ḥallāj, that the passive *fikhr are recollected for the soul, while meditations (*afkār) guide the initiate towards the single divine majesty, the reverential
fear of God, His favours and His gifts. Dhikr appeals to the organs of the senses (the tongue, the physical heart), fikr purely to intellectual concentration. By means of dhikr and its rhythmical use of oral prayers the Şafi‘ is almost certain to succeed in attaining subjective spiritual “states” (akhūd); fikr tends to put him within the possibility of experiencing transcendent truths.

But in the event, it was the superiority of dhikr to fikr which was to be most generally affirmed. There was distrust of the illusions which the practice of fikr could engender: as early as the 3rd/9th century, Khaṭṭābī Nīsārī said that, “some, by force of ‘meditation’, claim to enjoy in this world the spiritual life of God, the angels and the prophets, and to feast with the jāhīr” (quoted and trans. Massignon); whilst dhikr, though appealing as it does to the organs of the senses, at least has the merit of depriving the spirit of everything other than the object recollected. Monographs were written on dhikr, its techniques and achievements, but not on fikr and its methods.

There remains the fact that the gnostic soarings of those who profess wakādat al-‘uṣūdīd (“Unity of Being”) can be regarded as deriving from a fikr in which the use of typified symbols replaced the “process” of discursive reasoning.

(L. Gardet)

Fikret, Teyfik [see Teyfik Fikret]

Fikrī, ‘Abd Allāh Pasqa, an Egyptian statesman, poet and prose-writer, regarded as one of the authors who have helped to give a simpler, more modern character to Arabic literary style. Born in 1250/1834 in Mecca where his father, an Egyptian officer, was serving, and later brought up in Cairo, he studied at al-‘Azhar and consorted with the Sūfis. From 1267/1851 he was an administrative official and attracted the attention of Khudive Isma‘īl who, in 1284/1866, chose him to teach Arabic and Persian and conducted his son’s Tawfik, Hasan and Husayn. His biographers reveal him to be a man of integrity, with sincere religious beliefs, and distinguished by his family’s piety (his paternal grandfather ‘Abd Allāh taught at al-‘Azhar). He often visited Istanbul on official missions. In 1870 he took part in founding the Khedivial library, as the subordinate of AH Pasha Mubarak C. In 1871 he was serving, and later brought up in Cairo, he studied at al-‘Azhar and consorted with the Sūfis.

After his death, his son ‘Amm Pasqa Fikri published a collection of his father’s poems, letters, etc. under the title al-Al‘īr al-Fikriyya, Cairo 1315, and a description of his father’s travels under the title al-Buld al-‘Arabī ilā misrādūn ilmūk, Cairo 1892. The list of his other writings is given in Brockelmann, II, 474 ff. and Suppl., and also in his biographies.

talks to it in an Indian language. It possesses a curious gift for imitation and has the ability to choose the best moment to wreak its vengeance. It takes to flight at the approach of the rhinoceros, which is thought to be able to lift it up with its horn; similarly, the lion utterly terrifies it, and the cat profits from its resemblance to the king of beasts, so much so that one way of effectively dealing with a lion containing war-elephants is, on their approach, to release a battery of cats which have been kept in readiness in sacks. Its worst enemy is, however, a small creature called the sobrah, which kills it by spraying it with its urine.

The Arab authors are aware that the elephant lives in Africa also, but in the wild state, and al-Mas'udi (Muradji, iii, 5-7) relates how the Zandj set about killing it and taking its tusks. Al-Dimaghj, for his part, gives details of the way in which a wild elephant is captured by trapping it in a pit; men wearing brightly coloured clothes maltreat it and strike it, but a trainer, dressed in white, drives them away and starts to tame the animal by giving it food; after a certain time the hunters return, and the same manoeuvre is repeated until the elephant has enough trust in the fayyds to allow itself to be ridden.

To judge by the tales of travellers, geographers and historians, the various Indian sovereigns used by tradition to keep a varying but very large number of elephants for ceremonial use and for war. With the body shielded by bands of iron and cork, and the trunk protected by a curved saber (kartal), each war-elephant was accompanied by 500 men who in turn preceded 5,000 horsemen. Ibn Battuta says that he had seen some trained for executions.

The existence of certain elephants in Irak is attested by the texts; thus, it was on a grey elephant offered by an Indian king to al-Ma'mun that al-Mu'tasim in 223/838 had his prisoner Babak (q.v.) carried to Samarra, before handing him over to the executioner; similarly, at about the same period, al-Dhahbi was able to see some for Baghdad, and he takes part in conversations in which the respective merits of the camel and the elephant were debated. In general, however, this animal remained purely an object of curiosity throughout the Muslim world west of India, with the possible exception of East and West Africa. On the other hand, ivory was well known and was used in the making of various articles (see 416).

When seen in a dream, the elephant generally presages some important business, it is capable of more varied and subtle interpretations.

(J. Ruska-Ch. Pellat)]

**As beasts of war.** The use in western Asia of elephants for war stems from India. They were used in the warfare described in the Mahabharata and their tactical use is discussed in Kautilya's Artakhadatra. From this treatise we learn certain facts which remain valid in the Indo-Persian world of the Islamic period: that elephants were regarded as a royal monopoly and private possession of them was forbidden, and that they might be provided with armour plating and have mounted on their backs archers, swordsmen and mace-bearers (cf. B. P. Sinha, The art of war in ancient India 600 B.C.-300 A.D., in Cahiers d'Histoire Mondiale, iv, 1957, 132-6, and S. H. Hidivala, Studies in Indo-Muslim history, Bombay 1939, 139-40). From India, their use passed to Achaemenid Persia. Alexander the Great first met Persian elephants when he defeated Darius III at Arbela in 331 B.C.; the Greek rulers in Bactria used them; Seleucus I introduced them to Syria, and the later Seleucids used them against Rome.

The Sassanids regularly used war elephants (Mas'udi, Muradji, ii, 230; Christensen, L'Iran sous les Sassanides, 208). At Kadijsiyiya in 14635, the Persian general Rustum deployed thirty of them in his centre and on his wings, and their appearance spread terror amongst the Bedouins; the Arabs finally stopped them by cutting their girbs and dislodging the troop-laden howdahs, and also by attacking vulnerable parts like the eyes and trunks (Sir W. Muir, The Califate, its rise, decline and fall, Edin- burgh 1915, 102 ff.). Despite new contacts with the Persian world, the military use of elephants did not spread during the Umayyad and early 'Abbâsid periods. They were imported into the Caliphal lands from the fringes of the Indian world, the Indus, Makrân and Sind (cf. Tabari, i, 2708, and Ibn al-Ajurir, vii, 89), but they were mainly used as stately mounts on ceremonial occasions; the Caliph al-Manşûr is said to have favoured them for this (Muradji, iii, 18-20). The Buwayhid 'Aqûd al-Dawla had a number of war elephants, fuyûl makâhî, which he used in battle, but it is not recorded that they played any significant part in the fighting (Miskawayh, Eclipse of the 'Abbasid Califate, ii, 368, tr. v, 402).

It was the Ghaznavids, the first Islamic dynasty whose empire spanned both the Persian and northern Indian worlds, who first used elephants in large numbers for military purposes and who first assigned them a definite place in their tactical theory. The next two centuries, the 5th/tenth and the 6th/eleventh, were the heyday of the elephant as a military weapon in the Islamic world. Sebûtqîtin and Mahmûd of Ghazna captured elephants in hundreds from the Indian princes. These beasts fell within the Sultan's fifth of plunder. Their use was jealously guarded by the Sultans and by their successors in northern India, the Ghorids and the Slave Kings of Delhi, and only as an exceptional mark of favour were they bestowed on great men of state. Armour plating was often placed over their heads and faces. In battle, they were usually placed in the front line; their metal accoutrements and ornaments were jangled to make a terrifying din, and they were then stampeded towards the enemy. This tactic was used with demoralizing effect on the Karakhânids in 398/1008 and 416/1025 (cf. C. E. Bosworth, Ghaznavid military organisation, in Der Islam, xxxvi (1960), 61-4, and M. Nâzîm, The life and times of Sultan Mahmûd of Ghazna, Cambridge 1931, 139).

Influenced by Ghaznavid practice, the sporadic use of elephants is recorded in the empire of the Great Saljuqs from the time of Berk-yâruk onwards, especially in Khurasan and the east. At the battle outside Ghazna in 310/1116-17, Sandjar's Saljuq troops were initially thrown into confusion by the sight of the fifty elephants of the Ghaznavid Arslân Şâh, but they dealt with the beasts by ripping open the soft under-belly of the leading elephant and
stamping it back into its own camp (Bosworth, op. cit., 64). When Sangjar defeated his nephew Mughammad b. Mughammad at Siwa in 513/1121, he had in his forces forty elephants with troops mounted on them (Ibn al-Djawal, al-Manasad, ix, 205; Ibn al-Athir, x, 387). The Ghurids used elephants in their warfare with the Kh'azirim Shàhs, and beasts captured from the Ghurids were used by 'Ala' al-Din Mughammad for the defence of Samarqand against the Mongols in 617/1220 (Diuiwany, tr. Boyle, i, 117, 322-3). Although the Kara Khitai used elephants captured from the Kh'azirim Shàh for their assault on Balsàghân, the use in war of these slow-moving and cumbersome beasts did not commend itself to the swift-moving Mongol cavalrymen. After he had taken Samarqand, Cingiz Khàn refused to allot fodder for the elephants captured there, and they were turned out in the steppe to die of hunger (Diuiwany, tr. Boyle, i, 290, 360).

Outside Muslim India, elephants never thereafter regained their popularity as tactical weapons of war, although they were still used in the Persian world for ceremonial occasions.

Bibliography (in addition to the references given above): B. Spuler, Iran in früh-islamischer Zeit, 492-3; C. E. Bosworth, The Ghaznavids: their empire in Afghanistan and eastern Iran 994-1040, Edinburgh 1963, 115-18. (C. E. Bosworth) Iconography. The earliest known representation of an elephant in Islamic art is the so-called Elephant Silk, perhaps from Khuràsân, which was originally in the church at St. Josse-sur-Mer, Pas-de-Calais, and is now in the Louvre. In company with other decorative motifs, it shows elephants in yellow confronting each other which have been reproduced in terms of inlay. The colours are a deep purple for the ground, with clear blue and tan which may have once been red. Each elephant bears elaborate trappings and a saddle-cloth. Although the colours are sumptuous enough, the design of this piece of silk is rather crude. The Kufic inscription in yellow below the two elephants mentions the name of Abu 'l-Mansûr Bahgît-efnî, an Amir of Khurâsân whose death took place in 997. Part of a similar elephant pattern is found on a fragment of silk at Siegburg which is of uncertain date. The treatment is again very stylised, the elephant having an excessively thin trunk and jointed legs. Met (Renaissance, 437: English trans., 465) mentions that elephant designs were used in the decoration of carpets made at Hira. In this connexion some fragments of a carpet bearing an elephant's head are now in the Musée des Arts Décoratifs at Paris.

Elephants appear only very rarely in Islamic metal work. Some bronze incense-burners, supported by small figures of elephants, are known. In the Pennsylvania Museum of Art is a panel from Rayy showing a king seated on a throne which rests on the backs of elephants. This may possibly represent Toghrîl (d. 590/1193-4).

Several early examples are known of the elephant in its role as one of the pieces in the game of chess. These ivory chessmen can be paralleled by a small ivory casket from Cordova are in the Victoria and Albert Museum. A panel on one of these represents a person of rank travelling in state upon an elephant. This bears the date 359/969-70. Another, which is probably early 9th/11th century, has a number of circular panels each bearing a pair of different animals facing each other. One panel contains elephants with bushy tails upon the backs of which peacocks are resting.

In contrast to most of the elephants mentioned above, those depicted on Islamic pottery are more faithfully drawn. Examples are fairly numerous, the majority showing a king with two or more attendants riding in an elaborate howdah. This may represent Bahram Gur's return from Sindh. One plate in the Possession Moussa is dated 616/1219-20. Others, with the same scene, are in the Freer Gallery at Washington, the Possession Rabenou and the Collection Allan Balch. These are mostly miniatures, some from Rayy, belonging to the first half of the 7th/11th century. A spotted elephant with rich caparison appears on a star-shaped basin in a Kâşân lustre ware. Other ceramic objects of artistic merit with elephants are a basin from Amul with some Chinese characteristics now in the Art Institute of Chicago, a bowl and a pitcher in the Louvre, and a plate in the Kelekian Collection which was formerly on exhibition at the Victoria and Albert Museum.

Copies of the Mânasîf al-khâ专业人士' (ib Bukhtubî who with their wealth of animal paintings provide us with several pictures of elephants in which an attempt has been made to show every detail. The older copies were made and illustrated in the 7th/13th century. A bluish elephant with gilded saddle and a trunk composed of a series of loops (Pl. xx) appears in a British Museum manuscript of this work (OR. 2704, f. 136v). Another, better known, is the famous Elephant in a manuscript illustrated towards the end of the 7th/13th century for GÂhân Khàn at Marâgha which is now in the Morgan Library at New York. The two elephants, each adorned with gold circlets bearing bells around their trunks, are barely able to bear the weight of animal paintings which give us an accurate representation of an elephant encountered.

The best sources of elephant miniatures are the illustrated copies of the Shâh-name of Firdawsi. Scenes like Rustam killing the White Elephant or lassoing the Kâshân of Çin, the death of Tâhland (Pl. xxii), and Iskandar's battle with Fûr have all provided much scope for the portrayal of elephants, ranging from exact drawings to figures of somewhat bizarre appearance, like those in mediaeval bestiaries (e.g. B.M. MS. Harl. 3244 f. 39r°). In some Shâh-name illustrations the heroes bear the device of an elephant on their banners. Other literary themes in which elephants appear—but rather less frequently—are the story in the Mathnawî of Rûmi of the elephant who trampled to death the travellers who had eaten his call (Pl. xxii), the 'Aâdîb al-mahdîhât of Kâzêmîn, and the Court of Solomon (Sulàmûn) where an elephant sometimes appears among the animals grouped around the throne with angels and djinn.
The earliest appearance of an elephant in the Islamic art of India is probably an ivory chessman bearing an Arabic inscription on its base in the Cabinet des Médailles of the Bibliothèque Nationale. This piece was reputed to have been sent by Hārūn al-Rashīd to Charlemagne, and certainly formed part of the Treasure of St. Denis as early as 1505. The elephant is shown in battle, unhorning an enemy rider. On its back a king sits in a howdah, the exterior of which is fashioned in the form of a wall, guarded by soldiers with swords and round bucklers. Although some authorities have dated it much earlier, the latest study suggests that it was made in Gudjarāt in the 8th/14th or 9th/15th century. Two stone elephants which were discovered in the Red Fort of Dihili now flank one of the doorways. It is thought that they were made in the reign of Akbar.

With the flowering of Mughal painting which began during this period, elephants appear with increasing frequency. Several of the finest examples from the artistic point of view are in the Akhbar-nama at the Victoria and Albert Museum. One shows Akbar crossing a river mounted on an elephant. A painting of the reign of Dīghāṅḍrī depicts elephants fighting and is in the Metropolitan Museum, New York.

Even though elephant heads are found in one of the Fāṭiḥ Albums at Istanbul, these have been proved by Ettinhausen to be Timurid work of the 9th/15th century. One example is known of a very life-like elephant's head as a gold marginal ornament in a British Museum manuscript (OR. 2708) which was apparently painted during the third quarter of the 10th/16th century. Otherwise most of the relatively few Ottoman drawings of elephants resemble more or less that upon which Sitt Khātun, the wife of Meḥmemmed (Muhammad) II, is seated in a Byzantine miniature now in the Bibliotheca Marciana at Venice. This elephant is closely akin to those depicted in mediaeval Western manuscripts. A very similar elephant is to be seen in the Hūmūyūn-nāme of 'Alī Celebi (B.M. ADD. 15153, f. 385v, dated 997/1589) illustrating the story of King Hilar of India.

In the field of sculpture, there is a stone slab at Konya showing an elephant being pursued by a griffin. This was built into the wall of the Saldjukid citadel, dating from the early part of the 10th/16th century.

AL-FIL, is the title of the early Meccan Sūra cv which deals with God's judgment on the "men of the Elephant." This is an allusion to a story which must have been very familiar to the Meccan contemporaries of the Prophet; the background of the allusion is explained by the commentators and historians as follows. The Yemenite king Abraha [q.v.], bent on a policy of destroying the power of the Meccan sanctuary, led an expedition against Mecca, hoping to destroy the Ka'ba, and the expeditionary troops were supported by an elephant (some versions say more than one). But on arriving at the frontier of Meccan territory, the elephant kneeled down and refused to advance further towards Mecca, although when his head was turned in any other direction he moved. Flights of birds then came and dropped stones on the invading troops, who all died. The authority of 'Ikrima [q.v.] is given for the rationalizing explanation that they were in fact smitten by an epidemic of smallpox. Abraha himself is said to have been afflicted with a loathsome disease and carried back to Yemen to die. For the student of Islam, the main relevance of the episode is that the birth of the Prophet is said to have taken place at this time, in the "year of the Elephant". And according to the commonly accepted chronology of the Prophet's life, this event would have to be dated in or around 570 A.D.

Not unnaturally, the South Arabian inscriptions contain no direct reference to this disaster. The possibilities involved are, however, illustrated by an earlier occasion described in the Murayghan inscription, Ryckmans 506. This records that while Abraha was campaigning in central Arabia against Ma'add, who were subject to the suzerainty of the kingdom of Hira, another part of the South Arabian army was operating in the Ḥijāz and inflicted a defeat on a tribal confederation of the ʿĀmir b. ʿAṣaʿa [q.v.] at the oasis of Turaba (approximately 100 km. due east of Taʾif). This is dated in 662 of the Sabean era, i.e., the late forties or early fifties of the sixth century A.D.; in any case it cannot be later than 554 A.D., since it mentions al-Mundhir (who was assassinated in that year) as king of Hira. How much later than this we can reasonably date the "year of the Elephant" is problematical. But the fairly substantial cluster of texts from the decade or so preceding the Murayghan inscription, coupled with the complete cessation of South Arabian records from shortly thereafter (our latest being a private text of 665 of the Sabean era), tend to suggest that it is somewhat unlikely that Abraha and his kingdom continued so to flourish as to be able to stage a full scale attack on Mecca, until so late as 570 A.D.

A striking proposal advanced by C. Conti Rossini (J.A., xi 660-74, 30-2) deserves a passing mention, although it has not been endorsed by general approval. This is that the story as we know it is a contamination of two records of South Arabian attacks on Mecca: that by Abraha, and a much earlier one led by the Aksumite king Afīlas, whom numismatic evidence assigns to around 300 A.D. It was at or shortly after this time that the kingdom of Aksūn did in fact exercise a short-lived hegemony over South Arabia, and a military enterprise further north is not impossible. Conti Rossini appeals to this event in order to suggest that a conflated story of this nature was the one known to the Prophet's contemporaries, and that al-fil in this context is a later corruption of the name Afīlas.

sufficiently established (see Arabica, iv, 14-5 and Traité, 23-4). Acquaintance with the latter would have given Arabic grammar a different organization, something like this part of speech referred to above, which in essence derive precisely from this Greek grammar through the intermediary of the Latin grammarians. Besides, a division which establishes the noun and the verb as the principal categories finds its justification in general linguistics (see Traité, § 53).

The Kitāb of Sibawayh (i, ch. I) starts with the exposition of this part of speech: ism, ḥarif. Its definition of the verb (a) on the one hand stresses the origin of the personal forms of the verb: amma 'lis-fāl fa-amthālat hadāthīt min lafṣ ʿabādāt al-ʿasmmā'; these are the forms 'taken from the word expressing the "happenings" of nouns' (the infinitives); this is already the Başrī theory of the infinitive-masdar, that is, the 'origin' of the verb; hadāth, pl. ʿabādāt (int. of hadathāt (wīl "to happen, take place") can be well translated by "happening", a meaning very close to the idea of "process"), used in modern general linguistics to define the verb; (b) on the other hand expresses the temporal value of the verb: buniyāt (they have been constructed) li-mā ʿammad (past), wa-li-mā yaḥkin wa-lam yabā (future), wa-mā huwa kābīn lam yankūt (present).

Thus, from the very start, so far as can be traced, a temporal attribute is attributed to the verb as something self-evident, requiring no justification. We have here the indication that this was an accepted doctrine, accepted as something established, and not the fruit of the personal investigations of the Arab grammarians; for the latter, always so ready to explain or legitimize everything, would have advanced. Weil). But the whole grammatical tradition challenged by grammarians of the Kufa tradition (see Arabica, iv, 25). The theory of the infinitive-masdar has been challenged by grammarians of the Kūfīa tradition (Ibn al-Anbārī, K. al-ʿAfnādī, disputed question no. 28, ed. Weil). But the whole grammatical tradition teaches the temporal value of the verb, regarding this as the feature that distinguishes it from the noun (ism) (likewise Ibn Yaʿṣīfī, according to 26, l. 10-1, in spite of what is said later).

The definition given by the Mufṣājāl of al-Zamakhsharī is clear: al-fāl mā dalla ʿalā ʿktirān hadāth bi-ṣamān muhaṣṣāl (§ 402) "the verb that is indicates the connexion of an event with a [determined] time"; for the noun (ism), the contrary (§ 2).

Ibn Yaʿṣīfī blames the vagueness of mā: for a strict definition by closest genus and specific difference, he requires a more precise word, kalima or lāfṣa (912, l. 2). As for muhaṣṣāl, put by us in brackets as a reminder of the insistence of certain writers (according to 911, l. 6), on the need to distinguish the infinitive from the personal forms of the verb, Ibn Yaʿṣīfī states that this is needless: the masdar is clearly enough distinguished in itself; it too is verb but it expresses time in another way (min ḥārīṣ, min lauḏasmīh): see 911, l. 8-13.

He also finds fault, in the definition, with the predominance allowed to the connexion with time in regard to ḥādāth. This is to say that things are the ḥādāth and the time of its existence (911, l. 9), but the verb was not established to indicate this very connexion: it indicates a hadāth in connexion, the latter comes secondarily, wa-l-ṣūriʿun waḏidā tabāṭān (912, l. 5-6). However, Ibn al-Ḥāfizī, Ibn al-Kūfī, in the Sharḥ al-Kūfī, li-waḥ, l. 23, had said: al-fāl mā dalla ʿalā mānā fī naṣīh muṭrān bi-ḥaḏ al-ʿasmmā al-thālīḥa, without mentioning hadāth; and at Astarābdīhī repeats: kull ism fa-huwa ghaẓr muṭrān, kull fāl fa-huwa muṭrān (ibid., l. 26 and 30), "a noun of any kind has no connexion [with time]"; "a verb of any kind connects the connexion [with time]".

The present results spontaneously from the absence of this mark, e.g.: li-matābki "Why are you weeping?"

«96 explain or legitimize everything, would have advanced. Weil). But the whole grammatical tradition challenged by grammarians of the Kufa tradition (see Arabica, iv, 25).

Its reason or reasonings in support of any basic definition which he had drawn up. The same holds good for the tripartite division, simply stated. Like the latter, in fact, the temporal values of the verb came to the Arabs from Aristotelian logic (as has been said above), but this fact does in no way impair the originality of their construction of grammar (see Arabica, iv, 10 and Traité, 25).

The theory of the infinitive-masdar has been challenged by grammarians of the Kūfīa tradition (Ibn al-Anbārī, K. al-ʿAfnādī, disputed question no. 28, ed. Weil). But the whole grammatical tradition teaches the temporal value of the verb, regarding this as the feature that distinguishes it from the noun (ism) (likewise Ibn Yaʿṣīfī, according to 26, l. 10-1, in spite of what is said later).

The definition given by the Mufṣājāl of al-Zamakhsharī is clear: al-fāl mā dalla ʿalā ʿktirān hadāth bi-ṣamān muhaṣṣāl (§ 402) "the verb that is indicates the connexion of an event with a [determined] time"; for the noun (ism), the contrary (§ 2).

Ibn Yaʿṣīfī blames the vagueness of mā: for a strict definition by closest genus and specific difference, he requires a more precise word, kalima or lāfṣa (912, l. 2). As for muhaṣṣāl, put by us in brackets as a reminder of the insistence of certain writers (according to 911, l. 6), on the need to distinguish the infinitive from the personal forms of the verb, Ibn Yaʿṣīfī states that this is needless: the masdar is clearly enough distinguished in itself; it too is verb but it expresses time in another way (min ḥārīṣ, min lauḏasmīh): see 911, l. 8-13.

He also finds fault, in the definition, with the predominance allowed to the connexion with time in regard to ḥādāth. This is to say that things are the ḥādāth and the time of its existence (911, l. 9), but the verb was not established to indicate this very connexion: it indicates a hadāth in connexion, the latter comes secondarily, wa-l-ṣūriʿun waḏidā tabāṭān (912, l. 5-6). However, Ibn al-Ḥāfizī, Ibn al-Kūfī, in the Sharḥ al-Kūfī, li-waḥ, l. 23, had said: al-fāl mā dalla ʿalā mānā fī naṣīh muṭrān bi-ḥaḏ al-ʿasmmā al-thālīḥa, without mentioning hadāth; and at Astarābdīhī repeats: kull ism fa-huwa ghaẓr muṭrān, kull fāl fa-huwa muṭrān (ibid., l. 26 and 30), "a noun of any kind has no connexion [with time]"; "a verb of any kind connects the connexion [with time]".

The present results spontaneously from the absence of this mark, e.g.: li-matābki "Why are you weeping?"
For the past, a distinction must be made: the accomplished gives the tense of the narrative for historical accounts; the verb then expresses the past tense, corresponding to the French passé simple. But this mode is also the accomplished form, and the language possesses only this one single form for historic narrative and conversation, according to the distinction formulated by E. Benveniste (Les relations de temps dans le verbe français, in BSL, liv/1 (1959), 69-82). It often indicates something resulting; it may be merely a resultative or a simple accompaniment without any temporal value. It therefore cannot be called purely and simply a tense, a mǎdi (see Esquisse, 85-8; Études, 3: Temps et aspect, 170-7). The examples quoted can be examined in the light of the above distinction (published only in 1959), and the part played by the phrase and the verbal indicators will be noted.

As to the division of the verb, Arab grammarians teach: ma'allām-majdīl = known/unknown; this referring to the agent. In fact, the Arabic verb falls into two divisions: the verb with agent (the subject being considered as the agent) and the verb of quality (the subject being simply the thing qualified). The verb with agent is subdivided:

a) agent pure and simple: fā'ala yaf'īlula, like daraba (i) "to strike", yaf'ala (u) "a simple verb", fā'ila yaf'īlula, like rubība (a) "to gain", sakīra (a) "to get drunk". This category includes part of fā'ila.

b) agent unknown: fā'ila yaf'ali, like duriba, rubība.

Agentive is a good term for the first two as opposed to the third: the majdīl, to turn to the Arabic designation for lack of an appropriate English term. While referring to the second specifically, one can use the term "verb with interested agent".

The verb of quality (or qualitative verb) includes the whole form of fā'ila yaf'īlula (with two exceptions), e.g.: karuma (u) "to become generous" and fā'ila yaf'īlula, like karuma (u) "to become old".

The verb of quality is not static. It signifies: "to acquire a quality", or "to become such and such" (according to the quality in question), karuma "to become harīm (generous)"; or else as a consequence of the acquisition: "to have a quality", or "to be such and such", it is a resultative, karuma "to become harīm (generous)".

The majdīl is the verb whose agent is not known or, if known, unexpressed and cannot be expressed: it is the fi'hui lam yassumā fā'īlul, according to the expression of Muf. (116, l. 5). If it is used with a person as the subject, e.g., duriba Zayd, from the fact that Zayd is the subject of the verb, attention is concentrated on him, the idea of enduring takes shape to some extent; it may predominate and in that case we are led to translate by a passive: "Zayd was beaten", instead of "One has beaten Zayd", which would have revealed that the agent was unknown. This is to be judged according to the context. But none of the less the Arabic verb remains the majdīl. It cannot be coupled with "a complement of a passive verb", contrarily to its morphological character. One sees how deceptive it is to call fā'īla "passive".

The impersonal verb exists in classical Arabic, although the Arabic grammarians have not always recognized it; it exists, it can be constructed on any transitive indirect verb with agent (this being very widely interpreted, see the examples, Esquisse, 160), giving it the form of majdīl which remains invariable in the 3rd person singular. This is the impersonal majdīl, which provides the perfect example of the "verb whose agent is unknown". With the personal verb we can say: kharadīn min al-dār "I left the house", nazalitū 'alā Amr "I went down to 'Amr's"; in the impersonal, khurrajīn min al-dār, musalā 'alā Amr: "they went out of the house", "they went down to 'Amr". These verbs are often difficult to translate exactly, because for each of them we need to find the corresponding impersonal expression; in its absence "they" is used, as in the preceding examples.

Some verbs have come to the point of acquiring an impersonal usage without taking the form of the majdīl: kafā, badā, rūba, habba (see Brockelmann, Grundriss, ii, 124-5; A. Spitaler, mā rā'ā-hū illā bi-transparent verbandes, in Sertia Monacensis, Leiden 1952, 171-83); an example: wa-kafā bi 'llāh gāhdīn (Kūr'an, IV, 81-79), "it suffices with Allah as witness".

Arab grammarians have recognized a djiḏiḏ or ghiyar mutassāriif verb, like karim, nīma, laya, as opposed to the mutassāriif verb which possesses all its verbal forms: majdīl, etc. or nominative-verbal forms: n. ag., etc. (Dict. of T. T., 1143, l. 7-9). But these numerous derived forms have one thing in common, their different parts are not all used, and their usage is limited.

The verb presents contrasts: on the one side, great simplicity, on the other side complexity. Simplicity: in personal moods only two verbal forms, one accomplished, one unaccomplished, which are sufficient to give an opposition of aspect, the one active (1st person), the other passive (2nd person): one conjugation, "the common conjugation" (Esquisse, 80-5), which employs the same prefixes or suffixes for verbs of all kinds, triliteral and derived forms, quadriliteral and derived forms, variations resulting from phonetic accidents arising from the combination of these prefixes or suffixes with the verbal root. The simplicity of the internal flexion of vowels which, by an interplay of contrasts between the three vowels a, i, u, characterizes the verb in its divisions agentive/majdīl, not only in the simple triliteral or quadriliteral verb in all derived forms for every agent verb; moreover, the simplicity of the external flexion of vowels which determines the moods: yaf'ul-a (indicative), yaf'ul-a (subjunctive), yaf'ul (jussive). Complexity: the multitude of derived forms: 14 for the triliteral verb, 3 for the quadriliteral verb; the multitude of forms of the infinitive or noun of action for the simple triliteral verb: Wright (Ar. Gr., 11-2) lists 44 of them, either rare or common. But these numerous derived forms have one advantage: they allow one to express synthetically notions which, in French, must be enunciated separately in accordance with its analytical character, e.g.: farrasa "to cause to be deceived" (a prey), farrasa "to allow his flock to be devoured" (shepherd), taddārābī "they fought each other", etc. They con-
tribute considerably to the synthetic character of the Arabic language.

Affective language expresses itself through the Arabic verb. Briefly, we may mention the 2nd fathâla intensive form and the 5th lafaâla which is correlative to it; the so-called "rare" forms, with gemination (12th form) or repetition (12th and 13th forms), a procedure that was abandoned; quadriliteral formations, especially by repetition of a biliteral element (type 1212) (Esquisse, 102-3).

In addition, the energetic.

The energetic forms a part of the "common conjugation". It is formed by the suffix -amna or -amma, most often used, added to the unaccomplished in its jussive (or apocopated) form and to the imperative. It gives a vigorous expression to a personal feeling: conviction in an affirmation or negation, astonishment or impatience in interrogation. It is used especially to express an act of will: an order, prohibition, threat, promise, wish.

After an oath the energetic always occurs (if one uses the unaccomplished form, and in addition the corroboration lam (examples, Wright, ii, 42A).

(F. H. Fleisch)

Fi'tl, pl. afâlî, actuation, act, and sometimes the result of an act, that is to say effectuation, effect. From its current usage in Arabic, this word very quickly became a technical term (isfâlî), not only in grammar but also in falsafa and in 'ilm al-kalâm.

If 'amal (q.v.) designates the realms of 'doing' and 'acting' (whence 'work', human acts, and moral action), and thus has at least in its last meaning an ethical connotation, fi'tl refers above all to noetic and ontological values: the fact of actuating, of passing (or causing to pass) to the performance of an act. Hence the translation by R. Blachêre of Kurân, xxii, 73: 'et Nous leur révélâmes la réalisation des bonnes œuvres' (fi'tl al-hâyâlî). It should be noted that the distinction between 'amal and fi'tl often becomes less marked: akhâlah wa-afâlî, 'human mores and actions', says Ibn Sînâ, for instance, (Âbsâm, 107), in order to define ethics.

Falsafa.

Fi'tl belongs to the language of logic and noetics.

(a) In logic it is one of the ten categories, actio opposed to passio, infi'sâlî. It is worth mentioning here that the suppleness of its verbal forms allows Arabic to emphasize the connexion, at the same time opposed and complementary, of the mahdâl pair, action and passio. It is forming the verb root, fi'tl, in the first active form and in the seventh passive. In consequence, the active element is al-fâlî and the passive element, al-munfaîtî. This use of fi'tl and its derivations may be found over and over again in all treatises on logic, both in the philosophical introductions of the al-'ilm al-kalâm and also in falsafa.

(b) In noetics and metaphysics, the complementary opposition is no longer fi'tl-infisâlî, but fi'tl-kâmawâ, act-potentiality (faculty, in posse). Potentiality, in so far as it is the principle of change and becoming, may be in its turn either 'active' (fi'tlîyya) if it resides in the agent (fi'tlî), or passive (infisâlîyya) if it resides in the passive element (munfaîtî). The expression bi 'l-fistl, 'actually', which is used for every faculty of the human spirit, is of especially wide and well-known usage in noetics, where it is used to designate one of the states of the intellect, al-âsâb bi l-îsâfî, the intellect in action or the active intellect, as distinguished from al-âsâb bi l-'ûwama, the intellect in posse, or potential intellect. Moreover, al-âsâb bi l-fâlî must be distinguished from al-âsâb al-fâlîŷî, the acting intelligence, i.e., continually in action, which is the last of the separate Intelligences and the same for all men. The âsâb bi l-fâlî, in becoming more and more actual, receives the illumination of the âsâb fâlî and becomes similar to it. The hierarchy of the intellects according to al-Kindî, al-Fârâbî, Ibn Sînâ and Ibn Rushd, and the differences of meanings applied to these terms by the several authors, is well-known. For the âsâb bi l-fâlî according to al-Fârâbî and Ibn Sînâ, see âsâkî; contrary to what is suggested by the Latin translations referred to by F. Rahman in this last article, it does not seem necessary to translate differently the meaning of al-âsâb bi l-fâlî according to al-Fârâbî (in effectus) and Ibn Sînâ (in actu). The real differences of thought between the two philosophers can perhaps best be expressed, whether in translation or in Arabic, by the use of an identical terminology. The ancient Latin translations, in fact, often prefer effectus for fi'tl, while the modern ones (such as that of Mgr. N. Carame) are more in favour of actu. The difference which can be noted between act (or action) and effect diminishes when we go back to the more specifically appropriate technical terms 'actuation' and 'effectuation'.

'Ilm al-Kalâm

The mutakallimûn use fi'tl and bi l-fâlî in the same sense as the falsîfî when they in their turn speak of the subjects of logic, noetics and metaphysics.

But the term, above all in its plural form, afâlî, comes up frequently when they discuss 'questions concerning God' (îhâyâtî). Fî'î then designates the action of God ad extra, 'what it is possible (not necessary) for God to do'. Thus al-Âsh'ârî writes in his Kitâb al-Luma': 'the fact that God wills a thing, signifies that He does it' (fâlîlahû; ed. McCarthy, Beirut 1953, 15-6; cf. English translation, 21).

Later on, the subject of the treatise concerning the effects of Divine Omnipotence ad extra is thus called afâlîhû ta'dilî, 'the Acts of God, the Most High'. It is essentially the problem of secondary causes (asâbî), the relations of God with mankind, the divine pre-determining decree (bodar and hadâd), and human free-will (îbâhîyyah). For the details of the problems dealt with, and the solutions of the various schools, see allâmî, 412 ff.

The treatise on afâlîhû ta'dilî is preceded by a treatise on the divine attributes, sjidât Allâmî. One of the subdivisions of this last is concerned with the sjidâf al-afâlî, the explanation of the 'attributes of action' and which refer to what God
may or may not do: visibility, creation, commandment, decree (loc. cit., 411). These discussions of the 'actions of God' do not supersede the normal usage of *fīl* and *afūl* to designate the act or the act of God. Sometimes almost as synonyms of *amal* and *anamal*, more often with the psychological and legal background meaning 'an act which must be performed', leaving to *amal* the wider background meaning of 'human behaviour in general'. Thus *fīl* is distinguished from *tarā* lack of action, action to be avoided. It is thus also that at the beginning of the Ḥikāya *wā‘ām al-dīn* (Cairo 1355/1355), i. 135), al-Ghazālī teaches that many under Law is, in order to guide his conduct (*amal*), under the obligation of knowing: the creed of the faith (*ištīḥād*), the act (al-*fīl*) which must be performed at a given moment (e.g., the times of prayer), and what it is obligatory not to perform (*tarāh*). These terms, moreover, are reminiscent of the vocabulary of *hadīth*, since the text of a *hadīth* relates a saying or an action or the absence of an action on the part of the Prophet.

**Bibliography:** Apart from the references given in this article, reference should be made to the well-known treatises and chapters of the great philosophers (a) on the categories, (b) on *šabī*; also the various treatises of *išām al-halām* (e.g., Falāhr al-Dīn al-Rāzī, Muḥyay, Djiurdjānī, Sharīk al-Mawākiṭ, etc.), in the treatises Siṣāt Allāh and Asfālū hu taṣālī. (L. GARDET)

**FILĀHĀ, agriculture.**

Fālīk, the act of cleaving and cutting, when applied to the soil has the meaning of "to break up in order to cultivate", or "to plough". Fālūd *"ploughman", fīlāhī "ploughing". But from pre-Islamic times the word *filāh* has assumed a wider meaning to denote the occupation of husbandry, agriculture. In this sense it is synonymous with *sitāra*, to which the ancients preferred *filāh* (all the earlier writers called their works on agriculture Kitāb al-Filāhī). At the present time this latter word is very widely used in Northern Africa, both in official language and in everyday speech. Thus, in Morocco, the Ministry of Agriculture is called *sitārat al-filāh*, whilst in Egypt, Syria, Lebanon, Jordan and 'Irāk it is called *wistārat al-sitāra*. It is only since the last century that the word *sitāra* has taken precedence in official and literary circles in the Arab East; but the word *filāh* is still very widely used in the language of agricultural workers. The following articles will deal primarily with agricultural methods and techniques. (See further, for settlement and sedimentation, *iskān*; for irrigation, *kanāt, māz*; for land tenure, *ikṭā*; tenure of land, and the articles listed under ARD.)

1. — MIDDLE EAST

1. — Technical and historical survey. — Agriculture in the Arab countries is under the influence of two different types of climate: in the south of the Arabian peninsula (Yemen, Ḥaḍramawt and ʿUmān), and also in the Sudan, the Indian monsoon brings abundant rainfall in summer which enables various tropical plants to be cultivated (coffee, date-palms, custard-apples, mangoes, pawpaws, bananas, *catha edulis*, tamarinds etc.). Throughout the rest of the Arab world the mediterranean climate prevails. This climate is characterized by a cold wet winter season, followed by a long summer period which is hot and without rain. The further one goes from the Mediterranean coast the more the rainfall diminishes, until it ceases entirely in certain hot deserts in Arabia and the African Sahara. This basic climatic system divides the zones of Arab countries into two distinct categories; in the first, the extent and distribution of the rainfall favour the economic cultivation of zibbus crops. In the second category the winter rains, though not sufficient to allow of economic cultivation, nevertheless permit the natural growth of certain grasses and various succulent, bulbous and halophytes which constitute the pasturages of the desert steppes. In order to make use both of their agricultural land and of the steppes, the Arabs have at all times lived in two sorts of lives—a pastoral nomads.

Nomadism is a necessity in the desert steppes where the winter rainfall varies in extent between 50 and 150 mm., but the Bedouin tribes are not opposed to a sedentary existence. It is in this way that the Yemeni tribes, long before Islam, founded their civilization on irrigation and intensive cultivation of the land. After the Islamic conquests, the Arab tribes soon intermingled with Aramaeans from Syria and ʿIrāk, Copts from Egypt and Berbers from North Africa, and with the Ibero-Latin of the Spanish peninsula, in order to exploit together the vast territories of the present Arab countries and of former Muslim Andalusia.

The mediterranean climatic system being every-where the same, we find throughout these territories three agricultural climates. Firstly, in most of the coastal plains (the coasts of Syria, Lebanon, Palestine, Tunisia, Algeria and Morocco), thanks to a mild winter temperature and an annual rainfall of from 500 to 1,000 mm., it is possible without irrigation to cultivate cereals, annual leguminous plants, various vegetables, tobacco, olives, in particular, and even cotton. With the help of irrigation, a vast number of annual and perennial agricultural crops can be successfully grown—citrus fruits, bananas, pomegranates, loquats, early vegetables, aromatic or ornamental plants, etc.

Secondly, in the plains, hills and inland plateaux of Syria, Upper Mesopotamia and North Africa, where the density of rainfall varies between 250 and 500 mm., dry-farming is the dominant system of cultivation for vast areas of non-irrigated land. Of the chief annual plants cultivated in these regions we may mention wheat, barley, sorghum, lentils, chick-peas, vetch, gherkins, melons, watermelons and sesame, while the principal fruiting trees and shrubs are olives, vines, figs, hazelnuts and pistachios. In these regions, irrigation is indispensable for the cultivation of most fruit trees, ornamental trees, vegetables, leguminous and industrial plants—apples, pears, apricots, peaches, eggplant, tomatoes, gumbo, artichokes, potatoes, luscene, clover, cotton, hemp, groundnuts, poppies, roses, jasmine, etc.

Thirdly, in regions with a desert climate (Lower Mesopotamia, central Arabia, Egypt, inland regions of Libya and North Africa) where rain is rare and the average annual temperature reaches or exceeds 21° C. it is only by means of irrigation that such plants as date-palms, mangoes, orange trees, cotton, rice, sugar-cane and others can be successfully cultivated.

During the Middle Ages, the Arabs were familiar with and cultivated most of the agricultural plants now known to the Arab world. It was they who introduced Seville oranges and lemons from India to ʿUmān, and thence to Baṣra, Egypt and the coast of Syria and Palestine (cf. al-Masʿūdī, *Muṣāṭī*, ii. 438, viii. 336). From Andalusia and Sicily they disseminated throughout the Mediterranean basin
the cultivation of cotton, sugar-cane, apricots, peaches, rice, carobs, water melons, eggplant, etc. (cf. De Candolle, L'Origine des plantes cultivées, Paris 1912). Moreover, the European names of many cultivated plants are of Arabic origin, that is to say borrowed directly or indirectly from words either purely Arabic or long Arabized.

2. — Works on agriculture. — The oldest Arabic work on agriculture which we know is al-Filha al-nabatiyya (Nabataean agriculture) of Ibn Wahabiyya (q.v.), written (or translated from the Nabataean) in 291/904. A little later there appeared a work entitled al-Filha al-rumiyya (Greek or Byzantine agriculture). This book, published in Cairo in 1293/1876, bears the names of Kusís al-Rumí as author and of Sarçís b. Hilyá al-Rumí as translator from Greek into Arabic. According to Hadídí Khalífa (Kádí al-panúní, ii, 1447), the author's full name was Kusís b. Askúrákína, and we think that this is the name of Cassianus Bassus to whom agronomic works collected from Greek and Latin authors are attributed. Hadídí Khalífa names three other translators of this book, one of them being said to be Kusís b. Lúká (q.v.). From another source we know that the agronomic work of Anatolius of Berytos (4th century A.D.) had been translated into Syriac by Sarçís Rásáín (d. 536 A.D.), and there is reason to believe that this text was also translated subsequently into Arabic and that no manuscripts of it have survived (cf. BIE, xiii, 47). In any case, in the two Arabic works that we know (al-Filha al-nabatiyya and al-Filha al-rumiyya), we find a reasonable knowledge of agricultural practice, side by side with superstitious advice.

In Egypt, the best presentation of agricultural questions at the time of the Ayyúbids is to be found in a work of Ibn Mammáf (d. 606/1209), entitled Kádmí al-dawdáwí (published) book entitled Mabdhídi al-fikar wa-

3. — Legislation relating to land. — The Arabic language is rich in agricultural terms, particularly in relation to date-palms, vines, cereals and desert plants (cf. the Mukhásas of Ibn Sída), and the imagination of the poets of antiquity has endowed it with a vast and original literature on the nature of plants and their connexions with human beings. Not only flowers (roses, narcissi, jasmine, violets, pinks, irises, anemones, etc.) and fruit (dates, apricots, apples, pears, pomegranates, jububes, Neapolitan medlars, quinces, Seville oranges, lemons, etc.) but also a great quantity of cereals, legumes, vegetables and wild plants of the fields, pasturages and prairies are mentioned or described in verse.

4. — Legislation relating to land. — The code on landed property (Kínán al-arádi) and the civil code (al-Mádáila), which were in force in the Arab countries that were separated from the Ottoman Empire after the 1914–8 war, are based on Muslim law (shári'a) and Arab jurisprudence. (fikh). The Madáila divides land into five categories: ard mamíká, land to which there is a right of ownership; ard amíriyya, land to which the original title (rababa) belongs to the State, while its exploitation (tasarruf) can be conceded to individuals (this is the case with most agricultural land); ard márúká, land placed at the disposal of corporate bodies; and lastly ard masálá, waste land, defined as free land, situated away from inhabited areas and out of ear-shot of houses. For details see TENURE OF LAND.

The Madáila also defines and codifies questions relating to metayage (muúsíra), leases for orchard-planting (muúsádá), the repair and clearing of communal watercourses used for irrigation, reclamation of waste land (tákáí al-mamúsí), the enclosure (harím) of wells and subterranean watercourses (banaúsí), etc.

At the present time, the land laws of most of the Arab States, while incorporating substantial improvements, still uphold the principles respecting either the distinction between categories (and sub-categories) of land, or else their legal status and the rights based on them.

According to Muslim jurisprudence, it is the duty
of the State to construct and maintain dams, and also to excavate and clear the main irrigation channels. In former times, this work was carried out either directly by the governors of provinces or by holders of fiefs. The history of the Umayyads and also of the repairing of several ancient dams on the Tigris, Euphrates, Khabur, Orontes and Barada.

**Mustafa al-Shihabi**

**ii. — Muslim West**

So far as we know at present, it was exclusively in the Iberian peninsula, the home of the celebrated Latin agronomist Junius Columella of Gades/Cadiz, that an agricultural literature in the Arabic language was created and developed, particularly during the 5th/11th and 6th/12th centuries, in the brilliant period of the satraps 5ih/12th and 6th/12th centuries, in the brilliant period of the satraps.

The principal centres of this literature were Cordova, Toledo, Seville, Granada and, to a lesser extent, Almeria. In Cordova the great doctor Abu‘l-Kásím al-Zahráwí, who died in 404/1010, known as Albuscasis in the Middle Ages, is reputed to be the author of a Compendium on agronomy (Maḫbás or kīdāb al-filāḥa) which Professors H. Fértés has recently discovered and intends to publish. In Toledo, at the court of the renowned al-Ma’mún [q.v.], the great “garden lover”, lived the celebrated doctor Ibn Wāfīd (d. 467/1073) known as Aben-guefith in the Middle Ages. He also recounts his personal experiences in al-Sharaf. There he became acquainted with the physician Abu ‘l-Khayr al-Iṣhābili, who wrote a new royal garden.

In Toledo, at the court of the renowned al-Ma’āmūn [q.v.], the great “garden lover”, lived the celebrated doctor Ibn Wāfīd (d. 467/1073) known as Aben-guefith in the Middle Ages. He also recounts his personal experiences in al-Sharaf. There he became acquainted with the physician Abu ‘l-Khayr al-Iṣhābili, who wrote a new royal garden. In Toledo, al-Ma’mūn created his royal botanical garden (Dīnānat al-sulţān). Among other works, he wrote a treatise (maḏmīn) on agronomy which was translated into Castilian in the Middle Ages. Another inhabitant of Toledo, Muhammad b. Ibrāhīm Ibn Baṣṣāl, devoted himself exclusively to agronomy. He performed the regular pilgrimage, travelling via Sicily and Egypt, and brought back many botanical and agronomic notes from the East. He also was in the service of al-Ma’mūn, for whom he wrote a lengthy treatise on agronomy (dīmān al-filāḥa); this work was subsequently abridged into one volume with sixteen chapters (bāb), with the title Kitāb al-Kād wa l-bayyin “Concision and clarity”. This work, which was translated into Castilian in the Middle Ages, was published in 1535 with a modern Castilian introduction. The treatise by Ibn Baṣṣāl is singular in that it contains no reference to earlier agronomists; it appears to be based exclusively on the personal experiences of the author, who is revealed as the most original and objective of all the Hispano-Arabic specialists.

The name of this writer’s father has not been established conclusively. Writers who quote from him give the name with or without the definite article; the initial bā is sometimes replaced by fā (subpunctuated in Maqrizi orthography), or the fā by ū. Traditionally, the form Baṣṣāl/Baṣṣāl seems to be the most probable, but it is not certain that it is a name with any etymological connection with baṣṣāl “onions”. It might be a Romance diminutive in -el of the adjective bāzolbāzo (Castilian base), “brown”, a name borne by several Muslims in Spain; and Baṣṣāl then would be synonymous with the well-attested name of Mawrī.

Towards the end of the 6th/12th century or in the first half of the 7th/13th century (the capture of Seville by the Christians took place in 464/1268),
Abū Zakariyyā Yahyā b. Muhammad Ibn al-'Awwām of Seville wrote a lengthy Kitab al-Fīlāḥa in 35 books (būb). We know nothing of his life. To orientals as an abridged version of al-Fīlāḥa al-nabātīyya [see Ibn Wahḥīyya]. He is, however, far from being the most important of the Arabo-Hispanic agronomists. His work is essentially an extensive and useful compilation of quotations from ancient writers and from his Hispanic predecessors, Ibn Baṣṣāl, Ibn Ḥaṣdīḍā, Abu 'l-Khayr and al-Hāḍī al-Gharnātī. It is only occasionally at the end of a chapter that he records his own personal observations (introduced by the word LI “this is my own”), made in the neighbourhood of Seville, especially in the district of al-Gharaf. For Ibn al-'Awwām, see C.C. Moncada in Actes du 8e Congrès des Orient., Stockholm 1889, ii, 215-57; E. Meyer, Gesch. der Botanik, iii, 260-6; Brockelmann, S. I, 903.

Finally, towards the middle of the 8th/14th century, a scholar of Almería, Abū Uḥmān Sa’d b. Abū Dī’far Aḥmad Ibn Lūyūn al-Tudjīlī (d. 750/1349) wrote his Kitāb Ḳādaʾ al-malākhā wa-inḥūq al-radjdā hī waṣ’l šinad’ul-fīlāḥa. The work of an amateur, it is an abridgement in verse (urdūzā), based essentially on Ibn Baṣṣāl and al-Tiqnārī; but it also contains certain valuable information which the author recorded in the words of local practitioners (mīmām ḥaḍāḥahū bih aḥl al-ṣadīrāb wa l-‘imtiḥān). These treatises on fīlāḥa contain far more than their titles would indicate; in fact, they are true encyclopaedias of rural economy, based on a plan closely in line with that followed by Columella in his De re rustica. Naturally, the essential feature is of course agronomy (fīlāḥat al-arādīn): the study of types of soil, water, manure; field cultivation of cereals and legumes; but arboriculture is also dealt with at length (particularly vines, olives and figs), with additional matter on pruning, layering and grafting; and also horticulture and floriculture. Zootechny (fīlāḥat al-bayawawdīt) also takes a leading place: the rearing of livestock, beasts of burden, fowls and bees; veterinary practice (bayfara). All these fundamental questions are completed by chapters on domestic economy: farm management, the choice of agricultural workers, storage of produce after harvest, etc. Some writers also provide information on measurement of land (takṣīr) and the seasonal agricultural calendar.

We may imagine that specialists of many sorts were led to contribute to such encyclopaedic works. To start with, there were practitioners and professional workers: farmers (jallāhān), fruit-growers (ṣabīḏārān), horticulturists (djamānān); but there were also “scientific workers”—herbalists (ṣakḥāḏīrān), botanists (nabātīyyān), doctors interested in medicinal plants (muṣfrādāt) and dietetics; and there were also pure theoreticians (bukmādān, muṭakallimān).

On the other hand, Hispano-Arab treatises on fīlāḥa, which are mainly written by many-sided writers (muṣḥārīkān, muṭāfānānān). Beside Ibn Baṣṣāl who was essentially an agronomist, Ibn Wāfīd was primarily a doctor. Ibn Ḥaṣdīḍā was described by Ibn al-'Awwām as imām and khaṭīb. Al-Tiqnārī and Ibn Lūyūn are well-known poets. Finally, the essential oriental botanist Ibn 'Abdūn of Seville, the author of a treatise on bīṣa [q.v.], published and later translated by E. Lévi-Provençal. In this connexion one is reminded of Aristotle, both philosopher and naturalist and creator of a botanical garden, and Virgil, author of the Georgics.

The Hispano-Arab agronomists were familiar with and made wide use of ancient writers. A list of them (in which the names are often inaccurate) will be found at the beginning of the translation edition of Ibn al-'Awwām by Banqueri. Among the Arab sources, they made use of Kitāb al-Nabātāt of the polygraph al-Dīnawārī [q.v.] and, in particular, the Fīlāḥa nabātīyya of Ibn Waḥḥīyya [q.v.], though for the most part leaving out his farrago of magic recipes. However, in this branch of instruction they have not confined themselves to repeating their precursors’ writings. They made their own personal observations and experiments, in order to adapt their works to the realities of the Spanish soil and climate. They also introduced original chapters on the cultivation of new plants—rice, sugar-cane, date palms, citrus fruits, cotton, flax, madder, apricots, peaches, pears, watermelons, eggplant, pistachios, saffron, etc.

As we have seen, two Arabo-Hispanic treatises on agronomy were translated into Castilian. In this way, Ibn Wāfīd’s work was widely used by the Spanish agronomist Alonso de Herrera in his famous Agricultura General (1513). Finally we should note that it was in Muslim Spain, during the 5th/11th century, in Toledo and later in Seville, that the first “royal botanical gardens” of Europe made their appearance, both pleasure gardens and also trial grounds for the acclimatization of plants brought back from the Near and Middle East. In the Christian world we have to wait until the middle of the 16th century to see the establishment of gardens of this sort, in the university towns of Italy.

iii.—Persia

Agriculture in Persia was from earliest times regarded as the fundamental basis of the prosperity of the country. From early times also there has been a dichotomy between the agricultural and the pastoral elements of the population. The Avesta was unequivocal in its approval of the settled life and the dichotomy between the agricultural and the pastoral elements of the population. The Avesta was unequivocal in its approval of the settled life.

Δείτε τον ελεγχόμενο στην ιστορική και στην αρχαιολογική βιβλιογραφία.
Rulers were urged by mediaeval Islamic theorists to foster agriculture in order to ensure a full treasury and thus prevent the decay of the kingdom. To this end irrigation works were to be carried out, security established, and extortion against the peasantry prevented. The philosophers and encyclopaedists similarly regarded agriculture as the basic industry, upon which the good order of the world and the perpetuation of the human race depended (cf. Mahmud Amuli, Nafa'is al-funun, Tehran, ii, 159).

Invasion and dynastic struggles have been the cause of frequent interruption in, not the decay of, agriculture. For example in Khuzistán, where there had been considerable development under the Sasanians, the agricultural economy failed to return quickly to its previous level after the Arab invasion in the first half of the seventh century A.D. and there was until modern times a cumulative, though not uninterrupted, decline (R. A. Adams, Agriculture and urban life in early south-western Iran, in Science, vol. 136, no. 3511, 13 April 1962). The quartering of soldiers on the population in Byzid times appears to have materially contributed to agricultural decline (cf. Ibn Miskawayh, Eclipse, ii, 96, and Ibn al-Athir Ta’rikh, viii, 342). It has always been the practice of government officials, civil and military, to live upon the country, a custom highly detrimental to agriculture. At times the tribal officials, and to a lesser extent the municipal officials, played a similar role. The wills of the irrigation system reach greater heights than under the Ilkhâns (cf. Rashid al-Din, Gesch. Gâsân Hân’s, ed. K. Jahn, passim). In the Kâdjar period the evil was also widespread. In times of war, continuous or intermittent, it was sometimes the practice deliberately to lay waste frontier areas. Thus the Turco-Persian frontier area in Șafawid times was reduced to a desert (cf. chronicle of the Carmelites in Persia, London, 1939, i, 140). Many examples at different periods of Persian history could be cited of local officials imposing such severe contributions on the cultivators of the soil as to cause their dispersal and thus lead to the ruin of their land.

Tribal warfare and raiding was another major cause of agricultural decay. Such raiding was common whenever a provincial government collapsed, and further, whenever the tribal population, and its flocks rose above the level which could be maintained by the limited pasture available, either because of a period of drought or because of natural increase, there would be a movement, violent or otherwise, into the settled areas. The balance between the settled and semi-settled elements of the population was extremely precarious, and inevitably adversely affected agriculture on the borders of the tribal regions. Various tribal groups, notably in Fârs, during the course of the late nineteenth and early twentieth centuries became settled and practised agriculture. Rîdâ Shâh made an abortive attempt to settle the nomadic population of the country, notably in Fârs, the Bakhtiyârî, and parts of Kurdistân. Since about 1936 there has been a movement by Turkomans and others to reclaim the Gûrgân steppe.

Another factor militating against agricultural development has been insecurity of tenure both as regards the peasant and the landowner (see tenure of land).

Agriculture is also subject to interruption by the capricious nature of the climate. Drought, due to insufficient spring or winter rain, causing partial or complete crop failures, and floods, with the accompanying destruction of irrigation channels and imâns, are of common occurrence. Earthquakes have also been a contributory factor causing local and temporary dislocation. Ravages by pests, notably the sunn pest and locusts, not infrequently cause heavy losses. High winds in many areas and violent hailstorms are other detrimental factors. Deterioration of the soil because of a change in the water table due to over-lavish irrigation or inadequate drainage, or both, is a major problem in some parts of the country, especially Khuzistán and Sistân; and in some places on the central plateau the soil is salty and the water too saline to be used for irrigation. On the south and south-east borders of the central desert there is a natural tendency for the desert to encroach upon the surrounding area (cf. Hamd Allah Mustawfî, Nuzhat, 142, Ta’rikh-i Sistân, ed. Bahâr, Tehran 1936-8, 21). Soil erosion is widespread, notably in Adharbâyjân. Its primary causes are climatic and geological, but uncontrolled grazing by goats and the destruction of forests for fuel have steadily increased the tendency towards erosion. Little attention has been given to its control or reduction by modifying existing practices of arable and animal husbandry, or by contour ploughing, which is made difficult by the relatively small size of the holdings. Terracing in mountain valleys, however, is often carried out with considerable skill.

Irrigated and dry farming are both practised, the latter in large areas of Adharbâyjân and Kurdistân, and in the south and north-east, to the end of March.

The average rainfall in the coastal district of Persian Balúchistân is 3-4 inches; Bushire has an average rainfall of about 5 inches on the northern slopes of the Elburz. The natural vegetation is thick deciduous forest, found up to a height of 7,000-8,000 ft.; where this is cleared fruit, rice, cotton, and other crops thrive. The eastern end of the Persian Gulf littoral comes under the influence of the south-west monsoon. The average rainfall in the central district of Persian Balúchistân is 2 inches, and the average annual rainfall only 27 1/2 inches. It is estimated that only 10-14 per cent of the total area of the whole country is under cultivation. Some 30
to 35 per cent is desert and waste. The remainder is grazing-land and forest.

Grain crops. Wheat and barley are the staple crops and are grown as irrigated (daymi) and unirrigated (daymi) crops up to an elevation of about 10,000 ft. Maize and millet have also been widely grown throughout the country since early times (cf. B. Spuler, Iran in früh-islamischer Zeit, Wiesbaden 1952, 357). Wheat is mainly grown as a winter crop; but in the high valleys of the Zagros and Elburz it is also grown as a spring crop. The regions with the greatest production of wheat are the neighbourhood of Mashhad in Khorasan, western Azerbaijan, Hamadan, Kirmanshah, and Isfahan. In south Persia wheat and barley are sown between the first week in November and the first week in January, and in central Persia between the end of October and the end of November; and spring wheat between the end of February and the end of April. Wheat is harvested in the south about the end of April or the beginning of May; in the upland areas of Fars about a month later, and on the plateau some two to two and a half months later. Barley is harvested about three to four weeks earlier than wheat (cf. Mirzâ Husayn Khan, Dughrâfiyd-yi Isfahan, ed. M. Sutudheh, Tehran 1953-4, 55 ff.). The yield on wheat varies greatly in different parts of the country; in general it is low. The peasant normally saves part of his crop for the following year's seed.

Rice. The main rice-growing area is in the Caspian provinces. Some rice is also grown in the Lindjan and Alindjan districts of Isfahan (Dughrâfiyd-yi Isfahan, 55 ff.) and, on a small scale, in Fars, Khuzistan, Kordistan, and other districts (Spuler, op. cit., 387, 389). Hamd Allah Mustawfi, Nuzhat, 162, 163, Sanî al-Dawla, Ma'dîbîr al-dîhar, Tehran, lith. 1888-9, 113). According to tradition rice was originally imported from India (Kitâb-i 'ilm-i fîhâat wa zîrdâyat dar 'aâdi ghânân Khan, ed. 'Abd al-Ghaffar Nadjin al-Dawla, Tehran 1905-6, 86). In some rice areas it is sown broadcast, but in the main rice-growing areas such as Mazandaran and Isfahan it is sown in nurseries (khazâda) and transplantation (mishâ) takes place after a month. In Mazandaran the land is ploughed in April and then ploughed twice more. A fortnight after transplanting weeding (vidgin) begins, the weeds being trampled into the mud. The rice fields are kept permanently under water for two to three months. Rice is reaped in September. The main varieties are known as sadri, girdz, dum-i siyâh and 'ambarbâ (see also J. B. Fraser, Travels and adventures in the Persian provinces, London 1826, 119-20).

Sugar cane. This was mainly grown in Khuzistan in early Islamic times and in the middle ages (cf. Spuler, op. cit., 388, Kitâb-i 'ilm-i fîhâat wa zîrdâyat, 102); and to a minor extent in Mazandaran. In the later middle ages its cultivation in Khuzistan died out. An attempt was made in Kâdîr times to revive it (Wakdîy-i itâtikyrya, Tehran, no. 53), and also to cultivate sugar cane in Gilan (Ma'dîbîr al-dîhar, 118) and Isfahan (Dughrâfiyd-yi Isfahan, 58). In recent years the cultivation of sugar cane in Khuzistan has begun on a more extensive scale as a result of new irrigation developments. Planting takes place in March or April and the cane is cut in November.

Sugar beet. An abortive attempt was made to introduce sugar beet by a Belgian company at Kahrizk near Tehran in 1886-7. Under Rîdâ Shâh the cultivation of sugar beet was encouraged and it is widely grown in Mazandaran, especially in the Tehran, Tabriz, Kirmanshah, Shahr-e Kirmân, and Mashhad regions.

Cotton. This appears to have been widely grown on the plateau in early Islamic times (Spuler, op. cit., 389; Hamd Allah Mustawfi, Nuzhat, 52, and Jâmiy). American sea island cotton was first introduced into the Urmîyya region about the year 1852 from whence its cultivation spread (Letters from Persia written by Charles and Edward Burgess 1828-1855, ed. B. Schwarz, New York 1942, 117). During the reign of Rîdâ Shâh a long stapled variety was introduced and came to be known locally as filistânî (from the village where it was first cultivated). This variety is grown in Ahar, Khoy, Kirmanshah, Fars, and Khuzistan. A shorter stapled American variety is grown in the Caspian provinces, including Gurgân, and a native short stapled variety of inferior quality but hardy growth is grown in marginal areas. Cotton is grown as an irrigated crop up to an elevation of about 5,000 ft. It is sown in April or May and reaped in the autumn. The land is normally watered once before sowing and the crop is irrigated several times during the period of vegetation. Cotton is the main cash crop of Persia. It is also grown extensively for its seed, which yields an edible oil (cf. Dughrâfiyd-yi Isfahan, 56).

Tobacco. This is grown in many districts for local use and especially in the north-west and south-east Zagros and in the Caspian provinces. It appears to have been introduced into the country earlier than wheat (cf. Mirzâ Husayn Khan, Ta'rikh-i kishâvarzi-i Irân, Tehran 1951-2).

Opium. It is difficult to establish when the opium poppy was first cultivated in Persia. Muhammad b. Zakariyâ (Rhazes) refers to the wild and cultivated poppy. By the end of the 12th/13th century opium cultivation was well established (cf. Kaempfer, Amoenitas Exoticae). It spread in the nineteenth century as an alternative to the declining silk industry. It was first introduced into Fars in 1868-9 (Mirzâ Hasan Fâsi, Fîrâs nâmâ-î Nâsirî, Tehran 1894-6, ii, 3). The main opium-growing areas, until the prohibition of the cultivation of the opium poppy, which was first made in 1955 and became effective in 1956, were Isfahan, Fars, and Khurâsân; it was also grown in Hamadân and Kirmânsâh. The best opium came from AAbâda, Kirmân, Yazd, Burû-djîr, and Varâmân. The seed is sown from October to December, or more rarely in spring. The crop is weeded and thinned in spring; and irrigated during May and June. The collection of the sap begins in May, or a month earlier in the hotter districts of the south, and continues until August. A vertical or diagonal incision is made in the seed capsule in the evening; the sap oozes from the incisions during the night, partially dries, and is scraped off with a blunt knife the next morning. This operation is performed twice or, if the crop is exceptionally good, three times at an interval of several days (A. R. Neligan, The opium question with special reference to Persia, London 1927).

Tea. An abortive attempt was made by Şâni al-Dawla to introduce the cultivation of tea into Mâzândarân in the late nineteenth century. Subsequently there was some cultivation on a small scale; in 1928-9 seed was imported from the Far East, since when there has been a great expansion in tea cultivation in western Mâzândarân.

Silk. This is a traditional product of Persia. In the 9th/10th century and cotton was first introduced into the upland areas of Fars and Kirmân; in the 11th/12th century. In the nineteenth
century production declined because of a disease among the silk worms, which began in 1864. New strains were subsequently introduced (Taši Bahrām, op. cit., 99 ff.). Mulberry trees, on the leaves of which the silk worms feed, are widespread throughout the country, especially in the north. In northern Persia a curious custom exists for the hatching of the eggs of the silk worm. These are attached to a piece of paper and exposed to the warmth of the human body by being worn next to the skin (Hanway, *An historical account of the British trade over the Caspian Sea*, London 1792, i, 189 ff.; Curzon, *Persia*, i, 369; see also Harīr).

Minor crops. Pulses and oil seeds are widely cultivated; and some fodder crops, such as lucerne and clover. A great variety of vegetables is grown especially near urban centres. Potatoes were introduced into Persia by Sir John Malcolm during the reign of Fath 'Alī Shah (Ma'dīr al-dā'ār, 112; Kaye, *Life and correspondence of Major-General Sir John Malcolm*, ii, 47-8). Dye-plants, mainly in the central Zagros region and Kirmān, and other plants used in industry such as saffron, hemp, flax and, in the Dīzful and Shūhtar areas, indigo (which was introduced by the Bāyūd, 'Aḍjud al-Dawla, see Ibn al-Aḥṭīr, *Tārīḵ, viii, 531), madder, and, round Yazd and Kirmān, henna, and, in Māzandarān, jute, hemp, and flax. (Spuler, *op. cit.*, 389). Vegetable gums, including gum tragacanth and asafoetida, are cropped mainly for export. The latter was known in early Islamic times (cf. *Huddād al-dīlam*, 108-19). Oak-gall is produced mainly in Kūrdistān. A variety of flowers and a kind of willow were cultivated for scent (Spuler, *op. cit.*, 389-90); the former also contributed to bee-keeping.

Vegetables. Persia has been famous for fruit-growing since early times (cf. Spuler, *op. cit.*, 388). Many varieties of vine are cultivated and found up to an altitude of 4,500 ft. Vine cultivation is mainly by irrigation, except in some areas of Kūrdistān. On the plateau the vines are covered with earth in the winter. Apricots, peaches, nectarines, figs, melons, pomegranates, plums, cherries, pears, and apples are widely grown. Citrus fruits are important in the Caspian provinces and south Persia, especially in Kūhūzistān and southern Fārs. Recently citrus cultivation has been extended to Banāt. Dates are widely cultivated in south Persia and on the coastal plains bordering the Persian Gulf. The female plant is impregnated by the male in March or April, some two males going to a plantation of fifty (cf. Nasīr al-Dīn Tūsī, who was aware of this peculiarity of the date palm, *Aḥkām al-Nasīrī*, Tehrān n.d., 25-6). Nut trees, especially almonds and pistachios, are of importance. Olives were cultivated in early Islamic times in Nīshāpūr, Gurgān, Daylam, and Fārs (Spuler, *op. cit.*, 387). The main area of cultivation at the present day is Rūdbār in Māzandarān, where cultivation increased after the decline of silk production in the middle of the nineteenth century (T. E. Gordon, *Persia revisited*, London 1896, 163; Curzon, *Persia*, i, 368). The grafting of vines and other fruit trees has long been practised (cf. Fakhr al-Dīn Rāżī, *Dīkmā al-dīlam*, B.M., OR. 2972, ff. 132a-133b and Čahārdāh risāla, ed. Sāyīyīd Muḥammad Bākīr Saḥzawārī, Tehrān 1962, 146-51). At the present day in Kirmān and Fārs almonds and pistachios are planted in addition to the willow tree (*bāmeh*).

Although large landownership has been the dominant form of land tenure, large-scale farming was not (and is not) practised, except exceptionally. The agricultural unit was the ploughland (*gīyf, bīkh, zawāf*) and agriculture was carried on mainly as subsistence agriculture; this is still predominantly the case. Broadly the ploughland consists of an area which a pair of oxen can cultivate annually; but it varies in size according to the nature of the soil, the type of agriculture practised (dry or irrigated), practices with regard to fallow, the kind of crops grown, the draught animals used, and the pressure or otherwise on the land. The average ploughland ranges from some 60 to 20 acres; but in some areas holdings are much smaller, as for example in Mārbīn, one of the districts of Isfahān, where cultivation is mainly carried on by spade. The relation between the peasant and the landowner was formerly usually regulated, and to some extent still is, by a crop-sharing agreement (*muzāra[q.v.]*). The ploughland or peasant-holding is usually run as a family concern by the peasant and his sons or other members of the family; extra labour may be required at harvest time and at certain other seasons of the year. In some areas three or four ploughlands are run together as a unit (*bunā*). Periodical redistribution of the plough-lands among the peasants of a village used to take place, usually by lot, in some districts.

The main draught animal used on the plateau is the ox. Donkeys and, especially in Kūhūzistān, mules, and in the Persian Gulf littoral, Miyāndōbī (in Adhambāyqīdh, Bālucī and Mahbāb) and buffaloes, and in Persian Balūstān, the camel, are also used. In some areas, notably Sīstān, oxen are hired for ploughing to the cultivators by graziers. Where the soil is still more than one pair of draught animals may be required (cf. Morier, *Second journey through Persia, Armenia and Asia Minor to Constantinople in the year 1810 and 1816*, London 1818, 304). Donkeys and camels are the main pack-animals. Small bullock carts are found in western Adhambāyqīdh and some of the Armenian villages in Firaydān.

The plough (*ābīq*) is used of the hook type having a large or small steel share. The plough beam is linked to the yoke by means of a rope sling. There is no mould board and the soil is ripped open leaving an open, coarse, cloddy tilth. There are slight differences between the plough (*fārs*), Kirmān, and Sītān, (ii) Isfahān, Hamadān, Tehrān, and Adhambāyqīdh, and (iii) Ghīlān and Māzandarān. Seed is sown broadcast.

In addition to the plough, a kind of harrow (*māla*) is used; it differs slightly in shape in south and central Persia on the one hand and north-west Persia on the other. Two kinds of levelling board are in use, a relatively large board drawn by a draught animal, and a smaller board (known in central Persia as *katar*), which is used for the preparation of irrigation check banks, and operated by two men, one pulling and the other pushing. Three types of spade are used, one in Fārs, which has a wooden cross bar, the second in central Persia, which has a turned footrest, and the third in Adhambāyqīdh, which has a rolled edge.

Grain is cut with a sickle (*dād*) which has a plain cutting edge; scythes are used in northern Adhambāyqīdh, where they were introduced from Russia at the end of the nineteenth century. A small toothed sickle is used for cutting grass and lucerne, etc. Corn is tied into sheaves and left to dry or carried straight to the threshing floor (*kharmāngād*). Pod crops, such as peas, beans, linseed, and carraway seed, are mainly threshed by beating with rods; and in those parts of the country where draught animals are scarce, corn is also threshed in this way. A threshing board, the bottom surface of which is studied with sharp
pieces of flint stone held in position by wooden wedges, is used to thresh grain. It is attached by a rope to a yoke and drawn, while a man stands on it, in a circle by an ox or other animal over the threshing floor. A threshing wheel or wain (tūn, ?tūn) is used, especially in north-eastern, central and south Persia. This is a saddle-like carriage, usually drawn by two oxen with two sets of rollers, which turn round as the sledges beams slide over the sheaves. The rollers carry sharp-edged steel discs, sometimes with fine saw teeth, or have steel edges or prongs with sharp edges, one roller having the edges parallel to the axis, and the other having them right at angles. In some parts of Aḏharbāyjān the wain has wooden spokes. The third method of threshing is for the grain to be trodden out by strings of oxen, donkeys, or horses driven round the threshing floor. Winnowing is done by wooden forks, the grain being thrown six or seven feet into the air. The grain drops straight down while the chaff is carried by the wind and settles on a separate heap. A second winnowing done by wooden shovels is sometimes necessary. Finally the grain is sifted to separate it from the stones and earth with which it may have become mixed during threshing and winnowing. Two men can winnow and sift 20-25 cwt. of corn a day. Donkeys and other pack animals take the grain in sacks to the granaries. The chaff is removed in nets and used as fodder for oxen, donkeys and oxen (H. E. Wulff, Agricultural implements in Persia, in Power farming and better farming digest, Sydney, Oct. 1958).

Sheep and goats are commonly grazed on stubble fields, which thus receive a slight benefit from their manure. For the most part, however, animal dung is used as fuel. In some dry farming areas there is insufficient rainfall to rot the manure even if it were used. Household sewage mixed with earth is used as fertilizer in some areas, especially round urban centres. Earth from old walls and ruined buildings is also broken down and spread on the fields (cf. J. B. Fraser, Winter’s journey, London 1838, ii, 65). Gardezi tend to be manured more regularly than fields and to be cultivated annually. Pigeon limes, collected in pigeon towers, is used in the Isfahān district for the cultivation of melons and pear trees (cf. Chardin, Voyages, Amsterdam 1711, ii, 75). Faḵhr al-Dīn Rāzī mentions the use of bird lime and weed-killers (Ljāmī al-ulām, f. 132a). Fish manure is used in Kīrmān for pistachio trees. Chemical fertilizers have been introduced in recent years but their use is comparatively rare.

Practices in fallow, during which the land may or may not be ploughed, and crop rotation vary very widely. Unirrigated land tends to be left fallow for long periods. Irrigation is usually by inundation. In vineyards, melon land, and market gardens the water is let into the land by irrigation trenches. In land watered by bandās the tendency is to cultivate more intensively the land nearest the mouth of the bandā to avoid water loss while that at the end of the bandā is less frequently cultivated.

In many parts of Persia the crops have to be guarded, especially at night, to prevent depredations by wild pig and other animals. Scarecrows (matarsak) are erected in some districts (cf. C. E. Yate, Khurasan and Sistan, London 1900, 168, 283).

In recent years there has been some development in mechanization. An increasing number of tractors and combine harvesters have been in use especially since 1952, but the numbers are still relatively small except in Dagh-i Gīrgān, where cultivation in the grain-growing areas has been wholly, and in the cotton-growing areas, partially mechanized.

The state did not interest itself in the conduct of agriculture except so far as crown lands (ḵhlīša) were concerned, although it was interested in the prosperity or otherwise of agriculture from the point of view of taxation. A Ministry of Agriculture, Commerce and Public Welfare, was first founded in 1879; at the same time an Agricultural Council was set up. In 1891-2 the department of agriculture and commerce was transferred to the Ministry of National Economy and Roads. The following year departments of agriculture, commerce, and industry were set up. In 1893-4 agriculture and industry were once more united in one department, but were subsequently again divided. In 1897-8 the Ministry of Crown Lands (wisdār-i ḵhlīšagān va rakhābār-i dār al-ḵhlīša) became the Ministry of Crown Lands and Agriculture. Subsequently crown lands (ḵhlīša) were transferred to the Ministry of Finance. During the constitutional period agriculture suffered various vicissitudes administratively. The first agricultural magazine to be published was a fortnightly journal of agriculture and commerce issued in 1880 by the Ministry of Agriculture and Commerce.

The first agricultural school in Persia was the Madrasa-i Muṣafār at Tehrān which was opened in 1901-2. It closed after six years. The next attempt to open an agricultural school was at Karaj near Tehrān in 1929. This became a high school in 1933-4 and a college in 1943-4. In 1948-9 it was transferred from the Ministry of Agriculture to Tehran University and in 1952-3 separated into two colleges, the college of agriculture and the college of veterinary science, which were fully incorporated into the university. Experimental work is done in government agricultural stations, notably at Karaj.

iv. —Ottoman Empire

During the period between the 8th/14th and 11th/17th centuries, when the Ḳimārī (q.v.) system prevailed in the Ottoman Empire, the rēhbe, i.e., the freehold
ownership of agricultural lands was regarded as vested in the State. The tenure of lands held as wakf and mukdta^a by the aghas: in this state of affairs is to be found the basic reason for the cultivation. Every celtikdii was obliged to sow a definite amount of seed on a definite area, both prescribed by the State. The irrigation-canaels were kept in operation under the supervision of the resm-i cift. From the harvested rice, after seed had been set aside, the State took one-half (in some areas two-thirds). As compensation for this, the celtikdijiler so organized were exempt from certain taxes (mainly the resm-i cift, resm-i ghanem, 'awwârî; for the celtikdijiler see Barkan, Kanunlar, 54, 202-3, 205; for a celtik hâmis and his ankara Un, DTFC library, Ismail Saij collection MS 5120, 130-9). The cultivation of rice was introduced into Rûmeli by the Ottomans, and extensive rice-fields under State control appeared in the valleys of the Merîç (Maritsa), Karasu, Vardar and Salambria (see M. T. Gökbilgin, Edinme ve Paşa Liûâ, İstanbul 1932, 125-50). A similar system of State participation prevailed in those valleys, in order to ensure the food-supply of Istanbul, were created in the vicinity of the city by the settlement of prisoners of war, 'ortakdî kullar' (see Barkan, Kanunlar, 86-109, and idem, XV ve XVI. asrîlarda Osmanlîs imператорîlîlînda topârạch işçîlînîn organizasyonu şekilleri, in İktisat Fak. Mecm., i (1939), 29-74, 198-245, 397-447. On the food supply of the capital see further W. Hahn, Die perlverpflegung Konstantinopel und der ottomanische Staatsapparat, Stuttgart 1926; R. Mantran, Istanbul dans la seconde moitié du XVIIe siècle, Paris 1962, 179-213).

Thus the principal characteristic of the classical Ottoman land-system was direct State control of the peasant and the soil, a system which had grown up to meet the military and financial needs of an absolutist administration, and in which the State's main concern was to ensure the revenues of the timars. This timar organization and the Ottoman land-system broke up in the period of anarchy which began at the end of the 10th/16th century (see Koç Beg, Risâle, ed. A. K. Aksüt, İstanbul 1939, 24-56). Lack of settled conditions and heavy taxes caused the peasant to abandon the soil in droves: in the first half of the 11th/17th century this movement from the land reached disastrous proportions and was called the 'bûyûk ka^bûn' (see M. Akdağ, Türkâyênin ikitsadî vasyeti, in Belleten, xiii/51 (1949), 553-64, xiv/55 (1950), 319-405). In many districts local dignitaries and Janisâries turned the abandoned agricultural land into pastures for their flocks of sheep (M. Akdağ, Belleten, xiv, 374, 394). The new kânâns concerning the use of land and the râ'dîyê which were promulgated in the early 11th/17th century (they are found together in MÔM, i (1331), 49-112, 305-48) are the result of efforts to solve this problem.

In the 11th/17th and 12th/18th centuries the most important change in agricultural conditions was brought about by the spread of the systems of mubiîa'sa and ihisâm (qq.v.). There arose a new class of aghas, a'ydâns and derebeyûs (qq.v.), in Rûmeli and Anatolia who, holding possession of the land for life, became in practice great land-owners (for Western Anatolia see Ç. Uluçay, 18 ve 19. yüzyûllarda Saruhan da ekîyâlî vek halî harekâtleri, İstanbul 1955; see further A. F. Miller, Mustafa Pasha Bayraktar, Moscow 1947). Although Mahmûd II succeeded, after 1227/1812, in putting down the great a'ydân and derebeyes (qq.v.) in Rûmeli and Anatolia who, holding possession of the land for life, became in practice great land-owners (for Western Anatolia see Ç. Uluçay, 18 ve 19. yüzyûllarda Saruhan da ekîyâlî vek halî harekâtleri, İstanbul 1955; see further A. F. Miller, Mustafa Pasha Bayraktar, Moscow 1947). Although Mahmûd II succeeded, after 1227/1812, in putting down the great a'ydâns and derebeyes (qq.v.) in Rûmeli and Anatolia who, holding possession of the land for life, became in practice great land-owners (for Western Anatolia see Ç. Uluçay, 18 ve 19. yüzyûllarda Saruhan da ekîyâlî vek halî harekâtleri, İstanbul 1955; see further A. F. Miller, Mustafa Pasha Bayraktar, Moscow 1947). Although Mahmûd II succeeded, after 1227/1812, in putting down the great a'ydâns and derebeyes (qq.v.) in Rûmeli and Anatolia who, holding possession of the land for

The Ottoman response to that situation meant that agricultural products were in general disposed of in local markets. Cereals were distributed further afield only in areas near the coasts or in the vicinity of cities or along the great military routes. In the 8th/14th and 9th/15th centuries Venice bought large quantities of cereals from Western Anatolia, Thrace and Thessaly (see F. Thiriet, Régnes des délibérations du Senat de Venise concernant la Romanie, i-iii, Paris 1958-60). In the same period cotton and dried fruits were exported from Western Anatolia to countries in the north (this appears particularly from the customs-registers of Akkerman and Kili, Bayvekalı Arşivi, Malıye no. 6).

From the 9th/16th century onwards increased trade with Western Europe led to an increase in the export of the cotton and coffee goods of Western Anatolia (P. Masson, Histoire du commerce français dans la Levant, Paris 1896-1911, appendix VIII; E. Arup, Studier i Engelsk och Tysk Handelshistorie, Copenhagen 1907, 109 ff., 191 ff.). In the 19th century, as was observed by P. de Tichatchef (Asie Mineure, 3 vols., Paris 1867), G. Perton (Souvenirs d'un voyage en Asie Mineure, Paris 1867) and A. Ubicini (Letters sur la Turquie, Paris 1851, 244-65), the agricultural methods and peasants' practices were, as previously by tradition, in this field ethnographical observations (e.g. Hämni Z. Koşay, Türkiye halkının maddi kültüründen daire ayardırmalar, in Türk Ethnografi Dergisi, i, 1956, 7-55; Contribution à l'étude de la culture matérielle des Bulgares, in Bulletin du Musée Nat. d'Ethnographie a Sofia, viii, 1957, 109 ff., 130-65, xii, 62-85) can be supplemented from the registers of effects and deeds (e.g. Hamit Z. Kosay, Tarih arastırması, Ankara 1941, 237-63).

The Ottomans were naturally acquainted with much material—as yet unstudied—on the crops grown in various areas and their productivity; the various agricultural implements are to be found listed in the kişadı registers of effects (metrukdt). The actual cultivation of crops and the methods employed in the 12th/18th century were inadequate (see O. L. Barkan, Difficulties of communication meant that agricultural methods employed in the Ilkhanid period in Anatolia were adequate (see H. Inalcik, Tanzimat nedir?, in Tarih ayardırmalar, Ankara 1947, 237-63).

The cultivation of crops and methods employed in the 12th/18th century were inadequate (see H. Inalcik, Tanzimat nedir?, in Tarih ayardırmalar, Ankara 1947, 237-63).

lenders, the maximum interest was fixed by law at 15% (Başyevkelet Arşivi, Mühimme def. no. 253, 8-10), and the sum of 20 million burlaş per annum was set aside to provide credits to peasants. The measures taken to improve agriculture in the Dobrudjâ (q.v.) deserve particular mention. A French expert was called in to survey the agricultural situation and make recommendations (see A. Gaudry, Recherches scientifiques en Orient, Paris 1860). The distribution of good varieties of seed to the peasants, tax-exemption granted to promote the culture of olives and mulberries, encouragement to use modern implements—all these sprang from the adoption of the new outlook, whose effects are best exemplified in the activities of Midhat Pasha (q.v.) in the Danube province (northern Bulgaria): he was the first to import from Europe reaping- and threshing-machines, he founded a model farm, and set up ‘Memâfi sandıkları’ to supply credit on easy terms to farmers (see ‘All Haydar Midhat, Midhat Pasha, kayâl-i siyásiyësî...’, Istanbul 1325/1909, 29). In this period the export of agricultural products to Europe, especially to Great Britain, increased greatly (see K. Renell’s Atlas of Bengal, 1781, Map X). All descriptions and accounts of many of the phenomena of mediaeval agricultural practice apply equally well to the traditional practice in Indian villages today. There existed the same combination of simple and crude tools with certain ingenious methods and devices. While the fitting of the “iron point” to the wooden plough is referred to in a work as old as the Manusmriti (x, 84), Frier (1672-81) found that in fact the “coulters” of Indian ploughs were “unarmed mostly, Iron being scarce”, and that hard wood was being used instead. Yet on the other hand, Amâl Allah ‘U’saynî (early 18th century) notices the use of dibbling in sowing cotton, and Thévenot in Gujjarât observed the use of fish manure in planting sugar-cane.

Rainfall was generally supplemented by artificial irrigation, from wells, tanks and canals. Bâbur has described how he had two most large method of lifting water out of wells. One involves lifting water in a leathern bucket (Karâs) pulled out of the well by yoked oxen drawing a rope passed over a wooden wheel, “a laborious and filthy method”. The other (the raikâl or arkal), which deeply interested Bâbur, is called in English the Persian wheel (Bâburnâmâ, tr. Beveridge, i, 388; ii, 486). The dhekîl, based on the use of weights, has been described by Frier. Large tanks for irrigation purposes were usually constructed by damming streams and rivulets. Firuz Shâh (752-90/1352-88) is said to have built several tanks by means of such dams (bandâs) (‘Afdî, Ta’rikh-i Firuz-shâhî, Bibl. Ind., 330). The Udaypûr lake, created by a huge dam in the 16th century, was originally about 40 miles in circumference (A’tim, i, 509). Abandoned channels of rivers, which became active during the inundations, served as natural canals and were important sources of irrigation in the Indus basin. Human effort was often needed to keep them in use by clearing silted sections. In addition there were some big man-made canals. The best known of these was Firuz Shâh’s West Jamunâ Canal, re-excavated and re-aligned by Shâhjahân. Among other important mediaeval works were the East Jamunâ Canal (early 18th century), a long canal drawn from the Sutlej by Firuz Shâh, a network of Muggal canals drawn from the Râîv near its entry into the plains, the Sidhnâi (which the Râîv took as its main bed in or before the 16th century), the Begarwâh in upper Sind (17th or 18th century) and the Shânwâh in the Indus delta (early 16th century). Most of the major crops raised today were also raised in mediaeval times. A few new crops were introduced during the mediaeval period itself. Tobacco cultivation became well established throughout out the country during the earlier part of the 17th century. Coffee cultivation had its beginnings late in the same century, while the cultivation of capsicum spread rapidly in the earlier part of the next. Among the purely modern crops may be counted maize, potatoes, tea and groundnuts.

The geographical distribution of the crops in the 17th century (and so presumably earlier) was different in some important respects from that...
prevailing today. There was the same broad division into rice and wheat zones marked by the 40- or 50-inch isohyets. But the cultivation of cash crops, notably opium and hemp, was far more widespread in mediaeval times, the conditions of transport prohibiting concentration. Indigo claimed a large area, in mediaeval times as well as till late in the 19th century; but its cultivation has now practically disappeared. Similarly, opium and hemp were more widely cultivated than now. On the other hand, jute, though known to have been cultivated in certain localities in Bengal, was far from being an important cash crop during mediaeval times.

Sericulture, which has undergone a great decline since, flourished mainly in Bengal and Kashmir. Among fruits the most prominent were the mango and the coco-nut. The pine-apple was introduced during the 16th century through the agency of the Portuguese, and was rapidly acclimatized. The practice of grafting seems to have been widely applied in Mughul times. Dhihângr't describes its application to cherries and apricots in Kashmir (Tâzuk, ed. Sayyid Ahmad, 299). Aman Allah notices its use in planting mangoes, and a history of Shâhdjahân's reign declares that great improvement in citrus fruits resulted from grafting (British Museum MS, Or. 174, f. 102a). The Emperors and their nobles and generally Rajahs, as also laymen in their orchards, Firdw Shâh is said to have planted 1200 orchards around Delhi (‘Affi, 295). The Mughals have given their name to a particular type of garden, laid out in squares and criss-crossed by channels of flowing water obtained by various devices (see BUSTAN II).

2. Mediaeval Works on Agriculture. Very few works seem to have been written on agriculture in mediaeval India, to judge from their extreme paucity in modern collections. There exists in some MSS, e.g., India Office Library I.O. 4702, Aligarh, Lytton Farsiya Wâlam 31, and Brit. Mus. Or. 1741, ff. 25a-48a, a tract on agriculture which is really Chapter XI of an encyclopaedic work, the Gand-i Bâd-i-ardw, of Amân Allah Husaynî, Khân Zamân, d. 1064/1657. This tract embodies, with acknowledgment to the Kitâb Shâhgâr al-nihdî, a work mainly concerned with horticulture and written in Persia or Central Asia in the 15th century (Brit. Mus. Add. 1771, ff. 157b-269b, etc.). But Amân Allah has introduced considerable additions, including detailed descriptions of the cultivation of Indian fruits and notices of various crops grown in India. Yet, despite certain interesting statements, Amân Allah’s work is much too superficial, and he follows the Kitâb Shâhgâr al-nihdî in recommending a number of quack-practices. Abûl-Fadl in his famous work on Akbar’s administration, the Â‘in-i Akhbari (ed. Blochmann, Bibl. Ind., Calcutta, 1867-77), gives much information relating to agriculture. In its detailed accounts of the provinces of Akbar’s Empire, the book contains lists of prices of agricultural produce, tables of revenue-rates on the various crops, and area statistics and sundry information on cultivation and irrigation.

Bibliography: Modern works only. Moreland’s India at the death of Akbar, London 1920, also contains a description of the system of agriculture. On Mughal gardens there is a charming book by C. M. Villiers Stuart, Gardens of the Great Mughals, London 1913. Irfan Habib’s Agrarian system and sugar-cane, was far more consulted for a fuller treatment of several points touched on in this article.

Watt’s Dictionary of economic products of India, 6 vols., is a monumental work of reference, giving detailed historical, technical and other information on almost everything produced in India. For an examination of Indian agricultural practice see J. A. Voelcker, Report on the improvement of Indian agriculture, London 1893; see also the Royal Commission on Indian Agriculture, Report, London 1928. Modern agricultural statistics, given by districts, are available in the volumes of The agricultural statistics of India, issued by the Department of Revenue, etc., Government of India, at irregular intervals since 1884-5. (Irfan Habib)

FILÂLÎ [see tafîlây].

FILASTÎN, colloquially also Filastîn, an Arabic adaptation of the classical Palestine (Greek Παλαιστίνη, Latin Palaestina), the land of the Philistines. The name was used by Herodotus (i, 105; ii, 106; iii, 91; iv, 39) and other Greek and Latin authors to designate the Philistine coasts and sometimes also the territory east of it as far as the Arabian desert. After the suppression of the Jewish revolts in 70 and 132-3 A.D. and the consequent reduction in the Jewish population the name Syria Palaestina, later Palaestina, was adopted by the Romans in place of Judaea. The Roman province of Palestine was later extended by the annexation to it of other, adjoining territories. By the 6th century there were three provinces of Palestine, Palaestina Prima, with its capital at Caesarea, including Judaea, Idumaea, Samaria, and part of Peraea, Palaestina Secunda, with its capital at Scythopolis (Baysan), including the valley of Esdraelon, Galilee, and parts of the Decapolis and of Gaulanitis, and Palaestina Tertia or Salutaris, with its capital at Petra, including the Negev, Nabataea and part of the Sinai peninsula. (Ed.)

I.—PALESTINE UNDER ISLAMIC RULE.

The name of Filastîn was applied first to the administrative and military district (djund [q.v.]) established by the Arab conquerors on the territory of the ancient Byzantine province known as Palaestina Prima. The latter comprised roughly Samaria and Judaea with the coastal area stretching from Mt. Carmel in the north to Gaza in the south. This corresponded with a fairly varied region from the geographical point of view, the largest part of which was made up of a mountainous chain of medium height, with summits rarely exceeding 1,000 metres (mountains of Samaria in the north, with Mt. Gerizim, the mountains of Judaea in the centre, and the mountain of Hebron in the south), extending, toward the west in a series of hills bordering the coastal plain and to the east in expanses of steppe, of which the most important was the desert of Judah. It is difficult to reconstruct with accuracy the story of the conquest of Palestine by the Arabs. The expedition sent out by Abû Bakr and commanded by ‘Amr b. al-‘As invaded the region of Gaza in Dhu’l-Hijjâd 12 or Muḥarram 13/February or March 634. After the fall of Gaza, ‘Amr marched on Kaysariyya (Caesarea by the sea) and began to besiege it in Dju‘mâdâ I 13/July 634, but he was forced to retreat on the approach of a new Byzantine army, which he was ready to confront only after uniting his troops with those brought by Khâlid from Syria. After the victory over the Byzantines of Adjnadayn in Dju‘mâdâ I 13/July-August 634, ‘Amr occupied most of the towns of Palestine: Sabâstîya (Samaria), Nâbulus, Ludd (Lydda), Yubnâ,
FILASTIN 911

It was only after the battle of Yarmuk [q.v.] that Filastin (Palestine) was occupied by the Arabs. Amwas (Emmaus), Bayt Djibrin and Yafa (Jaffa), whose inhabitants are said to have refused to submit to anyone but the Khalifa himself. 'Umar b. al-Khattab then visited Syria for this purpose (6/637). As for the town of Kaysariyya, 'Amr took up the siege again, but left it shortly afterwards to go to Egypt, leaving as his successor Yazid b. Abi Sufyan, who, soon dying, was succeeded by his brother Mu'awiya. It was Mu'awiya who obtained possession of the town by betrayal in 19 or 20/640 or 641 and completed the conquest of Palestine by occupying 'Askalon (Ashkelon).

The Arab conquerors permitted the previous administrative organization to continue, transforming the former Palæstina prima into giund Filastin; they set up the capital first at Ludd, and then at al-Ramla, a new town which was founded by Sulayman b. 'Abd al-Malik when he was governor of Palestine and in which he continued to reside after he had become caliph in 96/715. The giund Filastin, still mentioned as such by Ibn Shaddād, survived until the Mongol invasion as an administrative district, but its territory appears to have been extended from the 4th/10th century onwards, both to the north and south, and to the south-east from the 5th/11th century onwards.

The geographer al-Mukaddasi in fact counts Arība (Jericho) and 'Ammān (the ancient Philadelphia) among the towns of this district, and is followed in this by Yākūt. Al-Īstakhri and Ibn Hawkal, for their part, join to Palestine the south of the Ghawr [q.v.], al-Dhibāl [q.v.] and al-Sharāt [q.v.], that is to say, on the one hand the lands situated to the north of the Dead Sea, and on the other those to the south of it on the other side of the rift-valley which extends as far as the gulf of al-Ākaba. Further, the vast area called al-Tīh, covering the present day Negev and Mt. Sinai, was also in practice attached to Palestine. Under the Mamlūk sultans, Palestine received a new administrative organization. It was attached more or less directly to the miyāba of Damascus, and comprised six districts, those of Ghazza, Ludd and 'Akkūn on the one hand (these three districts being sometimes considered as forming a separate mamelāka) and those of al-Kuds (Jerusalem), al-Khālīl (Hebron) and Nābulus on the other.

Palestine was particularly honoured in the Umayyad period. Mu'āwiya is reported to have had himself proclaimed caliph at Jerusalem and it was under one of his successors that the ancient court of the Temple, called the karam, received its two principal monuments, Kubbat al-Šākhra and al-Masqūd al-Ahkā, both built by 'Abd al-Malik (65/868/870). This caliph had the interior of the Dome of the Rock decorated with mosaics evoking the superiority of Islam over Christianity and the domination of the world by the Muslim rulers. In the 6th/12th period Palestine reverted, with Syria, to the rank of a mere province; its official capital continued to be al-Ramla, but the monuments of Jerusalem maintained sufficient renown for the caliph al-Ma'mūn, inspired by hostility by the Umayyads' memory, to feel the need to substitute his own name for that of 'Abd al-Malik in all the inscriptions commemorating the latter's foundations.

Palestine was occupied by the Fātimids immediately after Egypt (359/966) and thus broke free for some time from the authority of the caliphs of Baghdad, which had already become nominal under the Tūlūnīs [q.v.] and then under the Ikhshīdīs [q.v.]. But Fātimid rule was never firmly established there, and brief revolts ensued, of which the most spectacular was the one which led to the installation of the new 'Abīd caliph at al-Ramla by a Bedouin amir of the Banū 'I-Djarrah [see QARRĀHĪDS]. Jerusalem, on the other hand, was the victim of the violent measures adopted against the Christians by al-Hākim, and at his command the Holy Sepulchre was destroyed. In the late 5th/11th century, Palestine was briefly occupied by the Turcoman chief Ṭūṣ b. Uvak [q.v.]; shortly afterwards a minor Turkish dynasty, founded by Arūṭ [see ARTUKIDS], occupied Jerusalem, but it was soon expelled by a Fātimid counter-attack (479/1068-477). This Fātimid success was nullified by the arrival of the First Crusade, which achieved the foundation of the Latin Kingdom of Jerusalem and led to the Crusaders' occupation of the Holy Places for nearly a century (492/1099-1187).

The Arab geographers provide some scattered information on conditions in Palestine during the period between the Arab conquest and the arrival of the Crusaders. In the 3rd/9th century Palestine was occupied by a numerous population of Arab origin (belonging to various tribes). There was, however, also a certain proportion of non-Muslims, Christians, Jews and Samaritans, the size of which we naturally cannot estimate; al-Ya'qūbī refers to the presence of non-Arabs in the town of al-Ramla. At this period the region was crossed by the pilgrimage route from Damascus; at Ayla, near the gulf of al-Ākaba, this met the route followed by pilgrims from Egypt and the Maghrib; it was also a trade-route used long since for traffic with Egypt or Arabia. There was also a route connecting Jerusalem with 'Ammān via Jericho. In the 4th/10th century Palestine was one of the most fertile regions of the province of al-Shām, since it was well watered with rain and, in the Nābulus region, boasted abundant streams. Al-Mukaddasi informs us of its principal products, among which agricultural produce was particularly copious and prized: fruit of every kind (olives, figs, grapes, quinces, plums, apples, dates, walnuts, almonds, jujubes and bananas), some of which were exported, and crops for processing (sugar-cane, indigo and sumac). But the mineral resources were equally important: chalk earth (al-hawwārā), marble from Bayt Dījrīn, and sulphur mined in the Ghawr, not to mention the salt and bitumen of the Dead Sea. Stone, which was common in the country, was the most generally used building-material for towns of any importance. Al-Mukaddasi also gives us brief indications of the main Muslim religious trends; there were some Shī'īs at Nābulus, no Mu'tazilis openly confessing their beliefs, and some well organized Karrāms at Jerusalem; at the end of the 4th/10th century the judicial schools followed were the Shī'ī and the Fātimi. The mediaeval geographers also notice briefly the places of pilgrimage, which were especially numerous in Jerusalem and Hebron (the town of Abraham al-Khalil).

During the period of the Crusades, Palestine was the scene of battles and ambushes, periodically interrupted by the truces which were from time to time established by treaties; such a treaty is that of 626/1229 by which the Ayyūbid al-Kāmil restored the demilitarized city of Jerusalem to the Franks of Acre for ten years. This situation, which in any case became more settled after the recovery of Jerusalem by Ṣalāḥ al-Dīn, did not, however, prevent the continuation of economic interchange between Egypt and Syria; the caravans were merely subject to "transit tolls" imposed by the Franks or, in certain
circumstances, were the victims of hostile raids. Nor did it prevent the establishment of fruitful commerce, particularly under the successors of Salāh al-Dīn, even on the part of non-Mulsim merchants (Italian, French or English), living mainly at Acre, and the Muslim towns of the interior. It was also at this time that Palestine was celebrated by certain Muslim writers as the especial land of Prophets, and the places of pilgrimage experienced their greatest popularity; whether at Jerusalem or at Nabulus or A lI, [q.v.], head of al-Husayn b. Ghazza of Hashim, grandfather of the Prophet.

At the end of the 7tth/13th century (690/1291), the Franks, from whom the Mamlūk sultan Baybars had already taken the stronghold of ‘Aṣḵalān in 668/1270, were expelled by al-‘Aṣrāf Khāli from their last possessions, Caesarea and Acre; thus all Palestine and the neighbouring provinces were again under Muslim rule. The territories west of the Jordan continued thus during the Mamlūk period to play an important part as a trunk route, followed as much by the merchants as by the official couriers who linked Cairo with Damascus and Aleppo along a post-road adopted and improved to permit greater despatch.

After 1751/1516, after the battle of Dābīs, the region fell under Ottoman rule, which was last to almost without interruption until 1917-18. During the 16th century Palestine consisted of the sandjaks of Ghazza, Jerusalem, Nābulus, Ladjdjun and Saḍaf, all forming part of the eyālāt of Damascus. The sandjak of Ladjdjun was not under an Ottoman governor but was held by the local Bedouin clan of Turābbī, who revolted on more than one occasion. From the late 16th century there is a noticeable decline, due to falling standards in the administration, frequent changes of governors, attempts by local chieftains to gain independence, and the campaigns carried out on the soil of Palestine originating in neighbouring regions. As early as the end of the 16th/17th century, indeed, the little Druze state of Fakhr al-Dīn in which controlled the districts stretching from Beirut to Mt. Carmel, attempted, between 1595 and 1634, to make itself independent of the Sublime Porte; following this episode, in about 1660 a new province distinct from that of Suḥrān was created, named Saydā and including the lands of Saḍaf and al-Ladjdjun. This measure did not prevent the continued activities of local chieftains the most notable of whom, Zāhir Al Umar [q.v.], a chief of bedouin origin, established himself round ‘Akkā between 1750 and 1775. Shortly thereafter it was the turn of Ahmad al-Diāzār to attempt to emancipate himself from Ottoman tutelage in the same region, though not without vigorously resisting the attacks of Napoleon Bonaparte who, although he had captured Yāfā in 1221/1799, was unable to make himself master of ‘Akkā. In the 19th century, the son of Muhammad ‘Ali, Ibrahim Pāghā [q.v.], was another who desired to take Palestine and Syria from the Ottomans and thus assure his mastery over the lands of the Arabs. He captured ‘Akkā and Damascus in 1832, but in 1840 Palestine was returned to the sultan ‘Abd al-Majīd in consequence of the intervention of Britain and Austria.

During the later Ottoman period Palestine became a subject of increasing interest to the Great Powers of Europe, on economic as much as religious grounds. The custody of the Holy Places there had been acknowledged as in the hands of the Orthodox Patriarchate of Jerusalem in the 16th century and was reaffirmed at the request of Russia by firmans of 1853; the Latin clergy there also had, since the 16th century, been under the protection of France. This situation was the occasion for frequent intervention by the European States in the affairs of the Ottoman Empire. But Palestine also had European commercial factories, mainly French, such as those of Acre and Ramla, and here, as well as at Jerusalem, there resided Consuls charged with protecting their nationals by virtue of the agreements known as the Capitulations [see IMTIYAZAT].

From the 18th century onwards, European economic penetration increased in Palestine as elsewhere in the Arab East. European products were sold there either by European merchants themselves or by Christians or Jews native to the area who sometimes, by taking a European nationality, succeeded in enjoying the advantages conferred by the Capitulations, avoiding part of the 'asnas' to which those merchants who were Ottoman subjects were exposed and thus obtaining practically a monopoly of important trade [see BERATL]. In the 19th century, Christian missions, both Catholic and Protestant, contributed in Palestine as in the Lebanon to the raising of the general level of education, while with European help modern technology began to spread; thus a French company completed the building of the first railway line, that connecting Jaffa with Jerusalem, in 1892.

Palestine had some Jewish inhabitants throughout the period of Islamic rule, though their numbers were much reduced during the Crusades. They were from time to time reinforced by immigration from other countries, notably in the 16th century. A new type of immigration began in the late 19th century, with the establishment of the first Zionist agricultural settlements in the eighteen eighties. Despite attempts by the Ottoman government to restrain it, this movement gained force. It found its ideology in Zionism, whose official beginnings may be dated 1892, when the congress inspired by Th. Herzl was held at Basle; at the beginning of the 20th century it became clear that so much so that the number of Jews resident in Palestine rose from 25,000 in 1880 to 80,000 in 1914.

Turkish rule in Palestine ended with the First World War, which led to the dismemberment of the Ottoman Empire, ratified in 1920 by the abortive Treaty of Sévres, and again in the Treaty of Lausanne of 1923. Great Britain, who had occupied Palestine during the war (General Allenby entered Jerusalem on 9 December 1917), had asked the League of Nations as early as 1919 to entrust her with the administration of the territory under the form of an international mandate. The British proposal, which was amended in 1920, was approved by the Council of the League in July 1922, and it came into force in September 1923, after the conclusion (July 1923) but before the entry into force (August 1924) of the Treaty of Lausanne, which regulated the future of the territories split off from the Ottoman Empire. Although the Mandate covered the areas on both sides of the Jordan, direct British administration was established only in the region to the west of the river. That to the east formed the Amirate of Transjordan, with an autonomous government, whose powers were limited by a treaty with Britain.

The policy of the British mandatory government in Palestine was from the beginning influenced by the promises made by Britain to the Jews to establish a Jewish National Home in Palestine. In August 1897 the Basle Congress had defined Zionism in the following formula: "the object of Zionism is the establishment for the Jewish people of a National Home in Palestine of a National Home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine". The execution of this programme was undertaken by a "Zionist Organization", which committed itself to political action, with especial encouragement from Great Britain, and which achieved a great success in 1917, when the latter declared officially that "His Majesty's Government view with favour the establishment in Palestine of a National Home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine" (Balfour Declaration, 2 November 1917; France, Italy and the U.S.A. subsequently accepted the policy set out in the British declaration. Parallel with the obligations Great Britain had assumed towards the Zionist Organization, she was bound by the promises of independence she had made to the Sherif Husayn to encourage him to revolt against the Turks (Husayn-McMahon correspondence, 1915). The British Government subsequently declared that Palestine was excluded from the territories promised to the Arabs for their independent State; in the Churchill Memorandum of June 1922, accepted by the Zionist Organization, it further stated that "the terms of the Declaration referred to do not contemplate that Palestine as a whole should be converted into a Jewish National Home, but that such a Home should be founded in Palestine", and gave the Arabs various assurances that an autonomous government would be established in Palestine. But the Arabs, disappointed in their hopes and disturbed by the massive immigration of Jews, who in 1939 already numbered 400,000, refused to cooperate with the Palestine administration and, under the inspiration of the Arab Higher Committee for Palestine, directed by al-Haddi' Anin al-Husayn, mujt of Jerusalem, reacted with violence: in 1928, 1929, 1933, 1936 and 1939 bloody disturbances broke out in Jerusalem, Jaffa and Haifa.

In spite of the Arab reaction, the Zionists pursued their efforts with success; they consolidated their international position by the creation (Zurich Congress 1929) of the "Jewish Agency", which included also representatives of non-Zionist Jews. The situation in Palestine disturbed the League of Nations Permanent Mandates Commission, which in 1930 severely condemned the British administration for failing to meet and reconcile Arab and Jewish needs. The British Government gave assurances that no more land would be put at the disposal of Jewish immigrants; this measure was, however, mitigated by an assurance given to the Zionists that there was no question of an absolute prohibition but rather of the imposition of controls on land purchase. Nevertheless, faced with unshakeable opposition from the Arabs, and obliged continually to reinforce the garrison in order to put down the disturbances, Britain was forced to give an ever more restricted interpretation to the Balfour Declaration. After a fruitless attempt to bring Arab and Jewish delegates together to settle their differences (British Mandate Conference, London, February-March 1939), the British Government published a White Paper (May 1939) which restricted Jewish land purchases and immigration and envisaged the establishment after ten years of a Palestinian State in which Arabs and Jews would share the government. The solution proposed by the British Government excluded the establishment of a Jewish National Home, and the publication of the White Paper was followed by an outbreak of Jewish violence. The situation grew steadily worse during the Second World War. The Jews surviving the holocausts gazed with hope towards Palestine; the British authorities began to force the immigrants back; and the Jewish secret organizations entered on a campaign of terror against the British, who in 1946 proclaimed martial law.

Great Britain's efforts at conciliation had failed and she therefore referred the question to the United Nations Organisation. The U.N. General Assembly appointed a ten-member Special Committee in 1947. Its report was then considered by the Palestine Committee of the whole Assembly, which produced a partition plan, adopted by the Assembly on 29 November 1947, and envisaging the creation of two independent States, Arab and Jewish, and of an international zone covering the Jerusalem area under U.N. control.

The plan was accepted by the Jews but rejected by the Arabs. Arab volunteers attacked the Jewish forces, who were making efforts to occupy the areas assigned to them by the partition plan. Fighting broke out in the Jerusalem area, in which the Jewish forces gained an initial advantage but were then stopped by this to call for the intervention of the Arab regular armies; but divergencies of opinion arose in the Arab League and between the Arab governments.
On giving up the Mandate on 15 May 1948, Britain withdrew her troops from Palestine. The day before, David Ben Gurion had proclaimed the birth of the State of Israel. The Arab armies advanced, but the Jews confronted them everywhere. The Security Council imposed a truce, accepted by both Arabs and Jews, but the United Nations' efforts at conciliation ended in failure. In December 1948, the battle recommenced, but Egypt was the only Arab State fighting, for Iraq, Syria and Transjordan withheld their troops from the operations. Despite their numerical superiority the Egyptian forces withdrew before the Jews, whom the ceasefire imposed by the Security Council halted 20 km. beyond their borders. The armistice between Israel and Egypt, signed at Rhodes on 24 February 1949, and those signed successively thereafter between Israel and Lebanon, Jordan, and Syria, put an end to the fighting between the Arabs and the Jews and established the partition of Palestine.

FILIBE, Ottoman name for the town of Plovdiv in Bulgaria, situated on and around six syenite hills in the Thracian plain along the Maritsa. Called Pulpudeva by the Thracians, Philippopolis by the Greeks, Trimontium by the Romans, and Pludin by the Slavs, it was an important fortress throughout antiquity and the Middle Ages, being held successively by Byzantines, Bulgarians, and Ottomans between the 6th and 14th centuries A.D. At the time of the Ottoman invasion of the Balkans it was in the hands of the Bulgarians. The Ottoman chroniclers record the conquest of Filibe immediately after the fall of Edirne, i.e., in about 765/1363-4. According to Sa'd al-Din the governor of the town attempted to resist but, not risking an open battle, was obliged to retreat to the fortress; the besiegers made a fierce onslaught and the governor was compelled to cede the town to Lâlâ Şahîn. According to Ewliya Çelebi, Filibe was besieged at seven points, bridges having been built across the Maritsa, and was taken by assault after heavy fighting. There is no doubt that the town offered stubborn resistance, but it was probably taken on terms (cf. Chalocondyles, Bonn ed., 32). It is said that the town was taken by Sultan Lâlâ Şahîn with Lâlâ Şahîn as the first beglerbegi. In registers dating from the end of the 15th/16th century, Filibe is referred to as the chef-lieu of a mahalle, and a Jewish and a Gypsy community, while in the nth/i7th century it had 9 mahalles, and a Jewish and a Gypsy quarter. In the nth/i7th century it was settled here by Mehemmed II. According to de la Broquiere, the population was predominantly Bulgarian and Tatars was begun by Murad I. Bayazid I transferred here nomads from Sarukhan, and Mehemmed I the Bulgarians. The Ottoman chroniclers record the conquest of Filibe immediately after the fall of Edirne, i.e., in about 765/1363-4. FILORI, Ottoman name for the standard gold coin of Europe (see H. Sahillioglu, Bir müllitstem zimem defterine gore XV. yüzüyl sonunda Osmanli
The tax of one filori per household which the Ottomans exacted in Hungary was nothing but the continuance of a tax formerly paid to the kings of Hungary (see the Kanun for Lippe, of 961/1554, in Barkan, 322); this tax too was regarded as the equivalent of the džiýa (ibid., 304, 316). The resm-i filori was usually paid in ačes, so that the number of ačes which it represented increased with the increase in the relative value of gold (45 ačes in 873/1468, 50 under Süleyman I, 70 in 974/1664, 80 in 976/1568). In view of the lightness of this tax the Ottomans imposed military service on the Eflak (cf. in connexion the Yürük [q.v.],) every five households supplying one voynub (from Slavonic voynik, 'soldier').

The Ottomans imposed the filori tax, sometimes under the name of Eflak şadi, on other groups who rendered services to the state. Thus the rašiya miners in the Rudnik district paid one filori per household instead of bharadž (i.e., džiýa) and ispredjic (q.v.) (Kanun i Kanun-name, 15-6; for the Eflak employed as guards of passes (derbenđidi), ibid., 62); towards 936/1530 the Cingene in the sandjak of Semendire (Smederevo) also paid 80 ačes per household under the name of resm-i filori (Barkan, 250); but these groups may have been included with the Eflak.

In general the resm-i filori was collected by an official called filoriç (Kanun i Kanun-name, 78, 130, 147), to be paid direct into the treasury of the Sultan, although sometimes it was allocated to the sandjak-bég. In the 17th/18th century this subject to the filori tax were called filoriçi paša, or filoriçiyân; in Kanun of this period (Kanun-name, Ankara Un. DTC Fakültesi Library, I. Saip collection, MS 5120, 141) the filoriç is defined as a person who is exempt from the 6şâr [see 6şûr] and the rašiya raşûmu [q.v.] and pays only a fixed sum annually. The resm-i filori was paid (in ačes) in two installments, on the day of 6şâr-îlaş [q.v.] (23 April, O.S.) and on 6sâm günü [q.v.] (26 October, O.S.).

FINÝANA, Sp. FiŇANA, a small town of some 5,000 inhabitants engaged in agriculture. It is situated in the province of Almeria, about 30 km. from Guadix, in the partido judicial of Gérgal. It lies on the southern slope of the Sierra de Baza, which joins the Sierra Nevada on the west. It is overlooked by an ancient fortress of which only ruins remain. Within the town there was a mosque, now converted into a church where services are held. The Muslim inhabitants were muladies of Hispano-Roman origin and had nobody of Arab descent among them. They lived peacefully occupied in agriculture, preferably the cultivation of mulberry trees and the rearing of silkworms. An industry grew up of which the products were highly esteemed: the manufacture of türan—handkerchiefs and shawls of silk and brocade. These were exported even to Christian territory and were much sought after in León, where they were known as alfíns from their mark of origin. But already in the 14th century this industry and the culture on which it was based had disappeared and today no trace of it remains. During the rebellion of Ibn 6şâfün the inhabitants of Finyâna showed a disposition to join him but 'Abd al-Rahmân III, when he occupied the kâra of Baza during his campaign of 300/913 against eastern Andalusia, made a diversion against Finyâna and there, on 4 Shawâl 300/14 May 914, captured the emiress, whom Ibn 6şâfün had sent to them. No more details of its mediaeval history until it was taken by the Catholic Monarchs when they won Baza are known.

FIRABR, early (e.g., Hûdûd al-şam, 313) named also Firab (Fararb), in Xudâna (BGA vi, 203) as well as Xîlân (iii, 867) also called Karyat 'Ali or Ribât Tâhir ibn 'Ali, is a town opposite Âmûl (q.v., 2). It lay a parasang north of the Ouxus (Âmû Daryâ, [q.v.]) on the road to Bukhârâ and was the centre of a fertile region with many villages as well as the seat of an inspector for water-control (Mir-i râhi: Hûdûd, see above). The city was protected by a fortress and possessed a Friday-mosque and an open space for the sale of market wares (muqaddas). It had a hotel for travellers who were also boarded there (Muqaddas, 291; Ibn Faštân, ed. Z. V. Togan, 1939, 4, § 4; written Âf.r.r; cf. trans. Canard, in AEJÆ Alger, xvi (1958), 54). According to a presumably legendary account by
Abu '1-Hasan 'Abd al-Rahman ibn Muhammad al-Naysaburi (Nishapuri) in his Khazdb in al-'alam in his Khazdhn in al-'alam (continuator and editor of Narshakhl's description of Khazdhn, ed. C. Scheler, 6, also in his Chresto-
mathie persane, 13; tr. R. N. Frye, 1954, 8, and 119, note 97) the founding of Firabr followed the con-
quest of Paykand by the Kkdk Turks towards the end of the 6th century (conjectures regarding this report in J. Markwart, Wehrot und Arang, Leiden 1938, 145-8; and Franz Altheim-Stiehl, Finanzgeschichte der Spätantike, Frankfurt 1957, 257-62, who object to an interpretation of Naysaburi, 235 f., and other works of Tolstow mentioned there).

FIRASA, a technique of inductive divination which permits the foretelling of moral conditions and psychological behaviour from external indications and physical states: al-istiddil bi-al-khalk al-
şahir "ala'l-khalk al-bihin (cf. al-Rażl, Firasa, ed. Mourad, 4; H (;; al-Khalifa, ii, p. VIII; iv, 388 ff.; al-Kazwini, i, 318; cf. Ps.-Djahiz, irdja, ed. Ino-
straçteg, 17 ff.). This is provided by colour, form and movements of the body, and from these it reveals to experts the secrets of characters and minds. "Peculia-
rities of character cannot be concealed even if a man does his utmost to keep secret about them and to hide them; for nature unveils them and lets them show through. Sooner or later, God reveals them through the actions, movements and gestures of the man. Indeed the Kurân (XLVII, 30) says: 'And if We wish it, We shall make thee see them (= the false Muslims); thou shalt recognize them by their physio-
gnomy (simr-hum); thou shalt recognize them by their lapsus linguæ (lahn al-basal)" (Ps.-Djahiz, op. cit. 17). 'Ali is related to have said: "No-one considers something within his conscience without its being revealed by the slips of his tongue or the expression of his face" (al-Ibshlhl, Mudfur, tr. R. N. Frye, 1954, 8 and 119, 257-62, who object to an interpretation of Naysaburi, 235 f., and other works of Tolstow mentioned there).

Firasa is an Islamic science whose Arab ancestor is biyafa (sometimes confused with 'iyafa which is essentially concerned with portents drawn from the behaviour of birds).

The classification of the sciences which are included under the name of firasa bears witness to the breadth of territory which this technique of divination covers. In fact, it includes (H (;; al-Khalifa, i, 34; cf. al-Rażl, op. cit. 10 ff.; al-Djahiz, Hayawan, v, 93; Ps.-Djahiz, irdja, 16): birth-marks and beauty spots (al-shadat al-fil, or "the marks with which God causes to penetrate their hearts"; if there is one to be found in my nation it can only be "Umar (b. al-Kha'tatb)" (Tashkoprizade, Miftah al-ssada wa-misâb al-siyâda, i, 272; see also Ibn al-Atfi', Nikhîa, i, 240; Ibn Khaldun, Muhaddima, i, 200, tr. de Slane, i, 228, tr. Rosen-
thal, i, 223; Harîfr, Mahâmet, ed. de Sacy, 601).

Finally, firasa preserves the main meaning of Arab biyafa, the recognition of signs of paternity.

The far-reaching development which separates firasa from biyafa is due on the one hand to the psy-
chological and religious elements introduced by Kurân and Tradition, and on the other hand to the tradi-
tions of Greek treatises on physiognomy whose characteristics strongly influenced firasa. The most important of these were the treatise of Pseudo-
Aristotle called Sirr as-arzr, used by al-Rażl and al-Dimâshqî (cf. M. Steinschneider, Die arabischen Übersetzungen aus dem Griechischen, Leipzig 1897, 79 ff.), that of Polemon (al-Djahiz, Hayawân, iii, 46, 83, 87 ff.; likewise H (;; al-Khalifa, iv, 388 ff.; cf. Steinschneider, op. cit., 107 ff.; a Kitâb al-Firasa under the name of Fillmûn was edited at Aleppo in 1929; on this person and his work, see the excellent article by W. H. Le Strange in Encyclopaedia Britannica, xi, 2 (1952), col. 1320-57 (cf. col. 1345 ff.)) and that of Menas (Minas—Mîwak) al-Rûmî (7), Kitâb al-
Khayaldn and Kitdb al-Shdmdt (Fihrist, 314). In another connexion, Ps.-Djahiz (clrdfa, 120) quotes believers among them are saved. In the fragmentary elements may be detected, the chief ones being the who in the end are severely punished, while the Jawbar al-Hindi as the author of a treatise on "master of 9/10 and XXXVIII, 11/12) is given the name (LXXXIX, following. Fir an, the history of Pharaoh is seen in relation of Moses and Aaron [see HARUN], the hardening of which, at the time of the first Meccan period, in- one disregards certain verses of Umayya which are "to behave like a hardened tyrant".—Ifawn gave rise to a verb Arabic form of the name may derive from the Exodus, the crossing of the Red Sea and the drowning of the Amalekite kings [see 1929 by Muh. Raghib al-Tabbakh, then re-edited, translated and annotated by a bibliography, by Yousef Mourad in his Roman and annotated by K. Inostrantsev, Russian and annotated by K. Inostrantsev, Pharaoh. The extends beyond that of the inspired book, and it deals with the kings of Egypt both before and after the Firawn of Mūsā, connecting them with the "Amaelitkn" and also, later, drawing on the stock of local legends. Thus the Firawn of Ibrāhīm [q.v.] and Yūsuf [q.v.] is discussed; he is given the name al-Rayyān b. al-Walld (or al-Walld or even Dārīm b. al-Rayyān) and his successor Kābus b. Mūsāb (al-Masūdī, Murādī, i, 92, but written al-Walld b. Mūsāb). Isolated traditions, regarded with utter disdain by the author of al-Bad wa l-taґrīkh, attribute an Iranian origin to Firawn and Hāmān (al-Tabarl, Tafsir, xx, 28: Firawn was a native of Istakhr; R. H. Mason, iii, 9; F. H. Montgomery, Firawn a native of Balkh and Hāmān of Sarakhs). The New Testament theme of the massacre of the innocents is introduced into the account of the birth of Moses, and the Midrashic legend of the proving of Moses by the crown and burning coals came into the account of the education of the future liberator of Israel who was brought up at Pharaoh’s court. Similarly, it was with the Jewish Aggada (Abd of Rabbi Nathan, recension A, ch. XXVII and Pirkey Rabbi El’i’eser, ch. XLI) and through it possibly to an ancient Egyptian related form that is connected the legend of the mare ridden by Gabriel which led Firawn’s army into the abyss, the vanguard of the army being commanded by Hāmān. After the drowning of Firawn, whom Gabriel prevented from making his profession of faith until the very end by cramming his mouth with sea slime, Mūsā sent to Egypt a military expedition commanded by Joshua and Caleb. The Bad wa l-taґrīkh (iv, 3736) is aware that the Jews celebrate the feast of unleavened bread in memory of their delivery from the hands of Firawn (cf. also al-Birrūf, Aḍḥār, ed. Sachau, 281, Chronology, 273), but certain traditions also exist which give the same motive for the celebration of the fast of Ṭʿārīkh by the Jews (texts quoted from G. Vajda, Hebrew Union College Annual, xii-xiii (1957-8), 374, but
whose authenticity is rejected by al-Biruni, ibid., 330 ff./327 ff.).

A later Fir'awn bears the name Arajdī "the lame"; this, no doubt, is Necho (Neko, II Chron. xxxv and xxxvi), whose name is thus interpreted by the Jewish Aggada (Targum, also Peshitta, Leviticus-Rabbba xx/xi, ed. M. Margulies, 442); al-Mas'udi, Murājidī, ii, 410, however, calls him Bilūnāh.

—The theological problem of the "hardening of heart" of Fir'awn did not fail to occupy the attention of the Mu'tazila (see Badī', i, 106/97 ff.). The Mystics and in particular al-Hasan meditated in their fashion on the revolt and the conversion in extremis of Fir'awn (see L. Massignon, La Passion d'Al-Hallaj, 337, 416, n. 1, 615, 935-936).

 resources by devoting them to his work, he made no approach to the rulers of his day. The writing of the Shāhnāma was undertaken no doubt after the assassination of Daḵšī (ca. 370/980); before this he had tried out his talents in composing some epic passages and some lyric poems, of which a few have survived. At the beginning of his epic he speaks of how Daḵšī had begun to put into verse an ancient book, of how this work was prematurely interrupted by Daḵšī's death, and how a friend had procured the book for him (ed. Mohl, i, 16-20). For several episodes he had other sources, for the story of Bijen and Manja he probably took a manuscript (for which he followed a manuscript which a woman-friend read to him, ed. Mohl, iii, 293-4), and for the death of the hero Rustam (following a redaction by Azād Sarw, ed. Mohl, iv, 701). In spite of great political upheavals, recounted by the historians, his Shāhnāma was undertaken by 370/980-1 at the latest.

In the course of the 4th/10th century, the Iranians, reviving a pre-Islamic custom, had applied themselves to gathering the historical facts and the legends concerning their national history. Collections were made in imitation of the Pahlavi Khā*tāyāt-nāma (Book of Rulers) composed towards the end of the Sāsānīd period (Christensen, L'Iran sous les Sassanides, 54), which is lost, as are Arabic translations of it. Ancient tales were assembled in other collections. The oldest and most famous of the redactions of the 4th/10th century is the Shāhnāma of Abu 'l-Mu'ayyad Ballāh, a collection of heroic traditions which is echoed here and there in Firdawsl's epic and in some historical works (notably a fragment in the Ta'rīkh-i Sistān, Tehran ed., 35). Another Shāhnāma is that of Abū 'Ali Muhammad b. Ahmad al-Balḵi, praised by al-Biruni (al-Athdr al-bdkiya, Cairo 1370/1951, especially the 3rd/9th chapter), then by Firdawsi, then by al-Tha'labī (d. 429/1038). Besides these, there existed other documents and traditions which were treated by epic poets who came after Firdawsl (notably on the heroes Garshasp, Bāzarkhā, Sām [see HAMASA]).

At Tūs, various persons whom Firdawsl names had supported him in his work, but he was looking for a more powerful protector to whom to dedicate his work. Finally he chose the greatest monarch of the age, Sultan Mahmūd of Ghur; this was probably when he was about 65 years old (ed. Mohl, iv, 4). He was an ally of his vizier, Abū Mansūr Muhammad al-Mā'marī (preface to Abū Mansūr's Shāhnāma, dated 346/957, published by Muhammad Kāzvīnī in Bist makāla, ii, Tehran 1313/1935, 24-25); their work was used by Daḵšī (about a thousand of whose verses were incorporated by Firdawsl in his Shāhnāma), then by Firdawsl, then by al-Tha'labī (d. 429/1038). Besides these, there existed other documents and traditions which were treated by epic poets who came after Firdawsl (notably on the heroes Garshasp, Bāzarkhā, Sām [see HAMASA]).
FIRDAWSI

give on the last leaf the date 384/994, and not that of the final completion (400/1010).

Mahmud was a man of little erudition, but gathered at his court, even by force, men of learning and letters and particularly panegyrist. His attention was perhaps first drawn to Firdawsi by Abu 'l-Abbas Faḍl b. Ahmad al-Isfarayini, who was his first vizier (from 384/994 until 401/1010) and whose kindness is praised in the Shāhnāma (ed. Mohl, iv, 7-8). No doubt Firdawsi had composed various sections of his work, not in a systematic order but as inspiration came to him and inclination prompted; afterwards he linked them together by passages of transition; he then, as his fame spread, set about revising and polishing his epic. At the end of his poem (ed. Mohl, vii, 500) he states: "When I had passed the age of 65 years, the care of my sufferings increased; I was occupied always with the history of the kings; great men were having copies of his epic made, "but I received in return only praise" (He adds that three noble inhabitants of Tūs provided him with material help and encouragement). In the course of this revision, followed by the making of a fair-copy by a copyist, he probably inserted or amplified the passages in which Mahmūd is praised (one of these eulogies, for example, was inserted after the composition of the account of the Battle of Rustam). For the poet speaks in it of his old age and his infirmities: ed. Mohl, iv, 702). At this point his protector, the vizier Faḍl b. Ahmad al-Isfarayini, was dismissed; the poet was left without a supporter and his work was ill-received when he presented it to the sultan. Various stories have been handed down concerning his journey to Ghazna and the presentation of the poem, but they are not reliable: all that is to be accepted is that the journey took place and that it resulted in a disappointment, expressed by Firdawsi in the words: "Such a monarch, so generous, shining among the sovereigns, did not cast a glance at my poem: the fault lies with slanderers and with ill-fortune" (ed. Mohl, vii, 294). According to a tradition frequently repeated (it is given by Nizāmī 'Arūḍī), Mahmūd had promised one dīnār for each verse of Firdawsi's poem, and Firdawsi offended at the contrast between this reward and those heaped on the panegyrists living at the court, divided the sum he received among three persons before abruptly leaving Ghazna. One of his biographers claims that he worked on his epic for some months at the court of Mahmūd, who loaded him with honours; this report, like other similar ones, is not to be accepted: Firdawsi travelled to Ghazna simply to present his work. On reading the biographers, one is led to presume that the chief cause of Firdawsi's dissatisfaction was the inadequacy of his reward. But the causes of misunderstanding between the sultan and the poet were more serious. In the first place, Firdawsi was a Shi'a and Mahmūd a Sunni—each enthusiastically; according to Nizāmī 'Arūḍī, the poet was accused of being a Mu'tazilī and a Rāfdī (a 'rejecter' of Sunnism), and he quotes in support some verses of Firdawsi (op. cit., 56); as for his Shi'ism, Firdawsi does not announce it directly but allows it to be inferred in the introduction of his poem (ed. Mohl, i, 14-6). Futhermore, he had in his poem praised a vizier who had fallen out of favour, thus laying himself open to misrepresentation by his detractors. Finally, and most important, the poet could not tolerate the sultan's lack of interest ("Such a monarch . . . did not cast a glance at my poem"): Mahmūd appreciated only lyric poems, and particularly those devoted to his praise—slight and frivolous works in comparison with a vast and powerful epic.

According to Nizāmī 'Arūḍī (p. 57), Firdawsi, on leaving Ghazna, spent six months at Herāt, returned to Tūs, and then went to Tabaristan to the court of the prince Shahrīyar. It is impossible to confirm the truth of this. Moreover a legend gradually grew up on the relations between Mahmūd and Firdawsi, but it is impossible to give credence to its account of how the poet, loaded with honours, stayed for a long time at the court of Mahmūd, and of the sultan's belated charity, expressed by the poet in a few verses of the Shāhnāma (written by the Timurid prince Baysunghur (829/1426), used by Macan and Mohl in the prefaces to their editions. Firdawsi is said to have written a satire against Mahmūd (published in the editions and translated by Mohl, i, introd.); it is said that Shahrīyar pacified him and advised him to leave intact the passages of the Šahānmā composed in praise of Mahmūd, and that of his satire there remain only six authentic verses, quoted by Nizāmī 'Arūḍī; but the text of it as given in the manuscripts varies in length up to as many as a hundred verses, including some borrowed here and there from the Shāhnāma. These satirical verses, examined as a whole, show the same qualities of style and composition as the Šahānmā, so that it would be rash to affirm that they are not authentic (cf. Nöldeke, Cr. I. Ph., ii, 155 ff.).

The date when he finally completed his epic is recorded on its last page: "When I was 71 years of age the heavens paid homage to my poem; for 35 years, in this transient world, I composed my work in the hope of a reward; as my efforts were spent for nothing, these 35 years were without result; now I am nearly 80 and all my hope has gone with the wind. The last episode of my epic was completed on the day of ard of the month of isfendaremād, five times 80 years of the Hidjra having elapsed" (therefore in 400/25 February 1010). In other words, he had completed his poem at the age of 71 (in 400 A.H.), and when he was nearly 80 he added to it a note of the date of composition. He spent his last years at Tūs. According to Dawlatshāh, he died in 411/1020. Perhaps, as Nöldeke assumes (loc. cit.), the satire against Mahmūd was found among his papers and communicated to various people who spread copies of it around. According to Nizāmī 'Arūḍī, he was re-fused burial in a Muslim cemetery because he was a Rāfdī; he was buried in a garden which belonged to him (on his grave and on his present mausoleum, see TUS). In a manuscript in the British Museum (text and tr. in Nāṣir-i Khusraw, Safar-nāma, ed. and tr. Cr. Schefer; text reproduced with emendations in Firdawsi, Shāhnāma, Tehran 1935, vii, 3019), it is related that Firdawsi made in 354/994 a journey to Isfahān and Başhādād, and that he offered to the amir of 'Irāk his poem Yūsuf w-Zalikhdh (q.v.): Nöldeke (Gr. I. Ph., ii, 229 ff.) and S. H. Takhtādā (in the review Kl.ve., 1921, no. 10) have praised this poem, whose attribution to Firdawsi is now questioned (Z. Safa, Tavt numérique, ii, 477) for several reasons, notably the presence of many more Arabic words than are found in the Shāhnāma, apart from peculiarities of style. In any case this journey to 'Irāk seems doubtful. The death of a son at the age of 37 (the poet being then 63) inspired some sublime verses (ed. Mohl, vii, 190). Nizāmī 'Arūḍī says that he had a devoted daughter, of whom however he makes no mention. Such are the generally accepted facts and dates of the life of Firdawsi.
It is impossible to give more than a brief outline of the vast Shāh-nāma (amounting in several manuscripts to some 60,000 verses). It begins with the creation of the world and the seven days of creation; it tells how the first kings of Iran were reigning, benefactors of humanity for which they established the various elements of social life, at the same time struggling against the demons which infest the world. For more than a thousand years these good and evil powers confronted each other in an unrelenting duel full of dramatic episodes. At last one of these mythical kings established a general peace for half a century; but after his death his three sons, among whom he had shared out the civilized world, could not agree, and one of them, who ruled over Iran, was treacherously assassinated by his brothers. This murder begins an endless cycle of revenge: a merciless war is waged for several centuries between the settled Iranians and the nomadic Turanians of Central Asia. Whether he is describing pitched battles, skirmishes or single combats, the poet exhibits an unequalled skill in varying the situations, and in maintaining a note of the most ardent patriotism, which does not however lead him to belittle the bravery of the enemy: throughout the poem the adversaries are worthy of each other. This cycle of wars is divided into several "gestes", corresponding to the exploits of the heroes who dominate the action—heroes of superhuman power and stature. Among them the famous Rustam stands out. This epic, while dealing mainly with war, contains some splendid love-stories, by which Firdawsī, the incomparable creator of the national epic, became at the same time the founder of the romantic narrative poem which was to have such a brilliant future in Persia. His sensibility, as lively as it is deep, shows itself in a series of sentimental episodes where paroxysms of passion alternate with those of despair. While two-thirds of the poem are essentially heroic and legendary, the last part is more historical and recounts poetically the reigns of the Sāsānīd kings; this part is the product of the poet's old age, whence the numerous moral reflections and the digressions on politics and metaphysics. Firdawsī's ideas would demand a lengthy study. His view of the universe is entirely pantheistic; an implacable fate, the sister of that which dominates Greek tragedy, hangs over the principal actors of the epic until the final catastrophe in which ancient Iran perishes. Yet man must ceaselessly struggle against fate: Firdawsī's moral philosophy (which corresponds, though not deliberately, with that of the Avesta) vehemently preaches action and the love of good, which uphold in man reason—his unique privilege and his true claim to superiority over all other beings. Reason must always guide us: it teaches us to accept the (sometimes only apparent) injustice of fate and enables man to retain that feeling of tender sympathy which Firdawsī himself so often shows for luckless heroes and for suffering animals; for the character of this poet as a man is in harmony with his exceptional gifts as an artist—nobility and purity of heart, family affection, complete self-sacrifice for the sake of his work, love of glory, kindness to the weak and the defeated, ardent patriotism, religious tolerance and a profound sense of the Divine. In short, he combines harmoniously what he drew from his sources with what he owed to personal inspiration and he made magnificent use of the gifts which he possessed. As for his style, which was never used in the same way by Firdawsī, the poet who created the romances of the great Turanian cycles, it is simple language, firm but eloquent, and remarkable for the aptness of the terms used and the nobility of the thoughts. The level of expression is always equal to that of the ideas, which does not preclude the generous use of images; he varies his expressions according to the type and rank of the characters; he sometimes uses the different rhetorical figures common in the East, but not to excess, and his style remains sober even among the exaggerations proper to the epic genre. There are very few Arabic words in the poem: he wanted to revive the ancient Iran, but to do it in the Iranian tongue, remaining faithful to his sources; it is in the story of Alexander the Great that most Arabic words are to be found (for he was using a non-Iranian source, translated into Pahlavi [see ISKANDAR NAMA]). His influence on Persian literature and indeed on the spirit of the people of Iran has been as profound as it has been lasting, and in itself would merit a serious study; in particular it led to the writing of numerous epics which, though not the equal of his own, are of real (and still insufficiently recognized) interest from the points of view both of literature and of folklore [see HAMĀSA].

Bibliography: A full bibliography would itself constitute a detailed study. Complete editions of the Shāh-nāma: Turner Macan, The Shah-Nāma . . . , Calcutta 1829, 4 vols.; J. Mohl, Le Livre des Rois . . . , text and French translation, Paris 1838-78, 7 vols., and translation alone, Paris 1876-8, 7 vols.; J. A. Vullers and Landauer, Liber Regum . . . , Leyden 1877-84, 3 vols. (incomplete). These three editions were used for the Firdawsī Millenary edition (with notes and variants, Tehran, Beroukhim, 1931-6, 9 vols.), which is now the most easily accessible (it gives the pagination of the Calcutta and Paris editions at the head of each page). Parts i and ii of a critical text prepared under the editorship of E. E. Bertels appeared in Moscow in 1960 and 1961. Besides Mohl's translation, it has been translated into Italian verse by Pizzi (Turin 1886-8), into German by F. Rückert (Berlin 1852), into Russian by J. Modl (Bombay 1897-1904), into English by A. G. and E. Warner (London 1905-12), into Danish (selections) by Arthur Christensen (Copenhagen 1931); many sections have been translated into various languages. An Arabic prose version was made by A-BUNDART (g.v.). The essential study on the poet and his work (still of value although out of date on certain points) is Nöldeke, Das Iranische Nationalpos, in Gr. Phil., ii, Persian translation, Hamāsa-i millī-i Irān, Tehran 1937, to which is to be added Ėthē, Firdawsī als Lyriker, in München. Sitzungsberichte, 1872, 275-304, and 1873, 623-53.

In Persian there are the notable works of Z. A. Safa, Hamāsa-sarādyār dar Irān and Taṛkh-i adabiyāt dar Irān, ii. Finally, numerous articles and studies assembled in volumes or dispersed in periodicals, published in Iran and other countries. See further IA (Firdevsi, by H. Ritter), and Pearson 774-5.

(C. Huart-[H. Massel])

There are three principal translations of the Shāh-nāma in Ottoman Turkish: (1) a prose version, completed by an unidentified writer in 854/1450-1 (Fügel, Die . . . Handschriften des Kais.-hön. Hofbibl. zu Wien, i, 495; F. E. Karatay, Topkapı Sarayları . . . , Istanbul 1953, no. 2155; cf. Blochet, Cat. des manuscrits turcs, ii, 220); (2) a verse translation (in ḥasād metre) made in Egypt
by a certain Sherif or Sherifi, a member of the entourage of Prince Diem, who spent ten years on the task before presenting his work to Sultan Kâşim Şahî (see Retzsch-C., 152; D. Smirnow, Manus- 
crits turcs ... St. Petersburg 1897, 78-82; the presentation-copy, completed in 916/1510, is in the Topkapi Sarayi at Istanbul, MS Hazine 1519, see 
Karayat, no. 2155); (3) another prose version made early in the 11th/12th century for Ömânî II by 
Derwüns Hasan, Medhî [g.o.] (see Blochet, i, 314; 
Smirnow, 82-7). There is a translation into modern 
Turkish (in the series Dânya edebîyyatından terceme-
lar') by N. Lâgul and K. Akyüz, 3 vols., 
Istanbul 1945. There are at least two translations into Özbek 
Turkish (see Blochet, ii, 129; Firystals Celebration ... ,
ed. D. E. Smith, New York 1936, 93 f.). For the 
information of the Shâhnâmâ upon Turkish popular 
literature see Irène Mâlikoff, Abâ Muslim ... ,
Paris 1962, ch. i.

To compose Shâhnâmâ's in praise of the Ottoman 
and the second half of the 10th/11th century the 
of historiographer-pageantrists of the court 
were known as 'Şehnâme-çehän' [see Lokmân, 
Sayyid]. (V. L. Menage)

FIRDEWSI, called Rûmî also Uzun or Tâwîl, 
(857/1453 ?). Turkish poet and polymath, 
author of the voluminous Sûleymanname, the Book 
of Solomon. He was probably born in Aydîndîk, 
where he spent his childhood, and educated at 
Bursa, where he had as master the poet Melûhî, and 
lived for a while at Balkesir. According to infor-
ination in the introduction of a Sûleymanname copy, 
seen by M. Fuad Köprüli (see Bib.) but now 
available, his ancestors were all illustrious men of 
arms who served the Emirs from 'Ohmân I onwards, 
and his father Hâdîddî Gênek Bey was given the 
fief of Aydîndîk for his services at the conquest of 
Istanbul. He is the author and translator of many 
books of very diverse subjects of which only some 
have come down to us. But he is particularly known 
for his Sûleymanname, an encyclopaedic work in 
verse and prose which includes all contemporary 
knowledge on history, geography, philosophy, 
geometry, medicine, etc. and all the classical 
anecdotes, found in religious literature, concerning 
Solomon. In its 80th volume he himself tells how he 
came to write the book: in the year 676/1277 he 
translated a portion of Firdawsi's Shâhnâmâ into 
Turkish verse and presented it to Mehmed II 
through Mahmûd Pîşgîh, the Grand-Vizier. The 
Sultan, remarking that the Shâhnâmâ was widely 
known and that it was unnecessary to repeat it, 
encouraged the poet to write a book on Solomon. 
Firdawsi searched for sources in the Imperial 
Library and toured Anatolia. He based his first three 
Volumes on the biblical David legend and the next 
three on a Persian book of Solomon which he 
had bought from an Arab at Nîkîs. He presented 
the first six volumes of his work to Mehmed II, who 
promised a reward when the work was completed. 
The Sultan however died while Firdawsi was writing 
the seventh volume. Eventually Bayezid II came to 
hear of this and asked for a copy. The first 82 
Volumes were submitted to the Imperial Library except for 
this 81st volume which somehow, owing to the 
copyist's error, was not. It was eventually sub-
mitted to Selim I (Sûleymanname, 81st Volume, 
Millet Kütüphanesi, Tabrîz, son of 317, 
3b-4a and 123a).

Firdawsi had planned his enormous work originally 
in 366 volumes divided into 1830 medûsîs, as he 
states at the end of certain early volumes (see 
for instance Topkapi Sarayi, Hazine K. no. 1525, 287b), 
and asked God for health and long life to be able to 
complete the work. His plan to 99 volumes from the 
original 366 was duly presented to the Imperial Library. Uzun 
Firdawsi continued to write at Bayezid II's order 
(whom incidentally he refers to as İlâhirîm) and 
speaks of himself as an aged man (pir). He says that 
he has devoted 40-50 years of his life to the 
compilation of the book, writing most of it at Balkesir 
(Topkapi Sarayi, Köşşülî K. 892, 83a). From these 
circumstances no doubt springs Latifî's tradition, 
later repeated by most sources, that Bayezid II 
Chose only 80 parts and had the rest destroyed.

At the end of the 79th volume Firdawsi reduces 
his plan to 99 volumes from the original 366 (Topkapi 
Sarayi, Hazine K., no. 1537, 387a). This revised plan 
is repeated at the end of volumes 80 and 81. There 
is also reference to intrigues and rivals. We have no 
indication whether he was able to write the re-
mainng 17 volumes. No library possesses a complete 
set. The best set is at the Topkapi Sarayi Library. 
The style of the Sûleymanname is very much like that 
of popular story books of the period though 
more repetitive and less vivid.

FIREWORKS [see MELNIK].

FIRISHTA, by-name of Muhammed Kasim 
Hindî Shâh Astakâbâdi, Indo-Muslim historian, 
writer on Indian medicine and servant of the 
Ahmadnagar and Bijâlpûr sultanes. As Storey 
(whose account of Firishta's biography is followed 
here) states, the date and place of his birth remain 
conjectural but the context of Gülâm-i Ibrâhîmî, 
Bombay 1888, suggests that Firishta was probably born a few years before 980/1572. His 
father was one Gülâm 'Ali Hindî-Şâh. That 
Firishta was to be found among the gharîbân and 
gharîb-zadahd the 'foreigners' and their descendants 
who migrated for safety to Bijâlpûr in 997/1589 
(Gulâm-i Ibrâhîmî, ii, 295) suggests that his family 
was of recent domicile in Ahmadnagar. He was a 
Shi'î (Gulâmî, i, 27). Entering the service of Murdâd 
Nizâm-Şâh (972-976/1565-88) [q.v.] Firishta was 
employed as a member of the royal guard. Com-
misioned by Murdâd Nizâm-Şâh to discover why 
an army, gathered by the wakilî and pîşgîh Mirzâ Kâhîn ostensibly to resist invasion by Bijâlpûr, had 
remained immobile, Firishta discovered a plot 
between Mirzâ Kâhîn and the Bijâlpûr 'regent' 
Dîlawar Kâhîn to dethrone Murdâd Nizâm-Şâh in 
favour of his son Mirzâ Hasûn. Firishta warned 
Murdâd but was unable to save him from assassi-
nation. Firishta himself only escaped death through 
Mirzâ Hasûn recognizing his claims as a former 
school-fellow. A forced migration of gharîbân from 
Ahmadnagar to Bijâlpûr in 997/1589 followed the 
murder of Mirzâ Hasûn and on 19 Safar 998/28 
December 1589 Firishta was presented at the 
Bijâlpûr court and on 8 Rabî' 1 998/1 January 
1590 took service under Ibrâhîm 'Alî Şâh. Later 
that year Firishta acted as a go-between for Burhân
Firishta

Nizam Shah who was seeking Bidiapuri support for the deposition of his son Ismail. In the subsequent struggle between the forces of Bidijapur and Ahmadnagar, Firishta was wounded and captured, but escaped. In Radjab 998/May-June 1590 he accompanied Ibrahim ʿAbd Shah on his night excursion to remove the 'regent' Dilawar Khan. In Safar 1013/July 1604 Firishta accompanied Bega Sultan, daughter of Ibrahim ʿAbd Shah, upon her journey to marry Akbar's son Daulat. At the beginning of Daulat's reign, Firishta was sent upon some unspecified mission to Lahore. Under the reference to the death of Bahadur Khan Farkhli at Ágra in 1033/1623-4 was inserted by a later hand, Firishta was still alive in that year.

Firishta's reputation rests upon his well-known historical work the Gulshan-i Ibrāhīmi, extant in two recensions, the first dated 1015/1606-7 and the second, with a new title, Taʿrikh-i Nawras-nama, dated 1018/1609-10. The Gulshan-i Ibrāhīmi sets out (i, 4) to narrate the annals of the pāhārān-i Islām and the biographies of the masādīkh who have been connected with the ordering (nizām) of the countries of Hindustān (mamālik-i Hindustān) from Sebuktīgīn of Ghazna onward. The annals (nābūsī) are prefaced by a mubāhādima giving an abstract of Hindī history and are followed with a khitima on the geographical regions of the country, and on the great Hindī rādīs of Firishta's time who keep their territories, Firishta says (ii, 788), on payment of tribute.

The typical genres of Indo-Muslim historiography in Firishta's day were the general history of Muslim rulers from the time of the Prophet and the regional histories of the sultanates. Thus Firishta's abstract of pre-Muslim Hindu annals (wdffidt) of Hind, that of Baranī (264-5) than to that of the Tabakdt-i Akbari, appears to have been more of a historical rather than a biographical work. Firishta himself, in his account (i, 238) of Muhammad b. Sam of Ghor at Dāmak in 602/1206-7, followed by the numismatic evidence. Firishta copies (i, 122) Nizam al-Dīn's misstatement, that of Baranī (477), and following him Nizam al-Dīn (1001/1592-3). Firishta himself, in his use of data, shows independence. His account (i, 183) of the dialogue between the kōfūl of Dīlī and Sultan 'Alā' al-Dīn Khālidī (i, 183) is textually closer to that of Baranī (264-5) than to that of the Tabakdt-i Akbari (145). Firishta glosses his sources without explanation. Thus he speaks (i, 240) of Muhammad b. Tughluk's intention to conquer the wīsāyi-ī Ĉīn when Baranī (477) speaks of the Tughluk's assumption of royal titles by Sultan Kuli Khutba. In his use of data, Firishta draws upon oral tradition independently. His account (i, 238) of the origin of Ghiyath al-Dīn Tughluk is based on personal inquiries at Lahore during his visit there at the beginning of Daulat's reign.

Firishta evinces the same characteristics as an annalist of the Muslim sultanates of the Deccan. The story of the Ottoman origin of Yūsuf ʿAbd Shah of Bidjāpūr is given as 'the best of tales' (ii, 1) but without a personal affirmation of its authenticity. (See algārā). His report (ii, 6) that Yūsuf ʿAbd Shah assumed the title of ʿAbd Shah and had the kūha read in his name in 685/1289 is not consistent with the evidence of Rafīʿ al-Dīn Shīrāzī, Tabakdt-i Akbari, B.M. Add. 23,383, fols. 32a-33b, a work contemporary with Firishta and by re-creating a great regional history—Abū 'l-Fadl's Akbar-nāma, Abu 'l-Fadl's Rawdat al-safd (c. 905/1490-4) through Khudsi's Rawdat al-safd to Akbar in 993/1585, and from the Tabakdt-i al-mulūk, al-Dīn Shirāzī, (c. 930/1524) to the Tabakdt-i Akbari (c. 1015/1606-7) follows Nizam al-Dīn Ahmad's Tabakdt-i al-mulūk, al-Dīn Shirāzī, (c. 1001/1592-3). Firishta himself, in his account (i, 238) of the origin of Ghiyath al-Dīn Tughluk is based on personal inquiries at Lahore during his visit there at the beginning of Daulat's reign.
He states (i, 575) that the fifth Bahmani sultan was Mahmood and not Muhammad as the coinage (O. Codrington, *Coins of the Bahmani dynasty*, in *Numismatic Chronicle*, xvi (1899), 330-2), and ʿAll b. ʿAzaż Allah Tabātābā, Būrān-i maʿālīgh (1003/1594), Haydarābād 1355/1936, 36-8, and Shīrāzī's *Tāghkhārat al-mulūk*, fol. 16a-b, suggest. On the discrepancies between the Gūlgān-i ʿIrākīmī and the Būrān-i maʿālīgh in other respects see Sir Woleseley Haig, *The history of the Nizām Shāhī kings of Ahmadnagar*, in *Indian Antiquary*, xvi, 1935-6, 282-5; ii, 1937-8, 290-3; 1938-9, 39-53, 1920-3. The differences between the accounts of Deccan and Gūgārāt history by Niẓām al-Dīn Aḥmad and Fīrīzhītā have been exhaustively noticed in the translation of the *Tākhābat-i Aḥbār* by Brajendranath De, i/ii, *Bibl. Ind.*, Calcutta 1939.

Criticism of *Fīrīzhītā* as a historian, often by anachronistic criteria (e.g., S. H. Hodivala, *Studies in Indo-Muslim history*, i, Bombay 1939, 294-5), has perhaps been the more severe by reason of the reputation and status of an 'authority' which he enjoyed among European writers on Indo-Muslim history from the middle of the 18th century. Alexander Dow, *The history of Hindostan*, 2 vols., London 1768, introduced the *Gūlgān-i ʿIrākīmī* (makālas i and ii only), to a European public in the form of an interpretation in which there is little to distinguish a very free version from transliteration. Dow's translation was the basis of a general annalist of Muslim rule in Hindustān. Fīrīzhītā provided a basis for that general history of India before the attainment of political authority by the East India Company for which Dow hoped his countrymen were, by reason of their growing involvement in India, ready. A translation of the eleventh makāla on Māllbār in the *Āṣāsitīk miscellanea*, 2 vols., 1824, 1827-9, from the Persian of Jonathan Scott, *Fīrīzhītā's history of Deshkan*, 2 vols., Shrewsbury 1794, further established Fīrīzhītā as an 'authority' and Thomas Maurice, *History of Hindostan*, 2 vols. and 2 parts, London 1802-10, David Price, *Chronological retrospective*, 3 vols., London 1811-21, and James Mill, *History of British India*, 3 vols., London 1817, drew more or less heavily upon the text; Jonathan Scott published his own translation of all the *Gūlgān-i ʿIrākīmī* except the part containing the biographies of the maghālīk (on hunting); (on Ottoman literature) the dictio-
Firuz Shah Tughluq

Firuz Shah, son of Muhammad b. Tughluk, was the fifth sultan of the Tughluq dynasty. He succeeded Muhammad in 738/1338 and ruled until 767/1366. He was known for his humanistic and liberal policies, which contrasted with the harshness of his predecessors.

Firuz Shah's reign was marked by a number of significant events. He is credited with the construction of the Qutub Minar in Delhi, which remains one of the city's most iconic landmarks. He also promoted education and culture, founding universities and libraries. His policies were oriented towards the welfare of the people, and he attempted to reduce the burden of taxation.

However, Firuz Shah was not free from internal and external challenges. Internal conflicts and divisions within his court, along with external threats from the Muslim kingdoms in the Deccan, and the Berber states in North Africa, strained his resources and capabilities. His reign saw a decline in military power and the weakening of the imperial state. Despite these challenges, Firuz Shah's reign contributed significantly to the cultural and intellectual life of the Delhi Sultanate.

(A. Huici Miranda)
stratification. Indeed, some of his own measures contributed to corruption and inefficiency. The Sultan's weakness was to some extent balanced by the wisdom and firmness of his wazir, Khân Djahan Makbûl (a convert, from Telingânâ in South India), whom he trusted implicitly and who served him with rare loyalty. Another buttress which Firuz Şah built up to offset his weakness was the large body of personal slaves he acquired and maintained. These slaves, known as the bandagân-i Firuz Şahî, though loyal to their master, created much trouble towards the end of the Sultan's reign and after his death.

In religious matters Firuz Şah was strongly orthodox. He suppressed extremist sectarian manifestations and outbreaks of what he considered heretical movements in his kingdom. On the advice of the ulama (whom he frequently consulted), he extended diyya to the Brahmans, who had so far been exempt from the tax, though he allowed them to pay it at the lowest rate. Firuz Şah was the last Sultan of Dehli to receive investiture from the Abbâsîd caliph, himself by now a powerless pensionary in Cairo.

Firuz Şah was a prolific builder. He founded several towns, including a new city of Dehli named Firuzâbâd, and Dwânpûr, named after his late imperial cousin Dwânpûr Khân (afterwards Muhammad b. Djawna Khân). He spent his own fortunes and the wealth of his court in many public and private buildings, architectural undertakings in all, that have not been surpassed in the city.

Firuz Şah died in Ramaḍân 790/September 1388 and lies buried in a simple and dignified mausoleum at the Hawd Khâs outside Dehli. The ease and plenty of his reign, the widespread distribution of charity, the corruption in the civil as well as the military administration, and the very peace and tranquillity which made the people "forget the profession of arms" (Fârîd, mentioned above, 277), were not of a high order. He also showed interest in preserving old monuments and repaired many of these, including the Kutb Minâr. His transplanting of two Asokan pillars from their original sites to the city of Dehli was a creditable feat of mediaeval engineering. The operation in all its phases—the uprooting of the pillars, transporting them across the river Djamunâ and refixing them in the sites where they stand to this day—is described in elaborate detail in the Sirât-i Firuz Şâhî (see Asiatic Memos., no. 52, cited in Bibl. below). The many gardens Firuz Şah laid out around Dehli substantially increased the supply of flowers and fruits to the city.

Firuz Şah died in Ramaḍân 790/September 1388 but was not buried in a simple and dignified mausoleum at the Hawd Khâs outside Dehli. The ease and plenty of his reign, the widespread distribution of charity, the corruption in the civil as well as the military administration, and the very peace and tranquillity which made the people "forget the profession of arms" (Fârîd, sapped the vigour of the ruling community and thereby contributed to the rapid decline of the Sultanate after him. The invasion of Timûr a decade after the Sultan's death only hastened the process of decay which had already begun.

Bibliography: Among the Persian sources, ʿAffî's Taʿrîkh-i Firuz Şâhî gives the fullest account of the reign. Though professedly favourable to Firuz Şah, ʿAffî seldom slurs over his faults. Firuz Şah's own brochure, the Futuhât-i Firuz Şâhî (inscribed in a dome, no longer extant, in the Masjid-i Firuz Şahî in Firuzâbâd) is a revealing document. See Elliott and Dowson, i, 265-388, for translations of excerpts from Persian accounts. For modern writings, see articles by Riazul Islam, B. N. Roy, K. K. Basu and others listed in Pearson, Index Islamicus, pp. 631-2, Supplement, p. 203. The more important articles are given below.

FIRUZABAD (formerly Piruzabad, ‘the town of victory’, and originally known as Gür or Ėir) is situated in 28° 50’ N. Lat. and 52° 34’ E. Long. (Greenwich); it is 1356 m. above sea level. The present town, which had 4,340 inhabitants in 1951, is 3 km. to the south-east of the ancient site. Firuzâbâd, besides being one of the chief centres of the state, had four gates, one at each cardinal point; these gates were called Mihrâ (the Sun), Bahârm (Mars), Hormuz (Jupiter) and Ardashir. In the centre of the town was the lofty tower (now in ruins) on the top of which was a fire-altar; near by was a large fire-temple. North of the town are the remains of the palace which Ardashir built shortly before his successful revolt; it is thus the oldest Sásâni building in existence (see F. Sarre and E. Herzfeld, Iranische Felsreliefs, Berlin 1910, 128). Gür was the capital of the province of Ardashir-khurma (‘Glory of Ardashir’). According to al-Baladhuri (315 and 359), Gür and Iṣkâhûr were the last two towns in Fars to surrender to the Muslim Arabs. In the 3rd/9th century Gür was as large as Iṣkâhûr, but smaller than Shâhêr. The district produced excellent rose-water which was exported far and wide; it was also celebrated for its fruit. The Buwayhid ruler ‘Adud al-Dawla (q.v.) used to frequent Gür; his courtiers, disliking the name (which means ‘grave’ in Persian), persuaded him to change it to Firuzâbâd (‘the town of victory’). Ėirâd Allâh Mustawfî (Nusha, 137) stated that the inhabitants were noted for their piety and honesty.

(L. Lockhart)

Al-Fīruzābādī, Abū 'l-Tāhir Muhammad b. 'Abd al-Karīm Maḥmūd al-Dīn al-Shāfī'ī al-Sīrāzī, from his father's town Fīruzābād, was born at Kāzārūn, a town near Shīrāz (Iran) in Rabī' II or Dhu 'l-Qa'da II 729/February or April 1329. From the age of eight he was educated in Shīrāz, then in Wāsi't, and in 745/1344, in Baghdād. In 750/1350 he was attending the classes of Taṣlī al-Dīn al-Sukhālī in Damascus (Brockelmann, II, 106).

His long life can be divided into three main periods, spent in Jerusalem, Mecca and in the Yemen.

In the same year 750 he accompanied al-Sukhālī to Jerusalem where he stayed for ten years as a teacher and then, while still a young man, became a master. Subsequent travels took him to Cairo and Asia Minor.

The information to be found in his biographers in regard to his journeys varies very greatly (see Brockelmann, II, 232 n.). We have here followed, like Brockelmann, ibid., the account given in the K. al-Ra'sūl al-'itīr of al-Nūmānī, which seems to be the most trustworthy. According to al-Saljākhāwī's account (Daw, x, 85 foot), a long biography of al-Fīruzābādī is given in the 'Ubdb of al-Makrīzī; this must be the Durar al-'Ukūd al-farīda fi tarādīm al-'a'sīn al-mufrīdā; the MS Gotha 1771 cannot include this, but perhaps it is contained in MS Mawṣīl 1864, no. 5 (Brockelmann, S, III, 37), which should correctly be 264, no. 5. From al-Makrīzī interesting details might be expected. The ms. is at the present time in Baghdād, in the possession of the al-Djālī family who do not allow it to be consulted.

In 770/1368 he went to live in Mecca, breaking his stay there to travel to India and spending five years in Dīlīh; after that came more travelling.

In 794/1392 he went to Baghdād at the invitation of Sultan Aḥmad b. Uways, and afterwards to Persia. Timūr Lah, after taking Shīrāz (795/1393), greeted him with the greatest respect. But his native land, ravaged by the Mongol invasion, could no longer keep him: from Hormūz he set sail for the MS Gotha 1771 cannot include 'Ayun al-mufrīdā', in Dihli; after that came more travelling. Who do not allow it to be consulted. Subsequent travels took him to Cairo and Asia Minor.

He bought many books, the necessary equipment for the work of compilation, as practised in his time. A spendthrift (but see Daw, x, 81 l. 23), he used to sell during a famine and buy back when times of plenty returned. His works were concerned with tafsīr, hadīth and history, but lexicography remained the branch in which he excelled.

He had certain pretensions: born near Shīrāz, he claimed to be a descendant of the celebrated Shīfi'ī Abū Iṣāḥāk al-Shīrāzī (Brockelmann, I, 484) who had, however, died without issue. After achieving his brilliant position in the Yemen, he called himself and wrote by the name of Muhammad al-Siddīkī, as though a descendant of the caliph Abū Bakr al-Siddīkī (Daw, x, 85 l. 12-3; al-Nūmānī, Rawd, 218 r.), no doubt the eccentricity of a man who enjoyed great renown. He had more serious ambitions: he wished to compile a dictionary in 60 (Kāmūs, Preface, 3 l. 13) or, it is even said, in 100 volumes: al-Lāmī' al-muṣallam al-'aṣ̄īb al-qā'im bayn al-Muḥkam wa l-'Ushūb, which only reached the 5th volume (Ibn al-Tamād, Shaghadīrī, vii, 128; T. A., Preface, 14, l. 10). He made a summary of it, his Kāmūs, its full title being al-Kāmūs al-muṣallam wa l-'aṣ̄īb wa l-qā'im bayn al-Muḥkam wa l-'Ushūb, which only reached the 5th volume (Ibn al-Tamād, Shaghadīrī, vii, 128; T. A., Preface, 14, l. 10).

The Preface to the T. A. (i, 134) provides a biography of al-Fīruzābādī and a list (incomplete) of 45 works; Brockelmann (S, II, 236) must have referred to it, for the Preface to the Kāmūs does not include a comparable list. 49 works, according to Daw (x, 81-3): taṣfīr 6, hadīth and history 27, lexicography and et alia 16, but 61 in the 'Ubdb al-dawwar of Dāmil Bey al-ʿAzm (i, 302-6), lists, however, that are open to criticism.

Al-Fīruzābādī is "the author of the Kāmūs", his name remains connected with this famous book. The work is preeminently a compilation of the Muḥkam of Ibn Sīdā and of the 'Ubdb of al-Saghānī. He venerated al-Saghānī as a model (Daw, x, 83). But from whom did he take the taṣfīr? It
would be helpful to discover if he is indebted for certain elements to the Shams al-Tulûm of Naṣîḥân al-Ḥimyarî (a first vol. published by K. V. Zetter- stein, Leiden to 1933). The Kingârî completed in Mecca in his house ʿala l-tāfâf (end of K., iv, 415) during the second main period described above (cf. Daw, x, 83 and 85), before his stay in the Yemen. But it is hardly likely that such an expert lexicographer as he would have been unacquainted with this dictionary which incidentally devotes so much space to matters concerning the Yemen.

Very brief definitions or explanations allowed him to present an extremely rich vocabulary in a volume of modest size. This brevity has given rise to innumerable misapprehensions (see Lane, Lexicon, Preface, XVII t. 14-6 and ZDMG, iii (1849), 95 ff.). It was the subject of numerous glosses and criticisms, and commentaries of every sort, both by admirers, in particular the Tâdi al-ʿarâs of al-Sayyid Murtaḍâ al-Ẓabîdî (d. 1205/1791), 10 vols., Bûlâk 1306-7, who in this commentary incorporates the work of his master Abû ʿAbd Allâh al-Fâṣî, the ʿIdât al-ʿarâs, and by detractors, including the ʿShâk al-dârâh; see I. Goldzâher, Beiträge zur Geschichte der Sprachgeschichtsmethode bei den Arabern, Vienna 1872, ii, 602 ff. and the judgement of al-Sûyûtî, Mushîrî, iii, 1001 f. I. Goldzâher, in his analysis of the criticisms of Ahmad Fâris al-Shîdîyâk (d. 1205/1887), al-ʿDîjâsâr ʿala l-ʿKûmus, Istanbul 1299 and, more recently, the Taṣhîkh al-ʿKûmus (Cairo 1343/1925) of Ahmad Taymûr Pâsha.

The ʿKûmus was published for the first time in Calcutta (1720-2) and Üskûdûr (1230), and on very many occasions subsequently. The 4th edition (Cairo 1357/1938) in iv, of the Mathâbat al-Dâr al-Maʿâtir (cited in this article), is well presented typographically.

The ʿKûmus has been translated into Persian (see Brockelmann, S II, 234), and also into Turkish by ʿĀṣim Efendî (d. 1235/1819 or 1248/1832): al-ʿUbîyânîs al-basîl fi tâjîrânat al-ʿKûmus al-muṭîh, published in Bûlâk 1250, Istanbul 1305, etc. This Turkish edition was favoured by nineteenth-century orientalists and is often quoted, e.g., by Fleischer and Goldzâher.

In the West the Thesaurus linguae Arabicae of A. Giglius (Milan 1632, 4 vols.) was based on the ʿKûmus. For his Lexicon (Leiden 1653), J. Goliûs added to it the ʿShâkîh. Freytag (Kazimîrî) and Belot did the same. The two rivals were associated together to provide a dictionary for European orientalists; and Lane took as the basis of his great Lexicon the Tâdi al-ʿarâs, the commentary on the ʿKûmus referred to above.

The ʿKûmus, the turquois, a well-known precious stone of a bright green or “mountain green” colour with a glossy like wax; in composition it is a hydrated clay phosphate with a small but essential proportion of copper and iron. The colour is not permanent in all stones, and is said to be particularly affected by perspiration. It is almost always cut as an ornament en cabochon, i.e., with a convex upper surface; only stones with an inscription are given a flat upper surface. The provenance of serviceable stones is limited to a few places whose history may be traced back for thousands of years. Turquoise mines were worked by the kings of Egypt in the peninsula of Sinai. Major Macdonald discovered them again in 1845 in the Wâdî Maghâra and its neighbourhood and worked them again for a number of years. No mention of the stone or the mines has survived from the Hellenistic period; on the other hand in addition to marvellous details of the method of procuring the pale green callais in Carmania (east of Persia), Pliny knows a good deal about its properties, and his description can only refer to our turquoise; for the statement that the callais loses its colour when affected by oil or ointment is found in al-Kindî on the fīrûzâdî and in almost all mineralogical works. It can hardly be doubted that the turquoise was obtained in the Sâsânî period and even earlier in the mines around Nishâpûr. Al-Tîfâshî (d. 657/ 1253) says of the kings of Persia that they adorned their hands and necks with turquoises, because they averted danger of death by land or water; but we often meet with the assertion that the turquoise detracts from the majesty of kings. It was considered to contain copper and to be formed in the vicinity of copper mines. Different kinds are distinguished according to the different colours (sky-blue, milk-blue, green, spotted); the best kind is considered to be the bûshâkî (i.e., Abû Ishâkî) and the finest variety of this is the sky-blue az-hârî. Large pieces are very rare and are correspondingly costly, small pieces on the other hand are very common. The best specimens retain their colour, apart from the influences detailed below; after 10-12 years many lose their colour entirely and the stone is then said to be dead. All stones, however, show a certain variation in colour. They are brilliant in a clear sky and dim when the sky is clouded; they alter their colour with the state of health of the wearer, and when affected by sweat, oil or musk; fat is believed to restore the colour again.

Taken internally it is a poison, but in collyrium it is useful for clearing the sight, also if it is stared at for some time. Gold takes away its beauty (unlike lapis lazuli), i.e., probably, the greenish blue colour does not harmonize as well with the yellow of the gold as the dark blue of the lapis lazuli.

Ibn al-ʿAkâfî (d. 749/1348) explains the name fīrûzâdî as “stone of victory”; whence it is also called ḥādîr al-ṣâhâbî. The word fīrûzâdî is found in many corrupt forms in the Latin translations of the middle ages (farsaquem, febrongus, provseque etc.), but none of these can be considered the original of
the word turquoise; for as early as the 13th century we find the form turcos, turquesia and turquesia, and it may safely be assumed that this remarkably limited. Ibn al-A’fani quotes on the authority of Hermes a talisman made of it. In the great magical work "Ghayat al-hakim" the turquoise appears in the list of stones among those belonging to Saturn; but only one single talisman engraved on turquoise is mentioned.

General Sir A. Houtum-Schinder who was governor of the mining area and director of operations at the mines in the "eights" of last century has given a detailed account of the Persian turquoise mines at Mas’had in Khurāsān, which is quoted in Bauer’s "Edelsteinkunde" (2nd ed., 490 et seq.).

(F. RUSKA-M. PLESSNER)

FIRCUZAD — FIRCUZPUR

1. The capital of the Ghurid [q.v.] kings, in the mountains east of Herat on the upper Hari-rūd ca. 64° 22’ E. Long. (Green.) and ca. 34° 23’ N. Lat. The site has been identified with the present Djam al-Din (q.v.) where a large minaret of the same name still stands. The town was conquered by ‘Ala al-Dīn Khārṣāzī Shāh in 607/1210, and it was finally destroyed by Ogōdei son of Čingiz Khań in 619/1222. The Firuzkūh nomads probably derived their name from this site.

2. The name of a castle in Tabaristan near Mt. Damāwand in a district called Wānīma. We do not know when the castle or town of Firuzkōh was built and Casanova’s attempt to identify it with Fīrm, capital of a dynasty of Īṣāḥābdūr in the 4th/10th century, was refuted by Kazwīnī (Djuwanī, iii, 381). Firuzkūh is mentioned as an important stronghold under the Khārṣāzīs and especially under the Mongols. It was taken by the Mongols in 624/1227 (Djuwanī, ii, 210). Afterwards the Ismā’īlīs of Alamut obtained possession of it. It fell again to the Mongols under Hülegü in 654/1256. The area was a summer resort for the Il-Khāns, and the name appears in accounts of Tīmūr’s conquests. The town is now linked to Tehrān by rail (202 km.); it has over 5,000 inhabitants and is the centre of a district of the same name.

FIRZPUR (FIRZPUR). A district in the Panjab which takes its name from the principal town. It forms part of the Dīlanārdī divi-
sion, lying between 29° 55’ and 32° 9’ N. and 73° 52’ and 75° 26’ E. Area 3202 sq. m. Until 1947, the principal town was Fīrūzpur. After his conversion in 674/1277 (Djuwanī, ii, 213). The town was refounded by the Il-Khāns and to it were brought the spoils of the conquests of the Ghurids. It was a cultural centre where writers and poets flourished. After the death of Ghiyāth al-Dīn in 593/1202 the empire fell to pieces and Firuzkūh lost its importance. Ghiyāth al-Dīn built the minaret which still stands.

The Muslim population of the city, and of the district, have been fixed by his position as the second in a chain of five philosophers (between Empedocles and Socrates) (see Anabādūkīs), or to have fallen in the reign of an Artaxerxes (Saʿīdīd [Eutychios], Annals, i, 77). The customary dating “in the time of Sulaymān” used for men and events of great antiquity is occasionally mentioned (Shahrastānī), as he was also supposed to have been in touch in Egypt with followers (ashāb) of Sulaymān. His claim to being the founder of philosophy was recognized as disputed by other theories concerning the history of philosophy (Picatrix, 245; Sūjīstānī, Īṣām Īsāmīn, according to Ms. Murad Molla 1948, 293, but following Picatrix (Plutarch ?), it was constantly repeated that he had coined the word “philosophy”, and, following the introductions to the Aristotelian Logic, that he had given his name to the philosophical school of the Pythagoreans. He was sometimes believed to have elaborated on the doctrines of Empedocles (Saʿīdī al-Anḍalūsī, trans. Blachère, 60; Kīfīfī, 258 f.), or to have been a forerunner of the Platonic theory of ideas (Picatrix, trans. Ritter and Plessner, 154). In addition to his role in the history of philosophy, his main achievements were the invention of the science of music and the propagation among the Greeks of arithmetic and geometry (Ya’qūbī, i, 134; or the introduction of geometry, physics, and metaphysics from the East: Abu l-Hasan al-Āmīrī, Āmīrī, Martībī, 789, 80b; Saʿīdī; Kīfī; Ibn Abī Usaybiʿīa). The Ḥarrānīn (or Harrānīn), or Harrānīn, are said to have been one of their prophets (Bīrūnī, Chronology, 205; Ikwānān al-Ṣafāfī, cf. P. Kraus, Jābirī, Cairo 1942-3, ii, 223 n. 1), and his mystico-religious character was noted (Māšīdry, Muradī, iii, 348; Ibn Abī Usaybiʿīa). In addition to his own contacts with the East, we hear about students of his who went east and influenced Zoroastrianism and Indian religious philosophy (from the doxographical work of Ammonius, Ms. Aya Sofya 2450, cited by Bīrūnī, Chronology [cf. H. S. Taqizadeh, in BSOS, vili (1935-7), 947 ff.], and Shahrastānī, 277 f. and 455 ff.).

Of the works ascribed to him, the Golden Words (Chrysdé epō) enjoyed extraordinary fame and a wide circulation in their Arab translation, which, in the course of transmission, underwent slight but at times meaningful variations. The text, referred to as al-Risāla (al-Raṣādī al-ṣaḥābīyya or Wāṣāya (Wajīya)), once they are also referred to as the “Golden Epistle and Exhortation for Diogenes” (Ras. Ikhwān al-Ṣafā, Cairo 1947-1958, iv, 100 to be connected with i, 92 f.). The appellation “golden” is said to go back to Galen who read the poem daily and copied it with gold letters, a statement for which the Greek authority remains to be found. Separate editions by J. Eichmann, Tabula Cebetis (1640, from Miskawabī); L. Cheikhb, Traités indéits, 2nd ed. (1911); M. Ullmann (Diss. Munich 1959, not yet published); cf. also F. Rosenthal, in Orientalia, N.S., x (1941), 104 ff., and M. Plessner, in Eshkolot, iv (1962), 68. The Muslims knew of various commentaries on the work. One is ascribed to Proclus (Picatrix, 252; Kīfīfī, 89) and listed as extant in a summary made by ʿAbd Allāh b. al-Tayyib (d. 435/1043) in Ms. Escurial 888 (8); its relationship, if any, to the commentary of Hierocles has not yet been investigated. A recension of Sūjīstānī, Īṣām Īsāmīn (Murad Molla 1408, 13a) introduces its (uncommented) quotation of the work as being “a summary of the book of Iamblichus in explanation of the ‘Golden’ Exhortations”. A manuscript of this commentary appears to be preserved in Prince K. Kritzeck, in MIDEO, iii (1956), 380. The existence of a commentary by Ahmad b. al-Tayyib al-Sarakhsī (p. 55, Rosenthal) is poorly attested (a confusion with the
The influence of Pythagoras and Pythagoreanism on Muslim civilization must be rated rather high. Greco-Arabic theories of music and numbers go back ultimately to them (Nicomachus of Gerasa, the author of the *Ariihmétikh Esagégê*, was even thought to have been identical with the father of Aristotle). The *Fitna* may not have been entirely unaware of the organizational precedent of Pythagoreanism, and — al-Ra'i, among others, is stated to have been inspired by the Pythagoreans and to have written in their defence (Mas’udi, *Tanbih*, 162; Safi’di, trans. Blanchère, 75). However, the name of Pythagoras must often be considered a mere label, as in his alleged appearance, together with Plato and Aristotle, in Isma’ili *mawṣûl* (*Mafrîz, Qahîî, Bûlûk* 1270, i, 394). Biblical allusions, however, are greatly out of place, and the manner of the article, supplementary to M. Steinmeisser, *Die arabischen Übersetzungen* (1889), repr. Graz 1960, 4–8. (F. Rothen sal) *Fitna*, the primary meaning is “putting to the proof, discriminatory test”, as gold, al-Djurjânî says in his *Tarîfî* (ed. Flügel, Leipzig 1845, 171), is tested by fire. Hence the idea of a temptation permitted or sent by God to test the believer’s faith, which, for the man wedded to his desires, would have the appearance of an invitation to abandon the faith. “Your goods and children are *fitna*” (*Kûr*â’n, VIII, 28; LXIV, 15). The term *fitna* occurs many times in the *Kûr*â’n with the sense of temptation or trial of faith (“tention d’abjurer”, according to R. Blanchère’s translation); and most frequently as a test which is itself a punishment inflicted by God upon the sinners, the sinful, the unrighteous. “Taste your *fitna*” (LI, 14); this temptation is addressing “those who are *tried by the Fire*” (of Gehenna). It is not a matter of an inner, secret temptation, but of external circumstances in which faith succumbs or may succumb. “O Lord, do not place us in *fitna* before those who are unfaithful!” (*Kûr*â’n, LX, 5). The idea of scandal is associated with it (VII, 5), to such an extent that to take a part in this putting to the test is for man a very grave fault: “the *fitna* of believers is worse than murder” (ibid., II, 191; cf. II, 217). On the one hand, *fitna* will thus be employed in the sense of the “trial of the grace”, or even the torments of hell; but on the other hand *fitna* will be essentially a state of rebellion against the divine Law in which the weak always run the risk of being trapped. The idea which is to become dominant is that of “revolt”, “disturbances” “civil war”, but a civil war that breeds schism and in which the believers’ purity of faith is in grave danger. There are numerous *kadhîs* which proclaim the troubles to come, which will destroy the Community and from which the believer must flee. For example: “after me there shall break forth such troubles (*fitna*) that the believer of one morning shall, by evening, be an infidel, while the believer of the evening shall, by morning, be an infidel—save only for those whom God will strengthen through knowledge” (quoted in the “Profession of Faith” of Ibn Batîa,
in H. Laoust’s translation).—In view of the fusion of spiritual and temporal characteristic of Islam, the great struggles of the early period of Muslim history are fitna (pl. fitan), inasmuch as the questions contested regarding the legitimacy of the imams or caliphs and the armed conflicts that they aroused have a direct bearing on the values of faith.

The series of events which includes the murder of 'Uthmān, the designation of 'Ālī as 'Imām, the battle of Siffin and the development of both the ṛājūt 'Ālī [q.e.] and the ḥāshāridī [q.e.] schisms, and the seizing of power by Muawiya, is often called “the first fitna”, and also “the fitna” par excellence or “the great fitna”. On account of the struggles that marked Muawiya’s advent, the term fitna was later applied to any period of disturbances inspired by schools or sects that broke away from the majority of believers (al-dīwān). We read of the fitna of the Murādiya, which Ibn al-Nahkhāfi apparently described as “graver” than that of the Azarikā Khāridjī. And every “innovator”, every man guilty of bīdā’, is potentially an instigator of fitna. Reversing the terms, the al-Ḥasan al-บาṣrī gives this definition: “all those who foment disturbances (fitna) are innovators (mūkādhīn)”. The “men of Tradition and the Community”, ʿabī al-sunna wa l-dīwān have the strict duty to obey the legitimate sovereign so long as his orders do not run counter to the Kurgan, and to shun all fitna. It is in this spirit that the first Sunnī professions of faith (e.g., Ḥīb Ḥākar, i, 5) “rely upon God” in the dispute between ‘Uthmān and ʿĀlī, and regard the successive proclamation to Imām of both of them as equally valid.

Although the struggle between ‘Ālī and Mu’awiyah and its consequences instituted the era of fitna par excellence, during which schisms came into being which were never to be resolved, the term fitna was none the less applied, in the course of history, to other and more localized disturbances. It is in this way, for example, that some chronicles, denouncing the struggles and seditions which more than once pitted Ash’arīs and Ḥanbali against each other, are apt to speak of fitna, as is the case at Baghdād, shortly after the death of Al-ʿAshīrī, when his gravestone was overturned, or at Damascus in 835/1432, when the majority of the ‘ulāma’ anathematized Ibn Ṭaymiyya.—On the other hand, to denote the persecution of the “righteous Ancients”, which also affected Ibn Ḥanbal under al-Ma’mūn, at the time of the triumph of the Mu’tazilīs, the annalists are more inclined to speak of mihna [q.e.]. The chroniclers concerned are those who came after al-Muṭawakkil’s reaction and were opposed to mu’tazilī tendencies; according to this point of view, there was no element of “rebellion” under al-Ma’mūn, which was the central power which protected the bīdā’ī. The ʿabī al-dīwān thus underwent a “testing” (mihna) for the sake of their faith, there was no fitna (that is to say armed revolt led by “innovators” and “agitators”) whatsoever.

It is in the chapter on the imāma that the treatises of ʿilm al-kalām raise the question of fitna. It is taught that the nomination of an imām is “obligatory” (wadādīb) for the Community, an obligation justified “rationally” (ʿakhī) according to the Mu’tazilīs, “legally” (sharīʿī) or “traditionally” (ṣāhīʿī) according to the Ash’arīs. And one of the arguments most readily put forward is that only an imām can prevent the disturbances of fitna, or restore peace if they have already broken out. Indeed, certain schools with Khāridjī tendencies teach that it is obligatory to nominate an imām in the event of fitna, but not if peace is prevailing; others, on the contrary, hold that he should only be nominated in a period of peace, never in a time of unrest, for fear that the nomination should give rise to fresh revolts. The Ash’arīs, for their part, require the imām to lead the Community during fitna and in times of peace alike, and consider as the authority in favour of their opinion the history of the early years of Islam.

All these discussions relate implicitly to a notion of fitna defined as disturbances, or even civil war, involving a division of opinion which endanger the purity of the Muslim faith; and every mention of fitna evokes “the great fitna of Islam” which culminated at Siffin. We may say in fact that somewhat later summaries of the question—or more accurately, the nomenclatures of the schools in which they result—are closer or more distant echoes of the attitudes and opinions which the “great fitna” had caused to be accepted. At that time (early 2nd/7th cent.), certain traditionalists of Basra and the first Mu’tazilīs declared that “the era of the fitna” having opened, every muḍjī-ṭahid, every man capable of “making an effort”, was entitled to seek for the solution; the Karrāmīyya, for their part, upheld the concomitant legitimacy of the two imāms in dispute; the Shī’a maintained the sole legitimacy of ‘Ālī; while the majority of the Sunnīs maintained that it was better to obey the established power and refrain from taking sides, in order to have no part in civil war, and thereby to hasten the return to peace. It is on this last attitude that the Ash’arīs and Māturīdis were later to base their views. For the fitna in Muslim Spain, see Al-andalus, vi, 5.

FITNAT, pseudonym of Ḥuseyn (d. -1194/1780), a Turkish poetess. Little is known of her early life. She was the daughter of the Shaykh al-‘Īslām Mehmeh Efsadj Efendi (d. 1160/1753) the well known scholar of the reign of Mehmemed IV, whose father Abū Isḥāk Ismā’īl had also been a Shaykh al-‘Īslām. She was married to Derwīsh Mehmeh Efendi who became kādī-i asker of Rumeli under Selim III. Her short ʿafādīn contains all the usual conventional poems written for various occasions and ḥashāls which do not vary in style or content from those of her contemporary male poets. She tends on the whole to follow the Nābī—Kodja Râghib Pasha school of “wisdom-poetry”, full of aphorisms and fatalistic statements. But occasionally she is inspired by the carefree and joyful style of Nedin (see her musdās in Gibb, vi, 395). She writes with great ease in a polished and fluent style.

FITRA [see ḤD-AL-FITR].

FITRA is a “noun of kind” (Wright, Grammar, i, 125) to the infinitive far and means (an Ethiopic loan-meaning, see Schwally, in ZDMG, liii, 199 ff.; Nöldke, Nussbaumen 94; and means “creating or of being created”. It occurs in Kurʾān, XXX, 29 (khlīsa, Baydāwī) and other forms of its verb in the same meaning occur 14 times. But though
Muḥammad uses derived forms freely, it was obscure to his hearers. Ibn 'Abbas did not understand it until he heard a Bedouin use it of digging a well, and then the Bedouin probably meant the genuinely Arab sense of ẓalḥ (Liṣān, vi, 362, l. 20). Its theologically important usage is in the saying of Muḥammad, "Every infant is born according to the fitra (‘ala ‘l-fitra; i.e., Allāh’s kind or way of creating; fitra (khabar) —a favourite subject for hair-splitting). Two attempts have been made to escape this. (i.) This statement of Muḥammad is to be regarded as a decision (ḥukm) and was abrogated by the later decision as to inheritance. But it is pointed out that it is not really a decision, but a narrative (ḥabar) and that narratives are not abrogated. (ii.) The being made a Jew, Christian or Magian is to be regarded as not only a significant, but a formative, and takes place in this figurative sense from the point of birth; the legal religion of the infant is automatically that of his parents, although he comes actually to embrace another or unbelief when the time should come. Another was that it referred to Allah’s creating man (khabar) and was abrogated by the later statement of Muhammad—it meant only "beginning" (bad'a). Still another was that it referred to Allah’s creating man with a capacity of either belief or unbelief and then laying on them the covenant of the "Day of Alastu" (Kur’ān, VII, 172). Finally that it was that to which Allah turns round the hearts of men.

**Fītrat** (Fītra), 'Abd al-ʿRahmān al-Misbīḥ, theorist of the reform movement in Turkestān. Very little is known of his life: born at the end of the 19th century into a family of small traders in Buhkārā, he was at first a teacher, and then devoted all his time to his activities as a writer, poet and journalist. Fītrat was active from 1908 in the reform movement of Buhkārā (the Diwādī, who were originally concerned with educational reform, but from 1917 were to form themselves into a political party, the ‘Young Buhkāris’), of which he soon became the ideological leader. From 1910 to 1914 he took part in the creation of a reformed system of teaching in Buhkārā and in Turkestān, and actively promoted the sending of students to Turkey. In 1920, after the inauguration of the People’s Republic, he held office in the government at first as Minister of Education, then as Minister of Foreign Affairs. After the suppression of the republic in 1924, he took no part in the government of the Uzbek Republic (unlike some of his comrades in arms, such as Fayd Allāh Hoʿlaev [see mūqayyār]), and taught at the University of Samarkand until his arrest in 1937. His fate after that is unknown.

Like Dīzmāl al-Dīn al-Afghānī, with whom he has much in common (though he himself does not claim it), ‘Abd al-Raḥmān Fītrat studies in all his works the causes of the spiritual and temporal decay of the Muslim world, examines the external signs of it, and seeks a means of salvation from it. Fītrat studied this crisis as seen in the example of Buhkārā, which, perhaps more than any other Muslim country, showed the full extent of it: one of the chief centres of Islam delivered over to the Russian conqueror, the madrasās deserted, the formerly powerful state sunk into anarchy, the Muslim faith reduced on the one hand to a fossilized religion, fettered by all the weight of an obsolete legalism, on the other, to the superstition and the fetishism of the masses (Mundāṣāra).

Fītrat saw for it only one possible salvation: the return to a dynamic religion freed from a rigorism which was completely foreign to the fundamental rules of Islam, and freed first of all from servile respect for taklīd.

But although criticism forms a considerable part of Fītrat’s work, it is not merely critical and destructive. He gave constant thought to the means by which his country and all the Islamic community could overcome this crisis. In this search for its salvation, Fītrat seems to represent the two fundamental aspects of Muslim renewal. He was a reformer, an educator and a politician whose thought was mainly revolutionary. He considered that all reform must start with assiduous work among the people. True to his first vocation as an educator, he held that no regeneration of the Muslim community was possible without the preparation and education of individuals, and a consequent rebirth in each of an understanding and grasp of the meaning of Islam. Fītrat stressed continually the importance of the individual and the part which he must play, maintaining that personal reform was an absolute condition of the whole of Islam. He gives a considerable place in his works to the problem of reformed methods of teaching (Munwāṣāra, 26, 35-6, 43, 48, 52; Bayānāt, 29). Traditional education having proved incapable of developing, even of recognizing the necessity for change, he regarded the reformation of the maktabs as the only road to salvation. An important feature of Fītrat’s thought is his pragmatic conception of knowledge. He considers that the only learning which is worth the name is one which is of value not only to man’s ultimate salvation but also to his earthly existence; it is also a learning...
which can be acquired within a reasonable period, leaving man time to put it to use for the good of humanity. Thus he opposed the preservation of scholasticism, which 'is of no help to man in the modern world' (Munāpara, 28), and insisted that all knowledge should be submitted to the criticism of the intellect and not accepted blindly.

In this field Fitrat, while recognizing that 'one must seek knowledge where it is to be found', denied that Islam needed to borrow anything from the West or to seek inspiration from it or to imitate it, for, he maintained, everything that has contributed to the temporal greatness of the West derives from Islam (Bayāndī, 32-3). But Fitrat did not consider that the salvation of the Muslim community would come only from below, through a regeneration of all Muslims; he held that there was another task to be accomplished, the transformation of Muslim society from above, and it is here that we see in him the political thinker. No institution is spared in Fitrat's political programme; he insists throughout his works on the importance of the individual and of individual initiative, and on man's ability to dominate everything around him, from Nature to his own destiny. Analysing the economic and social bases of power, he clearly distinguishes spiritual demands from physical, considering that men's conduct is related to the natural conditions. Without arriving at any definite separation of the spiritual and the temporal, Fitrat indicated that the solutions to the problems of the adoption of Islam to the modern world were to be sought along these lines. Similarly, he considered that a complete revision of social relations, leading to a more equitable distribution of wealth, was indispensable and in no way contrary to the teaching of Islam, and he declared that the introduction of a new kind of relationship within society, a 'family' (The Family) is devoted to a study of the reform necessary in family relations to the teaching of Islam, enunciated by Fitrat, was a consequence of the decadence of the Muslim community and that of Western society, but a radical choice, a break with the past, the complete re-making of family relationships, in which Fitrat gave a very important place to the raising of the status of women. For Fitrat, the internal renewal of the Muslim community could be brought about only by a double process: a spiritual renewal, involving the education of each individual, and a political and social revolution which would leave remaining nothing of the ideas, the institutions and the human relations of the period of stagnation, and which would give birth to a modern society and a modern state. This internal regeneration was indispensable in order to achieve external liberation. The salvation of Islam would imply the end of foreign domination, which was a consequence of the degradation of Islam: and the struggle for liberty does not come after the work of internal regeneration, but is one of the aspects of it. Fitrat constantly reminds his readers that 'the dhīḥād is an obligation for every Muslim'. For Fitrat, this internal regeneration and the resultant progress would contribute to the Holy War, and in a very direct fashion: 'Learn at the same time the traditional learning and the new learning, and thus you will be able to prepare the material means which are indispensable for the defence of Islam, which is obligatory for all' (Munāpara, 48). Thus Fitrat's thought develops into the ideas of the unity of Islam and of Pan-Islamism.

Like Djamāl al-Dīn al-Adhānī, Fitrat thought that the renascence of Islam had to come from the Muslims themselves. The incitement to action, the rejection of passivity, of quietism and of reluctance to accept responsibility, which are such noticeable features of the works of Djamāl al-Dīn, are similarly prominent in those of Fitrat. Fitrat followed Djamāl al-Dīn along the path which he had opened up by stressing the temporal history of Islam, and it is probably for this reason that he has become more concerned with defining the means of achieving a new vitality than with re-defining the content, or more simply the methods, of the Faith. The originality of Fitrat's work lies in the fact that to reformism and Pan-Islamism there is added a call to social justice and to a revolt against the rich and those in power.

His principal works are (1) Munāpara, first published in Istanbul in 1908, and re-published in Persian at Tashkent in 1913; Russian trans. by Col. Yagello, Tashkent 1911, under the title Spor Bukharskogo mudarissa s evropeytsem v Indii o novomotelnih ţolkolah. (Istinnly rezult obmena mслей) pervoye izdanie sochneniy Buğhara, Fitrat; (2) Bayāndī-i sayyih-i hindī, first publ. at Istanbul (n.d.), then republished in Russian at Tashkent in 1913 as: Abd ur Rauf, Rasshat indyiskogo putežestvennika (Buğhara kah ona 'est'); (3) Sāʻība, Istanbul 1910; (4) Rabbār-i nāḏiūr, n.p. 1915; (5) 'Afdle, n.p. n.d.

He published also various novels (notably Kiyâmat, Tashkent 1961) and poems in Millī Edebiyat, Berlin, i (1943).

Carrere d'Encausse)
and sacked the chief town”. They then infiltrated westwards, ascended the Rhône, and extended their influence as far as the Alps and Piedmont. About 1211/933 “light columns, very mobile, held—at least during the summer—all the country under a reign of terror, while the bulk of the Muslim forces was entrenched in the mountainous canton of Fraxinetum, in the immediate vicinity of the sea”. The States concerned reacted slowly, and only in 362 or 362/972 or 973, after several unsuccessful attempts, did they launch the vast raids of Otto the Great “arrive to free Provence and the transalpine regions from the Muslim peril and to drive away for ever these pirates from their lair in the gulf of Saint-Tropez”. Thus ended this “strange Islamic State encapsulated within a wholly Christian land” (J. Calmette, *L’effondrement d’un empire et la naissance d’une Europe*, 127).

**Bibliography:** No Arabic chronicle refers to these events, for which the *Annales de Liébroux*, ed. Becker, Hanover-Leipzig 1912, is the principal source; J. T. Reinaud, *Invasions des Sarrasins en France*, Paris 1836 (Eng. tr., Lahore 1951), gives the history of these corsairs in detail, for which see also: R. Pourlard, *Le royaume de Provence sous les Carolingiens*, Paris 1901, 243-73; idem, *Le royaume de Bourgogne*, Paris 1887, 7-72; J. Levet, *De manière, Le royaume du Ier au XIIe siècle*, Paris 1908, 238 ff.; E. Lévi-Provençal, *Hist. Esp. Mus.*, ii, 154-60 (which has been taken as the basis of this entry) supplies a more detailed bibliography.

**FU’AD AL-AWWAL**, king of Egypt. Ahmad Fu’ad was born in the Gizeh palace on 26 March 1868, of a Circassian mother. In 1879 his father, the Khedive Ismail, who had been deposed by the Sublime Porte, took him with him into exile. He studied in Geneva and Turin, and in 1885 entered the Italian military academy. At Rome in 1887, as a second-lieutenant in the artillery, he frequently visited the Italian royal family. Having been Ottoman military attached at Vienna, he finally returned (1892) to Egypt after a stay at Istanbul. As prince he accepted the first Rectorship of the Free University of Cairo (1908-13). On the death of his brother Hussein (9 October 1917) he succeeded him as sultan of Egypt. The British considered him as not at all Anglophobe, though regretting that he enjoyed neither great popularity nor much influence among the Egyptians (Lord Lloyd). He assumed the title of king of Egypt from 15 March 1922, and d. 28 April 1936. He had a respect for decorum and tradition, and during his lifetime the queen and the princesses, excepting his own daughters, remained veiled.

The age in which he reigned is significant in the history of the Egyptian awakening. The nationalist movement was then embodied in the person of Sa’d Zaghlul and the Wafd, launched the open struggle against the British occupation immediately after the armistice of 11 November 1918. A campaign of signed petitions, demonstrations in Cairo, and strikes (1919, again in 1921) forced Great Britain to recognize Egypt as a “sovereign and independent state” (1922). While profiting by the action of the Wafd, which helped him to counteract British influence, king Fu’ad dreamed of an authority too absolute for him not to fear the nationalist leaders.

A constitution envisaging two chambers was promulgated on 19 April 1923. The 1924 elections were a triumph for the Wafd. But the assassination of the *Sirâd* (November 1924), the difficulties in the negotiations, several times broken off and then resumed, with the British with a view to drawing up a treaty, the intervention of the British in Egypt and their Sudanese policy, all added to the crises. Parliament was dissolved four times, and the elections always returned a Wafdist majority (1925, 1926, 1929), except that of 1931 which the Wafd boycotted. In spite of this, there were only three rather brief periods of Wafdist ministry (Sa’d Zaghlul in 1924, Mustafa al-Nabhâas in 1928 and 1930). That is to say, the king did as he pleased with the constitution, which was abrogated in 1930, immediately superseded, then re-established in 1935. He relied on minority parties or on unattached politicians; he appealed to, among others, Ahmad Ziaar (1924-6), Muhammed Mahmd (1928-9), and Ismaiil Shidid (1930-3). At the end of his reign the Italian menace ( Abyssinian war) demonstrated the urgency of an agreement with Britain. The treaty was signed in London on 26 August 1936, four months after his death.

From the economic point of view, the foundation of the Misr bank marked the first step in his reign towards economic independence. He took no share in it, nor did he deposit his private fortune there, which, however, he did not neglect. On the other hand, he took a lively interest in the intellectual development of the country. He founded schools, encouraged the new university at Gizeh (Fu’ad al-Awwal University, 1925) and the reform of al-Azhar (1924-6). At the end of his reign the personal prestige of mistrusting Egyptians and confiding in foreigners. He always patronized, without any fanaticism, all those who, outside politics, could contribute to the development of modern Egypt, especially in the cultural sphere. He was a kind of Mæcenas, visiting schools and institutions. The personal prestige which he enjoyed abroad and the historical studies which he patronized enlarged the world reputation of Egypt.

**FU’AD PASHA**, Keşeci-zade Mehmed, five times Ottoman Foreign Minister and twice Grand Vizier, was born in Istanbul in 1815, the son of the poet Izzet Molla [q.v.]. Upon his father’s exile to Tripoli in Africa; but since the Porte’s diplomatic business was rapidly increasing, his French gained Fu’ad appointment to the Translation Bureau in November 1837. Like his life-long colleague Mehemet Emin Ali [see **Ali Pasha Muhammad Amir**] he became a protégé of Mustafa Reşid Pasha [q.v.].

During the next decade Fu’ad advanced rapidly as interpreter and diplomat through the ranks of the Ottoman bureaucracy and gained firsthand expe-
rience of Europe. In 1839 he became dragoman of the Porte; in 1840 he was dragoman, and from 1841 to 1844 first secretary, of the Ottoman embassy in London; in 1844 he went on special mission to Spain when Isabella II was declared of age to rule. In March 1845 Fu’ad was appointed member of an ad hoc commission on education whose report of August 1846 recommended a new state school system. He became dragoman of the imperial Divan in June–July 1845, and on 18 February 1847 âmâddâr [q.v.]. Late in 1840 Fu’ad was sent to Bucharest to ensure smooth relations with the Russian forces which had entered the Principalities to suppress the revolution. When in 1849 Magyar and Polish refugees sought asylum in Ottoman territory Fu’ad was dispatched to St. Petersburg to uphold Reshld’s policy of no negotiations. Nicholas I received Fu’ad on 16 October. Fu’ad’s mission was successful. In reward he was advanced to şadâre’i ministêştir, in effect Minister of the Interior. After returning via Jassy and Bucharest to Istanbul on 11 April 1850 he sat on a special commission of the mejlîs-i waîdî to deal with Christian complaints from Vidin.

Fu’ad went to Bursa in mid-September 1850 to take baths for his rheumatism. There he wrote with Ahmed Djewdet [q.v.] the first modern Ottoman grammar published in the empire, Kavâid-i ‘Ogma ve ‘Ismâ’ilîn-în. In the autumn of 1850–1851 the Edjilâm-î Dânîsh [see ANDUMAN], Fu’ad was appointed a member. In Bursa Fu’ad and Djewdet also drafted a proposal for the Bosphorus ferry-boat company, which became the first joint-stock company in the empire. From April to July 1852 Fu’ad was in Egypt on a special mission to see to the application of Tanzimat [q.v.] decrees and solve questions of railway building, inheritance, and the Egyptian tribute. That year Fu’ad advocated a European loan to help the finances of the empire, but Sultan ‘Abd al-Mejjid refused.

On 9 August 1852 Fu’ad was appointed Foreign Minister, three days after ‘Ali succeeded Reshld as Grand Vizier. This marks the first time Reshld’s two disciples had worked together in the highest offices, and the beginning of their involuntary estrangement from each other due to their consistent differences of opinion. On arriving in Istanbul on 21 December. His first job was to deal vigorously with a financial crisis of panic proportions; he withdrew the hâkim [q.v.], drew up a budget, and negotiated the successful loan of 1862. A Montenegrin campaign was successfully concluded, but the Belgrade incident of 1862 forced Turkish evacuation of two Serbian fortresses. Fu’ad helped secure new millet constitutions for the Greeks, Armenians, and Jews. He resigned on 2 January 1863.

When in 1849 Magyar and Polish refugees sought asylum in Ottoman territory Fu’ad was dispatched to St. Petersburg to uphold Reshld’s policy of no negotiations. Nicholas I received Fu’ad on 16 October. Fu’ad’s mission was successful. In reward he was advanced to şadâre’i ministêştir, in effect Minister of the Interior. After returning via Jassy and Bucharest to Istanbul on 11 April 1850 he sat on a special commission of the mejlîs-i waîdî to deal with Christian complaints from Vidin.

Fu’ad’s three-year term was marked by the withdrawal law, prepared by Fu’ad and Midhat [q.v.] in 1864 for the new provincial administration experiment in Bulgaria; by the final authorization of the construction of the Suez Canal; by the necessity of recognizing Karl of Hohenzollern as the new prince of Roumania; by thefirman of 27 May 1866 granting Khedive Ismâ’îl’s heir direct succession from father to eldest son; and by Fu’ad’s growing feud with Mustafa Fâdîl Pasha [q.v.] over finances. Fu’ad was dismissed on 5 June 1866 because he opposed ‘Abd al-Aziz’s taking a daughter of Ismâ’îl as wife. When ‘Ali once more became Grand Vizier, on 11 February 1867, Fu’ad became Foreign Minister again. His masterly memorandum of 15 May for the Powers delineated Ottoman progress under the Tanzimat, but, with ‘Ali, Fu’ad was subject to increasing attacks from New Ottoman writers, especially over the Cretan rebellion and the final Turkish military evacuation of Serbia. From 21 June to 7 August 1867 Fu’ad accompanied ‘Abd al-Aziz on his trip to Paris, London, and Vienna; Fu’ad kept the sultan from blunders, and the trip succeeded in diminishing the likelihood of serious foreign intervention in Crete, as well as interesting the sultan in western material progress. Fu’ad returned exhausted. Nevertheless he also was acting Grand Vizier in the autumn of 1867 when ‘Ali went to Crete. He helped develop plans for the Council of State (Şârâr-î Davet [q.v.]) and the Galatasaray lycée, both inaugurated in 1868. On medical advice, for his heart condition, Fu’ad travelled via Italy to Nice for a rest in the winter of 1868/69; there he died on 12 February 1869. His body was brought to Istanbul by the French dispatch-boat Renard.
Fu'ad was a convinced westernizer. He worked on many of the reforms of the later Tanzimat period. He may have favoured representative government, though this was not achieved in his lifetime. His main objective was preservation of the Ottoman Empire through diplomacy and reform. He loved high office, but was not so jealous and grudging as 'Ali, and rather bolder in innovation. His honesty has been impugned, especially as regards gifts from Ismail, but his objectives remained constant. Fu'ad was a brilliant conversationalist. He was completely at home in French. His witticisms are famous; some imputed to him are apocryphal. He also wrote well, but his objectives remained constant. Fu'ad was a convinced westernizer. He worked on many of the reforms of the later Tanzimat period. He loved high office, but was not so jealous and grudging as 'Ali, and rather bolder in innovation. His honesty has been impugned, especially as regards gifts from Ismail, but his objectives remained constant.

The tribe of Tamimi, an early Sufi, disciple of Suyfân al-Thawri, was born in Samarkand, grew up in Abiward, and in his youth was a highway robber. After his conversion, he betook himself to the study of Hadith at Kûfa. He was summoned to give ascetic addresses to Hârûn al-Rashîd, who called him "The chief of the Muslims". He settled in Mecca and died there 187/803.

Mentioned frequently as a transmitter of Traditions, he was also a noted ascetic and advocate of other-worldliness, known as one who lived with God. "The servant's fear of God", he said, "is in proportion to his knowledge of Him and his renunciation of this world is in proportion to his desire for the next", and again, "Satisfaction with God is the stage of those who are close to Him, who find in Him joy and happiness". Asked what he thought of the condition of mankind, Fu'ad replied, "Forgiven, but for my presence among them". It was said that when Fu'ad left the world, sadness disappeared.

Nicholson), 97 ff; 'Aṭṭâr, Tabâbât al-awliyâ', (ed. Nicholson), i, 74 ff; Ibn Khallîkîn, No. 542; Sha'îrâni, Tabâbât, i, 58, 59. This material is known as the "Al-Fudjâyra", (officially, al-Fujairah), one of the seven Trucial Shâkhdoms in Arabia and the only one lying in its entirety on the eastern side of the peninsula separating the Gulf of 'Umân from the Persian Gulf. The tiny state is wedged between the Sultan of Muscat's territory of Rûs al-Dîbâlî to the north, and the once independent territory of Kalbâ (Kalba in Yakût, T.4, and the Kûmâs of al-Fîrûzâbâdî) to the south. Kalbâ, since 1371/1952 a part of the Trucial Shâkhdom of al-Shârîka (Sharjah), lies between al-Fudjâyra and the central part of the Sultan of Muscat's domains. From Kalbâ north to Rûs al-Dîbâlî, the narrow littoral and steep eastern watershed of the mountains of al-Hadjar behind the coast constitute the region known as al-Shâmâlkûyûn.

The little town of al-Fudjâyra is at the mouth of Wâdî Hâm and about two miles from the sea. Most of the inhabitants of the town and wâdi are members of the tribe of al-Shârîkiyyûn. Strung along the coast to the north are other villages of the state: Sakamkâm, al-Kurayya, Murbih, Dádha and a part of Dâbâl. Between Murbih and Dádha is the enclavé of Khaw Fakkân (Fukkan in Yakût, T.4, and the Kûmâs of al-Fîrûzâbâdî) belonging to al-Shârîka.

Al-Fudjâyra has long been under the influence of al-Kawâsim of Ra's al-Khayma and al-Shârîka, who were occupying Khaw Fakkân as early as 1188/1775. Al-Fudjâyra, however, became virtually independent in 1321/1902 and was recognized as such by Great Britain in 1371/1952, when the Ruler, Shaykh Muhammad b. Hamad al-Shârîkî, subscribed to the agreements in force between Britain and the Trucial Shâkhdoms.

Fu'ad was a convinced westernizer. He worked on many of the reforms of the later Tanzimat period. He may have favoured representative government, though this was not achieved in his lifetime. His main objective was preservation of the Ottoman Empire through diplomacy and reform. He loved high office, but was not so jealous and grudging as 'Ali, and rather bolder in innovation. His honesty has been impugned, especially as regards gifts from Ismail, but his objectives remained constant. Fu'ad was a brilliant conversationalist. He was completely at home in French. His witticisms are famous; some imputed to him are apocryphal. He also wrote well, but his objectives remained constant. Fu'ad was a convinced westernizer. He worked on many of the reforms of the later Tanzimat period. He loved high office, but was not so jealous and grudging as 'Ali, and rather bolder in innovation. His honesty has been impugned, especially as regards gifts from Ismail, but his objectives remained constant.
AL-FUDJAYRA — FUDULI

FUDULI, MUHAMMAD B. SULAYMÂN (887-963/1480-1556), (in Turkish Fuzûlî) one of the most illustrious authors of Classical Turkish literature.

He was born in 'Irâk at the time of the Ak-Koyunlu (White Sheep Dynasty) domination, probably at Karbâlî, although Baghdad, 'Hilla, Nâjlî, Kirkûk, Manzik and Hîr are also mentioned as his birthplace. It is reported on uncertain authority that his father was muftî of Hîlla, that he was taught by one Râzmat Allâh, that he first took to poetry when he fell in love with this teacher's daughter and that his literary taste was formed by the Âdharî poet Hâbîlî. It can, however, be said with certainty that Fudûlî came from an educated family and was himself fully trained in all the learning of the age. His learning is also attested by the titles of Molla and, later, Mawlûnâ which are given to him. It appears that his education commenced at Karbâlî and continued at Hîilla and Baghdad.

Mehmed b. Sulaymân (v. Hâdîdî Kallâhî, 255, 645, 805, 914, 1075, 1721, 1729) invariably used the name makhlas (pen-name) Fudûlî in all his verse and prose works and, is, therefore, mentioned among poets known by their takhallus (pen-name) Fudulî in all his verse and prose. Fudulî met also two poets who participated in the campaign, Khayall (d. 964/1557) and Tadhkira, 772, 528; Hasan Celevî, Ashîk Celevî, part, 1st. Univ. T.Y. 5959, 38-41; 121a-222a). Fudulî met also two poets who participated in the campaign, Khayall (d. 964/1559) and Tadhkira, 950-952. While the Sultan was in Baghdad, Fudulî was promised a pension payable from waqf funds. Difficulties arose, however, when a later bârdî stipulated the payment of nine aspers a day from the waqf funds. These difficulties are the subject of the letter known as the Şîhâyet-nâme (Abdûl-kâdir Karahân, Fuzulî'nin mevlûpârî, Istanbul 1948, 37-8). Fudulî entered also into correspondence with Ahmed Bey, the Mir-i ise of Mâshî, 'Âyâs Pasha, the Kâdi 'Allâ al-Dîn (cf. Karahân, op. cit., 38-41, 42-4, 44-6) and the Sâhezde Bâyezîd (Hasîbî Çâhâs, Fuzulî'nin bir mektubu, in AUDTCFD, iv (1948), 139-40).

Fudulî composed kaşidas praising the Pâgdas Uways, 'Âyâs Karahân and Mehmed, when they were Wâdis of Baghdad and also the Kâdi of Baghdad, Fudulî, FK. He also wrote some of his most important works, including Hadîbat al-su'addâ' and Layîlî wa Ma'hûnâ, under the Ottomans. Although he spoke with longing of travel in his poems, and although in his youth he hoped to visit Tabriz and in his mature age to go to India and Asia Minor, Fudulî never left the confines of 'Irâk. He seems to have spent a large portion of his life in employment at the 'Abâdîre 'Aliya in Nâjdaf (cf. the Persian kaşidas in praise of the Imâm 'Allî in the Ma'hûnâs, in the author's possession, fols. 166 ff.).

He died and was buried at Karbâlî in 963/1556 during a plague (fûnûn) epidemic ('Abdul, Güshen-i gu'urarî; Alî Emîri Lib. No. 774, 1559; Riyâdî, Riyâd al-şu'urarî; Ist. Univ. T.Y. 3250, 46 etc.). The year 1970/1562 is stated in the Tartûsî, Târîh-i 'Irâk, Baghdad 1939, iii, 246) or a Bânjîn (A. Gölpinarî, Fuzulî'nin bânsîneği temsîlî; ..., in Azerbaycan Yurî Bilgisi Mecmuası, no. 8, 265 ff.; for objections cf. Sâdeddin Nûzhet Ergûn, Türk musikisi antolojisi, ii, 640). Nevertheless it is right to consider Fudulî as standing above sects and schools in his şûfi approach (cf. Karahân, Fuzulî-Muhûtî, kwâilt ve 500, 1948, 144 ff.).

Fudulî wrote some fifteen works in Arabic, Persian and Turkish, as follows: (a) Arabic: (1) Diwanî; (2) Mulla-î al-şikhâyî; (b) Persian: (3) Diwanî; (4) Hâfî-î ârâmî (or Sâhezde Bâyezîd); (5) Anîs-î bâchî; (6) Risâla-î mu-âmmayyât (he also wrote riddles in Turkish); (7) Rind-î sâhî; (8) Hûm-î-šîkh (or Şîkh-î-ramî); (9) Turkish: (10) Beng-û-bâde; (11) Leyîlî-î Mu'âmmân; (12) Kirh-î dâhidî târîf-î; (13) Şîh-û-şo'âla; (14) Hadîbat al-su'addâ'; (15) Letters.

Four other works are attributed to him on doubtful grounds. These are: Şu'bat al-âşrîyî, Divan-i-yemnî-nâme, a Turkish-Persian rhyming dictionary and the Konya Rûzâîlî (Müze Ktbî. 2617).

The known manuscript of Fudulî's Arabic poems is preserved in the Austrian Museum in Leningrad and also in the Yâsînî Mu'âlâmî, Konya 1948, 139-40). In the tract entitled Mulla-î al-şikhâyî is to be found in a Kûlliyât-i Fudulî, preserved in the Austrian Museum in Leningrad (see E. Bertels, Arabîskie stûkî Fuzulî, in Zapischi Kollegii Vostokovedov, v, Leningrad 1930; idem, Novaya rukopis 'Kûlliyatsa Fuzulî, in Izvestiya Ak. Nauk, iv, 1935). Mulla-î al-şikhâyî, together with the Arabic kaşidas, was published in Baku in 1958. Another edition is being printed in Turkey. There are many manuscripts in existence of the poet's works in Persian, many of which have also been printed (for details see Abdûl-kâdir Karahân, Fuzulî; Mügân Cunbur, Fuzulî hakkinda bir bibliografya denemesi, Istanbul 1956).
There is a Turkish translation of the Persian Dildan (which is also about to be published), with the exception of the kaşidas (Ali Nihat Tatar, Fuzulînin Farsça Divam, Istanbul 1948). Fuzûlî's collected works (a Turkish edition of the Persian Dildan) have been published several times under the title of Sâhih-nâma as part of Fuzûlî's collected works (a Turkish edition of the Persian Dildan). Other published works are as follows: Anis al-hâl, ed. Süleyman Cafer Erkiço, Istanbul 1944; Risâle-i mu’lumâyyatî, ed. Kemal Edib Kürkçuoğlu, Ankara 1945; Rind wa sâhih, same ed., Ankara 1956; Husain wa rûh as Safar-nâma-i Rûh, ed. Muh. 'Abbâs Nâsihi, in Armaghân (Tehrân), xi, 418-24, 505-17; the same work as Şikhat wa marâq, ed. Necati Hüsnü Lugal and O. Reşer, Istanbul 1943—for the latest Turkish translation and a summary in French, see Fuzulî, Şikhat ve maraz, Istanbul 1940.

Critical editions of most of Fuzûlî’s Turkish works have appeared recently. Of the Dildan 26 printed editions and more than a hundred MSS are known to exist (cf. op. cit., by Karahan and Cunbur, also İstanbul kitâbîhârisi Türkche yazma organizations, İstanbul 1947, 124-37; A MS copied during the poet’s lifetime is in the author’s possession). The latest edition of the Bengi u bade is that by K. E. Kürkçuoğlu, Istanbul 1956. An interleaved edition of Leyli ve Meşun, published by the Turkish National UNESCO Committee, Istanbul 1959. The author has edited the first published version of the Kîrkh hâdîth tertîjesî (A. Karahan, Fuzulî’nin têsîhî edımmi nîseri: Kîrkh hâdîth tertîjesi, in Seldâm Mecmuasî, Istanbul 1948, nos. 57, 59, 61, 63, 64, 66). It was later published by Kürkçuoğlu, Istanbul 1951. Şihâb u gedâ is known only through a reference in Şâhî, op. cit. A critical edition of the Hâdîksat al-suwâ’dî is in preparation. MSS of this work are numerous (in addition to the works cited above, cf. catalogues by Rieu, Flügel, Pertsch, Blochet and Rossi). Five letters by Fuzûlî are known: the author of this article has published four (Fuzulînîn mektûbûlarîs, Istanbul 1948), while the fifth was published by Hasibe Çatbas (Fuzulînîn nîr mektûbû, Ankara 1948).

Both Fuzûlî’s artistry and his wide learning are reflected in almost every one of his works. The penetrating quality of his thought and his scholarlyship in many fields are made clear in many passages, chief amongst them being the taşıkra (praise of Divine unity) in the form of a kaşida at the beginning of his Turkish Dildan. Fuzûlî’s notions on medicine, material and spiritual welfare, love and beauty can be gathered from his tract Hûn wa rûh; his şîfi philosophy and the advice which he had to give are made clear in Rind wa sâhih; Haft-ı-dîsnî is full of the şîfi symbolism in which mystic love and wine are equated; mystic love and şîfi inspiration are also in Leyli ve Meşun and the ghazals; stories about the prophets and the poet’s feelings about the tragedy at Karbalâ can be found in the Hâdîksat al-suwâ’dî; the Divans (especially in the brief kitâfîs) and Anis al-hâl reflect the poet’s philosophy of life in general.

Fuzûlî was a brilliant linguist. No fault can be found with the language and technique of his Arabic poetry. Nevertheless in feeling they are overshadowed by his work in Persian and Turkish. It is true that in spite of their technical brilliance and richness of content his poems in Persian cannot compete with the great masterpieces of Persian literature, in which Fuzûlî is ranked as a better than average second class writer. In Turkish literature, however, he ranks with the greatest. Fuzûlî does not owe this reputation to the originality of his subject-matter, which he drew from earlier Persian writers. Thus, the subject of the Hâdîksat al-suwâ’dî, which can be classed as a mâyâlî (a description of the tragedy at Karbalâ) is drawn from the Rasûlîl-ṣâhādât (Hasûn) of Muhsin Wâîfî Kâşîfî; the desert story narrated in Leyli ve Meşun had been told many times before, particularly in the poems of the same name by Niâyîzî and Hâtîfî; the forty traditions of the Prophet in Kîrk hâdîth tertîjesi are drawn from Dîvânî’s Tarîjgâna-arba’în hâtîth (cf. A. Karahan, İslam-Türk edebiyâtında kîrk hâtîth, Istanbul 1954, 100-1, 167-72). Fuzûlî succeeded, however, in impressing the particular stamp of his personality on his treatment of this common subject-matter. His treatment of the themes of love, suffering, the impermanence of this world, the emptiness of worldly favours and riches and of the theme of death attain to a lyricism and directness which no other Turkish poet has reached. He is the Turkish poet who has expressed with the greatest effect a feeling of mystic love and wine, the face of adversity and of separation.

Fuzûlî’s Turkish has the characteristics of literary Âdîhârî. This is true both of his grammar and of his vocabulary. The works of his age of maturity reflect, however, some Ottoman influences which followed naturally the Ottoman conquest of Iran in 941/1534. Fuzûlî’s fame and influence, marked already in his lifetime, have not ceased to grow in the modern Turkish world. He has always been the most popular poet in all the countries inhabited by Turks. He has influenced many classical Turkish writers, such as Rühî, Newlî-zade ‘Âtâî, Nâ’ilî, Nâbî, Sheykh Qâlib and Nigarî. Such writers wrote imitations (nastras) of his poems, or lahîmîs and lasûls to his ghazals.

Traces of Fuzûlî’s influence occur also in post-Tanzimat modern Turkish literature, as well as in poems written specially for musical settings (sadî). Many of his own poems have also been set to music, starting from the 17th century. Even today, some of his ghazals are sung by bûhândan and are occasionally recorded.

(ABDULLAKID KARAHAN)

FULANI [see Fulbe].

FULBE, pl. of Ful, called Fula(s) in Gambia and Sierra Leone; usual French name: Peul; usual English name: Fulani; their language is variously called Fula, Fulani, Peul (French usage), Ful (German usage), their own name for it being variously called Ful, Fulbe, Fulfulde, in Mali and territories further east), a pastoral people—the only people of white (or red) stock in negro Africa—the ‘cattle-men' who for more than a thousand years have been moving in groups across Africa at its greatest width. Wearing their would-be white rags with unfailing pride, they look at you with a glance of aristocratic nonchalance. They are one of the few nomadic societies of negro Africa, and G. Vieillard, who professed a brotherly affection for them, spoke of the Fulani as “parasites on the bovine species”. Living amongst groups of stalwart negro farmers, the Fulani seem relatively frail, their frailty offset, according to Gautier (Afrique noire occidentale, 167) by a certain intellectual superiority.

According to Barth, Peul means “light-brown, red", in contrast to Olof (black), while according to Gaden the term Fulbe means “the scattered ones”. Peul being the Wolof name which was adopted by the French from the coast of Senegal, it is more correct to speak of Ful or Fulani, in the plural Fulbe, the name by which the Fulani call themselves.

Al-Makrizi (765-845/1364-1442) was probably the first to speak of the Füllanlyia, a term which was used again by al-Sa’di in the Ta’lih al-Saddan (1667). João de Barros speaks of them at length in his Asia, as do the various explorers who travelled through Africa from the 18th century onwards (Moore, Richet, Caillé, d’Avezac (1829), Clapperton (1825), the Lander brothers (1830), d’Eichtal (1842), Barth (1850-55). Substantial studies have been devoted to them by D. Crozals (1853), Gaden, Delafosse (1912), Mischlich (1931), and finally Tauxier (1932) who during his official career was for more than ten years in charge of districts containing many Fulani groups, and who produced an excellent comprehensive study. Vieillard (1938), Lhote (1951) and de Lavergne de Tressan must also be mentioned, as must Colonel Figaret, who settled at Bamako on his retirement, and died there in 1943.

Reference must also be made to the monographs by the British writers, East (on Adamawa), Stenting and Hopen, by the Germans Passarge and Strümpell, by the Frenchmen Lacroix, Richet and Froelich, and also the works of Wolf and Ahmadou Hampaté Ba on Macina and Senegambia.

Origin of the Fulani. The problem of the origin of the Fulani is one that is the subject of hot dispute among Africanists. In fact it seems vital to know whence came these pastoralists, often turned warriors, who have played such an important part in the establishment of various African kingdoms, from Senegal to central Cameroon. Racial resemblances, or reminders of some passage in the Bible or the Qur'an, have often led well-meaning authors along innumerable false trails which it is pointless to follow, now that considerable light has been shed on the existence in neolithic times of a humid Sahara, which for several millennia sheltered cattle-owning pastoralists who came from the east of Africa and are most probably the ancestors of the Fulani. Until quite recently, ignorance of the Sahara's climatic changes obliged authors to search, far or near, for peoples bearing a physical resemblance to the Fulani, and to conjure out of nothing a migration route which would have led them to Futa Toro in Senegal, the place where they are first mentioned in history. The various theories, many of which read like pure fiction, can be grouped under two headings: non-African origins, and African origins.

It has been maintained in all seriousness that the Fulani were descended from the Tartanes, from the Pelasgians, primitive inhabitants of Greece and Italy, or from Gauls or Romans who vanished in the sands of the desert. In support of the Judeo-Syrian theory, supported as early as the end of the 18th century by Winterbottom and Matthews, the explorers of Sierra Leone, M. Delafosse in his Haut-Sénégal-Niger put forward plausible arguments which for long were generally accepted. On this view the Fulani would have been the descendants of Jews from Tripolitania and Cyrenaica, a party of whom are known to have fled into the desert after the great Roman persecution of 115 A.D. Travelling by way of Fezzan, Air and Macina they would have reached the region between upper Senegal and the Niger, occupied by the ancient kingdom of Ghana. Tauxier, writing with merciless accuracy, has disproved this theory.

The supposed Indian origin of the Fulani has been upheld by many writers, including Faidherbe and Binger. It has been reinforced by the linguistic theories of which Mlle. Homburger has made herself the ardent propagandist, arguing as she does a relationship between the Dravidian languages and certain African languages such as “Serer-Peel", a relationship rejected by most writers. Finally Etienne Richet, in a lengthy study entitled Pensés de l'Adamawa, has adduced evidence of anthropological and sociological similarities between the Fulani and the ancient Iranians.

Two original African stocks have been invoked as representing the ancestors of the Fulani. The closest, geographically speaking, is the most difficult to defend. It seems clear that the Fulani are not Arabo-Berbers, as Cortambert, F. Dubois and C. Monteil have maintained—Monteil claiming that the Fulani are the descendants of the Honainen, mentioned by al-Bakr as the grandchilden of the soldiers sent in 734 by the Umayyads against the kingdom of Ghana. The Nubian-Ethiopian origin seems much more worthy of consideration. It has moreover been supported by the greatest number of authors. Mollien, the first of these, in his Voyage dans l'intérieur de l'Afrique aux sources du Sénégal et de la Gambie, 1818, sees a resemblance between the features, character and customs of the Fulani and those of the Barabra of Nubia; he makes them a race of red Ethiopians. Barth (1855) is inclined to admit that the Fulani occupied western Africa prior to the expansion of the Berber people; he likens the Fulani to the Pyrrhi Athiopis of Ptolemy, Ethiopians burnt to a copper-red colour. Coming from the east of Africa, the Fulani would have passed by southern Morocco (approximately 150 B.C.) and then, under pressure from the Arabs (from about 123/750), would have reached Senegal, occupying the region...
of Futa Toro. This theory was supported (1868) by F. Müller, who connects Fulfulde, the language of the Fulani, with Nuba in Kordofan, relates the Fulani to the Berbers, and supposes that the Fulani occupied North Africa, displacing the Berbers. Two years later Schweinfurth associated the Mangbutu (Mombutu) with the *Pyrrhi Aethiopes*, and found in them a resemblance to the Fulani, whose origin he too placed in eastern Africa. This theory was to be revived some years later (1881) by O. Lenz in his book on Timbuctoo; he makes the Fula and Nuba halfway between negroes and Mediterranean Hamites. About the same time E. H. Haeckel (1868-75), in his *Naturliche Schopfungsgeschichte*, takes the hair as a fundamental criterion, and this leads him to group together the Nubians and Fulani who are euplocomes (soft curly hair) like the Dravidians and Mediterranean peoples. He states: "the Nubians, properly so-called, inhabit the regions of the Upper Nile (Dongola, Changaalla, Barabara, Kordofan), from there the Fula or Fellata migrated towards the west and at present occupy a large zone in the western Sahara between the Sudan in the north and the negro peoples in the south". Haeckel, then, makes the Nubians and Fulani a race half-way between whites and negroes. He includes in these groups some Hamites or Cushites (Beja, Galla, Somali, Danakil), some elements of which have more negro features than the Fulani, who resemble rather the upper Hamites (Egyptians and Berbers) and Semites (Jews, Arabs, Indo-Europeans). Topinard (1879) says that the Fulani are a red people; he connects them with the Barabara and with the Ahmar described by Caillaud in the course of his explorations in Upper Egypt (1849).

Hartmann (1876) makes the Fulani some kind of sub-Ethiopians, a kind of cross between Berbers and Nigritians. Quatrefages and Hamy, in their *Crania Ethnica*, indicate a close connexion between Fulani and Egyptians, at the same time suggesting that there are fairly clear signs of admixture with negro peoples. Machat, in 1906, revives the theory of Dr. Tautin (1869) and of Dr. Verneau showing the relationship of the Fulani to the peoples of Upper Egypt and Nubia, which was supported by the Fulani traditions collected by Olivier de Sanderval and Heequard. Verneau's view was confirmed by Dr. Lasnet, who however connects the Fulani with the 240,000 soldiers of Psammetichus who in the 6th century B.C. left Egypt for Nubia; reaching the south of Morocco they would have become the leucho-Ethiopians and would then have moved down towards the Senegal. Deniker, in *Les races et les peuples de la terre*, after studying the Ethiopians or Cushito-Hamites, points to a Fula-Sande group derived from a mixture of Ethiopian and Nigritian stock. He makes the Fulani essentially Ethiopians with Berber or negro admixture. Montandon, in his *Ologniese humaine*, places the Fulani among the pan-Ethiopian races (which include also Barabra-Danakil-Somali, Abyssinians-Galla-Masaai, Badima), while Chantre, in his contribution to the study of the human races in western Sudan, connects the Fulani with the Beja in view of the following common features: colour of skin, which is not black but reddish; texture of hair, which is not woolly; the principal indices, which often differ only by a few millimetres; numerous common ethnographic features to the Nuba and Nubi-Fulani people between the 240,000 soldiers of Psammetichus (1.74 m./5 ft. 8½ ins.) and Deniker (1.75 m.) seem to suggest. Although they are taller than the average of negro peoples, they are shorter than the Wolofs. The height of the Fulani varies according to the region, and the samples taken give from 1.67 to 1.72 m. (5 ft. 5½ to 5¾ ft.) for men and 1.54 to 1.62 m. (5 ft. 1½ to 5¾ ft.) for women.

The Fulani are distinctly dolichocephalic (average horizontal cephalic index 74) and platyrhynine (average nasal index 96). These anthropological data enabled Dr. Verneau (1897-99), Deniker (1926) and Seligman to confirm the theory according to which the Fulani would be lower Hamites, Ethiopians. Tauxier, to whom we are indebted for the most complete study of the Fulani which has so far appeared, notes in this connection that they have always given the name *Phouta* or *Fouta* (Futa) to the countries where they have settled—Futa Toro, Futa Djallon, Futa Damga (west of Nioro Circle)—and he underlines the similarity of these names to the country of Phout (Fu) in Nubia. A. Berthelot accepts that the Fulani are Ethiopians, and red-skinned, and relates them to the Barabara and the Bakkāra, and makes their language a negro language. Recently Shelykh Anta Diop has supported this Nilotic origin by identifying the only two typical totemic proper names of the Fulani with two equally typical concepts in Egyptian metaphysical beliefs, *Ka* and *Ba*. On the other hand he supports the close connexion existing between the Fula language, Wolof and Serer.

The Fulani have no firm national tradition about their origin. They regard themselves sometimes as Arabs, sometimes as a cross between Jews and Arabs, sometimes as a cross between Arabs and negroes, or between Moors and negroes. In actual fact the legends most often date from the time of islammation, and on that account lack any kind of validity.

*Saharan route of the Fulani.* Although a number of authors have found little difficulty in demonstrating the relationship of the Fulani to the Nubians and the Masai, the difficulty of crossing the Sahara seems to have caused a diversion of the Fulani's supposed migration routes, so that almost all are made to pass by the northern fringe of the desert, in fact all over the Maghrib. It is only quite recently that the explorer H. Lhote has thrown light on a probable travel route across the present desert, a route possible in the climatological conditions of the 3rd millennium B.C. when the terrain of the Sahara resembled the present-day Sudan zone. More than a thousand rock engravings and paintings are found at intervals across the desert from Egypt to the Atlantic, depicting cattle and their herdsmen. The cattle portrayed belong to two types—longhorns, and the short-horned cattle, long ago domesticated in Egypt, which are indigenous to Africa. The style recalls that of Egypt—in the way the animal is depicted in profile and full face, and in the presence of a spherical object or appendage between the horns, suggestive of a cult identical with or related to the cults of Egypt; the human figures, with the hair fashioned into a crescent, are identical with those of present-day Fulani women.

The tools (polished axes, grinding stones) which
have been recovered near these engravings, particularly at Mertutek (Hoggar). It was probably around this period that these pastoralists left the Upper Nile and moved into a pastoral zone covering the present-day Sahara. They reached the Djebel Wenat, where some very beautiful paintings of cattle have been found, then reached the Pezzan, travelled along the high plateaus of Tassili, passed by way of the deep canyons of the Hoggar uplands, and then followed the valleys of the Hoggar and of Wadì Tamousak. They then passed to the north of Fezzan, and were unknown in Mauretanien until quite recently (their art, probably learnt in Egypt, had been lost). These movements are explained by the search for new pastures and the need for continual change of habitat that is typical of nomadic peoples, and also no doubt by the gradual encroachment of desert conditions through changes of climate; a contributory factor may also have been the importance which the Fulani attach to their cattle.

The vexed question of the origin of the Fulani is as hotly disputed by Africanists today as it has been in the past. Various branches of science—anthropology, ethnology, linguistics and prehistory—have made their contribution towards the solution of the problem. The type of ceramics (Chantre), cranial indices (Tautain, Verneau, Deniker, Chantre), linguistic relationships (Mlle. Homburger, F. Müller, Seligman), and the ethnographic context (Lhote, Tauxier) constitute a body of important presumptions concerning the common origin of these light-skinned peoples who set out from the vicinity of Ethiopia with their cattle, one group going west, the other south, peacefully driving their cattle before them. Often superior to the tribes they encountered, they became their advisers and their suppliers of meat—a luxury commodity—and then, when circumstances were favourable, they seized power, assisted by the fact that they were also skilled horsemen, and that in the open country of the savannah regions cavalry is always at an advantage, especially when the opposing infantry is equipped only with bows and featherless arrows, which make it impossible to shoot any distance.

Spread of the Fulani. Futa Toro plays an important role as the centre of the dispersal of the Fulani élite. It is nevertheless probable that where these élite have succeeded in establishing their authority, it is to a large extent due to the presence on the spot of other Fulani elements. It was probably in the 11th century that the Fulani established themselves at Futa Toro, and from there, at the time of the fall of the empire of Ghana, they spread towards the east by way of Dhombo and Kaarta, where several clans remained. Others mingled with the settled Mandinka population to produce the Fulanke. A fairly large group remained up to the end of the 14th century at Kanian (south of Bagana), whence Maga Djallo and his companions were set out at the beginning of the 15th century in the direction of Macina. Another section was to settle at Bakunu. Another contingent from Futa Toro was to reach the northern shore of Lake Debo and then, after crossing the Niger at Say, was to settle first in the Sokoto area and then in Adamawa. From Macina to come the Fulani of the Dogon country and of Liptako, as well as those of Futa Djallon. By intermarriage with the local negro population the Fulani were to produce six groups which were to be of considerable importance in the evolution of the African continent. The alliance of Fulani with Serer was to produce the Tukulors, the Fulanke and the Toronke, important groups in the valley of the Senegal crossed with the Mandinkas, they formed the groups of Fulanke who number more than 100,000 in the vicinity of Bafoulabe, Kita, Bougouni and Sikasso. The Kassonke and Wassulonke, who evolved during the 18th century at Wassulu, were to distinguish themselves during the struggle against the Fulani of Futa Djallon (1760).

The supremacy of the Fulani. The Fulani are normally regarded as fierce Muslims. Although this is true in general, nevertheless numerous pagan customs still persist, and their influence made itself felt at first in a pagan reaction against Islam.

The details of the spread of the Fulani have often been described. At first, as guardians of the cattle which farmers entrusted to them, they played an important economic role, and were fully conscious of their intellectual superiority. As a second step, the owner was reduced to slavery and his land and cattle appropriated. The extraordinary spate of Fulani conquests of the 18th and 19th centuries is then readily understandable.

From Futa Toro the Fulani, or at least their ruling classes, set out towards the east, establishing kingdoms as they went, first Macina, then Futa Djallon, and the Fulani empires of Nigeria and of Adamawa.

The Fulani empire of Macina was created by one Maga Djallo at the end of the 14th century. The Ardos resisted the assaults of the Songhai of the Sonni Ali Ber, and then came under the control of the Moroccans of Gao before finding themselves, at the end of the 18th century, caught between the Bambara invasions and the Tuareg expansion. It was left to Seku (Shuku) Hamadu (1840-52) to carry the Fulani empire of Macina to the peak of its power, thanks to the rise of Usman (Ughmân) dan Fodio. He established his capital at Hamdallahâ ("Praise to God") in 1815, and organized his states into provinces, with governors, judges, and fiscal and military systems. Seku Hamadu succeeded in converting to Islam almost all the Fulani and a considerable number of Bambara. After Hamadu Seku (1844-52), who established his suzerainty over Timbuctoo, his son Hamadu Hamadu (1852-62) saw his army of 50,000 warriors defeated at Sayewal at the hands of Al-Hâdîdâ. Umar's 30,000 Tukulors. Hamdallahâ was conquered and Hamadu Hamadu put to death. Two years later his brother Ba Lobbo was to succeed in defeating the Tukulor army while Al-Hâdîdâ Umar was to escape into the cave at Degemere with his reserves of ammunition. But Tidjani, nephew of Al-Hâdîdâ Umar, soon took his revenge. From that time on, the Tukulors were to be in control of Macina.
The Fulani (Fulas) of Futa Djallon came from Macina around 1694, led by a certain Sa'di. As soon as the Fulani felt themselves strong enough, they were to seize power and wage a succession of holy wars against the pagans. The position of Almamy was to be held alternately by the Sorya and Alfaya families; the most famous of the Almamys was Ibrahim Sori Maudd (1751-84).

The Fulani of Nigeria are among the best known of the Fulani groups, owing to the many written documents which have survived. Here, as elsewhere, a distinction is made between the Fulanin Gida, who took up a sedentary life and often intermarried with the local inhabitants, and the Bororo, who still faithfully tend their herds of cattle. In contrast to many of the Fulanin Gida, the Bororo are tall and slim, with a proud carriage, light skin, aquiline nose and thin lips. According to the Kano Chronicle, it was in the 18th century that the Fulani came from Futu Toro to establish themselves in the kingdom of Gobir, one of the Seven Hausa States.

Usman dan Fodio (born 1754) set himself up in opposition to the Emir of Gobir, declared a holy war, defeated the Emir's troops (21 June 1804), and had himself proclaimed Sarkin Musulmi ("Commander of the Faithful"). Thereafter he extended his authority over Kano, where he established his base while he collected the military and administrative documents of the Katsina, Kebebi, Nupe, Zaria and Liptako. Usman attacked Bornu (1808), although its people too were Muslims, but was repulsed by El-Kanemi (1810) and attacked Bornu (1811), while Muhammadu Bello, son of Usman, was given authority over Kano, where he established his base and had himself proclaimed Emir of Kano. Muhammadu Bello found time to write a History of the Eleven States of Northern Nigeria, and it was in the 18th century that the Fulani influence at Liptako had started with the establishment of British rule.

The Fulani of Adamawa entered the plateau areas during the 19th century in search of pasture. They settled peacefully among the Bata, Fali, Mundang, and Massa tribes in the neighbourhood of the Mandara mountains and the Benue, Mayo Kebebi and Logone rivers.

At the call of Usman dan Fodio the Fulani seized power. Summoning the influential malams (those learned in the Kur'an) to Kano, Usman dan Fodio appointed Adama of the Ba clan to carry his standard. Adama installed himself at Yola and conducted a campaign against the pagans of the north "for the faith, not to capture slaves and fill his harem". Meanwhile he attacked the chief of Mandara before carrying the war against the hill tribes of the Fulani, Mofu and Dawa. He overcame the Mundang of Mayo Kebebi, and to the south he fought the Vere, Chamba, Namchi and Doni. After the wars of liberation were to come the wars of domination. The captives made a plentiful labour force for tilling the soil. The Fulani themselves settled in the best-situated villages abandoned by the pagans.

On the death of Adama (1847) the conquest was practically complete. The country which had up to then been called Fombina ("the South") in the Fula language became Adamawa ("country of Adama"), subdivided into several chiefdoms (such as Banyo, Garu, Ngaundere, Rai and Tibati), whose incumbents received their appointments from Yola. After the death of Adama the chiefdoms of Ngoundere, Tibati and Bindere became independent, while the southern areas remained vassals of Yola.

The half-century between the death of Adama and the arrival of the Germans saw the gradual attrition of Yola's authority. The emirs were much more preoccupied with possible profitable raids and the sale of slaves to the Kanuri, the Arabs and the Hausas, than with converting the infidels.

Society and language. Fulani society is marked by a caste system consisting of nobles (rimbe, plural of dimo), serfs (rimast), traders and herdsmen (jaumalmb), singers and weavers (mababe), leatherworkers (sakhe or gargarabbe), woodworkers (ladhe or sakabbe) and smiths (sawabbe).

The language of the Fulani (Fula, Fulani, Pular, or Fulfulde) has been the subject of a great many studies. Once considered a Hamitic language related to the Berber dialects, Fula is generally grouped with the languages of Senegal and Guinea. It is a language with characteristic noun classes, marked by sets of suffixes and a pronominal system of an alliterative type. The roots are mainly monosyllabic roots consisting of closed syllables (consonant + vowel + consonant) like those of the other languages in the area. The verbal system is very rich, and includes three voices—active, middle and passive—and various moods and aspects.

FULBE — FUNDJ

FÖMAN (FÖMIN), the centre of a region (bâsaba) in Gìlan [q.v.], with (in 1914) about 70,000 inhabitants (mostly Shî'î Persians: Gîlak) whose main crops are rice and some cereals, and who also produce silk. The town of Fûman is 21 km. W.S.W. of Rašt [q.v.] on the right bank of the Gâzrâdbâd and it contains some four hundred houses. Before the advent of Islam in the 7th-8th century it was the seat of the Dâbhûa dynasty [q.v.] and for part of the middle ages it was considered the most important town in Gìlan. After the country's surrender to the Mongols in 1307, the prince of Ōfûman, said to be a descendant of the Sâhânids and the only Shî'î of the country, was, after the ruler of Lâhîdjan [q.v.], the Ilghân's confidant in Gìlan. Fûman was then the centre of a fertile agricultural area and an important market for trading, and was considered the focal point of the Daylam [q.v.] district. (The assertions of al-Umârî in Notes et traités des mes de la Bibliothèque du Roi, ed. M. E. Quatrembre, xiii, Paris 1838, 298, and Hand Allah Mustawfî, Nusha, i [text], 162 = ii [trans.], 159, contradict each other in many respects). Thereafter, until 980/1572-3, Fûman remained the capital of the Biya-pas ("beyond the river") region (see Gîlân) which was then transferred to Rašt. After that Fûman was the centre for two important clans, one of which was transferred to Rašt in the nineteenth century. Today Fûman is a small country town of little significance.

10. October, 1616.

17. Nul, d. 16 Shawwal 1136/8 July 1724.
18. Badi IV (Abu Shulub) b. Nul, deposed 2 Ramada- 
    dan 1175/27 March 1762.

* Date of accession of the last king.

The early monarchy: The northward expansion of the Fundj coincided with a southward Arab expansion under the hegemony of the ‘Abdallab dynasty, connected with the overthrow of the Christian Nubian metropolis of Sûbba. The two migrations clashed near Arbajji, the southernmost ‘Abdallabi town, on the Blue Nile, in the Gezira (Djajrat Sinnâr, Dj. al-Hûl, Dj. al-Fundi). The victory of the Gezira began the high-water mark of the ‘Abdallabi shaykh, whose own authority extended beyond the nomads and sedentaries northwards as far as the Third Cataract. The tradition that ‘Amâra Dûnîs and the ‘Abdallabi eponym, ‘Abd Allah Djamama, combined to overthrow Sûbba is probably a false-saving legend. The Fundj rulers were early converted to Islam. ‘Amâra had Muslims in his retinue, and his second successor, ‘Abd al-Kadir I, bore a Muslim name, and one which furthermore indicates the predominant role of the Kàdiriya tariqa in the Fundj territories. Our principal source of information on the islamization of the region, the Tabakdt of Wad Dayf Allah, says little about the true Fundj lands, but is almost wholly concerned with the ‘Abdallab districts further north. The dual hegemony was subjected to severe strain, when the Fundj chief, ‘Abd al-Majdîlak (i.e., “the Viceroy”), revolted against ‘Abdallan b. Onsa, and was killed in the battle of Karkoji (1067/1657-8). Peace was restored, and the ‘Abdallabî dynasty re-established, through the mediation of an influential Kàdiri shaykh, Idris b. Muhammad al-Abarb (d. 1060/1650).

The heyday of the monarchy: Fundj power expanded across the southern Gezira into Kordofan, west of the White Nile. The first stages were the conquest of the isolated hills of Sakadî and Muya, on the upper

Blue Nile, under a tributary chief, formed the southern limit of the Fundj dominions.

The monarchy in decline: On several occasions the purchase and freed sons of internal weak-

ness, as indicated by the deposition of monarchs. Bruce’s statement that there was a custom of regicide (Travels, vi, 372) seems, however, to be a gratuitous generalization. A development of great importance was the creation of a slave-army by Badii II, as a consequence of his successful raid in the west. These slaves, augmented by natural increase, produced further raiding, were settled in villages around Sinnâr. Their existence created tensions between the dynasty and the FundjJI warrior aristocracy. Badii III overcame a revolt of the Fundj of Sinnâr and al-Ays, who were supported by the ‘Abdallab, but his son, Onsa III, was deposed after the “troops of Lulu” had marched northwards on the capital. This marked the end of the direct male line. The next king, Nul, was connected through his mother with the former royal clan, the ‘Unsâb; there are other traces of matrilineal customs. Under Nul and his son, Badii IV, the monarchy temporarily regained strength. Badii was, however, overthrown by his victorious commander and viceroy in Kordo- 

fan, Muhammad Abi Likaylîk, who profited from the renewal of dissensions between the king and the Fundj aristocracy. Badi, the Fundj warrior chief became the high-king in a partnership with the ‘Abdallabi shaykh, whose own authority extended beyond the nomads and sedentaries northwards as far as the Third Cataract. The tradition that ‘Amâra Dûnîs and the ‘Abdallabi eponym, ‘Abd Allah Djamama, combined to overthrow Sûbba is probably a false-saving legend. The Fundj rulers were early converted to Islam. ‘Amâra had Muslims in his retinue, and his second successor, ‘Abd al-Kadir I, bore a Muslim name, and one which furthermore indicates the predominant role of the Kàdiriya tariqa in the Fundj territories. Our principal source of information on the islamization of the region, the Tabakdt of Wad Dayf Allah, says little about the true Fundj lands, but is almost wholly concerned with the ‘Abdallab districts further north. The dual hegemony was subjected to severe strain, when the Fundj chief, ‘Abd al-Majdîlak (i.e., “the Viceroy”), revolted against ‘Abdallan b. Onsa, and was killed in the battle of Karkoji (1067/1657-8). Peace was restored, and the ‘Abdallabî dynasty re-established, through the mediation of an influential Kàdiri shaykh, Idris b. Muhammad al-Abarb (d. 1060/1650).

The heyday of the monarchy: Fundj power expanded across the southern Gezira into Kordofan, west of the White Nile. The first stages were the conquest of the isolated hills of Sakadî and Muya, ascribed to ‘Abd al-Kâdir I, c. 1554, and the securing of the crossing of the White Nile, at this time dominated by the Shilluk, a pagan tribe, celebrated for their canoe raids. Badii II defeated the Shilluk, and raided the Muslim hill-state of Taqalî, south of Kordofan, which he laid under tribute. The command of al-Ays, the Fundj bridge-head on the White Nile, was always held by a member of the royal clan. The plains of Kordofan proper, ruled by the Musabbâ‘, kinsmen of the Kayra dynasty of Dar Fûr [q.v.], were not conquered until the reign of Badii IV. Fundj extension eastwards was barred by Abyssinia. Two Fundj-Abyssinian wars are recorded: the first (known only from Abyssinian sources) in 1618-9, and the second in the reign of Badii IV, culminating in a Fundj victory (Safar 1157/March-April 1744). The auriferous district of Fâzgufîl [q.v.] on the upper

(P. M. Holt)

FUNDUK, a term of Greek origin (πρόδυογελον) used, particularly in North Africa, to denote hostels at which animals and humans can lodge, on the lines of the caravanserais or ḥādūn of the Muslim East. These hostels consist of a court-yard surrounded by buildings on all four sides. The ground floors are generally used to house animals from caravans or owned by passing country-dwellers and also, when necessary, any merchandise stored there until such time as the consignee takes delivery of it. On the upper floor (usually there is only one), small rooms give onto a gallery which encircles the entire building; it is here that people are housed. The gate to the street is large enough to allow fully laden animals to pass through. In the Middle Ages it often happened that in towns open to international trade funduks were placed at the disposal of European traders on a "national" basis. Thus in Tunis there was a funduk for the French, in Cairo a funduk for the Venetians, etc. These hostels were patronized almost exclusively by the poor; others went out of their way to avoid the discomfort, the contiguity with the animals, and in many cases the presence of prostitutes who often occupied several rooms where they entertained travellers.

In Morocco the same type of building is often used by a group of merchants to store their goods. The court-yard is shared, and each participant hires one or more rooms; in this type of funduk there is no stabling for animals. It also happens that groups of artisans, often of the same trade, hire the various rooms in a funduk and use them as a collective workshop, each member remaining fully independent. In general, funduks belong to the administration of religious estates (babūs or awčāf) which let them out to the various occupants, in the case of traders or artisans, or to a concessionaire in the case of a hostelry.

Some of these buildings are of artistic merit, such as the funduk al-nadālīn and the funduk al-Tīfawīsīyīn in Piz. Funduks for storage or workshops are found along the infant or trading quay rs, while funduks in the sense of hostels are usually situated near the main gates of the town.

Biography: No work exists dealing specifically with funduks. Information relating to 1 2 will be found in R. Le Tournear, Pèse avant le Protectorat, Casablanca-Paris 1949, in particular 190-1 and 317-8. See also 3 4.

FUNKIRCHEN [see FES].

FUNG [see FUND].

FUR [see FAWR].

AL-FURAT is the Arabic name of the Euphrates, called in Sumerian BU-RA-NU-NU, Assyr. Puritu, Hebrew בּ֫רֻ, Syriac لب; in Old Persian it was called Φύρτα, whence Middle Persian Frat, modern Turkish Frat. On the name and the notices by authors in antiquity see Paulus-Wissowa, art. Euphrates (by Weissbach). The main stream of the Euphrates is formed by the junction of two principal arms, now called the Karasu (length 450 km./280 miles) and the Murad-suyu (650 km./400 miles). The former, though the shorter, long bore (and in its lower course still bears) the name Frat/Furat, and is regarded by all the sources as the true Euphrates. Its headwaters are the numerous rivers flowing down from the high mountains (Gavur-dagh [see GAWUR DAGHILA], Dumlu-dagh, Karga-Pazār-dagh) north of the plain of Erzurum. According to the Arab geographers, it rises in the district of Kalkalā [see ERZURUM] in a mountain called Ṿorne or some such name, in which we may probably recognise the Ḫūḏḏūḏy Ṿuṣq of Potlemy, and the Mons Parverdens of the Tabula Peutingeriana. For the upper course of the river we have the very important description by Ibn Serapion, whose text has been published with translation by G. Le Strange in JRAS, 1895; his statements were discussed by Tomasekh in a valuable paper in the Festschrift für H. Kiepert, 1898, 137-49. After leaving the marshy plain of Erzurum, the river flows westward through narrow gorges, accompanied by the line of the Erzurum-Sivas railway; the Erzurum-Tabzon road turns off north-west at Aşkale. Twisting south, between the ranges of the Cemal and Keşiş dağları, it is joined by the Tuzla yayin flowing from Tercan [see TERÇAN], and then turns west again to emerge into the plain of Erzincan [see ERZINCAN] (altitude 1200 m./4000 ft.). From there it proceeds through very steep and narrow gorges along the foot of the northern slopes of the Monzor range. Turning sharply south-east, it receives the Çalısuuyu (the Nahr Abrli of Ibn Serapion), which flows from Divriği [see DIVRİĞİ] to meet it, passes by Eğin [Eğen] a small town, and then enters the modern Erzurum province (which of a mountainous area), and finally reaches the plains of the Erzincan. The Murad-suyu rises in the volcanic Aldaş Mountains north of Lake Van, and flows westwards to traverse the Kara-köse plain. Alternately passing through steep gorges and across broad plains [see MALAZGERD, TUTAK], it enters from the north the extensive plain of Muş [see MUS], where it is joined by the Kara-su, flowing westward across the plain from the Nemrut-dağ. Now accompanied by the recently constructed railway to Elazığ, it again flows westward, receiving from the left the Harıcet-deresi, which drains the plain of Elazığ, and from the right the Peri-suyu, before uniting with the Kara-su.

The name of the Murad-su in antiquity was Arsanasia, whence the Nahr Arsunas of the Arab geographers, who describe it as rising in Tarın (Taranitis) and being joined near Shemahat (Arsamosa) by the Nahr al-Dhib, and the Nahr Salkıt (identified by Tomsekh with the Peri-suyu and the Sungut-suyu respectively). The origin of the name Murad is not clear; the hypotheses of Belck (Beiträge zu alter Geographie, i, 45), that it may be a popular etymology for Frat, and of Tomsekh (Sassn, 17), that it rises in a mountain region once called Murad, should be mentioned. Although some European maps and text-books refer to the Murad-su as the ‘Eastern’ and the Kara-su as the ‘Western’ Euphrates, such a distinction is not known in the

Encyclopaedia of Islam, II
region itself (and indeed the ‘Western’ Euphrates is in fact the northern arm).

The united stream flows, first south-west and then south-east of the village of al-Ma‘am (the modern Muslim, Khalil al-Zahrî, Zubda, 52: Mûshâr, receives on the west bank the Kuru-çay or Hekimhan suyu (probably the Nahr Djarjirîyya of the mediaeval geographers, reported as flowing from the neighbourhood of Kharšana) and the Tohma-çay. The latter (the mediaeval Nahr Kubûkîib, into which flow the Nahr Kurâkîs = Sultan-su and the Nahr al-Zarnûk, which irrigates by a branch Malatîyâ, is crossed by the celebrated Kanîtarat Kûbukîb, the modern Kûrgûz-köprü (see Yorke in the Geogr. Journ., viii (1896), 328 f.; Lehmann-Haupt, Armenien, i, 486). On the east bank the Euphrates receives the Nahr henzi (Bûyûk çay) which still preserves the name of the capital of the old district of Anzitene and then, breaking through the south-east Taurus, enters the cataract district, which it does not leave till it reaches Geze (see from Moltke, Briefe über Zustände der Türkei, 305-10; E. Huntingdon, in Zeitschr. für Ethnol., 1901, 183-204; idem, in Geog. Journ., xx (1902), 175-200).

Leaving the mountainous country the Euphrates divides the flat tableland into two, and forms the boundary between Syria and al-Djazira below Samasat (Sumaysât [q.v.]). At first the river continues as before to receive important tributaries from the west only. Of these the most important is the Nahr Sandja or Nahr al-Atrak crossed by the famous Kanîtarat Sandja, which, like the Singsas of the ancients (cf. R. Kiepert, Formara Orbis Asiatis, text to sheet 5, p. 3, *), is certainly to be identified with the Goksu. Below the rocky citadel of Kal‘at al-Rûm and the crossing of al-Dîra, of particular importance since the Crusading period [see BİREDJIK], there is still the Na̱r Sâgûr (modern Turkish Sacur) to be mentioned. Immediately after being crossed by the bridge of the Aleppo-Baghdâd railway, the river crosses the frontier into Syria.

In the early middle ages Düsr Manbîdî (the later Kal‘at al-Nadîm) and al-Rûkka [q.v.] were the main places where the Euphrates could be crossed. After Mesopotamia, which also swells eastwards, the river is navigable. It passes the battlefield of Şîfîn [q.v.], near which is the ruined citadel of Dîsbar [q.v.] with the reputed tomb of Sûleymân-shâh [q.v.]. Below al-Rûkka the al-Balikh, rising in the neighbourhood of Harrân, joins the mainstream at al-Rûkka [q.v.], the modern ruins of al-Samra (see Sarre and Herzfeld, Archäol. Reise im Euphrat- und Tigris-Gebiet, i, 160). The now very important crossing at Dayr al-Zôr has only become of any considerable importance in modern times. The place held by Dayr al-Zôr at the present day was held in ancient times by Circesium, the Kariksia of the Arabs, at the mouth of the Klîbîr; this river flowing from Ra‘î al-Ayîn formed, according to the repeated statements of the Arab authors, with its tributary the Hirmâs from Tûr ‘Abîdîn, a navigable connection between the Euphrates and the Tigris in the Nahr al-Tharthar, but, according to the investigations of Sarre and Herzfeld, op. cit., i, 193, this must be regarded as more than doubtful. The rôle of the ancient Circesium and of the modern Dayr al-Zôr was filled, particularly in the later middle ages, by the double village of Ra‘îba, or the Dîlîya of Mâlik b. Tâwîk, a little south of the former, the lands of which were watered by the Nahr Sa‘îd canal, which began before Kariksia, and was called after Sa‘îd b. ‘Abd al-Mâlik b. Marwân (see Peters, Nippur, i, 127, 129-30; A. Musil, In Nordostarabien und Südmesopotamien, p. 10 of the reprint from the Anzeiger der phil.-hist. Kl. der Wiener Akad., 1919, i, 166).

While modern geographers make Southern Mesopotamia begin at ‘Anâ [q.v.], already celebrated in the Middle Ages as a rule place the boundary between al-Djazira and al-Tîrât much farther south on the Euphrates. The Cerî Sa‘de, which was led out of the Euphrates downwards from Hit, the course of which can be traced almost as far as Nadjîf (see Peters, Nippur, i, 166 and 313; ii, 327; Meissner, Von Babylon nach den Ruinen von Uslra und Umrnawî, 15), has unfortunately not been sufficiently explored to establish its real importance and relation to Khandak Sâbûr (see Nûdeke, Sassamîden, 57; Le Strange, 65) and to the Wadî ‘Ayn al-Tamr (see Musil, op. cit., 11), which, according to Ibn Serapion, flowed into the Euphrates at Hit. According to Ibn Serapion a canal, called Nahr Dundjaiî, flowed from the Euphrates at al-Rabb (7 farsîh from al-Anbâr, 12 from Hit; possibly the Umm al-Rû‘ûs in Peters, Nippur, ii, 45) to the Tigris near ‘Ukbârî (see Streck, Die alte Landschaft Babylonien, 24), but it seems soon to have been silted up, as the later geographers give this name only to a Tigris-canal perhaps originally connected with the ancient Dundjaiî (see Streck, op. cit., 33 and 220 f.).

Only a little farther down, at al-Anbâr [q.v.] begins the great network of the Babylonian canal system, which dates back into remote antiquity, although only the remains survive today. The usual identification of the four main canals, Nahr ‘Ibâ, Nahr Şarî, Nahr al-Malik and Nahr Köghêr, led from the Euphrates, is given in the article DIJLAT (for details see Streck, op. cit., 25 f.), but in the present state of our knowledge of the country it can only be regarded as highly hypothetical. Shortly after they branch off, the Euphrates divides into two arms. The western arm, according to the Arabs the river proper, which flows past Rûfa and is finally lost in the Batiha, was also called al-Alqâm, which Musil (op. cit., 13) has found east-north-east of Karbalâ’ as the name of an ancient canal, perhaps forming the northern continuation of the modern Hindiyya arm. The eastern arm of the Euphrates, which even in Ibn Serapion’s time held a greater stream of water, for the first part of it corresponded to the bed of the modern Euphrates proper until, since about 1889, the river began to pour the greater part of its waters into the Hindiyya arm (see Peters, Nippur, ii, 335; Sachau, Am Euphrat und Tigris, 38 and 57), again divides near Bâbil. Its eastern arm, which flows to the Tigris under the names Nahr Šûrû al-A‘îb, Sarât al-Kabîra, Nahr al-Nil, or Nahr Sâbûs via the town of al-Nil (the modern Nîzîya), has been the roughly explored by Sarre and Herzfeld (Arch. Reise, i, 234-47) except for its eastern extremity. How far the western branch, the Nahr Šûrû al-Asfal, corresponds to the modern course of the Euphrates or the canals Shaṭṭ al-Nil, Shaṭṭ al-Kár, which flow to the southeast, cannot yet be exactly determined. This arm likewise ends in the great swampy area of the Batiha, the outflow from which, Nahr Abî ‘l-Asad, which runs into the Diţlat ‘Arîv, may in a way be described as the lower course of the Euphrates.

This is in its main outlines the picture drawn by the Arab geographers, particularly Ibn Serapion.
That the details which they give us are not always intelligible is not remarkable, considering the deficiencies in our knowledge of the country; that contradictions seem to be found in them need not cause surprise, when we consider how much the river has changed its course, of which the shifting to the south in quite recent times of its confluence with the Tigris is a striking example (see Geogr. Journ., xxxv, 11 with map). The Arabs themselves knew of considerable changes in the course of the Euphrates; for example, Mas'ud (Murādī, i, 216) says that in the period of Hira's prosperity sea-going ships came up as far as Nadjaf in the old riverbed (al-sūbīr). A detailed account has been given above (s.v.) of the Arabs' knowledge of the history of the Batba, which is at the same time the history of the Lower Euphrates. It is perhaps evidence of the gradual alteration in this area of swamps that, according to certain authors (see BGA, iii, 20, note 1; cf. also Yākūt, iii, 560 f.), an arm of the Euphrates—it can only be the Nahr Sūrā al-Asfal—entered the Tigris at Wāṣīt. Not only is the history of the Euphrates in antiquity and the middle ages still very obscure, but we have only very meagre information regarding the changes in its course in recent times.

**Bibliography:** The Arab geographers and the more important western works are given under the following head: (1) Karte von Kleinasien (1: 400,000). For further details see the separate articles. For the course, tributaries, etc. of the Euphrates in the modern Turkish Republic, see IA, s.v. Firat (by Besim Darkot) and Naval Intelligence Handbook, Turkey, 2 vols., 1942-3, index.

The Euphrates measures 2333 km./1480 miles from the confluence of the Karasu and the Murad-suyu to Basra. It drains an enormous basin, which is made up as follows: Karasu, 21,500 sq. km./83,800 sq. miles; Murad-suyu, 39,700 sq. km./15,500 sq. miles; the Euphrates as far as Diarabulus (where it enters Syria), 96,000 sq. km./37,500 sq. miles; as far as 'Āna (where it enters Irāq), 229,000 sq. km./89,300 sq. miles; to the point where it enters Iraq, 444,000 sq. km./173,000 sq. miles. It must however be realized that the greater part of this area is complete desert and contributes no water at all to the river.

The area from which the Euphrates is fed is virtually confined to the mountainous area to the north, which consists of 82,330 sq. km./32,110 sq. miles, only some 20% of the total area of the basin, 80% of which is made up of steppe and desert.

After it has left the mountains the Euphrates is nothing more than an artery for carrying away the rains and snows which have fallen in Eastern Turkey. Consequently, very soon—from Djarablus, on the Turco-Syrian frontier, 1980 km./1230 miles from the Persian Gulf—the river begins to dwindle. At Hit, its average annual flow is 838 cubic metres/29,595 cubic feet per second; at Hindiyya, 629 cu. m./22,213 cu. ft.; at Shinafiyya, 573 cu. m./20,730 cu. ft.; at Nasiriyya, 458 cu. m./16,174 cu. ft. (for comparison, the figure for the Rhine is 2200 cu. m./77,966 cu. ft. per sec.; for the Loire, 935 cu. m./33,020 cu. ft.; for the Oder, 510 cu. m./18,011 cu. ft.; for the Seine, 485 cu. m./17,127 cu. ft.). Between Hit and Nasiriyya (680 km./420 miles) the Euphrates loses 66% of its water by evaporation.

Similarly wide variations are found between different months of the year. During the hot season the flow decreases: (at Hit), August, 354 cu. m./12,501 cu. ft.; September, 293 cu. m./10,347 cu. ft. In the autumn it begins to rise again with the first rains: November, 433 cu. m./15,291 cu. ft.; December, 547 cu. m./19,317 cu. ft.; January, 587 cu. m./20,730 cu. ft., and rises still further during the winter: February, 668 cu. m./23,590 cu. ft.; March, 962 cu. m./33,973 cu. ft.; April, 1880 cu. m./66,394 cu. ft.; May, 2230 cu. m./78,755 cu. ft.; June, 1210 cu. m./42,732 cu. ft. Thus 63% of the water carried by the Euphrates flows during March, April, May and June only, and in May there flows 7 ½ times as much water (2230 cu. m./78,755 cu. ft.) as in September (293 cu. m./10,347 cu. ft.).

Especially striking is the rapidity with which the average flow declines in the space of two months—June and July—and also how late the annual maximum flow is reached (in May), whereas in the Tigris it appears a month earlier (in April). This is explained by the fact that the Euphrates is supplied to a large extent by snow which, on the high plateaus, does not melt until very late spring.

In addition to its extreme seasonal variations in rate of flow, the Euphrates is in flood for a shorter period than the Tigris, and this is due to the fact that the Euphrates flows during March, April, May and June only, whereas the Tigris flows during April, May and June and also in September. The Euphrates is fed by snow which, on the high plateaus of the Maritime Ala, does not melt until very late spring.

A very important feature of the geography of Mesopotamia is the fact that the Euphrates between Hit and Shinafiyya flows at a slightly higher level than the section of the Tigris between Bagdad and Küt. The northern part of Mesopotamia is thus irrigated by canals which lead off from the Euphrates to the east and the south-east, and this has been so since remotest antiquity (no canal can lead off to the west because of the edge of the Syrian plateau), while the southern part on the other hand is irrigated by canals leading off from the Tigris, the main one—practically the only one—being the Ultar, in whose bed the Tigris itself at one time flowed.

From Samawa to the Shat al-'Arab, the Euphrates clings to the desert plateau, the slope is very slight, and the area was formerly filled by the great marsh which, according to some sources, appeared in the 5th century A.D., while others say that it appeared at the time of the great flood of 629 A.D. The last traces of it are now represented by the 110 km./70 miles of lake Hammar.

At all periods embankments have been built to combat the floods. Since the building of the Ramaddl barrage in 1955-6, it has been possible when the water level is very high to divert 2800 cu. m./96,900 cu. ft. per sec. in the direction of Lake Habbaniiyya along a canal 8.5 km./5 miles long and 210 metres/230 yards wide. In the same year there
was completed on the Tigris at Samarra a similar barrage, which is capable of diverting 9000 cu. m./
315,000 cu. ft. per sec. towards the depression of the Wadi Tharthar along a canal 15 km./9 miles long.
Now, and for the first time in history, Mesopotamia
is protected from the catastrophe of floods.

(E. de Vaumas)

**AL-FURAT, BANU** [see IBN AL-FURAT].

**FURDA**, a term used interchangeably in Ottoman documents and Arabic texts with *firda*, in reference to personal taxes. Attested in Ottoman Egypt after about 1775 as one of the many illegal charges imposed on peasants by soldiers of the provincial governors, in 1792 this tax was legalized under the name *Firdat al-tahrir*, as a comprehensive levy to replace all the previous illegal charges. It was not a regular impost, nor was it applicable to the same tax, but only where and when local authorities needed money for special purposes. The total amount levied on each village and individual varied according to ability to pay and the amount of money needed. It was one of the *mukhridat* revenues of the Treasury, i.e., those collected and spent locally, without being sent to Cairo, although they were included in the accounts of revenues and expenditures of the central treasury. It was also considered to be one of the *kukhisiyye-i dejidat* taxes. In 1798, 7,066,194 paras were collected in this way, approximately five per cent of the total Treasury revenues. In March 1801 it was abolished by the French, along with most of the other taxes inherited from Ottoman times.

After the departure of the French, Muhammad 'Ali restored the *firda* and changed it into a general personal tax, theoretically an income tax (called *Firdat al-ra'ūš*). This was levied annually on Muslim and non-Muslim males alike, with only European employees and was a major cause of their discontent. In the villages and smaller towns, it was levied on individuals at a rate of about eight per cent of their incomes or salaries, but no one had to pay more than five hundred paras. The tax was deducted directly from the salaries of government employees and was a major cause of their discontent. In the villages and smaller towns, it was levied on households, which were divided into three classes according to ability to pay. It provided about one-sixth of the Treasury's revenues, and was used principally to pay for the expenses of the rapidly expanding armed forces. The *firda* was also collected in Syria during the period of Egyptian occupation.

**FURFIYYUS**, i.e., *Porphyroios*, Porphyry (A.D. 234-about 305) of Tyre, amanuensis, biographer and editor of Plotinus, and outstanding as the founder of Neoplatonism as a scholastic tradition. The philosophical syllabus common in Arabic philosophy is ultimately due to him: since his days it became customary to use the lecture courses of Aristotle as set-books in the Neoplatonic schools of late antiquity and to start with the *Categories*. He himself wrote commentaries on Aristotle and Plotinus, which seem to have reached the Arabs either in their original or in some diluted form. It is not impossible that his conviction that Plato's and Aristotle's views were basically real, and a part of the same system, but disputing where and when local authorities needed money for special purposes. The total amount levied on each village and individual varied according to ability to pay and the amount of money needed. It was one of the *mukhridat* revenues of the Treasury, i.e., those collected and spent locally, without being sent to Cairo, although they were included in the accounts of revenues and expenditures of the central treasury. It was also considered to be one of the *kukhisiyye-i dejidat* taxes. In 1798, 7,066,194 paras were collected in this way, approximately five per cent of the total Treasury revenues. In March 1801 it was abolished by the French, along with most of the other taxes inherited from Ottoman times.

A very sketchy Arabic account of Porphyry's works is to be found in Ibn Sinān, *Firdat al-ruus*). This was levied annually on Muslim and non-Muslim males alike, with only European employees and was a major cause of their discontent. In the villages and smaller towns, it was levied on individuals at a rate of about eight per cent of their incomes or salaries, but no one had to pay more than five hundred paras. The tax was deducted directly from the salaries of government employees and was a major cause of their discontent. In the villages and smaller towns, it was levied on households, which were divided into three classes according to ability to pay. It provided about one-sixth of the Treasury's revenues, and was used principally to pay for the expenses of the rapidly expanding armed forces. The *firda* was also collected in Syria during the period of Egyptian occupation.

Tayyib (343/1043) is preserved in the Bodleian MS Marsh 28. The 7th/13th century commentary by Al-Abhari (cf. Brockelmann, I, 669, S I, 841) becomes more frequent in later centuries, in turn frequently commented upon and eventually completely replaced the original work.

(2) Commentaries on Aristotle. (a) The Fīlīrīst, 252, 2 (= Cairo ed. 351, 21), refers to a lost commentary in the Nicomachean Ethics, in twelve books (translated by Ḥāšā Ḥūnaṇ), which is not mentioned in the Greek tradition but was obviously used by Arabic writers. Al-Fārābī [g.v.], for example, mentions it in the essay on the identity of Plato’s and Aristotle’s views, al-Ḍijmān baṣna raʿayy al-ḥakīmān Aflāṭūn wa-ʾĀristā (ed. Dieterici, 177; ed. Nader, 95, 17): “As Porphyry and many commentators after him say”. We are not in a position to decide whether he made much use of it in his other writings but it is obviously likely. Abu ‘l-Ḥasan Muhammad al-ʿĀmirī (d. 382/992) refers to Porphyry four times by name in his very interesting ethical work Fīlī-saʿda wal-ʾisʿād (ed. M. Minov, Wiesbaden 1957-9); once, p. 53, he mentions the commentary expressly while discussing Aristotle’s treatment of pleasure. The definition of felicity (p. 5) is given according to Porphyry; the other references occur on pp. 25 and 32. Another commentary, introduced in its Arabic text as ‘the interpretation ofPorphyry’ (which he seems to quote as the treatise Fīlī-saʿda wa-l-maʾṣūḥūl in the Iṯṣārāt) while voicing his dissatisfaction with Porphyry’s view of the unio mystica (cf. F. Rahman, Prophesy in Islam, London 1958, 75 ff.). As one ‘who is not among the most subtle of philosophers’ Porphyry is blamed by Ibn Rusḥād, Ṭahfūt al-Ṭahfūt, ed. Bouyges 250, 10 ff. (cf. van den Bergh, Incoherence ..., i, 154, ii, 100) for his explanation of the cause of plurality. Porphyry’s view on matter is rejected in the Epitome of Aristotle’s Physics (Amlin, 73), cf. S. van den Bergh, Die Epitome der Metaphysik des Averroes, Leiden 1924, 67 and 207.

(3) Porphyry’s History of Philosophy in four books (Greek remnants of it were edited by A. Nauck, Porphyrii Opuscula, Leipzig 1886, 3-52) was known in Syriac (Fīlīrīst, 245, 12 = Cairo ed., 355) and in Arabic (the Fīlīrīṣṭ, i, 245) mentions a translation of two books by Abu ‘l-Ḥāyyār al-Ḥasan Ibn Suwarā. The Arabic text of the Life of Pythagoras (Nauck, 11-12) is accessible in Ibn Abl Uṣayyība, ʿĪyūn al-anbāh, ed. A. Mueller, 38, 18-41, 4, and is discussed by F. Rosenthal, Arabische Nachrichten uber Zeno den Eleaten, in Orientalia, vi (1937), 43 ff.; F. Rosenthal edited from al-Mubashshir a section of Porphyry’s life of Solon (ibid., 40 ff.), and an unknown biography of Zeno of Elea (ibid., 30 ff.), which is most likely derived from Porphyry’s work. Al-Bīrūnī, Ḥind (Sachau, 21-43), seems to refer to this book. R. Beutler (op. cit., 287) does not mention the Arabic tradition at all.

(4) The so-called Theology of Aristotle [see ARISTOTELIS ET AL-BAYYAM AL-UYNANI], a running paraphrase of Plotinus, IV 3, IV 4, IV 7, IV 8, V 1, V 2, V 8, VI 7, arranged in a systematic order, is introduced in its Arabic text as the interpretation (tafsir) of Porphyry of Tyre. There is, in my view, every likelihood that it must ultimatley be connected with Porphyry’s explanations of the Enneads (ʿuṣūmiyya wa-khārījāt) which he mentions in § 26 (l. 29 ff.) of his biography of Plotinus. An English translation of the work by G. Lewis, arranged in the order of Plotinus’ Enneads, is to be found in the second volume of P. Henry and H.-R. Schwazer, The Enneads ofPlotinus, Paris-Bruxelles 1959, cf. particularly p. XXVI ff. Whether the Epistula de Sceneta Divina (cf. F. Kraus, Plotin chez les Arabes, in BIE, xxiii (1941), 263 ff.) which contains similar extracts from Enneads V 3, V 4, V 5, V 6 (also translated by G. Lewis in the same volume) goes back to the same source, is uncertain but it is quite probable.

The great corpus of Alchemy attributed to Ḥabīr ibn Ḥasyāḥ refers to a more probable spurious work of Porphyry entitled The book of Generation’, a book in which the creation of artificial human beings was discussed at some length. It is mentioned neither in Greek nor in Arabic lists of Porphyry’s works. It is described by F. Kraus, op. cit., 114 ff., 122 n. 3; cf. E. R. Dodds, The Greeks and the irrational, Los Angeles 1951, 295. (R. Walzer)
means “deliverance”, “redemption”, and (in the Christian sense) “salvation”. The Arabic root *furaṣa, which must be considered as another element in the meaning of the Arabic word seen in the context, means “to separate”, “to divide”, “to distinguish”.

*Sura VIII, 29 runs: “O believers, if you fear God, He will assign you a furkān and acquit you of your evil deeds, and forgive you”. In *Sura VIII, 47 “the day on which the two hosts met” (which must refer to the battle at Badr) is described as “the day of the furkān”. At the same time it is said that on that day something which must be believed in was “sent down” to the Prophet. On the five other occasions where the word is used it is always in connexion with the giving of divine revelation; twice Moses, or Moses and Aaron, are named as those who receive the revelation (II, 53; XXI, 48); on three occasions it is mentioned in connexion with Muhammad and the Kurān (II, 185; III, 4; XXV, 1).

The difficulty of interpreting these passages springs chiefly from the fact that the relationship between revelation-writings and *furkān is not always defined in the same way. In *Sura XXV, 1, the furkān seems to be identified with the Kurān (الْفُرْقَانُ [fa-‘frufr] بِالْعَبْدِ), whereas in *Sura VIII, 29 runs: “O believers, if you fear God, He will assign you a furkān and acquit you of your evil deeds, and forgive you”. In *Sura VIII, 47 “the day on which the two hosts met” (which must refer to the battle at Badr) is described as “the day of the furkān”. At the same time it is said that on that day something which must be believed in was “sent down” to the Prophet. On the five other occasions where the word is used it is always in connexion with the giving of divine revelation; twice Moses, or Moses and Aaron, are named as those who receive the revelation (II, 53; XXI, 48); on three occasions it is mentioned in connexion with Muhammad and the Kurān (II, 185; III, 4; XXV, 1).

The difficulty of interpreting these passages springs chiefly from the fact that the relationship between revelation-writings and *furkān is not always defined in the same way. In *Sura XXV, 1, the furkān seems to be identified with the Kurān (الْفُرْقَانُ [fa-‘frufr] بِالْعَبْدِ), whereas in *Sura VIII, 29 runs: “O believers, if you fear God, He will assign you a furkān and acquit you of your evil deeds, and forgive you”. In *Sura VIII, 47 “the day on which the two hosts met” (which must refer to the battle at Badr) is described as “the day of the furkān”. At the same time it is said that on that day something which must be believed in was “sent down” to the Prophet. On the five other occasions where the word is used it is always in connexion with the giving of divine revelation; twice Moses, or Moses and Aaron, are named as those who receive the revelation (II, 53; XXI, 48); on three occasions it is mentioned in connexion with Muhammad and the Kurān (II, 185; III, 4; XXV, 1).

The phrase wa-‘frufr la‘l-muttabit, which means “to separate”, “to distinguish”, is not always defined in the same way. In *Sura XXV, 1, the *furkān seems to be identified with the Kurān (الْفُرْقَانُ [fa-‘frufr] بِالْعَبْدِ). In *Sura VIII, 29 runs: “O believers, if you fear God, He will assign you a furkān and acquit you of your evil deeds, and forgive you”. In *Sura VIII, 47 “the day on which the two hosts met” (which must refer to the battle at Badr) is described as “the day of the furkān”. At the same time it is said that on that day something which must be believed in was “sent down” to the Prophet. On the five other occasions where the word is used it is always in connexion with the giving of divine revelation; twice Moses, or Moses and Aaron, are named as those who receive the revelation (II, 53; XXI, 48); on three occasions it is mentioned in connexion with Muhammad and the Kurān (II, 185; III, 4; XXV, 1).

Even the early commentators made some effort to interpret the term satisfactorily. Since the time of Abraham Geiger western orientalists have made renewed efforts at interpretation without ever reaching any certain conclusions. See the review of the whole question in A. Jeffer, *The foreign vocabulary of the Qurān*, Baroda 1938, 225-9. W. Montgomery Watt, *Muhammad at Medina*, 1956, 16, is in general agreement with the conclusion first reached by Richard Bell in *The origin of Islam in its Christian environment*, 1926, 118-25, and adds: “In VIII, 41 ‘the day of the furqān, the day the two parties met’ must be the day of Badr; and furqān, in virtue of its connexion with the Syriac word *purqān*, ‘salvation’, must mean something like ‘delivery from the judgement’. This being so the furqān which was given to Moses (II, 53; XXI, 48) is doubtless his deliverance when he led his people out of Egypt, and Pharaoh and his hosts were overwhelmed. Similarly, Muhammad’s *furqān* will be the delivery given at Badr when the Calamity came upon the Meccans. That was the ‘sign’ which confirmed his prophethood. Perhaps there is also a reference to the experience of his followers when they received the signs of revelation, which Muhammad apparently had during the heat of the battle, and as a result of which he became assured that the Muslims had invincible Divine assistance”.

In his *Introduction to the Qurān*, 1953, published posthumously by Richard Bell, again raised the question (136 ff., *Note on al-Furqān*), and put forward an interpretation of the whole subject which is both well-considered and complete in itself. According to Bell, “it was from Christian sources that the word was derived, but Muhammad must have associated it with the Arabic root *faraṣa* to separate, and taken it to imply the separation of an accepted religious community from the unbelievers”. To explain the places where the *furqān* is said to have been given to Moses (and Aaron) he adds *Sura V*, 25, in which Moses, referring to his people’s hesitation to enter the Holy Land, prays to God: “I control no one but myself and my brother: make a separation (fa-‘frufr) between us and the unbelieving people”. And he accounts for the passages referring to Muhammad’s own period by reference to the situation at (and before) the battle of Badr. “The victory at Badr was not only a ‘delivery’ of the small band of Moslems who had gone out with Muhammad expecting to intercept a caravan and had found themselves face to face with an army. It was a final separation between Muhammad’s followers and the unbelieving Meccans”. “Here (in the *furqān*) referred to then, we have the appearance of the Qurān as the distinctive Scripture of an independent Moslem religious community, linked with the *furqān*, the separation of believers from unbelievers, and the assurance of forgiveness and acceptance with God; and both linked with the *baddr*”.

**AL-FURS, one of the two terms used by the Arabs to denote the Persians, the other being al-`Adjam [q.v.]. In the following lines we shall attempt to show in precisely what way the Arabs were acquainted with the Persians and their civilization; for other aspects, see IRĀN.**

From remotest antiquity, the Arabian peninsula had maintained relations with Persia; shortly before Islam, these connexions were established, in the north-east, through the Lakhmids [q.v.] of al-Hira, and, in the south, through the medium of the Yemen, a vassal of Persia, and the Abād [q.v.] who were settled in the country. The word *Furs* does not appear in the *Kūrān*, which, however, contains a certain number of words of Persian origin, but among the Prophet’s entourage there was in particular one Salmān al-Fārisī [q.v.], whom legend has made a figure of outstanding importance. Already in the 1st/7th century, relations between Arabs and Persians were marked by the Islamic conquests, and some elements of Iranian civilization penetrated to Mecca and Medina through prisoners
who became mawāli ([q.v.]) and played an essential part in the history of the first centuries of Islam. However, it was only in the 2nd/8th century, and especially through the efforts of Ibn al-Mukaffa' ([q.v.]), that there first began to circulate Arabic translations of Pahlavi works such as the Khātā tāy-nāmāh (K. Siyar muláh al-'Ādīam or al-Furs), the ʿĀšīn-nāmāh, the Tādīn-nāmāh, etc., which helped to nourish the growing adūb ([q.v.]) and Arabic historiography, and later served as a source for Firdawsī (see F. Gabrielli, L’opera di Ibn al-Muqaffa’, in RSO, xii [1893], 197 ff.).

The dissemination of these translations and of the works they inspired coincided with the accession and rise of the ʿAbbāsid dynasty, which drew closer to Persia and, through its officials, increased Iranian influence to the point when it sometimes gives the impression of being heir to the Sasanids (cf. D. Sourdel, Vizīrat, passim). It is unnecessary to dwell here on the considerable importance of the khwād who, while attempting to acquire Arab culture, perceptibly followed the Iranian tradition, nor upon the rôle played by the Shūʿābīyya ([q.v.]) in the shaping of Islamic civilization.

What must be noted is the introduction into Arabic historiography, from the end of the 2nd/8th century or beginning of the 3rd/9th, of the history of Persia in the works of the Byzantines, the b.ʿAṣir (Al-Tabari, Persia, Abū ʿUbayda, etc.) which, together with the translated sources, were to serve as the basis for “universal” history. From then onwards historians writing in Arabic, among whom Iranians are not uncommon, were able to plan and write universal history, to include first the Biblical data and the legends transmitted by non-Muslims, representing a kind of scriptural history from Adam to Jesus Christ and then to Muḥammad; then a summary of the actual history or legendary events that had occurred since the earliest times in non-Arab countries now under Muslim rule; and finally the history of Islam up to the writer’s own period. Muslim Spain and the Maḡrib are somewhat neglected by the eastern historians, who on the other hand are better informed on the history of Egypt. The Persians, the b.ʿAṣir (Abū ʿUbayda, etc.) which, together with the translated sources, were to serve as the basis for “universal” history. From then onwards historians writing in Arabic, among whom Iranians are not uncommon, were able to plan and write universal history, to include first the Biblical data and the legends transmitted by non-Muslims, representing a kind of scriptural history from Adam to Jesus Christ and then to Muḥammad; then a summary of the actual history or legendary events that had occurred since the earliest times in non-Arab countries now under Muslim rule; and finally the history of Islam up to the writer’s own period. Muslim Spain and the Maḡrib are somewhat neglected by the eastern historians, who on the other hand are better informed on the history of Egypt. The Persians, the b.ʿAṣir (Abū ʿUbayda, etc.) which, together with the translated sources, were to serve as the basis for “universal” history. From then onwards historians writing in Arabic, among whom Iranians are not uncommon, were able to plan and write universal history, to include first the Biblical data and the legends transmitted by non-Muslims, representing a kind of scriptural history from Adam to Jesus Christ and then to Muḥammad; then a summary of the actual history or legendary events that had occurred since the earliest times in non-Arab countries now under Muslim rule; and finally the history of Islam up to the writer’s own period. Muslim Spain and the Maḡrib are somewhat neglected by the eastern historians, who on the other hand are better informed on the history of Egypt.

It must not be forgotten that the Arabic translation of Kalīla wa-Dīmma ([q.v.]) can be regarded as one of the first monuments—if not the first—of simple prose, and that adūb, which is the core of secular prose literature, is a product of Iranian influence. The early authors who sought to achieve a balance between the component elements of Arab culture took pains to restrict borrowings from Iranian civilization, but they were unable to prevent the Arabs from adopting and handing down with marked pleasure those traditions that had most impressed them. The names of emperors like Ardashīr or Anūširwān, even though obscure in the mists of legend, were well known to the authors who delighted in reproducing passages from the testaments (ahd) of Persian sovereigns, and, thanks to the adūb which popularized the figure of Buzurgmīhr ([q.v.]), gave the whole nation a reputation for wisdom and political adroitness, at least at a time when the Shūʿābī threat had been removed.

Bibliography: it is hardly feasible to give a restricted bibliography of the subject dealt with in the above article, since it would mean listing all the ancient works which mentioned the Persians. We confine ourselves therefore to referring to the articles ʿĀdīam, Iran and Shūʿābīyya, and also to the works of M. Inostranzev, Iranian influence on Moslem Literature, i, trans. G. K. Nariman, Bombay 1918 and R. N. Frye, The heritage of Persia, London 1962, 234 ff. (Ch. Pellat) FüRTENSPIEGEL [see SIVĀŠA]. FÜRCH [see FIKH, USUL].

FÜRCH, the pseudonym of two Persian poets: (1) Abu ʿl-Kāsim Khān, younger son of Fath All Khān Sabā, poet laureate at the court of Fath All Shāh Kājūr, was regarded as one of the scholars of
his time and had been well educated. He spent some
time in Mashhad in the civil service and, after
the crown prince ‘Abbās Mirzā had visited the region, he
entered his service, principally as a poet. Later he
returned to Tehran where he retired from public life
and lived until the end of the 19th century.

(2) Muhammad Mahdī ibn Muhammad Bāghīr
Iṣfahānī lived until the time of Muhammad Shāh
Kāḏār (1250-64/1834-49) and wrote a most interesting
work on the Siyād numerals, mathematics, calli-
graphy, weights and measures, contemporary cur-
rencies and accounts, entitled Furūġištān, dedi-
cated to the Grand Vizier Ḩāǧdī Miẓrā Ḥāṣūs.
The author of the Madīmā al-fusahd (ii, 396-9),
who included some of his poems, referred to him
incorrectly as Furūgh al-Dīn, and said that he was
born in Tabriz in 1223/1808, had a good education
from the age of seven, entered the service of the
crown prince ‘Abbās Mirzā and his eldest son
Farīdūn Miẓrā, travelled in Aḏharbāyjān and Fārs,
finally settled in Tehran where he entered the
finance department, and wrote various works in-
cluding the Šaḵāḵāl-āl-šām and the Taḏḏhirat
al-ḵābāb (“Recollections of youths”), a kind of au-
tobiography in which he included poems in Arabic and
Persian. He also had more than until the end of the
19th century.

Furūġištān: Rūḏ-Kūl Khān, Madīmā al-
fusahd, ii, 370-82 and 396-9; Furūğištān,
contemporary manuscript dating from the month of
Rabiʿ II 1259/May 1843, in the author's
possession. (Sāid Naṣīfī)

Furūḡ AL-DDIN [see FURUGH 2]
FURUGH, the pseudonym of three Persian
poets: 1) Miẓrā Miẓrāb Iṣfahānī, a scholar and
native of that town. During his travels in the middle
of his life he attached himself to Timūr Shāh, amir
of Afghanistan (1187-1209/1773-93) and became
his court poet. 2) Miẓrā ‘Abbās, son of Aḵa Muḥa.mmād
Bīstāmī, born in 1213/1798 in ʿĪrāk, where his
father was travelling. As a youth he travelled in Māzāndārān and Kārmān where he started
his career as a poet, at first using the pseudonym
“Miṣḵīn”. After taking the name “Furūḵī” he
came and settled in Tehran, where he held the pro-
tection of the paternal uncle Dūst “All Khān”, the
court treasurer. After joining the circle of the
Čīghī ʿṢīrā in ʿĪrāk, he led a retiring life of devotion and
died in 1274/1858. Furūḵī ranks among the best
modern lyric poets and his ghazals are very popular,
seven editions of them having been published in
Tehran. He is regarded as one of the best followers
of the school of Saʿdī. 3) Miẓrā Muḥammad Hūsūn,
son of Aḵa Muḥammad Ḥāḏī-Bīstāmī, born in
1255/1839 in Iṣfahān where he was educated. As
a youth he went with his father to India where he
was engaged in trade. Later he lived in ʿĪrāk, and
finally went to Tehran where he later served in the
Ministry of the Press, under the direction of the
celebrated publicist Muḥammad Ḥasan Khān ʿṢanī
Dawla, later ʿImām al-Šaltāna. He collaborated in the
publication of both official and official newspa-
ters of the time, as well as in some of his director's
publications. At the end of his life he received the
honorary title of Ḍḥāh-āl-Muluk, a title which was
granted to his eldest son Miẓrā Muḥammad “All
Khān who chose the family name Furūḵī. The
father was later appointed head of the translation
department at court and director of the School
of Political Science. He died in Tehran in 1906.
He was very active as poet, writer, translator,
publicist and journalist. On 11 Rādāb 1314/ 16 December 1896 he started publication in Tehran
of the weekly Tarbiyat which was influential in
introducing modern ideas into Iran and which
apparently appeared until his death. His chief activity was the
editing of works which his eldest son translated from
European languages, including La Chaumière
Indienne by Bernardin de Saint-Pierre, Le Tour du
Monde en 80 Jours by Jules Verne, The Seventh
Great Oriental Monarchy by George Rawlinson,
etc. His eldest son started his career by teaching in
secondary schools in Tehran, was then elected
depot and Leader of the Chamber of Deputies
during the second legislature. He was nominated
several times as ambassador, president of the Court
of Cassation, Minister and Prime Minister. He died
in Tehran on 5 Adhar 1332/5 November 1943.
From the time of the founding of the Iranian
Academy (Farhangīštānī-ī ʿIrān) he was elected a
member, and ranked among the best writers and
translators of his day. He translated other works
into Persian without his father's collaboration, in
particular Plato's Dialogues, the Discours sur la
Méthode de Descartes and the Kitāb al-Ṣālah of
Ibn Sinā.

Bibliography: Rūḏ-Kūl Khān, Madīmā al-
fusahd, ii, 383, 394-6; Dīvān-ī Ḍḥāh-āl-Muluk
Miẓrā Muḥammad Hūsūn Khān mutaḥallī bi-
Furūḵī, 1234 Hijrī (Saʿdī Naṣīfī).
erudition. Very fortunately, they also added some pages on riding, in which they describe various methods of schooling or the principles to be inculcated in the young rider.

It would not be wrong to make a fundamental distinction between two types of riding which co-existed in the Muslim world, that practised by the Arabs in the desert, and, at a later stage, high school riding. With regard to the former, we possess few documents which allow us to build up a detailed picture of it. It occurred in two basic forms, for war and for racing. The tribal warriors, basing their riding on the tactics of al-barr wa l-farr (attack and flight), practised it in small bands of combatants (katiba) using the sabre and lance in preference to the bow, their handing of the latter being decidedly clumsy in the eyes of al-Dāhījī, according to whom "the Khārijī when fighting at close quarters relies solely on his lance. Neither the Khārijī nor the Bedouins are renowned for their skill as archers when mounted". The problem of harness is also difficult to solve for this period. The poems do not help us to decide what sort of saddle was used by the tribal horsemen.

The question of the bit also arises. From the accounts of 19th century travellers we know that the curb bit was very seldom used by Arab horsemen in the East, their preference being for the bozal (rasan). We may question whether the word ḥidām, in passages of ancient poetry, in fact represents the curb bit. Perhaps bits were used for horses only at the time of an action, to make it possible to perform sudden halts and swift half-turns. We possess fuller documentation on the subject of horse-racing (sabkī, sibākī). Though with certain discrepancies in points of detail, writers have described the conditions of training (taqdmīr, idāmīr). This lasted from 40 to 60 days and had the effect of bringing the horses into good condition by a suitable system of feeding, while excessive weight was sweated off under blankets. Horses thinned down in this way were called hinād, and the sweat they lost sirāk. In pre-Islamic Arabia, races covering very great distances and over varied terrain were organized between the horses of the different tribes and the rules were often the same as those of the long and bloody wars [see FARAS], although even at that time they were governed by rules. The field (kalba) consisted of 10 horses; seven tokens were placed on lances, in an enclosure into which the first eight horses of the field made their way; seven received a prize proportionate with their placing, and only the eighth received no prize, its admission being purely a matter of honour. Each horse was given a name, according to the order of finishing, but the list of these names varies in the different authors. According to al-Masʿūdī, they were: 1st - sābīk, 2nd - muṭu- bāris, 3rd - muqālīlī, 4th - musālī, 5th - muṣālī, 6th - tālī, 7th - muṭrāh; al-Ṭabālī, following al-Dāhījī, gives a slightly different list, in which the 3rd is called muḥāfīl and the 5th ṭallī; the 9th and 10th have the same names in the two traditions, ṭālīm (knocked out of the enclosure by a blow) and subkhayt (silenced by shame at finishing last).

The Prophet did not forbid racing, which fostered rivalry between breeders and encouraged the preservation and increase of the stock of horses so much reduced by the wars. During his lifetime he made regulations for them, and by his advice tried to establish what were for the most part open competitions by making the size of the field uniform and fixing the distance to be covered according to the age of the horses taking part. The traditionists relate that he organized races at Medina, from Ḥāfya to Ṭhanīyiyyat al-Wadāʾ (60 ḍalālu) for mature horses and from Ṭhanīyiyyat al-Wadāʾ to Banū Zurayk (10 ḍalālu) for young horses. He himself presented substantial prizes for these competitions and entered his own horse. A ruling on the subject of betting (rīkān) had been made earlier by the ḥabīma of the large tribes. As Islam forbade the maysīr, the ancient custom was slightly modified to include the entry, among the other runners, of a horse called muḥālīl or ḍabbīlī, whose owner made no wager and gained the whole amount staked by all the other entrants if his horse won.

The wars of conquest waged by the Arabs under the first caliphs brought them into contact with foreign equestrian traditions and led them to organize new tactics for warfare on horseback. Three foreign traditions contributed, Iranian, Turkish and Greek. The arabized names of the Iranian or Turkish riders referred to by the writers of treatises on riding are an indication of the part played by foreigners in the elaboration of the new equestrian art. This influence made itself felt at a very early period; even in the 1st/7th century the fātā ʿĀlūsan ī, a freedman of ʿAll, had, according to the traditionists, tamed an unridable horse belonging to that caliph (see T.A., iii, 507). To make a chronological study would be of little interest; indeed, in riding, two series of factors alone can determine any radical evolution—the type of horse used, and the use of new arms. The first of these factors cannot enter into it, even though the Arab stock was very largely interbred with the stock owned by the conquered peoples [see FARAS]; the resulting progeny was still of the eastern type. The second of these factors, which is closely concerned with the art of war, had a decisive influence on the Islamic equestrian art which sprang up in the 2nd/8th century, and whose apotheosis can be placed in the 6th/12th and 7th/13th centuries in Spain and Egypt.

Principles of schooling.—Treatises on the first steps of dressage for the young colt, started at about the age of three, might bear the signature of modern riders, but the principles of the more elaborate schooling are somewhat obscure. The terminology is often Turkish or Iranian: the term maysīn must represent καρτα (e.g. kalīf), the term kurūs the circular show-ring where the horse is made supple (istikhradī al-khāyī fī l-nawārīd). The expression tartīb al-mayṣūdān can no doubt be interpreted in the sense of organized movements of groups of horsemen; they doubtless served the same purpose as our show-routines. The riders also alluded to the balance between front-quarters and hind-quarters (la'dīl) and to the flexibility of the jaw (tākī al-līdījīm, lauk al-līdījīm). The advice given to aspiring riders is very simple: the secret of riding rests in the firmness of the seat (khādbī) and the evenness of the reins (taswiyat al-'indn). This firmness is acquired by riding bare-back ('ulā l-'dārī), the rider being held in position by the grip of his thighs. As soon as he has some measure of experience, the young rider uses a saddle and fork seat. It will be seen how different such methods of riding are from those practised today in North Africa and Andalusia under the name a la jinetе. This style is difficult to date and no doubt corresponds to the appearance of the cross-bow and gun. Writers have drawn up long lists of vices both natural and acquired, from which we can give a typical list: harūn, a horse that refuses to walk forward; rānī, a horse that sprints forward; ḍabīdī, that checks its head to escape from control by the hands; mūnsīnī, that takes the bit in its teeth and jerks the hands; ramāk, a horse that kicks; khābfānī, that...
stamps its fore-feet; ṣhabūb, that rears; ṣhamūs, difficult to mount; kalāb, a horse of uncertain temper; nafūr, that swerves and shies; finally, the fāmulāk is regarded as impossible to ride. In this list the writers have classed faults in carriage of the head and withers; the horse with bad head carriage is called munkhās. The remedies suggested for dealing with these defects are often brutal and sometimes fantastic.

Harness.—The treatises define with considerable precision the nomenclature of the harness (līṭāmān), which includes the reins (fīndīn), the cheek straps (īḍāb) and the browband (iṣāb). Three types of bits were used—the iṣām, a light bit, the fakk a snaffle bit (?), and the nāštikī, which must be the equivalent of the modern bit used by the Spahis. The bit is composed of branches (ṣhikhāma), mouth-piece and port (fa'a) and curb-chain (kabma); in other cases, this term also denotes the bozal or martingale. The saddle used, the so-called saddle of Khūzistān, was flat and wide, the pommel (barsūb) and cantle (muʃkškha) being only slightly raised. It rested on a pad (mīrgabā), held in position by one or two girths (ḥīṣām) and a breast-strap (labāb). The horse was provided with collars (ṣhikdā) and cloths (kabāb and skātī), the terms kābūhrī and ḡabābī ḡabūrī denote a stable-chain. The war-horse wore barsīm (carapaces) and barsīkī (helmets).

Throughout the whole of this period (6th-7th/12th-13th centuries) equestrian sports were regularly practised. Horsemens took part in gērdīd (q.v.) or burdī, a chivalrous duel with lances, in polo [see burdī] or diurrīd (q.v.), and in a chivalrous duel with the sabre and lance, giving detailed descriptions of lunges and parries (liṭāmānī). The bit is composed of branches (ṣhikhama), mouth-piece and port (faa) and curb-chain (kabma); in other cases, this term also denotes the bozal or martingale. The saddle used, the so-called saddle of Khuzistan, was flat and wide, the pommel (barsub) and cantle (mutshkha) being only slightly raised. It rested on a pad (mīrgabā), held in position by one or two girths (ḥīṣām) and a breast-strap (labab). The horse was provided with collars (ṣhikdā) and cloths (kabāb and skattī), the terms kābhūrī and ḡabūrī denote a stable-chain. The war-horse wore barsīm (carapaces) and barsīkī (helmets).

In any study of the furusiyya training, special attention must be paid to the condition of the hippodromes, which were the venue for these activities. No trace of cavalry training is possible for any length of time in dilapidated hippodromes. Their number and state of repair are, therefore, useful indications of the level of training reached. During the Bahri period (648/1250-784/1382) there was a considerable number of hippodromes in Cairo and its immediate vicinity, where furusiyya exercises were carried out systematically and intensively, especially under Sultan Baybars (658/1260-676/1277) and to a lesser degree under Sultan Kālāūn (678/1280-689/1290) and Nāṣir Muhammad (693/1295-741/1340, with interruptions). After al-Nāṣir Muḥammad's death the disintegration of the Kālāūnid dynasty set in; and it seems that the accompanying disturbances also had an adverse effect on Mamluk training. Sultan al-Ẓahraf Shāhīr (724/1323-765/1356) attempted to arrest the deterioration of furusiyya training, but in vain. The decline continued at an accelerated pace during the Circassian period (784/1382-923/1517), with a short interruption during the reign of Sultan Kansūh al-Ghawrī (905/1500-922/1516). The standard of the furusiyya training is clearly reflected in the state of the hippodromes. In the Bahri period there were the following hippodromes, most of which did not remain in use throughout that period: a) al-Maydān al-Salīḥī, built in 641/1243 by Sultan al-Salih Nāṣir al-Dīn Ayyūb, the founder of the Babriyya regiment; b) al-Maydān al-Zāhirī, built by Sultan Baybars; c) al-Maydān al-Kābāb, built by the same sultan in 665/1267; d) Maydān Birkat al-Fil built by Sultan al-Ẓahir Kitbughā (694/1294-696/1296); e) al-Maydān al-Nāṣirī or al-Maydān al-Kābir al-Nāṣirī, built by Sultan al-Nāṣir Muḥammad in 724/1323-2; f) Maydān Siryakūs, built by the same sultan in 724-5/1323-5; g) Maydān al-Mahārī, built by the same sultan in 720/1320.

From the end of the reign of al-Nāṣir Muḥammad and up to that of Kansūh al-Ghawrī no sultan is reported to have built a hippodrome. The remaining Bahri hippodromes were abandoned in the first years of Circassian rule. Towards the middle of the 9th/15th century, exercises were performed on a limited scale in the Royal Courtyard (al-Hawsh al-Sultānī) in the Citadel. The performance of such
exercises near Birkat al-Habash is also mentioned in the sources from time to time, but no source refers to the existence of a hippodrome there.

Kansūh al-Ghawrī was the only Circassian sultan who constructed (in 909/1503) a hippodrome in Egypt. But his attempt to revive furusiyya came too late, for the decline of traditional military training in the Mamlūk Sultanate coincided with the slow but steady rise of firearms, which revolutionized the whole art of war and, necessarily, of training for it (for a discussion of this aspect of furusiyya see my Gunpowder and Firearms in the Mamlūk Kingdom, London 1956, 46-140, and art. BARŪD above).

Furusiyya included the following 'branches': a) the lance game (la'b al-rumūh, thāḥāf al-rumūh, thāḥāf or ṭhāḥāf); b) the polo game (la'b al-khurā, al-darb bi 'l-khurā, la'b al-yasa'idān); c) the kabākah (or 'gourd' game); d) archery (ral-ʿinā al-nasb>dāf al-nasb>dāf, al-rumūh bi 'l-nasb>dāf); e) fencing (al-darb bi 'l-sayf or darb al-sayf); f) the bird game (samw al-birdās); g) the mace game (fanun al-dabẤb); h) wrestling (ṣirāf); i) the games accompanying the maḥmil procession (samw al-maḥmil); j) hunting (ṣād); k) shooting with the crossbow (la^b al-kura, thaʃzd;). The information furnished by the sources on the first two branches is as meagre as, on the other hand, the games accompanying the maḥmil procession is considerably richer than that supplied on the other 'branches'. The mace game is mentioned rarely in the sources. Fencing is mentioned quite frequently in the enumeration of funūn al-furusiyya, but is rarely referred to independently. The bird game is often mentioned; but without any details. Though the sources frequently speak of the games of archery, they furnish no details regarding them. This is particularly disappointing, seeing that the bow was the main weapon of the Mamlūks and was far more important in battle than the game. The game of chess (qīṣrān) was very popular among the Mamlūks. Though it cannot be included among the furusiyya games in the strict sense of the word, the mastery of chess was considered as an accomplishment, deserving of mention side by side with the Mamlūk's accomplishments in the field of furusiyya.

The furusiyya master (or expert or instructor) was called muš'allim. If he was an expert in the handling of the lance, he was called muš'allim al-rumūh (or ramūh). If he was an expert in the handling of the bow and arrows he was called muš'allim al-nasb>dāf, and so on. The name waʃd in the same sense is also mentioned from time to time in the Mamlūk sources, but it is much more frequent in technical military literature. We know the names of a considerable number of such masters, especially from the Circassian period.

(D. AYALON)

FUSAYFISA mosaic. The fact that the Arabic word for the mosaic itself is ultimately derived from the Greek υψαύσια, perhaps through Aramaic דוד, and the word fass, used for the little coloured cubes which are arranged according to a pre-designed cartoon, derives from the Greek πασαύσια, leads us to consider the mosaic as a form of architectural decoration as a borrowing by Muslim art from Byzantine art. This borrowing is undeniable and we shall examine it later. All the same, apart from this importation from abroad, Muslim art of the early centuries seems to have included a form of mosaic which was rather different from any whose technique could have been learned from Constantinople and which the Islamic peoples must have found still flourishing in the countries which they conquered. The Byzantine mosaic is characterized by the use made in it of cubes of glass, called smalts, and by its use to cover walls, arches and domes. The pavement mosaic which derives from the Roman tradition is quite different, being composed almost exclusively of cubes of stone of various colours, mostly cut from pieces of marble. Being limited to these mineral components, the colouring of these pavements is usually confined to a few warm tones: creamy white, black, red and grey-green; the cartoons are often composed of large areas of geometrical motifs, chequered designs and polygonal figures, interlaced plant forms, and plaits, which, in state rooms, frame a central picture (emblema).

This type of decoration, appearing first in the Greek lands of the Near East, spread across the Mediterranean world with the Roman conquest. Not only in Italy, but in Syria and in North Africa and southern Gaul it enjoyed great popularity. The triumph of Christianity extended its domain and impeded its use, except when a Christian church was put. The mosaics which had covered the floors of villas and baths were, in a rougher style and with a less elaborate technique, adorned the apses and naves of churches. Pagan forms now represented Christian symbols. Nevertheless, these survivals from antiquity became suspect to the strict: fear of profanation caused these pictures to be banished from the chancels, while long inscriptions and geometrical patterns, often of an impoverished invention, covered vast areas. Paving mosaic underwent a great decadence, yet it did not disappear completely from Christian buildings: in the form of ornamented pavements it is still found in basilicas of the 8th and 9th centuries A.D.

Fairly recent discoveries allow us to state that at about the same period, and even later, Islam preserved the taste for mosaics and the technique for making them. North of Jericho, excavation has revealed the ruins of an Umayyad palace, called Khiรābat al-Muʃāfšār [q.v.]. To this princely residence is attached a magnificent bath. A vast columned hall, 30 metres long, with a central dome and with walls containing scooped-out apses, has a pavement consisting of thirty-eight mosaic panels, all different. The geometrical decoration consists of rectilinear and curvilinear interlacing patterns, chevrons and imbrications, splendidly executed and with a harmonious colouring produced solely by cubes of stone. In one corner of this monumental frigidarium is a small apsidal hall whose floor is adorned with a particularly elaborate decoration. A leafy tree rears itself along the axis, separating two groups of animals very realistically drawn: on one side two gazelles, on the other a third gazelle attacked by a lion. The very recent excavations of Khiรābat al-Miniya [q.v.], another Umayyad building, have revealed halls and courtyards paved with mosaic. The exclusively geometrical ornament consists of strapwork, lattice work, Greek key patterns and other related themes. Although less well represented in the West, the tradition inherited from pagan and Christian mosaic artists is attested by remains found in eastern Barbary. Five miles from al-Kayrawān there has been identified the site of al-Raکkāda which was,
at the end of the 3rd/4th and the beginning of the 4th/5th centuries, the seat of the Aghlabid amirs, was found there, either at ground level or buried in the masonry. Beside an enormous pool there had been erected palaces, of which very little remains. All the same, some rooms paved with mosaic are still to be found. The very simple decoration, of black on a white background, consisted of scattered geometrical figures, square, lozenge-shaped and hexagonal, and of compartments adorned with knots and of spirals arranged in crosses. These pavements of Ifrîkiya, executed in about 290/900 and so similar to Christian mosaics, betray themselves as being the work of local craftsmen who put at the disposal of Arab amirs a technique and a style of decoration which had been entirely inherited from their Romanized Berber ancestors.

Some forty years later was executed a mosaic revealed by the excavations of Mr. Sliman Zbiss at Mahdiyya (in Tunisia), among the ruins of the palace of the Fâtîmid caliph al-Kârim (322/934-334/946). This fine pavement covered the floor of a room of state 13 yards long and 4 yards wide. It consisted of a central panel adorned with quatrefoils interlaced like the rings of a coat of mail and a wide border containing horizontal rows of squares and circles. The colours represented are black and white, with ochre and bistre. Neither the colours nor the polygonal shapes are foreign to what is attested in Roman work. Yet the theme of interlacing patterns gives the decorative scheme an oriental character (for interlacing polygons are hardly ever found in Roman pavements); the compact plant themes enclosed by these polygons belong still more obviously to the flora of 'Abbasid 'Irâk or 'Ummân Egypt. The craftsmen working at Mahdiyya would seem to have been using cartoons imported from the East; just as the contemporary architecture of Ifrîkiya bears the stamp of the same foreign influences.

This pavement mosaic, whose survival in the first centuries of Islam is attested only by excavation, is to be distinguished from mural mosaic, of which Fatimid and Wegueline have preserved magnificent examples. In the East, they are to be found at the Kubbat al-Sâkhra [q.v.] in Jerusalem, built in 72/691 by 'Abd al-Malik, and at the Great Mosque of Damascus, built in 86/705 by al-Walid; in the West, at the Great Mosque of Cordova, in the superb kible of the caliph al-Hakam I [q.v.], of 930/941. As is evident, these are the three most important religious buildings of the Umayyads owing their adornment to mosaics. The interior of the Kubbat al-Sâkhra is largely covered with mosaic, which adorns the peripheral arcades, the drum surmounting them, and the dome. As for the Great Mosque of Damascus, only fragments survive of the pictures representing a great gilded vine and whole towns, the most striking of them adorning some surfaces of the arcade surrounding the courtyard. As for the Great Mosque of Cordova, in it are preserved, more or less worked over, the frame of the misbâr and of the doors flanking it, and also the dome in front of the misbâr. These three examples, from East and West, have many features in common, but are distinguished one from another by more than one characteristic. The materials used show clearly their interrelation. White and black cubes of marble and red and pink stones rigidly defined, as in the mosaic pavements; but much more numerous (85% at Damascus) are the cubes of glass paste coloured throughout, and particularly such cubes consisting of a brown base of glass paste upon which is applied gold leaf, which in turn is covered with a protecting layer of glass. It is the use of gold which creates the richness and the harmony of the Byzantine mosaics. The varied positions of the cubes, stuck in either vertically or slightly inclined towards the spectator, diversify the tones and, in particular, relieve the monotony of the areas of gold and bring life to these shining surfaces. The subjects of the decorations vary from one monument to another. That of the Kubbat al-Sâkhra is the richest, and in it floral designs predominate. The most frequent themes are those of acanthus leaves or vine leaves with grapes, the main stem emerging from a cluster of leaves, a bowl or a cornucopia. Narrow panels are provided with vertical supports reminiscent of the antique candelabras on which are placed trays, foliage or fruit. The plant themes, arranged in bands placed side by side, alternate with motifs of jewellery, ribbons, bandeaux, and pendants inspired by necklaces and diadems; plaques cut from mother-of-pearl add their lustre to these themes of adornment. This ornamentation derives almost entirely from Hellenistic tradition; the jewellery motifs seem to be inspired by the imperial decoration of Byzantium; some palm-branches in the form of wings and some flowers derived from the lotus are probable borrowings from the Sâsâni flora and were familiar also to Syrian sculpture of the same period.

Quite different are the very beautiful mosaics of the Great Mosque of Damascus, at any rate those which the removal of the layer of plaster has revealed in the courtyard. They contain large green trees rising up among groups of buildings: fortresses whose walls border on the terraces alternate with balconied houses with pitched roofs and wide balconies, vertical supports reminiscent of the antique candelabra and pendants inspired by necklaces and diadems; jewels cut from mother-of-pearl add their lustre to these themes of adornment. The Pompeian character of the architecture has been remarked. The waters which form the foreground of the decoration have been thought to be the Barada, the river which flows through the oasis of Damascus. This realistic interpretation, which associates a familiar and not very highly esteemed landscape with the adornment of a great mosque, does not seem compatible with Muslim aesthetic. Perhaps we should rather consider this decoration of the courtyard as the complement of the geographical pictures which spread across the walls of the prayer hall, and identify the tumultuous waters on the shore with those of the surrounding Ocean (al-bahr al-muhit) which, according to the Arab geographers, encircles all the inhabited lands of the world. According to the traditions which Ibn Idhârî has transmitted and which we shall examine, the Umayyad caliph al-Hakam II, following the example set by his ancestor al-Walid, the builder of the mosque of Damascus, obtained from the emperor of Constantinople the派遣 of a mosaicist and the necessary materials to decorate the Great Mosque of Cordova, which he was providing with a new kible. In fact the mosaics of the misbâr of Cordova and the parts which frame it or lead to it scarcely recall the picturesque decoration of Damascus. This is not surprising, for two and a half centuries separate the Syrian from the Andalusian work. The latter presents a simplified and schematic flora with its central axis, the stems slightly curving, regularly bent into foliated scroll-patterns or doubled and forming wide symmetrical interlacings. These stems bear palm leaves with two or three incurved fronds, flowers, or
bunches of grapes, each separate. The inscriptions play an important part here and their Kufic script is sober and elegant. One seeks in vain Christian mosaics of the same period analogous to these Muslim mosaics; on the contrary, analysis reveals the relation between this flat and coloured decoration and the sculptured decoration which surrounds it. We find the same floral themes portrayed by the two techniques, sculpture and mosaic, but both belong to the same Islamic art.

Nevertheless the historical conditions make it probable that mosaics were sent from Byzantium to Cordova. Relations between the two powers, interrupted for over a century, had been resumed since 346/958, and at the end of the reign of 'Abd al-Rahmān III they were active and cordial. The sending of gifts—notably of Byzantine mosaics—served for the embellishment of the Madinat al-Zahra'. The continuation of these relations between Al-Ḥašim II and Nicephorus Phocas is therefore not surprising and we have no difficulty in accepting the tradition, albeit three hundred years old, related by Ibn Ḥishām (Bayād, ii, 253, tr. ii, 392). At the request of al-Ḥašim, a mosaicist came from Constantinople with 320 quintals of mosaic cubes. The caliph assigned to him a certain number of slaves (some of whom had already begun to learn the craft at Madinat al-Zahra). The master worked under the direction of the Greek and were not long in surpassing their master in skill. When the latter left Cordova, where he had been lodged magnificently, he received from the caliph gifts and robes of honour; his pupils continued the work alone and completed it. The story seems to be historically possible.

However, we have seen that (according to Ibn Ḥishām) al-Ḥašim, in requesting the Byzantine emperor to send a mosaicist, was following the example of al-Walid, the founder of the Damascus mosque. Now it seems that this is a legend which was unknown to the earliest sources and which does not appear until the 6th/12th century. According to Ibn ʿAsakir (d. 571/1176) al-Walid accompanied his request with the threat to overrun the territory of Byzantium and destroy the churches on his own lands if the Basileus refused; and the Basileus complied. The attribution of such an attitude to the two rulers is doubtful. But although the story cannot be applied to the Damascus mosque it may be possible to associate it with the mosque of Medina. According to al-Yaʿqūbī, al-Walidid and al-Tabarī, for the re-building of this mosque, a request for a mosaicist was made to the emperor of Byzantium and was granted. This is nevertheless rather surprising. Al-Balāḍūrī (d. 279/992), speaking of the work on the mosque of Medina, gives a more likely report. Al-Walid, he says, wishing to embellish the Mosque of the Prophet, obtained the collaboration of mosaicists and other craftsmen of Rūm recruited in Syria and in Egypt. This supposes the existence in these countries of ateliers or individual artists, presumably of Greek origin, continuing in the 2nd/8th century the technique of Byzantine mosaic. The tradition of this fine craft, which had formed the glory of Antioch, could have survived in Syria from Christian times, which saw the building of the Church of the Ascension in Jerusalem, the Basilica of the Nativity in Bethlehem and the churches of Emessa and of Lydda. It seems very possible that for the first religious foundations of Islamic local mosaicists as well as builders were recruited, and probably they were still available during the following centuries to complete and restore the decorations of the sanctuaries of Syria. In Jerusalem there are the mosaics of the Fāṭimid al-Ẓāhir (411-729/1021-36), of the Ayyūbīd Sahlī al-Dīn (570-59/1174-93), and of the Mamlūk Taqlī (729/1330), and at Damascus those of Baybars. The date of the mosaics of the Kaʿba of Mecca described by Ibn Ḥiṣabī is not known.

In Egypt, which, as we have seen, had possessed, like Syria, artists from Rūm, who practised the art of Byzantine mosaic, only a few and late examples of this work remain. In Cairo, the tomb of Shaḥṣīr al-Durr (648/1250) retains a mosaic of Byzantine origin from which is decorated with cubes of blue, green, red and gilded glass with the addition of mother-of-pearl. Of the same type are the decoration of the mīhrāb which the sultan Lāḏīn gave to the mosque of Ibn Ṭūlūn in 966/1260, and the mīhrābs of the madrasas of ʿĀbd al-Mūmin (970/1369) and of Abū Ḥaḡā (740/1339), dependencies of the Al-Azhar mosque.

Philistion, camp, encampment, used by the bi-
lingual papyri to denote the town. The chroniclers
also use the expression Fustāt-Misr or even simply Misr.
The proximity of Babylon made it easy for
the Arabs to employ and control Coptic officials.
Later came the distribution of the land and the
building of the mosque (Dīmār 'Amr or al-Dīmār
al-Atlak). This mosque, the first to be built in Egypt,
originally measured 50 by 30 cubits. It is possible
that it had a minbar from the start; but the minābār,
in the form of a niche, seems to have been built only
in 92/711. Reconstructed and enlarged several times,
it attained its present dimensions in 212/827. It
served simultaneously as a place of prayer, council
chamber, court room, post (office) and as lodgings
for travellers. It was there that the main grants of
leases of land were made. Not far away was 'Amr's
house and the army stores. There was also a
mūsālah, an immense place of prayer in the open air, where,
in the 9th/15th January 604, prayers were
offered over the body of 'Amr b. al-Āṣ, who had
died the previous night. Each tribe was allotted a
certain fixed zone (khīṭa which, in Fustāt, is the
equivalent of the kāna in Cairo, that is to say quarter
or ward). Certain khīṭāt included inhabitants belonging
to different tribes, for example, the khīṭa al-rāyā
surrounding 'Amr's mosque, the khīṭa al-Luṭfī just
to the north of it, and the khīṭa al-dār al-Zahr, the
last-named being reserved for new arrivals who had
been unable to settle with their own respective
tribes (cf. Guest, in JARAS, 1907, 63 f.). Each khīṭa
had its own mosque. In 53/672, for the first time,
minarets were built for 'Amr's mosque and for those
in the khīṭa, with two exceptions. The Arab army of
conquest included a very large proportion of Yamanis.
Christians and Jews from Syria with political affili-
ations with the Muslims had accompanied the
invading armies; they were settled in three different
quarters near the river, named respectively, going
north from 'Amr's mosque, al-Hamrā al-dār al-
Îmāra, al-Hamrā al-Wastāt, and al-Hamrā al-ḥusnāt. Other
ghīmīs settled with them.

The original encampment was gradually trans-
formed. The different quarters were separated by
open spaces. Whole zones, particularly to the north
in the desert, were then abandoned, only to be
reoccupied later. Permanent structures multiplied.
The treasury, bāyāt al-māl, was built (Becker, Beitrag
zur Geschichte Ägypten, ii, 162). Al-Fustāt was not
fortified and, in 64-5/684, the Khāridjīs of Egypt
who had seized power had a ditch built on the east
side to defend the town against the caliph Marwān
and his forces. The governor 'Abd al-Ṣāhir b. Marwān,
who founded or developed Ḥulwān, where he
had taken refuge from the plague (70/689-90), also built
houses, covered markets and baths in Fustāt. The
Copts imperceptibly became intermingled with
the conquerors. Coptic was spoken in Fustāt in the
2nd/8th century. Some churches were also built, and
are occasionally mentioned by the chroniclers.
Warehouses were set up along the Nile for water-
proofing merchandise and for the storage of
Marwān II, in flight before the 'Abbāsidīs, went
through Fustāt (132/750) he caused the stores of

grain, cotton, chopped straw and barley, and indeed
the whole town, to be set on fire, according to
Severus of Asmūnayn (Pair. Orient., v, 168).
Further south, the suburb of Nāsirī was built,
created his own capital called al-Kātābī, the
north-eastern tip of the Dījāb al-Yaškur, as a refuge
from an epidemic, in 133/751. Later they settled at al-
'Askar where a dār al-Imāra was built and then in 169/785-6, just beside
it, a large mosque (dgīmīs al-'Askar, also called
dgīmīs Sāḥib al-Qaila). Around all there grew up a
real town, with shops, markets and fine houses.
Nothing now remains of it.

In the 3rd/9th century 'Abdād b. Ṭūlūn also
created his own capital called al-Kātābī, the
town which was divided into two districts—the "amāl fākh and
upper district with its western section (the high
ground in the south as far as the Nile) and eastern
section (the rest of the desert as far as al-'Askar), and the
"amāl asfāf or lower district, including the
remainder. The 'Abbāsidīs tried a new and short-lived
settlement on the Dījāb al-Yaškur, as a refuge from
an epidemic, in 133/751. Later they settled at al-
'Askar where a dār al-Imāra was built and then in 169/785-6, just beside
it, a large mosque (dgīmīs al-'Askar, also called
dgīmīs Sāḥib al-Qaila). Around all there grew up a
real town, with shops, markets and fine houses.

Nothing now remains of it.

In the 3rd/9th century 'Abdād b. Ṭūlūn also
created his own capital called al-Kātābī, the
north-eastern tip of the Dījāb al-Yaškur, as a refuge
from an epidemic, in 133/751. Later they settled at al-
'Askar where a dār al-Imāra was built and then in 169/785-6, just beside

dgīmīs Sāḥib al-Qaila). Around all there grew up a
real town, with shops, markets and fine houses.

Nothing now remains of it.

The founding of al-Kāhira (358/969) did not put
an end to the prosperity of Fustāt which, in the
Fatimid period, was one of the wealthiest towns of
the Muslim world, with its lotty houses of from five
to seven stories (Nāṣir-i Khusrūw, in the Safar
Nāma, trans. Schefer, 146, even speaks of fourteen
stories), the crowded souks round 'Abbāsi's mosque
and the network of narrow streets recently excavated
on the desert plateau. Al-Kāhira, where the houses
were lower and furnished with gardens, was then the city
of the caliphs and the military aristocracy; Fustāt,
more populous, remained the home of commerce and
industry, as is testified by very fine ceramics and
pieces of glassware discovered during excavations,
as well as texts on papyrus and paper. In the 7th/13th
century the town still manufactured steel, copper,
soap, glass and paper (Ibn Dukmāk, iv, 108), not
to mention its production of sugar and textiles. In
513/1119 the town was able to produce a massive
ring of polished copper, graduated, and measuring
more than ten cubits in diameter, weighing several
tons and intended to act as a support for an appa-
raus for astronomical observations. However, during
the anarchy that followed the death of the last
Fatimid, the town suffered a period of eighteen years (from 446/1054 to 454/1072)
the town suffered sixteen years of severe famine,
accompanied by epidemics. Al-'Askar, al-Kaṭāṭī‘ and whole zones of the desert quarters of Fustat were consequently abandoned. The vizier Badr al-Djamālī then caused the materials of the ruined buildings to be removed for re-use in Cairo. A second operation of this kind took place between 495/1101 and 524/1130; it was concerned with those buildings which the owners, despite a general warning, had failed to put into a state of repair. The year 564/1168-9 was catastrophic. The Frankish armies of Amr’s mosque were driven the just to the south of al-Ra‘ad, at Birkat al-Habashiyya; Shā‘war, their former ally, had sung them four years earlier, and he himself was now attacked by them. Fearing that they would occupy Fustat, which had no ramparts to defend it and which might be used by them as a base against Cairo, he had the town evacuated and his men systematically set it on fire. The conflagration lasted for fifty-four days. After all these catastrophes life began once again; the place was rebuilt. All the same, to prevent the recurrence of such incidents Ṣalāb al-Dīn built a city wall enclosing Cairo, the citadel and Fustat. The remains of this wall can be seen to the south of the citadel, and also 900 metres to the east as well as to the south-east of ‘Amr’s mosque. New quarters were built on the abandoned land by the Nile, while the notables erected pleasure pavilions alongside the water. The eastern districts were increasingly neglected, while ‘Amr’s mosque remained a flourishing centre of religious instruction until the great plague of 749/1348. Under the Mamluk sultans, however, Cairo attracted great commerce; it was the souks of Cairo, not of Misr, that the Christian traders visited. Fustat (which name disappears, being replaced by Misr) fell into obscurity. It remained merely the administrative capital of Upper Egypt whose produce was constantly brought by ship to its river banks. At the time of Napoleon’s expedition, Old Cairo contained 10,000 inhabitants, 600 of whom were Copts.

Bibliography: Makrizi, Kitāb al-Sina‘ al-Mas‘ūdī; Ibn Duknāk, Kitāb al-Imrā‘; All Mubarak, Al-Mar‘iyyat al-Fustatīyya. Besides, the works mentioned earlier, A. F. Mehrez, Daru‘ al-‘Imrā‘; C. Th. Clerget, Le Caire. Of the 750,000 inhabitants of the Fouta, two-thirds are Fulani and the others are former slaves who have adopted the Fulani language and who have been largely retained by them in their traditional way of life.

The administrative organization consists of the missidi (village mosque) at the bottom, then the 700 m./3,000 ft., with some peaks of over 1,000 m./3,300 ft. The Tinkissi, a tributary of the Niger, rises there. The central Fouta is an internal "Tassili" divided into three masses: in the north the massif of Mali (with its highest point at Mount Tennissa, 1,151 m./3,890 ft.), in the centre the plateau of Timbi, Labé and Popodara, with an average height of 1000 m./3,300 ft., which is divided by numerous canyons with impressive waterfalls (Ditinu, Kinkon, Kamabaga, the Sala, etc.), and finally in the south the massif of Dalaba (1,425 m./4,700 ft. at Mount Tinka). From these massifs with their cliffs (those of Massi reach 800 m./2,600 ft.) rise the Bafing, the principal feature of Senegal, the Upper Gambia, the Rio Grande of Portuguese Guinea and many mountain rivers, which together form the water tower of the western region of Africa. Because of its altitude the Fouta enjoys a favourable climate. It has a high rainfall in summer and its winter is a healthy dry season, the effect of which is further increased from December to February by the ‘harmattan’; the rainy season is from July to September. The scorching heat of the Sahara attracts the Atlantic clouds and each year Dalaba has a rainfall of 2035 mm./80 ins., Pita 1882 mm./73 ins., Labé 1764 mm./70 ins. and Mali 1933 mm./76 ins. Three types of vegetation are found in the Fouta: (a) bush, either brushwood or trees; (b) sparse grassland, sometimes on the shores of a small lake (dunkere) on the clay covering a plateau (hollandes), sometimes on sand which fills a depression (dantari); (c) the bowal, which covers three quarters of the surface of the Fouta and which is "in the dry season a vast and torrid surface of desert, marked at intervals by mushroom-shaped white-ant-heaps" (Richard Marcilard).

Population. The Fouta is a mountain district suitable for the rearing of livestock. As Vieillard says: "half-way between the Sahelian steppe and the dense forest: the former stretches over the endless barren plains of the high plateaus, the latter clothes the sides of the mountains in the form of tall riverside forests. This hybrid environment has favoured the formation of a composite society, a mixture of settled forest-dwellers and of shepherds and cowherds". The Baga and Landuman, probably autochthonous, were driven out in the 13th century by the Susu-Dialonke expelled by the Mandinkas of Sundjata. In 1534, the Fulakunda of Koli Tenguia came from the Fouta Toro to settle to the west of this group of mountains. Finally, in 1694, Fulani who had come from Macina formed an empire which was to last for two centuries. Apart from these great movements, there were small migrations from the plains of the north. The Fulani replaced the hump-backed cattle by the ndama which was more or less immunized against trypanosomiasis. They enslaved or drove out the former negro inhabitants of the forests, borrowing features of their material civilization. According to Vieillard they "brought with them their language, their faith which permitted the foundation of a Muslim fraternity, and a harsh exploitation mitigated by intermarriage. Of the 750,000 inhabitants of the Fouta, two-thirds are Fulani and the others are former slaves who have adopted the Fulani language and belonged to the feudal system of the Fouta. These vassals, rimaiz (slight three awadou), cultivated the ground for their Fulani masters. They live in rues near the country house of the master (marga).
tehu, a group of missidis with the lambode-tchu at the head. When the system of alternative government came into operation the chief of a djawel (province) was changed every second year, at the same time as the almamy.

The fiscal laws were very carefully worked out. The tax on inheritance consisted of the homidia (assigning to the marabout a quarter of the possessions of the deceased) and the kombabete, collected by the chief of the djawel or the lambode-tchu five months after the death. The assaka (or saka or farba) was due to the chief of the missidi for the poor. The ussuru was a tax on manufactured goods. In addition the ruler of the Fouta received a fifth of the booty of war and the tributes (sakkale) paid by the vassal peoples of the coast.

History. A large contingent of the Fulani of the Fouta came from Macina at the end of the 17th century, led by Seri or Sidi. After Muhammadu Sall, elected chief in 1700, they chose the pious Kikala, then his son Sambigh, whose two sons divided the succession (1720-26). So the Fulani called on Ibrahima Mussu, called also Karamoko Alfa, a man of immense piety, who was invited to wage war against the pagans. Karamoko Alfa inaugurated that permanent state of Holy War which was to become one of the characteristic political features of the Fouta. In the Fouta Djallon Islam served as a justification for the seizure of power. A committee of insurrection consisting of Karamoko Alfa and six other members was formed and the movement was supported by young Islamized Dialonkes and Malinkes. Thealist Dialonke were conquered and Timbo and Fukumba occupied. But some years later, Puli Garme, chief of the pagan Labe, subdued the Fulani chief of Labe, seized the council of the elders, and particularly its president, Puli Garme, chief of the pagan Labe, to fight Bokar Biro. The latter, put on to the throne by French authority, signed the treaty of the protectorate with Bissimilah (bism 'ilah) instead of his own name. Then Captain Müller marched on Timbo and Bokar Biro and his 1500 warriors were defeated at Poredaka. This was the end of the independence of the Fouta, which was divided by the French administration into districts.

The Fulani chieftains, which had been retained throughout the colonial period, were suppressed by the Council of Government set up during the summer of 1957. But by then they were already of very little significance. The Fouta Djallon had ceased to be an independent fortress and had become fully integrated into the political and economic life of Guinea.

Quite soon, however, in the complex society of the Arabo-Islamic Empire new fityan (now in the plural) made their appearance; it is however impossible to date their origin either exclusively to the ancient Arab tradition. Indeed, these new fityan themselves are presented to us in two categories of portraits which are at first sight incompatible.

A first group of texts, consisting for the most part of relatively late accounts of mystics, but also of earlier narrations of the lives of poets, presents the fityan as young adults living in small communities, coming from varied social, ethnic (and, to start with, religious?) circles and, free from any sort of attachment to family (they were frequently bachelors), profession (even if they had one) or tribe, associating together to lead in common the most comfortable possible life in an atmosphere of solidarity, mutual devotion and comradeship (with joint ownership of goods), without which such an aim could obviously not be achieved. The setting was more extensive than that of a single town, in the sense that a fraternity existed between the fityan of each town and others elsewhere by whom they were received when travelling, like the old "companions" in Europe. It seems that they wore a special costume. It was still largely under this aspect that Ibn Baṣṭūtā, the famous traveller of the 8th/14th century, was to see them when he encountered them among the common people of the Muslim East,

in the course of history, they have assumed very different forms, corresponding with which are two fundamental categories of documentation, the information from which often appears for that reason to be irreconcilable. Thus, from the time when, over a century ago, Hammer-Purgstall drew attention to them, many representations of them have been given and, despite the advance that has been made in our knowledge of them, it cannot be said that even now we really know exactly what they were. Hammer-Purgstall for his part regarded the futuwwa as a form of chivalry, and one finds this interpretation repeated up to our own time; but, for the past fifty years, particular attention has been given to the connexions maintained by the futuwwa at a late period on the one hand with Sufism, and on the other with the professional groupings; however, even in the latter case the nature of the treatises specifically devoted to it has resulted in its being approached from the doctrinal or psychological angle rather than being integrated within the social structure, of which nevertheless it constitutes an important element. It is to this last aspect that I wish to give especial emphasis.

In the pre-Islamic and early Islamic periods, the Arabic language does not use the term futuwwa, but only faṭā, itself used in the singular rather than in the plural, in that the word denoted individuals, not groups. At that time the faṭā was a man still young and vigorous, valiant in warfare, noble and chivalrous: an essentially personal attitude and, though obviously linked with tribal society and its combat, one not dependent on any collective activity or explicit religious belief; and indeed it so happens that a modern work will still extol this type of character under the name faṭā. In contrast, however, to these peaceful impressions the ancient chroniclers record many others which are far less so. In this connexion the name fityan is not in fact the one that occurs most frequently; since they were discussing elements of disorder, the writers, who belonged to the official classes, gave them names suggestive of the mob or rabble; the most general term, which the recipients adopted with just as much pride as did other men of the people in revolutionary France the term sans-culotte, is ṣaw‘yān ("va-grant, outlaw"); other quite common terms were abšāb ("rift-raft", shdtir, pl. shdtāt ("artful [ones]") and, from the time of the Salāqikids, rind (q.v.), pl. rūnāt ("scamp"). It is with their condition in Baghdād that we are through the documentation most familiar, but it must not be forgotten that the special character of that town may mean that they did not occur there in their widely-spread form, and it is important to study them also in any other place where it is possible to do so.

In Baghdād, we see the ṣaw‘yān emerging from obscurity in the periods when authority was relaxed. Well-known pages of al-Ṭabaršīr al-Mas‘ūdī evoke them for us, armed with stones and staves and with no protection other than helmets made of palm-leaves, standing together in defence of the caliph al-Adām against the attacks of the Khurāṣānīs who supported his brother al-Ma‘mūn, or, half a century later, in the cause of al-Muṣta’īn against the troops of al-Mu‘taazz. The three centuries from the 4th/10th to the 6th/12th are full of tales of disturbances fomented by them or in which they took part, their exploits only ceasing at exceptional times under strong rulers (the Būyid ʿAbūd al-Dawla, the three great Saḥālīkīs). During the civil wars of the last years of the independent caliphate, numerous leaders sought their help and enrolled them in their police forces. In 361/972, when arms had been distributed
to those who had declared themselves ready to set off for the Holy War against the Byzantine invaders, disorders ensued which were ended only by burning down the quarter of the town. In about 420-5/1028-33, two of their leaders, Ibn al-Mawsill and al-Burgdjam, were the real masters of the capital and forced the appointment as head of police of Muham mad al-Nasawi who was regarded as one of their friends and who in any case treated them with consideration and relied on them. If we are to believe later traditions, it is possible that the Buyid Abū Kālidār was an associate with them. In the following century the head of the futuwwā in Baghdad in about 530/1135 and the succeeding years included the governor and members of the vizier's and the sultan's families among his followers. These are only a few instances out of a multitude of other less striking ones. When they were strong, they succeeded in plundering, but the chief complaint of the merchants in the suks was in general less of their "thefts" than of the "protection" khifdrā, kumdya, ghnā, which, following the example of certain great men, they extended over the suks for the sake of the spoils that fell to them. They were particularly powerful in the outlying districts, but also in certain quarters of Karīkh, inhabited by artisans, on the left bank of the Tigris and, later, at Bāb al-Azāvj on the right bank, at the gates of the capital which provided their livelihood.

Who were they, what were their aims? In the first place they were clearly humble people, often without any established or definite profession; but more exalted persons readily mingled with them, either being attracted by them or, from ambition, desiring to have followers. They certainly had no 'programme' in the sense that a modern popular party would have, and often an inclination towards plunder and the rewards derived from it seem to have been their sole motivation; however, at the same time they had a more specific ambition, which may cause some surprise: they wanted to be enrolled in the police (shurta), partly of course for the sake of the regular pay, but also and primarily because to join the police was the surest way of avoiding trouble with them. This is also the reason why one sometimes comes across returns of persons who, acting as volunteers (mufāsārsūn), helped the government against their former companions. Among the masses, the true 'ayydrūn enjoyed the popularity of thieves who attack the rich, an elementary form of class resistance; sometimes they joined forces with the bourgeoisie in support of a native prince, as in the Sāmānīd territory; sometimes the bourgeoisie relied on them in resisting the authorities whom it resented as foreigners, particularly during the Turkish period. Their greatest success, in Sīstān, was the elevation to princely authority of a dynasty that had sprung up from themselves, that of the Saffārīds, which had started out by superseding the inadequate forces of the Caliph during the struggle against the bedouin Khāridjīs; and without going as far as that, there were many occasions when they made and undermined princes. More usually, in the majority of towns which had no shurta, they formed an indispensable local militia, whose quality was enhanced by their active traditions of sporting and military training and upon whom the rā's of the city relied, whether or not he was their actual leader (see the case of Bukhārā, where the K. al-Dhakhdhir clearly shows the official standing of their battalions alongside the army and the ghādir). It will naturally be asked what connexion there is between the fītyān whom we described at the beginning of this article and the 'ayydrūn of whom we are now speaking. The texts, however, make it clear beyond question that many of the fītyān of the first sort called themselves or were called 'ayydrūn or some equivalent name, while many of the 'ayydrūn on the other hand called themselves fītyān or followers of the futuwwā. An at least partial equivalence is therefore indisputable, and the only question is to know if this is or is not absolute and, insofar as it is confirmed, to understand its significance. To find the answer, we have to remember the existence of the urban 'asabiyyāt. In eastern towns certain kinds of factions existed almost everywhere under this name, feuding in the name of some particular doctrinal eponym; but they are more profoundly characteristic of a certain type of urban society. Now the texts also leave no doubt that the concepts of 'asabīyya and futuwwā were, at least in part, inter-related. In the moral sense, 'asabīyya is the principle of solidarity of a group, futuwwā the individual qualities by which it can be achieved. This being said, it is evidently as impossible to attribute any great numerical strength to the sodalities of fītyān of the mystico-literary texts as it is to deny it to the 'ayydrūn belonging to the 'asabīyyāt who inspired the accounts in the historical and related works; but we see very clearly that, in a sense that is materially elastic but morally no less strong, the members of the 'asabīyyāt could have regarded themselves as true adherents of the futuwwā and that, among the fītyān in the apparent idyllic sense, many individuals or groups may in fact have been steeped in the 'asabīyyāt and the disturbances that they engendered. Consequently the futuwwā must apparently be considered neither as an interesting but marginal socio-ideological institution, as most of the ancient descriptions imply, nor even solely or precisely as a form of reaction by the destitute classes, but as a general and fundamental
structural element of urban society in the mediaeval East.
Within which frontiers, in the East? Though attested throughout the whole Irano-Mesopotamian territory, the ʿṣydra-futuwwa is not recorded, at least under those names, in Syria or Egypt. There were militias there, it is true, the ʿabdāšt (q.v.), a name which, like ʿṣydn, evokes “youth”; they are found first in the 4th/10th century, ranged against the authorities while simultaneously entrusted with the functions of the ʿghurā; later, towards the end of the following century, they became an officially accepted institution, their ʿrāʾls then being ʿrāʾs for the town, sometimes almost by inheritance; however, they progressively declined in face of the organization of new powers relying on military garrisons. The resemblance to the ʿṣydn, both in the facts and the meaning of the name, is evident; and yet the analogy is not absolute. The status of the ʿabdāšt became more systematically official than that of the ʿṣydn, their recruitment was perhaps more bourgeois, and above all there is no indication that their organization was in any way concerned with the communal life, the rites of initiation and the ideological elaboration which, as we shall see, characterize the futuwwa; if we add to this that the latter’s domain was that of Sāsānid tradition, while the ʿabdāšt only existed in the ʿayydrun period, it becomes evident that Cārūn ʿayydrun, for the rest he is a phenomenon of wider occurrence, and even there generally coexisted with the other without confusion.

These remarks on the ʿayydrun apply particularly to the period up to the 5th/11th century; at that time there occurred an evolution, both among them and in the surrounding society, which in itself is of great historical importance, but which furthermore, as we shall see, is at the origin of the appearance of that form of literature on which, compared with the reality, is at first sight so misleading. The growing importance of the ʿṣydn-ʿayydrun, attracting persons of high social rank and an increasing number of men of erudition, provoked a tendency among them to clarify and scrutinize the values that the futuwwa in fact implied; in the second place, and simultaneously with this process, another movement came into being within ʿṣydnism which, for long restricted to individual forms of asceticism and mysticism, became organized into communities where, very naturally, the problems of collective life brought them into touch with the experience of futuwwa; it was perhaps the extra-legal aspect of the futuwwa which formed the attraction for some ʿṣydnīs like the Malamatiyya. It was in these circles, from the 7th/13th century onwards, that a specific literature on futuwwa made its appearance, which, for the first time, gave a characteristic feature of which it is that it provides us with a spiritual elaboration of the subject, with the addition of certain pseudo-historical traditions and a selective and idealized portrayal of the ancient ʿṣydn (such as we described earlier, partly from this source), without any other allusion being made to the real organizations of ʿṣydn and the use of violence, of which nevertheless the chroniclers continue to provide such irrefutable evidence—to such an extent that we might well wonder if we really are dealing with the same people, were it not that we know that at least from the 7th/13th century some of the writers of the treatises of this type were well-known as leaders of authentic groups of real ʿṣydn.

The attitude of the governments and aristocracy towards the futuwwa was consequently modified. It is true that they continued their struggle against those who fomented disturbances or who were suspected of heterodoxy, but, far from being opposed to the concept of the futuwwa, they were hostile only to what they called distortions, or deviations from what it should in fact be. Nīṣām āl-Mulk, the great Saljuqī vizier, in whose lifetime a vizier of the Caliph persecuted the group of ʿṣydn suspected of ʿṣydnīslic to whom we have already referred, was at the same time the man to whom one of the first treatises of murawwana and futuwwa was dedicated.
Again, during the following century, in the well-known pages where the Hanbali Ibn al-Diawzi attacked the fitiyān of his day and their conception of sexual honour, their acts of violence, etc., what he preaches is not so much the destruction of the futuwwa, as the taking over of the futuwwa, in its anarchic condition, by a superior authority capable of guiding it towards its true aims.

It was this reform that the caliph al-Nāṣir (577/1181-620/1223) was to accomplish. The dominating preoccupation of this remarkable man was his attempt to regroup under the aegis of the Caliphate all spiritual families and all organizations claiming to have kinship with Islam. At a very early date (578/1182 according to Ibn Abi '1-Damm and al-Sakhāwanī quoted in Muṣṭ. Diwād, see Bibl.) he had himself initiated into the Baghādādī futuwwa by its grand master, šaybān ʿAbd al-Diabbar. As we have seen, the futuwwa was to a greater or lesser degree diversified, and in the time of al-Nāṣir in Baghdad there were five branches of it, one of which, the Nabaweyya, whose existence is attested as early as the 4th/10th century and which was also known elsewhere in the 6th/12th century by Ibn Dūbayr, devoted itself to fighting against the heretic and the infidel, while another was the Rāhštisīyya, ʿAbd al-Diabbar's branch. Al-Nāṣir cannot have been a simple, ordinary man, he preaches is not so much their destruction as the transformation of the futuwwa, the troubadours, the ruffians, into an instrument of the state, the shārīʿa of which the Grand Master was the caliph assisted by a hierarchy of the simple adepts by the spoken word only (bashīl) and those who had girded on the sword (ṣayfī), but we do not know how far this corresponded to reality; at the end of the century an intermediate stage was still spoken of, that of those who had drunk the cup (ṣaybī). Solidarity between comrades had to be absolute. The general organization, in which the Grand Master was the caliph assisted by a nābūlī, was divided into a certain number of sub-groups (ahbāb, pl. of ḥāb) each of which consisted of several būyūṭ; and a kind of autonomous internal jurisdiction settled their disputes by a procedure in which the oath of honour of the futuwwa played a great part. The books on futuwwa do not mention any sporting privileges; but we know that these did apply to the rearing and flying of homing pigeons, an ancient occupation of the fitiyān but despised by the aristocracy, and the sport of the bundikh (see Kaws) (accompanied by the shooting of birds), the rules for which were then officially promulgated, and which seems to have been a favourite diversion of the Turkish military caste; we may suppose that this aspect of the fitiyān did not interest the writers who were considering the futuwwa in its moral and religious aspects.

There is no doubt, however, that from then onwards there was a certain convergence between the popular futuwwa and the futuwwa of the Sūfīs. One of the most ardent disseminators of the reformed institution was the same Suhrawardī, general theological adviser to al-Nāṣir and founder of an order of Sūfīs, and one who commanded extraordinary respect, especially in Asia Minor. A certain reciprocal penetration took place between the combative spirit of the fitiyān and the spiritual ideal of the Sūfīs. One manifestation of this was the adoption for the futuwwa of inīdāds inspired by Sūfī models, by means of which each group claimed attachment to ancestors, whether true or suppositional, whose patronage was morally significant: generally, in the end, to 'Āli, on account of the ambivalence of the word fašāl, and very often after him to Salāmīn, the patron of the Irano-Mesopotamian artisans. In more general terms, we thus see the futuwwa demonstrating in its own particular way the method of absorption of popular movements by Sūfī organizations which from the end of the Middle Ages to our own time has characterized such large sectors of social evolution in Muslim countries. It is merely necessary to repeat that the literature that resulted from this evolution cannot
be taken as a guarantee of what the classical futuwwa had been in earlier times.

Bibliography: It is impossible to enumerate here all the historical, literary, religious etc. works which provide occasional and exceptional valuable documentation on futuwwa; references will be found in the articles listed below, particularly those of Fr. Taeschner and Cl. Cahen; we shall confine ourselves to adding two works which have more recently become known, the K. al-Dhahabir wa 'l-tubah of al-Raghib b. al-Zubayr, ed. Hamidullah, Kuwait 1953, and the Ta'rikh of Ibn Abi 'l-Damm, unpublished, passage quoted by Muşaffa Dişâwîd in the work listed infra, 52. In the section following we shall consider only those treatises which, either wholly or in part, are devoted specifically and explicitly to the futuwwa, with the reservations noted in the article. The earliest is that of Sulamî (about 400/1010), ed. Fr. Taeschner, As-Sulami's Kitab al-Futuwwa, in Studia Orientalia Joannis Peter Der ... dicit, Copenhagen 1953, which is followed by some special sections on the futuwwa in the larger works of mysticism or muruswa of Thâ'alîbi (Brockelmann, I, 286), of ʿAbd Allâh al-Ansârî (Abdulbaki Gölpinar, op. cit., infra, 10), of Ibn Djadawîy (ed. Taeschner in Documenta Islamica Inedita [Festschrift für Th. Nöldeke, Leipzig 1951]; Risdâla, see R. Hartmann, al-Kuschairis Darstellung des Sufismus, Türk. Bibl. XVIII, Berlin 1914). In the following century appeared the critical chapter of Ibn al-Djâwî in his Taḥlîs Iblîs, ed. Cairo 1340, 421-2. But it was naturally around the caliph al-Nâṣîr that works on futuwwa especially developed. The most notable of these is the Bast modâd al-tawfiq of the Hanbali Ibn al-Mîmâr (and not ʿAmmar, as has been read until recently), which was studied by Thornîng (see infra) as early as 1913, though its attribution to al-Nâṣîr's circle was only established by P. Kahle in his article Die Futuwwa-Bündnisse des Kalifen al-Nasir, in Festschrift Georg Jacob, in Festschrift Georg Jacob (op. cit., infra, v, 1952), of Ibn al-Djawzi in his Al-Kuschairis Darstellung des Sufismus, das Futuwwarittertum des islamischen Mittelalters, in Beiträge zur Arabistik, Semitistik und Islamwissenschaft, Leipzig 1944 (not to mention his contributions on the later Turkish futuwwa and the âqîs, for which see below). More recently, critical views of varying validity have been expressed by G. Salinger, Was the Futuwwa an oriental form of Chivalry?, in Proceedings of the American Philosophical Society, xxiv (1956). A valuable and illuminating study of social psychology has been made by L. Massignon, La futuwwa ou pacte d'honneur entre les travailleurs musulmans au Moyen Age, in La Nouvelle Clio, 1952. After bringing to light certain details concerning Les Débuts de la futuwwa d'al-Nasir, in Oriens, 1953, Cl. Cahen has attempted, by a more complete use of historical information, to further our knowledge of the futuwwa organizations as an organic part of oriental urban society, in his Mouvements populaires et autonomisme urbain dans l'Asie Musulmane du Moyen Age, in Arabica, 1958-9 (also printed separately, 1959); abridged German version: Zur Geschichte der städtischen Gesellschaft im islamischen Orient des Mittelalters, in Saeulium, ix (1958), 59-76, and quite recently the tiltîn of Khursân have attracted the attention of C. E. Bosworth in The Ghaznevids, Edinburgh 1963, chap. VI. Of the Arab scholars, besides the contributions of Muşaffa Dişâwîd reproduced in the introduction to his edition of Ibn al-Mîmâr, we should add S. ʿAffît, al-Maḥlî%C3%B9miyya wa ʿl-Sâfîyya wa ahl al-futuwwa, Cairo 1364/1945. For the Turkish scholars, who for the most part have concerned themselves with the Turkish period of the futuwwa, see below.

The fatâ, in its ancient Arab form, has been the subject of expositions, for example in Bishr Farrîs, L'honneur chez les Arabes avant l'Islam, Paris 1932, of Umar al-Dasûkî, al-Futuwwa wa al-ʿArab, Cairo 1953, and M. Bravmann, On the spiritual background of Early Islam, in Muséon, lxiv (1951). (CL. CAHEN)
POST-MONGOL PERIOD

(i) Survival of the courtly *futuwwa* after the Mongol Invasion.

When Hulegu, the grandson of Chingiz Khan, conquered Baghdad in 1258, putting a bloody end to the *Abbasid* Caliphate, he also dealt a blow to the *futuwwa* organization, which the Caliph al-Nasir II-Din Allâh had reformed and brought to new greatness by introducing it into courtly life. *Futuwwa* writings, which had come into being under al-Nasir, survived for a time to the extent of entries in the great encyclopaedias (here I would mention the Persian encyclopaedia *Nafâ'is al-funun fi masa'il al-uyûn* of Amuli, and the *Tuhfat al-ibnân* of *Abd al-Razzâk Kâghânî), which have a chapter on *futuwwa*, giving extracts from the writings, which had come into being under al-Nasir, c. Abu al-'uyûn al-'alî, *Nafd*is al-funun fi masâ'îl al-âdâb, c. Abd al-Razzâk Kashani), which have a chapter on *futuwwa* in its courtly form. For some time, however, the courtly *futuwwa* did in fact persist in Egypt. This was connected with the existence of this form of *futuwwa* under the Caliphate of the *Abbasid* Caliphate to that country under the Mamlûk sultan al-Zâhir Baybars (658-676/1260-1269), who had bequeathed to his successor 'Alâ' al-Din Kaykâbûd 1 (675-693/1276-1294), the great *Shaykh* Abû Hâfîm al-Suhrawardî—al-Nasir's theologian adviser—came to Baghdad as ambassador and performed the *futuwwa* rituals. One might be justified in assuming that this contributed to the spread of *futuwwa* in Anatolia, yet this impetus from courtly *futuwwa* does not seem to be solely responsible for the development of *Akhilik*. The existence of this form of *futuwwa* in Iran can be proved even before that in Anatolia, and everything tends to the fact that it must have reached *Abâbâd* from there. This theory is also supported by the cult of Abû Muslim (q.v.)—the propagator of the *Abbasid* revolt against the Umayyads—who (rather like Sayyid Ba'tsil [q.v.]) became a sort of national hero, first for the Persians and later also for the Turks. However, whilst Sayyid Ba'tsil was regarded as the model of fighter for the faith—the model for the artisans and the lesser people, who formed a corporate body under the name of *Akhili*, according to a widespread tale which was responsible for shaping the picture of Abû Muslim in the imagination of the people, the *Akhili* led by him—especially those of Marw and Khurâsân—were the ones chiefly concerned with the *Abasîd* rising. Even if one regards this as a mythical elaboration of the figure of Abû Muslim, one may still assume that the institution as a popular element in the social structure of Iran dates quite a long way back.

Although there is clearly a connexion between the *futuwwa* and the *Akhili*, there is some question about the earlier Islamic and Iranian antecedents of the *futuwwa* (see above). *Akhili* Farâdî, *Zindânî* (died 1257/1265), one of the most famous saints in Iran, is, the earliest personality on Iranian soil who is mentioned as an *Akhili*, and he is also revered by the Anatolian *Akhâs* (whose adherence to the *futuwwa* is beyond doubt) as one of their own *shaykhs*, appearing in their rolls of honour (*sililsa*). *Akhili* Farâdî *Zindânî* is held to be the master of the great Persian poet *Nizâmî*, but as the latter was born only in 535/1141 (that is to say 80 years after *Zindânî's* death), one can only regard *Nizâmî* as a spiritual disciple of the great master.

In the 7th/13th and 8th/14th centuries, when *Akhili* flourished in Anatolia (as is borne out by
numerous documents) it also flourished in Iran. There were a number of Akhīs in the time of Shaykh Ṣaḥīf al-Dīn Ardabīlī (1252-1334), the ancestor of the Ṣafawī Shāhs, and some of them must be numbered among his own companions and followers. Notable amongst these is Akhī Sulaymān al-Gīlānī, the father-in-law of the Ṣafavī. In connexion with these, one should probably also mention a certain Akhī Ahmad al-Muhībī al-ʿArbābīlī, by whom we have a Kitāb al-Futūwāt (in Arabic (which contains, however, only quotations from the Kurān and hadith, and saying concerning generality). The Ṣafawī Akhī tradition may also be the basis of the fact that we find the word Akhī (with reduced significance) several times in the Dīwān of Khaṭībī (i.e., Shīʿī Ṣamīʿī), as a name for followers of the Ṣafawīyya.

Further evidence for the existence of the Iranian institution is to be found in the work of the great Persian Sūfī Shāykh and saint Amīr Sayyīd ʿAlī b. Shīḥāb al-Dīn Ḥamādānī, called Ṣālīh 11 (714-786/1313-1384), entitled Risāla-i Futūwawīyya, in which he not only equates futuwwa and āsawāwī (and where the possessor of the futuwwa, the futuwwatdar, is referred to by the name of Akhī), but where there is also clear reference to the institution as such.

Like the Anatolian Akhīs, the Iranian ones occasionally intervened in politics. This can be seen from the example of Akhīdīdīk [i.e.] who gained power in Tābrīz and Ādharbaydān for three years (758-760/1357-59), until the Dījālīkī Shāykh Uwāyṣ al-Dīn al-Ḥusaynī al-Radāwī, dated 931/1524, the full title of which is Miṣḥāb al-dādāšt, is the most important of these documents. It describes the futuwwat customs of the guilds in full detail, and from this it appears that the futuwwat of the guilds had nine grades (whereas that of the Akhīs had three). The first three of these, nāṣī, sim-jarāk, and meydān-beste, may be taken to correspond to the first three grades of a trade: apprentice (terbiye, or ērā), journeyman (kafās), and master (usta), which do not, however, appear under these names in the futuwwatnāme. The next three grades (that is to say, 4 to 6), are those of the master of ceremonies, the nakīb: bishrewīsh (i.e., the assistant of the nakib), nakib, and head nakib (nakib al-mubābī); the three top grades (7 to 9), are those of the Shāykh: the representative (khalīf) of the shaykh, also known as Akhī, the Shāykh, and the Supreme Shāykh (shāykh al-shaykh). The Akhī, therefore, is the seventh grade in the hierarchy of this particular guild futuwwat. There is a further difference: whereas the Akhīs show a division into two classes, the futuwwatnāmes of the guilds give evidence of a division into three: Kōwī, Shīrīh and Seyfī. Thus there is an intermediate class between the lowest members—those who are committed by their word only—and the full members—those who have received the accolade; this is the class of those who have partaken of the ritual cup.

A further interesting custom of the guild futuwwat is the one by which the novice, or apprentice—the nāṣī—chooses not only a master as “Patron of the Journey” (yol atası), but at the same time he has to choose two “Brothers of the Journey” (yol kardesleri)—apparently from among the older apprentices—who are to assist him along the path of the futuwwat.

A further thing which emerges clearly from almost every page of the “Great futuwwatnāme” of Sayyīd Ṣeyyīd b. Sayyīd ʿAlī al-Dīn, is its decidedly Shīʿī (and more specifically “Twelver” Shīʿī). Imāmī chronology is clearly reflected in this text when it was written, at the beginning of the 10th/16th century, the “Twelver” Shīʿa enjoyed a
time of expansion because of the Safawiyya, and this led to the foundation of the new Persian Empire. It threatened to spread also to Ottoman territory, until Sultan Selim I put an end to the threat of the new Shi'i Persians by his campaign against Shah Isma'il, over whom he won the victory of Çıldırán [q.v.] in 1514. This was also the time when the Shi'i order of the Bektashiyya [q.v.] was organized by Bâlim Sultan. There are, in fact, some points of contact between the "Great futuwwetname" of Sayyid Mehmed, and the Bektashiyya: a number of the lendemâns—short verses—mentioned there which were recited or sung at the celebrations of the guilds—can also be found in the book Mirât al-mabâsîd fi dâ'i al-mâjâsîd of Sayyid Ahmad Rifat, which describes the Bektashi ceremonies.

There appear to be only a few complete manuscripts of the "Great futuwwetname" of Sayyid Mehmed. There are, however, shorter guild extracts in all libraries, and these are usually also called "futiwwetname". They are generally excerpts from the "Great futuwwetname". One may therefore assume that every guild compiled its own little futuwwetname from that source. It is worth noting that the Shi'i character of the original no longer emerges in these. This fact reflects a trend in the history of religion of the Ottoman Empire where—after earlier indecision between Sunni and Shi'i—the Sunni creed progressively took ground from the days of Selim I onwards. Arabic futuwa writings (discussed by Thorning in a study which has become an indispensable basis for all work on futuwa) also seem to be based on the Turkish "Great futuwwetname" of Sayyid Mehmed, and to represent Arabic translations of excerpts from this work.

Whilst there were other futuwa traditions besides Aâkhilik in most of the guilds whose rule was Sayyid Mehmed's "Great futuwwetname", there was also a group of guilds which must be regarded as the direct continuation of Aâkhilik, namely the tanners and all trades concerned with the treatment of leather, such as saddlers and cobblers. All these paid homage to their pir Aâkhî Eivân [q.v., properly Eivân, an Aâkhî saint of Kârshâhî in Central Anatolia (south-east of Ankara), who is himself said to have been a tanner. They did not use Sayyid Mehmed's "Great futuwwetname" as their rule, but the original futuwwetname of the Aâkhîs, which is that of Yahyâ b. Khalîl al-Burghâzî. There is, however, in most of these manuscripts which come from tanner circles, an appendix informing the reader of the more modern terms, and these are the terms familiar to us from Sayyid Mehmed's "Great futuwwetname". Thus there is evidence that influence was exerted by the futuwwet tradition represented by the latter over the Aâkhî tradition kept up by the tanners.

For their part, the tanners, thanks to their Aâkhî tradition, could exert their own influence over the other guilds, particularly as they had a firm and centralized organisation which had its centre at the grave of their patron saint Aâkhî Eivân in Kârshâhî. At this place there was a tekâye whose guardian, called Aâkhî Baba [q.v.], was taken to be a descendant of Aâkhî Eivân, and regarded (admittedly only in the Turkish provinces of the Ottoman Empire, Anatolia, Rumelia, Bosnia and even the Crimia, but not in the Arab provinces) as the head of all the tanners in the Ottoman Empire. This Aâkhî Baba, or his representative, travelled through the provinces every year, receiving the apprentices into the guild. The main part of this ceremony was their girding with the belt (bukkan) of Aâkhî Baba. Naturally, such ceremonies brought a certain income, and this formed the financial basis of the organisation. The Aâkhî Babas succeeded in gaining the privilege of girding the apprentices to other guilds as well, and thus they gained a position of considerable power among the craftsmen of the ancient Ottoman Empire. Aâkhî Eivân thus became pir not only of the tanners but of the whole of the Turkish guilds. This position of the Aâkhî Babas of Kârshâhî was repeatedly confirmed by edict, and, on the whole, the Ottoman sultans protected the guilds and their organisations. These writings were useful to them on ecclesiastical counts: firstly, they supplied not only the general populace, but in particular the armies on their campaigns, and secondly they were a reserve of men—some of the guilds were bound to do military service; in the earliest days, the guilds were also the only means of reaching the whole population of the Empire. This was the purpose of the occasional processions of the guilds. Ewliya Celebi describes one which took place under Murâd IV in 1048/1638. Such gatherings gave the ruler a picture of the military and economic strength of his country.

There were, however, some protests from 'ulema' circles, both against the Shi'i leanings of the "Great futuwwetname" by Sayyid Mehmed, and against the Aâkhî Eivân cult of the tanners. A learned man by the name of (Mustafa b. Fakhr al-Din) Belghrâdî wrote a book entitled Nisâb al-ittisâb, sa-âdâb al-iktiisâb, attacking these things and presenting the crafts from the strictly Sunni point of view. The book was of no avail; probably it never even reached the hands of those for whom it was intended.

There is a great amount of important documentation concerning the guilds (including their rules and regulations) in Turkish archives, the major part of which has not been studied.

The European provinces, including those inhabited by other races, like Bosnia, took part in the general development of the Turkish guilds; they also relied on the same writings.

As has already been mentioned, the "Great futuwwetname" of Sayyid Mehmed b. Sayyid Aâkhî al-Din was also the accepted authority in the Arabic provinces of the Persian Empire. There, the guilds used extracts, written in Arabic, and adapted them to their special needs. This is the material on which H. Thorning based his epoch-making work. There is a description of the guilds in Damascus in 1683 by Elia Qoudsi, from which it becomes clear that the organization at that time was still essentially the same as that with which we know to have existed among the Turkish guilds.

A valuable document concerning the futuwwet as an organization of the guilds comes from Persia. This is the Futuwwetname-i sultânî of the well-known writer Kamâl al-Din Huseyn Wâ'iz Kâshîfî (died 920/1515), a nephew of the famous poet Şâni. Unfortunately only one manuscript has so far come to light; it is in the British Museum, but is incomplete and still awaits an editor. One may hope, though, that further manuscripts of this important work, and of others concerning the futuwa and the guild organizations, will emerge from the still largely unexplored libraries of Iran.

In Turkestan also it can be shown that futuwa is at the basis of the guild organizations. The eastern Turkish guild treatises (of which there was quite a number in the collection of the Berlin orientalist Martin Hartmann), are generally called risâla. It has not been shown that there is even a reference to the Anatolian saint of the guild,
Akhl Evren. Thus the effects of his cult stretched as far as Turkestan.

In the course of the 19th century, with the influx of European goods and the expansion of the European type of commerce, the guild-organizations fell into decay in all states of the Islamic Orient. For this reason it has been gradually abolished in all countries of the Islamic world. In Turkey, it was discontinued in Young Turk times, and replaced by chambers of commerce (by a law of 13 February 1325 (1906-07), and later by another law of 14 April 1325 (1907-08)). A few surviving features were abolished in the time of the Turkish Republic. With this, therefore, the organization of the futuwwa also came to an end.

In the Arabic dialect of Egypt, futuwwa means "ruffian"; cf. the Mudhakkirat futuwwa, 2nd ed., Cairo 1927, written in colloquial Arabic.

Bibliography: On Turkish guilds in general: Oğhman Nürtî [Ergun], Mejdî-î-i sâmî-i beldeîî, Istanbul 1338/1922, ch. VI: Esnâd teşkilâtî ve tıfîdjet uşâlî; Fr. Taeschner, Das Zunftwesen in der Türkei, in Leipzig's Vierteljahreschrift für Südosteuropa, v (1941), 172-182. Concerning the "Great futuwwetînâmê" of Seyyid Meşmed b. Seyyid 'Allâ, in a letter from the Egyptian capital to Ascalon, Palestine, took twelve days, while those carried between Tunisia and Egypt required from one to two weeks. AL-FUWATI (see IBN AL-FUWATI).

FUYYDĐ, pl. of fuyyq, (from Persian payq), is the name only not of the couriers of the government Barîd [q.v.], but also of the commercial mail serving the population at large. This term was common all over North Africa and Egypt during the 5th/11th and 6th/12th centuries, while on the Egypt-Syria route the word Barîd, letter-bearer, was used. Occasionally, rasal appears in the same sense, although the latter is more regularly applied to special messengers (see below).

Since only a few letters written in Arabic script on paper have been published, for the time being our information about the fuuydi is derived exclusively from the letters of the Geniza [q.v.], which are written in the Arabic language but in Hebrew script.

In addition to carrying letters between the cities of a country, the fuuydi provided the international mail services during the winter, when the sea was closed, and in midsummer, since the ships used to sail in convoys in spring time and in the autumn. As with the Barîd, one and the same man would carry the dispatches entrusted to him from the starting point to the final destination, e.g., from al-Kayrawân to Cairo, or even from Almeria, Spain, to Alexandria.

For the task of the fuuydi was of a confidential nature. The names of the fuuydi (mostly Muslim, some Jewish) are often referred to in a way which indicates that they must have been personally known to the addressee, albeit coming from a distant country.

No traces of any guild organization of the fuuydi have been found thus far, but the times for their departures and arrivals must have been more or less fixed. The Geniza letters suppose that there was a weekly service between Cairo and Tyre, and presumably also other Syro-Lebanese-Palestinian cities, see below), while that between Cairo and al-Kayrawân also was regular, but dependent on the caravans, which, in normal years, seem to have made the double journey three times during one winter.

As to the speed of this service, the time between Cairo and Alexandria required four days approximately. A letter from the Egyptian capital to Ascalon, Palestine, took twelve days, while those carried between Tunisia and Egypt required from one to
two and a half months, depending on the length of the stay of the caravans in each of the localities visited by them (which stay was used by the *fuyūdī* for collecting additional mail).

The cost of the forwarding of a letter from Jerusalem to Ramle was half a *dirham*, that from Alexandria to Cairo one *dirham* exactly, that from Almeria to Alexandria, referred to above, one and a half *dirhams*, four letters being sent to the same address. These prices are indicated in the letters preserved because payment was to be made after delivery. The prices were certainly not fixed, but probably customary.

The payments to special messengers, called *rasūl*, of which three cases have been traced thus far, were up to fifty times as high as those made to *fuyūdī*. A service midway between the latter, who moved too slowly, and the special messengers, who were too expensive, was provided by the *fayyūdī* or express courier. The request *tuṣṣayr il kīlāb*, "fly your letter to me", most probably refers not to carrier pigeons, but to this express service. Carrier pigeons might have been intended in another letter, in which the addressee is asked to send a *barz*, or release, *mālāl līfayr*, "with the birds", possibly a technical term, parallel to the usual request to send a letter either bi *l-ma'rūsh", "by boat" or *mālā* *l-fayūdī*, "with the mail couriers".

GABON [see GABON].

GABAN, properly *GABANPERT* (cf. Abu l-'Faradj, *Chron. Syr.*, ed. Bruns, 329 and *Kaplan* *pp* *o* *ou* *lav* *ov*, Cinnamus, i, 8), an Armenian mountain stronghold on the Tekir-Su, a tributary of the Djayhān, now called Geben and belonging to the *ilçe of Enderin in the il of Maraş*. Here the kings of Armenia kept their treasures and retired in case of need; the last king Leon VI de Lusignan of Maras. Here the kings of Almeria to Alexandria, referred to above, one and a half *dirhams*, four letters being sent to the same address. These prices are indicated in the letters preserved because payment was to be made after delivery. The prices were certainly not fixed, but probably customary.

The payments to special messengers, called *rasūl*, of which three cases have been traced thus far, were up to fifty times as high as those made to *fuyūdī*. A service midway between the latter, who moved too slowly, and the special messengers, who were too expensive, was provided by the *fayyūdī* or express courier. The request *tuṣṣayr il kīlāb*, "fly your letter to me", most probably refers not to carrier pigeons, but to this express service. Carrier pigeons might have been intended in another letter, in which the addressee is asked to send a *barz*, or release, *mālāl līfayr*, "with the birds", possibly a technical term, parallel to the usual request to send a letter either bi *l-ma'rūsh", "by boat" or *mālā* *l-fayūdī*, "with the mail couriers".

FYZABAD [see FAYDABAD].

Ogoué Ivindo, 32 in the Ngounié, 22 in the Ogoué-Lolo, 10 in the Nyanga and 4 in Upper Ogoué).

The paucity of Muslims is matched by the small number of mosques, one at Port Gentil, one at Lambaréné, two at Libreville, the biggest of which was built at the expense of the French Government. The Muslims in Gabon, representing 0.4% of the population, were of importance only during the colonial period in the capacity of subordinates in the administration. They still play a certain part as a commercial bourgeoisie.

**Bibliography:** Some lines in the various works relating to Gabon. The Abbé Raponda-Walker has very kindly furnished the essential features of the information contained in the above article.

(R. Cornevin)

GABAR, term generally used in Persian literature—with rather depreciative implications—to indicate *Zoroastrians*. Philologists have not yet reached agreement on its etymology. Several suggestions have been made, e.g., (a) from Hebrew *ḥabber* ("companion") in the sense of *Kidādān* 72a; (b) from Aramaeo-Pahlavi *gabrā* (read *mart*), especially in the compounds *mālā-martān* ("the Magi") (written *māg-gabrā-dn*); (c) from a Persian corruption of Arabic *kafir* ("unbeliever"). The first two etymologies are very improbable, so that the derivation from *A. kafir* seems the most acceptable. In Persian literature the word takes often the depreciative suffix -*ak* (*gabrāk*, pl. *gabrākān*). Persian knows also the form *gawrlvār*, Kurdish the forms *gebr* (applied to Armenians), *gawr* (*Zoroastrians*), *gāʾer* (applied to Europeans, especially Russians), Turkish the well-known word *gawur* (unbeliever). In Persian literature the word is applied only secondarily to "unbelievers" in general, the oldest texts using it especially and technically for *Zoroastrians*. This, together with the iranization of the Arabic word which probably lies behind it, points to a very old origin—purely "oral"—of the loan, certainly at a period preceding that when Arabic words were introduced in abundance into new-Persian, at the birth of new-Persian written literature.

G
The Gagauz are a small Turkic tribe speaking a Turkic language but Orthodox Christian in religion. At the present time they are settled in the south of the Moldavian S.S.R. (Bessarabia) in the district of Komrat, Cărlig-Lungă, Kangaz, Tarakliya, Vîlkanesti; in the south of the Ukrainian S.S.R. in the district of Zaporozhe and Odessa (Izmail) and in the district of Rostov in the Russian S.S.R. There are also small Gagauz settlements in Central Asia—in the districts of Kokpekî, Zarma, Carșikî, Aksuat and Urdzar in the region of Semipalatinsk and in the eastern Kazakh and Pavlodar region of the Kazakh S.S.R. The Gagauz also live in the region of Frunze in the Kirghiz S.S.R. and in the district of Tashkent in the Uzbek S.S.R. The total number of Gagauz in the U.S.S.R. is 124,000 (1959). In Bulgaria the Gagauz occupy the villages in the district of Varna, near Provdyâ, in the Dobrudja near Kavarna and in the south of Bulgaria in the district of Vambol and Topolovgrad. In Rumania there are only a few Gagauz villages left—and those in the Dobrudja.

The name Gagauz is derived from a small Turkic tribe speaking a Gagauz language. The etymology of the name is not clear. According to one hypothesis the Gagauz originate from the Kumans or Polovtsians who played an active role in the history of the south Russian steppe and the Kievan Rus. The name Karvuna-land was changed to Dobrotic-land. The form 'Dobrudja' became current at a later date. Dobrotic was followed by Yanko (1356)—according to other sources Yanko—the last Ottoman ruler. In 1398 he was obliged to acknowledge the suzerainty of the Ottoman Turks. After the fall of the Gagauz state some of the population accepted Islam but the rest remained true to Christianity. With the conquest of Constantinople the Ottoman Sultan recognized the Gagauz tribe as an independent state and the Gagauz of the Bessarabian peninsula—in connexion with a similar movement by the Bulgars—over the Danube to Russia (until 1769 into the province of New Russia; between 1787 and 1791 and most strongly between 1801 and 1812 into Bessarabia).

Initially this went on without any apparent interference from the Russian government, which only later introduced order into the management of the land and the administration. This migration was apparently caused by the oppression of the robber bands (the Daghi and Kirdjali) of Pasvand-oglu 'Othman [q.v.], the notorious Pasha of Vidin, and of Kara Feydi).

Since 1949 the territory of the Bessarabian Gagauz has belonged to the U.S.S.R. In 1949 all the Gagauz villages in the Moldavian and Ukrainian S.S.R. were collectivized together with those in Bulgaria and Rumania. The Gagauz work mainly in agriculture, cattle-raising, wine growing and, on the coast, fishing. As a result of being the long-standing neighbours of the Bulgarians, the Gagauz have borrowed much from their way of life, their customs and their domestic activity. The most salient characteristics of the Gagauz are diligence, hospitality, cheerfulness and contentment.

The language of the Gagauz belongs to the southern group of Turkic languages, i.e., it is closest to the Turkish of Turkey, of Adharbaydjan and of Turkmenistan. Several phonetic features, almost the whole syntax and phraseology as well as most of the morphology and vocabulary of the Gagauz are not Turkish. The following points may be enumerated here:

1. the softening of consonants before front vowels;
2. the appearance of the gender suffixes -ka, -yka;
3. syntactically the Gagauz language is completely Slavicized and un-Turkish;
4. the strong foreign element in the vocabulary (Greek, Rumanian and Slavonic).

For a long time the Gagauz possessed no literature of their own. For ecclesiastical purposes the Greek Church used 'Karamanî' books written in the Turkish language. But these books contain lives of the saints and prayers. By contrast a rich folk poetry has developed, together

(A. BAUSANI)
with riddles (bilmeydā), proverbs (soleiś), folk-songs (tiirkii, mani), stories (masal), etc. The Gagauz alphabet, based on the Russian with additional letters, was created in the Moldavian S.S.R. in 1957. Since 1958 elementary education in the Gagauz language has been introduced. For this purpose text books are being compiled. Work is gradually going on towards the development of a Gagauz literary language. In Kishinev a Gagauz newspaper is published twice a month as a supplement to the Moldova Socialista.

(Wlodzimierz Zajączkowski)

GAKKHAR, a war-like Muslim tribe, inhabiting mostly the Hazara district and parts of the districts of Rawalpindi, Attock and Djehlam (Jhelum) of West Pakistan and that part of the Indian-held territory of Djammi which lies to the west of the Cīnāb; it is of indigenous origin. Agriculturists by profession, the Gakharaks are considered socially high and stand apart from the local tribes of Rādpūt descent who resent their arrogance and racial pride. Many of the religious and social ceremonies observed by the latter tribes, were not permitted to the Gakharaks who had not only ravaged their territory and inflicted a crushing defeat on them but were also instrumental in their conversion to Islam. It is also possible that some disgruntled members of the tribe, who had unwillingly abandoned the faith of their forefathers, might have nurtured a grudge against the Gakharaks and, finding a suitable opportunity, wreaked their vengeance. Here again we are confronted with a difficulty in that history does not record any large-scale defections on the part of the Gakharaks. The Tābahā-i Nāsīrī (Raverty, i, 485) also says that the Sultan "attained martyrdom at the hand of a disciple of the Mulahidh (sic)", who was apparently a Muslim, and not a Hindu as stated by Hamd Allah Mustawfi (Tārīh-i Ḡūz̄a, i, 472), and al-D̄uwaynī (tr. Boyle, i, 326), where "Hindu" has been wrongly translated as 'Indian', as he was
found on capture to have been circumcised. He could not, therefore, have been a Khokhar as there is no evidence to prove that the Khokhars had ever been so circumcised. The chief among the Khokhars captured in the present expedition was Mu'izz al-Din Muhammad Ghūrī. Piecing all the recorded evidence together one is led to believe that the assassination was a Gakkhār, smarting under the insult and humility suffered by his tribe. It was the result of a personal vendetta and had no political or religious implications as has been suggested by Raghib al-Dīn (Zan'ī al-tasvīri, ed. Shaimmīnov, i, 56) and Ibn al-Athīr (sub anno 602 A.H.) involving even Fakhr al-Dīn al-Rāzī (q.v.) in the conspiracy.

The Gakkhārs continued to harry the Delhi Sultans and in 645/1247 even a peace-loving prince like Naṣir al-Dīn Māḥmūd had to take measures against them. He appointed Balbān, who reduced their country, took revenge on them for their continued incursions, chastised them for having allowed passage to the Mongols through their territory and made thousands of them captives. Malik Aṭīrūnī, who had forcibly married Rādiyya Sultānī, most probably had pressed these very Gakkhārs, along with the Dīās and other tribes, into an army with which he opposed the forces of the slave king Mu'izz al-Dīn Bahram Shāh but was defeated. Almost a century later they invaded the Pandjāb in 743/1342, during the reign of Muhammad b. Tughluk, killed Tāhir Khan, the viceroy of Lahore and "completed the ruin of the province". Taking advantage of the disturbed conditions in the wake of Timūr's invasion of India (802/1399), they tried to harrass the great conqueror but had to pay dearly for their audacity. They again gave trouble to Bābur (q.v.) during his victorious march 932/1525 against the Delhi Sultans. Ibrāhīm Lahorī captured their fort of Phafwala (now called Phafwala, but mostly in ruins, about 12 miles east of Rawalpindi), ruled by Hātī Khan, their chief, who had to flee before the onslaught of the Mughals. At the end of 933/1526 Hātī Khan waited on the emperor during his return to the Pandjāb and assisted greatly in procuring supplies for the Mughal army. Bābur fully recognized his services, made him a handsome present and conferred on him the title of Sultan but refused to recognize his chieftainship. However, as the result of Timūr's invasion of India (802/1399) following a family scandal, Sultan Adam Shāh was blinded, Adam receiving robes of honour, a diāhr or title of Nawwab. (This seems to have been a personal title as no later Gakkhār chief ever used it.) He was defeated by the Sikhs at Gudjrat (q.v.) in 1152/1739, which showed up the cracks in the crumbling fabric of the Mughal empire. As a reward for his services he was confirmed in his possession of the fort of Phafwala and on return to Kabul, Nadir Shah conferred upon him, as a mark of further favour, the title of Nawwab. (This seems to have been a personal title as no later Gakkhār chief ever used it.) He was defeated by the Sikhs at Gudjrat (q.v.) in 1179/1765 and had to surrender the whole of his possessions up to the Djehlam to the Sikhs. They seem, however, to have reluctantly accepted the Timūrids as their overlords, inasmuch as a celebrated Gakkhār warrior-chief, Mukarrab Khan, sided with Nadir Shāh Afshār (q.v.) and took part in the battle of Karnāl (1152/1739), which showed up the cracks in the crumbling fabric of the Mughal empire. As a reward for his services he was confirmed in his possession of the fort of Phafwala and on return to Kabul, Nadir Shāh conferred upon him, as a mark of further favour, the title of Nawwab. (This seems to have been a personal title as no later Gakkhār chief ever used it.) He was defeated by the Sikhs at Gudjrat (q.v.) in 1179/1765 and had to surrender the whole of his possessions up to the Djehlam to the victors. Four years later he was treacherously captured and put to death by a rival chief, Himmāt Khan. The Sikhs, finding it a suitable opportunity, annexed the entire Gakkhār territory to the Sikh kingdom of the Pandjāb. Mukarrab Khan's two elder sons were, however, allowed to retain the Phafwala fort as a diāhr; this too was confiscated in 1234/1818 by the Sikh governor of the area. Chafing under successive insults and acts of expropriation, the Gakkhārs revolted in 1835 but were crushed by the Sikhs who put their chieftains—Shād-mān Khan and Muddū Khan—along with their families in confinement, where both of them died. On the annexation of the Pandjāb in 1849, the British conferred a pension of Rs. 1200 per annum on Hayāt Allāh Khan, a son of Shād-mān Khan, he and the other members of his family having been released from captivity by the British two years earlier. In 1853 Nādir Khan, the Gakkhār chief of Mandāla, joined a Sikh conspiracy against the British. The rising, which might have been serious, was promptly quelled and Nādir Khan was captured and hanged. Apart from this incident
the Gakkhar remained loyal and peaceful; they joined the army and served the British well, who honoured one of their chiefs, Râjîa Dîjahândâd Khân (Khânpur), by conferring upon him the order of C.I.E. The present chief of the tribe is Sultân Irâdî Zamân Khân, an 18-year old youth, who succeeded to the title in October 1963 after the accidental death of his father, a grandson of Dîjahândâd Khân.

The Gakkhar is divided into several clans, the leading being: the Bûgüylâ, Iskandâral, Fûrûzâl, Sârângâl and Adâmâl. Of these the last two are more influential and powerful; they are the descendants of Sârângâl and Adâmâl respectively, the two chiefs who gained prominence during the reign of Humâyûn and Akkar. While the Sârângâls are found in Hazâra and Aytoc, the Adâmâls inhabit the districts of Rawalpindi and Dîjahm. As compared with the Gakkhar of Hazâra and Dîjahm those of the Rawalpindi district are generally considered the senior and most important branch of the tribe (for details see Rawalpindi District Gazetteer, 63 ff.).

Galata [see İstanbul].

Galata-Saray [see Galata-Saray].

Galen [see Galina].

Galicia [see Diliçgayê].

Galla [own name Oromo, 'the people']. A people widespread in the modern state of Ethiopia, speaking a language belonging to the Eastern (or Low) Kushitic group which includes 'Afar-Sahô and Somâli). They irrupted from the region south of the Webi during the first half of the 16th century, most contemporaneously with the campaigns of Ahmad Grâh [q.v.] and spread fanwise, penetrating deeply into the Abyssinian highlands. For long they were a menace to the existence of the Ethiopian state but were finally subdued by Menelik II between 1872 and 1888.

When their expansion began they were all nomadic herdsmen with an elaborate political system based on a cycle of generation-sets (qada), but in consequence of their tribal movements and settlement in different environments many of the groups underwent profound changes. When they first expanded they came into contact first with Islam and then with Ethiopian Christianity. Their gradual and qualified adoption of the one or the other religion was slow, piecemeal, and tribal or regional. Although all the other Hamitic nomads of north-east Africa (Bedjâ, Sahô, 'Afar and Somâli) had long been Muslim, and although the important Muslim city of Harar [q.v.] and the southern Muslim states of Bali and Dawaro lay in their path, the Galla remained impervious to religious change so long as they remained nomads and their qada system intact. But when they settled in contact with Amhârâ and Sidâmâ they became either Christian or Muslim.

The vast number of tribes forbids any formal classification here, whilst the syncretistic character of their religion, whatever they call themselves, also prevents any clear-cut religious classification. The southernmost Galla, small groups of Warday or Orma of Tanaland in Kenya, detached from the rest by Somali expansion, have adopted Islam in this century. So have many Borâns of northern Kenya. But the nomadic Borân of southern Ethiopia, occupying a vast territory between the Lake Stefânie region and the River Djûba, and those Arsi (Arsî in Amharic), living to the north of the Borân between the Somali of Ogaden and the Sidâmâ, who continue to maintain a pastoral nomadic life, remain pagan. Some Arsi are Muslim and in their territory lies the famous Muslim-pagan pilgrimage sanctuary of Shaykh Husayn. Muslims are the northernmost Galla of the highlands (Yêdju and Raya or Azebo), who inhabit a region once occupied by a Muslim population known as Doû'a, and the Wallo, covering a wide area of the eastern highlands north of the Tulamâ, who played an important part in the history of the empire in the 19th and 19th centuries, during which many embraced Christianity. Among the Shanâ Galla (collectively known as Tulamâ) Christianity prevails. The Galla who penetrated the Gîbê region of south-west Ethiopia, where they mingled with Sidâmâ, were transformed in form of government, forming a group of five monarchical-type states (Dîmmâ, Limmû, Gera, GommA and Guma), which many embraced Christianity. Among the Shanâ the Galla who penetrated the Gibe region of the Galla of Southern Abyssinia, Harvard African Studies, iii (1922), 9-228; idem, Ethnographic Study of Ethiopia (Report for 1883-84), see "Robtas—the fortress of"; Abu 'l-Fadl, A'in-i Akbhari, tr. Blochmann, Calcutta 1873, i, 486. On the confusion between Gakkhar and Kohkhar, see Rose, Kohkars and Gakkharas in Panjab history, in Ind. Antiquary, 1907. (A. S. Bazmee Ansari)

Gallipoli [see Gelibolu].

Gambia, British Colony and Protectorate, West Africa, 13° 25' N., 16° W.; 4,000 square miles in extent with a population of about 260,000. It forms a narrow enclave in the surrounding territory of Senegal, occupying both banks of the Gambia river to a distance of 200 miles from the coast and being nowhere more than 39 miles broad. The principal tribal groups are Mandingo, Fula and Wolof.
The country is entirely agricultural, millet and rice providing the staple food of the people. The main economic crop is groundnuts, which accounts for nine-tenths of the revenue in an average year. There is no mining and apparently no mineral wealth. The only town is the capital Bathurst (population, 20,000). Under the constitution introduced in May 1962, the country has attained full internal self-government, the prime minister being Mr. D. Jawara the leader of the People's Progressive Party. A measure of union with Senegal is under active consideration (1964).

The British trading interest in the Gambia dates from early in the seventeenth century, and from 1662, when the fort on James Island was seized from the Duke of Courland, the succession of British African Companies maintained permanent occupation of one or more trading posts. The eighteenth century was a period of intense commercial rivalry with the French, who had established a factory at Alberda on the north bank and were not finally excluded from the river until 1857. Bathurst was founded in 1816 to provide an additional base for the campaign against the slave trade. At least four-fifths of the indigenous population are Muslim. Islam was first introduced in the pre-Muslim capital of Adharbaydjan (now the ruins of Tiflis). Later (1235) the town was captured and burned by the Georgians; but the retreat afterwards was not shared by Adharbaydjan and Gandja under the rule of the Ildegizids. The town of Gandja came to Tiflis; according to him 9 farsabh, according to Yākūṭ (i, 132) 16 farsabh. After the decline of Barđha's Gandja became the capital of Arrān; the Shaddādīd dynasty ruled here from c. 340/951-2; after it had been overthrown by Sultan Malik Shāh, the latter's son Muhammad was granted Gandja in fief. In 533/1140-9 the town was destroyed by an earthquake in which, according to Imam al-Dīn al-Isfahānī, there perished some 300,000 persons (130,000 according to Ibn al-Athīr), including the wife and children of Kara-Sonkur, amīr of Adharbaydjan and Arrān, who was absent at the time; Demetrius, king of Georgia, sacked the ruined town and carried off one of its gates. 'Imād al-Dīn says that the Georgians built a new town in their country, gave it the name Djanza and set up the lower river. In some areas literacy in Arabic is not uncommon. Protestant and Catholic missions have been at work for more than a century, but there are very few Christians outside Bathurst.

GAMES [see Lār].

GANĀFA [see DIJANABA].

GANDĀPUR, the name of a Pathan tribe which lives in the Dāmān area of the Dera Ismā'il Khān district of Pakistan. The tribe is now, for the most part, absorbed in the population of the area.

The tribe descended from the Afghan highlands to the plains of Dāmān during the 17th century. The centre of their winter quarters developed into a town in the 19th century, probably because of the trading activities of the tribesmen between Khurāsān and India. This town is at present called Kulāči.

The Gandāpur tribe took part in Pathan tribal wars during the 18th century but under British rule the tribe became settled and peaceful, mixing with other Pashto-speaking settlers. The origin of the name is unknown, as is the history of the people.

GANDJA, Arab. DIJANZA, the former ELIZAVETPOL, now KIROVABAD, the second largest town in the Azerbaian S.S.R.

The town was first founded under Arab rule, in 1245/659 according to the Ta'rikh Bāb al-umāra (V. Minorsky, eds. A History of Skandarbeg, Cambridge 1958, 25 and 57). It is not mentioned by the oldest Arabic geographers like Ibn Khurraḍah-bih and Yākūṭ; it seems to have taken its name from the pre-Muslim capital of Adharbaydjan (now the ruins of Tiflis-i-Sulaymān). Isṭakhrī, 159 and 193, mentions Gandja only as a small town on the road from Bār’dhā (q.v.) to Tiflis; according to him the distance between Bār’dhā and Gandja was 9 farsabh, according to Yākūṭ (i, 132) 16 farsabh. After the decline of Bar’dhā Gandja became the capital of Arrān; the Shaddādīd dynasty ruled here from c. 340/951-2; after it had been overthrown by Sultan Malik Shāh, the latter's son Muhammad was granted Gandja in fief. In 533/1140-9 the town was destroyed by an earthquake in which, according to 'Imād al-Dīn al-Isfahānī, there perished some 300,000 persons (130,000 according to Ibn al-Athīr), including the wife and children of Kara-Sonkur, amīr of Adharbaydjan and Arrān, who was absent at the time; Demetrius, king of Georgia, sacked the ruined town and carried off one of its gates. 'Imād al-Dīn says that the Georgians built a new town in their country, gave it the name Djanza and set up the lower river. In some areas literacy in Arabic is not uncommon. Protestant and Catholic missions have been at work for more than a century, but there are very few Christians outside Bathurst.

the Turks, who in 966/1558 captured the town itself; invested in Shawwal 104/February-March 1606 by Nâdir Shâh in 1148/1735 it remained after his death under the rule of Khâns who were practically independent, passed at the end of the 19th century into the power of the Kâdîjars and was stormed on the 2nd (i5th) January 1864 by the Russians under Prince Tsitsianov to be definitely ceded to Russia by the treaty of Gulistân [q.v.]. On the 13th (25th) September 1828 Paskevî of the Persian army under 'Abbas Mirzâ in the immediate neighbourhood of the town. Called Elizavetpol by the Russians, it was resumed its old name in 1924, to change it again in 1935 to Kirovabad in honour of the Soviet statesman S. M. Kirov.

The modern town with a population (1959) of 116,000 inhabitants, lies on both banks of the Gandja Çay, a tributary of the Kura. In the older western half of the town, fortifications and the so-called "Tatar" mosque have survived from the time of Shâh 'Abbas; the "Persian" mosque belongs to a later period. The climate is unhealthy and malarial but favourable to the growth of vegetation. Vines, fruit trees, vegetables and tobacco are cultivated in the surrounding countryside; it is also a centre of sericulture.

**GANDJA** [see FULBE].

**GANZA** [see GANDJA].

**GANDO** [see FULBE].

**GANGA**, the Ganges (also Gang [gaŋg] in the Muslim historians of India), the principal river of Upper India [see HIND] which rises in the snows of the Himalaya in the district of Garhâwal in an altitude of some 3100 m., flows through the present provinces of Uttar Pradesh, Bihar and Bengal, and falls in the Bay of Bengal after a course of about 2500 km., the last 500 km. through the Bengal delta. Above the delta it receives successively the waters of the Râmgângâ, Yamunâ [Dîjamnâ, [q.v.]], Gomâth, Gôgrâ, Sôn, Gandak and Kôsî; above the Dîjamnâ confluence at Prayâg (Allâhâbâd, [q.v.]) it is faster. At the six months commences south of the ruins of Ganges [see LAKÂNIWATI], the westernmost channel which passes close to Murshidâbâd [q.v.] being known in its upper reaches as the Bâghrâthi and in its lower as the Hûglî [q.v.]. The main (eastern) channel, known also as the Padmâ, runs south-east to Gôlândâ where it joins the Bengali Dîjamnâ, i.e., the lower reaches of the Brahma-putra. The confluence forms a broad estuary, narrowing at its mouth into the Ganges, which enters the Bay of Bengal near Noâkkhâli as the most easterly of a number of channels. The delta is fertile in the north, and the swampy Sundarbans (salt, timber for boat-building) form its southern base; the Hûglî is its main commercial channel. Until the construction of the railways the Ganges formed, with its tributaries, a most important traffic artery (J. Renell, *Memoir of a map of Hindostan ...*, London 1793, 335 ff.), its major towns (e.g., Kanawâdi, Allâhâbâd, Faydâbâd, Banârâs, Patnâ, Munger, Râjdînâhâll [q.v.]) having in many cases stone or brick landing stages. Its irrigation waters are extended by the Upper and Lower Ganges canals, with headworks at Hardwâr.

In its lower reaches the fall is no more than from 1 to 3 cm. per kilometre, and hence its course is very liable to change under the weight of monsoon rain-fall; for example, before the Muslim conquest of Bengal the main stream instead of turning south at its present point ran eastwards to Mûldâ and then turned south along the present course of the Mûhâmmâd, running east of Gâwî (cf. E. V. Westmacott in *JASB*, 1875, 7 ff.); the transfer of the Bengal capital from Gâwî to Pândûa in 739/1338-9 was evidently occasioned by such a change, as was a subsequent removal of the court from Gâwî to Tândâ about 850/1446. The differences between the present courses of the Ganges and its deltaic tributaries and those shown on Renell's map (op. cit., facing p. 364; cf. *IA*, facing p. 345 ff.) are striking. For further details of change of course see Hûglî.

To the Hindus the Ganges is a sacred river, having its source in paradise whence it is precipitated on to the earth as the centre of seven streams; this legend, represented in Sanskrit sources in the *Matsyapîrûpa, Vâyuapûra, Râmâyana*, etc., is recounted in al-Bakrî's *K. a.l.-Hind*, Eng. tr. W. Crooke, London 1888, i, 261. Its water has a special ritual purity, either for bathing at the confluences, especially at Allâhâbâd when the sun is in Aquarius, or for drinking (for the express courier which took Ganges water to Muâammad b. Tughulk's court in Dawlatâbâd see Ibn Ba'tûtâ, ii, 96, tr. Gibb, 184; for Akbar's use of Ganges water see Abu 'l-Fâdîl, *Al-în a Akbar*, i, 55; and cf. Tavernier's *Observations sur les voyages*, Eng. tr. ed. W. Crooke, London 1925, i, 95 that the emperor (Shâhdjahan) and his court drink no other. For the Hindu practice of self-immolation in its waters, and casting the ashes of the dead therein, see Ibn Ba'tûtâ, i, 79, iii, 141 f., tr. v. Mîlk, 57; tr. Gibb, 193; V. Minorsky, *Gandzîl on India*, in *BSOAS*, xii (1947-8), 639 f.

**GANO**, a town in the republic of Mali, situated on the left bank of the Niger (10,000 inhabitants), is one of the oldest commercial centres in West Africa, standing at the point where the caravan route from Timîni reaches the Niger. In older writers, Gâo is referred to under the names Kaukau, Kawkaw, Koomou, Kâwakou and Kounkou. Two etymologies are suggested: according to al-Bakrî (*Description de l'Afrique*, 399), the name Kaukau derives from the sound of tom-toms; Houdas (Ta'rîkh al-Salâdîn, 6, n. 3) suggests that it is an abbreviation of kokoy Korya (the king's town).

Probably founded in about 690 A.D. by the Sôrko Faran fishermen expelled from Kûkia by the Songhai Gâo became an important commercial centre. It is probably the town referred to by al-Khârîzmî (before 218/833) and, in about 258/872, by Ya'qûbî as "Kawkaw, the greatest and most power-
ful of the kingdoms of the Sudan", which would anticipate by some twenty years the date 890 given by Earth as marking the extension of the authority of the Songhai rulers of Kukia over Gao.

Gao was then very much frequented by traders from the Maghrib. Hence it happened that, according to Ibn Khaldûn (Berbères, trans. de Slane, iii, 201), it was at Gao, during one of his father's business journeys, in about 271/885, that ʿAbd ʿAzīz (q.v.), the man known as "the monkey", was born. Al-Muhallabi tells us: "The king of this people sets his subjects the example of the faith of Islam, and the majority of them follow his example. It has a town on the east bank of the Nile (Niger) named Sarna; this town contains markets and merchandise and is regularly frequented by people from all countries. The king also has a town on the west of the Nile where he lives with his nobles and intimates. He has a mosque where he prays, while the people have their own musalli bi between the two madrasas. In his town the king has a palace which no-one lives in except himself and which now harbours only a single eunuch. They are all Muslims. The king and his principal companions wear tunics and turbans and ride horses bareback". These lines, quoted by Y. Kamal (Monumenta Cartographica Africae Occidentalis, trans, de Slane 1859, Algiers 1913, iii, 201), were written in about 385/996, that is to say 15 years before the date given for the conversion to Islam and the settling at Gao of Dia Kossoi (1009-10).

Al-Bakrī (459/1067) describes the division of the town into two quarters: "(Kawkaw) consists of two towns, one is the residence of the king and the other is inhabited by the Muslims. Their king bears the title of Kanda. Like other negroes, they wear a loin-cloth and a jacket of skins or other material, the quality of which varies according to the wealth of the individual. Like the negroes, they worship idols... When a new king mounts the throne, he is given a seal, a sword and a Qurʾān... Their king professes the faith of Islam, they never entrust the supreme authority to anyone other than a Muslim" (Descr. de l'Afr. sept., trans. de Slane 1859, Algiers 1913, 342-3).

In 1393, royal steles of the 12th century were discovered at Sane (9 km. east of Gao). Al-Zuhri (before 545/1150) noted a greater volume of trade came from Egypt and Wargha than through the Tafilelt. Gao was captured by Sagamandia, one of the generals of ʿAbd al-Maʾzūn (Mansa Musa), at the time of the return from pilgrimage of the emperor of Mali (724/1324) who had a mosque with mihrāb built, perhaps on the plans of the poet al-Sāhilī. Dia Assibahl, a vassal of Mali, had to surrender his two sons as hostages. One of them, ʿAll Kolen (the cricket), managed to escape and restored the Songhai empire by depposing the dia Bada who was governing Gao on behalf of the Mali. He was called Sonni (the liberator) and founded the second dynasty which ruled from 739/1339 until 898/1493.

Gao, however, remained a highly prosperous capital and, after his visit in 753/1352, Ibn Battūța stated that it was one of the most beautiful and extensive cities in the Negroes' country, and most abundantly supplied with foodstuffs. But during the 8th/14th century the Songhai were driven back to the former capital of Kukia. It was only in 802/1400 that the Songhai Sultan ʿAbd al-Day Ṣaḥhā (that is, the Giant) passed to the attack and sacked the town of Mali. The last ruler Sonni ʿAll (868/1464-898/1493) or ʿAll Ber (the Great) brought the Songhai empire to its apogee when he captured Timbuctoo (872/1468) and Djenne (877/1472). But it was a period of pagan resurgence and of persecution of the Muslims.

When nominated chief of the Songhai on 21 January 1493, the Sonni Barou refused to adopt Islam; he was compelled to fight against ʿAli Ber's best commander, the Sarakole (Soninke) Muhammad Toure who won a victory (12 April 1493) and took the name Askia (signifying usurper or it is not he). Muhammad Askia (898/1493-934/1528) made the pilgrimage to Mecca (1497-8), and then extended and organized his conquests. He received a visit (907/1502-909/1504) from the reformer al-Maggīlī who had just had the Jewish colonies at Touat (Tuat) massacred.

The 16th century represents the great period of the empire of Gao. The Taʾrīḫ al-Fattālī enumerates 7626 houses, which represents a large town. Leo Africanus, who probably visited Gao at the beginning of the 16th century, related: "Gao is a very large city without walls... the greater part of the houses are ugly in appearance; however, there are some quite handsome and commodious buildings in which the king lives with his court". In 999/1591, the army of the pasha Diawīdhār captured Gao. But, accustomed to the splendours of Morocco, Diawīdhār was disappointed: "the head donkey-driver's house in Marrākūḫ is better than the Askia's palace" (Taʾrīḫ al-Fattālī, 1583, 182).

But dependence on Morocco was soon no more than nominal. In any case, it merely took the form of plundering the educated and bourgeois classes, which explains the utter collapse of Islamic culture. After 1021/1612, the pashas commanding the Moroccan army no longer came from Morocco, but were appointed on the spot by the soldiers. The Arma, half-breed descendants of Moroccans, had difficulty in fighting against the Tuareg who occupied Gao for the first time in 1093/1680, but were driven from it in 1099/1688 by the pasha Mansūr Senebe, who however left no further garrisons there.

Thereafter, decline set in, and in 1184/1770 Gao, following Timbuctoo, was under Tuareg control. At the time of Barth's visit in 1854, Gao was no more than a wretched village with from three to four hundred huts, where only a single partly ruined monument was to be seen, the tomb of the great Askia Muhammad. Although they reached Timbuctoo in 1893, the French military authorities established a base there only in 1899 (Lt.-Col. Klobb). On their arrival, the French found merely a small group of sharīfs called Sherifīla in the neighbour-hood of the Askia tomb.

The peace brought by French rule permitted the intermingling of the various races which nevertheless retained some degree of specialization, with Songhai farmers, Arma artisans, Moorish shopkeepers, Hausa traders and Bambara fishermen and tailors.

GARDIZI, Abû-Sâ‘îd Abû al-Hâvy b. al-Dâhîr b. Mâhmûd, Persian historian who flourished in the middle of the 5th/6th century. Nothing is known of his life. His niṣba shows that he came from Gardiz [q.v.]; since he says that he received information about Indian festivals from al-Birûnî [q.v.], he may have been his pupil. His work, entitled Zayn al-akhbâr, was written in the reign of the Ghaznavid Sultan ‘Abd al-Râshid (440-449/1049-1052). It contains a history of the pre-Islamic kings of Persia, of Muhammad and the Caliphs to the year 423/1032, and a detailed history of Khurâsân from the Arab conquest to 432/1041: no sources are named, but for the history of Khurasan Gardizi must have had access to Khwâjuzâdâ’s romantic history of the Khwâjahs. Khwâjuzâdâ’s history has been mainly following al-Sallâmî [q.v.]; the work includes also a valuable chapter on the Turks, based on the works of Ibn Khurâdâghîbî, al-Diâyânî and Ibn al-Muqaffî [q.v.] (ed. with Russian tr. by W. Barthold, in Oevet o poedvetke v Srednyi Aziiy (Zap. Imp. Akad. Nauk po Ist.-Fil. Otd., i, no. 4), St Petersburg 1897, 78 ff., and with Hungarian tr. by G. Kunn in Kolekt Kudfok, 1898, 5 f. and KS, 1903, 17 ff.), a chapter on India (see E. Sachau, Alberun’s India, London 1888, ii, 360, 397 and V. Minorsky, Gardizi on India, in BSOAS, xii (1948), 625-40), and essays on Greek sciences, chronology, the religious festivals of various peoples, and genealogy.

Only two incomplete manuscripts are known: Bodleian, Ouseley 240, dated 1196/1782, which is a transcript of the Toofan Valley now in the possession of the Peshawar Museum dated 248-857 contains the words fi barr* ‘Uman in the land of ‘Uman’, which appears to refer to the well-known Khwârîjî conceptions beyond the Persian Gulf. The ruler’s name has not been read, but the early date suggests that he must have been one of the princes of Gardiz. The historian Gardizi [q.v.] (Zayn al-akhbâr, ed. Nazim, 11), reports an attack by the Saffâris Yâ’âbî b. al-Layvî on the amir of Gardz, Abû Mansûr Afllab b. Muhammed b. Khâkân in 256/869. In 364/974 Bilgetegn, one of the predecessors of Mahmûd of Ghazni, died whilst he was undertaking a siege of Gardiz. However, the town soon fell into the hands of the Ghaznavids, for during the reign of Sebicukin, in 385/995 according to Barthold, the former was housing political prisoners in the fortress of Gardiz. With the loss of its independence, the historical importance of the town began to diminish. During the Mongol invasion it was the scene of a counter-attack by the Sultan Djâlal al-Dîn upon the Mongol vanguard. The Emperor Bâbur, in his Memoirs, mentions it as a strong fortress, and the scene of a skirmish with the “Abd al-Rahmân Afghans”. Modern research has devoted little attention to Gardiz, and it is remarkable that its earlier rulers are apparently unknown to numismatics.

Guercif was founded towards the middle of the 3rd/9th century by the Banū Abī 'l-‘Āfiya, one of the tribes of the Miknāsa, a Berber people who led a nomadic life in the Moulouya valley. It became the centre of the lands of Māsā b. Abī 'l-‘Āfiya (d. 327/938) and then of his sons who were renowned for their wars with the Idrīsids and Fāṭimid s.

Its commercial and strategic importance was due to its situation at the intersection of two important routes, one from Fez to Tlemcen, the other from Sījdīlmāsā to Melilla. In the middle of the 5th/11th century al-Bakrī described it as an important village with a considerable population (kāra ‘āmira). But after being captured and destroyed by the Almoravid Yūsūf b. Tāḥfīnīn in 473/1080 it lost its former importance; and al-Idrīsī (middle of the 5th/11th century) did not know it.

At the beginning of the 7th/13th century, the site of Guercif was frequented by the Banū Marin, nomadic Berber tribes belonging to the Ẓanātā group. In summer they came down from the high plateaus of the pre-Saharan zone and spent the summer in the lower Moulouya valley. It was at Guercif that they stored their stocks of grain; it was also there that, at the approach of autumn, their tribes met before retreating to their grazing-lands in the Sahara. In 670/1271, taking advantage of the enfeebled state into which the Almohad empire had fallen as a result of the disaster at al-'Ukāb, the Banū Marin settled down along the lower Moulouya and occupied Guercif. It was there that, in 646/1248, they lay in wait for the Almohad army in its retreat from Tlemcen to Fez, and then defeated and routed it. In about 1211/1212, the Banū Marīn became masters of the whole of Morocco. However, on the eastern borders of their empire the Zayyānīd kings of Tlemcen constituted a dangerous enemy. Along with the neighbouring localities of Tawrīrt and Dūbūt (qv.) Guercif formed a march (ṭahlīr), barring access to the interior of Morocco. In 721/1321 the Marinid Abu Sa‘īd had the fortified castle of Murada (15 km. to the north of Guercif) destroyed by Abu ‘l-‘Inān.

After his death (759/1358) Guercif, together with the fortified castle of Murāda (15 km. to the northeast, on the Moulouya) became a fief of the cele- brated Wanzammār b. ‘Arif, chief of the Sūwayd Arabs, who was in command of all the Bedouin tribes supporting the Marinids, and the mentor of the kings of that dynasty. Numerous attacks were made against it by Abū Ḥammū, king of Tlemcen, and the two fortified places were on several occasions captured and sacked.

Later, Guercif lost its military importance when the boundary between Morocco and Turkish Algeria was moved east of Oujda; the Sa‘īdīs and ‘Alawīds preferred Tawrīrt.

From 1912 Guercif was occupied by France and acquired a measure of importance through being at the head of the railway from Oujda. After the line had been extended, first to Taza, then to Fez, the village declined rapidly. With Musouin, it is one of the two centres of the Hawwāra, an important tribe who move with their flocks to summer pasturages and who devote themselves to sheep- rearing.

**GASPRALI (GASPRINSKI), İSMÂİL**, promi- nent ideological writer of the Turks, more particularly of the Russian Turks, was born in 1851 in the village of Avūł, near Bagḥesārā. His father, Muṣṭafā Agha, was one of the notables of the village of Gaspra, between Yalta and Alupka (whence their family name Gasprali, later Gasprinski), and a graduate of the Military Lycée in Odessa. At the time of the Battle of Sevastopol in 1854 Muṣṭafā Agha settled in Bagḥesārā and sent his son İsmâ’il first to the Zindjīrī Medrese in Bagḥesārāy and later, at the age of ten, to the Simferopol Gymnasion. Two years later İsmâ’il went to the Voronēz Military Lycée and was then transferred to the Moscow Military Lycée. Together with Muṣṭafā Mīrzā Davidović, a Lithuanian Tatar in origin, he attracted the attention of their principal teacher, Ivan Katkov, the famous Pan-Slavist and editor of the newspaper *Moskovskiy Vedomosti*, who invited them every week to his house. At the time of the rebellion in Crete in 1867 the hostility which Katkov showed toward Turkey produced a reaction in these two youths, and they went to Odessa with the intention of serving in Crete as volunteers on the Turkish side. As they had no passports, however, they were arrested and sent back to their homes in the Crimea. İsmâ’il Bey was appointed a teacher in Russian, the study of which was compulsory, in the Zindjīrī Medrese in Bagḥesārāy. He constantly thought of going to Turkey to become an officer; and when he discovered that it was necessary to learn French to do this, he learned French during his four-year appointment at Bagḥesārā. He had, in fact, acquired some knowledge of this language while at the Military Lycée in Moscow. In 1871 he resolved to go to Istanbul; but, seeking to perfect his French, went by way of Vienna to Paris. The results of his observations in Paris were reflected in works which he later published in Russia—especially in his work named *Rüśvā IslāmîLt* ('The Muslim Community in Russia')—and also in a work named *Avrâpa medeniyetine bir nasar-t müsävâne* ('A balanced view of European civilization') which he wrote while still in Paris.

While in Paris he earned his living by working as an translator of advertising and Second empire was to go to Turkey, he did not mix much with the Young Ottoman circles in Paris. Finally in 1874 he went to Istanbul and stayed with his paternal uncle, Süleymān Efendi, who had settled there earlier. He made great efforts to enter the Turkish War College, but when the Russian Ambassador Ignatiev learned of this he brought influence to bear on the Grand Vizier Mâhmd Nedîm Paşa and pre- vented it. After vainly waiting a year, Ismâ’il returned to the Crimea. While in Istanbul he pub- lished non-political articles describing Eastern life for some Russian newspapers appearing in St. Petersburg and Moscow.

Between the years 1874 and 1878 he became familiar with the village life of the Crimean Turks, and described this period of his life in his story * Gün Dogğdu*, published in 1906. In this he refers to him- self under the name "Dâniyâl Bey’. While becoming familiar with the needs of his nation, with education and village life, this Dâniyâl Bey sees the vital need of bringing out a newspaper and making his nation aware of the world. In 1878 İsmâ’il Bey was elected mayor of Bagḥesārāy, and in 1879 he applied to the Czar’s government for permission to bring out a newspaper, but was refused. He thereupon wrote in the Russian-language newspaper *Tavrida*, published in Simferopol, serious political articles pertaining to the Muslims of the Russia Empire. He also published...
occasional collections of articles: Tungud (lithograph, Simferopol); Shefefy and Latfy (Unıszádéler Press, Tıffis); and, later, Ay, Yıldız and Guney. These writings were mostly in the Crimean dialect. In the new law for Russian subject, every expanded a little the articles he had published in Russian in the newspaper Taşvida and published them in the form of a fifty-four page work with the title Russoyoe Muslumanstvo (Russian Islam). This work was a pioneer work relative to the political and cultural problems of the Muslim subject-peoples of the Russian Empire. Although Ismà’îl Bey presented himself in this work as a loyal Russian subject, even speaking approvingly of the salvation of the Russians from Tatar domination, Russian circles believed this to be a device and regarded this work with suspicion. In it he considered the “Turco-Tatars” under Russian rule as a single Russian Muslim community and showed the road by which they might join Western civilization. In the pamphlets which he published in Turkish he pointed out that if the Turco-Tatar group were to remain dispersed the result would be calamitous: he tried to explain that the sole road of salvation for them was to work together to join the new Western civilization by means of their own languages. In the year 1883 he received permission to publish a newspaper named Terdişmân. The Russian title of the newspaper was Pervovolück; and in the first issues the Russian-language section was more important. It explained that it was to perform the role of translator in the matter of spreading Western civilization among the Russian Muslim community. The Turkish-language section gradually expanded and became more serious and later, in 1890, Terdişmân became “the national newspaper concerning politics, education, and literature”. After 1905, it took the name Terdişmân-ı Aşiwi-i Zamân, and at the head of the newspaper was the slogan: “Unity in language, work, and thought”. Finally the part in Russian was abandoned altogether, and the newspaper became the interpreter of the thoughts and aims of the Muslim community in the Russian Empire. All the Turks living in the regions of Kazan, the Caucasus, Turkistan, and Siberia recognized this newspaper as being the disseminator of their national ideas. The deep influence of this newspaper on Turkish intellectual may be judged from the first novel in the Tatar language, entitled Molla Hüsâm al-Din by Mûsâ Akeýgtızâde, published in 1886, from the speeches and gifts of the delegates who came from every part of the Russian Empire on the occasion of the twenty-fifth anniversary of the appearance of Terdişmân in 1908, and from the increased numbers of newspapers that year.

Ismà’îl Bey married Zehra Khanım, a member of the Akcura (Akcurin) manufacturing family, one of the noble Kazan families. Through this marriage his ties with the Kazan Tatars became close. He was in constant touch with Azerbaijan Turkish writers, Hasan bek Melikov, Unıszáde, Topçabash and others. Muşţáfa Davıdoviç, the Lithuanian Muslim who had studied with him at the Moscow Military Lycée, settled in Bâghçeşaray, where he was mayor for twenty years, helping Ismà’îl Bey in all his enterprises. The work with which Ismà’îl Bey was most occupied was to create modern primary schools for Russian Muslims and to publish textbooks for these. He also wanted to ensure modern methods of instruction by opening teachers’ courses in Bâghçeşaray and other places, and to assure the opening of this type of school throughout the Muslim community of Russia. He himself visited every part of that community, including Tashkent, Bûhkârâ, and Siberia. He set up and printed personally on his own press Kâgâde-i iþbân, Mu’âlimât-ı iþb(130,949),(552,978)

word and other works which he brought out for the primary schools. Together with his wife, Zehra Khanım, and the mayor, Muşţáfa Davıdoviç, he opened a handcraft institute for girls on the twenty-fifth anniversary of the appearance of Terdişmân, an idea which spread to other provinces as well. He brought out the first magazine for women, entitled Àlem-i nisâan, and placed his daughter Shefîka at the head of it. He also published a word concerning women’s rights, entitled Kûhûr-ı Rûhî. Inspired by Shams al-Dîn Sâmî’s Kimâm al-àlîm, he began to publish an encyclopedia for Russian Muslims, but was unable to complete it. He became occupied with problems of language and literature. After the 1905 Revolution he planned a programme especially designed to deal with the problems of instruction and “literary language”. It envisaged that in the first three years of primary school instruction would be carried out in the local Turkish dialects; afterwards, the “common literary language” would become the general language of instruction. His original idea of the “common literary language” was some addition of Ottoman to a language which was mainly Tatar; but the Ottoman influence increased under the influence of those who were working with him, and the result was a simple Ottoman which could be understood by the Muslims of Russia. National Turkish literature, according to Ismà’îl Bey, would consist of novels which would reflect the life of the regions in which the Turks lived and which would incite in them new thoughts and ideals. The supplements named Damîmâ-ı Terdişmân, which he published as additions to Terdişmân in the years 1892-4, and his newspaper Damîmâ-i Târkât Muslûmanları were important in this respect. In language, Ismà’îl Bey earnestly opposed the domination of Arabic and Persian in Ottoman and also the tendency among the Kazan Tatars to take words from Russian, and he put forward the idea of drawing on popular literature for the literary language. His stories Arslan Köşk and Gâdişmâl Biket telling of the 18th century Chinese occupation of Kashgâr, and his writings entitled Bâghçeşarâyân Tâshkende, which included the memoirs of his travels, were serialized in many issues of the Damîmâ. In 1893 he published stories about Bâghdâd Khâhn (q.v.), who played an important role in the history of the Hîghânids. He also published an expanded version of the treatise Târkîlerde úrum ve junân of Bursâl Tābih, publishing some of it—the discussions of Sa’d al-Dîn Taftâzânî, for example—in the Damîmâ.

At first Ismà’îl Bey valued Islam as being useful in preserving for the Turks their national identities but, aside from the “pocket Kur’an”, he did not devote much space to religious publications. After the 1905 Revolution he saw the adverse results of Socialism and Communism, which were beginning to appear in those years in Kazan and Baku, and became frightened of those movements, especially in the face of publications which, opposing the separate political institutions of the Russian Muslims, claimed allegiance solely to the Russian socialist parties, and which made haphazard efforts to impose Russian as the literary language. In the series of articles which he published in Terdişmân under the title “Ikhrîsîkhîyân”, he moved noticeably to the right and began to think of bringing about a cultural unity among Islamic nations. With this aim in mind he wanted to convene a general Muslim
GASPRALI (GASPRINSKI), ISMA'IL — GAWUR

congress in Egypt in 1907, and, having gone there himself, even began to further this endeavour; but when these efforts did not give the results he had hoped for, he resumed his old activities in Baghche-
saray.

Among the other publications of Isma'il Bey are the Mebad'-i tamedân-i İslâmîyyan-i Rûs, published in 1901, and the twenty-page work Rûs ve Şark anlihamisi, published in Russian (Russko-vostoknoyje soglâšenye) in 1896. Isma'il Bey, having seen the positive results of his efforts, fought in the last years of his life against the excessive bias which viewed Westernization as a form of spiritual suicide for Turks and other Muslims in Russia. Isma'il Bey, carried away with new hopes at the time of the beginning of the First World War, died on 11 September 1914, in his house in Baghche-
saray and was buried there. His son and daughters carried on for a period after his death the publication of the newspa-
per Tergümân which had continued for thirty-one

Bibliography: The biography of Isma'il Bey has been written by Yusuf Akcûra in Türk Yıllı, 1928, 338-46. Cafer Seydahmet also published a fairly large work entitled Gasprals Ismail Bey in 1924. A complete set of Tergümân is preserved in the Leningrad Public Library; outside Russia, some copies of this newspaper may be found in the Helsinki University Library, the Inkilap Library in Istanbul, the British Museum, the Ankara National Library, and in various private libraries. The Centre Russe de l’École Pratique des Hautes Études in the Sorbonne is now collecting micro-
films of all the years of publication of this newspa-
per.

GATE, GATEWAY [see Bâr].
GAUR [see LAKHNAWTI].
GAUR [see KÁFÎR].
GAWILGARH, in the histories also GAWIL, GAWILGHAR, a fortress "of almost matchless strength" (Abu ‘1-Fadl, A’ín-i Akbari, Eng. tr. Jarrett, ii, 237) in Berar, Central India, lat. 21° 20’ N., long. 77° 18’ E., seven kos (about 25 km.) north-west of Elüçpur (Elüçpûr [q.v.]). According to Firishta the fortress was built by Ahmad Shah Writers [see BAH-
MANIS] in 829/1425-6; but from its name it appears to have been a former stronghold of the Gawai chiefs, and it is more likely that Ahmad Shah merely strengthened the fortifications during the year he spent at Elüçpur in the consolidation of his northern frontiers before proceeding to his attacks on the Vidjayanagar kingdom on his south. A Brahman captured in an earlier Vidjayanagar campaign who was received into Islam under the name Faith Allah was sent for service under the governor of Berâr; later, under the Bahmani minister Mahmûd Gâwân, this Faith Allah, with the title ‘Imâd al-Mulk, was himself made governor in 876/1472. The increasing loss of power by the Bahmani sultans to their Baridi ministers in the capital, Bídâr, had led Faith Allah to prepare against possible opposition by strength-
ing the defences of Gâwilghar in 893/1488 (inscription on Faith Darwaza), from which time also dates the rebuilding of the Dâmî Masjid "with the old stones" and Faith Allah’s use of the Vidjayanagar emblems on the gates (see below, Monuments). Two years later Faith Allah assumed independence (see ‘IMâD SHÁH) with headquarters at Elüçpur and the fortresses of Gâwilghar and Narnâl as his strong-
holds, and these remained ‘Imâd Sháh possessions until the extinction of the dynasty in 983/1574 when Berâr became a province of the Nizâm Sháh (q.v.) dynasty of Ahmadnagar. After the cession of Berâr to the Mughals in 1004/1596 Gâwilghar was still held by amîrs of Ahmadnagar, and Akbar’s son Prince Murâd, reluctant to besiege it, made Bálâpur his principal stronghold; two years later, however, it fell to Abu ’l-Faḍl. The description of the sâba of Berâr was added to the A’ín-i Akbari immediately after the cession of Berâr, obviously before the Mughals had had time to reorganize the province, and thus the place given to Gâwil as the largest and richest of the thirteen sârkarâs must reflect the pre-
Mughal administrative division. This division was substantially unchanged in the great scheme of reorganization of the Deccan provinces under Awrangzib as viceroy in 1640/1636. In the Marâthâ troubles in the Deccan in the early 17th/18th century the province was held together by Àsàf Dîhâr-Nâzîm al-Mulk, but on his absence in Dîhî in 1751-78 Berâr with its great fortresses of Gâwilghar and Narnâl was taken by the Bhonsâla Marâthâs. In 1803 Gâwilghar fell to Wellington, but was retained by the Bhonsâla in the treaty which followed; in 1822, however, it was restored to the Nizâm. In 1853 it was assigned to the East India Company, and the fortification and administration of the place was entrusted to the Commissaries.

Monuments. Much of the walling of the fort still remains, with gates and bastions. One fine tall bastion on the west wall, the Burdji-e Bahram, gives its date of repair (1855) by chronogram by Bahârân Khân, governor of Gâwilghar under the Nizâm Shâhs at a time when it was expected that Akbar’s forces would advance. The Dîhî Darwâza is most interesting for its sculptured symbols: the lions with elephants beneath their paws, level with the top of the arch, are devices of the Gond kings, but the two-headed eagles holding elephants in each beak, which lie over the lions, are the ganda-
berurunda symbols of the Vidjayanagar empire; this is the northern gate, which leads to the outer fort built in the 17th/18th century by the Marâthâ Bhonsâlas of Nâgpur. The Dâmî Masjid stands on the highest point within the fort, and in its present form doubt-
less represents the rebuilding by Faith Allah recorded in the inscription on the Fath (south-west) Darwâza; the liwân was three bays deep behind the seven-arched façade, on which was some blue tile decoration in addition to fine stonework, and bore a rich bâddîq on carved brackets; the mihrâb wall has fallen. The most interesting feature, character-
istic of the local style, is the pylon standing at each end of the liwân façade, which bears not a minâr as in the other Deccan styles but a square châtrî with projecting eaves, rich brackets, and djâlî screens in each side. A large walled sahn stands in front of the liwân, with a great eastern gateway. To the north-
east of the great mosque stands a smaller unnamed mosque, similar but supported on octagonal columns.

Few other buildings remain.

Bibliography: Almost the sole source for the history of Berâr is Muhammad Kâsim b. Hindi Shâh Firishta, Gûljân-i Ibrâhîmî, passim. See also T. W. Haig, Inscriptions of Berar, in E.I.M, 1907-8, 10-21; Archaeological Survey of India, Annual Report 1920-1, Plate VIIIa; ibid., Report 1922-3, 56-8 and Plate XXl; ibid., Report 1926-7, 36-8; Dispatches of the Duke of Wellington, ... , London 1838, ii, 560 ff. (J. Burton-Page)

GAWR [see LAKHNAWTI].
GAWUR [see KÁFÎR].
extremity of the eastern Taurus. It consists of a vast anticline rising to 7,411 ft./2,262 metres, orientated north-east/south-west in its southern section after the col of Belen, with a structure of palaeozoic sands, with peaty soils. The population consists of Turks and Alawis. Apart from the permanent villages (which are found up to a height of about 3,000 ft./900 metres) there are yaylas (Belen, Sorkun) which in summer are occupied especially by the inhabitants of the coastal towns and villages. The official Turkish name is now Amanos. For the other names, which are very varied, see Streck, art. ALMA DAGH, in El. The most important is the Arabic: Djabal al-Ūkkiām = Turkish Kara dağ, "the black mountain", very probably the origin of the name Akma dağlı used by several European travellers, owing to a confusion with Alma (or Elma) dağlı.

K) and (on 2) for structure: E. de Vaumas, Structure et morphologie du Fracile-Orient, in Revue de Géographie Alpine, 1951, 469-72; idem, L'Amanas du Dji, Ansarist, étude morphométrique, in Revue de Géographie Alpine, 1954, 633-64; for vegetation: H. Louis, Das natürliche Pflanzenkleid Anatoliens, Stuttgart 1939, 98; among the travel accounts see also Th. Kotschy, Reise in den Amanus, in Petermanns Mitteilungen, 1863, 340 ff. (X. de Planhol)

GAYHAT, Ilkhān [q.v.] from 1291 until 1295, the younger son of Abaka, was raised to power by the leaders of his country after the death of his brother Arghun [q.v.]. He ascended the throne on 23 Rajab 692/12 July 1291, when he also adopted the Buddhist (Tibetan) names Rin-chen rDo-rje "precious jewel"; he was, however, in no way hostile to the Muslims, and he was the only Ilkhān who did not carry out any executions. Earlier, as an official in Asia Minor, he had been renowned for his unbounded liberality; now he squandered the State Treasury within a short space of time, devoted himself to drunkenness and pederasty and—apart from an attack against Asia Minor in 1292—paid no attention to State affairs. In order to prevent financial disaster, Ṣadār al-Dīn Ahmad b. 'Abī al-Razzāk Khālidī (also called Zangjālī), his Finance Minister (Ṣāhib ṭawāf) since 1292, advised him to introduce paper money on the Chinese pattern; the name tāw (from Chinese ts'āu) was retained in Persia [see ČAO]. Since the population was not familiar with this type of currency and since it was not covered by treasury resources, the State finances collapsed in the autumn of 1294 (under circumstances described most dramatically by Rashīd al-Dīn). Gaykhātu was consequently deserted by his armies and troops which he was powerless to advance against him. Three days after his defeat at Hamadān (3 Dijumād 1 694/21 March 1295) he was taken prisoner and executed. The paper money was again withdrawn.—After six months of civil war, his nephew Ghārān [q.v.] succeeded him.

GEDI or GEDE, a late mediaeval Arab-African town, built on a coral ridge four miles from the sea and ten miles south of Malindi on the Kenya Coast of East Africa. It is shown on sixteenth century Portuguese maps as Quelam, a rendering for the Swahili Kilimani, meaning "on the hill". Gedi is a Gala word meaning "precious", the name which the site acquired in the seventeenth century.

The ruins, excavated during the years 1948-58 and maintained as a National Park, cover an area of forty-five acres, and are surrounded by a town wall. They include a dâmi, seven other mosques, a palace, a number of private houses and three pillar tombs. The excavations have produced large quantities of Chinese porcelain and Islamic faience, and also glass beads.

The single dated monument is a tomb with date 802/1399-1400. The original settlement may go back to the 7th/13th century, but the majority of the structures remaining are unlikely to be older than the 9th/15th century. It may have been destroyed in the early 10th/16th century, but was re-occupied at the end of the century. In the early 17th century it was abandoned as a result of the southern advance of the Galla from Somalia.

GEDIZ CAYI, a river in west Anatolia, the former Hermos; it takes its modern name from Gediz, a place (39°3' N., 29°29' E.) near its source. It rises on Murat Dagi (3212 m.) and in its upper reaches flows through the Lydian mountains.

In its central section the Gediz Çayı traverses the broad plain which is bounded on the south by Mount Sipylos (Manisa Daği), at the foot of which there are the ruins (see p. 459) of Magnesia (the ancient Magnesia). Further along on the southern extremity of this plain lie the towns of Turgutlu (Kasaba) and Salihli which have been connected with Izmir by a railway since 1863. In this plain are also to be found the remains of the ancient Sardes, near Sartköy.

After forcing its way through a ridge of mountains the Gediz Çayı flows past Menemen in the plain near to its mouth in the Gulf of Smyrnia (Izmir). And indeed in ancient times and in the Middle Ages the river-mouth was dangerously near to the old port of Smyrna. Since the land round the river-mouth was continually being enlarged by deposits from the sea and Izmir was in danger of being cut off from the sea, in 1886 the mouth was removed above Menemen, so that it now flows into the more open part of the Gulf. (FR. TAEESCHNER)

GEG [see ARNAWULTU].

GELIBOLU, in English Gallipoli, town on the European coast and at the Marmara end of the Dardanelles (Turkish: Çanak-kale Bogaz [q.v.], in the Ottoman period a naval base and the seat of the kapudan-pasha [q.v.], now an île belonging to the île of Çanakkale; the name derives from the Greek Kallipolis, Kallionpolis, also Kallipolis (for the various forms see E. Oberhumer, in Pauly-Wissowa, x, 1659-60).

When, towards 700/1300, the Turks of Anatolia first concerned themselves with the town, it was one of the greatest and strongest Byzantine fortresses in Thrace and the Peloponnese. L’Émir des Omeyyades et l’Occident, Paris 1957, 69-70, the base, towards 720/ 1320, for all the crews of the Byzantine fleet. In the winter of 704/1304-5, the Catalans in the service of Byzantium were stationed there, and when their leader Roger de Flor was killed in the following year they seized and fortified this strategic position (L. Nicolau d’Olwer, L’expansion de Catalunya en la Mediterrania oriental, Barcelona 1926, passim). Some 500 Turks, led by Edje Khâli, came from Karasli [q.v.] to join them. When these Turks, returning from the raids they had made with the Catalans in Thrace, wished to cross back from the Gallipoli peninsula into Anatolia, they were attacked by the Byzantines (709/ 1309) and obliged to stay there two years longer (P. Wittek, Yassifoglu ‘Ali on the Christian Turks of the Dobruja, in BSOAS, xiv (1952), 639-68, at 662-67). In 731/1331 or 732/1332 Umur Beg [q.v.] of Aydin made an unsuccessful attack on Gelibolu with his fleet, but was able to seize and sack the fortress of ‘Lazgol’ (Lazu?) (Lemerle, op. cit., 70). Enweri (Düstürnâme, ed. M. Khâli [Yînanc], Istanbul 1928, 256-61, and tr. I. Melikoff-Sayar, Le Destan d’Umur Pacha, Paris 1954, 62) states explicitly that this fortress was on the Gallipoli peninsula. If, however, one thinks it might be a small fort in the neighbourhood.

The Ottomans, under the command of Süleyman Pasha [q.v.] and as allies of John Cantacuzenus, in 753/1352 occupied the fortress of Tzyyme in the Ottoman registers and in the wakfîye of Süleyman Pasha, ‘Dînbîl’, north of Gelibolu, and, occupying the whole of the hinterland, cut Gelibolu off from Thrace. In order to maintain pressure on the strong fortress, the Ottomans made an ‘idjê’ here, under the command of Yâkob Edje and Hâzî Fâdîl (‘Aşkipaşâzâde, ed. Giese, 45; tr. R. Kreutel, 77).

While the Byzantines were trying to buy them off (Cantacuzenus, Bonn ed., iii, 278-81; Fr. tr. Cousin, Hist. de Constantinople, viii, Paris 1774, 230-1), a violent earthquake, on 7 Safar 755/2 March 1354, destroyed the walls of Gelibolu (Düstûrname, 82; P. Wittek, in Byzantion, xiii (1938), 220; P. Charanis, in Byzantinosavlica, xvi (1955), 113-7). The Ottomans immediately occupied Gelibolu, and other neighbouring fortresses whose walls had been thrown down. Süleyman Paşa crossed from Anatolia, repaired the citadel, and settled there Turks brought over from Anatolia (Cantacuzenus, loc. cit.). This occupation of Gelibolu made it possible for the Ottomans to install themselves in Europe: Süleyman Paşa made Gelibolu the base for the conquests in Thrace (‘Aşkipaşâzâde, ed. Giese, 47; tr. Kreutel, 80), and Gelibolu became the first centre of the Paşa sandığâli in Rumeli. After Süleyman’s death (758/ 1357), he was succeeded at Gelibolu by Prince Murad (later Murad I); the wakfî-registers mention his palace at Gelibolu (Tapu def. no. 67 [see Ibhit], 426). On 15 Dhu ’l-Hiddâja 767/23 August 1366, the Duke of Savoy, Amaddeo VI, attacked Gelibolu with a Crusader fleet and captured it. The Crusaders handed it over to the Byzantines on 15 Şawwal 768/14 June 1367 (N. Jorga, GÖR, i, 226; idem, Philippe de Mésières, Paris 1896, 334-5). In a speech made in the summer of 773/1371, N. Cydones was urging that Gelibolu must not be returned to the Turks (Ortelius, Invent. Generale, iv, 497, cliv, 1009; R. J. Loemertz, Les recueils de lettres de Demetrius Cydones, Vatican 1947, 112), but finally
Andronicus IV yielded to the Sultan's insistence and returned the fortress to the Ottomans on 14 Rabl' II 778/3 September 1376 (G. Ostrogorsky, History of the Byzantine State, tr. J. N. D. Kelly, Oxford, 1936, 483).

During the reign of Murad I Gelibolu was the regular crossing-point for Ottoman armies, and became also the principal base for the Ottoman fleet. In 791/1389 Murad I transported the army to Rumeli under the protection of the fleet stationed here, and left Yanâli Beg at Gelibolu to protect his line of communications with Anatolia (Nesghi, ed. Taeschner, i, 68). In 796/1392 Venice had sent her fleet to make a threatening demonstration off Gelibolu (N. Jorga, La politique vénitienne dans les eaux de la Mer Noire, in Bull. de la sec. d'histoire de l'Acad. Roumaine, no. 2-4 (1914), 14-5). Indeed, during the 8th/14th and 9th/15th centuries, to blockade the Strait and destroy the Ottoman fleet at Gelibolu were always two main objectives in the plans of the Crusaders (such a plan had been mooted even before 767/1366: O. Halecki, Un empeure de Byzance à Rome, Warsaw 1930, 63-144; for the plan of 798/1396 see M. Silberschmidt, Das orientalische Problem zur Zeit der Entstehung des türkischen Reiches, Berlin 1923, 145; for the plan of 848/1444 see H. Inalcik, Fatih deersi, . . ., i, Ankara 1954, 12, 30); G. de Lannoy wrote in 825/1422: "Et qui auroit dit chastel et port les Turcs n'aurroit nul seuur passage plus de l'un à l'autre pont; tandis que nos tiles, en Gelibolu, comme perdu et defect!" (Voyages et ambassades de Messire G. de Lannoy 1399-1450, Mons 1840, 117-8).

Bâyezîd I well understood the vital importance of Gelibolu for his imperial policy. He rebuilt completely the ruined citadel and fortified with a strong tower the harbour, which was capable of accommodating large galleys. His aim was to control the Strait (Ducas, ed. Grecu, 43 = Turkish tr. by V. Mirmiroglu, Istanbul 1956, 9; Silberschmidt, 115). In 806/1403, Clavijo saw a great arsenal and docks at Gelibolu and reported that the fortress was full of troops and that there were about 40 ships in the harbour; between the inner and the outer basins there was a bridge with a three-storey tower (presumably that which Ducas mentions) at one end of it to protect the inner harbour. G. de Lannoy, who visited Gelibolu in 825/1422, speaks of a "ville très grande" outside the wall; there was a citadel with eight towers, and a fine large square tower to protect the inner basin. The upper part of this tower was destroyed in 1920 (Kurtoğlu, op. cit., pl. 32). In 1069/1659 Eyhîâî Celebi described Gelibolu as a strong fortress, hexagonal in shape, with 90 (?) towers of hewn stone (Seydihatname, v, 315).

By thus making Gelibolu into a powerful fortress and naval base and by strengthening the fleet (Silberschmidt, 139), Bâyezîd I hoped to establish complete control over the Strait, and compel foreign ships to halt off Gelibolu, undergo inspection and pay a due for the right of passage. But Venice decided to fight for the right of free passage through the Strait. In alliance with Hungary she planned to destroy both the naval base and the Ottoman fleet (Silberschmidt, op. cit., 111-2, 145; F. Thiriet, Règtes des déliberations du Sénat de Venise concernant la Roumanie, i, Paris 1896, 852, 868). The Ottoman fleet was not in fact very powerful (Bâyezîd had 17 galleys); it would emerge from the shelter of the strong base at Gelibolu and attack Venetian territory and merchant ships in the Aegean, but only when the Venetian fleet was not at sea; and it could not prevent Marshal Boucicaut from sailing past Gelibolu in 1399, although it seriously hindered Venetian attempts to bring relief to Constantinepol, then under investment by Bâyezîd (see Thiriet, op. cit., ii, Paris 1959, doc. 1023). After the Ottoman defeat at Anchâr (804/1402), the Venetian fleet was ordered to seize Gelibolu (Thiriet, op. cit., ii, docs. 1070, 1078), but the plan was not carried out, and the Ottoman threat continued in the reign of Emir Suleyman, so that Venice was obliged to send warships to protect her merchant ships in their passage through the Strait (Thiriet, op. cit., ii, docs. 1289, 1431). In 812/1409 Emir Suleymân built another fortress (the so-called 'Emir Süleyman Burkozl') at Lapseki on the Anatolian coast, primarily as a protection against his rivals in Anatolia. While the struggle among the Ottoman princes continued, Venice encouraged the Byzantines in their hopes of recovering Gelibolu (Thiriet, op. cit., ii, doc. 1415) and came to an agreement with Moçul Moçul Celebi under the protection of the fleet stationed here, by which he granted her free passage through the Strait. In 817/1414 she was unable to renew this agreement with Mehemmed I (Thiriet, op. cit., ii, doc. 1538), so that Gelibolu became the main object of dispute in Venetian-Ottoman relations. When, in 818/1415, an Ottoman fleet based on Gelibolu attacked Venetian territory in the Aegean, the Venetian fleet, under Pietro Loredano, appeared off Gelibolu and, when the Ottoman fleet rashly emerged from the well-protected harbour, destroyed it (1 Rabî' II 819/29 May 1416; see Jorga, GOR, i, 372). Makrîzî (al-Sulûk il-mârîsîfat dusul al-mulâk, MS. Istanbul, Fatih 4380, fol. 66a) mentions that the Venetians captured 12 ships (Venetian sources say 14, Ducas says 27) and killed 4000 Muslims. In spite of this victory, Venice was unable to achieve control of the Strait and remained obliged to convoy her merchant ships (see Thiriet, op. cit., ii, docs. 1667, 1708, 1749, 1853, 1866). During the peace negotiations of 822/1420 Venice endeavoured above all to obtain freedom of passage past Gelibolu and exemption from tolls (Thiriet, ii, doc. 1750). In the Venetian-Ottoman war of 826/1425-834/1430 (for possession of Salonica/Selanik [q.v.]), Venetian attacks were mainly aimed at Gelibolu (see Thiriet, ii, docs. 1931, 1949; Jorga, GOR, i, 403; idem, Notes et extraits . . ., 2nd series, i, Paris 1899, 374). When her merchant ships were seized, the Venetian fleet under Silvestro Mocenigo launched an attack on the inner harbour: Mocenigo broke through the 'palisade' of the bridge and penetrated the inner harbour, but was obliged to retire (Jorga, Notes et extraits . . ., i, 505-6; Tarihi takvimler, tr. J. Hussey, Oxford 1956, 483); the aim of the Venetians was to destroy once and for all the Ottoman fleet (see Thiriet, op. cit., ii, docs. 1789, 2212; Jorga, GOR, i, 409). At about this time the Emir Süleyman Burkozl at Lapseki was destroyed on the orders of Murad II, for fear that it should be occupied by the enemy (Tarihi takvimler, 26; according to Ducas, 149 = Turkish tr., 67, this occurred in 1447). In 824/1422 the authorities at Constantinople hoped that the struggle for the throne between Murad II and his uncle Mustafâ would enable them
to recover Gelibolu by negotiation, but neither of the rivals was willing to relinquish control of this important base (see IA, art. Murad II, 599-601). In the whatever war with Venice broke out (winter of 868/1463-4), two strong fortresses, named Kılıl al-bahr and Kal-ei sultaş-
niye, were built on opposite sides of the Strait towards the Aegean end, and an arsenal and harbour were constructed in Istanbul at Kapidîrga Lümalân (see IA, art. Mehmed II, 523); nevertheless Gelibolu remained the principal naval base of the Empire (Iorga, Notes et extraits, iv, Bucharest 1925, 330) until superseded by the great arsenal and base constructed on the Golden Horn in 922/1515 (F. Kurtoglu, op. cit., 57-8). When the Venetian fleet attempted to gain control of the Strait during the war for Crete, two more fortresses were built at the Aegean entrance to the Strait, Seddüb-i-bahr (Sadd al-bahr) and Kum-kales, also called Khaşâniyye and Sultaşâniye (Naftmâ, iv, 420; Silâhâdar, i, 118). By this time, according to Ewliya (v, 317), Gelibolu had lost its former military importance and counted as 'iç-el'.

When the Ottomans first occupied Gelibolu, the upper class of the Greek population fled by ship to Constantinople (Diştürnâme, 83). Those that remained settled in the area known as Eski Gelibolu and the nearby village of Kozlû Dere. The tabir-register of 879/1474 (Cevdet O 79, see Bibli.) shows the Greeks of Gelibolu organized into two principal djemä'at, the kürbükâyân (rowers) and the senbekeryân (arbalettes); of the latter, a group of 35 served in the citadel and a group of 22 in the 'tower'. A further 95 Greeks were organized into various djemä'at for ship-building and repair, and for the maintenance of the galleys. Some of these were paid a daily wage, others were recompensed by exemption from the kharâj, ispendje and 'awârid-i divânîye. The register of 925/1515, however, shows that all the members of these djemä'at were by then Muslims. It shows the Greeks living in six mahâalles, and records also 80 Greeks as 'bâyâmine', organized in five djemä'at: these are presumably migrants who had been able to settle at Gelibolu.

After the occupation, Gelibolu developed as a typical Ottoman city. The population at various dates, as revealed by the tabir-registers, was:

879/1474 39 mahâalles comprising 1055 households (khiine)
924/1518 55 mahâalles comprising 1303 households
1009/1600 58 mahâalles (four of them Christian and one Jewish).

Each mahâalle was usually named after the founder of the mosque which served it: most of these founders belonged to the military or to the theological class (e.g., Hasan Paşa, Şarûdu Paşa, Ahmed Beg, Kapudan, Hâddîdî Dîzdar, Shâycîh Mehemd, 'Ali Fakih, Mûtewwilli Khoshadî, etc.); some were merchants (Keçêçî Hâddîdî, Weled-i Xllaladînî, Khâdîja Hamza); the founder of the Hâddîdî Khîdr mosque (Tapu def. 67, 509) was presumably the Hâddîdî Khîdr who had accompanied Süleyman Paşa into Rumeli. According to Ewliya Celebi there were in his day some 300 two-storied houses in the fortress; outside the walls the city, with most of the principal buildings to the west, contained seven or eight hundred fine two-storied houses. The population in the middle years of the 19th century was 12-17,000 (N. V. Michoff, La population de la Turquie et de la Bulgarie, iv, Sofia 1935, 58, 94, 112, 128).

According to a register (Tapu def. 12), at the end of the reign of Mehmed II the principal buildings were: (1) the mosque of Hâddîdî Khudâwendârî (Murad I), also known as Eski Kehf; (2) with a bath (hammâm) and a shop (dükânîm) among its wakf properties; (2) the zâîüye and mosque of Karâdja Beg, built by the close associate of Emir Süleyman, who was killed with him (Hammer-Purgstall, i, 349; on his grave-stone at Gelibolu he is called Hâddîdî Karâdja b. 'Abd Alâh and the date of his death is given as the first decade of Shâwâl 924/1518); (3) the 'îmârât (with inscription dated 840/1436) and medrese of Şarûdu Paşa, who was beglerbegi of Rumeli until 840/1436, when he was dismissed and banished to Gelibolu (see H. Inalcik, Fatih davri ..., i, 86; Sa'd al-Dîn, i, 374): he appears as saqâjâbeg of Gelibolu until the winter of 847/1443; the wakf properties of his foundations were, at Gelibolu, a bezâsiyât, a hârûnsâray, 96 shops, a bath and two abattoirs (see M. T. Gökbelgin, Edirne ve Paşa Livâdâs, Istanbul 1942, 248); (4) the zâîüye and mosque of Khâûs Ahmed Beg (b. 'Abd Alâh), an officer of Murad II; his wakfâyî (reproduced in M. T. Gökbelgin, op. cit., 257-61) is dated Shâwâl 863/August 1459; among the endowments he made were several shops and fields and a hârûnsîray beside the quay at Gelibolu; for the property-guants (temîlîk) made by Murad II there are deeds of con-
firmation (mukarrer-nâme) issued by Mehmed II in 886/1482 and by Bâyezid II in 886/1481; (5) the medresse of Balaban Paşa; the wakfâyî (Gökbelgin, op. cit., 223), dated 846/1442, endows the medresse with a bath and some shops; (6) the zâîüye and türbe of Gûveyî (Gûvey = Dâmdâ) Sinân Paşa, the husband of Bâyezid II's daughter 'Ayyahe ('Ayyahe) Khatun; as beglerbegi of Anatolia he played a part in bringing Bâyezid II to the throne; in 907/ 1501 he was beglerbegi of Rumeli, and from then until his death in 909/1503 was governor of Gelibolu and Kapudan (Sa'd al-Dîn, ii, 220-1); the zâîüye, of which the ruins survive, was built in 896/1491; the türbe was, in Ewliya's day, a place of pilgrimage.

These and several other similar religious foundations, and the gates, bazaar, markets, and shops, whose revenues supported them, promoted the development of Gelibolu as one of the chief cities of the Ottoman Empire. This development was most pronounced during the reign of Murad II, but important buildings were added in later years, such as the mosques of Meslih Paşa [q.v.] and of Ahmed Paşa (941/1534). Ewliya Celebi credits Gelibolu with 164 mosques, zâîüyes and tekkes, 14 'îmârâts, 900 shops and 8 baths. The tekkes of Yazidiyzade Mehemd [q.v.] and of the Mewlewl order (detailed description in Ewliya, v, 318) were especially famous. Gelibolu, known as 'Dar al-mudâjdîhindî', remained the principal naval base and arsenal of the Empire until the 10th/16th century, so that a high proportion of its population consisted of fighting men. The register of 897/1494 shows the sailors organized in 4 djemä'ats: captains (re'isî) and 'azebîs of (1) the galleys (kaptîrga), (2) the galleots (galyata), the 'bâyîks' (at this period a bâyik was a transport big enough to take 14 horses), and (4) the horse-transports (at gemilerî). Each djemä'at was divided (like the djemä'at of the Janissaries [see YENİ CEHR]) into a number of bôlûks [q.v.]. The djemä'at of the galleys comprised 24 bôlûks: the first, that of the kohâr (of which contained also, in two separate djemâ'at, 7 'inâ'îsî [see MIHTER] and 5 non-Muslim 'kumîs' [from Latin comes, Greek kôpîs, officer in charge of the galley-slaves, see Tietze and Kahane, The Lingua Franca in the
Levant, Urbana 1958, no. 789; these were mostly non-Muslims, Greeks or Genoese); it was headed by the kapudan and a ser-oda, the rest being ‘azbes, i.e., seamen. Each of the other bôliûks was similarly composed of a râfs (captain), a ser-oda, a kümi, and a number of ‘azbes. The captains and ‘azbes were all Muslims (a captain named ‘Frenk Ilyas’ is presumably a convert). The dîjmed’at of the galleys comprised 1112 men, and the division into 92 bôliûks shows that the strength of the fleet at that time was 92 galleys. There were 5 bôliûks in the dîjmed’at of the galleys (hence 5 in number) and 11 in that of the hayûks. In the register of 925/1519 we find 93 bôliûks in the dîjmed’at of the galleys, and very little change in the organization. At the time of the Malta campaign of 973/1565, the construction of a new arsenal was begun (Mükûmmîm register no. 5, p. 183; I. H. Uzunçarsîh, Osmanlı devletinin merkez ve bahriye teşkilâtı, Ankara 1948, 395, n. 3).

Besides these naval crews, there were the garrisons of the citadel (bâlîl), consisting in 879/1474 of 56 men (27 with timârs, 29 with ‘ülûfe), and of the ‘tower’, consisting of 42 men (9 with timârs, 33 with ‘ülûfe). The dîjmed’ats of Christians who rendered service as arbalers or in the upkeep of these fortresses numbered 60-65 men.

The first oğlab of ‘âdami oğhlans [q.v.] was established at Gelibolu. In the roth/16th century they numbered between four and five hundred, and served on the transports plying between Gelibolu and Cardak.

Particularly in the 9th/15th century, Gelibolu was the most important point on the great trade-route between Crimia (via Mîkhâli-C—Bigha—Lapseki or Cardak) and Rumeli (see H. Inalcîk, in Belleten, xxiv/93 (1960), 55). From Gelibolu the Florentines carried the silk which they had bought in Bursa (‘Barbàrossa’) to their markets and to the Venetians. In 940/1533 Khayr al-Dîn Pasha (an Ottoman vassal of the Serbs) was made kapudan pasha at Gelibolu, that of 925/1519, eight. At about this time 15 Jewish families had come from Istanbul to settle here as merchants. In the reign of Mehemmed II there were also Venetian trading-houses (Hedîy, op. cit., ii, 328).

Before the capture of Constantinople, Gelibolu was one of the principal customs-houses of the Ottoman Empire. Under Mehemmed II theîdîvâtsa [q.v.] of the Gelibolu customs was included in that of the customs of Istanbul. The customs levied at all harbours from Edîv-oevasi to Tekfur-daghî (Rodosto) were farmed out as a separate mêkhîba; in about 880/1475 the ‘Gelibolu customs’ brought in some 9000 gold ducats (about 400,000 akbas) a year (F. Babinger, Die Aufzeichnungen des Genuesen Tacopo de Promontorio-de Campis ..., Munich 1957 [SBBAyr.Ak., 1950/8], 63); in 1009/1600 it brought in 766,663 akbas (Muafaqât register 141 [see Bibli.]; Ewliya Çelebi (v, 316) gives a similar figure—700,000 akbas—for 1069/1658-9. But by this time the port was declining, and the French consulate there was closed in 1100/1689. Customs dues (for the rates see M. T. Gökbildîn, in Belleten, xxv/78 (1956), 252). Every foreign ship, after being inspected at Istanbul, was inspected again at Gelibolu before passing out into the Mediterranean and issued with an âdijem tetherkresi (‘clearance’); in about 1091/1680 the charge for this ‘âdijem-i sêfîne’ was about 100 kurush; the revenue from these charges amounted in 1009/1600 to 610,000 akbas. By article 29 of the French capitulation of 1153/1740, ships inspected at Istanbul were relieved from the obligation to be inspected again at Gelibolu.

Gelibolu served also as the principal control-point for traffic between Rumeli and Anatolia. A traveller going in either direction was obliged to obtain from the kapudan of his starting-point a ‘chit’ (tâdefhir) attesting the purpose of his journey and produce it to the authorities at Gelibolu. The ‘peedjiik resmi’ [see Pendik], levied on enslaved prisoners-of-war being transported from Rumeli to Anatolia, was collected at Gelibolu by the ‘peedjiik emini’. Gelibolu was also a centre for the slave-trade. Here too a tax of four akbas a head was levied on sheep and goats being taken from Rumeli to Anatolia; this tax brought in 66,499 akbas in 1009/1600. There was an additional levy of 80 akbas per thousand sheep, which was assigned to the hâss of the sandjak-begi.

The chief exports from Gelibolu were wheat (see A. Refik, Onalınce asrîda İstanbul hayâtı, İstanbul 1935, 82), cotton, fish, wine and arack (îdâm, Hicri onêmesî asrîda İstanbul hayâtı, İstanbul 1930, 119), bows and arrows, and naval stores such as cables and sails. In 1009/1600 the ‘municipal’ taxes, which were assigned to the hâss of the sandjak-begi, amounted to 15,000 akbas from îsîntâb (see Bâsra) dues, 12,000 akbas from niyaçet [q.v.] dues, and 3,500 akbas from the îmân (see Bibli.).

Until 940/1533 Gelibolu was the chef-lieu of a sandjak belonging to the beglerbegi of Rumeli (see M. T. Gökbildîn, in Belleten, xxv/78 (1956), 252). As commander of the fleet, the sandjak-begi of Gelibolu held a position of especial eminence among the other sandjak-begis: his hâss approached in value the hâss of a beglerbegi (500,000 akbas early in the reign of Sûleyman I, 605,000 later in that reign). The post of sandjak-begi was often given to prominent statesmen—dismissed viziers or beglerbegis, or pasha with the rank of beglerbegi. When in 940/1533 Khayr al-Dîn Pasha [q.v.] (‘Barbàrossa’) was appointed both beglerbegi of Algiers and Kapudan Pasha [q.v.], Gelibolu was incorporated in this beglerbegili; later it became the chef-lieu of the eyâlet of Diyarbaşî-î Bahri-i Safîd [q.v.], i.e., the ‘Pasha-sandjak-begi’ of the Kapudan Pasha (see Eyâlet, Sandjak). According to the register of 1009/1600, the nâzîyes of the sandjak were: Gelibolu and Erevshe (together), Lemnos, Taşhoz (Thasos), Mîglakara (Malkara) and Harala (together), Abri, Keshan, Ipsala, Gümülûjine. In the time of ‘Ayn-i ‘Ali (Kâwûnîn, İstanbul 1280, 20 = German tr. by P. A. von Tischendorf, Das Lehrwesen ..., Leipzig 1872, 70 f.) it contained 14 ze’âmets and 85 timârs, in the time of Ewliya Çelebi (v, 316), 6 ze’âmets and 122 timârs.
During the confinement there of the pseudo-Messiah Shabbetay Sebi [q.v.] in 1666, Gelibolu briefly became a place of pilgrimage for his Jewish disciples.

By the new provincial law of 1281/1864, Gelibolu became a sandjak (liwa?) of the vilayet of Edirne, containing in 1287/1870 six kadás: Gelibolu, Sharköy, Ferejik, Keshan, Malkara and Enoz (Edirne sânamesi, 1271). The sandjak was later reduced in size, to comprise only the three kadás of Keshan, Mürtefe and Sharköy (Edirne sânamesi, 1309). The town is now the centre of an ilçe, population (1960) 12,945.

GENEALOGY [see KARAM]

GENEROSITY [see KARAN]

GENIE [see DÎNN]

GENIL [see SHANLI]

GENIZA, a Hebrew word of the same Persian origin as Arabic djanâza, designates a place where Hebrew writings were deposited in order to prevent the desecration of the name of God which might be found in them. As a term of scholarship, Geniza, or Cairo Geniza, refers to writings coming from the store-room of the "Synagogue of the Palestinians" in Fustât [g.] and, to a small extent, from the cemetery al-Basâtîn near that ancient city. When the synagogue was pulled down and rebuilt in 1889-90, a good deal of the manuscripts preserved in its Geniza were dispersed and acquired by various libraries in Europe and the United States, until, in 1960, Solomon Schechter brought the bulk of what remained to the University Library, Cambridge, England, where it forms the famous Taylor-Schechter Collection.

Naturally, it was mostly Hebrew literature which gained from these treasures. Paul E. Kahle's book with the somewhat misleading title The Cairo Geniza (second edition, New York 1960) deals exclusively with this aspect. For Islamic studies, it is mainly the documentary material, such as letters, accounts, court records, contracts etc., which is of immediate interest. Most of these documents come from Fâtimid and Ayyûbid times; there is little from the Mamlûk period; but from the 10th/16th century onwards, the Geniza was again used somewhat more frequently, albeit in a sporadic way. This article is concerned with the "classical Geniza", the three hundred years between 354/965 and 663/1265 approximately.

The major part of the documentary material of the Cairo Geniza is written in Arabic language, though in Hebrew characters. Business letters were invariably and family letters generally written in Arabic, and the same applies to court records and other legal documents with the exception of writs of divorce, deeds of manumission and the formal—parts of marriage contracts. Only subjects related to religion or the life of the Jewish community were largely, but by no means exclusively, transacted in Hebrew. As to the number of the Geniza documents preserved, if we disregard mere scraps and confine ourselves to complete pieces and fragments which are self—contained, meaningful units, we arrive at a total of about ten thousand items.

In addition to Egypt itself, Tunisia and Sicily are conspicuously represented in the Geniza. This has its reason in their prominence in Mediterranean trade during the first half of the 9th/11th century and the migration of many Maghrûbûs to Egypt in the second half (see S. D. Goitein, La Tunisie du XI siècle à la lumière de l'Édiction de la Geniza du Caire, in Études d'Orientalisme . . . Lévi Provençal, 1962, 559-79). Most of the Geniza letters dealing with the India trade come from the 6th/12th century, but here
again we find that the majority of the Mediterranean merchants active in South Arabia and India were Maghrībis (see idem, Letters and documents on the India trade in medieval times, in IC, xxxvii (1963), 188-205). Spain is only sparsely represented during the 5th/11th century (see E. Ashtor, Documentos españoles de la Genizah, in Sefarad, xxiv (1964), 41-80), and somewhat more generously during the 6th/12th, but Spanish products loom large in the Geniza papers and so do persons called ‘Andalusī’, although many of these seem to have originated in countries other than Spain. There is some correspondence from Palestine and the cities on the coast of Lebanon and Syria, but very little from Damascus and other Syrian and Mesopotamian cities and next to nothing from Baghdad. On the other hand, thousands of responsa (fatwās) and a number of letters of the heads of the two Jewish academies of Baghdad have been found in the Geniza. Most of them were addressed to places in Tunisia and Morocco, but were preserved in Fustat, partly because they were copied there before being sent on to the West and partly because they were brought back by immigrants from the Magrib. Still, the discrepancy between the abundance of official correspondence with Baghdad and the almost complete absence of business and private letters is not easily explained. A few Persian items (see D. S. Margoliouth, A Jewish Persian lan-
report, in JQR, xii (198-92), 67 (there are more)), and one or two beautifully written Arabic letters from Iran have also been found.

Material in Arabic characters also made its way into the Geniza, either because blank reverse sides of Arabic documents were used for Hebrew writings, or because the persons concerned were Jewish, or for no apparent reason. Much of this material is dispersed all over the various Geniza collections. In the Cambridge University Library some of it was put aside in boxes labelled ‘Mohammedan’, which is, however, somewhat inaccurate, since most of the documents contained in them concerned Jews. There are a number of pieces from the Fatimid chanceries (see Bibl.) as well as a variety of material on widely different topics: two Christians lease from a Muslim two-thirds of his vegetable garden (19-20, vegetables to be grown are specified) on the outskirts of Alexandria; an archer (ahab al-rumāl) in prison requests his commander to work for his release; a funduk, or proprietor of a caravanserai, undertakes to transport to the sīna‘a, the customs station on the Nile at Fustat, all consignments for which no customs had been paid, whether brought to his own funduk or to any other in the city; a tax-farmer makes a contract with a representative of the caliph al-Mustansir; the al-sīda al-fubāda are requested to give a fatwā in a disputed case of inheritance, etc. Jews also corresponded sometimes with each other in Arabic characters. When a schoolmaster writes a complaint to a father about his son in this way, he certainly did so because he did not want the boy, who thus far had learned only the Hebrew letters, to read it. When a scholar boasting of his Jewish learning asks a notable for financial help in a letter written in Arabic characters, he followed that course because he knew that the addressee was more fluent in Arabic than in Hebrew (there is an express statement to this effect). However, even a letter addressed to the Gaon, or head of the Jewish academy of Jerusalem, and dealing exclusively with communal affairs, is written in Arabic characters.

Research on the Geniza documents began imme-

diately after their discovery in the eighteen-nineties. A survey of the widely scattered publications is contained in S. Shaked (see Bibl.). Jacob Mann’s work, although intended to serve Jewish history, is important for Islamic studies as well, and so are the publications of S. Assaf and D. H. Baneth, which are, however, all in Hebrew. The importance of the Geniza documents for the economic, social and cultural history of mediaeval Islam, as well as for the history of the Arabic language, is being more and more recognized. Joshua Blau, A Grammar of mediaeval Judoæo-Arabic, Jerusalem 1961, is a mine of linguistic information, and, albeit in Hebrew, can be used with profit also by scholars not familiar with that language, since each paragraph has also a name in English and consists mainly of examples culled from the Geniza and similar sources. E. Ashtor is completing a book on prices in mediaeval Islam, based largely on the Geniza. N. Golb has prepared an edition of the magnificent series 18 J of the Taylor-Schechter Collection with an English translation and commentary. S. D. Goitein has written two volumes containing a general survey of the Geniza material under the title A Mediterranean society: The Jewish communities of the Arab world as portrayed in the Cairo Genizah, accompanied by a volume of selected translations in English, called Readings in Mediterranean social history. His col-
lection of Geniza papers dealing with the India trade amounts now to 315 items. M. Michael is preparing an edition of letters emanating from or addressed to Nahray ben Nissim, a prominent Kayrawānī merchant scholar and public figure who was active in Egypt in the second half of the 5th/11th century. Muhammad El-Garbi of Cairo University is preparing a selection in Arabic characters of Geniza documents written in Hebrew script.

The Geniza contains also a consider-able number of fragments of Judoæo-Arabic literature (see, e.g., the series of articles The Arabic portion of the Cairo Genizah at Cambridge, in JQR, xv-xvi (1902-4), by H. Hirschfeld), and some items from Islamic Arabic literature, which might not have been preserved otherwise, e.g., a manual of correspondence prepared for Muhammad al-Dawla ʿAll b. Naṣr (cf. D. S. Margoliouth, Eclipse, Index g3), publ. by Richard Gotthiel in BIFAO, xxxiv (1933), 103-28, under the title Fragments from an Arab Commonplace book, or A Muhammedan book of augury in Hebrew characters, publ. I. Friedlaender, in JQR, xix (1907-8), 84-102. Cf. also H. Hirschfeld, A Hebrew-Sufic poem, in JASO, xlix (1929), 168-73, and the literature on the subject noted by S. M. Sterin, in JQR, 1 (1960), 356, n. 21.

GERDEK RESMI [see 'Arūs resmi]

GERMİYAN-OGHULLARI. Germiyan, at first the name of a Turkoman tribe, was afterwards applied to a family, then to an amirate. Mentioned from the 6th/12th century in the history of the Anatolian Turks, the Germiyan appeared for the first time in 636-7/1239 in the reign of the Saltukid Ghiyath al-Dīn Kaykhusraw II; at this time the Germiyan Muẓaffar al-Dīn b. 'All Shīr, installed in the region of Malatya, was sent at the head of a troop of Kurds and Germiyan against the Turkoman rebel Baha b. Kutb al-Dīn. After the execution of Ghiyath al-Dīn Kaykhusraw III by the Mongols in 682/1283, and the accession of Mas'ud II, it seems that the Germiyan sought to break their bonds of vassalage towards the Saltukids and to proclaim their independence. The downfall of Mas'ud, however, put an end to the hostilities between the Germiyan and the Saltukids, as is revealed by an inscription in the mosque of Kızıl Báb at Ankara, dated 699/1299, according to which Yaṣūk b. 'All Shīr, whose possessions at that time extended up to this town, declared himself a vassal of 'Alla' al-Dīn KaykobĀd III. This Yaṣūk b. 'All Shīr was the founder of the amirate of Germiyan, under the nominal suzerainty of the Saltuk Sultan and the Mongol Ilḫān; the breakdown of the central power was progressively to give him complete independence. According to al-'Umari he was the most powerful of the Turkish amirs; he led a princely life and surrounded his amirate with ostentation over the neighbouring amirs, many of whom, such as his former subhāgh Mehmed Beg Aydınlı-oğlu, had at first waged war in his name before becoming independent; the Byzantine emperor paid him an annual tribute of 100,000 pieces of gold. The amir of Germiyan, whose capital was Kütahya, occupied the greater part of the ancient Phrygia, according to Gregorios (i, 214); his sovereignty extended to the region of Toğruflu-Lâdik, which was governed by a member of his family, and to that of Karabsahr, where his son-in-law was amir; Pachymeres (ii, 426, 433, 435) attributes to him possession of Tripoli on the Menderes, and al-'Umari that of Gümüşhâne (not to be confused with the town of the same name in northern Capadocia) where there were important silver and alum mines, and of Sivri-Köy, a rice-producing region; the conquest of the regions of Smav and Kula, regained by the Catalans and then reconquered by his son Mehmed, is attested by the inscription of the madrasa of Yaṣūk b. Kütahya; Yaṣūk b. 'All Shīr also coveted Philadelphia (Alashehir), to which he laid siege but which was liberated by the Catalans in the spring of 703/1304 (cf. Pachymeres, ii, 421, 427-8); we learn, however, from an inscription in the Wāqidiyya madrasa in Kütahya that in 714/1314 the town of Alashehir, the only Byzantine possession in Turkish territory, had been forced by him to pay the diwān. In the reign of Yaṣūk b. I the amirate of Germiyan was extended up to the greater part of the ancient Phrygia, according to Gregorios (i, 214); his sovereignty extended to the region of Tofmızlu-Ladik, which was governed by a subhāgh, the best in all Anatolia, and for its cloths and brocades; thanks to the Menderes it maintained an active commerce, transporting goods by this waterway as far as the Aegean Sea ports. The date of the death of Yaṣūk b. I is not known; it took place after 720/1320. His successor was his son Mehmed Beg, on whom there is little information; a court romance composed for his elder son, Suleymān Shāh, relates that Mehmed Beg was named Câşık-bâddān (cf. Kâḥrîhâname, B.M. ms. Or. 11408, fol. 14 v°). We also know, from the inscription of his grandson mentioned above, that he reconquered the regions of Smav and Kula which the Catalans had retaken from his father. The date of his death is not known; but, from the inscriptions of his son Suleymān Shāh, it is known that the latter was reigning in 764/1363. In Sulaymān’s time the Germiyan amirate was no longer the prosperous state described by al-‘Umari: separated from the sea by the coastal principalities founded by his former vassals, Aydınlı-oğlu, Sarukhan, Karesi, the Germiyan amirate was reduced to the situation of an inland state confined by the states of two rival powers, the Karaman-öğli and the ‘Oğhambâlî. Before the increasing threats towards him by the amirs of Karaman, Suleymān Shāh decided, forgetting the hostilities which had opposed his family to that of the ‘Oğhambâlî, to align himself with the latter and to consolidate their friendly relations by matrimonial ties: in 783/1381 he gave his daughter Dewlet Kâthtîn in marriage to the prince Yıldırım Bâyazîd, with the towns of Kütâhâya, Smav, Egrîzîz (Emed) and Tâwganîl as dowry, and himself withdrew to Kula (cf. Aşkîpâhasâzâde in Osmanlı tarihiileri, i, 129-31; Neshirî, Türk Tarih Kurumu ed., i, 203-9). Suleymân Shāh was a generous and benevolent prince and a patron of men of letters; many works were written for him: at his request Bâbî ‘All b. Sâlih b. Kûth al-Dīn translated the Kâbüsh-nâme and the Mârâshân-nâme from Persian; Şâhîgül Mustafâ, who filled the offices of nîşâhâq, defterdar and treasurer at his court, composed for him a work in prose entitled Kâns al-kubârâ and, in particular, the Kâhrihâname, a verse romance
manuscripts of which exist in Istanbul, London and Paris, and which is a valuable source of information; from this work we learn that Sülêyman died in 790/1387. In 824/1421, he bequeathed his principality to Murad II; on the death of Mehemmed I, he upheld, with the amir of Karaman, the claim to the throne of the Othmanlis. In 854/1449, the amir of Germiyan, Ya'qûb II, died in 789/1387. His son Ya'qûb, together with the towns which had been given to his sister as dowry (804/1402). In the dynastic struggle which involved the sons of Bâyazîd I, Ya'qûb aligned himself with his sister's son Mehemmed Celebi. Robbed once more of his principality in 831/1428 the amir of Germiyan, Ya'qûb II, was thereafter able to reign under the protection of the Othmanîs. In 824/1421, however, the amir of Karaman, who took the opportunity in this troubled period to enlarge his territories, he had his amirate restored to him, after two and a half years of exile, by Mehemmed I, who had triumphed first over his young brother of Murad II, Kucûk Mustafa (cf. Ashikpashazade, 139-40; Neshrl, i, 343, 353). After his victory Timîr rested the Germiyan amirate to Ya'qûb, together with the towns which had been given to his sister as dowry (804/1402). In the dynastic struggle which involved the sons of Bâyazîd I, Ya'qûb aligned himself with his sister's son Mehemmed Celebi. Robbed once more of his principality in 831/1428 the amir of Germiyan, Ya'qûb II, was thereafter able to reign under the protection of the Othmanîs. In 824/1421, however, the amir of Karaman, who took the opportunity in this troubled period to enlarge his territories, he had his amirate restored to him, after two and a half years of exile, by Mehemmed I, who had triumphed first over his brothers and then over the amir of Karaman. Ya'qûb II was better educated than most folk-poets. This made him a better imitator of the classical form and style, but at the same time adversely influenced the language of his more spontaneous folk-poems, where the use of the vocabulary and mannerisms of "upper class literature" is sometimes overcome. In his poems in the diwn tradition he is repetitive and achieves nothing but an awkward and uninspired imitation of classical poets, particularly of Fûdûlî. In his poems in the folk tradition, which revolve on themes of love, separation, nostalgia and epic exploits, he proves to be a most original and spontaneous poet, one of the strongest representatives of the Ashîk [q.v.] literature. Some of his poems have been set to music and are still sung.

Gevheri seems to have died after 1150/1737 (see H. Dizdarolu in Fikirler, no. 262 and 263, İzmir 1944).
period a north-south traffic was carried on, as is borne out by the ruins of Ottoman caravanserais, one of them that of Ka‘f®at al-Mud®b, near the site of the ancient Apamea/Al-Mî‘ámîya. The gradual spread of reed-covered lagoons and the ravages of malaria explain the increasing abandonment of this area, where there soon remained no more than some few poor villages, almost surrounded by lakes, living by buffalo-breeding and chiefly by fishing for catfish, carried on every winter on a very big scale. However, important modern land improvement works have already been started; besides the control of the course of the Orontes by damming, they provide for the drainage of the swamps and the installation of a new system of irrigation.

GHABA. Forest. The terrace of Mount Al-Ghab lying for the most part within the arid and semi-arid districts of the Old World, includes comparatively few areas of dense and continuous forest. The monsoon forests of parts of East Pakistan, Malaysia and Indonesia are of course exceptional. The hazel woods of the coastal mountains of north-east Turkey and the adjacent parts of the Caucasus, the forests of plane and alder which overlook the Caspian shores of Iran, and the stands of deodar and pine in the high valleys in Cyprus led to the desiccation of wells downstream.

GHADAMES (Ghadams), a little oasis in the Libyan Sahara, situated approximately on the 30th parallel and the 10th meridian east of Greenwich (at almost the same longitude as Ghat, Gabès and Tunis). It lies at an altitude of 350 m. between the great oriental erg and the arid plateaus of al-Hamâda al-Hâmirâ® almost at the meeting-place of the Libyan, Algerian and Tunisian frontiers. It owes its very ancient existence and its continuity to the artistic spring called Aya al-Fres (faras) (temperature 30°C, 2-3 grammes per litre of sodium and magnesium chloride), and also to its situation, almost equidistant from Gabès, Tripoli, Ouargla, the heart of the Fezzân and Ghât. Far more than its very limited agriculture, it was trans-Saharan trade which made its fortune over the course of the centuries and it is the disappearance of this trade which explains its decline. Paleolithic and Neolithic implements have been discovered in the neighbourhood. In 19 B.C. Cornelius Balbus camped in this Libyan centre, which was to become Cydamus, and, under Septimius Severus,
an advance post with a garrison of the 3rd Augusta legion, 200 km. to the south-west of the limes. By Byzantine times, it had a church and a bishop; the "idols" (al-`asndm) which stand nearby are ancient remains. The Arab conqueror, `Ubay b. Nafi', occupied it with a detachment of cavalry between his conquest of Fezzan and his march on Gafsa in 47/667. It was Ibadî between the 2nd/8th and the 4th/10th centuries. Ibn Khaldûn (Barberès, iii, 303), far more than al-Bakri (340), dwells on the prosperity and importance of this "portent" of the desert, both for traders and pilgrims. In the 10th/16th century again, Ghadames seems to have consisted of several kd'immâkdm, and the no less compulsory good relations with Tunis and Tripoli. It suffered several attacks by Ḥafṣîd and Turkish troops but always managed to free itself rapidly from the taxes imposed by Tunis. It was nevertheless obliged to recognize the authority of the Turks of Tripoli in 1860. It then became a seat of a šuyūkhd, and after 1874 was given a little garrison; it continued none the less to administer itself with a šuyūkhd and a dîjamâ'a formed from the heads of noble families.

The Italians, who disband at Tripoli in 1911, did not at first occupy Ghadames, but did so later from April 1913 to November 1914, then from February to July 1915, and finally and more permanently from 15 February 1924 on. They left it before the arrival of General Leclerc's troops on 27 January 1943. First of all attached to the Territory of Fezzan (q.v.), it was provisionally administered by the Tunisian Protectorate from January 1948 until 1 July 1951; but following the proclamation of independence of the United Kingdom of Libya on 24 December 1951, and then of the Franco-Libyan treaty of 20 August 1955, Ghadames was evacuated by the French authorities. It was attached to the province of Tripoli in the spring of 1957.

All the texts are in agreement to show that trans-Sahara trade was the essential activity of Ghadames. They dwell on the comings and goings of the caravans, on the remarkable aptitude of its traders who were to be encountered in the Sudan as far away as Timbuktu, as well as at Tunis and Tripoli, and who made large profits under the protection, for which they paid tribute, assured to their caravans by the Touareg Ajjer, at the extreme limit of whose territory Ghadames was situated. Caravans coming from the south brought above all slaves, as well as gold, leather and hides, ostrich feathers, ivory and incense. On the return journey, they carried cotton goods and cloth, sugar, and various products manufactured in Europe. The extreme points of their journeys were Tunis and Tripoli in the north, Agiades, Kano and, more rarely, Timbuktu (for which Ghât was the first halt) in the south.

Trade profited above all the nobles (aḫrâr), who also possessed gardens and sometimes herds; they had many black slaves (agnaw) whom they sometimes allowed to become free men (addra); the humrân formed a small and not very numerous middle class of artisans and shopkeepers; mostly, no doubt, of foreign origin, they formed the retainers of the principal noble families.

In the middle of the 10th century, Duveyrier notes the beginning of the decline in trade, following the abolition of the slave trade, for the most part still little enough resorted to. In 1810, for instance, the geologist, described the stagnation of a much diminished cross-Sahara trade which had turned away from Ghadames. To-day it is practically dead, the towns of the Mediterranean coast no longer needing the produce of the Sudan region, which in its turn is provisioned by sea. At the same time, the artisans, once extremely prosperous, many-sided, and since the beginning of the 19th century, the industries which brought about the ruin of most of the nobles, have almost ceased to exist, lacking raw materials.

The people of modern Ghadames are almost all reduced to cultivating their little oasis, and the Touareg to the raising of camels, sheep and goats. The palm-grove has barely 20,000 palms and the whole area of the gardens is only 75 hectares. It seems that the flow of Ayn al-Fres has become less since 1872-7. The Italians opened an artisanal well in 1952 and another was sunk by the French but their flow also tends to diminish. The departure of a great number of addra and former slaves, now become free men, provoked a man-power crisis which brought about the ruin of most of the nobles, only a few of whom were willing to apply themselves to agriculture.

The population of Ghadames, estimated at 7,000 by Duveyrier round about 1850, had fallen to 1,900 by 1952. Most of the people have emigrated to Tripolitania or Tunisia; nearly 2,000 live in Tunis, the town to which the young people used to go in former times to get their initiation into the business world, which led to a local proverb saying: 'Ghadames gives birth and Tunis brings up'.

Ghadames is a pretty little oasis which attracted some tourists in Italian times. The palm-grove and gardens are surrounded by crumbling mud walls, and the village, all of unfired brick, is in the interior, a little to the south-east, beside the attractive pool of Ayn al-Fres. Most of the houses are very unusual with their urban appearance, rooms placed in uneven storeys or spanning the streets, often transforming them into dark tunnels. The inhabitants, Berbers of the Beni Waxit and Beni Ulid, are Awdâl Beîlî who consider themselves of Arab origin, used to live as enemies, one group against another, shut up in seven districts isolated from one another by walls whose gates were shut at night. Despite these divisions, hard to understand for people travelling between the Mediterranean and the Sudan, the little urban centre of Ghadames has been able to maintain across the centuries its personality as a city of caravaners, its own Berber dialect (a little different from that of the Touareg), its social castes, its original houses and, for a long time, its independence.

Three kms. west of Ghadames, Tounin is no more than a hamlet with a few palm-trees. The poor oases of Derдж and Sinawan are situated on the trail which goes via Nalout to Tripoli. Oil research has been going on in this area since 1956.

Ghadir Khumm

**Al-Ghadanfar** [see Hamdâns].

**Ghadanfer Aqha** [see Aqha Aqahl].

**Ghadâr** [see Kafaff].

**Ghadir Khumm**, name of a pool (or a marsh) situated in a large area called Khumm, between Mecca and Medina, about 3 miles from al-Dhufra. The waters from which it was formed came from a spring which rises in a wadi, and from it they flowed to the sea about six miles away, along a valley which was also called Khumm; the name is no longer in use. As the place was frequently watered by rain, there were there bushes and thorn trees which provided large shady areas around the pool and the mosque built in honour of the Prophet between the pond and the spring. The climate there was very hot and unhealthy, and the inhabitants, belonging to the Khuzâ'a and Kinânâ tribes, who in any case were not numerous, finally abandoned the region because of the lepers which afflicted them and the lack of pasturage.

Ghadir Khumm is famous in the history of Islam because of a discourse (or some sentences) in favour of 'Ali which the Prophet uttered there during a discourse, the circumstances of which, according to the most detailed accounts which are preserved in some hadîths, were as follows. On his return from the Farewell Pilgrimage, Muhammad stopped at Ghadir Khumm on 18 Dhu 'l-Hijja 10/16 March 632. As he wanted to make an announcement to the pilgrims who accompanied him before they dispersed, and as it was very hot, they constructed for him a dais shaded with branches. Taking 'Ali by the hand, he asked of his faithful followers whether he, Muhammad, was not closer (awlî) to the Believers than they were to themselves; the crowd cried out: "It is so, O Apostle of God!"; he then declared: "He of whom I am the mawlî (the patron?), of him Ali received, affirmed that revelation on the night of the mawlid (man kuntu mawlî huwa 'alî)". Nothing which can explain the inner meaning of the main sentence is added either by the additions supplied by several hadîths, e.g., "O God, be the friend of him who is his friend, and be the enemy of him who is his enemy (Allâhumma wâli man wâlihu wa-qâdi man qi'dahu)", or by the variants (the most interesting of which is the substitution of the word wâli for mawlî, which proves that the meaning of the latter word, at least in its metaphysical sense, was not very precise). Most of those sources which form the basis of our knowledge of the life of the Prophet (Ibn Hîshâm, al-Tabârî, Ibn Sa'd, etc.) pass in silence over Muhammad's stop at Ghadir Khumm, or, if they mention it, say nothing of his discourse (the writers evidently feared to attract the hostility of the Sunnis, who were in power, by providing material for the polemic of the Shi'is who used these words to support their thesis of 'Ali's right to the caliphate). Consequently, the western biographers of Muhammad, whose work is based on these sources, equally make no reference to what happened at Ghadir Khumm. It is, however, certain that Muhammad did speak in this place and utter the famous sentence, for the account of this event has been cited elsewhere, either in detail, not only by Al-Ya'qûbî, whose sympathy for the 'Alid cause is well known, but also in the collections of traditions which are considered as canonical, especially in the Musnad of Ibn Hânbal; and the hadîths are so numerous and so well attested by the difference of interpretation, as the Shi'is and the Sunnis, that it is hard to reject them. Several of these hadîths are cited in the bibliography, but it does not include the hadîths which, although reporting the sentence, omit to name Ghadir Khumm, or those which state that the sentence was pronounced at al-Hudaybiya. The complete documentation will be facilitated when the Concordances of Wensinck have been completely published. In order to have an idea of how numerous these hadîths are, it is enough to glance at the pages in which Ibn Kathîr has collected a great number of them with their isndds. This author informs us that al-Tabârî, in a two-volume work (probably the unfinished work mentioned by Yâkût, Irshâd, vi, 432, the title of which was K. al-Fadâ'il) in which he reported the Prophet's discourse at Ghadir Khumm, had collected, he says, "the fat and the thin, the strong and the weak". Abu 'l-Kâsim Ibn 'Aqîshî (d. 57I/1176) also reproduces many hadîths on the same subject and it is from his collection that Ibn Kathîr has chosen the principal traditions, which however, he adds, supply no basis for the Shi'is claims.

The beliefs of the latter concerning the affair of Ghadir Khumm are as follows: Muhammad had already known through divine inspiration (or by revelation on the night of the mawlid) that 'Ali was to become his successor as leader of the Muslim community, but he had kept this divine decision secret, waiting for the moment when there should be no more opposition to 'Ali among the Muslims. At Ghadir Khumm he received the revelation: "O Apostle, communicate that which was revealed to you by your Lord" (Kur'ân, V, 76/69). Then, in the presence of the Companions, taking 'Ali's hand in his own, he pronounced the sentence man kuntu mawlîhu etc., which is thus a nass [q.v.] nominating 'Ali as imâm of the Muslims after the death of their Prophet. On the same occasion, Muhammad announced his impending death and charged the Believers to remain attached to the Book of God and to his family. After this communal prayer he went into his tent and, on his orders, 'Ali received, in his tent, the congratulations of the Muslim men and women, who greeted him with the title of amîr al-mu'mînîn. Among them was Umar b. al-Khattâb. Hasan b. Thâbit recited, with Muhammad's approbation, some verses in honour of 'Ali (some verses by him, affirming that 'Ali was named as the successor of the Prophet on the day of Ghadir Khumm, are quoted by Ibn Shahârahû (ii, 230) and, if they are authentic, they are, apart from the hadîths, the earliest attestation of the event at Ghadir Khumm, and not, as Goldziher has suggested, the verse of al-Kumayt). It is said that the same day Muhammad received at Ghadir Khumm the revelation of Kur'ân, V, 53 ("Today I have perfected your religion for you, and I have completed my blessing upon you, and I have approved Islam for your religion"), which is generally accepted to have been revealed at 'Arafât a few days earlier.

The Sunnis do not deny that Muhammad may have expressed himself in the above manner concerning 'Ali, but they consider that in the sentence in question he was simply exhorting his hearers to hold his cousin and son-in-law in high esteem and affection. On this point, Ibn Kathîr shows himself formerly to be a percipient historian: he connects the affair of Ghadir Khumm with episodes which took place
during the expedition to the Yemen, which was led by 'Ali in 10/631-2, and which had returned to Mecca just in time to meet the Prophet there during his stay in 10/632. 'Ali had been very strict in the sharing out of the booty and his behaviour had aroused protests; doubt was cast on his rectitude, the sharing out of the booty and his behaviour had aroused protests; doubt was cast on his rectitude, the sharing out of the booty and his behaviour had aroused protests; doubt was cast on his rectitude, the sharing out of the booty and his behaviour had aroused protests; **GHAFFARI, MUHAMMAD B. KASSMÎ B. ASLAM.** Spanish-Arab scholar and oculist, probably of the 6th/12th century. The Arabic chroniclers are silent with regard to his biography and we know almost nothing of his life. It has been more than supposed that he was born in Cordova and that he practised for a long time in this city. According to Wustenfeld, he was the father of Abû Ḥâfar Abâmad b. Muḥâammad b. ‘Ali Sâdîq. (In the modern Supplement, the famous doctor and pharmacologist, author of the Kitâb al-ʿAduways a al-muwfrada.) Of Muhammad al-Ghâfiqî, there remains only the Kitâb al-Murshid fi l-ʿulûm, “The Oculist’s Guide”, of which a single copy exists in the Esorcal (N. 835). This book is regarded as a summary of all the knowledge of ophthalmology possessed by the Arabs of both the Islamic east and west, in its author’s time. It is divided into six sections of which, in fact, only the fifth (partially) and the sixth (entirely) treat of the medicine and the hygiene of the eyes.

Although the K. al-Murshid is considered to be the most remarkable ophthalmological text of the Islamic east, it has been said of it that it is no more than a vast compilation without original contributions, that the part which concerns the oculist in reality only occupies a limited space in relation to that dedicated to general medicine, and that it lacks a sense of proportion (Hirschberg). But in judging it from the point of view of present-day knowledge, it is precisely in the plan of the work and the arrangement of its material that it is possible to catch a glimpse of a kind of anticipation of the modern conception of the pathology of the eye, necessarily linked to and following as a corollary on that of the entire organism.

**GHAFFARI, MEDJID,** one of the best-known national poets of the Bashkurts and Tatars. He was born in 1881 in the village of Dîllîm Karan, a village inhabited by both Tatars and Bashkurts belonging to the Isterlitamak administrative district of Bashkurdstan. He died in 1934, a Soviet poet. His father, Nurgâni, was the village teacher, and Medjîd (ʿAbd al-Madjîd) received his primary education from him. For his intermediate schooling he went to the medrese in the neighbouring village of ʿOteş, and from 1898 to 1904 he studied in the Resûlîye Medresesi in the city of Tôrûsk. Through teaching among the Kazaks he became attracted to their style of literature. He published his first poetry in Törgümân in 1902, and later, in 1904, in the form of a collection with the title Sîbir Temiriyolû yahi Awdâl-i millet. He subsequently published small collections of poems with titles like Yâsh ʾomrîm (1906), Mîllet Mahâbât (1907), Zamâne shîrîrî in and Mâjîd Ghorfâri shîrîrî (1909), Tehârhusârîm (1910), Muṣ̂ûr zar (1911), Mîllet âsâr ve emtâhî (1913), and Yanqan Yûrel (1915). As he knew little Russian, he did not derive much inspiration from Russian literature, being influenced only by Krylov’s Fables and some of the works of Gorky. His first poems, written under the influence of Kazakh literature and especially of the Kazakh poet Akmolla, were beautiful, and bring a fresh style to Bashkurt and Tatar literature. After 1907 he wrote his poems wholly in Tatar, in the classical metres (ṣarâd). Because of lack of variety in his thoughts and carelessness in metre and style, however, he was considered to be in the second rank of poets, compared with men like Shams al-Dîn ʿÎzek and ʿAbd al-Lâh Tôkây among the Bashkurts, and ʿAbd Allâh Tôkây among the Tatars. In Zamâne shîrîrî, in which he imitated Sufi Allahyâr, he made it clear that he had read Caghatâî literature first by way of poetry. In his collected works, which appeared in 1904, he complained of the backwardness of the Bashkurts and Tatars, of the ignorance of the Mollas and so on. He manifested his belief that the Siberian railway, which was completed in 1902, “the longest railway in the world”, would bring about some changes in the life of the Bashkurt. In his works generally he reflected the early twentieth-century life of the Tatars and Bashkurts and also their complaints and desires. Before the 1917 Revolution, the works which he had written under the influence of the popular literature of the Kazaks and the Bashkurts, not attempting to rival the Tatar poets, had made him very popular in his own land. One of his finest works is the bayâda Ab-Edil, published at Ufa in 1917. After 1923 he was drawn into propaganda work by the Soviets, and he was much used for this purpose. In the Soviet period his collected works were published in five volumes, which included the greater part of his early writings, as well as later works of an entirely different character and outlook.

**GHAFTIB, absent,** usually means in law the person who at a given moment is not present at the place where he should be. But, in certain special cases (see below), the term is applied also to the person who is at a distance from the court before which he was to bring an action or who does not appear at the court after being summoned.

If to this first notion is added that of uncertainty concerning the person’s existence, the term used is not ghâftib but maʃâfd, although sometimes the state of the maʃâfd is called also ghâftib, to which is added the epithet munkâbûs (absence not interrupted by information on the person’s existence). This state of affairs may give rise to juridical consequences of greater or less importance according to circumstances. If such an absence extends to a period when persons of the same generation as the missing person are dead, the judge declares him dead; his estate goes to his heirs, and his marriage or marriages are dissolved. Up to this time, the estate of the maʃâfd continues to be administered by his agent, if he had appointed one, or, failing such an appointment, by
a trustee nominated by the judge; inheritances which are due to him remain in suspense; his marriage or marriage continues to subsist.

Ghalata-sarayi, in its normal and general sense, gives rise to various juridical consequences, particularly the following:

As regards marriage, the absence of a husband which extends beyond a certain term—four years, four months and ten days, according to the majority opinion—permits the wife to apply for judicial divorce if she is not regularly receivingimony. Thus, in the absence of a litigant at a hearing does not permit the judge to decide the case by default, a procedure which, in principle, is not recognized, although various means may be employed to compel the litigant to appear, provided that he is not too far away. Nevertheless in the most recent stage of Muslim law, as it is represented by the Ottoman codification of the second half of the 19th century, judgement by default is admitted.

In public law, in certain states (for example the Mamluk Empire) the Sultan, when himself absent from the capital, often appointed a locum tenens, who was called naib al-ghalaya (literally, 'substitute of absence').

In public worship, salat al-ghulafa ('prayer of the absent') is the name given to the prayer said for a dead person whose body cannot be produced.

were nominated to the administration of the school. Except for two short intervals, the Imperial lycée remained on the same site. In September 1873 it moved into GÜlhane, to provide accommodation for the Faculty of Medicine. But three years later, in 1876, it returned to its old premises. On 6 March 1907 a fire burnt the school, and courses continued in a pavilion in the courtyard. The construction of the new building ended the next year, offering more space to the school.

The programmes were revised after the proclamation of the Turkish republic in 1923. Meanwhile the main courses continued to be given in French, mostly by French teachers. Able directors and distinguished professors, many of them famous Turkish poets, scholars and scientists, served in the lycée of GHALATA-sarayl (now Galatasaray). Graduates of the school contributed much in all fields of activities in Turkey, the Balkans and the Arab countries. The share of the lycée of GHALATA-sarayl in the modernization of Turkey is important. It still continues to educate Western-minded young men.

**GHALATAT-I MESHHURE,** Ottoman term meaning literally ‘well-known errors’ and hence ‘solecisms sanctioned by usage’. Arabic and Persian loan-words in Ottoman Turkish generally retained their original spelling and pronunciation only so far as was essential to accommodate them to the Turkish alphabet. The programmes were revised after the proclamation of the Turkish republic in 1923. Meanwhile the main courses continued to be given in French, mostly by French teachers. Able directors and distinguished professors, many of them famous Turkish poets, scholars and scientists, served in the lycée of GHALATAT-I MESHHURE, among them Kemal Pashaözde (’Al-tanbih ’ulal ghalat al-‘ishqiizdr wa ’l-nabih, see Brockelmann, II 452, S II 671 (no. 106); tr. and printed, Istanbul 1289, as Terdjume-i Ghalatdt al-‘awweem), Abu ’l-Sufi‘id al-Mehmed; many of these ‘solecisms’ were written in the period of the Tanzimat (q.v.) and after, when there was increased controversy over the rules of correct usage. A number of these `solecisms’ have been accepted in modern Arabic usage.

**GHALCA,** an imprecise designator for those mountain peoples of the Pamirs who speak Iranian languages. The term has been used in English scholarly literature for the Iranian Pamir languages. In New Persian the word means ‘peasant’ or ‘ruffian’, while in Tajik it means ‘squat, stupid’. In old Yaghnibä ghalca meant ‘slave’. The origin of the word is uncertain, for one might compare Sogdian yé ‘to steal’, (Pashto yé ‘thief’) or Sogdian yé ‘mountain’, hence ‘mountaineer’. Usually the term ghalca has been used in modern literature to cover the speakers of the following languages and dialects (from north to south): Wangji, Yazaqulami, Orokor, Bartangi, Sarikoll, Rosani, Shughni, Wakhi, Ishkshami, Munjii, Sangchel, Yidgha. A wider use of the term would include such tongues as Yaghnibä in the north and Parak 4 in the south.

The earliest attested use of the word by an European is found in the travel account of Benedict de Gös circa 1603 (Lentz 12). The term Ghalca was brought into prominence by Shaw, who early investigated some of the languages.

Little is known of the history of the Pamir region. Although much of the area paid tribute to Muslim rulers in Balkh in the first three centuries A.H., it is probable that the majority of the population of Islam remained non-Muslim until the Ismaʿīlī missionary activity of the fifth/sixth century. The most famous missionary in neighbouring Badkhšan was the author Nāṣīr-i Khusrav. Various forms of the Shi'a creed remained among the populace down to the present. Today the area is divided between Afghanistan, the USSR and China.

GHALIB B. SHAJA'A — GHALIB DEDE

GHALIB DEDE, MEHMET ES'AD, also SHAYKH GHALIB (1171/1757-1213/1799), Turkish poet, the last of the five great representatives of the Divan literature (the others being Bâkil, Fu'âdî, Nefti and Nedîm [q.v.]). He was born in Istanbul at the Yenikapı Mewlewîkhâne, in 1171/1757, as is recorded in two famous chronograms: iether-i 4lk and diweret-âllih. His father Muṣṭâfa Rešhid, poet and scholar, belonged to a Mewlewî family and exercised a decisive influence on Ghalib's life and his choice of career. Of his mother we only know, from a chronogram by Ghalib himself, that her name was Emîne and that she died in 1209/1794. Ghalib does not seem to have had a regular madrasa training, but to have been thoroughly educated in Islamic classics in the family circle and in the Mewlewî convent. After his father, his main teacher and guide seems to have been Aṣhdî-bashî Hüsûn Dede who became the Shaykh of the Ghalata convent in 1194/1790. Ghalib began to write poetry at a very early age and was able to arrange a diwerîn at the age of twenty-four, while at the same time serving as an official at the Beylikdî Odaî of the Diwanî Hûmâyîn. At the suggestion of the poet Nesh'et he adopted as pen-name (makhlaṣ) Es'ad, which he later changed to Ghalib. Ghalib became increasingly interested in the works of Diwel al-Dûnîmî and the Mewlewîs. He suddenly decided in 1198/1783 to join the order and went to Konya accompanied by his young friend İbrâhîm Kâhân-zade 3ûnuss Bîey to perform the necessary rites in the headquarters of the order, under the guidance of the head of the Mewlewîs, Seyyîlîb Ebdî Bekir Celebî. On his return he completed his cîle at the famous Ghalata convent of the order and then retired to his house in Sütülgüe on the Golden Horn where he wrote a commentary to Yusûf Sînetek's Diweret-i Methnewî.

His appointment by the Celebî of Konya as the shaykh of the Ghalata convent is a turning point in Ghalib's life. He soon attracted the attention of the Sultan Süleyman III, himself a poet and musician, an admirer of Diwel and Din Rûmî and a friend of the Mewlewî order. The Sultan became a great personal friend of Ghalib and used to pay him frequent visits in the convent, and the poet was always welcome in the Imperial Palace. With the Sultan's help Ghalib succeeded in restoring the convent and its annexes completely and then in making it the most important literary centre of the capital; he himself moved to the living quarters of the convent. Princess Beyehan, the sister of Süleyman III, a cultured and intelligent woman, had great sympathy for the poet, which seems later to have developed into an attachment. She helped and protected him in many ways until his death. Ghalib reveals his great respect and admiration for her in many of his poems. It is not impossible that he was in love with her; judging from the many passages where feeling and affection are couched in expressions of reverence.

In the circle of the Mewlewîs Ghalib's best friend was Esâr Dede, poet and biographer, on whose death he wrote his famous elegy. Ghalib himself died in 1209/1799, at the age of forty-two. The sources are not in agreement as to the causes of his early death. It seems likely that he fell victim to tuberculosis. He was buried at the Ghalata convent cemetery by the orders of Sultan Selim III, himself a poet and musician, an adherent of the Ghalata convent and in 1209/1799, at the age of forty-two. The sources are not in agreement as to the causes of his early death. Ghalib reveals his great respect and admiration for her in many of his poems. It is not impossible that he was in love with her; judging from the many passages where feeling and affection are couched in expressions of reverence.

In the circle of the Mewlewîs Ghalib's best friend was Esâr Dede, poet and biographer, on whose death he wrote his famous elegy. Ghalib himself died in 1209/1799, at the age of forty-two. The sources are not in agreement as to the causes of his early death. It seems likely that he fell victim to tuberculosis. He was buried at the Ghalata convent cemetery by the orders of Sultan Selim III, himself a poet and musician, an adherent of the Ghalata convent and in 1209/1799, at the age of forty-two. The sources are not in agreement as to the causes of his early death. Ghalib reveals his great respect and admiration for her in many of his poems. It is not impossible that he was in love with her; judging from the many passages where feeling and affection are couched in expressions of reverence.

of poetry began to influence 12th/18th century Ottoman poets like Nefci and more particularly Nāīl and a host of other minor writers. The appearance of a poet of genius like Nefdi in the early 12th/18th century seemed to announce a radical change in the Persian-inspired tradition of Ottoman poetry. Nedim, although not daring to do away with traditional themes, forms and clichés, made great efforts to “depersianize” Ottoman poetry, introducing many themes and motives from his time and surroundings and using unconventional and even unconventional forms. With his poetic genius, unusual power of imagination and mastery of form, might have achieved what Nefdi had started: to create a thoroughly Turkish diwan in the classical tradition, had he chosen to follow his example. Instead, although he admired Nefdi and owed much to him in some of his poems, he decided to turn the clock back and picked up again the “Indian School” tradition where Nāīl had left off. But as he was a greater poet with more vision and imagination, and imbued with mysticism, he created, at the close of the classical period, his original blend of both sources.

**FAHİR 12**

GHALİB, ISMĀ‘IL [see ISMĀ‘IL, GHALİB].

GHALİB, MIRZĀ `ALI KHAN, one of the greatest Muslim poets of the Indo-Pakistani subcontinent. He was born in 1797 at Āgra in an aristocratic Muslim family; his childhood and early boyhood were passed at Āgra where he received the classical Mughal education (Persian being one of its chief subjects). He moved to Delhi when he was about 15 years of age and lived in the Mughal capital till his death on 15 February 1869, except for a brief sojourn in Lucknow and Benares on his way to Calcutta where he remained two years (1830-32) in connexion with an unsuccessful attempt to have his pension increased. Returning to Delhi, he lived on pensions granted him in recognition of his talents first by the nawāb of Oudh, then by the court of Delhi. Thus Ghalib lived a major part of his life near the degenerate Mughal court of his times and witnessed the hard days of the famous “Mutiny” of 1857. Only with great difficulty and after painful humiliations did he succeed in freeing himself of suspicion of having taken part in the Mutiny and get his pension restored to him by the British Government. Apart from domestic unhappiness (he lost his father at the age of five years, all his seven sons died in infancy, etc.) Ghalib’s life was rather quiet and colourless. Hardly any hints at the grave political events of his times can be found in his poetry. He was not even passionately concerned with the Muslim religion, and his broad and tolerant attitude in this respect is shown in a letter to Munṣīr, Margonī, Tātkhīm, to whom he writes: “I hold all human beings, Muslim, Hindu or Christian, dear to me, and regard them as my brothers”; the mystical imagery present in his lyrics is due rather to his following the traditional style than to genuine Şı‘ī feeling. The real protagonist of all his poetry is his own mind, which creates extremely refined intellectual images; his poetry, chiefly of a very melancholic trend, is therefore extremely fragmentary, but those “fragments” in the Limon described as his Diwan as a “selection” are amongst the most perfect specimens of Urdu literature.

Ghalib’s more important works are: (1) His Urdu Diwan first published in 1841 and then, with additions, four times again during his life (last edition in Ghalib’s life in 1863 with 1975 bayts), and numerous times after his death (Diwan-i Ghalib, ed. Dḥākīr Husayn, Berlin 1925 is an attractive pocket edition without notes; the last good edition is: Diwan-i Urdu, ed. and annotated by Intīyāz ‘Ali Arghī, ‘Allīgarh 1958); (2) His Persian Kulliyāt, consisting of kasidas, ghazals, short matnawīs, khīfas etc., first published in 1845 and then repeatedly, especially by Nawalkishore in Lucknow (1862, 1924 etc.); (3) Various works in Persian prose included in his Kulliyāt and some other important minor writers. His most mature part of his Persian work has been superseded in the Indian administration by Urdu and had practically no future in India. There is the second part of which never came out), and Dastanbā (an account of the Indian Mutiny as seen by Ghalib); (4) Kāfīr-i Burhdan, a critical work on the famous Persian Dictionary Burhdan-i bāqa‘ī, first published in Lucknow in 1861-62, and then, with additions, in 1865-66 as Dirāfī-khā Kārsyān; (5) The two famous collections of letters in Urdu, the Qād-i Hindī first published in 1868 (162 letters) in Meerut, and Urdu-e Mu‘allā‘ (472 letters) published only 19 days after his death, in March 1869 in Delhi; further letters, fragments in Persian and Urdu etc. were repeatedly published afterwards. Ghalib expressly stated that he entrusted his fame and renown not to his Urdu, but to his Persian works, and his letters reveal his keen interest in Persian grammar, lexicography and stylistics. He declares that at first he was fascinated by Bīdīl [p.v.] and his difficult style, but afterwards he preferred a sounder and simpler, more classical Persian. Actually the most mature part of his Persian work is far superior to that of many Indo-Persian writers, but historically speaking its value is rather reduced by the fact that Persian had, already in Ghalib’s time, been superseded in the Indian administration by Urdu and had practically no future in India. Therefore a more durable trace was left by Ghalib’s Urdu productions. In spite of the difficulty, the wealth of conceits and the extreme over-persianization of its style, his small Urdu Diwan shows what has been called by some of his commentators a “passionate intensity of thought”, partly at least derived from his former master Bīdīl. In some of his fragments he tries even the supremely refined experiment of simplicity. Simplicity—in contrast to his rather complicated Persian prose—is the chief and revolutionary aspect of his Urdu letters, an unsurpassed model of direct, unaffected expression. Ghalib can therefore be considered the father of modern Urdu prose; for what concerns poetry, he is the father of only one aspect of modern Urdu
poetry, the intellectual and psychological deepening of the old imagery; his complete aloofness from outward reality (no more than 15-20 lines out of the

In North Africa, the Ghalzays aided Shah Shudja to take Kabul in 1218/1803, and ties of marriage joined the Ghalzay chiefs to the ruling Durrani tribe. In more recent times a Ghalzay force was defeated at Ahmad Khel in 1887, and the Ghalzays revolted against the ruler of Afghanistan, 'Abd al-Rahman in 1886, and have participated in many local uprisings and raids since that time.

At present the Ghalzays are mainly found east and south-east of Ghana, although groups of them are also scat tered in the north and west of Afghanistan near Mayamana and in Badakhshan. They are divided into two main groups, the Turan (Tolkhi and HotakI sub-tribes) and the Burhan (Sulayman-khel, 'All-khel, Tarakki and Ishkazzay). There may be almost two million Ghalzays, of whom three-quarters live in Afghanistan, and the rest in Pakistan.

GHAMID, tribe and district in western Saudi Arabia. The tribe is said to descend from Ghamid b. 'Abd Allah of al-Azid of Khafs, who moved northward from the W. of the Jeddah area and settled in the area now called Bilad Ghamid in the highlands of southern al-Hijaz, centred around approximately 20° N. and 41° 45' E. The tribe is now subdivided into a large number of sections, most of which are sedentary. The few nomadic sections, called Al Sayyah, roam along the northern and western edges of the desert. It owns a few gardens in al-'Ashik and along Wadi Ranyah. The district of Ghamid is relatively thickly settled, fertile, and prosperous. Rainfall allows dry farming, and fruits, wheat, barley, beans, and tobacco are grown. The villages consist for the most part of stone houses, made from locally quarried granite blocks. The fertility of the area, the extreme fragmentation of tribal splinter groups, and the raids by the Beduin, formerly always at odds with the farming population, led to the construction of innumerable defensive towers, also made of granite blocks, which are characteristic of the area. Many of these towers have been allowed to decay.

Before the First World War Ghamid owed allegiance to either the Turks or the Sharif of Mecca, and its administrative centre was in the village of al-Zafr (from Al al-Zafr section of Ghamid). The construction of the Saudi government, the district of Ghamid and that of Zahrn [q.v.] to the north have been administered as a unit. The seat of local government is now some 15 miles south of al-Zafr at BaldujGhur (or BaldujGhur), a name designating twenty-four small settlements scattered over a wide plain (altitude 1,960 meters). Four of these settlements: al-'Awasha, al-Silmiya, al-Rukba, and al-Ghazl, collectively referred to as Dér al-Sök, are close together and form the administrative and marketing centre.

Middle Ages, now vanished, the site of which should apparently be identified with Kumbi Salih (15° 40' N., 8° 27' W.), some 70 km./45 miles north of Nara and 70 km./44 miles south-south-east of Timbedra. Kumbi Salih belongs to the administrative district of Aioun el Atrous ("Uyun al-satrás") (subdivision of Timbedra) in the Islamic republic of Mauritania.

The term Ghana signified sovereign in the Awkar. By extension, it denoted the capital city of the first negro kingdom of Nigerian Sudan. Al-Fazārī (before 848/800) is the first to speak of "Ghana, the land of gold", which is mentioned also by al-Yaʿqūbī (256/870) and, in particular, by Ibn al-Faqīh al-Hamadhānī who died probably in 290/930 and who, in his Kitab al-Buldān (BGA, vi, 57), provides some amusing details (ed. and trans. M. Hadj-Sadok, Algiers 1949, 31): "from Tarkala to Ghana it is three months on foot through the desert; in the country of Ghana, gold grows in the sand like carrots (dżaras); it is dug up at sunrise; the natives live on millet (dhura) and beans (labrān); their name for millet is dżūn; they clothe themselves in Panther skins since these animals are abundant in their country".

The first eyewitness account by a traveller is that of Ibn Hawkal, who in 366/977 wrote the Kitab al-Suddn (1065/1655), in the Tarih al-Suddn (ed.-tr. O. Houdas, Paris 1900, 2nd ed. Paris 1906) mentions 44 princes of white stock of unknown origin, 22 of whom are said to have ruled before the hidīrga and 22 afterwards, but Delafosse thinks it is dug up at sunrise; the natives live on millet (dhura) and beans (labrān); their name for millet is dżūn; they clothe themselves in Panther skins since these animals are abundant in their country".

by the king of Ghana, who is, however, his deputy, despite his title when it attained independence in 1957-

The largest concentrations are found in the capital, Accra, which probably has about 75,000 Muslims (total population of Ghana). The largest concentrations of Muslims are likely to be less than 10%, and may be significantly higher. The largest concentrations are found in the capital, Accra, which probably has about 75,000 Muslims (total population of Ghana).
laitian: 388,000), and in Kumasi with probably about 60,000 (total population: 221,000). Estimates of the extent of Islamization in northern Ghana vary widely from 15% to 50%; much depends upon the view taken of the many marginally Muslim groups there.

No detailed study of Muslim organization in Ghana has yet been made. The Kâdiri and Tijani orders are both established. The history of the former in Ghana, as already suggested, may date back to c. 600/1200, though its main growth took place in the early 19th century, largely through Hausa intermediaries. The Tijâniyya spread widely, often at the expense of the Kâdiriyah, in the second half of the 19th century and is still ascendent. The Tijání wird in Ghana is probably partly of Umari origin (al-Ḥâḍirī Umâr of Segu, d. 1864), but it has certainly also been received immediately from the Senegambia, and, through pilgrims, from Meccan contacts. There are no reliable estimates of the numerical strength of either order. In addition, since 1921 Aḥmâdi missionaries have been active especially in Saltpond in the extreme south, in Kumasi, and in Wa. In 1963 they claimed a following of between thirty and forty thousand. In the political life of Ghana Muslims are represented by the Moslem Council, a wing of the ruling Convention Peoples Party. The Moslem Association, founded in 1932 as an auxiliary to the political organization of the Moslem Association Party joined the opposition to the C.P.P. in 1956, but was disbanded in late 1957.

The development of Islamic learning in Ghana was one result of the spread of the faith. A tradition of local authorship was certainly well established by the early 18th century; it is exemplified in the extant Kûdâ Ḡundâdî, an important historical work of Goniya authorship compiled in the middle of that century. The tradition is still a thriving one, and is excellently represented in the works of al-Ḥâḍirī Ḫumâyî b. Abî Bakr of Salaga and Kete Krachi (b. Kano, c. 1590; d. Kete Krachi, 1643), of which over a hundred are known. They are characterized by their lively treatment of topical events,—the coming of the Christians; the Salaga civil war; the influenza epidemic of 1619; the claims of a false Mahâdi; etc. Al-Ḥâḍirî Ḫumâyî's pupils are now widely dispersed throughout Ghana and the surrounding territories. The Institute of African Studies in the University of Ghana has a growing collection of works in Arabic script from Ghana; these are mainly in the Arabic language but also include items in Hausa, Dagbane, Mamprule and Guan.

The ancient Western Sudanese tradition of mosque architecture, best known from the Niger Bend, is represented in about thirty surviving buildings in northern Ghana, of which the Friday mosques at Larabanga and Bole (Gonja) are particularly worthy of note. In general, however, the old mosques are rapidly being replaced by undistinguished (though more commodious) structures of concrete and corrugated iron. Much of the domestic architecture of north-western Ghana is also heavily Šudano-Islamic in style. (I. Wilks)

GHANAM [see Bawd (ii.a), Yûruk, Zârât.]
GHAN, tabâkhus, the Persian poet Mullâ Muhammad Tâhir Aşha'î of Kâšmir, who flourished during the reign of the Moghal emperors, Shâh Shâhjâhân and Awaŋrzîb [q.v.]. Nothing is known with certainty either about the date of his birth or the origins of the clan; the Aşha'îs, which he belonged to, is, however, certain that he was the son of an obscure poor shâbîf (a weaver of woollen shawls). A pupil of Muḥsin Fâni, assumed by some scholars to be the author of Dâbâšt-i mâdâşhâh, Ghânî began writing poetry at the early age of twenty. The etymological value of his pen-name Ghânî (i.e., 1060/1650) supplies the date. True to the literal meaning of his poetical name, he hated and detested meeting and attending on princes, potentates or men of power and riches. When his fame as a great poet reached the emperor Awaŋrzîb, he wanted to see him and offered the governor of Kâšmir, Sayîl Kâshân, to send Ghânî to Delhi. Learning of the governor's intention, the poet refused to comply with his wish, and asked Sayîl Kâshân if he could not be properly understood on the first hearing or reading was absurd and meaningless. Ghânî lies buried in the Gurgan Mahalla (formerly known as Kutb al-Dîn pur), Zayna Kadal, Srinagar where his grave is still extant. His cottage in Radjwer Kadal, near the city, is also pointed out to visitors although the simple brick-built structure (with walls covered with mud) was arranged and edited posthumously by Muhammad 'Ali Maḥir, a Hindu convert to Islam and an adopted son of Mir Qâfar Muḥammâdî. It contains over 2,000 select verses and was printed in Lucknow in 1261/1845. Given to composing verses which exceeded in length of more than one interpretation, Ghânî has few rivals in this field of sanâ'at-i ikâm-gûâ'. Piqued and offended, he gave up attending on 'Inâyât Kâshân, son of Governor Awaŋrzîb. A pupil of the Moslem Association founded in 1932 as an auxiliary to the political organization of Kashmir and a great patron of art and culture, as the former had once remarked that a couplet which could not be properly understood on the first hearing or reading was absurd and meaningless. Ghânî lies buried in the Gurgan Mahalla (formerly known as Kutb al-Dîn pur), Zayna Kadal, Srinagar where his grave is still extant. His cottage in Radjwer Kadal, a quarter of the same city, is also pointed out to visitors although the simple brick-built structure does not show any signs of age. (A. S. BAZMEE ANSARI)

GHAN b. AŞ'UR b. Sa'd b. Kâys (b.) AYålân, an Arab tribe. They were, according to the genealogists, the brothers of Bâhîla (q.v.). Their grazing-grounds lay between Bîsha (q.v.) and the later hîmâl Darîyà (q.v.). Being small in number they were never prominent. In pre-Islamic times one of them, Kâshân Aşbâl, killed Al-Rây towards the middle of the 6th century A.D. Shâb, the son of Zuhâyir b.
Djadhlma, the powerful chieftain of the Banū 'Amr b. Sa'ā'a. Since then the Ghanī were in subordinate alliance with them, though not considered their equals (Nakādīd, 533, 17; cf. also Mufaddalidāyyīt, no. 105, 19). The Ghanī fought about 580 A.D. on the side of the Banū 'Amr b. Sa'ā'a at Shib'in (Agdhun, x, 37, 20; Mufaddal, 353, 1, and 710, 17; Mubarrad, Kūml, 482, 16), the ancestor of the leading "house" of the Banū 'Amr b. Sa'ā'a. The Ghanī took part in the fight on the Day of al-Rajām (Mufaddalidāyyīt, 31, 18) towards the end of the 6th century and on other occasions (Nakādīd, 227, 1; 1060, 12; 1061, 9; 1063, 6). Some time afterwards they suffered heavily on the Day of Muḥaddidār, when Zayd al-Khayl al-Tām (d. 10/632) fell upon the Banū Kilāb and Banū Ka'b; but they soon took revenge on him (Agdhun, xvi, 52 and vii, 147; Tufayl b. 'Awf, nos. I and III).

It seems that the Ghanī were indifferent towards the rising power of Muḥammad; there was, to be sure, amongst his earlier companions Abū Marḥṣāb al-Ghanawi, but he was a confederate (halif) of Ḥanuma b. 'Abd al-Muṭṭalib (Ibn Hīshām, 332, 3 etc.). After the battle of Hunayn (8/630) the Ghanī accepted Islam without resistance, nor did they take part in the revolt (ridda) after Muḥammad's death (11/632). During the conquests many of them went to Syria. In the wars that ensued after the battle of Ṣard al-Rakam (12/633) towards the end of the year 2/624 the Ghanī met the enemy—no doubt because of the political insight of the Prophet, according to one tradition, hesitated to comply with this custom in one case (al-Bayḍawī, Tafsīr, on VIII, 1). Nevertheless he was forced on several occasions as a matter of policy to make considerable adaptations, lest, in view of the vital interest taken in this question by his followers, discontent should become serious.

Most later theorists regard it as a settled rule that the spoils (salah), comprising the clothes, weapons and occasionally the mount of an adversary killed in battle, are the property of the victor and are not to be included in the rest of the booty. But after Ṣa'd the Prophet, according to one tradition, declared that the Prophet was free to dispose of his personal share of four per cent of the booty (ḳhums al-ḳhums) as he wished could scarcely have given rise to discontent. There is some authority for the view that salah should be promised before the battle as a fixed share of the expected booty (Ikhṭildf, 251 ff.), but this view was not generally regarded as valid. Criticism was especially severe after Ṣa'd, when the political insight of the Prophet led him to reconcile former opponents with Islam (taʿalluf al-ṣubḥ al-ḥilāl l-islām) by bestowing upon them large shares of the booty to the detriment of his old supporters (cf. Sūra IX, 60). There is hardly any reason for posteriority to attempt to exculpate the Prophet for this manoeuvre on the ground that the booty in fact went to persons who had already embraced Islam. Since the obvious political aim of Muḥammad was to secure a stable centre among the wavering Bedouin tribes it was essential for him to establish his position in Mecca. The ridda after Muḥammad's death demonstrated, in its extreme form, a situation which he had successfully kept in check during his lifetime—rival prophetic movements in certain tribes which detested
a centralized government and aversion to the poor-tax. Subsequent opponents of the Umayyads, using in their invectives against the dynasty the term al-mu'allafa/atu kalâlum (al-Dinawari, 175, 3), failed to appreciate that the Prophet had won over the ablest politicians of the day, who were destined to provide an effective government at a time of crisis. Once triumphant, however, Islam could afford to abandon this line of approach and was not loth to do so. But, of course, even in later Islam the way to political influence was occasionally paved by economic means, although other names were used. When al-Mâwardî (239) calls transferred property (amâwâl mânâka, cf. Má'dîkâh, 64, 11) by the term ghâzwâ'im mânâ'â, it shows he was not unaware of the fact that such property was taken from the shares of the militia [see further TA'LIF AL-KULûB].

A highly interesting example of the vast amount of booty and the unpreparedness of the government for sweeping successes in the field appears in the tradition of Diyarîr and his tribe Badjîla. After the latter's exploits in Irâk the laxity of the rules for the division of the militia is underlined. Of course such rules could never be realized in practice, since situations falls outside normal conditions. See also BARANTA, GHANIMA, YATHLUM. The traditions are undoubtedly right in maintaining that it was 'Umar I who first settled fixed annual pensions or incomes on the most influential and deserving of the inner circle of conquerors and on the Prophet's widows. The transfer of the militia to a diwân of fixed stipends also took place under his leadership, a process which undoubtedly continued to develop under 'Uthmân. A Muslim could choose the state of hîdrîa, or military service, and so become entitled under the law governing the dâr al-hîdra to fâyî contributions (Abû Yusûf, 85; al-Dinawarî, 131, 141; al-Baladhuri, 275). In the systematized rules enunciated by the jurists for the division of the booty it is possible to trace the growth of Islam from its small beginnings and the development of skirmishes into large scale operations. The booty was divided on the basis of military potential. As with regular pay a distinction was drawn between foot soldiers and mounted troopers. The precedent may have been set by the Prophet but the aim behind it was well suited to the conditions of the times. Every man was given one share, but the mounted soldier got one or two extra shares for his mount. Some jurists would go even further and give to the horseman one share for each of his horses. This tradition marks the trend of development. An illustration is provided by a case in the 4th/10th century of an increase in pay in the ratio 10 : 1 (al-Sûhî, A'khâr al-Râdi wa l-Mutâkabbî, ed. J. Heyworth Dunne, 1935, 226).

Where large armies were engaged it was naturally not only upon those in the front ranks or those who actually came in grips with the enemy that the victory depended. Tradition in fact represents 'Umar I as faced with the situation of the appearance of certain troops after the battle had been won (al-Baladhuri, 256). He is said to have decided that they were entitled to booty if they had arrived before the dead had been buried. Some jurists claim that even if the army is returning to the dâr al-isldm and is then met by other troops of auxiliaries, these latter can claim part of the booty. Furthermore the next of kin of fallen soldiers may inherit their shares. On the other hand, since only free Muslims are entitled to booty, bondmen, women and dhimmis who may in some way have contributed to victory may take only a bonus share, ra'dâ, to be given at the discretion of the Imam. Such shares may even be given to those who are temporarily absent. It is not clear whether this also applies to those who are represented by a hired substitute (badîl). Such shares are usually small, and ought not in any case to exceed the normal share of one person.

As regards ransom money there was a precedent from Badî, where the captor received it for his own captive ('Ubayd Allah ibn Abî Jâbar, ed. J. Schacht, 1933, 20 ff, 68-196; Yahyâ ibn Abî 'Abdallah, 1896, 3-51 passim; A. J. Wensinck, Handboek, references s.v. booty; F. F. Schmidt, Die occupatio im islamischen Recht, in Iisl., i, 303-5; W. Montgomery Watt, Muhammad at Medina, 1956, 255 ff., 348 ff.; Sabîh 'Abd Allâh, al-Tanquim al-idâmî'â'wa l-thiqâdî-â'wa l-Baṣrâ, Baghdad 1953, 125 ff., and references above.

GHANIMA, MUHAMMAD AKRAM, Indian poet who wrote in Persian, a descendant of a family of muṣlis who originated from the village of Kandîdah five miles from Gudrât (Pandjûb). Nothing is known about his life and it is not proved that he was governor of Lahore from 1106 to 1108/1695-7, as is asserted by Étêh (Gr. Ir. Ph., ii, 257). He was in the service of Makkârâm Khân at Gudrât and we do not even know the exact date of his death, which occurred, it is said, at the end of the 9th century A.H. (about 1690). He is best known for a mathnawî, highly esteemed in India, entitled Neyrang-i 'sâhî, which tells of the love of the young prince 'Azîz (who seems to have been the son of his patron) for a gipsy dancer named Shâhâ. 'Étêh gives the date 1685 for the composition of this poem. He left also a small collection of ghazals which have recently been published (Lahore, 1337).
Bibliography: Mir Husayn Dust Sanbhli, Tadhkira-i Husayni, Lucknow 1875, 230-2; Muhammad Afdal ibn al-Nasir on his return but was overwhelmingly defeated on the Chelif plain. Passing along the edge of the desert

Meanwhile, the Almohads had just landed in Spain (541/1149). Yahyā b. Ghaniya was one of the last defenders of the peninsula of the Almoravid domains. He died at Granada in 543/1148.

Muhammad, Yahyā's brother, had been nominated governor of the Balearic islands by 'Ali b. Yusuf in 520/1126. At the time of the Almoravid collapse many members of the fallen clan came to join him there. The governor was declared an independent sovereign and this was the beginning of a new dynasty. Following a palace revolution authority passed to Isḥāq b. Muḥammad (560/1156). Under his rule the small Almoravid kingdom enriched itself by piracy at the expense of the Christians; the islands were peopled by refugees and prisoners. Isḥāq himself died in 579/1183 during a piratical expedition. The eldest of his many children, Muḥammad, succeeded him, but he was compelled to submit to kingship of the Almoravid family. In the midst of all this 'Ali b. Ghaniya retired to the Djadrī. Six thousand Almohad horsemen followed him there, and he inflicted a bloody defeat on them on the plain of al-ʿUmrā (583/1187). Al-Mansūr then went at the head of his troops and gained a victory at al-Ḥamma near Gabes, and reoccupied Tozeur and Gafsa, whose remains were razed. "All 'Ali b. Ghaniya and Karakūsh fled to the desert. Scarcely had Al-Mansūr retaken the road to the Maghrib than the two allies reformed, rallied their followers, and began their campaign afresh. In the midst of all this 'Ali b. Ghaniya died (584/1188). Power passed to his brother Yahyā, who for nearly fifty years was to deal the heaviest blows against the Almohad might. His action began with two fruitless attempts against Constantine. He retired to the desert, the traditional refuge of the vanquished, and rejoined Karakūsh there. Not that his relations with the Armenian condottiere were unclouded. They had broken off their alliance many times. The dubious attitude of Karakūsh with respect to the Almohads and his severity towards the Arabs caused opposition, and conflict broke out in 591/1195. Yahyā b. Ghaniya, helped by the Sulaym Arabs, seized Tripoli and Gabes and then proceeded north, where he took Mahdiyya from Ibn 'Abd al-Karim al-Rasgrādī, a curious character who had declared himself independent sovereign. Two years' campaigning had made him master of Bējā, Biskra, Tēbessa, Kairouan, and Bōn; then, on 7 Rabī‘ II 600/14 December 1203, the Almohad governor of Tunis, the Sīd Abū Zayd, surrendered to him. Learning that the Khāridjīs of Dījābl Nafūsā were profiting by his absence to stage an uprising, he mounted a rapid expedition against them, defeated them, and extorted a crushing indemnity from them. Yahyā b. Ghaniya, master of eastern Barbary, was then at the height of his power. He was at Tunis when he learnt that the Almohad caliph al-Nāṣir was on the way to attack him. He did not wait for him but withdrew towards the Djadrī. He was overtaken on the Tājūra plain, where he suffered a heavy defeat. Al-Nāṣir re-took possession of Mahdiyya and Tunis, where he appointed Abū Muḥammad ibn Abī Hāfīẓ governor, with orders to continue the reconquest of the country. Knowing the danger which hung over him in Ifrikiyya, the Almoravid chief transferred his efforts to the central Maghrib. With his Arab allies he wished to halt al-Nāṣir on his return but was overwhelmingly defeated on the Chellī plain. Passing along the edge of the desert
he rallied fresh nomad allies, met Abu Muhammad ibn Abi Hafs on the river Shabrur near Tebessa, and suffered a fresh defeat. He returned westwards as far as Tafilalt and took Sigilmassa, which he gave up to pillage. Loaded with booty, he encountered the Almohad governor of Tlemcen and beat him, and passed through Tiaret, which he devastated along with many small towns of the central Maghrib of which Ibn Khaldun, in the 8th/14th century, was to say “there no more will you find a lighted hearth, nor hear any more the crowing of the cock.” On his return from this campaign of destruction a meeting with Abu Muhammad proved disastrous for him; a second battle fought in the Djibal Nafusa was still more catastrophic (606/1209).

Thus decisively driven out of Ifrikiya, Yahyā ibn Ghāniya sought refuge in Waddan in the south of Tripolitania. Karakūsh the Armenian was installed there but capitulated, unable to resist his old rival. Yahyā had him executed and took his place.

Abū Muhammad ibn Hāfs had been replaced in the governorship by the Mu’āminid prince Abu ‘l-‘Ālā, who resumed the struggle against the Almoravids. The latter, taking the field again, took possession of Biskra; he even conceived a bold plan of marching anew on Tunis. At Majdūlī, not far from Tunis, a bloody battle decimated the Almoravid force and put Yahyā to flight (620/1223).

Having instigated by his action in Ifrikiya the indefatigable rebel, having got himself new allies in the south, again took the road to the central Maghrib and once more sowed ruin there. He went on to Bougie, laid siege to Delys, Mitidja, and Algiers, and stirred up a revolt at Tlemcen which came almost to the point of recognizing Almoravid sovereignty. He fled before an army from Tunis which was marching on his heels and took refuge at Sigilmassa (624/1226). The eleven years of life left to him saw a hopeless prolongation of his activity. He gave up hope of returning to a too well defended Ifrikiya but he pursued to the end of his career the harrying and pillaging along the border of the central Maghrib and perished on the banks of the Chelif, not far from Miliana, in 633/1237. He left three daughters whom he entrusted to the generosity of the Ḥāfiz Abū Zakariyya who was governor of Tunis. They were treated considerately and housed in a palace called Kašr al-Banāt (Palace of the Daughters) which a Tunis boulevard (Bāb Banāt) still commemorates.

As a conclusion to this account of a turbulent enterprise which lasted more than 50 years some observations may be made to fix its place in history and underline its importance.

The attempt to restore the Almoravids failed completely and could scarcely have succeeded. But although apparently a mere episode in the past of the period of the Almohads, this was more evident than the rise of Tlemcen in central Barbary that of Tunis in Ifrikiya, where a strong rule was established which delivered the province from the danger of the Almoravids. The handing over of the government by the Almohads to the Hafsids, who soon assumed autonomy, seems to be one of the only happy consequences of the epic of the Banū Ghāniya.

The Ghārīb, part of the Moroccan coast situated approximately between the Wādi Lukkius, the Wādi Subī and the mountains which border the coastal plain to the east. This territory has never been precisely defined, but its limits have varied according to the tribes which occupied it and were or were not considered as tribes of the Ghārīb. It is an alluvial plain, humid and marshy, along the coast and bordered to the east by rolling hills. The Ghārīb, thus roughly defined, was at first inhabited by Berbers and probably formed part of the territory of the Barghawata [s.v.]. There were these exterminated by the Almoravids and the Almohads, leaving an uninhabited area so that the Almohad Ya’qūb al-Manṣūr could establish there at the end of the 6th/12th century levies of the Hilāl Arabs which he intended to use in his battles against the Christians of Spain. The Marinid rulers Abū Yusuf and Abū Ḥābih similarly used the Maṣ’il Arabs in the 7th and 8th/13th and 14th centuries. Hence the population of the Ghārīb is almost entirely of Arab origin (Banū Mālik, Sufyān, Khluṭ and Tīlīk) and, until the 19th century, the tribes inhabiting this territory were fighting tribes and nomadic rather than settled, pastoral rather than agricultural, which have been of some importance, particularly during the period of Sa’did anarchy (first half of the 17th century).

With the French colonization, heavy in this region, the Ghārīb became a prosperous agricultural district, where the growing of rice particularly has flourished. With the possible exception of al-Kašr al-Kabīr and the large market of Sūk al-Arba’, no thriving urban centre has so far flourished in this area. **GHARB AL-ANDALUS**

**Algarve, the West of Andalusia.** This name, now that of the southernmost province of Portugal, was applied by the Muslim historians and geographers to the territory lying to the south-east of Lisbon, reaching as far as both banks of the Guadiana estuary. Mússá b. Nuṣayr[8] took Mérida in 847/1253 and his son 'Abbād al-'Azīz made himself master of Niebla, Beja, and Ocsówoba, but the Gharb soon began to itself a focus of rebellion with the revolt of the Berbers, who were beaten in the Mérida region by the governor Tha‘laba in 1247/743. The Syrian king of Hīna settled in Niebla and a part of that of Egypt in Beja and Ocsówoba. Niebla was the scene of a revolt of Yemenites against 'Abbād al-Raḥmān I, whose son Sulaymān also revolted against his nephew al-Hakam I. In 213/828, Mérida was the centre of a prolonged Berber rebellion under Muḥammād b. al-Djabbār. Hemmed in by the forces of the Córdoban caliph, little by little the Taifa of Niebla was forced to retreat on a fortified position on Monte-Sacro, not far from the present-day town of Faro in the Ocsówoba district, but soon emigrated to Galicia, where he was killed by Alfonso II in 225/840. During the reign of the amīr Muḥammād I one 'Abbād al-Raḥmān b. Marwān b. Yūnūs, known as Ibn al-Djillīki (son of the Galician) as being a member of a muwallad family originally from the north of Portugal but long settled in Mérida, proclaimed himself champion of independence in the west of Andalusia and in alliance with Alfonso III kept up a struggle in Badajoz, Esparraguera (between the Guadiana and Almāddn), and Antaniya (I典kana a Velha, about 140 km. from Mérida and 30 km. north-west of Castelo-Branco). His dynasty, the b. Marwān, survived till 318/930, in which year 'Abbād al-Raḥmān III recovered Badajoz. Soon afterwards he also recovered the petty principalities of their vassals in Beja, Santa María del Algarve, and Silves. On the fall of the caliphate of Córdoba, during the first period of 'party kings', the petty kingdom of the B. Muzayyin was formed at Silves and lasted from 420/1028 to 445/1053. In 433/1041 Muḥammād b. Sa‘d b. Hārūn made himself independent at Santa Maria del Algarve but had to submit to al-Mu‘taṣid the emir of Seville. At Huelva and Saltes there reigned 'Abbād al-Sakīr, the father of the famous geographer Abū ‘Ubayd al-Bakrī, the father of the famous geographer Abū ‘Ubayd al-Bakrī, from 403/1012 to 445/1051 when he surrendered to al-Mu‘taṣid. Niebla suffered the same fate. Tāǧj al-Dawla came to power there in 414/1023 and was recognized by Huelva and Gibraleón. On his death in 433/1041 he was succeeded by his brother Muḥammād al-Yāsibī, who retired to Córdova in 443/1051 leaving the power to his nephew Nāṣir al-Dawla who handed it over to al-Mu‘taṣid and took refuge in Córdova in 450/1058. When the Almoravids power declined a party kingdom re-formed in Algarve under Ibn Ḥaṣīn at Mertola, which has an old tradition of spinning and textile manufacture in Egypt. Tanta, now the capital of the province, has the tomb of Sayyid Ahmad al-Badawi[8], where the annual feasts attract thou-
sand of devotees. The population of the province in 1960 was 1,815,000 persons.

---

**Ghārdāyā** (current spelling: Ghardaia), the chief town of the Mzab, situated 635 km. by road south of Algiers on the parallel 32° 30'. Between 500 and 560 metres in altitude, it is built over a rounded hillock on the right bank of the Wādī Mzab, which cuts a hundred metres into the completely desert-like and deeply channelled limestone plateau of the bēlkā ("net") of the Mzab.

Ghardaia was founded in 1450/1053, after al-'Atif (al-Atif, 407/1011), Bou Noura (Bou Nura), Beni Isguen (Isgen) and Mellika, its lower neighbours, by the Ibāḍīs who, little by little, abandoned Sedrāta (south of the oasis of Ouargla), their first refuge in the Sahara, after the ruin of their capital, Tiaret (Tahart), in 296/909 by the Fātimids. It was families from Ghardaia who later founded Guerara (Grara) in 1631 and Timūn in 1679, 100 km. to the north-east and 50 km. to the north respectively. Ghardaia, like all the other towns of the Mzab, gives the impression that it has always lived by trading across the Sahara, and, above all since the 10th/16th century, by its dealings with Algerians, far more than by an agriculture seriously limited by shortage of water.

The Mzabis have remained fiercely Ibāḍī and attached to their Berber speech. Ghardaia has grown over the centuries owing to Ibāḍī immigration. To the Awlād ʻAmrī, ʻIṣa and Awlād Bā Silmān, the groups which founded the city, have later been added Ibāḍī groups from Tafilalet, from the Wādī Rīgh, Djerba and Djiābal Nafsū. It has grown equally through the Mdabih, Mālikīt from the ḥājīr of al-Māya, on the foot-hills of the Djiābal ʻAmūr, and Mdabih by little, through some Benī Merzūg families from the old ḥājīr of the Shaʻanba of Metlili; Mdabih and Beni Merzūg are Arabic speaking and belong to the Mālikī school. Ghardaia also shelters a community of Jews, of whom the earliest are supposed to have come from Djerba from the 14th century on, and others from Morocco, Tripoli and Algeria.

Ghardaia surrendered to France with the rest of the Mzab in 1853 and was peacefully occupied in 1882. To-day it has a population of 16,000 (1957), of whom about 1,000 are Arabs and about 1,500 Jews, and there is a small number of Europeans. Both in its appearance and in the way it functions, even more than from the size of its population, Ghardaia is a true city and not a simple Sahara ḥājīr.

Originally, its shape was oval and its plan concentric and radiating. Its single mosque, focal point of the city, placed by the Almighty, refuge and storehouse in the troubled times of the past, dominates the whole town with its annexes (schools, takhdibust for the ablutions of the scholars) and its great truncated cone of a minaret (ʻassāda), twenty metres high, which overlooks the whole surrounding country-side. The circular streets, with others radiating from them, narrow but rarely covered, and lined with houses side by side, are the main thoroughfares of the district which surrounds the mosque. To the south-west there is a way down to the edge of the town through a place where the ancient ramparts have been demolished to form a rectangular market place, 55 by 44 metres in extent, bedded with porticos of irregular arches and shops—the souk. Eight streets coming from three directions of the compass, lead into this and here are to be found the shopkeepers and artisans. This is the economic centre of the town as well as the political and administrative one, where the baʿid has his office and the āḏādīn meets. To the south-east, the little Jewish quarter leads into the new business district; the Mādhīb live together to the north-west. Several vast cemeteries enclosed by walls cover the land immediately surrounding the town.

Ghardaia is primarily a town of merchants and business men. Little by little, the trade across the Sahara has disappeared, but its population lives mainly on the profits of its approximately 2,000 shopkeepers, grocers and textile merchants in the towns of the Tell. Ghardaia is also the principal market of the Mzab and a transit post for food supplies for the stations further south. Arabs and Jews share the transport business with the Ibāḍīs. Since 1920, lorry traffic has little by little replaced the traditional caravan. Tourists visiting the Mzab usually stay in Ghardaia. It is also the chief town of the administrative district (circlaire) of the Mzab. Some of the traditional artisans (the men make carpets and woollen textiles, the men are coppersmiths) are encouraged by the schools and workshops of the White Sisters and find some exterior outlets. Blacksmiths, carpenters, tailors, shoemakers, work for the local population as do the Jewish jewellers; the building industry has always been active.

Agriculture, on the contrary, shows a debit balance. The 60,000 palm trees and the gardens in the lower part of the valley, watered with difficulty by deep wells, which are worked by animal traction, or flooded by the rare spates of the Wādī Mzab, are used more as pleasure gardens where, for the last three-quarters of a century, the people of Ghardaia have built houses of an urban type in which they live during the summer. The profits of trade pay for the upkeep of the houses.

In many features of its activities, in its type of housing, in its particular form of administration, and even more in its social and religious life, Ghardaia is inseparable from the other cities of the Mzab. (J. DESPOIS)

**Ghardjistan, Gharghistan, a territory in the mountains of Afghanistan east of Harat on the upper valley of the Murghab River and north of the upper Har i Rūd. Al-Muqaddasi (309) was probably right in explaining the word as "mountain", hence "country of the mountainiers".**

Little is known of this land before the time of the Ṣāmānids (q.v.), but we may assume that it was ruled by petty Hepthalite princes. Ghardjistan was raided by Asad b. Ṣubayl b. Asfari, governor of Ḳūrān in 107/725-6. The local ruler Namrun (?) made peace and accepted Islam (al-Tabarī, ii, 1489-9). The title of the ruler of Ghardjistan was ṣār, derived from an Old Iranian word for "king" (Marquart). The Muslim geographers knew that ṣār meant "king" (al-Muqaddasi, 309; Ḳudūd al-ṣārim, 105), but Ibn Ḳurrādaḍībīb (39) says that the king of Ghardjistan was called Barāz bandah, which is probably a confusion with the ruler of neighbouring Māğhān.

The geographers (al-Muqaddasi, 30; Ibn Hawkāl, 443; Yāḳūṭ, s.v. Ghardjistan) speak briefly of two
principal towns in the country, Baghlan and Shahrin, which cannot be located.

Muhammad b. Karam (d. 255/869) converted many people in Ghardjistan to his heretical doctrines (al-Baghdaḏ, 202), and centres of this heresy remained in the mountains (al-Mukaddath 323). The rulers of Ghardjistan acknowledged the suzerainty of the Samanids but Mahmud of Ghazna had taken to Ghazna where he died in 406/1015 (Uṭbī, 146). The kingdom of Ghardjistan was placed under the governor of Marv al-Rūḏ, but apparently local princes resumed control of the country for we hear of several Ṣāḥr again in the time of the Gharīḍs (Dīḏzḏānī, 49). The founder of the dynasty of Khārīzmiyān, Nush Teg̲n, was a Turkish slave from Ghardjistan (Djwvwj豪门, ii, i).

The name of Ghardjistan appears in many annals of the Ghurids and Mongol periods, while the "kings" of Ghardjistan are mentioned as late as 715/1315 (Ta’ilk-ānā-i Ḩarīḍ, ed. M. Z. Siddiqi, 626). Thereafter the name does not appear in relevant sources.

(A. N. FRYE)

GHARĪB, literally: "strange," "uncommon," a technical term in philology and in the science of tradition. As a term in philology it means: "rare, unfamiliar (and consequently obscure) expressions" (in which sense the terms wāḥīš and ḥāšī are also used), and frequently occurs in the titles of books, mostly such as deal with unfamiliar expressions in the Kūrān and in the Tradition (books carrying the titles Gharīb al-Kūrān and Gharīb al-ʿIqāl seem to have existed as early as the second century). The term also occurs in works on literary theory (where it may also have the non-technical, laudatory sense of "uncommon," "original"). More or less anecdotal reports purport to show that some Umayyad and early ʿAbbāsid critics rejected the use of unfamiliar language by certain contemporary poets such as Ṭirimmā, Kumayt, and Ibn Munāḏhir, because this unfamiliar language was not part of the native vocabulary of these poets, but resulted from an archaizing tendency. Most classical scholars of literary theory follow the same line with regard to the poet's vocabulary, allowing only expressions that are known in the poet's own time, and likewise condemn the use of the gharīb in prose and oratory. Ibn al-ʿAǧīr, however, who deals with the subject at great length, holds that unfamiliar expressions may be used in poetry as long as they are not unpleasant to the ear.

For the technical meaning of the term gharīb in the science of tradition see ḤADRĪTH.

GHARIM (gharim, according to the lexicographers, is a synonym): debtor or creditor. By analogy with other legal terms this semantic distinction was
favoured by the jurists. In Islam the ghadr was entitled to a share of the zakat (Sura IX, 60) to pay his debt, provided he was destitute and the debt did not arise from any disreputable cause or, if it had so arisen, the debtor had duly repented. Other debtors had this claim although they were not destitute, if the debt had been incurred “for God’s sake”, i.e., for Islam or for an unselfish purpose. The zakat of relatives might be employed to this end as an exception. This latter case reflects pre-Islamic standards, where it was praiseworthy for a man of standing to take upon himself the burden (hamdla) of blood money (diya) in order to prevent or stop a blood feud (Hatim al-Ta’I, ed. Schulthess, 1897, lxi, 40 (ar. ft; Hamdla, Cairo 1335, i, 145; The Naghamia of Djair and al-Farasaab, ed. Bevan, i, 345, 8; 382, 14; li, 789, 17; 1046). The Prophet also paid diya on several occasions (al-Bukhari, 87, 22; 93, 38).

(F. Løkkegaard)

**GHARNATA, GRANADA, the capital of the province and ancient kingdom of that name, does not come into prominence in Spanish history until the early 5th/11th century when a collateral branch of the Banu Hammad (the ruling clan of the lands of the Banu Hamdil and late in Bougie) realigned its power and offered its services to the first caliph of Kairwan II, Abd al-Malik al-Muzaffar, son and successor of al-Manṣur Ibn Abi ʿAmir. The reply was satisfactory, so they embarked with a considerable band of fellow-tribesmen and retainers, with Zawi b. Zaki at its head, soon to become one of the most important and turbulent sections of the Berber army recruited by the ʿAmirids. On the death of ʿAbd al-Raḥmān Sanchol they espoused the cause of the leader of the Berber party in Spain, Sulaymān al-Mustāʿin, and contributed largely to his succession to the Caliphate. When Sulaymān rewarded his chief followers by the grant of fiefs, to these he allotted the district of Elvira-Granada (al-Hamds, al-Sultaniyya, ed. Enger 1853, 212; Al-Shirazi, Al-Tamhid, ed. Juybobi 1897, 62, 113, 288).

Historians and geographers of Muslim Spain are at one in stressing the beauty of Granada and the fertility of its plains. The admiration inspired in the Muslims, a people hitherto inhabited mainly by Jews.

In the story of the Zirid dynasty (treated at length in the article ZIRI (BANU)) the principal events directly affecting the city of Granada are: the siege by the caliph al-Murtada, who incited and betrayed by the ʿAmirid fadis al-Mundhir, and Khayrān sought to drive out the Zirids, only to flee and perish in Guadix, after a shameful defeat. After this unexpected victory and the consolidation of the dynasty during the amirs of ʿAbd al-Murtaḍ, and with the effective support of the Jewish viziers Samuel and his son Yusuf b. Nagralla (Negrello), Granada was the scene of a notorious pogrom, whose victims included the vizier Yusuf as well as a large number of his co-religionists. Just after this the amir Bādis, old and conscious of the threat to his rule, spent large sums on making the old alcazaba of Granada strategically impregnable, judging that if the neighboring states, or his enemies, or his own rebellious subjects should drive him to a last resort, he might shut himself up in it with the possibility of embarking at need for Ifrīkiya, as his grandfather Zawi had done before him. Of the last
Zirid amir, 'Abd Allah, Badis's grandson, who began his reign when little more than a child, we have only to mention that after a chequered career of revolts and resistance to the Castilians and Christian neighbours, he finally incurred the enmity of the Almoravids, and prepared for armed resistance against them by provisioning and fortifying his castles, and building walls adjoining the alcazaba. However, when Yusuf b. Tashfin appeared before Granada, his innate cowardice and the advice of his ministers and his mother decided him to go out to welcome the Almoravid amir, to open the gates of Granada to him, and give him all the treasures of his palace.

After this, Granada was administered by Almoravid governors from 483/1090 to 551/1166, when it passed into the hands of the Almohads. Its first Almoravid governor was Abu Muhammad 'Abd al-'Aziz, himself followed by the amir Yahyá b. Wasíná, related to Yusuf. The latter returned to the Peninsula for the last time in 496/1102 to safeguard the position of his son 'Ali as heir apparent (he had been proclaimed the year before in Marrákkush), proceeded via Granada, whose governor at the time was Abu 'l-Hasan b. al-Hadjdj, and went first to Levante. Attacked by Alfonso VI at Medinaceli, he counter-attacked through Toledo and Talavera, but was defeated and died on the field of battle. The next governor was Abu 'l-Hasan's brother Muham- mad b. al-Hadjdj; he, with the Granada forces, came to the help of the amir Súr, governor of Seville, whose territory was threatened by Alfonso VI, but at Mu'tá, close to Seville, he was forced to retire with heavy losses. The following year (499/1105) we find as governor Abu Bakr b. Ibráhím al-Lantuní who, on the death of Yusuf b. Tashfin (500/1106), attempted some opposition to the proclamation of 'Ali b. Yusuf; the citizens of Granada, however, gave him no support, and he was captured and sent to Marrákkush. 'Ali, accompanied by his faithful but incompetent elder brother Abu 'l-'Táhir Tamlím, went straight to Andalusia to stifle this attempt at revolt and another which had broken out in Cordova, and appointed Tamlím governor of Granada. The latter organized the defence of Granada against Ulus, during which Alfonso VI's son the Infante Sancho met his death. However, he was dismissed in that same year, and after a brief period under the governor of Valencia, 'Abd Alláh b. Fátima, the governorship of Granada was taken over by 'Ali b. Yusuf's cousin the amir Mázdallá b. Sulánkán. Though his attack at Guadalajara (506/1112-3) had no success, in the year following (507/1113) he took Ocreja, and in July 1114 attacked the Sagra of Toledo, pillaged Pégina, Cábanas and Magán, and defeated the alcaide Rodrigo Aznárez. His success was short-lived, for during Shawwál 508/March 1115 this great ally of Yusuf b. Tashfin and his successor 'Ali was defeated and killed. His son 'Abd Alláh b. Mázdallá, who succeeded him as governor of Granada, went with his forces to the assistance of Abu Bakr b. Yahyá b. Tashfin, amir of Cordova; he was engaged by the Castilians around Baeza, and was defeated with heavy losses. In 510/1117, while Tamlím was once again in Granada, Alfonso I (the Battler) undertook his great expedition across Andalusia, in the course of which he twice camped before Granada but did not manage to lay siege to it; he defeated Tamílm at Aranuel. Dismissed at last for his inefficiency, Tamílm was succeeded by Abu 'Umar Inalú, grandson of Tashfin and a former governor of Fez, who had engaged Alfonso during the retreat before Guadix. When Ibn Ruqád told 'Ali b. Yusuf what had been happening in Andalusia and advised him to complete the fortifications of Marrákkush, a few men sent by the same advice about Andalusia. Orders were therefore sent to the governors of Sevilla, Granada, Cordova and Almería to mend and reinforce the walls and defences of their cities. In Granada the new governor Inalú made great efforts to get this done even though while the work was in progress the Geníl rose and swept away his building materials around Báb al-Ramla and Bab Fannú, and many lives were lost. 'Ali dismissed Inalú on Diumád 512/May 1118 and ordered him to Marrákkush to face serious charges preferred by the Mozarabs of Granada. These were proved at a court of inquiry, and he was imprisoned and sentenced to make good the wrongs he had committed. This unpublished episode from the Almoravid Bayán shows clearly that by no means all the Mozarabs were deported to Morocco, no more were they all accomplices and collaborators of Alphonso the Battler, for the majority of them suffered no punishment or reprisals, and even after the great damage caused by him, their rights were respected and justice was done to them. The new governor Abu '1-Hasf 'Umar, a son of 'Ali b. Yusuf, campaigned in Levante and seized an unnamed castle, only to be disposed after (May 516/1121-2) and replaced by another of 'Ali's sons, the famous and unfortunate Tashfin, who for ten years struggled with vigour but without success against the Castilians. In 526/1132 he had to take on as well the governorship of Cordova, and therefore delegated that of Granada to Abu Muhammad al-Zubary b. 'Umar, the Azoel of the Christian chronicles, whose valorous exploits came to a tragic end in 538/1143, when he was beaten and slain by the heroic Toledan alcaide Muño Alfonso.

The last of the governors answerable to Marrákkush was 'Ali b. Abu Bakr, son of 'Ali b. Yusuf's sister Fannú; he died during the revolt of Ibn Adhäuser who gave up Granada to Sayf al-Dawla (Zafadola) the last descendant of the Banu Hud of Saragossa, who had made his submission to Alfonso VII. The Azoel of Cordova, who had just resisted the assaults of Sayf al-Dawla and forced him to retire after killing his son Imam al-Dawla during a sortie. After the Granadan populace had expelled 'Ali b. Adhäuser who retired to Almuñecer, they acknowledged the sovereignty of the Almoravids of the alcazaba. Commanded by Ibn Gháníya's lieutenant Maymún b. Yiddar, they stood their ground until 551/1156, but the achievements of the Almo had governors of Cordova and Seville, added to their sense of isolation and dwindling numbers, moved them to write to Marrákkush and sue for peace. Their offer to surrender the city was preferred by the Mozarabs of Granada. These were proved at a court of inquiry, and he was imprisoned and sentenced to make good the wrongs he had committed. This unpublished episode from the Almoravid Bayán shows clearly that by no means all the Mozarabs were deported to Morocco, no more were they all accomplices and collaborators of Alphonso the Battler, for the majority of them suffered no punishment or reprisals, and even after the great damage caused by him, their rights were respected and justice was done to them. The new governor Abu '1-Hasf 'Umar, a son of 'Ali b. Yusuf, campaigned in Levante and seized an unnamed castle, only to be disposed after (May 516/1121-2) and replaced by another of 'Ali's sons, the famous and unfortunate Tashfin, who for ten years struggled with vigour but without success against the Castilians. In 526/1132 he had to take on as well the governorship of Cordova, and therefore delegated that of Granada to Abu Muhammad al-Zubary b. 'Umar, the Azoel of the Christian chronicles, whose valorous exploits came to a tragic end in 538/1143, when he was beaten and slain by the heroic Toledan alcaide Muño Alfonso.
whose garrison was absent in Almería, but the vizier Abū Dī’ār Ahmad b. ʿĀtiyya and the sayyid Yūsuf b. ʿAbd al-Muʿmin, having expeditated the surrender of Almería, set out of the place, and the vizier the Almohad garrison entrenched itself in the old alcazaba, which Ibn Hamushuk attacked with battering-rams from the Alhambra in the Sabika. He appealed for reinforcements to Ibn Mardanšī, who arrived with his soldiers and the Christian mercenaries commanded by Alvar Rodríguez the Bald, grandson of Alvar Fáez. The governor of Granada, the sayyid Abū Saʿīd ʿUghmān, was absent in Marrākush, so he set off and crossed the Straits to bring up to the beleaguered city, and from Málaga he reached the plain of Granada, picking up reinforcements from Seville; but at a place called Mārdī al-rukād (“sleepy meadow”) some four miles from the city he suffered defeat and fled to Málaga. ʿAbd al-Muʿmin, in Rabat at the time, sent picked forces over the Straits, commanded by himself, who, by his lieutenants, Yūsuf b. Sulaymān, but in reality by the veteran Yūsuf b. Sulaymān, who scaled by night the rocky cliffs above the Genil, near to the Sabika and the Alhambra, surprised the enemy encampment at dawn, and achieved total victory. Hefreed the beleaguered garrison and received the submission of all the dwellers of the plain (who had already submitted to Ibn Hamushuk), and provisioned and restored the liberated Alcazaba.

In 563/1168, at the very moment when Granada had recognized Yūsuf I as amīr al-muʿminīn, its governor defeated between Granada and Guadix a detachment of Christian mercenaries in the service of Ibn Mardanšī which had got as far as Ronda. Returning from his abortive expedition against Huete (autumn 566/1172), Yūsuf I came by Granada where he left as governor his brother Abu Saʿīd ʿUghmān, who had been with him on this campaign. Nothing of importance occurred in Granada during the reign of the subsequent Almohad caliphs until al-Maʿmūn, who, proclaimed in Seville, before he left for Morocco had to tackle Muhammad b. Yūsuf b. Hūd al-Dīwadhamī, the personification of general insurrection of the Spanish Muslims. During al-Maʿmūn’s absence, Ibn Hūd quickly mastered the whole of Andalusia. He had recognized the sovereignty of the ʿAbbāsīd caliph al-Mustanṣir, and in 630/1232 the caliph’s ambassador was received with due solemnity when he came to invest Ibn Hūd with the title of amīr of all Andalusia. But Ibn Hūd was assassinated in Almería in 550/1157, and his enemy Ibn al-Ahmar rose in Aχrjona and took possession of Granada in 556/1258 and founded the Naṣrīd dynasty.

One of his first tasks was to make a thorough inspection of the Alhambra. He traced the foundations of the Alcázar, appointed the excavators, and before the year was out many defensive works had been built. He brought water from the river, set up an asād and dug a dike to feed it. When this work was just beginning he put to death in the Alhambra itself the tax-gatherer of Almería, Abū Muḥammad b. ʿArūs, and later other collectors of revenue, determined to clear the building programme. When the Almohad caliph al-Rashīd died in 640/1242 he transferred his allegiance to the Ḥāṣfīd amīr of Tunis, Abū Zakariyā, from whom he received considerable sums intended to be used by the Spanish Muslims in the holy war; but Ibn al-Ahmar spent them on the works he had undertaken and on the extension of the mosques of the city, and made the hādi Muhammad b. ʿAyyāb swear that this money from the Tunisian sovereign was not intended for any definite purpose, but could be spent at will. For the rest of the long and eventful story of the Naṣrīd dynasty up to the capture of Granada by the Catholic Kings, see the article MARRAKESH.

Monuments

A. — The town

The Roman and Visigothic town.—Granada originated in a small Roman town, Illiberis, built on the site where, in the 5th/6th century, the palace of the Zirids, al-Kasaba al-kadima, arose, and on the hillside sloping down towards the Darro. Ancient tombs have been discovered on the other side of the river, and before the year was out many defensive works had been built. For the rest of the long and eventful story of the Naṣrīd dynasty, see the article MARRAKESH.

The remains found in the ground at Granada are inadequate for a reconstruction of the topography of the town, or for assessing the value of its monuments. A Visigothic inscription preserved at Granada, but which may have come from somewhere else, mentions the founding of three churches in an unspecified place. Hence the history of the monuments of Granada can only be written from the Muslim period onwards.

Granada in the 4th/10th century.—Up till the 5th/11th century Granada was not the most important town in the region. The chief town in the district was Madina Elvira, at the foot of the ridge of mountains of that name, where excavations have unearthed remains of the period of the caliphs with painted or carved decorations. However, from the 4th/10th century onwards Granada had monuments of a certain importance, built according to the techniques current in Spain under the caliphe. The minaret which served as the base for the bell-tower of the church of San José is similar in its plan and arrangement of stretchers and bondstones to all the minarets of that date. As early as that period the town had a fortified wall, some remains of which are still in existence: the wall was of concrete: the towers and the remains of a gateway are chained with free-stone. Old drawings show that the façades of the gates of Elvira and of Hernán Román had
kept their 4th/10th century work up to modern times. The bridge over the Genii, several times altered ... on the first floor. The hospital—the Mdristdn—has been destroyed;

but its plan has been preserved. Its central court seems to have been a spice tray. There are two gates in this part of the wall: the Puerta Monaita and the Puerta Nueva or Arco de los Pesos. They have arches made of stone or brick, surmounted by brick lintels and relieving arches. They are the oldest known examples in Spain of towers with crooked entry made of vaulted halls, interrupted, at the Puerta Monaita, by an open bay. The gates of Barambla and of the Maouror, now vanished, belonged to this enclosing wall.

This rampart was prolonged on the left bank of the Darro by a stone archway between two towers, allowing the curtain to cross the river without interrupting the route of the patrol. What remains of this beautiful work is commonly known as the Bridge of the Kâdi. The wall reached right up to the summit of the Alhambra plateau, where it was supported by two small fortresses. It enclosed a fairly extensive suburb in the quarter of the Maouror, where wealthy houses were erected. What is left of this Zîrid enclosure remains one of the finest fortifications in the Archangelus 9th/15th century.

The palace of the Zîrids occupied the upper part of al-Kasaba al-badima. Nothing of it remains beyond a cistern with four cradle-vaulted bays, and several pieces of wall utilized in later buildings.

Of the buildings of the town itself only a hammam called the Bânu elo remains. After a room for undressing and resting—with a basin in its centre and which the hose courtyards had galleries on the first floor—come three parallel vaulted rooms: the tepidarium had columns along three sides; the frigidarium and the caldarium were prolonged by little loggias reached through twin arches. The columns, with neither base nor astragal, are surmounted by re-used antique capitals. The walls are made of a very hard concrete; the arches and vaults of brick. The Banuelo with its row of three parallel rooms is the perfect example of a Hispano-Moorish bath, which persisted in Spain during the following centuries and is often found in Morocco.

Few remains of decoration have been found in Granada, apart from a few capitals. A curious piece of sculptured marble, divided into several sections and decorated with a Kufic inscription, preserved at Madrid in the Instituto de Valencia de Don Juan, seems to have been a spice tray.

Granada under the Almoravids and the Almohads.— Under the African dynasties Granada apparently did not undergo great changes. It is possible that the fortification to the west of the Alhambra, now known as Torres Bermejas, goes back in the main to the 6th/11th century.

Some carved woodwork and fragments of moulded plasterwork of the Maouror, all of which have been collected in the Maouror Regional Museum, seem to be of the Almoravid period. They are of excellent quality. This continuity of the Granada workshops played its part in assuring the rise of Nasrid art. Nasrid Granada.— With the dynasty of the Nasrids, the founder of which, Muhammad Ibn al-Ahmâr, settled in Granada in 635/1238, Granada became, and remained till its conquest by the Catholic monarchs in 897/1492, the capital of the last Muslim state in Spain (see NASRIDS).

Nasrid Granada, while maintaining profitable economic relations with Castile and Aragon, was closed to all spiritual and artistic influence from the Christian world. It shut itself up within its Muslim traditions, which it preserved, without renewing them, with pious faithfulness. Nasrid art was thus the final outcome and the supreme flowering of Muslim art in Spain.

The end of the 7th/13th century and the 8th/14th century were the periods of active construction: architecture and decoration, within formulas now become classical, continued to evolve slowly. But in the 9th/15th century in this increasingly threatened kingdom, often shaken by internal strife, buildings of importance seem to have been very rare, while the decoration of monuments lost its spontaneity and fine quality.

The surrounding wall. — From the moment that it became the capital of Muhammad Ibn Ahamar, Granada was transformed, especially by the influx of refugees. The wall was extended to the north in order to take in the Albaycin quarter; a concrete rampart with oblong quadrilateral towers, a part of which still exists, enclosed this extension. The rest of the city wall was underpinned and reinforced. In engravings made shortly after the reconquest, the wall appears with albarranas towers in many places. But all this fine array of fortifications was demolished when the modern enlargement of the city took place.

Religious buildings. — Granada has kept hardly any of its religious buildings. The church of the Salvador remains some remains of the ahn of the great mosque of the Albaycin, the site of which it occupies. From an old description we know that this Nasrid sanctuary was a beautiful building with nine naves, the arcade of which rested on eighty-six marble columns. A 7th/13th century minaret serves as the belfry of the church of San Juan de los Reyes. It is a square tower, with a cradle-vaulted staircase rising round a square central newel. The outside walls are decorated with a pattern of interlaced links in brick. The top band of the tower's decoration is in the form of a frieze of star-shaped polygons. This minaret, which belonged to a small 7th/13th century mosque, has neither the size nor the sumptuousness of the great Marinid minarets of Fez which belong to the same architectural style: it lacks ceramic decoration.

Of the madrasa which was built in 750/1349 only the hall of prayer remains, and now much restored. Some remains of the façade have been assembled in the Museum. Finally, outside the old city, the ermita de San Sebastián is a small Muslim sanctuary of the 9th/15th century, probably a funerary building, of square form, covered by a sixteen-sided cupola with fine and numerous ribs.

Secular buildings. — Nasrid Granada had many public baths: only one has been preserved, that of the Calle Real. It is of thoroughly classical type: its three vaulted rooms, on parallel axes, are preceded by a room for undressing and resting, with a gallery on the first floor.

The hospital—the Mridán—has been destroyed; but its plan has been preserved. Its central court
was bordered by porches with pointed arches on the ground floor, and wooden lintels on the first floor. The rooms opened through twin bays onto galleries. Its façade was symmetrically disposed. Above the first floor, richly decorated, and above its lintel, an arcade contained the foundation inscription: on the first floor there were windows, single or gminated.

Of the many fundúks which Granada boasted, only one has been preserved: the Corral del Carbón. The court, the arrangement of which is similar to that of the Márístán, is surrounded by a two-storied colonnade on lintels. Of purer lines and better proportion, it has the same plan that one finds in Marinid hosteries of the same period in Fez. This utilitarian building, the interior of which remains very sober, had a monumental doorway which was richly decorated. Its approach reveals a short vestibule with a horse-shoe arch, surmounted by a false lintel and a gminated window framed in two arcades. All this arrangement is decorated with moulded plaster. The ceiling of this type of portico is made of stalactites. One enters the court by a door with a lintel surmounted by a gminated arcade. The fundúks of Fez retained, up till the modern period, the tradition of monumental doors, decorated to a greater or lesser extent.

Although the public buildings of Granada have nearly all disappeared, five beautiful dwelling-houses, more or less restored, still remain in part. The convent of Santa Isabel la Real retains the remains of the Daralhorra: a court whose shorter sides consist of three arches on the ground floor and first floor, and whose big halls have an alcove at each end.

In the convent of Santa Catalina de Zafra can be seen the remains of a house with a court which had, in its original form, the same arrangement as that of Santa Isabel la Real, and the decoration of which was mainly painted. These two fairly simple houses, the disposition of which is often to be found in the Morisco houses of the 16th century, seem to date back to the middle of the 9th/10th century.

The Casa de los Girones has been much restored. It too had porticoes along the shorter sides of its court. Its beautiful staircase had groin vaulting. Its richly moulded plaster-work on a coloured background dates it as late 7th/11th century.

Outside the city wall the Nasrid sovereigns and persons of high rank in the kingdom had, extra muros, beautiful country houses.

At the Cuarto Real de Santo Domingo a tower which formed part of the city wall contains a beautiful square room, entered by a portico. The walls are decorated with moulded plaster and with very lovely faience mosaic panels, which, in the older parts, belong to the end of the 7th/11th century. The buildings of the Alcazar Genii have been even more restored than those of the Cuarto Real de Santo Domingo. There remains a tower with a square room flanked by two alcoves with two interior basins. The moulded plaster-work belongs to the 8th/14th century.

These only too rare remains show us the same intention, the same structure, the same decoration in the houses of Granada as in the palace of the Alhambra, and frequently of an equally good quality. Luxury and refinement in their dwellings was not the prerogative of the sovereigns. These private houses testify to the perfect architectural and decorative unity of the art of Granada.

B. — The Alhambra

The Alhambra before the 7th/13th century. — The name of al-Ḥamrā' appears at the end of the 3rd/9th century: it was applied to a small fortress where the Arabs who were being pursued by the rebel peasants took refuge during the revolts that took place under the Umayyad amir 'Abd Allāh. This fortress must have been built on the westernmost point of the plateau of the Sabika. The Nasrid Alhambra was later to cover the whole of this plateau. This castle, built at the end of the 3rd/9th century, was doubtless abandoned during the latter years of the caliphate and during the first half of the 5th/11th century. It was rebuilt and without doubt enlarged by the Jewish vizier Samuel Ibn Nagrello between 443/1052 and 447/1056. The Zirid amir 'Abd Allāh improved it, inspired by the arrangement of the Christian castle of Beillos which he had just captured.

This castle is mentioned several times in the struggle of the Spanish amirs against the Almoravids and the Almohads. It was of small dimensions, for the Christian contingents of Ibn Hamūghī had to camp outside its walls. Some stretches of wall of very hard rubble and some remains of towers and buildings are chained with flat stones and bricks, in the neighbourhood of the present Alhambra wall, show that the fortress previous to that of the Nasrids was very plainly built.

The Alhambra, seat of the Nasrid government. — When Muḥammad Ibn al-Aḥmar entered Granada in Ramadān 635/May 1238 he took up residence in the Zirid Alcazaba, in the town itself. But he lost no time in ordering the construction of the present Alhambra, work on which began after a few months. The new foundation was something quite different in its intention and size from the original fortress. The Alhambra is more than a fortress and a palace: it is a royal city, a seat of government, as had been Madīnat al-Zāhrā', al-Madīna al-Zāhirah and the Almohad Kasaba of Marrākūsh.

Opposite the commercial part of the town there was a kasaba which had been enlarged for the governmental needs of the Nasrids. It contained, in addition to the royal palaces, the State administration: offices, mints, barracks for the guards, accommodation for the palace servants and some high dignitaries; in short, all the organs necessary to the administrative city's ordinary life: workshops, shops, a great mosque, baths.

Never was the separation of town and palace more happily reflected in the landscape: above the Darro and its confluence with the Genil, the hill of the Sabika is the last platform of a spur that comes down from the Sierra Nevada. It is a narrow plateau, rising almost sheer above the Darro, easy to defend in all other respects, and separated by a ravine from the slopes which overlook it from the direction of the mountain. This "enormous boat anchored between the mountain and the plain", as L. Torres-Balbás has described it, has a maximum length of 740 metres and width of 220.

Work began with the construction of an aqueduct which brought in the water coming from the mountains: there was water flowing everywhere in the town and in the palaces of the Nasrids. The enclosure and the first palaces were probably not completed till the time of the second amir Muḥammad II (671-701/1273-1302). The Nasrids never gave up their residence there.
The Alhambra is first of all a powerful fortress. The high rampart flanked by strong towers which surrounds it is not one of the least of its beauties. The interior of the enclosure, sloping at either end, was divided into three parts: to the west a compact block of fortifications: the Alcazaba; on the highest part, the main body of these palaces; on the gentle slopes which stretch to the east, the town itself.

The fortress. — At the end of the hill, facing the Vega, the Alcazaba formed a sort of fortified keep completely independent of the rest of the Alhambra. A large parade-ground, then occupied by small houses, is surrounded by a strong triangular wall made up of high curtains, flanked by towers, reinforced by three powerful vaulted bastions, and with an outer wall to the east. This fortress had its own gateway opening into the exterior.

The wall which surrounded the whole of the Alhambra and which the Alcazaba completed to the west consisted of a single rampart made of concrete. This wall is exceptionally high and is strengthened by twenty-three high, wide towers, in the upper storeys of some of which there are halls or small houses belonging to the palaces. The whole of the surrounding wall was built by Muhammad I and Muhammad II. In the 8th/14th century, during the reign of Yusuf I (723-55/1333-54), were built the towers of Machuca, of the Candil, and the three great monumental gateways of the Justice, of Siete Suelas, and of las Armas. The tower of the Peinador was completed under the following sultan, Muhammad V. So the surrounding wall acquired its present appearance as far back as the middle of the 8th/14th century. The last sultans, in the face of the Christian threat, contented themselves with building platelike or cannon at the foot of the three great gateways.

Three of the Alhambra gates, those of the Justice, of Siete Suelos and of los Picos, opened onto the exterior. Only the gate of las Armas which flanked the Alcazaba linked the Alhambra to the town.

The Alhambra gates, of huge proportions, form deep masses of masonry enclosing vaulted passages with two or even three bends, often cut across by an open bay. They were made of concrete with façades and arches of brick, sometimes set off by ceramic decorations. Quite apart from their military value, they are beautiful examples of architecture. The gate of la Justicia, which is not flanked by towers, but which forms part of a raised bastion, is pierced by an arch with high piers and has a vigorous elegance all its own. The others do not differ from the great gates of the Almohads or Marinids in Morocco, especially when they are flanked by two towers.

The curtains, which are very high, had a sentry-walk edged by a parapet crowned by merlons with pyramidalons. The lay-out of the ramparts, closely following the contours of the terrain, often makes use of re-entrant angles. The spacing of the towers, which is fairly irregular, reaches and sometimes exceeds fifty metres.

The high bastions of the surrounding wall are often big enough to contain, at the top, one of the halls of the palace, or a small house with a courtyard. The Hall of the Throne, or Hall of the Ambassadors, occupies the top floor of a huge square bastion. All these halls and dwelling-houses overlooked, through numerous windows, the beautiful view of the town and of the Vega.

The magnificent group of fortifications built by the Nasrid Sultans was never attacked. The numerous Christian incursions to reach Granada stopped before the walls of the town, which never underwent a formal siege, till the last campaign of the Catholic Monarchs, in 1484-6. The town capitulated and the surrender of the keep took place on 1 Rabii I 897/2 January 1492. Ferdinand and Isabella made their entry into the Alhambra on 6 January. Thus the ramparts of the Alhambra and the palaces they enclosed suffered no damage during the progressive collapse of the kingdom and the fall of the dynasty. The palaces. — The palaces of the Alhambra, like all Hispano-Moorish palaces, are arranged in groups of buildings round courtyards. The main element is not the body of the building, but the court, more or less spacious, with or without porticoes surrounding it, onto which open the state and living rooms. These groups of buildings often have different axes: they are linked together by corridors or by connecting chambers. The palaces of the 7th/13th century were demolished in the following century to make room for the present palaces. A first group of buildings to the west, long since ruined, and recently uncovered by excavations, comprised a square court onto which opened some small rooms and a small mosque. This fairly simple dwelling-house was followed by a huge court, the patio of Machuca, bordered to the north by a portico which gives access to the harem and to the top of one of the towers of the enclosing wall.

The present palaces form two groups built round two courts with perpendicular major axes. The first group, the Cuarto de Comares, preceded by a vestibule, by the Mechouar, and by a small patio, was built by Yusuf I (733-55/1333-54); the second, the Cuarto de los Leones, by Muhammad V (755-94/1368-92). Some older baths and a mosque link these two 8th/14th century groups.

To the south of the Cuarto de los Leones was the burial-ground of the dynasty, the Rawda, the plan of which has been rediscovered through excavations. The Partial, a pavilion bordering a pond, the rich houses which complete the towers of the Peinador de la Reina and of the Captive, form separate groups.

The two big patios are surrounded by porticoes or buildings on all four sides. The reception halls are always on the ground floor: the living rooms, of much smaller proportions, occupied the first floor. Thus each of the quarters of this palace forms a small enclosed world round its patio. But, with happy inconsistency, the higher parts are pierced with bays and open galleries surmounted by belvederes.

The architectural composition. — It is in the patio of Comares, known also as the patio of la Alberca or of the Myrtles, the work of Yusuf I, that we can grasp the methods of composition of the Granada architects. The centre of the court, a very elongated oblong, is occupied by a large pond, emphasized by two borders of myrtles. The buildings which surround this vast patio are disposed in three different styles. The long sides have walls pierced by doors on the ground floor, and by twin windows on the first floor. A mezzanine with single or double windows is inserted along the south front between two colonnades of slender pillars. To the north there is a portico of equally graceful elegance, dominated, above a tile roof, by the huge mass of the bastion that contains the Hall of the Ambassadors, the throne room of the Nasrid palace. This paradoxical composition which contrasts occupied spaces with empty ones, walls with colonnades, which aims at picturesqueness and variety rather than unity, for all its apparent and intentional lack
Classical traditions govern the arrangement of the state rooms, which open onto the south of the court. The gallery gives access to a very long ante-room, which flank the patio, different in size and in shape, grouped the majority of the buildings which Sultan Muhammad V built in the second half of the 8th/14th century. On a plan, the disposition of the four rooms which flank the patio, different in size and in shape, seems to lack severity. But seen from above, the masses of the roofs combine a happy equilibrium with a picturesque variety. The architect has voluntarily deprived himself of the facile resources of symmetry of detail. When one goes through these halls, where perspectives of arches and bays have been skillfully contrived to form axes of light, one cannot help admiring the vital and yet subtle discipline of the architectural arrangement. In spite of the great variety of the decoration the rows of arches re-establish the unity of the composition through the spacing of their lacework of light and shade.

The Court of the Lions itself is of a very classical style: it is divided by two paths which intersect at right angles: their intersection is marked by a fountain whose basin rests on stone lions doubtless belonging originally to a 5th/11th century palace. Four projecting pavilions occupy the middle of the sides. The porticoes and pavilions are made of rich arcades of moulded plaster resting on high and slender marble columns. On the ground floor the portico makes use of one motif only—the ringed column with palm-leaf capitals: here the architecture seems to melt into music. However, the vigorous masses of the tile roofs and pavilions which dominate this ethereal portico save the composition from insipidity. The very placing of the columns shows a rare subtlety: sometimes isolated, sometimes paired, the little columns form symmetrical groupings which link up on successive axes and sometimes overlap. Thus, in the Court of the Lions, the architecture itself becomes a symphony of decoration, through the play of association and repetition of motifs.

At the Partal there is a pool along whose edge runs a long pavilion with a five-arched portico surmounted by tile roofs. This colonnade faces the interior of the palace; but the great hall which opens onto this portico and its central pool have, like the Hall of the Ambassadors, windows which allow one to enjoy the whole panorama of the palace, the mountain, and the town.

The arrangement and classical themes of the Muslim palace have been treated here with true originality. The Nasrid architects have not been seeking what is grand and massive, but have made use of contrast and nuance with incomparable virtuosity in the almost-romantic decoration.

The interior decoration. — The Alhambra is famous all over the world for the beauty and opulence of the decorations which overspread its halls. Throughout the palace the tradition of covering everything with decoration dominates. Examples of walls bare or covered by a fairly large and simply engraved geometrical net-work are rare. The decoration is distributed on three levels. On the floor and on the panels at the base of the walls are to be found ceramic facings. On the floors there are usually geometrical motifs with juxtaposed elements, sometimes star-shaped. But on the panels there are polygonal stars ceaselessly sending out a whole complex of lines, and, through a subtle interweaving, rejoining and forming themselves into frames. In the less important rooms the faience mosaics are sometimes replaced by glazed paintings, composed of geometrical networks in which are set epigraphic and floral motifs. The middle part of the walls is covered by moulded plasterwork. As a rule it is divided into panels, which, especially in the first half of the 8th/14th century, are arranged with as much skill as variety, thanks to the subtle play of axes and levels. The frames, made up of interlacing bands of inscriptions of varying width and content, allow for both precision and nuance in the grouping of these panels. But in the second half of this century, long high friezes tend to cover, with their uniform distribution, a large proportion of these walls.

In this moulded plasterwork one often finds geometrical networks which make up the general plan. But it is in the epigraphs and floral design that we seek the essentials of the decoration. Kufic script expresses eulogies and spreads out into complex arcatures, but it is the naskhi which dominates nearly everywhere: thanks to the balance of its movement it has acquired monumental dignity. Some of the Alhambra inscriptions are perhaps the finest examples of cursive epigraphy. The abundant floral designs, usually disposed in foliated scrolls, unites the palm leaf, single or double, ribbed or smooth, to the pine cone and the palmette. Under Muhammad V an effort was made to renew the forms of the palm and the palmette. But it is not so much a case of innovation as of inspiration rooted in the past, sometimes even in the art of the Cordovan caliphate. But this attempt was short-lived, and apparently limited to the Alhambra.

The quality of the detailed forms is still excellent in the work produced under Yusuf I. But at the end of the 8th/14th century a certain stiffness appears in the moulding and even in the forms. This incipient decadence became more pronounced in the 9th/15th century, in the moulded plasterwork of the Tower of the Infantes, one of the few buildings of the last Nasrid rulers in the palace of this dynasty.

This moulded plaster-work composes delicate symphonies in great wall panels with a shade of its own, because of the distribution of light and shade. The movement of the lines also counts. The double play of light and line prevents any banality or monotony, and gives personality to each panel.

Colour was often used to enhance the moulding, particularly in the background, but sometimes covered the floral or epigraphic forms themselves. The shades—mainly blues and reds—were usually
fairly dark, but gold was not lacking. This polychromy, in spite of its sobriety, sometimes impaired either its methods of composition or the forms of its details, yet shows great artistry and real beauty. Its worth lies in its exquisite sense of nuance: but it has lost the vigour of the art of the 6th/12th century. Above all, it no longer troubles to produce an original composition for each panel. Indefinitely repeated motifs—the background decoration—overrun the whole of the décor. This decorative art of the 8th/14th century, in its delicate classicism and its artistry, is already imprisoned in the past: it lacks the boldness of the architecture which it covers. The main motifs—apart from the quadrangular panels—are the arched doorway, its palm-leaf spandrels, its bold rectangular setting, and its arcing, isolated or in tiers.

The ceilings are always most luxurious. Roofs with an interlacing framework, or artesanados, are still used. They are nearly always painted. But the biggest and most beautiful halls are covered by domes with stalactites. The muskarnas are small in size, and some of their sides are moulded and painted. These small stalactites are created with great variety, and are provided with line and shadow both rigorously and hallucinating. The cupolas of the halls of the Kings, of the Two Sisters, and of the Abencerrajes boast a richness and complexity which have never been surpassed.

The human figure is found in some of the famous paintings which cover some of the vaults of the Hall of the Kings: but these have been painted by artists of Christian upbringing. However at the Partal small paintings have been found which in their subjects—scenes of hunting and war and domestic reunions—belong to the Muslim tradition. The costumes and arms are those of the Muslims of Granada.

The Alhambra is the supreme example of monumental decoration in Muslim Spain in its final stage: an art which is still wonderful, but imprisoned in a past of less vibrant glory. But it has been greatly altered. Nevertheless, the plaster mouldings is excellent. Nasrid art has left us the chef d'œuvre of its classical age, the greatest testimony of its architecture and art of decoration. And the Alhambra has naturally become nothing less than a place of pilgrimage for all who wish to know, and for all who love, the arts of Spanish Islam in their final flowering.

**Ghasb,** uspensation, *i.e.*, "highhanded appropriation", is neither robbery as it is often translated, nor larceny (sariba), both of which pertain to the field of criminal law, but the illegal appropriation of something belonging to another or the unlawful use of the rights of another. Ghasb is thus restricted to civil law, so that it is dealt with by the Islamic jurists in the *Kitāb al-Buyāʿ*. While contractual, legal possession by the non-owner (e.g., tenants, depositaries) is regarded as trusteeship (amnā), illegal possession not based on a contract is regarded as *ghāšīb*. The Islamic jurists consider *ghāšīb* from the point of view of an obligation arising from a tort. Hence the question is primarily whether the *ghāšīb* has to return the object obtained by unlawful interference (maghsāb) to the deprived person (maghsāb minhu) or to pay compensation. If the return of the object is no longer possible on account of loss (kašār) or as a result of specification, commixtion and confusion, he has to repay the value. As the *ghāšīb* has illegally taken possession of another's property, a high degree of liability is incurred: in all cases of loss, even through force majeure, he is liable, e.g., if a usurped child dies from lightning or snake-bite. In the case of *ghāšīb* of res immobiles (′abār) jurists disagree over the question of liability. As far as the consequences, under the law of *res immobilis* (′abār) jurists are concerned, two schools exist in Islam, just as in Roman and Jewish law: the Shāfiʿis, like the Sābiʿians or the school of Shamaym, direct their attention to the substance of the resulting article, the Hanafis, like the Procurials or the school of Hillel, to the work performed. The Mālikis represent a media sententia, which, however, diverges materially from the Code of Justinian, while the Jewish media sententia coincides with the Roman and certainly goes back to it.

**(O. SPIES)**

**Ghaššānīya,** (a.), "the covering", particularly, a covering for a saddle*. Among Ibn al-Zubayr, Mamluks etc., this was one of the insignia of royal rank and carried before the ruler in public processions (see C. H. Becker, *La Ghāššāniya comme emblème de la royauté*, in *Centenario M. Amari*, ii, 1948). *Ghsil al-Malāʿīka,* nickname by which Ḥanẓala b. Abī ʿAmir (ʿAbd ʿAmir) b. Saiyf al-Aws, a Companion of the Prophet, is known. The son of a Christian monk counted among the "People of the Interval" (see *Ghānatra*), he embraced Islam and took part in the battle of Uhud; he was about to kill Abū Sufyān (*q.v.*), when he was mortally wounded by one of the enemy (some think that he fell at the hand of Abū Sufyān who, by killing a Ḥanẓala, would thus have avenged his own son Ḥanẓala who had fallen at Badr). On hearing of his death, the Prophet exclaimed: "The angels will prepare his body for burial", and this earned him posthumously the name of Ghāššān-al-Malāʿīka. He was buried at Uhud with the many other Muslims killed in this battle.

**(C. PELLAT)**

**Ghassān,** a division of the great tribal group al-Azd who migrated from South Arabia, wandered in the Peninsula, and finally settled within the Roman times ca. A.D. 490, having accepted Christianness and agreed to pay tribute to Rome. After a short period of coexistence with Ṣalḥi, *q.v.*, as tributaries, ṣapīrōri, they overpowered the latter group and superseded them as the new Arab allies, ṣūmuṣṣā, of Byzantium in A.D. 502-3. Their relations with the Empire were regulated by a treaty, *foedus*, according to which they received annual subsidies, *amnonae foederaticae*, and in return they contributed mounted contingents to the Byzantine army. The leaders in the various provinces were technically called phylarchs, *φυλάρχοι*, and were generally endowed with the rank *clariusim*, *λαμπροτάτος*. The chief Ghassānī phylarch whose seat was Ḥajibiyah in the province of Arabia was accorded the highest honours and titles; he was *patricius*, *bīzāb*, *q.v.*, and *gloriosissimus*, *ἐνδοστάτος*, and was allowed to wear the crown of a client king. Although Romanized in many respects and passionately attached to Monophysitism, the Ghassānids remained Arabs at heart. Poets from the Peninsula, like Nābhīgha and Ḥassān b. Thābit, *q.v.*, visited their courts and composed on them panegyrics which give intimate glimpses into their inner life and document their history for three decades.

As allies, *Ṣūmuṣṣā*, politically and militarily, the Ghassānids performed for Byzantium their most important function: (a) they supplied the Army of the Orient with an efficient, mobile contingent in the war against the Persians. Their most notable political and military contribution was during the reign of al-Ḥārīth b. Ḥajibal b. Ḥajal b. Thābit, A.D. 559-59, and before disagreements with the Roman Emperors Justin II, Tiberius, and Maurice limited and frustrated their military efforts. Harīth participated regularly in the two Persian Wars of Justinian's reign (A.D. 531-63), and fought with distinction at Callinicum (A.D. 532) and in Belisarius' Assyrian

Campaign (A.D. 541); (b) the war against the Lakhmids was successfully prosecuted. Harith triumphed signal to over the Lakhmid Mundhir at al-Halma [q.v.] in A.D. 541 near Damascus, and his son Mundhir triumphed over Kābūs, possibly at Ayn Uubah [q.v.], in A.D. 570, captured Ḥira, and burnt it. Ghassānid military superiority over the Lakhmids solved for Byzantium its most serious Arab problem; (c) from their main base in Arabia and Palæstina Tertia, the Ghassānids kept the nomads in check and conducted military operations against the Jews of Ḥidżāz. The Arabian aspect of their function included, also, the protection of Byzantine commercial and political interests along the spice-route, and their importance in this sector is reflected by their participation in the diplomatic mission to Abraha [q.v.], the Abyssinian ruler of Arabia Felix.

In the history of Syria Monophysitism the Ghassānids were a determining factor. It was mainly through the efforts of their king Harith b. Diābalah that the Monophysite Church in Syria was resuscitated after its disestablishment during the reign of the Chalcedonian Emperor Justin I, A.D. 518-27. Around A.D. 540, and with the help of the Empress Theodora, Harith secured the ordination of two Monophysite bishops, Theodorus and the famous Jacob Baradaeus, by which the Syrian Monophysite Church was called Jacobite. The indefatigable efforts of these two bishops put the Monophysite Church in Syria on its feet again. The Ghassānids, Kings, Harith and his son Mundhir, continued to protect the Monophysite Church not only against the hostility of the Chalcedonians but also against divisive movements from within: e.g., the Trinitistic heresy of Eugenius and Conon; the discord which broke out between Jacob Baradaeus and Paul the Black; and the patriarchal strife between the sees of Antioch and Alexandria. But they did not neglect the Arabian Peninsula. Their missionary activities, particularly in Nadrān, were important contributions towards the propagation of Christianity in those southern parts. Although their staunch support of the Monophysite movement reflected well the relation of two Monophysite bishops, the Chalcedonian Emperor, and brought about the downfall of their king Mundhir [q.v.], A.D. 569-82, and his son Nu’mān. This considerably weakened the Ghassānid Phylarchate. But it was the Persian invasion of A.D. 613-14 that dealt the crushing blow to the Ghassānids who, however, re-emerged, serving in the army of Heraclius and represented by the Diābalah b. al-Ayham [q.v.] at the decisive battle of Yarmūk, A.D. 536.

The Muslim Conquest of Syria swept away the Ghassānids beyond recall. Some of them went over to Byzantium and settled in Anatolia; others adopted Islam and were assimilated in the new Arab Muslim community; the rest remained Christian and stayed on in Syria. To these, some of the Arab Christian families of the contemporary Near East trace their descent.

(İfRAN SHAHİD)

AL-GHASSANI, ABÖ ʿABD ALLAH MUHAMMAD

section A: Southern Syria, Leiden 1919, 362-3; (iii) the castle in Dumayr, built by al-Mundhir (509-82) (described in Brünnow-Domanszcky, Die Provincia Arabia, Stuttgart, 1909, 554; the foundation inscription (Wetzstein, no. 175, Waddington, 2562c) was lost, but in the summer of 1963 I was able to rediscover it on the site, and the Syrian Service of Antiquities is going to exhibit it in the Damascus Museum).—note communicated by K. Brisch. The prosperity of the province of Arabia in the sixth century, archaeologically attested, can to a great extent be made explainable by the activities of this energetic dynasty whose main base was Arabia, and who, consequently, animated the region and relieved it of its technically insignificant and provincial status.

Rarations between Byzantium and the Ghassānids were not uniformly smooth. Their independent spirit, but more, their unflinching support of Mono-

The urbanization of Syria and to its architectural life in the sixth century: (a) they were credited with the building of a number of towns, e.g., Ḥalif, and of public works, e.g., the cisterns, ṣāḥārdā, of Sergiopolis (Rusafa); (b) generuity pious, and living in an age which witnessed a great building activity, they erected churches and monasteries for the resurgent Monophysite Church, e.g., the Ecclesia extra muros (possibly a fratorium) at Sergiopolis; (c) anticipating later Umayyad practice they built, and in near the desert, palatial residences which were sometimes also military establishments, mašāʿīn. In addition to the dated monument in Sergiopolis there are at least three more, arranged here in chronological order: (i) the tower of the monastery in Kaṣr al-Ḥāyar al-Ḥarbār, of 559 A.D., by Harith b. Diābalah (D. Schlumberger, Les fouilles de Qasr el-Ḥāyar al-Ḥarbār, i, 1920), 560-72; (ii) a house in al-Ḥayān (Ḥawrán) built by Flavios Seos in 578 (H. C. Butler, Syria, Princeton Expedition, division II: Architecture, xix, 12-8, 26-46; Anecdota, ii, 23, 28; Malalas, Chronographia (Bonn), 434-5; 441-2; 445-7; 461-5; Menander Protector, in Excerpta Historica, ed. (İfRAN SHAHİD)
leads towards southern Tunisia by way of Ghadamat, and to Tripoli either via Ghadamat or via the Fezzan, thus avoiding the mountains of the Tassili and the ergs of the Fezzan.

The region was inhabited in ancient times, as is proved by the numerous rock engravings and more than one necropolis such as those of al-Barkat and of Tin Alloun, but it has never been proved that the oppidum of Rapsa mentioned by Pliny was situated there. Ghat itself does not go back for longer than 700 years and is mentioned for the first time by Ibn Battūta in the 8th/14th century. Its prosperity depended from the vicissitudes of trade across the Sahara, about which our only exact information comes from some 19th century travellers, in particular Muhammad al-Otsman al-Hachaîchi (al-Hâshâshî); he remarks, at the end of the century, that if for the Touareg Ajjer "Ghät is their Paris", most of the traders of Ghat "which is the Marseilles of the Sahara" are people of Ghadames and people from Tripoli; the Touareg hired their camels to the traders, but the essential part of the cross-Sahara traffic already went via the Fezzan. This trade disappeared little by little in the early years of the twentieth century.

For a long time Ghat remained independent, governed by a hereditary amînhâr [q.v.] and an elected municipality, but nevertheless under the somewhat heavy protection of the Touaregs. In 1875, the Turks of Tripoli installed a garrison there and a bââimmakâm, and remained its masters until 1914. Ghat was occupied for the first time by the Italians, conquerors of Libya, from April to December, 1914, and a second time from February 1930 until January 1943. It was then taken by the French troops of southern Algeria at the same time as the expedition of General Leclerc made itself master of the Fezzan; it was annexed to the region of Djent (Fort Charley). French forces left Ghat after the Franco-Libyan treaty of 10th August, 1955, and Ghat was attached once more to the Fezzan, a province of the United Kingdom of Libya. Ghat is a picturesque ksar, fortified in an irregular rectangle 700 by 500 metres in area, surrounded by a crenellated wall with five gates; part of it also are the suburbs of Tadrart and Tounin. Al-Fewet, 10 km. away to the west, and the fortified ksar of al-Barkat, 8 km. to the south, as well as some hamlets scattered within modest palm groves, are under its control. The whole area has more than 2,000 inhabitants. The Kel Ghat fall into five groups: the Tel Talak and the Tel Makammazan who are the oldest, the Idrâh, the Tel Inan Tamalgat and the Tel Khabsa; some Arabized families, Ghadamesians, Touaregs who have become sedentary (especially at Al-Fewet and al-Barkat) and many negro share-croppers of Sudanese origin, called here atâra, complete the population. All speak Tamâhakk but many understand Arabic and even Hausa which is spoken by the negroes.

Ghat is the centre for about 1,000 Imanan and Oraghennomads and for some Imamaghassatien families. Some springs and shallow wells (both the type worked by animal tread with windlass) and a few shallow wells are found, for example at Ghaâl. For a long time Ghat remained independent, governed by a hereditary amînhâr [q.v.] and an elected municipality, but nevertheless under the somewhat heavy protection of the Touaregs. In 1875, the Turks of Tripoli installed a garrison there and a bââimmakâm, and remained its masters until 1914. In 1875, the Turks of Tripoli installed a garrison there and a bââimmakâm, and remained its masters until 1914. Ghat was occupied for the first time by the Italians, conquerors of Libya, from April to December, 1914, and a second time from February 1930 until January 1943. It was then taken by the French troops of southern Algeria at the same time as the expedition of General Leclerc made itself master of the Fezzan; it was annexed to the region of Djent (Fort Charley). French forces left Ghat after the Franco-Libyan treaty of 10th August, 1955, and Ghat was attached once more to the Fezzan, a province of the United Kingdom of Libya. Ghat is a picturesque ksar, fortified in an irregular rectangle 700 by 500 metres in area, surrounded by a crenellated wall with five gates; part of it also are the suburbs of Tadrart and Tounin. Al-Fewet, 10 km. away to the west, and the fortified ksar of al-Barkat, 8 km. to the south, as well as some hamlets scattered within modest palm groves, are under its control. The whole area has more than 2,000 inhabitants. The Kel Ghat fall into five groups: the Tel Talak and the Tel Makammazan who are the oldest, the Idrâh, the Tel Inan Tamalgat and the Tel Khabsa; some Arabized families, Ghadamesians, Touaregs who have become sedentary (especially at Al-Fewet and al-Barkat) and many negro share-croppers of Sudanese origin, called here atâra, complete the population. All speak Tamâhakk but many understand Arabic and even Hausa which is spoken by the negroes.

Ghat is the centre for about 1,000 Imanan and Oraghennomads and for some Imamaghassatien families. Some springs and shallow wells (both the type worked by animal tread with windlass) and a few shallow wells are found, for example at Ghaâl. For a long time Ghat remained independent, governed by a hereditary amînhâr [q.v.] and an elected municipality, but nevertheless under the somewhat heavy protection of the Touaregs. In 1875, the Turks of Tripoli installed a garrison there and a bââimmakâm, and remained its masters until 1914. Ghat was occupied for the first time by the Italians, conquerors of Libya, from April to December, 1914, and a second time from February 1930 until January 1943. It was then taken by the French troops of southern Algeria at the same time as the expedition of General Leclerc made itself master of the Fezzan; it was annexed to the region of Djent (Fort Charley). French forces left Ghat after the Franco-Libyan treaty of 10th August, 1955, and Ghat was attached once more to the Fezzan, a province of the United Kingdom of Libya. Ghat is a picturesque ksar, fortified in an irregular rectangle 700 by 500 metres in area, surrounded by a crenellated wall with five gates; part of it also are the suburbs of Tadrart and Tounin. Al-Fewet, 10 km. away to the west, and the fortified ksar of al-Barkat, 8 km. to the south, as well as some hamlets scattered within modest palm groves, are under its control. GHATAFÁN, name of a group of Northern Arabian tribes, belonging to the Kays *Ayālān* [q.v.] and represented in the genealogical system as the descendants of Ghaṭafān b. Sa’d b. Kays b. *Ayālān*. Their lands lay between the Hijāz and the Shamar mountains in that part of the Nadīd which is drained by the Wādī al-Rumma. Here lived from West to East their principal tribes: the Banū Ashīdā‘, the Dhubyān (with the sub-tribes: Fazara, Murra, and Tha‘labā), the *Abs*, and—in the region al-Kasim—the Anmar. Of these tribes the Banū *Abs* (b. Baghīd b. Rayyih b. Ghaṭafān) rose to prominence c. 550 A.D., when their chief, Zuhayr b. Dhihmīla, gained power not only over all Ghaṭafān, but also over the Hawāzīn, the other important group of the Kays-*Ayālān*. After Zuhayr was slain by Khallīd b. Dīāfār of the Banū *Amīr* b. *Sa‘ṣa‘a*, the power of the *Abs* declined. A quarrel between Kays b. Zuhayr b. Dhihmīla und Hūdāyfya b. *Badhr*, chief of the Banū Fazāra (b. Dhubyān b. Baghīd b. Rayt b. Ghaṭafān), led to the so-called war of Dāhīs between the *Abs* and Dhubyān; during it nearly all Ghaṭafān took up arms against the *Abs* and forced them to leave their pasture grounds. After many unsuccessful attempts to come to an agreement, both and the Banū *Amīr* b. *Sa‘ṣa‘a* and c. 580 A.D. both groups defeated in the battle of Shi‘b Ḫīdāla [q.v.] the coalition of Tāmil, Dhūyān, Asad, and other tribes (see the poem of Khurāshā b. *Amīr* al-Abīn in Mu‘addalīyyāt, no. 121). Later on peace was restored between the *Abs* and Dhubyān through the good offices of two chiefs of the Banū Murra (b. * Aws* b. Sa’d b. Dhubyān) named al-Hārīth b. * Aws* and Harīm b. *Sinān*, both of whom were praised by Zuhayr b. Abī Sulmā [q.v.] in his *Ma‘allaka*. After this reconciliation the *Abs* and Dhubyān stood together against the Banū *Amīr* b. *Sa‘ṣa‘a* (see Bakrī, Mu‘ājam s.v. al-Baghīdā‘a) and were often joined by the other Ghaṭafān tribes, e.g., in the battle of al-Rakam (see the poem of Salāma b. Khurshub al-Anmarī in Mu‘addalīyyāt, ed. Lyall, no. 5). About the same time the Ghaṭafān concluded an alliance with their neighbours the Tayyīr and Asad. There were also fights between the Ghaṭafān and the Hawāzīn and Sulaym till the rising power of Islam ended these clashes. The Ghaṭafān were, like almost all Bedouins, hostile towards Muhammad and his religion. At this time *Uyyayna b. Ḥiṣn al-Fażār* of the famous "house" of *Badr*, was the leading chief amongst the Ghaṭafān and the Meccans tried to win his support, whilst Muhammad was eager to forestall all hostile movements (e.g., in the expedition of al-Kudr against Sulaym and Ghaṭafān). After the expulsion of the Banū *Nādir* from Medina to Khaybar, the Jews and Meccans made an alliance and gained the support of the Ghaṭafān and Sulaym. A contingent of the Banū Fazaʿr and perhaps of the Banū Murra under *Uyyayna* took part in 5/627 in the siege of Medina (the so-called War of the Trench), but when this attempt had failed, the Banū Ashīdā‘, who of all Ghaṭafān lived nearest to Medina, concluded a treaty with Muhammad (Ibn Sa’d, ii/46, and *Uyyayna* thought it best to refrain from open opposition. He was in Muhammad's camp during the conquest of Mecca in 8/630, accompanied him during the subsequent campaign of Ḥunayn, and the Prophet honoured him at Dī‘ā‘āna, where the spoils were distributed, by a special gift of one hundred camels, to the chagrin of al-Abāb b. Mīrād al-Sulāmī, who got only four, though the Sulaym had taken an active part in the fighting. It was only in 9/631 that a deputation of the Fazaʿr and the Murra, led by Ḥārīdāb d. Ḥiṣn and al-Hārīth b. * Aws*, went to Medina to announce their tribes' conversion. But in the revolt (ridda) that broke out immediately after Muhammad's death, the Ghaṭafān and the Banū Asad took up arms. A band of them, led by Ḥārīdāb b. Ḥiṣn, attacked Abū Bakr in his camp near Khaybar but was dispersed by Khallīd b. Al-Halīdī b. al-Wald defeated the Banū Asad under Tulayba and a corps of the Fazaʿr under *Uyyayna* b. Ḥiṣn in the battle of Buzākhā [q.v.] and broke the last resistance of Ḥārīdāb b. Ḥiṣn at Ḥammir in Fazaʿr territory. In consequence of this defeat the Fazaʿr lost part of their grazing-ground. *Uyyayna* b. Ḥiṣn was brought as captive to Medina, but was pardoned by Abū Bakr. His daughter Umnū b. Al-Banīn became wife to *Uthmān* b. *Affān* (Ṭabarī, i. 3956-7).

In the wars of conquest the warriors of the Ghaṭafān joined the armies; some of them settled in the newly conquered countries. The Syrian army which was sent after Mu‘awiyah's death in 69/680 against Medina was led by Muṣlim b. *Ukhb ā* of the Banū Murra. In Kūfah we find members belonging to the leading families of the Banū Fazaʿr, e.g., Manzūr b. Zābbān, father-in-law to Ḥasan b. *All*, Muḥḥammad b. Ṭalḥa b. *Ubayd Allāh*, al-Hādīdāb, Abī Allāh b. al-Zaybār, and Mundhrīr b. al-Zubayr (Ibn Durayd, *Genealogisch-etymologisches Handbuch*, 127 etc.). Hind bint Asmā‘ b. Ḥārīdāb b. Ḥiṣn was married to *Ubayd Allāh* b. Ṭayyād, then to Bīshr b. Marwān, and later to al-Hādīdāb.

In the contest between the Northern (Mudar) and the Southern (Kalb) Arabs the Ghaṭafān naturally sympathized with the former. They fought against Ṭahlīb b. Rāḥiṣ 65/684 under al-Ḍābḥāk b. Kays al-Fażārī against the Banū Kalb. It seems that later on the Fazaʿr at Kūfah supported Zufar b. al-Hārīth of the Banū Kilāb b. *Amīr* und *Umayr* b. Ḥiṣn al-Sulami in their fight against Ḥumayd b. Ḥurayth b. al-Kalb (Ibn al-Athir, iv, 259). When Ḥumayd killed some of the Fazaʿr in their homeland in Arabia the latter took revenge in the battle of Banāt Kayn in the Samāwā c. 74/693 (see Wellhausen, *Das arabischke Reich*, 128 ff.). It was to the advantage of the Fazaʿr that Wāllāda bint al-Abāb, one of the wives of Abī al-Malik and mother of the caliphs al-Walīd and Sulaymān (Ṭabarī, ii, 1174) was a descendant of Zuhayr b. Rawḥa al-Fażārī (see the verses in Abu Tammam, in Abu Tammam, 3056-7). In the translation of the Fazaʿr that Wāllāda bint al-Abāb, one of the wives of Abī al-Malik and mother of the caliphs al-Walīd and Sulaymān (Ṭabarī, ii, 1174) was a descendant of Zuhayr b. Rawḥa al-Fażārī (see the verses in Abu Tammam, in Abu Tammam, 3056-7).
dency. After the downfall of the Umayyad Empire we hear little of the Ghatafan. The Fazara, Ashdja, and Tha'ABA are mentioned in connexion with the revolt of the Bedouin tribes in 230/844-5 which was put down by Bughla al-Kabir (Tabari, iii, 1342 ff.). But the majority of the Ghatafan had left Arabia, and their lands were occupied by the Tayyit. There were apparently no Ghatafan groups among the Northern (Kays) Arabs settled by order of Hisham b. 'Abd al-Malik in 107/725-6 in Egypt (see Haytham b. 'Abd al-Malik, al-Baydani, see 'Id, 39 f., Wustenfeld). Later on we find clans and families claiming descent from Ghatafan tribes in Egypt, Libya, the Maghrib and in Spain.

Amongst the poets of the Musallahabit there are two belonging to the Ghatafan: 'Antara b. Shaddad al-'Absi ('q.v.) and al-Nabigha al-Dhubyani ('q.v.). Lesser poets of the Ghatafan are 'Urwa b. al-Ward and al-Hutayya from the 'Abs; al-Husayra and al-'Asmamah from the Tha'ABA b. Sa'd; Ibn Mayyada (see Ashdja, iii, 261-340) from the Banu Murra b. 'Awf; and Ibn Dara (see 'Id, ed. W. Caskel, iii, 7-14; Wellhausen, Die Beduinen, ed. W. Caskel, iii, 7-14; Wellhausen, Kultur und Vorarbeiten, vi, 7 ff. (J. M. FOSTER)).

The etymology of the name Ghatafan is unknown. Besides the well-known Ghatafan of the Kays-Ayafan there are also clans of the same name amongst the Djiyaha, Djdbam, and iyad (Wustenfeld, Gen. Tabellen, vi, 7 ff. (J. W. FUCK)) who according to a saying attributed to Muhammad was 'a prophet whom his people let perish' (Ibn Sa'd, xii, 42, 7; Ibn Hadjar, Isaba, Cairo 1328 A.H., i, 466 ff.).

The central portion of Ghawar (Ghawar) Oil Field coincides with al-Ghawar proper. Extending north to Fazran and south to Wadi al-Sabah, the oil field has a total length of 256 kilometres. This, with an average width of 20 kilometres, gives it a greater surface area than any other oil field in the world. Discovered by the Arabian American Oil Company in 1948, Ghawar Field yielded an average of 715,200 barrels daily during 1962, nearly one-half of the Company's total production.

flood; in the middle of the 8th/i4th century, the
route was modified to spare couriers from having
to climb too steep gradients; they made use of the
bridge of al-Madhāmī, further to the north, at the
confluence of the Jordan and the Yarmūk.

2. Another Ghawr is Ghawr Thīhāmāt al-Yaman
or Ghawr Thīhāmā (al-Farazdāk, ed. Boucher, 20), called
also, as a dual, Ghawr Thīhāmā (al-Ṭabarī, ii, 219).
The statements by the geographers regarding it are
ever vague, for it is sometimes identified with
Thīhāmā and sometimes described as a separate
district adjoining it. For example, according to
Kūdāma b. Dīnāfar, it stretched from Nāṣīlī to the
extreme borders of Thīhāmā; on the other hand,
according to a passage in al-Bakrī, it lay between
Thīhāmā (the district from Dīahlūrī to two days’
journey beyond Mecca) and the Saratātī.

**AL-GHAYB** (a.). The two connotations of the
root are ghāba ʿan, to be absent, and ghāba fi, to be
hidden. In current usage, ghāya (and especially ghāya)
may signify “absence” (and ghāba, of existence, “presence”,
may be a technical term of ʿĪsfīsm); but more frequently ghāya
may indicate what is hidden, inaccessible to
the senses and to reason—thus, at the same time
absent from human knowledge and hidden in divine
wisdom. It is to this second meaning that al-ghayb
refers, as a technical term of the religious vocabulary.
It may then be rendered by “the mystery”. Such is
its meaning with ghāya, “presence”, in the
Kūrān. Its use there is frequent.

“The ghayb belongs only to God” (Kūrān, X, 20);
“He has the keys of al-ghayb which are known only
to Him” (VI, 59), etc. Reference is here made to
the Divine mystery, of itself inaccessible to man. Hence
the translation adopted (by R. Blachere) of ‘Incon-
naisable’, “Unknown”. The idea which reappears
most often is the inaccessibility of al-ghayb, which
remains totally hidden. “God knows the Unknowable
and God, if He wishes, will reveal His mystery to
me” (LXXII, 26), “He does not raise you up to the Unknowable”
(III, 174).

The ghayb nevertheless is an object of faith (II, 3),
just as is the Word revealed to the Prophet (II, 4).
Man ought therefore to cling to the unknown
mystery “where from God is” (laddun), and God, if
He wishes, will reveal His mystery to man. “This is part
of the story (ambd) of the Unknowable which We
reveal to you” (III, 44; cf. II, 49; XII, 102). It is thus,
as Guaderyo-Demombynes emphasizes, that the
ghayb of the Kūrān is “sometimes the Revelation,
sometimes the Unknowable, sometimes both to-
gether” *(Les sens du substantif Ghayb dans le Coran*, in *Mélanges Louis Massignon*, ii, Damascus 1957,
250). In fact, the common denominator is still the
notion of (divine) Mystery, sometimes unrevealed,
sometimes revealed in fragments—to the extent that
this revelation is necessary to lead man along the
straight path (hidddya). The Kūrān does not com-
municate all the ghayb to man, but the whole
kūran is a (partial) communication of the ghayb.
It is in this sense that Fakhr al-Dīn al-Rāzī was to
entitle his great commentary “The keys of the
Mystery”, Mafdtih al-ghayb.

This partial revelation of the ghayb is explained by
L. Masson (Passion d’al-Hallājī, Paris 1922, 500)
as a participation which God vouchsafes to the
prophets in His “essential mystery” (al-sirr al-Īsfī, as
al-Djūrjānī says in *Tawīfīt*, Leipzig 1845, 169).
In the commentaries on the Kūrān and in religious
literature, al-ghayb is in fact applied at times to the
absolute mystery of God Himself, but more often it
is the invisible world taken as a whole. The distinction
frequently appears between ʿilm al-ghayb and ʿilm
al-ghahāda, the world of the invisible mystery,
created and uncreated, and the perceptible world,
also called ʿilm al-μūlīk. These refinements of meaning
are found in the saifīr commentaries on Kūrān, II, 3.
Al-Baydāwī there explains the ghayb in which belief
is required as “that which is not perceived by the
senses or which is not immediately understood by the
reason”. But al-Ṭabarī, on the other hand, there
defines the ghayb which is an object of faith as being
the Will of God—thus an “attribute of the Essence”.
However, this resort to the Divine Will seems to
relate the idea of ghayb to the Decreee of God,
rather more than to the notion of “Divine
Mystery”. In his profession of faith, the Ḥanbalī Ibn
Bāṭa lays down: “One must throw oneself (taslim)
upon the Divine Omnipotence (budra) and have
faith in the Divine Mystery (ghayb), for the individual
reason is unable to raise itself to the understanding
(marafī) of this mystery” (cf. the translation of
H. Laoust, *La profession de foi d’Ibn Bāṭa*, Damascus
1958, 105). This “Divine Mystery” is thus simultane-
ously the “mystery of things” and the destiny of man;
and of each man. It is reserved to God, who reveals
it to his prophets to the extent that He wills.

Other usages of the expression al-ghayb:
— (a) in Shiī theology, the imām has, of himself,
knowledge of the ghayb; a view attacked by the
Ḥanbalī al-Barbaḥārī and others. Mafdtih al-ghayb
is the title of a work of the Shiī Shīrāzī (Muḥāf
Ṣadrā).—(b) Ibn Bāṭa compares astrology and
the idea of this mystery” (cf. the translation of
H. Laoust, *La profession de foi d’Ibn Bāṭa*, Damascus
1958, 105). This “Divine Mystery” is thus simultane-
ously the “mystery of things” and the destiny of man;
and of each man. It is reserved to God, who reveals
it to his prophets to the extent that He wills.

Other usages of the expression al-ghayb:
— (a) in Shiī theology, the imām has, of himself,
knowledge of the ghayb; a view attacked by the
Ḥanbalī al-Barbaḥārī and others. Mafdtih al-ghayb
is the title of a work of the Shiī Shīrāzī (Muḥāf
Ṣadrā).—(b) Ibn Bāṭa compares astrology and
the pretension to know the ghayb” and condemns
both severely (cf. H. Laoust, *op. cit.*, 155).
Under the same title of Mafdtih al-ghayb (Cairo 1327)
the Egyptian Ahmad al-Zarkawī treats of magic and
divination.—(c) Ibn ʿArabī uses the same title
again, but this time to designate Shī Ṣulṭān
marafī. In fact tasawufu frequently interprets the ghayb as
the threefold world of djibarāt, malakūtāt and lākāt (cf.
ʿĀlam), but as the hidden essence of all that is,
whether visible or invisible. It is then the ghayb al-
hwāyiyā (mystery of selfhood) or absolute ghayb
(mutlāb) (cf. al-Djūrjānī, Taʾrīfīt, 169-70).—The
hierarchy of the ābdāl, the “saints apostrophes”
(Massignon), crowned by the κύβ ("Pole"), is called
“the men of the Mystery” (mīḍāt al-ghayb, Lane,
*Arabian Nights*, xxx, n. 17).—And according to C.
Wells (Mehemet the Kurd . . ., 129), ibn al-ghayb
describes a child begotten without a father and
endowed with mysterious intellectual faculties.

Al-ghayb, the Mystery, therefore, may be under-
stood in three possible meanings. — 1) Normal
religious sense: the mystery of the Divine Decree,
unknowable in itself, partially revealed in the
Kūrān.— 2) The invisible world which magic,
ocultism and astrology try to penetrate (but the
man who persists in crossing its boundaries by his
own powers is committing a sin). — 3) In ʿĪsfīsm,
Encyclopaedia of Islam, II
al-ghayb means, according to context, the reality of the world beyond the senses and beyond discursive reason which gnosia (ma'ra'a) experiences,—the hierarchy of the invisible worlds,—the beings of these worlds,—and even the world of the Divine Essence. (The penetration of the ghayb through a pleasurable intellectual experience was to become extremely suspect to the adversaries of tasawwuf.)—Finally, we should note that in Shī‘ism, the ghayb known to the imām recalls the latter's actual condition when he has become ghāyib and his state of absence, or better, "occultation".

(D. B. Macdonald—L. Gardet)

GHAYBA (masdar of ghība) means "absence", often "absence of mind". The latter sense was developed by the Sūfis as the opposite of hadra (q.v.), absence from the creation and presence with God. The word is also used for the condition of anyone who has been withdrawn by God from the eyes of men and whose life during that period (called his ghayba) may have been miraculously prolonged. It is so used of al-Khadir (q.v.). A number of Shī‘ī groups have recognized the ghayba, in the latter sense, of one or another imām, with the implication that no further imām was to succeed him and he was to return at a foreordained time as Mahdī (q.v.). The first instance of this was that of Muḥammad b. al-Hanafīyya.

Among the Ithna ‘asharī Imāms, the Ghayba became a major historical period, lasting from the disappearance of the twelfth imām until his reappearance in eschatological times. It was divided into two parts. In the "lesser Ghayba", from 260/874 to about 329/941, the Hidden Imām was represented among his followers by safirs (q.v.), held to be in touch with him and exercising his authority. They maintained the organization, in its legal and financial functions, which had grown up around the later imāms (cf. Javād Ali, Die beiden ersten Safire des Javad Ali, 1925). The claimants to this office has been generally recognized by the Durūzs (q.v.), the concept and term were revived to refer to the period of absence of al-Ḥakim and Ḥamza.

(D. B. Macdonald—M. G. S. Hodgson)

GHAYLAN B. MUSLIM, Abū Marwān al-Dimashqī (q.v.), is chiefly known as one of the first advocates of free will [see KADARIYYA], at the same time as Maḥbād al-Dhujānī (q.v.). The son of a freed slave of ʿUṣmān b. ʿAffān, he appears, like Maḥbād, to have been the disciple of a Christian from Irāq, but he lived in Damascus where he held the position of secretary in the chancellery. Al-Dhāḥiq (Bayān, iii, 29) mentions him on the same footing as Ibn al-Muṭṣafqa; Sahī b. Ḥārūn and Abū al-Ḥamīd, and even one so strictly orthodox as al-ʿAskālānī acknowledged his professional ability (Lisān al-Mīṣrīn, iv, 424), while Ibn al-Nadīm (Fihrist, 171) estimated his rādīdī to amount to about 2,000 leaves; they were probably not all of an administrative and diplomatic character, to judge by al-Ḥayyās (Insārīd, ed. and trans. Nader, Ar. text 93, trans. 175) who when answering the accusations of Ibn al-Mukaffa against Ghaylan as one of the proponents of free will, appealed to the content and stated that they were very widely known; he added that Ghaylan believed in the five Muṭtazzīlī principles, but the heresiographers rank him solely among the Kadrās. According to al-Shahrāstānī (margin of Ibn Ḥāzm, i, 194), who names him as one of the Murdīlī Kadrās, his principal doctrine concerned the primary, innate knowledge (maʿra’a) which allows it to be known that the world has an Artificer created by Himself; the imām is only the secondary, acquired knowledge.

The activities of Ghaylan, who apparently embraced the cause of al-Ḥārīrī b. Suraydī al-Kadhībī [see ḤAYHAN B. ṢAFWĀN], earned him the imprecations of ʿUmar b. ʿAbd al-ʿAzīz, but it was only Hishām b. ʿAbd al-Malik (105/724-43) who gave orders that his hadra (q.v.) be cut off and who had him crucified, after al-Awzaʿī (born about 87/706, d. 157/774 (q.v.)) had subjected him to interrogation and given a verdict in favour of his execution.

(G. Pellat)

GHAYLAN B. UKBĀ (see ghwāl b. ʿImām). GHAYN, 19th letter of the Arabic alphabet, here transcribed gh; numerical value: 1000.

Definition: A voiced postvelar fricative; according to the Arab grammatical tradition: rīḥā ba mādhūra mūsulāˈīya. As regards the malārādī: min aḍnā ʾl-halī (from the part of the throat nearest to the mouth). The Arabs thus made ghayn (and ḥād) guttural. They contrasted them with ṣayn and ṣād, min al-ḥalā; and with ʿayn and ḥamza, min aḍnā ʾl-halī (al-Zamakhsharī, Mufīd, 4, 732). The velaric articulation of ghayn is well described by
R. Rüdika as "between the soft palate (velum) and the back of the tongue" (Existence du gh, 182). The soft palate is divided into two areas: upper (prevelar) and lower (postvelar). The articulation of ghayn takes place in the latter area, hence the adjective employed in the definition. To the extent that a channel is formed on the back of the tongue permitting the uvula to vibrate, ghayn approximates to uvular r.

In a few cases the passage from gh to hh is quoted (J. Cantineau, Cours, 94), see Ibn al-Sikkit (al-Kalb wa 'l-idāli, 32). But particularly interesting is the passage from ghayn to gha'ayn which has been illustrated with numerous examples by R. Rüdika, notably in L’alternance de x — x en arabe (JA, cxxxi (1932), 67-115). Since his article in ZA, xii (1907), 293-340, he has sustained and defended the theory of the secondary origin of ghayn in Semitic, by the passage of ‘ayn into ghayn in Arabic and only in Arabic (references to these writings: Ar. Or., xix (1951), 100, n. 4).

One of his last articles summarizes his ideas and his activity in this controversy: La question de l’existence du gh dans les langues sémitiques en général et dans l’arabe oriental ou maghrébin, in Ar. Or., xii (1954), 176-237 (quoted as Existence du gh). K. Petrēček, his pupil, who is loyal to his ideas (Ar. Or., xii (1953), 240-62 and xxiii (1955), 475-8), acknowledges (ibid., xxi, 243, n. 16) that only H. Torczyner has accepted the theory. During the lifetime of its author, and to his great chagrin, it seems to have encountered only indifference or neutrality in the world of orientalists. S. Moscati, in his recent Lessioni di linguistica semitica (Rome 1960) includes ghayn among the phonemes of common Semitic (41-3), as had W. Leslau in the Manual of phonetics (Ed. L. Kaiser, Amsterdam 1957), 327. The existence of doublets is not sufficient to prove the secondary character of the Arabic ghayn (according to the judgment of J. Cantineau, Cours, 94). Further, R. Rüdika appears to have underrated the data of South Arabic epigraphy and to have misinterpreted those of Ugaritic (cf. S. Moscati, loc. cit. and Rend. Lin., series VIII, xxv-34 (1960), 87; compare also the account of C. H. Gordon, Ugaritic manual, Rome 1955, i, ch. 5, 8). We would ourselves also retain ghayn among the articulations of common Semitic.

The most recent documents to be discovered (see GLECS, Comptes rendus, viii, 73; C. Virolleaud, Palais d’Ugarit, ii, 201, Mission Ras Shamra, vii, 1957), pending a fuller report, do not contradict this view.

But the dispute has at least brought to light a certain instability in the Arabic ‘ayn (which can pass into ghayn), at least among certain tribes; (we must also eliminate false doublets arising from simple graphic errors in the manuscript tradition). An analogous case seems to be reproduced in present day dialects, where ghayn is seen to have passed into kāf; dialects of North Arabian nomads: Rōgga, the Mawali; the majority of the dialects of the Algerian Sahara, an immense region which seems to cover also the South Moroccan and Mauritanian Sahara (see J. Cantineau, Cours, 95).

In Classical Arabic ghayn undergoes few conditioned changes (ibid., 94). For the phonological oppositions of the phoneme gh see J. Cantineau, Espuisse, in BSL (no. 126), 109, 227; for its incompatibilities see ibid., 135.

For a general discussion of the phonetics of Arabic as seen by the classical grammarians, see Hūrūf al-}

GHAYTA — GHAZAL

(Henry G. Farker)

GHAZAL, "song, elegy of love", often also "the erotic-elegiac genre". The term is Arabic, but passed into Persian, Turkish and Urdu and acquired a special sense in these languages.

The semantic development of the word from the root gzl l, "to spin", "spinning", is not in doubt, but presupposes intermediary meanings for which we have no evidence; the ghasal was not in fact a song of women spinning, like that of which Tibullus was not in fact a song of women spinning, like that of which Tibullus

...by loss of emphasis, with the word nasb, "a kind of camelman's lament similar to the ḥīdī" (see al-Dībāsī, Tabbīr*, index; Aghānī*, ix, 135 and also vi, 63, where it is a matter of a single appearing title of the name of al-Naṣīb). The word nasīb, in ancient times, designates the elegiac genre, in a list in which there also figure the poem of praise, the satire and the fahār (thus in Ibn Rashīk, i, 100 and especially Ibn Sallām in Aghānī*, vii, 6, line 4; cf. ibid., 97, line 12); sometimes this genre appears in a five-fold list (see Ibn Rashīk, loc. cit., bottom of page). In certain passages, the verb nasab constructed with bi-

...clearly means "to sing of the beauty of a lady and the agitation she inspires" (thus in Aghānī*, vi, 279, vii, 99, 123). It is well known that in its common meaning nasīb designates the amatory elegiac prologue at the beginning of a ṣāsidā. Kudāmā, 42, attempted very artificially to establish a distinction between the thematic elements of the ghasal and those of the nasīb.

i. — The ghasal in Arabic poetry

1. The amatory elegy in Arabic poetry can be made the subject of historical and critical study only from the last quarter of the 6th century A.D. onwards. Of course, we have no text originating in this era, but those which have come down to us under the names of poets belonging to this period, such as Imrūʿ al-Kays, Tarafa and a number of others, are very instructive. At that time the ghasal was handled according to a tradition which is clearly ancient and honoured. According to all the evidence, this genre was one of those most current in "spontaneous poetry", that is, in the camelman's chant (or ḥīdī?); at this level it must have been improvised and for this reason no example of it has come down to us. Under what influences, where, and when did these appear and become established the custom of prefacing the ṣāsidā with an amatory elegiac prelude, known from the 1st/7th century onwards as the nasīb? We can only guess at the answers to these questions. Since the ṣāsidā was both originally and essentially not a framework but a lyrical movement consisting of a sequence in the key of fahār or a Dionysiac prelude, the nasīb is quite possibly that the nasīb owns its place to the very importance of the carnal and psychic impulses which it evoked; in fact there also occur in the ṣāḥil of the Tuaregs the same lyrical flights introducing identical explosions of boasting; the procedure is not therefore peculiar to the Arabs. Though at first episodic in the poetry of the nomads of Central and Eastern Arabia, the elegiac production known as nasīb seems to have become incorporated in the ṣāsidā under the influence of a fashion current among or created by poets belonging to groups on the Euphrates steppe; certain data accepted among ṣāḥiṣī scholars indeed assume that the nasīb is the invention of a certain Ibn Hīdām (see Ibn Sallām, ed. Hell, 13, line 9) or of the famous Muḥāhalî*. (ibid. and also al-Dībāsī, Bayāmīn, ed. Hārūn, ii, 297) or even in fact of Imrūʿ al-Kays (Ibn Kutayba, 40, 52); as may be seen, these indications demonstrate the existence of a tradition which was still living in the 3rd/9th century and according to which the nasīb was associated with an idea peculiar to the Bakrī poets or others in the orbit of al-Ḥira (see Blachère, Litt., chap. V, § C). This feature is significant since, in so far as it may be historically acceptable, it permits us to infer that this centre, with its musicians and its circle of poets, probably exercised an influence on the ghasal cultivated in the desert. It would seem that this

influence became apparent in the last quarter of the 6th century A.D. at the latest. From certain indications it may be possible to see some phenomenon in other centres closely linked with the *badawi* way of life such as Ta'ayma, Mecca and al-Ta'if. Most probably, though of still uncertain date, the verse texts attributed to ancient poets like Tārāfa, Zubayr, ‘Alkama, Imru’-al-Kays, Ḥassān b. Ṭḥābit, al-‘Aṣḥāb Maymūn, and al-Ḥuṭayrā, to mention only the most representative, evoke reasonably well the themes which were habitually developed in the amatory elegiac *nasib* of this period. The apostrophe to the deserted encampment, the description of the migrating group disappearing into the distance, the sorrow aroused by the separation, the memory left in the poet’s heart by the promises of the beloved, the recital of the efforts made to rejoin her, all constitute a thematic sequence arising from the environment; even the detail of the development, as much as the stock phrases, derive from the same origin; to a certain extent, the thematic elements belong to the real world but they are transposed into a kind of fiction by the use made of them. Already at this time convention may well have been very powerful; everything leads us to believe that the elegiac poet from now on makes use of a vocabulary, of formulas, of stock phrases, whose use is of an entirely different character. 

2. Among the generation of poets which arose about 50/670, the amatory elegiac genre received a particular twist which conditioned its subsequent development. This generation varied degrees freed itself from the grip of the poetic tradition inherited from Central and Eastern Arabia. The three areas of the Muslim Arab East which were to struggle for leadership during the eighty years or so which followed differed in the extent of their contribution to this change. Syria and Palestine were of secondary importance and followed the lead of the Arabian peninsula and Irāk. The latter, while occupying a prominent place in the poetic movement, carried on the previous tradition; the artists and versifiers were led by circumstances to specialize in the laudatory, satirical and descriptive; in the works of the most representative Irāk poets, amatory elegiac themes occur only in the *nasib* of the *ḥāsidas*; in some, like al-Farazdāk, they are in fact noticeably neglected; in all, they are treated in a manner which suggests a mere prolongation of the tradition passed on from the desert and cultivated at al-Hira or under its influence.

In the Hidjāz on the other hand, and more particularly in Mecca, al-Ta’if and Madīna, the situation was entirely different. The influx of wealth from the conquest, the disruption of the social structure resulting from the enrichment and political advancement of certain families such as the Umayyads, the Zubayrīds, and several Ḥakamī clans, the introduction into the population of Mecca and Madīna of foreign elements, particularly captives brought from Palestine and Irāk, as well as the choice of Madīna as political capital, had all played their part in turning this province, with its urban centres, into a world very different from that which the generation of the Caliph Umar I had known. The establishment of the Umayyad dynasty in Syria, the gradual political and religious rise of the cities of Irāk and the ten years during which the revolt of the Zubayrīds cut off the Hidjāz from the rest of the Empire, succeeded in giving society in Madīna and Mecca a character of its own. Certain aristocratic elements renounced an active rūf and sought solace for their unsatisfied ambitions in the pursuit of pleasure and the taste for sentimental intrigues. The anecdotal literature collected by Abu ‘l-Farāgī al-Islahānī from the writings of the ‘Irākī ‘dīwān’ poet, especially the *ḥādi* of Mecca, al-Zubayr b. Bakkar (d. 256/870), subject to the necessary critical adjustments, helps us to form an idea of what life in this circle was like. Women occupied an important place, together with dilettanti, aristocrats with violent passions, intrigues, characters of doubtful morality, singers and singing-girls. The setting was favourable to the development of a new lyric poetry; by a happy chance, the aristocracy produced several poets like al-‘Arḍīlī, al-‘Alwaṣ and ‘Umar b. Abī Rabī’ī, who devoted their talent to the celebration of their love affairs; others of more humble origin like Kuṭhāyyir and Nuṣayb imitated them, without entirely being able to avoid becoming court poets. In this poetic movement a significant part is played by singers and singing-girls, as much by reason of the practices they introduced as because they took part in the composition of the works; often in fact they selected fragments of verse or commissioned them from poets, which implies an artistic production entirely governed by musical considerations.

The study of the amatory elegiac verse which developed in the Hidjāz between about 50/670 and the end of the first quarter of the 8th century comes up against the difficulty posed by the state of the texts. On the one hand a considerable volume of verse has disappeared; on the other, what has survived has often been preserved only in anthologies or late or even very recent recensions, as is for example the case with the poems of Kuṭhāyyir (ed. Perès, Algiers 1928-30) and those of Nuṣayb (ed. Rizzitano in RSO, xxii, 1943); frequently, these recensions consist only of fragments which poorly represent the original outpouring; even in the case of the relatively important *Dīwān* attributed to ‘Umar b. Abī Rabī’ī (ed. P. Schwarz, Leipzig 1901-2, 1909; reprinted by ‘Abd al-Hamīd, Cairo 1952), many problems arise; it is in fact apparent that this collection includes pieces which give evidence of reconstitution, retouching, and indeed the handing over of imitations. The primary condition for the study of the *ghaṣal* of the Hidjāz was born explain the disappearance of these works and the state of those which survive; many were simply extempore compositions, occasional pieces, ephemeral by nature; some seem to have been commissioned by musicians, singing girls or dilettanti from poets forced to compose in haste and to refurbish earlier works. The uncertainties of attribution are great; it was indeed enough for a piece to contain the name of ‘Aza for it to be attributed to Kuṭhāyyir, who was accustomed to celebrate a lady of this name; often too, single lines or pieces attributed to a poet are nothing more than elaborations in verse drawn from fictional biographies or romances about the poet; thus the small historical and literary value to be accorded to such compositions is easily seen. Taken together, nevertheless, the amatory elegiac texts which have been preserved allow us to evoke satisfactorily the general characteristics of the style in the period under consideration. In order to estimate the extent to which this is possible, however, we must constantly keep in mind the fact that our texts contain passages where the influence of the courtly style of ‘Irāk appears, as indicated below.

The poetic instrument used by the poets of the Hidjāz was substantially different from that of their contemporaries in Central and Eastern Arabia.
Under local influences the connexion between poetry and music remained very much alive; this is shown especially in the use of metres practically unknown to the poets in the desert tradition; thus, the hashid, the kasidà, the roza, etc., are found quite often represented among the elegists, and the identity of these with the musical modes of the same names must be emphasized. Among the poets of this school emjambment is much less rare than among their desert rivals. The vocabulary is equally characteristic; free from rare words and khasas legomena, it aims at simplicity and naturalness; the dialogue form is frequent and corresponds to the description of real scenes; naturally, many expressions are proper to the evocation of feelings connected with the excitements of the heart and the flesh.

The elegists of the Hijaz were primarily poets of the desert school. Their surroundings simply brought about a development which set them aside from the main stream of the badawi tradition. This can easily be shown from some texts. Often, for example, the elegist of Madina and Mecca invokes the deserted encampment, describes the departure of a migrating group, bewails his sorrow at a separation; thus thematic elements proper to the nasib of the kasida continue to appear (cf. specimens in Kuthayyir, ed. Perès, no. 44, and 'Arджì, no. 2, lines 7 ff. and no. 5, lines 1-4). These remnants of the desert setting lead quickly to stylization, but they still do not preclude a certain realism of description. This derives from the abiding nature of things. The elegist is above all a lyric poet and self-expression cannot do without a minimum of sincerity in its references to life. The various themes which he develops are in effect the highlights of the more or less stylized narration of known circumstances or real events; even the poetical texts inserted in fictional or romantic narratives still represent elements of verisimilitude within the pattern of the whole. It is clear that the elegist of the Hijaz loves to note those details which evoke reality. We can therefore say that this lyric poetry was above all marked by an effort to express sentiments and emotions which were really felt, to represent scenes where the participants retained their attitudes and reactions; this is so unquestionable that in many cases the poet felt obliged to allude to the lady by a name other than her own.

A rapid examination of several themes treated by the elegists of the Hijaz demonstrates the trends just sketched and emphasizes the persisting badawi influences. The thematic sequence relating to the obstacles encountered by the poet in seeking to find his lady reproduces the essential features of what is found in the desert tradition. There are few novelties; at the most we may note a certain harping on the obstacles arising from the separation of the sexes and the rigour of the new ethic in the society of Madina and Mecca; we may also note the realism concealed beneath the fiction of conventional personages such as the rabì or "censor", the hāθīḥ or "ill-wisher", the ḥālīḥ or "blamer"; according to our biographical information, these personages correspond to known real persons. The poetical texts also refer very often to the difficulties which arise from human nature, to the quarrels and misunderstandings between lovers, to the rupture of relations never to be resumed (thus 'Umar b. Abì Rabi'a, ed. 'Abd al-Hamīd, no. 1, line 25 ff.; no. 6, line 10 and no. 258); among the Hijaz poets rediscoveries are given substance by the description of details designed to emphasize the reality of the experience; thus, the lover, either alone or with companions, surprises the lady amusing herself with her women; sometimes the event is prearranged and organized by the lady; the two lovers meet in a secluded spot (thus in 'Arджì no. 13, line 15, no. 23, line 2); the account very frequently ends with a description of the beloved and the evocation of sensual excitement between the two lovers (thus 'Umar b. Abì Rabi'a, no. 1, lines 35-41, no. 5, lines 10 ff., no. 258, lines 9 ff.; al-'Arджì, no. 47, lines 6-26).

There emerges from the whole pattern of these amatory elegiac themes a certain literary concept of love, which, for convenience, we shall call the Hijaz manner. This concept is seen primarily in the images formed of the lover and his lady. The latter remains a somewhat unfocussed character, owing to the lack of any poetess able to express herself in verse with the authority of such men as 'Umar b. Abì Rabi'a, Nuṣayb or Kuthayyir; her physical appearance is described according to the canon already established in the traditional nasib, evoking a softness and luxury that correspond with an ideal of womanhood having little in common with the generality of real badawi women; socially, she belongs to a noble family, which does not at all imply any insistence on the part of the elegist on celebrating her intellectual merits; on the contrary, under the influence of a tradition which may have already been established for centuries, the lady is depicted as a creature formidable in charm, coquetry and beauty, which she wields with a kind of unselconsciousness and at times with manifest cruelty. Nevertheless, on this point, the feminine ideal differs from what seems to have been the ideal of the desert poets; in the texts we are considering, there is a certain contradiction in the fact that the Hijaz elegist takes pleasure in saying that his lady is the embodiment of womanly love, humble in the face of Destiny, eagerly submissive to her seducer (as in 'Umar b. Abi Rabi'a, passim, and esp. no. 7, lines 1-4, nos. 181 and 182, lines 13-18, and no. 242); this attitude is what distinguishes the Hijaz lady most completely from her 'Irākī sister, so imbued with courtly spirit. The poet-lover, in contrast to the lady, emerges from our texts with more defined features; two thematic sequences can be distinguished: in the first the lover represents himself according to the psychology and in the attitudes already familiar in the desert tradition; like his badawi brother, the elegist of Madina and Mecca appears to us as a victim of his love for his lady, a prey to the hostility of a world in which he is alone with his agony and despair; his
tears flow easily and his complaints are shrill; a fairly large number of clichés strengthen the already apparent links with a completely traditional manner. In this field are those fragments of passages in which the poet portrays himself as a breaker of hearts, a kind of Don Juan whom no beautiful woman can resist (see details in Aghdni, ii, 119, 139, 144, 166 f.; Umar b. Abi Rabâ’î, no. 10, lines 10-18, and no. 45); the realities of life are also evident in the developments which might be grouped under the title “love withers with age”; indeed, the poet often stresses the transience of the passions he has aroused or felt; this theme is further linked with the tendency of the desert poets to replace the elegiac nasib with a stereotyped sentiment-sentiment on the flight of youth (thus al-Farazdak, ed. Şâwi, 78 and 89). Whatever the reason, the Hîdîjâz manner stands in absolute contradiction here to one of the basic principles of the courtly spirit, which imposes on the lover the obligation of submission to the lady of his choice. The poet claims for himself, in this connexion, his right to refuse on his own terms, on which this contradiction is accentuated even more decisively; the Hîdîjâz manner excludes the sofâ, that is, a refusal to yield to desire, both in the lover and the lady. These poets adhere to what is human and do not seek to transcend it; their sensuality is as much part of their love as is their constancy (cf. the strikingly sexual passages in al-’Ardjî, no. 15, lines 19-21, no. 5, lines 11 f., no. 131, line 7, no. 28, lines 1-9; and frequent also in Umar b. Abi Rabâ’î, as no. 28, lines 2, 5). In view of this, these poets have been named ibâdîyyun, “licentious”; it is justifiable, provided one makes it clear that their licence does not descend to indecency or depravity; it is very noteworthy in this connexion that the Hîdîjâz manner never offends against nature and a certain respect for a code remains. Nevertheless, the worldly occupation of the poet carriers with them the spirit which had favoured the flourishing of the Hîdîjâz manner; without creating it, this current could not but make the curiosity of the court continue to pose questions regarding tales which had spread about the elegists of Madînâ or Mecca. From the end of the 2nd/8th century and in the following twenty-five years, there developed in Basrâ and Baghdâd a semi-romantic, semi-historical literature, of which Ibn al-Nadîm, Fihrist, 306, cites several authors, such as Ibn al-Kalîbî, al-Madâ’înî, or al-Hayyâm b. ’Adî; these writings, widely utilized by Abu ’l-Faradj al-İsfâhânî in his Kitâb al-İshâriyya, demonstrate that the poet-lovers sometimes underwent a genuine transfiguration, which in certain cases turned real persons like Djamî into veritable heroes of love. From then on the poetical works collected or mis-attributed under the names of these poet-lovers could not but reflect the psychology of the heroes who figured in the romances or romanticized biographies. Can certain tribal groups of Western Arabia have been familiar in their folklore from the 1st/7th century or even earlier with love stories centred on a more or less legendary personality? It is very possible. In particular it seems that the little tribe of the Udhra, which in the 1st/7th century frequented an area extending from the oasis of Taymâ to the Wâdî l-Kûrâ (see Aghdni, vii, 123, 126, lines 4-5) prided itself on having produced one of these annual bard-poets, the famous Djamî. The Udhra were not, however, the only ones to claim such a title to fame; the Nâdh of the same area were equally proud of having given birth to the sayyîd Ibn ’Adîjân, who later became the hero of a love saga (cf. Ibn Kutaybah, Poetry, 449; Aghdni, xii, 102-4 and xx, 22; Blachère, Litt., ii, chap. IV, § B). Under the pressure of tribal particularism, other groups seem later to have developed creations of a similar kind in the lIrâkî centres where they had installed themselves; such seems to have been the case with the ’Amîr b. Șa’â’a and Madînûn, their “fool of love” who became a famous hero through his passion for Laylâ. Before it was finally established in a closely defined system, the courtly spirit seems to have spread through these influences as a kind of heightening of the Hîdîjâz spirit. There is no doubt that the poet Bashshât’î b. Burd (b. about 95/714, d. about 169/784) played a considerable part in popularizing certain themes at Baṣra; in his Dîwân, which is unfortunately incomplete, it is easy to note, among verses or fragments addressed to ʿAbdab and other female personalities of the city, lyric pieces where in fact his love is from the first known to be hopeless and draws its lasting character from this certainty. The setting in which Bashshât’î was composing his ghâzals was in any case favourable to such emotional exaltation; it was the time indeed when at Baṣra mystical experiences were particularly to be observed among women; it was also the time when, in this centre as at Kûfâ, a giddy society, free thinking and morally lax, was plunging into easy pleasures which, in occasional flashes, inspired a thirst for purer and serener joys. Bashshât’î himself seems to have experienced such disillusion, like his contemporary of Kûfâ, Mu‘tâb b. Iyâs (d. 170/787); here and there in Bashshât’î’s elegiac works he gives evidence of a fruitless desire to detach himself from carnal pursuits. The merit of having achieved such an escape must be ascribed to his younger compatriot, al-‘Abbâs b. al-’Abî, who a little later than 193/808). The work of this poet is unique in the history of Arabic poetry; it is exclusively a song of
courtly love. Inspired by real love for a lady designated by various names, this elegist composed occasional pieces and more elaborate works all concerned with one ideal; for the poet, the lady is the unattainable, the distant incarnation of a desired being which one owes it to oneself to love while obeying a self-imposed rule never to try to go beyond dreaming. Renunciation is the law imposed by the ayyubid al-Baha3 Zuhayr (b. 581/1187, d. at Cairo 656/1258) frequently manages to achieve tones which are beyond dreaming. Renunciation is the law imposed by obeying a self-imposed rule never to try to go beyond dreaming. Reason; nothing can permit one to dream of being Alya, as lady of Al-atika, as

khafif, ramal, purposes; he employs the same metres, khafif, ramal and hazadi; he shares their taste for a flexible vocabulary free of lexical pathos; for him even

hazadi', he shares their taste for a flexible vocabulary free of lexical pathos; for him even faris, pi. zarif[.v], this courtly poet turns to the instrument developed by the elegists of the Hidjaz for their own experience, this courtly poet turns to the instrument developed by the elegists of the Hidjaz for their own purposes; he employs the same metres, khafif, ramal and hazadi; he shares their taste for a flexible vocabulary free of lexical pathos; for him even

hazadi', he shares their taste for a flexible vocabulary free of lexical pathos; for him even faris, pi. zarif[.v]

but his school; the courtly spirit occupies a secondary place in these works and must be sought in some pieces addressed to the enigmatic Djanan. These poems prefer to develop, with significant exuberance and insistence, an Epicureanism which embraces every kind of satisfaction; to a certain extent the Bacchic pieces verge, in certain episodes, on the elegy of sentiment; but the poet's eyes are no longer turned towards a chosen lady but towards loose women, or towards young men who, in these works, inflame passions which are hardly Platonic. If, as one may be justified in accepting as a hypothesis, the collection attributed to Abu Nuwas is not the work of one individual, it follows that this lyricism, so definite in character, corresponds to the taste and manners of one sector of Baghdad society. The break with the courtly spirit and romantic love on the part of this sector is clear; in opposition to an idealism lacking relation to the human, there now arises an unashamed naturalism which refuses to blame itself. 4. The 3rd/9th century saw the elaboration of a coherent doctrine of the courtly ideal under the growing influence of neo-Platonism. This ideal is represented by the kind of treatise on sophistication which the Khāl al-Muwāshshād of al-Waghsa3a [q.v.] constitutes; it is also illustrated by that notable anthology of love which we owe to the zahir theologian Muhammed b. Dāwūd al-Iṣfahānī (d. 397/990), called Khāl al-Zahrā, It is unnecessary here to recall the characteristic traits of this spirit [see 'ugra]. But we must indicate the connections which seem to have existed between this concept of love and its reflections in the neo-classical poetry whose principal representatives in the East are Abu Tammān, al-Buhturi and al-Mutanabbi. Among the poets of this period the field of expression of the amatory elegiac genre became more restricted; the only developments to be found are confined in fact to the nasībīs prefacing kāṣidas. In several respects this is a recollection of the badawi tradition, but the tone differs completely and the themes are treated more intellectually and are reduced to the notation of states of mind, and the expression of aphorisms on the vanity and fleeting nature of love, on the sorrow it inspires and the dissatisfaction to which it leads. This lyricism is sinking into conventionality and frigidity. Nevertheless, some urban poets of lesser fame, both in ʿIrāk and in the Muslim West, composed poems of a more personal lyricism in the ghazal manner. Their tone is given by certain pieces by the ʿAbbasid prince Ibn al-Muʿtazz (b. 247/861, d. at Baghdad 296/908), but the influence of the courtly spirit is perceptible in these works but it does not go so far as to exclude references to a lived experience, in which emotion seeks to express itself with a spontaneity which is frequently suppressed. During the 4th/10th century, similar efforts are visible in other Baghdad poets, particularly those who flourished in great numbers under the Bāyids; many names could be cited, but the most typical seem Ibn Sukkara (d. 385/995) and al-Salāmī (d. 393/1003). In this group of poets the influence of Abu Nuwas is undeniable. Like their predecessor these artists sing as much of the joy of loving as of the emotional troubles which passion brings; in all of them we find a stylistic simplicity which in its directness of expression is decidedly a characteristic of the genre. Certain works of the Baghdad poet Ibn al-Hādirī (d. 391/1001) raise the question already put regarding Abu Nuwas; should they be cited in connexion with this genre? As far as Ibn al-Hādirī is concerned, the reply is of even greater delicacy, since the amatory elegiac inspiration of this poet is usually nothing but cynical eroticism. A more elaborate analysis of the genre at this stage in its development may lead to the conclusion that two currents are forming: the one idealistic and courtly; the other realistic, either with the moderation of the Hīḍās manner or with the extremism of the obscene poems of Ibn al-Hādirī. Whatever the case may be, the latter tendency shows itself only sporadically, since the conventionalism and the religious ethic of society do not offer it a favourable soil in which to develop. In the period we have now reached, poetry in Arabic was cultivated in all the intellectual centres of the Muslim world. The amatory elegiac genre naturally therefore had its representative figures in each of these centres. In ʿIrāk under the Saljuqīs, they were numerous, competent in the manipulation of their instrument, but entirely without originality (see al-Tahir, ii, 97-102 and the examples given). In Egypt, the same comment is valid, though under the Ayyubīs al-Bahā3 Zuhayr (b. 528/1132, d. at Cairo 656/1258) frequently manages to achieve tones which
recall Abū Nuwās in their sincerity. In Spain, the Cordovan Ibn Zaydūn (b. 394/1003, d. at Seville 447/1055) contributed also to give the genre a somewhat more personal and refined accent, but with a deeper vocabulary and the substitution here and there in the traditional thematic material of more acute psychological analyses. Similarly, Ibn Hamdīs of Syricus (b. 447/1055, d. at Bougie (?) 527/1132) achieved the combination of a generalized lyricism with amatory elegiac movements of real charm. It seems also that the cultivated society of the cities of Spain particularly relished this spirit, which induced a sort of “sad delight”.

ii. — IN PERSIAN LITERATURE

The ghazal is one of the most common instruments of Neo-Persian lyrics. In its present form it consists of a few bayts (verses, or distichs), generally not less than five and no more than twelve, with a single rhyme (often accompanied by a radīf); in the first bayt, called mafā`a, both hemistichs too rhyme together; the last bayt, called makhša`, contains the nom-de-plume (shakhla) of the author; the contents of the ghazal are descriptions of the emotions of the poet in front of love, spring, wine, God, etc., often inextricably connected.

The problem of the origin of the neo-Persian ghazal coincides practically with the problem of the origin of neo-Persian poetry. Various hypotheses have been proposed, e.g. : (a) the neo-Persian ghazal originated from the baḥšīb or nasīb of the Arabic bašīla [q.v.], isolated from its context and later developed into an independent form (Shibli Nu`mānī, etc.); (b) its origin lies in Persian folk-songs, antedating Arabic influence (Braginskiy and other Soviet authors); (c) a distinction between a “technical ghazal” and a more generic ghazal should be made: the first can be said to have found its final form only in Sa`dī (7th/8th century), the second owes its origin to folk poetry, later refined at the courts under Arabo-Persian kings (Mizrave). All these hypotheses have their share of truth. Actually it should always

be borne in mind that neo-Persian poetry in its specific sense has its origin in the literary experiment of adapting the Persian language to Arabic metres and forms, an experiment first begun at the courts of the first independent Persian dynasties of Khurāsān by people with a perfect knowledge of Arabic. On the other hand "Arabic", in this case, does not imply an ethnic meaning, as many Arabic poets of the time were, ethnically, Persians, and, from the point of view of its content, Arabic poetry of that period was in its turn influenced by Persian ideas. A very useful distinction is that between ghazal in its technical sense and ghazal in its generic sense, proposed especially by Mirzoev. In its generic sense the ghazal may also have been influenced, in its origins, by elements from folk-poetry, though this can in no way be demonstrated by documents, as we know nothing about Persian folk-poetry of the 3rd/9th century, and the very little we know about pre-Islamic Persian poetry shows us something totally different, technically, even from the oldest and least specific and formal terms of the neo-Persian post-Islamic ghazal.

The formal history of the neo-Persian ghazal can be divided roughly into five periods. The first is the period of the origins, rather obscure, as we have seen, for which we possess actually only fragments of poetical compositions not too different from fragments of generic "ghazals". Many elements of the "technical" ghazal still are lacking (e.g., taḥallus, regular maṣ'la and maḥfaṣ) and the style is rather decorative/descriptive, with a certain unity and congruity of meanings in the same composition (as compared with the conceptual incongruity of the "technical" ghazal) accompanied by a lack, or rarity, of taḥārūz (the name given to the hardly definable general Stimmung of the classical ghazal). Rudāḡi and Daḵšīḏ may be regarded as the greatest poets of this period (3rd/9th and 4th/10th centuries).

The second period could be called the formative one (4th/10th to 7th/13th centuries). In it the proto-ghazal acquires a very important element: the mystical experience. At the end of this period the classical ghazal is perfectly formed, though the "atmosphere" of the ghazal is either mystic in tendency (e.g., ʿĀṭār), or predominantly profane, as in Anwārī, best known as a kasīda:ι of many elements of the "technical" ghazal still are lacking (e.g., taḥallus, regular maṣ'la and maḥfaṣ) and the style is rather decorative/descriptive, with a certain unity and congruity of meanings in the same composition (as compared with the conceptual incongruity of the "technical" ghazal) accompanied by a lack, or rarity, of taḥārūz (the name given to the hardly definable general Stimmung of the classical ghazal). Rudāḡi and Daḵšīḏ may be regarded as the greatest poets of this period (3rd/9th and 4th/10th centuries).

The third period (7th/13th to 10th/16th centuries) could be called the classical period. The ghazal finds its perfectly defined present shape, both from the point of view of form (all the technical elements implied in the definition of ghazal given above are present) and from the point of view of content: the decorative style of the origins, after the mystical injection of the formative period, passes into a highly refined and complex symbolic style. Saʿdī and Hāfiz are the supreme ghazal writers of this period. Especially in Hāfiz the chief object of the ghazal, the maṣ'la, the (earthly) Beloved, becomes inextricably connected not only with the maṣ'la, the divine Beloved (God, or better His representative on earth, the mystical Initiator) but even with the madīd, the traditional object of the kasīda: it has been demonstrated recently especially by Lescot, that the Beloved of the ghazals of Hāfiz is often his Prince or patron.

The fourth period, that of the so-called Indian style (10th/15th to 12th/18th centuries) [see sanā'ī hindi], sees an intellectual reflection on the accepted symbols of the classical ghazal, which becomes an arena for a quasi-philosophical exercise of the mind.

The ghazal finds a renewed congruity of meaning, and its protagonist, instead of the maṣ'la/madīd, maṣ'baḏ seems to be the Mind of its Author, creating ever new purely intellectual combinations of the old worn-out symbols. (The greatest poet of this period is probably Šāh Šāhīn).

The fifth and last period is not easily definable: in Iran a tendency to revive the classical and even pre-classical ghazal is followed by attempts to use the ghazal for more modern and profane purposes, for which this poetical form, with the refined neo-Platonic symbolism acquired in its classical period, seems rather inadequate.

A description of classical ghazal at the time of its "perfection" can be given only by showing the features and symbolic motifs of a single concrete example. We have selected for this purpose the ghazal of Hāfiz whose maṣ'la is:

rasanak-ī ʿālā-ī ṣabāḥ-ast digar bustān-rā
mirasad moshfāl-yi gol bulbul-i Ṣ̱uḥ.-ahān-rā
(for full text see edition by M. Kazwini and K. Ghani, Tehran n.d., 7-8).  
1. Once more the age of youth has returned to the garden—and the sweet-singing nightingale receives the good news of the Flower.
2. Oh, gentle breeze! should you once more reach the budding plants in the meadow, give my greetings to the Basil, the Rose, the Cypress tree.
3. The young Son of the Magi, the Vintner, appears before me in such charming motions that I am ready to sweep with my eyebrows the dust of the Tavern.
4. Oh, thou who coverest with purest amber the face of the Moon, do not perturb yet more this man perplexed by love.
5. I greatly fear that those who laugh at wine-bibbers may at last make a tavern of their Faith in God.
6. But mayest thou remain a friend of the Holy Men, for in the Ship of Noah there is still a handful of Mud that knows how to dely the Deluge.
7. Go out from this Dwelling, that has the Heavens for roof, and do not ask it for Food, for that Vile One at the end shamelessly kills her Guest.
8. And say to those whose last resting-place will be a handfull of Dust: "Friend, what avails it to raise high palaces to the Skies?"
9. Oh, moon of Canaan! The throne of Egypt has been allotted thee; it is now high time that thou shouldst say farewell to the Prison!
10. Oh Hāfiz, drink wine, and be a libertine, and live joyfully, but take care not, as others do, to make a snare of the Book of God!

We have here an excellent example—the poem has been chosen almost by chance—of many features characteristic of the style of Persian lyrical poetry of the golden age. Let us list, first of all, the several motifs: of the images indeed none, without exception, is original.

(1) Nightingale-Rose. It may seem strange, but this motif, perhaps the one that occurs most frequently in Persian lyrics, has never been the object of historical research.

It appears in the most ancient Persian lyrics of the 4th/10th century. In the mature lyrical forms (Hāfiz) it contains the following meanings:

The rose is Beauty aware of itself, the supreme, inaccessible symbol of the divine širīgān; or, the rose disdainfully derides the nightingale but as soon as it blossoms it dies. This is the cause of the twofold
sadness of the nightingale, which mourns over the rapid death of the rose and its disdainful rejection of union. But between the two there is a kind of mysteri-
ously intimate moment, when the rose and the nightingale are in love, when the former is frequently applied to the nightingale ) alone under-
stands the secret language of the rose. The nightingale sings in Arabic—the sacred language—invitations to take partake of the mystic wine. Inebriated with the perfume of the rose it fears to end as did the magician-
angel, Mārid. As the prayer offered at dawn is of special value and has special power (cf. Kurān, XVII, 78), so the mention of the nightingale is the auroral prayer. But it is a doleful offering, to offer something inaccessible, for, as Muḥammad says in his charming book translated in the middle of the last century by Garcin de Tassy, “my song is a song of grief and not of joy . . . Each time that I flutter over a garden I warble of the affliction that will soon replace the gaiety that reigns there”. In an Indian Muslim allegory, the romance of the Rose of Bakāwāli, the in-
accessible Rose, so difficult to find, is the only remedy that can restore the sight of King Zayn al-
Mulkū, etc. The God-Rose identity of the famous preface of the Gulistān of Sa'dī can be clearly seen when the Mystic who travels in the transcendental world is unable to bring back any gift from his travels because: “I had in mind that when I reached the Rose-tree I would fill my lap with this perfume for my friends, but when I reached it I was so inebriated with the perfume of the Rose that the hem of my robe slipped from my hand”.

The enthusiastic pan-Islamist, Pizzi, has endeav-
oured, but without adequate evidence, to show influence of the Persian Rose motif in the mediaeval Roman de la Rose, whose symbolism is reminiscent of this. But in the absence of definite documentary evidence and of preparatory studies we cannot exclude the opposite hypothesis, namely that a Hellenistic motif may have penetrated into both cultures, derived from that civilization which in various ways and forms fertilised them both, i.e., the late Hellenistic symbolism. One should, however, bear in mind that what we refer to is a motif and not an emotional and original perception by Hāfīz of the “romantic” and vivid reality of the Spring and the flowers.

(2) And here we have another “personage”, the sabā, “the zephyr”, the springtime breeze, generally held to be—and not for the first time by Hāfīz but by innumerable poets before and after him—the Messenger par excellence. The breeze also is personified in a bird, more especially the hoopoe. Why? because with a very slight change in the transcription, the pronunciation of its name is identical to that of the famous region of Sabā whose Queen, we read in the Kurān, sent a hoopoe as her messenger to King Solomon. Thus the “secondary images” aroused in the mind of the listener by the word sabā are quite other than those awakened in us by the word “zephyr”, now ineradicably associated in our minds with Metastasio and Wateau. Sabā is a sound that reverberates with a rich symbolism which can be traced back historically and clearly to a “gnostic” world. Basil (rayshān), mentioned soon after, which to us suggests little more than the idea of “perfume”, is instead a word used in the Kurān. The fragrance of basil is one of the chief components of the olfactory joys of the Islamic paradise (cf. Kurān, LVI, 89), and singularly enough, of the Zoroastrian paradise also (cf. Mānūk Xrad, ch. II). Basil, on the other hand, the Cypress, familiar to all amateur collectors of Persian carpets and miniatures, in its charming con-
ventionalized shapes, is the sacred tree of Zoroaster. It is identified with the Prophet himself who planted a specially memorable cypress (that of Kāghmar) just at the time when the ecstatic-prophetic ex-
perience first thrilled him. It is a motif that seems to have come straight from a Central Asian spiritual area: the Shaman, indeed, plants a tree when starting on his “prophetic” career. Thus, even if in the case in point the words are not always intentionally and knowingly symbolical, they are not merely descriptive but are related to verbal-psychological cycles with which we have no connexion in our languages.

(3) In the springtime scenery summoned before us, the nightingale, the rose, the zephyr, the cypress, basil and the “young” plants of the meadow are playing a part in a scene which, even from our descriptive standpoint, might acquire a certain unity. But now there enters a character who to our eyes may seem truly extraneous. He is the young Magian (moghbāt), the vintner, and the Tavern. The “Zoroastrian” character of the images connected with wine, with the Superior of the Magi, and with the Young Magian (cf. Kurān), sent a hoopoe as her messenger to King Solomon. Thus the “secondary images” aroused in the mind of the listener by the word “priest”, “bishop”, “Brahmin” “Magian”, “temple of fire”, “church”, “monastery” in the same poem. The ideas that these lyrical-symbolic images summon up are not something precisely and theologically Zoroastrian (wine is not a secondary element in the Zoroastrian ritual); they serve as signs indicating an esoteric rite. As lyrical poetry was traditionally condemned both by Islam and by Zoroastrianism, the motif of self-abasement is added to this intricate image-motif. The poet, the Initiate, is willing even to wipe with his face the door of the tavern-temple where the Young Magian reigns. Here is summed up the material inherited from the frankly libertine poetry of the Arab mutāšākbīrin (wine-drinkers) of ancient and modern, to evoke this idea use indi-
scriminately the words Magian, Christian, temple of fire or church. Sa’dī, although by differences well known to him, uses indiscriminately the words “priest”, “bishop”, “Brahmin” “Magian”, “temple of fire”, “church”, “monastery” in the same poem.

The ideas that these lyrical-symbolic images summon up are not something precisely and theologically Zoroastrian (wine is indeed only a secondary element in the Zoroastrian ritual); they serve as signs indicating an esoteric rite. As lyrical poetry was traditionally condemned both by Islam and by Zoroastrianism, the motif of self-abasement is added to this intricate image-motif. The poet, the Initiate, is willing even to wipe with his face the door of the tavern-temple where the Young Magian reigns. Here is summed up the material inherited from the frankly libertine poetry of the Arab mutāšākbīrin (wine-drinkers) of ancient and modern, to evoke this idea use indiscriminately the words “priest”, “bishop”, “Brahmin” “Magian”, “temple of fire”, “church”, “monastery” in the same poem. The ideas that these lyrical-symbolic images summon up are not something precisely and theologically Zoroastrian (wine is indeed only a secondary element in the Zoroastrian ritual); they serve as signs indicating an esoteric rite. As lyrical poetry was traditionally condemned both by Islam and by Zoroastrianism, the motif of self-abasement is added to this intricate image-motif. The poet, the Initiate, is willing even to wipe with his face the door of the tavern-temple where the Young Magian reigns. Here is summed up the material inherited from the frankly libertine poetry of the Arab mutāšākbīrin (wine-drinkers) of ancient and modern, to evoke this idea use indiscriminately the words “priest”, “bishop”, “Brahmin” “Magian”, “temple of fire”, “church”, “monastery” in the same poem.

(4) And now, as in a filiform succession of images, the Young Magian takes on the ambiguous appearance of a beautiful boy. The fourth verse should more accurately be translated as: “Oh thou, who drawest across the moon a polo-stick (damdīg) of the purest amber, do not make me, whose head whirs (like a polo ball), yet more confused”. And we must then add that the game of polo, which is of Persian origin, supplies a wealth of images to this lyric. The polo stick, with its characteristic hooked shape, is the suf, the long wisp of hair, black as the night, and the moon is no other than the face (the roundness of the face is traditionally greatly admired in this lyric). The Child-Magian who is also the Beloved of the Poet (or his Initiate, or God) has the brilliant and round face of the moon. By mischievously half-veiling it with his black curl, shaped like a polo stick, he only makes the already confused head of the poet whirl like a polo-ball.

(5) In this verse the poet introduces another motif: he upholds the doctors of the law, the orthodos. But Hāfīz must be thought of as the other hand, a “progressive”. There may be cases in the traditional poetry of Persia of mutāšākbīrin who, when indulging in
this literary style, are obeying its conventions in abusing... as themselves as a class. This... that confers on it a special kind of style of its own.

(6) The verse that follows contains a transparent allusion to the superiority of the Saint (the man of God) over the Doctor of the Law, very skilfully expressed. Noah's ship is the human race, the handful of mud that it contains, possessing, however, the supreme faculty of overcoming any deluge, is the Perfect Man, the Saint, the mystic Master. He is "earth", mud indeed, but one which—as the original puts it—be-abt naskhur fā'fmār, that is to say "would not buy the deluge for a drop of water", i.e., gives no importance to external "deluges" (and here note the word-play water-deluge-earth). We should therefore be friends of those Masters and not of the doctors of the law.

(7-8) The ethical-mystical warning continues. But, be it always remembered, without undue personal tension. The world is seen as a house, an "old dilapidated convent". But the world—in Arabic a word of feminine gender—is also often compared by the Persian poets to a malicious, faithless old woman. Here the word we have translated by "Vile One" is siyah-kāse, "of the black pot", also "miserly" "despicable"; hence the play of words "food"-"pot".

(9) The following verse contains a metaphor which may be familiar to the Westerner also: Joseph the Israelite, the symbol of perfect beauty, or of the Soul, for whom the throne of Egypt is prepared, but who yet groans in prison (a typical Neoplatonic metaphor). The last verse reiterates the traditional accusation of hypocrisy addressed to the mullahs.

In classical ghazal each verse forms a closed unit, only slightly interconnected with the others. Some modern scholars, to explain this, have invoked the "psychology of depth" to show that there is unity, but an unconscious one, in the ghazal. However this may be, external incongruity would seem to be a real rule in modern Persian poetry. We are here the presence of a bunch of motifs only lightly tied together.

Further bibliography will be found in the above mentioned works.

### iii. OTTOMAN LITERATURE

(Circumstances beyond our control have obliged us to refer the reader to the Supplement. Editors' note.)

---

### iv. IN URDU LITERATURE

In spite of its difficulty the ghazal enjoyed a wide popularity in all literatures belonging to the Islamic cultural cycle. Urdu literature was born under the strong influence of Persian culture, more precisely, of the Persian literature of the period wrongly called "decadence", or the period of Indian style (10th/16th to 12th/18th centuries). This fact accounts for some special features of the Urdu ghazal. Its history should be divided into some four periods. The first period is that of daḵšīn Urdu (9th/15th to 10th/17th centuries). Its influence is only one, and not the most successful, of the instruments of Urdu lyric, that prefer indigenous poetical forms. Dakhāl ghazals are generally descriptive and more congruous than the classical Persian ones. With Wall (1665-1741) the experiment of adapting the contemporary Persian style to Urdu poetry is widened and deepened. Urdu ghazals, more or less imitating the contemporary Indian-style Persian ghazals, find acceptance also in the literary circles of North India; so begins the classical period of the Urdu ghazal, culminating perhaps in Mr. Taqī Mr. (d. 1810), Ghalib (d. 1869 [q.v.]), who uses the ghazal in his peculiar ideological way as a symbolic channel to introduce ideas, Ashgar of Gondwāna (1884-1936), Hasrat Mohānī (1875-1951), Fānī of Badāyūn (1879-1941) and Dīgār of Murādbād (b. 1890).

The Urdu ghazal, born under the influence of the Indian-style Persian ghazal (e.g., Bidil of Patna, d. 1721, who left almost no trace in the development of the Persian ghazal of Iran, had an enormous influence in the Urdu Dīwān, a reform of the classical ghazal, together with a comparatively greater congruence in meaning. In later times this led ghazal writers to use this form too as an ideological instrument, especially under the influence of Hālī (d. 1914) and Ikbāl (d. 1938). Hālī advocated, in his stylistical treatise Muḥaddāsīn-i āhir u ʿalāri, added as a preface to his own Dīwān, a reform of the classical ghazal in a modern sense, based on a widening of the scope of ghazal so as to include real love, and other human emotions of our times; the rather limited Wortschatz of the classical ghazal should also be widened, according to Hālī, while the mālāmātī and anacreontic aspects of the old ghazal should be abandoned. The renovation brought about in Urdu ghazal by the aforementioned personalities led to the result that now, in the Indo-Pakistani subcontinent the ghazal has become a serious instrument of modern poetry and its old popularity has found an interesting development in a modern sense.

(A. Bausani)
sexes having tapering horns which are ringed for the lower two thirds and curve forward at the tip. Gazelles are creatures of the semi-desert steppe and the savannah; thus they bulk large among the fauna of the Arabic-speaking countries in general, and among those of the Muslim world in particular. The desert-dwellers, nomads and camel-drivers, have from ancient times distinguished different species of gazelle, and the Arabs early gave them different names according to their coats; the modern systematic classification accords perfectly with these denominations, so that the gazelles are:—

a. the Goitrous Gazelle, *Gazella subgutturosa* (*ghazdi*), in western Persia, Mesopotamia, and northern eastern Arabia;

b. the Rhom or Loder's Gazelle, or Slender-horned Gazelle, *Gazella leptoceros* (*rimrim, pl. *ārum*), with the sub-species *G. l. litori* on the fringe of the Sahara and *G. l. marica* in Arabia, Palestine and Sinai;

c. the Dorcas or Atlas Gazelle, *Gazella dorcas* (*ādam*, pl. *udm, ādam, sin, śīt*), with the sub-species *G. d. saadiya* in northern Arabia, Palestine and Sinai, *G. d. dorcas* in Egypt, *G. d. neglecta* in the Sahara and *G. d. massaeyslae* in Morocco; and the three subspecies *G. d. litoralis*, *tīloura* and *Feltzmi* occurring by turns along the Red Sea coast;—d. the Dama Gazelle or “Biche Robert”, *Gazella dama* (*aryal, adra*), with geographical sub-species the Mhorr or Tursi Gazelle (*aryal*), *G. d. melleri*; the southern Moroccan, *G. d. dama* (the sub-species bearing the specific name) in the central Sahara, the Red-necked Gazelle or Addra Gazelle, *G. d. ruficolis*, and the Korin or Red-fronted Gazelle, *G. d. rufifrons* (*umm ḍjāba, ḥamra*), the last two named being widely scattered throughout the scrub zones of Arabia and Africa; while the distribution of the Soemmering's Gazelle, *G. d. soemmeringi*, extends from Somalia across into the coastal border of southern Arabia;—e. the Arabian Gazelle, *Gazella gazella* (*afrī, yāfūr*), with the sub-species *G. g. arabica* in the mountainous areas of Arabia, *G. g. gazella* in Syria and Palestine, and *G. g. cuvieri* (Maghribi; *ādam*) throughout the Sahara and the Maghreb.

The excellence of its meat, a food permitted by the Koran and the dictates of capturing a beast so fleet-footed, made the gazelle, “daughter of the sand” (*bint al-raml*), from earliest times highly prized game alike for the nomad in search of sustenance and the prince whose main pastime was hunting. Methods of capture varied with the hunter's rank. For the well-to-do, there was the noble chase (*tarad*, Sahara: *talād*) with gazelle-hounds (*sulibya*), usually in the heat of the day (*taḥmiš*); this hunting down in strength, together with the lighting of the trained cheetah [*see PAHDI*], were the forms which venery most often took in the Orient, the Arabs preferring them to the spectacular massacres in a closed battue (*halba*) in which the Sāsānids took pride. The gazelle was also hunted by means of falconry, with eagles, gerfalcons, sakers and the increasing ages of the young animals as determined by teeth development.

Without the gazelle, Arabic literature would have been without an important source of inspiration. The treatises on falconry and hunting [*see BAYZARA and PAHDI*], in the first place, would virtually have lacked a raison d'être, the antilopinae being in Arab countries the noblest game of all for the highborn, or for the West. Then poetry, classical and popular, would have been without its hunting themes (*tarādiyyāt*) in *radžas*, with their vivid descriptions of the hunt in full cry and triumphant hallow, and erotic writing, in its search to idealize feminine grace and attractions, without countless metaphors drawn from the slender delicacy of the gazelle, its wild starting shyness and maternal tenderness, and the velvety glance owed to the contrast (*hawar*) of the ebony pupil set in ivory; such transports of earthly beatitude were induced by these eyes in the heart of the Oriental that the gazelle was to surrender them to the virgins of Paradise, the “hours” (*al-tūr al-šīn*), promised to the Muslim elect in the after-life (*Kūrān*, XLIV, 54, LII, 20, LV, 72, LVI, 22).

The aura of lyricism enveloping the gazelle must not obscure the saddening fact that in our day the number of these gracious animals has dwindled considerably in the Islamic countries as a result of modern vehicles; if stringent measures are not taken for the gazelle's protection, the species will be severely in the way to extinction, and the term *ghazlāl* will become an archaism in the Arabic language.

For the *ghazāl al-mišk*, see *mišk*.

the musician Ziryāb (q.v.) introduced the game of chess to Cordova, where it had a great success. But it was not approved by al-Ghazal, for in a poem addressed to a nephew of his who was a keen chess-player he declared it to be sinful and an invention of the devil. Al-Ghazal’s unusual diplomatic mission and the memory of Viking incursions gave rise to the legend invented in the 12th or 13th century by the Valencian Ibn Dihya (Muṭrib, Khartoum 1954, 330 f.) according to which ‘Abd al-Rahmān II, satisfied with the way in which al-Ghazal and his companion had carried out their mission, entrusted to them, later years another embassy to the North with the aim of dissuading the king of the Vikings from attempting a fresh landing in Andalusia. According to this story the poet and his companion fulfilled their task in northern Europe and returned to Cordova after a dangerous voyage of nine months in Atlantic waters. The falseness of this is obvious at a glance. The more or less marvellous elements of which it is formed are copied for the most part from episodes attributed in the 9th century to al-Ghazal’s journey to the Greek emperor. No doubt the unusual activity of the Byzantine emperor in Cordova and the daring landing of the Vikings on Spanish territory, enriched with romantic details, finally amalgamated in the popular beliefs of Andalusia and so gave rise to a combined legend which little by little distorted the historical reality.

(A. Huici Miranda)

AL-GHAZALI, ABD AL-HAMID MUHAMMAD B. MUHAMMAD AL-TASI (455/1063-455/1115), outstanding theologian, jurist, original thinker, mystic and religious reformer. There has been much discussion since ancient times whether his nisba should be Ghazal or Ghazzal; cf. Brockelmann, S 1, 744; the former is to be preferred in accordance with the principle of difficilior lectio potius.

1. Life

He was born at Tus in Khurāsān, near the modern Meshhed, in 455/1063. He and his brother Ahmad were left orphans at an early age. Their education was begun in Tus. Then al-Ghazāl went to Diurḍiān and, after a further period in Tus, to Naysābūr, where he was a pupil of al-Duwānī Imām al-Harāmāyin (q.v.) until the latter’s death in 478/1085. Several other teachers are mentioned, mostly obscure, the best known being Abū ʿAli al-Farmāndī. From Naysābūr in 478/1085 al-Ghazāl went to the “camp” of Niṣām al-Mulk (q.v.) who had attracted
many scholars, and there he was received with honour and respect. At a date which he does not specify but which cannot be much later than his mouillah date of 1060/1649, al-Ghazālī passed through a phase of scepticism, and emerged to begin an energetic search for a more satisfying intellectual position and practical way of life. In 484/1089 he was sent by Nizām al-Mulk to be professor at the madrasa he had founded in Baghdād, the Nizāmiyya. Al-Ghazālī was one of the most prominent men in Baghdād, and for four years lectured to an audience of over three hundred students. At the same time he vigorously pursued the study of philosophy by private reading, and wrote several books. In 488/1095, however, he suffered from a nervous illness which made it physically impossible for him to lecture. After some months he left Baghdād on the pretext of making the pilgrimage, but in reality he was abandoning his professorship and his whole career as a jurist and theologian. The motives for this renunciation have been much discussed from the contemporary period until the present day. He himself says he was afraid that he was going to Hell, and he has many criticisms of the corruption of the ulama of his time (e.g., Ḥuyā', i); so it may well be that he felt that the whole organized legal profession in which he was involved was so corrupt that the only way of leading an upright life was to leave the profession completely. The recent suggestion (F. Jabre, in MIDEO, i (1954), 73-102) that he was chiefly afraid of the Ismā'īlīs (Assassins) who had murdered Nizām al-Mulk in 485/1092, and whom he had attacked in his writings, places too much emphasis on what can at most have been one factor. Another suggestion is that of D. B. Macdonald (in EJ) that contemporary political events may have made al-Ghazālī apprehensive; shortly before he left Baghdād the Saldjukīd sultan Barkiyaruk [q.v.] executed his uncle Tutush, who had been supported by the caliph and presumably al-Ghazālī; and it was soon after the death of Barkiyaruk in 498/1105 that al-Ghazālī returned to teaching. From al-Ghazālī's abandonment of his professorship in Baghdād to his return to teaching at Naysābūr is a period of about seven years, and it is sometimes said, even in early Muslim biographical notices, that al-Ghazālī spent ten years of this in Syria. Careful reading of his own words in the Munkīd, (see below), and attention to numerous small details in other sources, makes it certain that he was only "about two years" in Syria. On his departure from Baghdād in Dhu 'l-Ka'dah 498/November 1095 he spent some time in Damācus, then went by Jerusalem and Hebron to Medina and Mecca to take part in the pilgrimage of 489/November-December 1096. He then went back for some time to Damascus, but his own phrase of "nearly two years there" (Munkīd, 130) must be taken loosely. He is reported to have been seen in Bagdād in Djuhumādah II 499/May-June 1096 (Jabre, op. cit., 87; cf. Bouyges, Chronologie, 3), but this can only have been a brief stay in the course of his journey to his home, Tūs. It is sometimes said that al-Ghazālī visited Alexandria, but scholars are now inclined to reject this report; if he did go to Egypt it can only have been for a short time.

In this period of retirement at Damascus and Tūs al-Ghazālī lived as a poor sīfī, often in solitude, spending his time in meditation and other spiritual exercises. It was during this period that he composed his greatest work, Ḥuyā' al-Salām al- ḏin ("The Revival of the Religious Sciences"), and he may have lectured on its contents to select audiences. By the end of the period he had advanced far along the mystic path, and he had convinced that it was the highest way of life for man.

In the course of the year 499/1105-6 Fakhr al-Mulk, son of Nizām al-Mulk and vizier of Sandjar, the Saldjukīd ruler of Khurasān, pressed al-Ghazālī to return to academic work. He yielded to the pressure, partly moved by the belief that he was destined to be the reviver of religion (mudaddid) at the beginning of the new century, in accordance with a well-known Tradition. In Dhu 'l-Ka' ḏah 499/July-August 1106 he began to lecture at the Nizāmiyya in Naysābūr and not long afterwards wrote the autobiographical work al-Munkīd min al- ḏalāl ("Deliverance from Error"). Before his death, however, in Djuhumādah II 505/December 1111, he had once again abandoned teaching and retired to Tūs. Here he had established, probably before he went to Naysābūr, a khāndāk or hermitage, where he trained young disciples in the theory and practice of the sāfī life. Several names are known of men who were his pupils at Tūs (cf. Bouyges, Chronologie, 4 n.).

2. Works and doctrines

(a) Questions of authenticity and esotericism. A great difficulty in the study of al-Ghazālī's thought is that, while he undoubtedly wrote many books, some have not been attributed to him which he did not write. Bouyges in his Essai de Chronologie (composed before 1924 but only published posthumously in 1959 with additional notes on subsequent publications by M. Allard) lists 404 titles. Many of these are taken from lists of his works and no copies are known to exist. In other cases the same book appears under different titles, and a great deal of work has still to be done on manuscripts before scholars know exactly what is extant and what is not. Further, at least from the time of Muhuyī 'l-Dīn b. al-ʿArabī (d. 638/1240) allegations have been made that books have been falsely attributed to al-Ghazālī (cf. Montgomery Watt, A Forgery in al-Ghazālī’s Mishkāt?, in JRAS 1949, 5-22; idem, The authenticity of the works attributed to al-Ghazālī, in JRAS, 1952, 24-45). The works whose authenticity has been doubted are mostly works expressing advanced sūfistic and philosophical views which are at variance with the teaching of al-Ghazālī in the works generally accepted as authentic. There are difficulties, owing to the richness of his thought, in establishing conclusively the existence of contradictions. Ibn Ṭufayl (d. 581/1185), however, who called attention to contradictions, also suggested that al-Ghazālī wrote differently for ordinary men and for the elite, or, in other words, that he had esoteric views which were not divulged to everyone (Ḥuyā b. Ṭākūsīn, Damācus, 1358/1939, 69-72). This complicates the problem of authenticity: but there is no reason for thinking that, even if al-Ghazālī had different levels of teaching for different audiences, he ever in the "higher" levels directly contradicted what he maintained at the lower levels. An alternative supposition, that he adopted extreme philosophical forms of sūfism in his last years, seems to be excluded by the discovery that Ḥuyā' al-ʿawāmm, in which he holds a position similar to that of the Ḥuyā', was completed only a few days before his death (Bouyges, Chronologie, 80; cf. G. F. Hourani, The chronology of Ghazâlî’s writings, in JAOs, lxxix (1959), 229-33). In the present state of scholarship, the soundest methodology is to concentrate on the main works

1039
of undoubted authenticity and to accept other works only in so far as the views expressed are not incom-patible with those in the former (cf. Montgomery Watt, The study of al-Ghazali, in Orieni, xiii-xiv 1961, at 271).

(b) Personal. A year or two before his death al-Ghazali wrote al-Munkhid min al-dafal, an account of the development of his religious opinions, but not exactly an autobiography, since it is arranged systematically not chronologically; e.g., he knew something of Sufism before the stage of development at which he describes it in the book. Most of the details about his life given above are derived from the Munkhid. He is also concerned to defend himself against the accusations and criticism that had been brought against his conduct and the views he had expressed. A small work answering criticisms of the Ihyad is the Imlad.

(c) Legal. Al-Ghazali's early training was as a jurist, and it was probably only under al-Djuwayni that he devoted special attention to kalâm or dogmatic theology. Some of his earliest writings were in the sphere of fikhr, notably the Basîf and the Wasif, but he apparently continued to be interested in the subject and to write about it, for a work called the Wadías is dated 495/1101, while the Mustasfâ was written during his period of teaching at Nayshâbûr in 503/1119 (Bouyges, Chronologie, 49, 73). The latter deals with the sources of law (usl al-fikhr) in a manner which shows the influence of his earlier philosophical studies but is entirely within the juristic tradition. It is reported in biographical notices that at the time of his death al-Ghazali was engaged in deepening his knowledge of Tradition.

(d) Philosophy and logic. After the period of scepticism described in the Munkhid, al-Ghazali in his quest for certainty made a thorough study of philosophy, a subject to which he had been introduced by al-Djuwayni. This occupied all the earlier part of the Baghdad period. What he studied was chiefly the Arabic Neoplatonism of al-Fârâbi and Ibn Sînâ. Though his final aim was to show in what respects their doctrines were incompatible with Sunnî Islam, he first wrote an exposition of their philosophy without any criticism, Makâsid al-falasîfia, which was much appreciated in Spain and the rest of Europe in the twelfth and thirteenth centuries. This he followed by a criticism of the doctrines entitled Tahdîf al-falasîfia, "The incoherence (or inconsistency) of the philosophers"; this was finished at the beginning of 488/1095 (Bouyges, Chronologie, 23). In it he noted twenty points on which the philosophers' views were objectionable to Sunnîs or inconsistent with their own claims; in respect of three of these they were to be adjudged unbelievers. In the Tahdîf al-Ghazali concentrates on demonstrating the inconsistencies of the philosophers and does not argue for any positive views of his own. Because of this he has been accused of having remained something of a sceptic. This accusation falls to notice that the Tahdîf was written just before the crisis which caused him to leave Baghdad; it is therefore possible that at the time he was somewhat uncertain of his positive beliefs, but a few years later when he was writing the Ihyad he was in no doubt about what he believed. What impressed al-Ghazali most of the various branches of philosophical studies was logic, and in particular the Aristotelian syllogism. For the sake of Sunnî jurists and theologians to whom philosophical books were not easily accessible or, because of their technical language, not readily understandable, he wrote two books on Aristotelian logic, Mu’yar al-sîm and Mi’ashk al-nazar. A justification of the use of this logic in religious matters is contained in al-Kisâf al-mustakâm, apparently written for some comparative philosophical students who were attracted by Bâjînî (Ismâ’ilî) doctrines. While full of enthusiasm for philosophy al-Ghazali wrote a work on ethics, Misân al-samâl, though whether the whole of the extant text is authentic has been questioned (JRA, 1952, 38-40, 45). Since al-Ghazali does not appear to refer to the Misân in his later works, and since he became very critical of philosophical ethics in Ihyad (99 ff.), it is possible that, as his enthusiasm waned, he rejected much of what he had written in this work.

(e) Dogmatic theology. His chief work of dogmatics is al-Ihtisâd fi ‘l-i’tibâd, probably composed shortly before or shortly after his departure from Baghdât (Bouyges, 34). This book deals with roughly the same topics as the Ihyad and al-Djuwayni, but it makes full use of Aristotelian logic, including the syllogism. In this respect Ibn Khaldûn (iii, 47) is correct in making al-Ghazali the founder of a new tendency in theology, although there is no striking novelty in his dogmatic views. In Kitâb al-Arabîn, (Cairo 1344, 24), written after the Ihyad, al-Ghazali says that the Ihtisâd is more likely to prepare for the gnosia (ma’rifâ) of the sîfîn than the usual works of dogmatics; and this continuing approval strengthens the view that al-Ghazali never ceased to be an Ash’arî in dogmatics, even though he came to hold that intellectual discussions in religion should range far beyond the limited field of dogmatics, and that detailed discussions in dogmatics had no practical value. To dogmatic theology might also be assigned Fuyûl al-lafîka bayn al-Islâm wa-l-zandâba. This is partly directed against the Bâjinîyya, but is in a sort of the philosophers' views were objectionable to Sunnîs or inconsistent with their own claims; in respect of three of these they were to be adjudged unbelievers. In the Tahdîf al-Ghazali concentrates on demonstrating the inconsistencies of the philosophers and does not argue for any positive views of his own. Because of this he has been accused of having remained something of a sceptic. This accusation fails to notice that the Tahdîf was written just before the crisis which caused him to leave Baghdad; it is therefore possible that at the time he was somewhat uncertain of his positive beliefs, but a few years later when he was writing the Ihyad he was in no doubt about what he believed. What impressed al-Ghazali most of the various branches of philosophical studies was logic, and in particular the Aristotelian syllogism. For the sake of Sunnî jurists and theologians to whom philosophical books were not easily accessible or, because of their technical language, not readily understandable, he wrote two books on Aristotelian logic, Mu’yar al-sîm and Mi’ashk al-nazar. A justification of the use of this logic in religious matters is contained in al-Kisâf al-mustakâm, apparently written for some comparative philosophical students who were attracted by Bâjînî (Ismâ’ilî) doctrines. While full of enthusiasm for philosophy al-Ghazali wrote a work on ethics, Misân al-samâl, though whether the whole of the extant text is authentic has been questioned (JRA, 1952, 38-40, 45). Since al-Ghazali does not appear to refer to the Misân in his later works, and since he became very critical of philosophical ethics in Ihyad (99 ff.), it is possible that, as his enthusiasm waned, he rejected much of what he had written in this work.

(f) Poetry. The Mustashiri, edited in abridged form by Goldziher as Streitschrift des Gesalî gegen die Bâjinîscha-Setke (1916), is a searching theological critique of the Nizârî Ismâ’îlîs or Assassins. A Persian work, edited by O. Pretzl as Die Streitschrift des Gesalî gegen die Ihbâhiya (1933), attacks the antimo-nianism of certain mystics. The authenticity of a work of anti-Christian polemic, al-Radd al-ğamîl ǧâlî sunnî al-înîfî (ed. and tr. R. Chidiac, Paris 1939), is doubted by Bouyges (26), but defended by Louis Massignon (in REI, 1932, 491-536).

(g) Sufistic practice. Al-Ghazali’s greatest work, both in size and in the importance of its contents is the Ihyad ʿulûm al-dîn, "The revival of the religious sciences", in four volumes. This is divided into four "quarters", dealing with ʿibâdât (cult practices), ʿaddî (social customs), musâkhîl (vices, or faults of character leading to perdition), munjîyût (virtues, or qualities leading to salvation). Each "quarter" has ten books. The Ihyad is thus a complete guide for the devout Muslim to every aspect of the religious life—worship and devotional practices, conduct in daily life, the purification of the heart, and advance along the mystic way. The first two books deal with the necessary minimum of intellectual knowledge. This whole stupendous undertaking arises from al-Ghazâlî’s feeling that in the hands of the ʿulamâ’ of his day religious knowledge had become a means of worldly advancement, whereas it was his deep conviction...
that it was essentially for the attainment of salvation in the world to come. He therefore, while describing the prescriptions of the Shari'a in some detail, tries to show how they contribute to a man's final salvation. Biddatay al-hiddiya is a brief statement of a rule of daily life for the devout Muslim, together with counsel on the avoidance of sins. K. al-ʿArbaʿīn is a short summary of the Iḥyāʾ, though its forty sections do not altogether correspond to the forty books. Al-Mašجاد al-asnād discusses in what sense men may imitate the names or attributes of God. Kimiyyā ʿal-ṣāda is in the main an abridgement in Persian of the Iḥyāʾ (also translated in whole or in part into Urdu, Arabic, etc.), but there are some differences which have not been fully investigated.

(II) Sufistic theory. It is in this field that most of the cases of false or dubious authenticity occur. Miḥḥāl al-anwar ("The niche for lights"), tr. W. H. T. Gairdner, London 1924; cf. idem, in IJL, v (1914), 121-53) is genuine, except possibly the last section (JRAS, 1949, 5-22). Al-Risāla al-ladāniyya deals with the nature of knowledge of divine things, and its authenticity has been doubted because of its closeness to a work of Ibn al-ʿArabī and because of its Neoplatonism (cf. Bouyges, 124 f.). There are numerous other works in the same category, of which the most important is Minhāj al-ʿabādīn. These works are of interest to students of mysticism, and their false attribution to al-Ghazālī, if it can be proved, does not destroy their value as illustrations of some branches of Sufistic thought during the lifetime of al-Ghazālī and the subsequent half-century.

3. His influence

A balanced account of the influence of al-Ghazālī will probably not be possible until there has been much more study of various religious movements during the subsequent centuries. The following assessments are therefore to some extent provisional.

(a) His criticism of the Bāṭinīyya may have helped to reduce the intellectual attractiveness of the movement, but its comparative failure, after its success in capturing Amāriz, is due to many other factors.

(b) After his criticism of the philosophers there are no further great names in the philosophical movement in the Islamic east, but it is not clear how far the decline of philosophy is due to al-Ghazālī's criticisms and how far to other causes. Its continuance in the Islamic west, where the Tahāfūt was also known, suggests that the other causes are also important.

(c) Al-Ghazālī's studies in philosophy led to the incorporation of certain aspects of philosophy, notably logic, into Islamic theology. In course of time theologians came to devote much more time and space to the philosophical preliminaries than to the theology proper. On the other hand, his speculations about the nature of man's knowledge of the divine realm and his conviction that the upright and devout man could attain to an intuition (or direct experience — ʿaḥāk) of divine things comparable to that of the worldliness of the 'ulamāʾ does not seem to have led to any radical changes.

(d) He undoubtedly performed a great service for devout Muslims of every level of education by presenting obedience to the prescriptions of the Shari'a as a meaningful way of life. His Munkidh at Tūs, where he and his disciples lived together, was not unlike a Christian monastery; and it may be that he gave an impetus to the movement out of which came the dervish orders (but this requires further investigation).

(e) His example may have encouraged those forms of Sufism which were close to Sunnism or entirely Sunnī. Before him, however, there had been much more Sufism among Sunnī 'ulamāʾ than is commonly realized. His influence on the Sufi movement in general, however, requires further careful study.

been investigated. His sermons were very popular in Baghdad, and were collected in two volumes by Şâfi’î b. Fâris al-Labbâni; of these, however, only extant are preserved in Ibn al-Djawzi. In them he undertook the defence of Satan (al-ta’asub li-bîbi), popular in many Sufi circles since Hallâjî, which was soon afterwards further developed by ‘Atîr (see Das Meer der Seele, 536-50), and which presumably gave the so-called Devil worshippers, the Yazidis, the justification for their worship of Satan (Abjad Taymûr Pâsha, al-Yazidiyya, Cairo 1352, 59-64).

AL-GHÂZĂLî, Dânîbirdî, governor of Damascus under Selîm I. Originally a mamlûkh of Kâfît Bây (873/1468-901/1495), he took his niṣba from the Egyptian village of Minyat Ghažal (Sharîkiyya), where he was šādî (superintendent). He obtained promotion, ultimately becoming nâbî (governor) of Damascus (1521). After the battle of Mârdj Dâbîk (24 Râjdah 922/23 August 1516), he was nominated governor of Damascus, first by fugitive amîrs in that city, then in Cairo, whither he had fled, by Tîmûn Bây. He commanded an expedition against the Ottomans in Syria, but was defeated by Sinân Pâsha near Baysân (Dhu ’l-Ka’dâ 922/December 1516). On 18 Muḥarram 923/10 February 1517, after the Ottoman victory at al-Râyâniyya, he submitted to Selîm I, with whom he had secretly secured the safe passage of the Pilgrimage caravan. He was killed, and his head sent to Istanbul. Korkud grew in a short time to like both Ghažali’s company and his witicism and made him his inseparable companion, even taking him with him to Egypt. Although Korkud became angry with him at one point there and ordered that he be executed, Ghažali was successful in winning over the kapîlé-bâbkhîş and thus saving himself (for details, see the Tedkhore of Āṣîgîh Celebi).

Ghažali wrote for Piyaṭê Bây, who had introduced him to Korkud, a risâla entitled Dâfîṣ al-ʾaḥûtâm wa-raʿîṣ al-ʾumûmîm (Istanbul Un. Lib., Turkish MSS nos. 1400, 9659), in imitation of the ʾAlîyyâ wa-shâlîfiyya of Ḥakîm Azrâq, and presented this risâla to Korkud. According to one account, Korkud was angered by this indecent risâla and sent Ghažali away; but a more reasonable tradition relates that they were not separated until Korkud was put to death by Selîm I, and that only after Korkud’s death did Ghažali become shâykh at the tekke of Geyîkîlî Baba in Bursa. It was at this point that he adopted the malâhîs “Ghažâlî”.

Quickly becoming bored with the life of a shâykh, he became mûdîrîs in Sivrihisar with a daily salary of 50 akîd and then at the Hûseynîyye medresse in Amasya. Through the good offices of Kadî Efendi, he went from there to become mîṣṭî in Aghras.

Not happy in any place to which he had been, he finally went to Istanbul with a pension of 1000 akîd and built in Beshiktash a garden, a bath, a mosque and a sâwîye. He began to operate the bath with Aṭeqâzâde Memî Shâh, but after a very short time complaints were lodged with the Grand Vizier İbrahim Pâsha. İbrahim Pâsha sent 100 ṣâbînîm and the bath was pulled down, so much to the joy of some that chronograms were written to commemorate the event. Ghažali wrote a poem of 25 bayt, the Kapîlûğanîne, in which he expressed his grief. Following the death of Memî Shâh and the execution of İskendeîr Celebi, he made his way in 938/1531 to Mecca where he built a garden, a mosque and a sâwîye, and where he remained until his death. Although there is disagreement about the date of his death, the date 942/1535, which is given in a chronogram, seems acceptable.

His risâla Dâfîṣ al-ʾaḥûtâm wa-raʿîṣ al-ʾumûmîm shows clearly Ghažali’s outlook on life. Although Ghažali grew ashamed of this risâla in his old age and tried to collect the copies of it in order to destroy them, he was not successful in doing so. The work is divided into seven chapters and is filled from beginning to end with indecent stories. Along with this aspect of Ghažali’s nature, however, it is worth noting the sincerity which he showed to those whom he loved. After the executions of Prince Korkud and İskendeîr Celebi, he wrote for each an elegy in which he manifests the grief he felt.

He also wrote a risâla entitled Mîfîdî al-hîdâyâ concerning precepts relative to the ritual ablution and the prayer. This risâla was extracted from the Bîdâya and the commentary upon it called the Hîdâyâ (Istanbul Un. Lib., Turkish MS no. 3273, fol. 3a). His various anecdotes, short poems (hîsâs) and chronograms are very fine. Both Kâtîb Celebi...
and Bursali Tahir record that he wrote a history in Persian entitled Mirād-i kādīndt, but Bursali Tahir adds that no copy has yet come to light. He received the nickname "Deli Birader" because of a bayt which he wrote.

**GHAZĀN, MAḤMŪD, Ilkhan [q.v.] from 694/1295 until 713/1304, was born on 20 Rabīʿ I 670/5 November 1271, being the eldest son of Arghūn [q.v.], then only in his thirteenth year. Upon his father's accession Ghażān was appointed governor of Khurāsān, Māzandārān and Khūzestān, to administer during the reign of Ghiyāṭhī [q.v.]. He had been brought up as a Buddhist and, whilst governor, had ordered the construction of Buddhist temples in Kḥābūshān (Kūzān); but shortly before his accession, during the war with Bāydū [q.v.], he had been persuaded by his general Nawrūz to become a Muslim. In his reign Islam was recognized as the state religion, the regime was organized on a basis of Muslim culture, charitable endowments, mosques, theological schools etc., were erected in and around the new capital Tabrīz, descendants of the Prophet were sometimes mentioned in the first place in the state record before princes and princesses of the blood, and lastly the turban was introduced as the court headgear. But Ghażān was more a Mongol than a Muslim; as rules and legislators he was entirely free from biased pietism. Particular attention was devoted to the finances of the country, the currency etc.; Ghażān no longer appears on the coins (the inscriptions on which in Arabic, Mongol and Tibetan), like his predecessors, as representative of the Great Ḥān in Pekin, but as ruler "by the grace of God" (in Mongol inspi-yin kūlūndār "in the power of heaven"). He carried out his plans with ruthless vigour; everyone whom he believed to be opposed to the peace of the realm or to his autocratic rule was disposed of without compunction; among these was the Amir Nawrūz himself, to whom he owed his throne. On the other hand Ghażān's measures increased the prosperity of the country and in particular protected the peasantry from oppression and extortion. The revenue of the state is said to have risen during his reign, from 1700 to 2100 tumāns. Like other Mongol rulers Ghażān particularly esteemed those arts and sciences which might be useful to the State; he himself is said to have been conversant with natural history, medicine, astronomy, chemistry and even several handicrafts; attached to an observatory built by his orders in Tabrīz was a special school for secular sciences (khiṣmīyātū). In addition to his native Mongol, Ghażān is said to have had some knowledge of the Arabic, Persian, Hindi, Kāšmīrī, Tibetan, Chinese and Frankish (i.e., French or Latin) languages.

Notwithstanding his conversion to Islam, he took a great interest in the history and traditions of his own people, on which indeed he was an authority. It was at his suggestion that his minister the famous historian Rashīd al-Dīn [q.v.] compiled his Dīmānī al-tawārīḵā, in which he drew in particular the information of the Mongols was none other than Ghażān himself. Continuing the anti-Mamlūk policy of his predecessors, Ghażān twice invaded Syria. In the first campaign (1299-1300) he occupied Aleppo, defeated the Egyptian army before Hims and entered Damascus; but upon his return to Persia in Dūmākād I 699/February 1300 the country was at once re-occupied by the Mamlūks. For the second campaign he sought the alliance of Christian Europe. There has been preserved in the Vatican archives a letter from Ghażān to Pope Boniface VIII dated 12 April 1302. "We for our part", says the Ilkhan, "are making our preparations. You too should prepare your troops, send word to the rulers of the various nations and not fail to keep the rendezvous. Heaven willing we [i.e., Ghażān] shall make the great work [i.e., the war against the Mamlūks] our sole aim." The expedition to which Ghażān refers was undertaken in the spring of 702/1303: the Mongols were decisively defeated at Shādkāb near Damascus (2 Ramadan 702/20 April 1303) and never again attempted the conquest of Syria.

**GHAZĀT [see GHAZW].**

**GHAZĪ, Arabic active participle (pl. ghāṣūd) used to indicate those who took part in a razzia [see GHAZW], later in a ghazwa [q.v.] "raided against the infidels". This name later grew to be a title of honour reserved for those who distinguished themselves in the ghazwa, and it became part of the title of certain Muslim princes, as "the ghazī" of Anatolia and more particularly the first Ottoman sultans. Corporations of ghāṣīs are attested in Transoxiana and Khurāsān from the Sūmānīd period: these wandering bands who obtained their living chiefly from booty won in the ghazwa, and who offered their services wherever war was to be waged against unbelievers or heathens. Their leaders often achieved great fame and even an official status. But these soldiers of fortune, for whom war was an economic necessity and who were easily transformed by lack of occupation into brigands, became, in times of peace, a danger to the government which employed them; al-Ṭabari records, in 205/821 (iii, 1044), a revolt in Khurāsān, stirred up by one of these mercenaries; Ibn al-Aṣḥāb (viii, 155) mentions that these seditionary elements took part in the revolt of Būkhrā against the Sūmānīd Nasr, about 318/930. However, these groups, referred to by historians as ghūṣūl, fiṣṭān, ʿayyārūn [q.v.], etc., formed a reserve of troops always available to whoever had need of them; Maḥmūd of Ghazna drew on them extensively, taking with him to India as many as 20,000 ghāṣīs ("Ubbī- Manbīnī, ii, 262 f."); he was always in need of money to pay his mercenaries, burdening his people with taxes for this before each campaign (ibid., ii, 168). These groups of soldiers of fortune mentioned by the historians in Transoxiana and Khurāsān offered at the
same time a refuge for political or religious dissidents and an occupation for adventurers of all races, attracted by the lure of plunder. However, for centuries in these eastern provinces the Turks especially were the reservoir from which Persians and then Arabs recruited their mercenaries; hence, although these groups were originally without any national character, the Turkish element, as constituting the military class par excellence, was soon to predominate. Such organizations were not peculiar to the eastern provinces; they existed everywhere where there was fighting to be done, especially in the regions of the frontier zones. Thus they were also found in the Arab-Byzantine frontier zones where, even since the Umayyad period, a state of war had existed. In these regions, where, since the reign of the caliph al-Mu'tasim (218-27/833-42), the Turkish element formed the majority of the fighting men, the Arab-Byzantine frontier battles were more and more to become Turk-Byzantine wars. In this zone where the ghazis were fighting against the abkralis, guardians of the Byzantine frontier who were themselves often recruited from among Turkish mercenaries, there came into existence a population of the marches which to a considerable extent was ethnically the same on both sides of the frontier. We find proof of this state of affairs in the epic literature, both Byzantine and Arabic: the Turcos of the Turkish story of Digenis Akritas, the Arabic epic story of Dhul-Himmah [see ghzu 'l-Himmah], or the Turkish story of Sayyid Ba'ttal [see Ba'ttal]. In this area where pilgrimages maintained a continual state of crusade, the defence of both sides of the frontier was organized in the same way: on both sides there was a spontaneous organization, growing up independently from the frontiers and outside the framework of the state, imbued with the same half-military half-religious spirit. In about 595/1200 the caliph al-Nasir, seeking to strengthen the caliphate against its enemies, reorganized the corporations which were already linked to the principles of the futuwa [q.v.], the code of rules for a virtuous life, according with the tenets of Islamic mysticism and held in common by the artisan, military and administrative classes of the state, to which was added the habit of giving alms and charity; he turned his attention to the military element, which he bound to his own person by new bonds of vassalage. The ghazis, who had at first consisted of a popular movement in which were mingled adventurers and dissidents, were grouped into a corporation which possessed the attributes of a Muslim chivalry and was organized like a religious fraternity, with a ceremony of investiture conferring the title of ghazi, the granting of arms and of ritual emblems, and which was joined henceforth by princes and rulers. In the marches of Asia Minor, however, where in the 5th/11th century the ghazi element was re-inforced by the massive immigration of Oghuz tribes, the movement retained a popular and nomadic character, opposed to the settled and Persianized population of the Saltuk towns. It was these turbulent elements of the marches, taking advantage of the slackening of Byzantine defences after the defeat of Mantzikert, impelled by the need to obtain their livelihood from plunder and at the same time inspired by the ideal of the Holy War, who, without the acquiescence of the Saltuk government, carried out the conquest of Anatolia. The first Turkish conqueror of Cappadocia was a ghazi leader, Emil Danothmend; with him ghazi makes its appearance among the Turks, but the term is even given as a personal name to the elder son of the emir; the Greek legend on the coins of Danothmend's successor reads: Ο ΜΕΓΑΣ ΑΜΗΡΑΣ ΑΜΗΡ ΓΑΖΙ (cf. I. Melikoff, Geste de Melik Danothmend, 1, Paris 1960, 106). But this first ghazi principality of Asia Minor, and which figures in its first inscriptions, as is shown in the inscription of 737/1337, concerning the building of the
Bursa mosque, where Orkhan is called “sultan ibn sultan al-ghusi, ghazi ibn al-ghazi, Shudâ’ al-Dawla wa l-Din, marbân ibn al-âifâ, pahlavan-i dîyân,Orkhan ibn ‘Uthmân-i Ashâq-pa’shâzâ, also reveals that in the first centuries of the Ottoman empire there were four corporations, the first of which he calls the ghâsîyân-i Râm, the others being the akhiyân-i Râm, abdâl-din-i Râm and badjiyân-i Râm. But when the Ottoman principality grew into an empire and the central power became firmly established, the ghâzî, who had taken an active part in the conquest of Anatolia, were subjected to the authority of the state and the corporations were gradually disbanded. The work of the conquerors was accomplished and they had now to give place to the organizers of the empire.

**GHAZI,** King of 4râk, son of King Fâysâl I and his cousin Hâzîma, was born in the Hidjaz in 1212, moved to Baghâdî in 1221, and spent his childhood there until he was sent to Harrow School in England. He mounted the throne in the autumn of 1234, equipped with excellent social gifts; but he lacked seriousness or any taste for public affairs. He married ‘Âliyya, daughter of ex-King 4Ali shortly after his accession, becoming the father of the future Fâysâl II in 1235. His short reign was marked by repeated military interventions in the Government, including the short-lived coup of General Bakr 4Sîdî, 1236-7. He died in a motor accident in the spring of 1237.

**GHAZI,** Sayyf al-Din, Zangid prince of al-Mawâsîl from 541/1146 to 544/1149. See al-Mawsil, nûr al-Din, zandids.

**GHAZI CELEBI,** ruler of Sinope (700/1300 - circa 730/1330 ?) known especially for his piratical exploits against the Genoese, and sometimes with and sometimes against the Greeks of the Crimea, and skill (he is said to have been able, by swimming under water, to pierce the hull of enemy ships), all of which testify to his reputation (see the episodes and the sources, Genoese, Byzantine (Panaretos) and Muslim (Abû ‘l-Fidâî and Ibn Battûta), in W. Heyd, Histoire du commerce du Levant en Asie, iii, 485 and especially 457, and it is real that this maritime activity represents the most important feature of his policy—certainly nothing is known of him beyond this; indeed—and this is not without significance—even his identity is in doubt. According to 4‘Ali, Kunk al-akhbâr, v, 22 (following Rûhî), he was the son of the Saljûq sultan of Râm, Masûd II, and on the death of the last sultan, 4Alû al-Dîn (at the beginning of the 8th/14th century), was granted by the Ilkhan Ghiyân the northern coastslands of Asia Minor; but this is a late version, perhaps entirely due to the fact that the tombstone of Ghiyân Celebî (TOEM, ii, 422) calls him the son of Masûd Celebî, or to the fact that the career of Masûd Celebî II and of his father Kay-Kâhs in the Black Sea was well remembered; more nearly contemporary authors (Ibn Battûta, ii, 450-2, tr. Gibb, ii, 466-7, and, less clearly, Abu ‘l-Fidâî Takwîm, ed. Reinaud-de Slane, 453) make Ghiyân Celebî a descendant of the famous Mu’nîn al-Dîn Sulaymân the Pervâné, whose sons Muhammed and, more especially, Masûd had retained Sinope, their father’s fief, until 1300 (cf. Mûnedjûm bashî, iii, 31), and this version, although dubious, is not impossible. Ghiyân Celebî died, if the inscription on the tombstone has been read correctly, in 722/1322, a date which conflicts with reports of his being active in 1324. In any case when Abu Battûta passed through Sinope (in 1331 or 1333 ?) he was certainly dead—from an excess of hashîsh it was said—and the town had been occupied by the Isfandiyârî of Kamastâmî, but it is possible that Ghiyân Celebî had accepted the suzerainty of this prince; his death is probably therefore to interpret al-‘Umarî, ed. Taeschner, 23). It is in any case impossible to deduce—as some authors have done—from the confused data on the Isfandâyîrîs (cf.) that Ghiyân Celebî lived until 1356.

**Bibliography:** apart from the sources mentioned in the article, see Ahmed Tewhid, in TOEM, i, 199, 257, and 317, and xv (1925), 305; Zambaur, 448 (inaccurate); Ibn Battûta, tr. H. A. R. Gibb, ii, 466, n. 195; Ep., art. Sinûb. (C. CAREN)

**GHAZI ‘L-DIN HAYDAR** (not Haydâr al-Din Ghiyân as given in the Cambridge History of India, v, 575, 578), the eldest son of Nawâwîb Sâ’dât All Khân, ruler of Awâdî (1212-29/1798-1814), was born at Basawll in Rohilkhand in 1188/1774. He succeeded his father as the Nawâb-Wazîr of Awâdî in accordance with the rule of primogeniture, in 1229/1814.

Right from the time of his accession he was under the influence of the British Resident, Col. John Bailey, who did not hesitate to interfere in the day-to-day administration of the state. Supported by the Governor-General of British India, Lord Hastings, who wanted to reduce the prestige of the Mughal emperor of Delhi, he declared his independence in 1234/1819 and assumed the royal title of Abu ‘l-Muzaffar Mu’izz al-Dîn Shâh-i Zamân Ghiyân ‘l-Dîn Haydâr. A huge sum of two crores of rupees (20,000,000) was spent on the manufacture of a throne, made of pure gold and silver and studded with precious stones, and a canopy richly decorated with pearls and gold and silver thread. The same year he struck his own coinage bearing the legend: stika sad bar sim-u zar az fadl-i rabb-i dhu ‘l-minan, Ghiyân ‘l-Dîn Haydâr-i ‘all nasab shâh-i sman. The obverse bore a coat of arms with two fishes (the insignia of the House of Bârâhân al-Mulk [q.]), supported by two tigers bearing banners. These coins, which replaced the pahiyahh-dâr rupee of Shâh ‘Alî II, were in circulation from 1235/1819 until 1247/1827.

A fine silver medal, commemorating the commence-ment of his rule, was also issued during the first year of his reign. This medal carried his full-faced portrait. An unsuccessful ruler, Ghiyân ‘l-Dîn Haydâr
was a debaucher. He was under the baneful influence of rapacious and unscrupulous ministers like Sayyid Muhammad Khan, commonly known as Agha Mir and entitled Muhhammad ad-Dawabri, who had been one of the pages of Ghazi 'l-Din Haydar before his accession. His maladministration, combined with his extravagance and dishonesty, hastened the decline of the Awadh dynasty.

Ghazi 'l-Din Haydar was benevolent towards the poor and the needy, and provided dowries for innumerable poor girls from the public treasury. Among the notable buildings constructed during his reign are: the Qadam Rasul, where a piece of stone, said to contain the footprint of the Prophet, was enshrined and the Imambafah Shah Nadjaf, an imposing building dedicated to mourning for the son of Agha Mir. This building.

Ghazi 'l-Din Haydar died in 1243/1827 and was buried in the building.

Ghazi Giray II, known as Bora ("tempest"), twice Khan of the Crimea (996/1588-1002/1596 and 1002/1596-1007/1607). Born in 901/1554, he first distinguished himself in 986/1578 as general of Crimean forces operating in support of the Ottomans against Persia. In 1588 he invaded Moldavia and captured their capital, Tervet, which is ascribed to him, is in fact Burhdn-i fcdti*.

The Ottoman Sultan (Siileyman I) refused to rebel against Persia in 1594. Ghazi Giray, unable to resist, had been one of the pages of Ghazi 'l-Din Haydar before his accession. His maladministration, combined with his extravagance and dishonesty, hastened the decline of the Awadh dynasty.

GHAZI GIRAY II — GHAZI MIYAN

to advance through Shirwan to attack Persia (Feridun, Munshîât al-sulûti, ii, 119), but died soon after of plague (Sha‘bân 1016/November 1607). His son and kâlehyak Taktamish Giray, whom he had nominated to succeed him, was proclaimed khan by the bâgs of the Crimea, but the Porte refused to recognize him.

Ghâzi Girây, one of the greatest khanen of the Crimea, managed to steer a course between the Porte, which wished to have the Crimean forces always at its disposal, and the Crimean aristocracy, which was seeking independence of the Porte. During his reign the Khanate co-operated more closely than ever with the Porte, and Ottoman influence, in culture and in administration, greatly increased: the haspâ-aghâsî (esmak-aghâsî, bash-aghâsî), appointed from among the Circassian slaves, came to occupy a prominent place in the government comparable with that of the Grand Vizier; and a corps of mounted musketeers (tufânkähir), bound to the ruler’s person, was formed. Ghâzi Girây was at the same time a genuine literary artist, occupying a unique place in Crimean literature and in the Ottoman diwân tradition. In a sincere and fluent style, he wrote prose and poetry in Persian, in Arabic, and in Crimean, Câghatay and Ottoman Turkish (he used as makhlûs ‘Ghazîiyî’ and ‘Khan Ghazîî’), introducing into Ottoman poetry the new theme—later much imitated—of the valiant sentiments of the soldier. His works include (1) a complete manuscript published in fascimile by I. H. Ertaylan (see Bibli.); (2) a mathnawi entitled Gûl u Bûlûbul, in Câghatay Turkish (Ertaylan, 50-3, 62 n. 2, where the suggestion that it is a nasîrî to Fudullî’s Nûk u bud is rejected); (3) a lost ‘contention-poem’ (munshanâra) between Coffee and Wine (see Pedewî, Târîxhî, ii, 251); and (4) several letters in prose and verse (to be found in various însâd collections, e.g., British Museum MS Or. 6261; see also Abdullah-oglu Hasan, Kurîm tarîxhine ait nollar ve vesikalar, in Azerbeycan Yurt Bilgisi, iii (1932), 162-4, iv-v, 159-66, vi-vii, 249-52). He figures prominently in a romantic novel by Nâmîf Kemâl (q.v.).

GHAZİ GIRAY İII, KÂNîn of the Crimea from 1116/1704 until 1118/1707. In Radjab 1110/ January 1699 he was appointed Nureddin (Nûr al-Dîn [q.v.]) by his brother Dewlet Giray II, but rebelled, in collusion with the Noghay, and was dismissed. He came to Edirne and was exiled by the Porte to Rhodes. Upon the accession of his father Salar Giray [q.v.], in 1114/1702, he was recalled and made kâlehyak [q.v.], and at his death succeeded him as Kânîn (3 Ramadân 1116/30 December 1704). In spite of the Porte’s pacific attitude, he himself followed the Porte’s efforts to bring the Noghay directly under Ottoman control, and was deposed (Rûbû 1–8 Hidilja 1116/March 1707) and ordered to reside at Karin-abad (Karnobat, in Bulgaria), where in Rabî‘ II 1120/June 1708, aged 36, he died of plague.

GHAZİ KHAH [see Supplement].

GHAZİ MIYÂN, popular title of Sîhâb Salar Masûd‘în Giray, one of the earliest and most celebrated of Indo-Muslim saints, who lies buried at Bahraîc in Uttar Pradesh, in the district of Bahraich in the Banaras subdivision of the Allahabad district. The tomb, which is now lost, has been a place of pilgrimage for hundreds of thousands of Hindus and Muslims every year. The legend of Salar Giray passed his youth in the field by the side of his father Salar Sâhî. At the age of fourteen, he started on his invasion of Hindustân. With Sâtrîk (in Bâra Banka) as his base of operations, he sent out his lieutenants in every direction to conquer and proselytize the country. Sayyîd Sayf al-Dîn and Миyân Radjab of his army were sent to Bahraîc but they failed to achieve their objective. Sâlîr Masûd‘î then marched in person to Bahraîc. He was successful in the beginning but was ultimately overthrown and slain with his followers on 18 Radjab 124/30 June 1633. His servants buried him at a spot he had earlier chosen for his resting-place. The fact that his name and his grave survived through the long years between the Ghaznavid invasion and the Ghûrid occupation of northern India shows that there was some Muslim population to look after the grave and to preserve the tradition of Salar’s martyrdom. Some aspects of religion and politics in India during the 13th century, (Allgar, 1961, 76-7). Iltêmish’s son, Nâsîr al-Dîn Mahmûd, was the first prince of the ruling house of Delhi to live in Bahraîc and during his governorship Muslim colonization began in that region; but there is no reference to Sâlîr Masûd‘î in Minhäjî’s account of the prince. According to Fîhîr (Archaeological survey report, ii, 292), the first building over his grave was constructed by Nâsîr al-Dîn Mahmûd. Muslim b. Tughlûk (725/1325-732/1351) was the first sultan of Delhi to visit his grave. Frîzû Shâh Tughlûk also made a pilgrimage to Bahraîc in 776/1374 and was so overwhelmed by its spiritual atmosphere that he had his head shaved (masâlûk shud) in the mystic fashion and adopted an other-worldly attitude (‘Aftî, Ta‘rîxhî-I Frîzû Shâhî, 372). Some buildings, wells, shades and verandas are said to have been constructed by him.

The tomb of Sâlîr Masûd‘î is one of the most popular centres of pilgrimage in India. Hundreds of thousands of Hindus and Muslims visit it every year. The legend of Ghûrî Miyân—aalso known as Bâlâyî Miyân, Bâlâyî Pîr, Hataylî Pîr etc.—occupies a unique place in the cultural life of the people of northern India, particularly in the villages of eastern Uttar Pradesh, Bihar and eastern Bengal. Many tales about him are current amongst the people, and many fairs,
festivals and feasts are held in different towns and villages of Uttar Pradesh (e.g. Meerut, Sambhal, Badaun) to commemorate different events of his life. Of all the places, Ghazi Miyan was born in the town of Ghauspur in the northern Indian province of Uttar Pradesh in the town of Meerut. Certain old graves are considered to be those of his martyrs-companions (e.g., the grave of Miran Mulhim in Badaun, see Radi al-Din, Kanz al-tawârîkâh, Badaun 1907, 51). The tradition of Ghazi Miyan has assumed the form of a popular superstition in the villages of eastern Bengal, where large number of symbolic graves of the saint have been put up and thousands of Hindu and Muslim villagers make offerings to them. As it is believed that he was slain while his nuptial ceremonies were being celebrated—which thus became in a double sense his *urs*—marriage processions in his memory are held at many places with *talams* (banners) on the first Sunday of the month of Dhiayth (May-June). As this festival led to some immoral practices, Sikandar Lodî (894/1489-923/1517) banned it, but it was revived later.

Once the Emperor Akbar (963/1556-1014/1605) had assumed the form of a popular superstition in the vicinity of Agra. The death of the saint is commemorated on the 12th, 13th and 14th of Radjab every year. 

**GHAZI MUHAMMAD** (see Kâpu Muhammadd).

**GHAZIYAPUR** (see Supplement).

**GHAZIYA** (l.) plur. *ghawzi*, the name for Egyptian public dancing-girls. In the 19th century, according to Lane, they came from a single tribe and married only within it. They gave lascivious performances in the streets and courtyards, and performed privately in the *harims* for certain celebrations or in special places for upper-class Turkish and Armenian ladies, but among the most beautiful women in Egypt and as common prostitutes; they distinguished the *ghawziya* from the *alîma* [*q.v.*] or female singer.

Today this distinction is less sharp. In Egyptian cities both the dancing-girl and the singer are now called *alîma* (colloquial), while in the villages the dancer is still often called *ghawziya*. The dancers do not come from a distinct tribe but from various sorts of low-income families, usually urban. They are taught the art, after showing some natural ability, by female teachers who are sometimes called *sunûlîm* (plur.) too. Both the *ghawziya* and the *alîma* must now be distinguished from the better-paid, better-trained "Oriental" dancer (*rahîsha*) who performs in the modern night clubs and films and at private celebrations.

The *ghawzi*, according to Lane, preferred to call themselves *Baramika*. *Ghawziya*, the origin of which is uncertain, is still a derogatory term avoided by the dancer herself. In the villages it connotes a woman outside the pale of respectability. *Ibn ghawziya* is thus a serious insult. See further RAKS.

**Bibliography:** Lane, Manners and Customs of the Modern Egyptians, ch. xix; Dozy, Suppl., s.v.; M. Berger, *The Arab Danse du Ventre*, in Dance Perspectives, x (1961). (M. Berger)

**GHAZNA,** a town in eastern Afghanistan situated 90 miles/145 km. south-west of Kâbul in lat. 38°18' E. and long. 33°44' N. and lying at an altitude of 7,280 feet/2,220 m.

The original form of the name must have been *Ganak < gandia* ['treasury'], with a later metathesis in eastern Iranian of *-ns/-nd*- to *-zn*-. This etymology indicates that Ghazna was already in pre-Islamic times the metropolis of the surrounding region of Zâbulistân. The parallel forms *Ghanî* (in present-day use) and *Ghaznin* must go back to forms like *Ghanî* and *Ghaznin*; the geographer Mukaddasî and the anonymous author of the *Hudud al-Sulam* (end of 4th/10th century) have *Ghaznin*, and Yâqût says that this is the correct, learned form.

The oldest mention of the town seems to be in the second century A.D., when Ptolemy gives Ganijazka in the region of Paropamisâdâs, locating it 1,100 stadia from Kâbul, but to the north of that town. It must have been of some significance under the successive waves of military conquerors in this region, such as the Kushans and Ephthalites. The Chinese Buddhist pilgrim Hiuen-Tsang (7th century A.D.) mentions it as Ho(k)-si(k)-na = Ghaznik, and describes it as the chief town of the independent kingdom of Tsau-ku-ch'a = Zâbulistân. Buddhism was known in the region, for recent excavations at Ghazna have uncovered a Buddhist site and many clay and terracotta buddhas have been found. (It should be noted that A. Bombaci, in *East and West*, vii (1957), 255-6, doubts the accepted identification of Ghazna with the places mentioned by Ptolemy and Hiuen-Tsang.)

The history of Ghazna in the first three Islamic centuries is most obscure. The armies of the Arab governors of Khurâsân and Sîstân penetrated into Zâbulistân in *Abû al-Malîk*’s reign and fought the local rulers, the Znibîl, whose summer quarters were in Zâbulistân (Balâbduri, Futâh, 397; *Tabarî*, ii, 488).

The population of this area was doubtless basically Iranian, but with a considerable admixture of Turkish and other Central Asian peoples brought in by earlier waves of conquest; as the homeland of Rustum, Zâbulistân plays a part in the Iranian national epic as a place of land and romance, as among the most beautiful women in Egypt and as common prostitutes; he
the Zunbil of that time, but it is only with the 4th/10th century that the history of Ghazna, by then a major centre of trade, becomes reasonably clear.

It has been suggested that AlpTigin, a Salar commander, set up a palace in Ghazna, but this is speculative. The Zunbi of Ghazna is known to have been a major centre of trade and religion. The city was known as a busy entrepot for goods from Persia and India, and the region was known for its abundance of provisions.

After the Ghaznavids' loss of their western territories, Ghazna and Lahore became two main centres, and the minting of coins was concentrated on these two towns. In the first half of the 6th/12th century, Ghazna was twice occupied by Seldjuk armies (510/1117 and 529/1135), but it suffered much lesser disaster than other Seldjuk possessions. In 545/1150-1 when AlpTigin's army was defeated by Seljuk forces at Kanawdj and Muttra, the city was sacked and its markets and houses were destroyed.

Ghazna was then again taken by Ziauddin Ayubi in 558/1163, and after an occupation by a group of Ghuzz from Turkestan, passed into the hands of the Seldjuk armies. The city was then sacked by the Seljuk Sultan, a few miles to the north of the town, has survived to this day. For all these building works, Ghazna had no artistic traditions of its own.

request, the alleged Gates of Somnath captured by Mahmud of Ghazna eight centuries previously.

Today, Ghazna is a town of some importance; it lies on the Kabul-Kandahar road and is the junction for the roads eastward to Gardiz and Māṭūn, Urgun and Tōdī. It is the administrative centre of the province (wulāyat) of Ghazna. The great majority of the people are Persian-speaking and are Sunnī in religion.

('C. E. Bosworth)

GHAZNAWIDS is the name given to the dynasty of Turkish origin which was founded by Sebūtkīnī, a General and Governor of the Sāmānīds [q.v.]. With Ghazna [q.v.] for long its capital, the dynasty lasted for more than 200 years, from 367/977-8 to 538/1147, in eastern Iran and what is now Afghanistan, and finally only in parts of the latter. Its last ruler, ‘Umar, held the title of Ghur (where native potentates had submitted to his overlordship), northern Balūcīstān (around Ḳusdār), Afghanistan, and Ghūzni, as well as Ḳazak and Ghur (where native potentates had submitted to his overlordship), Ṣūṭān, Khūrāsān, and Persia although historians call them Sultan from the start; on coins, ‘Ībrāhīm (no. XII below) was the first to bear this title.

From the time when Alptūgīn established himself in the region of Ghazna in 144/955-6 and made himself to a great extent independent of the Sāmānīds, the area surrounding this town remained in the hands of Turkish rulers (for details see Ghazna). In 367/977-8 (I) Sebūtkītnī gained power, and continued to rule until his death in 387/997. The new ruler, on the evidence of his coinage, acknowledged the overlordship of the Sāmānīds, and gave them help against the Smīḏjidīs [q.v.] in 992 and 995. He also turned his attention to the Hindū Empires in the Pāṇḍīga [q.v.] and in particular the Ṣūṭān dynasty, whose head, Ḳiyāpūlī, he defeated in 979 and 988, thereby acquiring the fortresses on the Indian frontier. His empire furthermore included northern Balūcīstān, Ḳūr, Zābulūstān and Bactria (Tukharistan) (on the subject of these and all further geographical references in this article see the entries under individual words). In this way, Sebūtkītnī, an extraordinarily powerful and ambitious ruler, and a convinced Sunnī, laid the foundations of one of the last lasting empires in the Indo-Afghan border regions.

On this foundation, Sebūtkītnī’s son (III) Māḥmūd, who after quarrelling at one time with his father but reconciled himself towards the end of the latter’s life, was able to embark upon the conquest of the Pāṇḍīga. By so doing, he created for Islam an extensive territory in India, and laid the foundation for the religious division of this area, the latest effect of which has been the creation of the independent state of Pakistan. Māḥmūd swiftly superseded his brother (II) Ismāʿīl, who had been designated by his father as his successor, and by 389/999 had finally made himself secure. There is no doubt that he is the most important ruler of the dynasty. Culturally already strongly inclined towards Iran and receptive to the developing new Persian literature, he perseveringly encouraged Firdawsī [q.v.], although he did not fulfill the exaggerated demands made by the latter since he could not overlook the expenses for his task of spreading Islam in India. Politically Māḥmūd was in a fortunate position, since on his ascending the throne the Sāmānīds had lost their influence and he was able to come to an agreement with the victorious Karākhānīds [q.v.], which in essence laid down that the Oxus should be the frontier between the two kingdoms. A convinced Sunnī like his father, Māḥmūd exchanged the ties which Sebūtkītnī had had with the Sāmānīds for an allegiance to the ʿĀbbāsīd Caliph al-Ḳādir [q.v.], an allegiance which remained purely nominal, since at that time distant Baghdad could not exert any influence so far east, and the Caliphs were in any case dominated by the Shīʿī Būyids [q.v.]. The latter had passed the zenith of their power and were several times the target of attacks by Māḥmūd, who thereby also rendered a service to the Caliph. At the same time as his 17 campaigns in the Pāṇḍīga, Māḥmūd was able to push the Būyids back a considerable distance and exert his influence in Khūrāzīm [q.v.]. On his death (23 Rabiʿ II 421/30 April 1030), his empire comprised the Pāṇḍīga and parts of Sīn (plus a series of Hindū states in the valley of the Ganges which acknowledged his overlordship), northern Balūcīstān (around Ḳusdār), Afghanistan, Khūrāsān, Ghūzni, as well as Ḳazak and Ghur (where native potentates had submitted to his overlordship), Sīṭān, Khūrāsān, and Persia.

opponent of his own calibre in Persia. Now, however, just at the time when Masʻūd came to the throne, the Saldjiḳs [q.v.] began to cross the Oxus and little by little to occupy Khurāsān. Masʻūd's resistance had little success; considerable parts of his army were engaged in the Pandhār, and his forces were made up of very diverse elements: Iranians of various races, and also Indians; his own fellow Turks were only sparsely represented. On 8 Ramādān 431/23 May 1040, on the steppes of Dandān(a)kān, Masʻūd was decisively defeated by the Saldjiḳs under Toghril [q.v.], a defeat which cost him his Persian possessions (cf. B. N. Zakhoder, Dandanekan (in Turkish), in Bulletin, xviii/2 (1954), 581-7). On a march to India Masʻūd was overthrown by a conspiracy and murdered forthwith in prison (433/1041). (For details see Masʻūd b. Māhmūd.

An attempt to restore the blinded (IV) Mūhammad on the whole to maintain the power of the dynasty in India, even though some areas were temporarily lost and even Lahawur was threatened for a time. Mawdūd was about to set forth himself on a campaign against the Saldjiḳs to attempt the recovery of Sistān, when he died in Ghazna on 20 Radjab 440/9 Jan. 1049 by Mawdūd's brother (VIII) ʻAlī b. Masʻūd I and on his overthrow, in
May 1049, by (IX) ʿAbd al-Raḥīd b. Māhmūd. Although this ruler lived in peace with his neighbours, he did not succeed in restoring internal stability. Of all the Ghaznavid princes, he was the only one to his relations with a certain slave, Tāmīn, who was forcibly removed as soon as ʿAbd al-Raḥīd himself was murdered on 10 Shawwāl 443/February 1052. The murderer, a former slave of Masʿūd I and now Commandant of Zaranj, (X) Togḥī, fled, disposed of other members of the royal house and himself attempted to seize supreme power, but was murdered by followers of the dynasty on 17 Dhu ‘l-Ka‘da 443/21 March 1052.

With (XI) Fārūkhīzād b. Masʿūd I the hereditary ruling family returned to the throne. With the help of General Nūḥ-tīgin, who had already served ʿAbd al-Raḥīd loyally, the new ruler was able to repel the Saldjuks, who in the meantime were making further advances on Bāhdād and Anatolia, when they attacked his central territories; on the other hand, Mārkān was lost to them. Fārūkhīzād died at the early age of 34, in Safar 451/March 1050 apparently of cholera.

His brother and successor (XII) Ibrāhīm b. Masʿūd I, signed a treaty of friendship with the Saldjuks, being obliged to cede to them Khūttalān, Caghānīyān and ʿAvidāyān. Marriage alliances and later rich presents sealed the settlement thus reached with their long-standing main opponents in the West, who for their part promised to abandon their expansionist policy in the East. In other ways too, the new ruler proved himself an able diplomat and a cautious politician, avoiding dangerous undertakings, but essentially capable of preserving and defending his possessions. Ibrāhīm thus had his hands free for exploits in India (455/1063-6). He succeeded in capturing a number of fortresses and in re-establishing the influence of the Ghaznavids in the Pandjak. Thenceforward Ibrāhīm called himself ʿSūlṭān’ on his coinage. Finally he delegated the continuation of the campaigns to his son Sayf al-Dawla Māhmūd, whom he made Governor of Lāhāwūn, and who succeeded immediately in capturing Agra, and later other strongholds. When he attempted to seize power for his father, he was thrown into prison with his friends (481/1089). Ibrāhīm died on 5 Shawwāl 492/25 August 1099, after a reign of 40 years, the longest recorded in this dynasty.

His son and successor, (XIII) Masʿūd III, immediately embarked on an attack on Kanawdī, whose Hindu rulers were forced to submit and were brought to Ghazna in chains; a later attempted revolt in the town was suppressed. Otherwise, Masʿūd III kept up the ties of friendship and marriage with the Saldjuks and had a peaceful reign, until his death, at the age of 56, in Shawwāl 508/February-March 1115.

As had happened two generations earlier, the death of Masʿūd III meant the outbreak of fratricidal war. Three of his sons took their turn as head of state. (XIV) Shārūzād was forced after one year (Shawwāl 509/Feb.-March 1116) to flee to Tabaristān before his brother (XV) Malik Arslān, and early in 510/middle of 1116 he fell in an attempt to regain control of Ghazna. But Malik Arslān’s days were also numbered. Another brother, who had escaped his sword, (XVI) Bahārām Shāh, won the help of Sandjar [q.v.], and was able to march into Ghazna in his train on 12 Shawwāl 511/6 February 1118 after two successful battles; Malik Arslān had fled to India.

Bahārām Shāh had to acknowledge the suzerainty of the Saldjuks and pay them high tribute; as a guarantee of this one of their tax controllers remained in Ghazna when Sandjar vacated the town after 40 days, taking with him the State Treasure. Although these conditions were onerous, they also guaranteed Bahārām Shāh Sandjar’s solid support. It was only with Sandjar’s help that he could fend off an attack by Malik Arslān from India; his brother fell into his hands and was executed in Diwānād II 512/September-October 1118. Bahārām Shāh then established his authority in the Pandjak in three campaigns (Ramadān 512/January 1119, Diwānād II-Shawwāl 514/end of 1120, and 523/1129). Otherwise the first decade and a half of his reign appear to have passed peacefully; at any rate no records of battles have survived. In 1135-6 Bahārām Shāh tried in vain to rid himself of Sandjar’s overlordship together with the crushing tribute, of 10,000 dinārs per day (so at least according to the sources). Nevertheless, in spite of his defeat by Sandjar, Bahārām Shāh was confirmed in his hereditary territories just as was the Khwarizm Shah Atsiz [q.v.] after his rebellions. Like the latter, Bahārām Shāh now remained loyal to the Saldjuks Sultan, although he fell out with the rulers of Ghur, and had one of them—his son-in-law—poisoned whilst visiting Ghazna. A brother of this man, after losing a battle (2 Muḥarram 544/12 March 1149), was publicly hanged on Bahārām Shāh’s orders, with many of his advisers. Both these acts were revenged in the most terrible way by a third brother, ʿAlāʾ al-Dīn Ḥusayn, in an attack on Ghazna towards the end of 1150. The complete destruction of the capital and the utterly ruthless murder, rape and deportation of the inhabitants— who were certainly not responsible for the conduct of their ruler—rightly gained for this monster the name of Dhāhānsūr (Burner of the World), by which he is known to history.

Bahārām Shāh had meanwhile fled to India; thence, when ʿAlāʾ al-Dīn had been taken captive by the Saldjuks, he apparently returned to Ghazna and died, it is thought, early in 552/February-March 1157. There is no doubt that by his treacherous murders and the personal cowardice with which he deserted his subjects in a moment of crisis Bahārām Shāh contributed, in a completely personal way, to the disintegration of his ancestors’ empire, which now could no longer be checked.

The rule of Bahārām Shāh’s second son (XVII) Khusraw Shāh, was restricted to Ghazna, Zabulistan and Kābul—from the Pandjak. Further parts of the empire, Zambilwār and Bust, had in the meantime been taken over by the Ghūrids [q.v.]. Teginālūd also fell into their hands after a clash with Khusraw Shāh in the middle of 552/summer of 1157. As Sandjar died just at this time, Khusraw Shāh lost his only helper against his ever more powerful enemies in Ghur. By Radjāb 555/July 1160 he was dead.

His son and heir (XVIII) Khusraw Malik, saw his possessions dwindle bit by bit, until the empire of the Ghaznavids ceased to exist. Already at the beginning of 558/1163 he lost Ghazna and all his Afgān lands to the Oghuz (q.v.) of the Oguz (q.v.) to whom Eastern Persia too was exposed after the death of Sandjar. It was not long before the Ghūrids seized power here also; a member of their ruling house, Shībāb al-Dīn, was put in charge of these territories, and used them, as Māhmūd had done before him, as a jumping-off ground for an advance on the Pandjak, where Khusraw Shāh still retained Lāhāwūn (his capital), Peshwār, Mūltān and Sind. On the pretext that he was obliged to take action against the
native Karmatls, Shihâb al-Dîn took Multân in 571/1175-6; in 575/1179-80 Peshawar fell into his hands. Finally he forced Khusraw Malik in Lâhâwûr to pay him tribute and give up his son, Malik Shâh, as hostage. Even so it was no easy task for the Ghurid prince to dispose of Ghaznavid rule completely, for the Indian tribe of the Khokharas was collaborating with Khusraw Malik. Only after Lâhâwûr had been besieged several times was Khusraw Malik forced by hunger to yield, in Djmâdâ I and II 583/July-August 1187. After some delay he was sent to Ghuristan and imprisoned in a castle in Ghuristan. There he was put to death with his sons, probably at the end of 585/beginning of 1190, when the Ghurids found themselves threatened by the Khârizm Shâhs.

"Thus Sebûktîgin's house came to an end, and nothing was left of these mighty rulers but the historical memory" (Mîrkhând, Bombay (lithograph) 1849-50, 135), almost at the same time, incidentally, as the last Saljûqs also disappeared from history before the advance of another new dynasty, the Khârizm Shâhs.

In contrast to the Sâmânîs and the Saljûqs, the cultural significance of the Ghaznawids after Ma'hmûd's death was slight. As far as can be seen, the dynasty assimilated Persian influence in the realms of language and culture as quickly as did other Turkish ruling houses. But, leaving Firdawsî aside, they were not privileged to have a really important poet at their court. On the other hand, we are indebted to one of their leading officials, Bayhâkî [q.v.], for a uniquely detailed picture of early Islamic-Iranian history; for the period of Sultan Masûd I, it is also a mine of information on cultural and diplomatic matters and the technique of government.

The life of the court, with its receptions and parties, and the form of government were in accordance with the customs of other Sunnî empires on Persian territory at this time. It is however worth noting that the principal ministers rarely changed, and therefore must on the whole have worked in harmony with their rulers.

Accession to the throne took place with the customary ceremonials, especially when the succession was peacefully established. The rulers counted among their principal duties a reverent attitude to the Caliphs, and the protection and dissemination of the Sunna—in opposition to the Hindus as well as the Shî'is and the Karmâtîs in Multân. The fact that at the same time execution and torture were allowed in the repression of revolts or the "punishment" of defeated enemies was in accordance with the ideas of the time. The financial demands made on their subjects certainly varied according to what was required for waging war, paying tribute, and possibly also supporting an extravagant court, although it would appear that they did not exceed the usual average elsewhere, just as the rulers of the dynasty after Masûd I were average personalities. Of the longer-lived members of the dynasty, Bahrâm Shâh can be considered the least conscientious and indeed also the least capable.

Art and Monuments

Corresponding with the pre-eminence of the Ghaznavid dynasty there was, for about a century, an efflorescence of architecture and craftsmanship promoted by the tastes and opulence of those powerful patrons, and with its geographical centres in the eastern provinces of Iran, which for so long were a meeting-point of Islamic and foreign artistic currents. Quite certainly, this flowering sprang directly from the earlier experiences of the Sâmânî centres in Khrûsân or Transoxania and, in its last phase, it intermingled with the development of the art commonly denoted by the name Saljûqî, which was destined to achieve a renown that reached far beyond the limits of the empire of the Great Saljûqs. But the style developed within the Ghaznavid territories, from the reign of Ma'hmûd b. Sebûktîgin and under his immediate successors, took an equally significant part in innovation, thus allowing us to emphasize its importance as well as the exemplary character, for the later evolution of Islamic art, of the works of art then executed in the residences, distant though they were, of Ghazna, Bust, Balûk, Harât or Nîshâpûr.

Too often, we have to deplore the ruin and disappearance in the centuries that followed, of these monumental works, as well as of their furnishings. The sites of the ancient Ghaznavid capitals are today deserted, and the chroniclers' accounts can restore nothing to us save the astonishment of contemporaries at the ornateness of their edifices, the brilliance of the official ceremonies that were performed in them and the collection of objects of value which the conquest of India had made it possible to bring together. This is the point that emerges for example from the unfruitful attempt made earlier by A. U. Pope to evoke Ghaznavid art by starting from the imprecise facts contained in the literary sources (cf. A survey of Persian Art, ii, 797-80).

On the other hand, the various archaeological remains which have survived to our own time, our knowledge of which has been considerably increased within recent years, provide an insight,
stimulating in itself, into the art that flourished under the aegis of the Ghaznawids, and it is to be deplored that they have not yet given rise to any general work, pending the coming of the new discoveries which will perhaps one day complete the instruction they have imparted.

In these remains, traces of imposing edifices can be found, from the minarets at Ghazna to the castles in the "royal town" of Bost [q.v.], all situated within modern Afghanistan, to which no doubt should be added the half-ruined remains of the so-called mausoleum of Arslân Dîjâhîb at Sanghâbêt, of which we have only a description made some time ago (cf. E. Diez, Churussanische Baudenkmäler, Berlin 1918, 52-5).

The minarets had long been known in the field of ruins at Ghazna, where their prism-shaped brick plinths still stand, entirely covered with decorations and inscriptions; but only recently have both been attributed to Ghaznawid sovereigns of the last period, Mas'ûd III (d. 508/1114) and Bahârân Shâh (d. 547/1152), after having formerly been incorrectly described, on the strength of ancient travellers, as "victory towers" of the conqueror of India and his son Mas'ûd I. Their archaeological significance has thereby been slightly modified, particularly in regard to the date of the appearance in Ghazna of these brick buildings, described by the simple use of brick decorations, which adorn the silhouette of the last minaret, so long regarded as being a century older.

The ruins of Lâshkârî Bâzâr, on the other hand, on the site of Mahmûd's "camp" in the suburbs of Bost, which also became a favourite residence of Mas'ûd I, constitute an architectural ensemble, the great extent of which has only just been revealed by excavations conducted by the French Archaeological Mission in Afghanistan—and still incompletely, since as yet only a preliminary report has been published. Three palaces built in a line along the bank of the Helmand, formerly surrounded with enclosures and gardens, as is shown by their high outer walls, testify to the vigour of an architectural tradition directly related to the customary methods of construction in use in palaces of the Caliphs in Abbasid 1'ârak. But the details of their plans, in which traces of successive alterations do not fail to raise delicate problems of date and attribution, also deserve attention, starting with the cruciform lay-out of the mausoleum round the central courtyard of the South castle, where we can see the application of a typically Khurâsânian formula and a clear statement of the welcome subsequently accorded in Iran to the niche reveals a lobed profile, and tombs attributed to Seleucid and Mahâmîd.

Finally, in the third category are the various products of luxury crafts, of which interesting specimens have been preserved, though without attracting any but the most spasmodic attention, except for ceramics. Here, in fact, the discoveries at Lâshkârî Bâzâr, enriched by the results of digging on the actual site of the town of Bost, have been subjected to a methodical analysis; there is a sufficient range of material for comparison to provide significant fixed points for the hitherto highly confused chronology of certain main categories of Muslim ceramics. The significant features of Ghaznawid pottery, glazed and unglazed, are in any case now precisely defined in its two principal stages, firstly in the 11th century, in its relation with Sâmânid pottery, which provided it with its first models, and later at the end of that century and the beginning of the 12th century in relation to Persian Saldjûkid ceramics, from which it then began to draw inspiration.

One could wish that the Ghaznawid bronze objects, which for the most part are in the museum at Kâbul, might be studied in the same way. As for the carved woodwork, of which the doors of Mahâmîd's tomb provide the most famous illustration, it occupied in the art of the period a place which some have already underlined, but which has not yet been defined with the requisite precision or based upon sufficiently detailed analyses.

In its most common sense, *ghazwa* (and the dialectal variants) signifies a raid or incursion, a small expedition set on foot by Bedouins (both in the Sahara and in northern Arabia) with booty as its object, and also the force which carries it out.

The term has passed into French in the form *rezou*, which preserves the original meaning of *ghazwa*, whilst it is the synonymous *ghouya* (pl. *ghouwaz*) which has given the English word *razzia*, current also in Italian (*razzia*), German (*razzia*), and French (*razzie*). *Razzia*, thus, is the English word for a small raid mounted on perhaps 20-30 camels (or horses), or on camels and horses if the section to be raided was not far distant. The objective was to keep the section under constant pressure until the moment of departure, which would be postponed if necessary until the omens were favourable. Scouts (*'uyan*) were then sent out to reconnoitre the ground over which the raiding party would pass. When these reported that the objective was nearby, an advance-party (*sabr*, pl. *subur*) made a final estimate of the position and brought back a report (*'ilm, pl. *'ulam*) and if possible a prisoner. The attack itself, provided the raiders were genealogically and socially close to the section to be raided, was made at sunrise (*sabah*) or sunset, or at such times in between as the herds were not scattered (cf. Hess, *Beduinen*, p. 98). A night-attack (*bayd*), though it would succeed most easily, was considered dishonourable (*'ayb*, colloquial *'eb*).

The captured herds were driven back to the *saddid*, and the raiders divided into a rear-guard (*hamin, *haim*), to ward off the inevitable counter-attack (*faz'a*), and a party which drove the captured camels to the raiders' last camp, and then as fast as possible to their home-camp.

Although the community attacked was seldom taken by surprise and counter attacks were often effective (Musil, *Arabia Deserta*, 181), most raids would seem to have been successful.

When the extent of the theft from further afield the raiding party was likely to be larger, and the concern with protocol and the desire to avoid bloodshed would then appear to have been less, since in these circumstances genealogical ties were more likely to be remote (Doughty, *Travels*, ii, 393). In general the more closely related were the parties involved, the more stringent were the rules governing the actual raid.

In its heyday the institution of the raid permeated the whole of Bedouin society, its social and economic life, and its folk literature. It reinforced the fissiparous and predatory nature of tribal society, and for long prevented the emergence of any political organization more complex than short-lived confederations. However, the rise of a strong central power in Arabia under Ibn Sa'd marked the end of the traditional mode of life based on the *ghazu*. More recently the rise of the oil industry has further hastened the decline of traditional society by accelerating the trend towards the de-tribalization of the Bedouin and their re-grouping along modern industrial lines.  

Contes pottiques bedouins, in BEO, v (1935), 33-119. See further GHAZI (as frontier-warriors).

GHAZZA, a town in southern Palestine which from ancient times had been an agricultural and caravan centre, situated 4 km. from the sea, on the route leading from Palestine to Syria and at the junction of the caravan-routes coming from Arabia. A frontier-town which often changed hands through the course of the centuries, the ancient Ḥazza, which had been one of the capitals of the Philistines, later became, under the Greek name Gaza, a flourishing Hellenistic city, and afterwards a Roman town belonging to Judæa. In the Byzantine period it formed part of Palestina Prima and was christianized in the 5th century; the seat of a bishopric, it was also a flourishing junction of the caravan-routes coming from Arabia.

The town of Ghazza was afterwards occupied by the Crusaders, who found it in ruins. They started to rebuild it in 544/1149, and the new citadel was given to the Templars by king Baldwin III of Jerusalem. In the Mamluk period, Ghazza became the chief town of a district that for the most part belonged to the province of Damascas, though at times the town was independent. The town was then very rich and very extensive, if one is to believe the accounts of contemporary geographers and travellers, all of whom stress its economic prosperity, which derived partly from the richness of the surrounding district, abundantly irrigated by subterranean water, and partly from the energy of its merchants. Its most sought-after products were the grape and the fig, but the abundance of its saḥāls was also a source of pride and, according to the Arab authors, it combined three types of social life represented by the merchants, farmers and stock-breeders. The population, belonging to various tribal groups, was very turbulent and always involved in strife. Ghazza eventually possessed numerous public buildings—mosques, madrasas, convents, a hospital and caravanserais, some of which still survive. The chief mosque, built on the foundations of the Crusader church of St. John through the efforts of the governor al-Djawfi at the beginning of the 8th/14th century, remained standing until the 1914-18 war.

The arrival of the Ottomans in 922/1516 brought suffering to Ghazza. The inhabitants, misled by a false report of a Mamluk victory into thinking that they could massacre the new Turkish garrison, were the victims of severe reprisals and a certain number of them were executed. They seem, however, to have made a good recovery. The Ottoman taṣu registers [see DASTAR-E GHAZĀNI] show an increase in population in the city from under 1000 households in 932/ 1525-6 to well over 2000 in 955/1548-9; the survey of 965/1555-7 shows a slight decline. The population was predominantly Muslim, with Christian and Jewish minorities and a small group of Samaritans—18 households in 963-4. The registers also show a number of retired members of the former Qawwāl families who, Husayn Pasha, succeeded in putting a stop to the periodic raids of the Bedouins, while he maintained good relations with the Christians and Europeans. As the Chevalier d'Arvieux put it, the town at that time acted as the capital of Palestine, and Arabic, Turkish and Greek were all spoken there. Among its principal buildings were six mosques, besides the Great Mosque, numerous baths and markets and two churches, one Armenian and the other Greek.

The 18th century, on the other hand, was characterized in Ghazza by various disturbances and by the turbulence of the Bedouins, whom the Ottoman authorities had some difficulty in subduing; it closed with Napoleon's victory in 1799 immediately outside the town. In the 19th century Ghazza shared the fate of Palestine, being for a time attached to Egypt and then made directly subject to Ottoman governors; at the end of the 1914-18 war, it formed part of Palestine under the British mandate.

The period of peace experienced by Ghazza at the end of the 19th and the beginning of the 20th century brought about a marked increase in its population, which rose from 16,000 inhabitants in 1862 to about 40,000 (of whom 750 were Christians and 160 Jews). By 1932, however, the population had declined to...
The food of the inhabitants of the Arabian peninsula (apart from the agricultural and civilized states of the south) was—and in large measure still is today—typical of the diet of a pastoral people in a desert region with scattered cultivated oases. We can get an idea of this food from ancient poetry, the classical texts and the Qur’ān (the sources have been examined by G. Jacob, *Altarabisches Beduinenleben*, Berlin 1897, 88-109; 246; M. J. Darwaza, *4urar Al-Nabi*, Damascus 1365/1946, 80-6; M. Sh. Alósí, *Bulūgh Al-arak fi ma’rifat ākhwî Al-‘Arab*, i, Cairo 1934/1924, 380-5; M. Kurd ‘All, *Malakî Al-‘Arab*, in *Al-Muktabas*, iii (1908), 569-79). We have examined in addition the *hadiths*, the data of which are acceptable on this matter, since even forgers took great pains to add to the credibility of their work by the archaism of the customs to which they referred.

The essential product from the raising of domestic animals was milk (labān rather than halāb), one of the two basic foods of the Arabs. The Qur’ān (XVI, 68-66) pays an eloquent tribute to this liquid, calling it “sweet to drinkers”, and numerous traditions witness how greatly the Bedouin longed for it (*‘ayma*) when they were deprived of it (H. Lammens, *Etudes sur les sources des Omayyades*, Beirut 1930, 25-5 MFOB, iv (1939), 91 ff.). Milk was drunk, also that of goats and sheep. It could be drunk diluted with water, but sour milk (*ḥāzir*) was despised (G. Jacob, *Altarab. Beduinenleben*, Berlin 1897, 95). Milk-products from it were: *samm* “clarified butter” which was used for cooking and which disgusted the Romans of Aelius Gallus when they found it used instead of oil in the *hidjāz* (*strabo, iv, 4, 24*; it is probably his *poliruvi*; *akbi* “sour-milk cheese” (al-Bukhārī, lxx, 8, 16; Abū Dāwūd, xxvi, 27; Ibrū’ al-Kays, ed. Ahlwardt, *The divans*, London 1870, 162, no. 68, verse 5); *gūm*, cheese of an unknown sort (Abū Dāwūd, xxvi, 38). Camel’s milk was slaughtered only in cases of great necessity. In general it was rare for meat to be eaten, but this made it all the more appreciated (Abmāb b. Ḥanbal, iii, 303 c.). They seem to have eaten chiefly mutton, sometimes from sheep kept near the house and specially fattened for the table (*iddjim* (Ibn Ḥishām, 735), of which the Prophet preferred the shoulder and the fore-leg (al-Bukhārī, lxx, 26, 58; Ibn Ḥanbal, vi, 392; cf. Ibn Sa’d, ii/2, 108, 109; Abū Dāwūd, xxvi, 20; Ibn Ḥishām, 764). The Medinans were extremely fond of the fat from its fall (*alayha*) and of that from the camel’s hump, which they cut from the living animal, a practice which Muhammad forbade (al-Dārimi, vii, 9; references in poetry *aqd* G. Jacob, *Altar. Beduinenleben*, 94; the same practice in the eastern Sahara: W. Besnard, *Que mangent-ils*, Paris 1947, 47 f.). Specially prized parts of the camel were the udder, the liver, the foetus, etc. but the stomach and the tail were the food of slaves (Ibn Ḥishām, ibid.). It seems that it was not only in time of famine that they ate blood drawn from the veins of a living camel and allowed to coagulate or put into pieces of gut and cooked (al-Maydānī, ii, 119; Ḥamāsī, 645; *Agkhīni*, vii, 107: 20; W. R. Smith, *Lectures on the religion of the Semites*, 234). They ate very little beef (ibid.; Lammens, *Bureau de l’Islam*, Rome 1914, 132) or goat meat. *Pig le d’tow* (Jacob, ibid.) was the camel to have been scarcely known, although some *hadiths* relate that the Prophet ate the latter (al-Dārimi, vii, 22).
The agriculture of the oases provided mainly dates, another basic food of the Arabs (Lammens, Berceau de l'Islam, 62 f.; idem, Fatima, 44, n. 2). In the oases they were almost exclusively grown. When the Prophet died, we were nourished only by the two black things: dates and water” (saying attributed to 'Ali: al-Bukhari, Ixx, 6, 41; cf. Lammens, Berceau, 105, n. 3; for the inhabitants of the Fertile Crescent, on the other hand, the staple foods, even in the oases, were bread and water: Genesis, XXI, 14; I Kings, XVIII, 14). A scarcity of dates is the equivalent of famine, (al-Darimi, viii, 26; Abu Daud, xxvi, 38; Muslim, xxxvi, 152, 153; cf. Aghdni, i, 161). They liked to stress their therapeutic qualities and they formed the stock provisions when setting off on an expedition (Abu Daud, xxvi, 46). They were eaten also at festivals, such as the wilada in honour of the marriage of Muhammad with Safiyya (al-Bukhari, Ixx, 8, 10; Abu Daud, xxvi, 2). They were eaten dried (lamr), fresh (rawāb)—when they were especially relished (Muhammad was particularly fond of them eaten with cucumber, bukul, or oil). They were also eaten raw—oils (cf. Genesis, xxv, 38)—or disguised by a corruption in the text), the pomegranate (Kur'ān, VI, 99, 142/141; lv, 68), the grape (cf. Kur'ān, VI, 142/141; cf. Lammens, Berceau, 90 f.; the dried raisins of Tā'if were famous). The apple and the fig are scarcely mentioned by the poets (Jacob, Altor. Bed., 230) or in hadiths (Wensinck, Concordance, s.v.).

The pastoral nomads were able to use also, in addition to the meat and the milk-products provided by their flocks, wild vegetables, game and small desert animals. Among the plants may be mentioned havuq, the ripe fruit of the thorn tree areb (Capparis), sedata; cf. Lammens, Berceau, 69; al-Bukhari, Ixx, 50; Muslim, xxxvi, 163), desert truffles, which, according to a saying attributed to Muhammad, came from the manna sent to the Israelites (Muslim, xxxvi, 157-6; cf. Abu Daud al-Antāk, Tadhkira, Cairo, 1326/1937, 252; Lammens, Berceau, 49), etc. The game mentioned in the traditions are the hare (Abu Daud, xxvii, 26; al-Darimi, vii, 7) and the bustard (būhrā). Among the plants may be mentioned the ripe fruit of the thorn tree areb (Capparis).

Bread may not have been such an aristocratic food as has been thought, for barley bread at least was not uncommon among the settled populations. All the same, the Prophet and his family never ate bread made from wheat flour three days running (Ammianus, xiv, 4, 6; al-Bukhari, Ixx, 29). Among the nomads, however, bread was very rare (Amianus, iv, 4, 6; Lammens, Berceau, 141; Noldeke, Neue Beiträge zur altorientalischen Sprache, Strasbourg 1910, 56 f.).

The inhabitants of coastal regions could also add fish to their diet (Kur'ān, V, 97/96).

Besides milk and water (often muddy and seldom plentiful), the Arabs were familiar with a certain number of fermented drinks prepared from dates, honey, wheat, barley, raisins. But wine made from grapes, which (in spite of the fact that there were vineyards at Tā'if for example) was generally imported, was an expensive luxury. It was drunk in the taverns (būn), which were visited by the Jews, the Christians of Hira (Ibnu Shabbal, 2, i, 5, iii, 397), and even the Islamic monarchs (Zayd b. Shaward, 141; cf. Noldeke, Jahrh. 19, 90 f.).

The settled agricultural populations were able to enjoy also some vegetables. Among the bukār, "herbs", the Prophet preferred hindāh, "chicory". He was also fond of beets (sedāt, al-Bukhari, Ixx, 17) and of some vegetables belonging to the gourd family which are difficult to identify exactly (dūbbā, a kind of marrow?", kuštah, "a kind of cucumber", harbour, "marrow"). Leeks (kurrāth) were forbidden, though not barley (Ibn Ḥanbal, 1, 15, iii, 397), and were used instead of garlic and onions. But according to other traditions, Muhammad merely expressed his personal dislike of them and forbade those who had recently eaten them to come to the place of prayer (references in Wensinck, Handb. s.v. Garlic, Onion, and Concordance, s.v.; also al-Dārimi, vii, 21). Olives also were eaten (Kur'ān, V, 142/141) and the pith of the palm-tree (dīmmār, al-Bukhari, Ixx, 42, etc.). Fruits mentioned are the citron (wurṭuṣqā), the pith of the palm-tree (dīmmār), the dried raisins of Tā'if (multiq). The apple and the fig are scarcely mentioned by the poets (Jacob, Altor. Bed., 230) or in hadiths (Wensinck, Concordance, s.v.).

The pastoral nomads were able to use also, in addition to the meat and the milk-products provided by their flocks, wild vegetables, game and small desert animals. Among the plants may be mentioned havuq, the ripe fruit of the thorn tree areb (Capparis), sedata; cf. Lammens, Berceau, 69; al-Bukhari, Ixx, 50; Muslim, xxxvi, 163), desert truffles, which, according to a saying attributed to Muhammad, came from the manna sent to the Israelites (Muslim, xxxvi, 157-6; cf. Abu Daud al-Antāk, Tadhkira, Cairo, 1326/1937, 252; Lammens, Berceau, 49), etc. The game mentioned in the traditions are the hare (Abu Daud, xxvii, 26; al-Darimi, vii, 7) and the bustard (būhrā). Among the plants may be mentioned the ripe fruit of the thorn tree areb (Capparis).
Arabia, were prepared in a very elementary fashion. The meats were roasted (roots sh.w.y, h.n.dh, s.l.y.) or baked (t.b.kh). The meat was cut in slices or in thin strips which were left to dry in the sun (hdad) (e.g., Abu Dâwûd, xxvi, 36a; Abu ‘Hîndi apud Alûsî, Bulûgh, i, 380; in general on the methods of cooking, see Jacob, Altar. Beduinienleben, 90 ff.). A hadîth is cited according to which the Prophet announced "I am only the son of a woman of the Kuraysh who fed on kûfut" (cited in an epigraph by Bint âl-‘Sâ’îlî, Umm al-‘Nabî, Cairo 1938, 5). The oven proper is to this day little known. The only word for oven attested in early Arabic, tannur, is a borrowing from Aramaic (cf. Landberg, Glossaire, 150; cf. Robertson Smith, op. cit., 150); Hûghâli poets reproach the South-Arabian tribe of Marhad for eating grasshoppers (Dîwân Hudhayl, 57, 147), but this was rather a special distaste for this food, or an affectation. A later saying claimed that the Bedouin ate “everything that crawls or walks except the chameleon” (umm bâ’ây; Ibn ‘Abd Rabbîn, 87d, ed. A. Amîn, etc., iii, Cairo 1942, 485; Ibn al-Ughûwîa, Ma’dîn al-harbûd, ed. Alasî, Bulûgh, i, 380; Kurd ‘All, Ma’dîhî, 570). According to Sozomenus (5th century A.D.), the Saracens abstained from pork and observed a number of Jewish ceremonies (Ecclesiastical history, vi, 38 = PG, lxvii, 1412); it was probably a case of the Arab neighbours of Palestine coming under Jewish-Christian influences. But Plînî had already noted (Nat. Hist., vii, 78 = 15, 212) the absence of pork in Arabia. In case of vital necessity, which often arose in the severe conditions of desert life, all the taboos were relaxed, even the general taboo on human flesh (Dîwân Hudhayl, 161 ff.; Procopius, Bell. Pers., i, 19, 4) though it should not therefore be thought that cannibalism was general (J. Henninger, Kannibalismus in Arabien?, in Anbropos, xxxvi (1940-1), 631 ff.), but during battles the heat of passion or the desire to break the taboo was made use of by men to drink or lick up the blood or the brains, to gnaw the liver of the dead, etc. (Ammanius, xxxii, 16; Ibn Hûghâm, 581, etc.; cf. Robertson Smith, Kinschî, 75, n. 2, 295 f.; Nallino, Raccolta, iii, 86). Vows were made of temporary abstinence: from sâm, milk, meat, wine, sometimes even to fast completely (see nâyyâ). In some regions wine must have played a religious part. Some rather doubtful texts speak of libations of wine poured on tombs (Jacob, Altar. Beduinienleben, 143; Wellhausen, Reste, 182 f.; Lammens, Arabie occid., 204). In Liybân it is perhaps a case of a large offering of wine to Dhû Ghabat to expiate a murder (W. Caskel, La religion des Palmyrénien, Paris 1931, 194 f.; R. Dussaud, in RHR, xiv (1927), 200 ff.). It is perhaps to this sacred importance that we attribute the frequent use in Saphetic of names such as Shîrî (Shîrî? “drinking companion”) and Skrn (Sâkran “drunk” “intoxicated”: G. Ryckmans, Noms propres sud-sémitiques, Louvain 1934, i, 212, 249, ii, 130, 99). At Mecca, at the moment of deconsecration which concluded the hdâdîth, there was ritually drunk a fermented beverage with a basis of grapes (shârâb, nîbdîh) or of barley and honey.
and this rite was continued under Islam until the 2nd/8th century; a similar rite at... (drr, Corpus Inscriptionum Semiticarum, 8).

"chamois"). The domestic animals mentioned... reflected in the rock engravings which accompany... dates (CIS, v, 4902, 4384).

Musaylima (cf. Auxoupycx; (inscr. Waddington 2286a), who was possibly with polemic intent, "does not drink (or

An example is Sayy b. ʿAmr from the ʿAdl clan of the Kurayah, who is said to have abstained from animals which had not been ritually slaughtered, from blood and from meat which had been sacrificed to idols (Ibn Hishām, 144). Others, probably from asceticism, under the influence of the earlier practices mentioned above and of the abstinence which was enjoined by Manicheism, by the Christian ascetics and certain Christian sects, and which was practised by other Semitic peoples (if the fact is indeed true), are said to have abstained from drinking wine—e.g., another Kurāṣhī, ʿUthmān b. Maʿzūn, who was later to embrace Islam (Ibn Saʿd, iii/1, 286). Musaylima forbade wine as well as sexual relations to those who were already fathers (Sayy b. ʿUmar, apud al-Tabarī, i, 1916; as against Ibn Hishām, 90). It has been possible to compile a list of those who abstained perhaps for food (wrl), (ibid., i, 7). Flour (šn, flour in general, ḏb, the flour of cereals, perhaps ḥbr?, was made with wheat (br), barley (ḏbr?), dates (lmr), āḏhūl, which was perhaps a kind of wheat (it seems difficult to translate it literally as its Arabic equivalent āḏhūla “wheat husked and crushed”), and in addition semolina (ṣbl, cf. Ethiopic sendlle, CIS, i, 390-40, 83, 86-8; 541: 120). We may have in CIS, 408 a reference to a field (mʿnsıt); with the emphatic, ʾl in which would be grown the variety of wheat called in Arabic ʿalas; this inscription seems to refer to it in two aspects ybr and ʿfr (cf. CIS, 352: 7, 11; cf. also ḏbr, in RES, 2774: 4). Vegetable gardens (bblk, in RES, 4563: 6, 7), orchards (mghr, in CIS, 204: 3, 546: 11; ḏbwt, in CIS, 308: 9), vineyards (šnbl, in CIS, 342: 11-2, 604: 3, ym, in CIS, 228: 2, 276: 3, etc.) were numerous. They produced vegetables (bbl, in SE, 48, translated “broad beans” by Conti-Rossini) and fruit (ṯmnr). The country produced sesame oil (Pliny, Nat. Hist., VI, 28 (32), § 161), but not enough for its needs and had to import it via Moscha (Periplus, § 32). As a condiment they used capers which they soaked ʾḏbr wbl, in RES, 2845; cf. N. Rhodokanakis, Studien . . ., i, 1 (1934, no. 107) and they imported saffron (Periplus, § 24) for the same purpose. Cinnamon, also imported in transit, obtained too high prices on the Roman market to be used locally (Pliny, Nat. Hist., XII, 93). The dbś which was distributed in large quantities to the workers on the dam of Mārib (CIS, 540: 96; cf. also 541: 12 f.) must have been a treacle of grapes or of other fruits, different from the honey which according to Pliny was produced in abundance in the kingdom of Saba (Nat. Hist., VI, 32: 18, § 161). Eratothenes mentions numerous ariās (μελιτουργεῖς) in Southern Arabia (Strabo, XVI, 4: 2, § 768).

The meat (ḏbr, in CIS, 503: 3) was in the main that of animals slaughtered (bblk, in CIS, 541: 122-3, cf. Hebrew ḏbḥabaḥ) probably according to the usual Semitic rite. For the workers engaged on the repairs to the dam of Mārib they slaughtered thousands of cattle (ḥbr) and probably also sheep (cf. Dionysios, Periegetes, 942 f.), one sort of which had the characteristic name of āḏḥy (Ar. ʿāḏhāb “victims”) and the other the enigmatic name of brš, and, on one occasion, 207,000 bnt, which seems to represent...
portions rather than head of sheep and goats (cf. Gl. 1142: 9). They were given also noo *dh (“lambs used for sacrifice” to judge from Ar. addhīb, pl. of ḏāhibīya) and ḏad (perhaps “fat lambs” to judge from Ar. ṣa’dī), CIIH, 540: 43 ff., 88 ff.; 541: 122 ff. The sheep were called elsewhere ḏhrif, in RES, 2959: 2 (Min.), Van Lessen 1: 9 (Katab.), and in the Manean colony of the Ḥiǧrāj dh’n (in contrast to the goats ṣ’ayz, in JSa, 19: 11, called in Saba sfr, Gl. 1000 A 3). According to Eratosthenes they ate also birds, except for geese and hens (Strabo, XVI, 4, 2 = 768). On the shores of the Indian Ocean, some communities ate mainly fish (Periplus, § 27) and the nomads lived on game (Pliny, Nat. Hist., VI, 32: 18 = § 161). These people drank milk (ibid.) and the workers of Mārib were supplied with butter (khāmāth, Hebrew ḥemāth, Akkadian khimēṣa, etc.; CIIH, 540: 96 ff.). The main drink (CIIH, 563: 27) seems to have been palm wine (Strabo, XVI, 4, 25, § 753; Pliny, Nat. Hist., VI, 28 (32), § 161), which was called mar dh-tmr (CIIH, 540: 50-1; cf. Ar. mazār, mizr, the word for various fermented drinks) or ṣkṭ dh-tmr, perhaps with a north Arabic gloss al-ḥalab (CIIH, 541: 129-30, but the hypothesis of J. M. Solá Solá, Las dos grandes inscripciones sudarbigas del dique de Mārib, Barcelona-Tübingen 1960, 37, raises some difficulties). However, the numerous vines (cf. above, and the popularity of the Dionysiac themes making use of the vine in sculpture) provided grape wine (Periplus, § 24) and a certain amount was imported (ibid., §§ 24, 28). The workers on the Mārib dam were provided with more of this than palm wine. A distinction was made between the fermented beverage (ṣkṭ) made with the excellent grapes of Ghirib (ghribb, cf. the classical dictionaries) and that prepared from dried raisins (ṣkṭ, cf. fusa; CIIH, 540: 46-8, 91-4; 541: 127 ff.). The grape wine in a temple (CIIH, 548) is probably the ḥašān “wey or milk diluted with water” known in various Arab countries (cf. the classical dictionaries and Dozy). We do not know whether the thermal springs of therapeutical value, which according to Ammianus (XXIII, 6, 46) were numerous, were used for drinking. Almost nothing is known about the ritual use of foods. Libations (ṣkṭ, in CIIH, 553: 27) were made on special altars (mstm, in RES, 3512), but we do not know what was the liquid used. Nor is anything known about the prohibitions concerning food. Nevertheless Eratosthenes mentions the absence of pigs among the domestic animals of the region (Strabo, XVI, 4, 2 = 768).

iii. — Regulations concerning food in early Islam

Muhammad’s reforms were made under the influence of a milieu in which each religious community was distinguished by its own regulations concerning food. We have seen how in the pagan milieu the situation was rather chaotic, and there was the influence of the Noachic code, imposed on proselytes by the Jews and coinciding more or less with the original Christian code. The Revelation (texts conveniently brought together by D. Masson, Le Coran et la Révélation judéo-chrétienne, Paris 1958, ii, 577-86) in this respect also was to put an end to ignorance and errors and the Prophet was to declare lawful (ḥalād) “good” foods (al-tayyībīt) and unlawful (ḥarām) unclean foods (al-ḥabībūd; ḏurān, VII, 156/157). But the ḏurān insists above all on the beneficent nature of food in general. Food is one of the greatest of Divine blessings (often in the Meccan sūras (cf. index of Blachère’s tr., s.v. nourriture), which, however, must be used with moderation (VII, 29, Medinan) and which must not be rejected except in specific circumstances. The word “eat (ḥaṣa)…” occurs nearly in every sūra. Moreover the Jews and the Christians have obliged two newly converted ḏiyyīfs to eat heart, taboo in their tribe, without which their conversion would have been incomplete ( Ibn Sa’d, i/2, 62, 1: 5 ff.). The ḏurān inveighs against men who arbitrarily deprive those who listen to them of certain foods (II, 163 f. 116 f.; V, 89 f. 87 f.; VI, 118 ff.; VII, 30/32; XVI, 117/116, texts which seem to belong to the beginning of the Prophet’s stay at Medina). In such cases it is certain that the adversaries aimed at are pagans observing the prohibitions described above (II, 165; VI, 139-138-50; X, 60/59); but at Medina it became important to define Islam as against Judaism.

The mass of Jewish prohibitions concerning food led to the emphasizing of the fact that Allah does not wish to impose too many burdens on His faithful people (II, 88). It seems that the ḏurān is sometimes criticizing Judaizers or ḥanifs who imposed on themselves excessive restrictions (VI, 118 ff.) and who wanted to influence the Prophet to do the same (VI, 116). The Jewish prohibitions (rather inexact) defined in VI, 147/145 are explained as a Divine punishment of the sins of the Israelites (IV, 158; XVI, 119). This is proved by the fact that they were not imposed on them before the revelation of the Torah, except for a prohibition, not of divine origin, which ḏaṣr’ād (Jacob) had imposed on himself (III, 87/93), a reference to the prohibition of the sciotic nerve after the struggle of Jacob and the angel (Gen., XXXII, 33). They were moreover partially lifted by Jesus (III, 44/50). “Today” (V, 7) these forbidden foods are therefore permitted. We have here ideas taken from the Christian polemic against the Jews, particularly as exemplified by the Syriac writer of Iran, Aphraates (4th century A.D.); cf. his fifteenth homily (ed. Wright, London 1869, 309 ff.; cf. H. Speyer, Die biblischen Erläuterungen im Koran, Gräfenhainichen 1931, reprinted Hildesheim 1962, 318 ff.). Only a limited number of prohibitions were retained: blood (and consequently “strangled” meats), milk (and blood) and the flesh of a dead animal (one not killed specially for meat, pork, animals consecrated to a pagan divinity (II, 166/173; V, 4/3; VI, 146/145; XVI, 116/115; on the date of these passages, see J. Schacht, in ET, s.v. maṭā’a). In addition, during the Pilgrimage it was forbidden to those in a state of ritual purity to kill or eat game (V, 1, 95/94 ff.), but fish was permitted (V, 97/96; cf. XVI, 14). It was necessary only to invoke (ḏḥāhara) the name of Allāh on lawful foods (VI, 118 ff., 33/32 ff; XXII, 35/34). Involuntary infringements of these rules, through force majeure or compulsion, are moreover regarded by Allah with indulgence (II, 168/173; V, 5/3; VI, 119, 146/145; XVI, 116/115). They defined the Muslim community, but only as a particular category within the wide family of the Possessors of the Scripture, since it is permitted to eat the food of the abd al-ḥitāb and vice-versa (V, 7/5). In fact, these prohibitions go further in conformity to the Jewish regulations than the Noachic regulations, which the Jews theoretically admitted as sufficient for any strangers allowed to live with them (only not to eat unbleed meat, according to Gen.; IX, 4; cf. E. Schürer, Geschichte des jüdischen Volkes im Zeitalter Jesu Christi, Leipzig, 1901-11, ii, 164 ff., 178, n. 77). There was, as a sort of solution, a falling into line with the primitive Christian
position (which remained very closely observed in the East) as it is defined by the decree of the Apostles (Acts, XV, 29; this apparently influenced K. Baier, Speise- satzungen mosaischer Art in mittelalterlichen Kirchen rechtsquellen des Morgen- und Abendlandes, Münster i. W. 1907). They went further in demanding also abstention from pork. This abstention, one of the first to be practised by Judaizing pagans (Juvenal, xiv, 98 f.), was also the rule among certain Judaean-Christians (Didascalia, 121, 27 ff.; cf. H. J. Schoeps, Theologie und Geschichte des Judenchristentums, Tübingen 1940, 342, n. 2) and it was presumably through this route that it became adopted in Arabia (see above, col. 1059 b); it was also adopted by the Christians of Ethiopia in imitation of the Old Testament (Confesso fides Claudius regis Aethiopiae, ed. J. M. Wansbrough, London 1661, 3 and n. 11; E. Ullendorff, in JSS, i (1956), 240-3.; J. Baeteman, Dictionnaire amarigna-francais, Dire Dawa 1929, col. 574; cf. M. Rodinson, in Bibliotheca Orientalis, xx1 (1964), 241). The insistence on the lawfulness of fish arose perhaps from opposition to a Judaean-Christian and Samaritan practice (Schoeps, op. cit., 189 f.). In addition, an entirely new restriction appears in the Divine revelation: at first it praises the virtues of wine (XVI, 69), which is one of the delights promised to the elect in Paradise (XXXVII, 445 ff.); but later it makes reservations about it (II, 216/219), and then forbids it (V, 92/90). The commentators and the historians disagree on the causes and the date of this prohibition (see EHM). The association with the prohibition of maysir suggests a link between wine and pagan usages (W. Montgomery Watt, Muhammad at Medina, Oxford 1936, 298 f.; M. Gaudefrey-Denomyves, Makomet, Paris 1957, 570 f.; cf. above, col. 1059 b) and we have seen above that abstention from wine was a religious practice fairly common in Arabia in various milieus and on various occasions. It does not seem easy to agree with W. Montgomery Watt that it was also partly a case of discouraging the import of an expensive commodity which came from enemy countries. The initial indifference about it and the injunction contained in verse IV, 46/43 seem to indicate a prohibition not essentially a reaction against the deplorable effects of drunkenness within the Medinan community, one of them perhaps being excessive extravagance. This does not exclude the possibility that the practices of abstention mentioned above contributed to the enactment of the prohibition. In addition to these general prohibitions on the eating of specific foods, Islam decreed a general temporary abstention from food at periodic intervals—the fast of Ramadān (see SAWM). iv.—FOOD IN THE TRADITIONAL MUSLIM WORLD

In the Arab empire, which after 132/750 became the Muslim empire, the food in the various occupied countries naturally continued to be the same as it had been before they were conquered. The Arab conquerors adopted it, after a certain period of adaptation, perhaps adding certain dishes or practices of their own. For the food of each country reference should be made therefore to works describing the diet in the pre-Islamic civilizations. For Egypt, see A. Ruffer, Food in Egypt, Cairo 1919 (= Mémoires présentés à l'Institut d'Egypte, i); A. Erman and H. Ranke, Ägypten und ägyptisches Leben im Altertum, Tübingen 1923, 219-29; A. Wiedemann, Das alte Ägypten, Heidelberg 1920, 287-309 and also 250 ff., 259 ff., 271 f., 275 ff. On Syria and Palestine see especially R. A. S. Macalister, art. Food in J. Hastings, Dictionary of the Bible, ii, Edinburgh 1859, 27-33; A. Bertholet, Kulturgeschichte Israels, Göttingen 1919, 130-4; F. Thomsen, art. Nahum, Zeitschrift des Deutschen Orientvereines, Berlin 1924-32, viii, 429-31. On Mesopotamia, see B. Meissner, Babylonien und Assyrien, Heidelberg 1920-5, i, 413-20. The picture had been somewhat modified by the influence of Greek and Roman customs, on which see especially Orth, art. Kochkunst in Pauly's Realenzyklopädie d. class. Altertumswissenschaft, Neue Bearb., xii/1, Stuttgart 1921, 944-82 and J. André, L'Alimentation et la cuisine à Rome, Paris 1961 (= Études et communications, 38). For Sāsānīd Iran, see A. Christensen, L'Iran sous les Sassamides, Copenhagen-Paris 1944, 477-9.

However, the Muslim conquest created a relatively coherent cultural area which survived the fragmentation of the political unity which had brought it into being. Yet the differences between countries are important. To give a picture of the food and its variations throughout the whole of this area would be a vast and difficult enterprise for which the necessary detailed monographs do not exist. We shall limit ourselves here to indicating the main factors which influence all these diets. References to precise facts have in most cases only the value of examples taken at random.

1. Products consumed. The formation of new cultural frontiers leads to the spread throughout the territory concerned of products which have formerly been known only in one section of it. In the case of products too heavy to transport, this spread can take place only by their being grown or made locally. The most striking phenomenon in the Muslim world was the spread of the growing of rice and of sugar cane.

Rice, originally from India, was already in pre-Islamic times being cultivated in Iran, in Irāk and in Syria, but had hardly been used as food in the Roman world (only as a thickening for sauces); it spread as a crop and as food as far as Spain. It became a common item of food and especially of the poor (particularly in the form of bread made from rice flour) in the areas where it was intensively cultivated, but elsewhere it remained relatively a luxury food, used only in recherché dishes. In any case it did not take the place of wheat and did not acquire the importance which it had in India and in the Far East (cf. M. Canard, Le ris dans le Proche-Orient aux premiers siècles de l'Islam, in Arabicas, vi (1959), 113-31, and art. RIZ).

Sugar, introduced to Iran from India perhaps shortly before the Muslim conquest, spread after this through the whole of the Mediterranean world (cf. N. Deer, The history of sugar, i, London 1949, 68 ff., 74 ff.; and art. SUKKAR). It was used in the food of princes and wealthy people, but among the poor was found chiefly as a medicine (a significant text in the K. al-Harb al-ma'dah ... tr. J. Finkel, in Zeitschrift für Semitistik, viii (1932), 5). Honey was generally less expensive, and in particular dīb, a treacle of grapes, carob etc., was the sugar of poor people (cf. M. Rodinson, Recherches sur les documents arabes relatifs à la cuisine, in REI, 1949, 147).

Large-scale transport was particularly necessary to bring to the towns from the surrounding country-side food products such as wheat which were consumed in large quantities. Wheat was everywhere a commodity traded on a large scale (cf. for example R. Le Tourneau, Prix avant le protectorat, Casablanca 1949, 377 ff., and art. KAMH).
Certain heavy products regularly consumed were however transported by caravans or by ships (river or sea transport) considerable distances from the specific region in which they were originally grown. Examples are Syrian olive oil coming down the Euphrates, the dates of Lower Iraq or of Arabia, etc., familiar with long distances, and melons or rice, the latter of Transoxania were transported to Baghdad packed in ice inside lead boxes (al-Tha'labi, Latafi' al-ma'rif, ed. P. De Jong, Leiden 1867, 129). Drying was a less expensive and more widely used process. We have seen that before Islam the Arabs were already familiar with long driers, enabling the inhabitants of Desert truffles were also dried (Wusla, ch. viii, § 44), also figs, pistachio nuts, etc. (Ibn al-`Awwâm, i, 675 ff., tr. Clément-Mullet, i, 634 ff.). Fruits were often preserved in a sealed air-tight container which was sometimes buried in the ground (Ibn al-`Awwâm, i, 662 f., 664 f., tr. i, 624, 626, etc.). The curing or smoke-drying of meat seems to have been very little known among the Arabs; it is described in the Wusla (ch. viii, § 45, mss. A, B, D) as being a Greek process. It was, however, one of the processes applied to gur`atib, slices of meat, in particular to those known as mīriṣiyat, “Egyptian” (Wusla, ch. v, § 2a), and known in some places as mudakkhhānas “smoked” (ibid., § 2d). The crystallizing of fruits in honey or sugar, a process known to ancient Rome and a speciality of modern Damascus, was known there at this time according to A. von Kremer, Culturgeschichte des Orients unter den Chalifen, Vienna 1875-7, ii, 333, who however quotes no evidence. Kidād, or dried meat, must have been coated with fat (cf. the modern Algerian recipe in J. Desparmet, Enseignement de l’arabe dialectal moderne, Algiers 1913, ii, 184, tr. H. Péres and G. H. Bouquet, Coutumes, institutions et croyances des indigènes de l’Algérie, i, Algiers 1930, 260). But the chief method of preservation was by means of antiseptic agents, particularly salt and vinegar, often used together and with the addition of many condiments; hence the names of these preserves: muqallalat, muqallab. In addition to vinegar and salt (steeping in salted water, impregnating with salt), a great deal of honey, or its substitutes sugar and treacle (dhb), was used in these preparations, also lemon juice, oil, mustard, walnuts or hazel nuts roasted and crushed, all kinds of herbs and spices, etc. In this way we were preserved for long or short periods according to the preparation used, vegetables, fruits and also (using vinegar, oil, etc.) small fishes and birds (hafitra). Special preserves were made (often to be kept for a shorter period) to be used, so called misriyya, a kind of mixture of meat, fish, herbs mixed into salted goat’s laban. In their preparation, laban and banbars (curds; Wusla, ch. viii, §§ 1-25) were sometimes used. Spices made possible also the preservation of sausages, of which those considered the best contained only mutton without beef, goat-meat etc., and not too much semolina; their name, labbi’ and labbi’, betrays their Roman origin (locumacae, sausages of Lucania; Ibn al-Ukhwawa, ed. R. Levy, London 1938, 94 f., 107; H. Zayyât, al-Khizna al-sharkiyya, iv, Beirut 1948, 21, 3, 23, l. 6). The principal method of preserving milk was in the form of cheese. The eastern Jews sometimes transported kosher (halal) cheese very great distances (S. D. Goitein, Jews and Arabs, New York 1955, 112); the transport of food over medium or longer distances is a privilege of the larger cities to enjoy a rich variety (e.g., for Mamlûk Egypt, list in K. al-Harb al-ma’qub, apud J. Finkel, Zeitschrift für Semitistik, ix (1933-4), 11 f.). Generally speaking, the preservation of food was sometimes done by the producers for home consumption or for sale (e.g., cheeses), sometimes by the wives or the servants in private households or in

2. Storage and preservation. The preservation of food is an important problem in all societies. The Muslim civilization had inherited processes from the ancient East and from the classical civilizations. Cereals were stored either in granaries (see agadir) or in silos (mâlmûra [q.v.]) and the agronomists recommended various processes to preserve them from decay, worms, etc. (Ibn al-`Awwâm, K. al-`Utldi, ed. J. A. Bousquet, Madrid 1802, i, 678 ff.; tr. J.-J. Clément-Mullet, Paris 1864-7, i, 638 ff.). For fruit, especially grapes, there were handed down various recipes for preserving them from any deterioration and keeping them fresh (e.g., Ibn al-`Awwâm, i, 660 ff., tr. Clément-Mullet, i, 619 ff., to be compared with processes used by the Romans, J. André, L’alimentation... , 89). Preserver
palaces (whence the chapters of recipes for preserves in books of cookery like the Wusla), and sometimes it was the work of specialist craftsmen and prepared to be sold at a 'table libre', the commercial compliment.

The manuals of hísba [q.v.] enjoin the muḥāsib to make sure for example that any fish left unsold was salted (al-Nabrāwī apud W. Behrmauer, Mémoire sur les institutions de police chez les Arabes les Persans et les Turcs, Paris 1861, 135; Muḥammad b. Abī Muḥammad al-Ṣaḥḥ, ed. G. S. Colin and E. Lévi-Provençal, Un manuel hispanique de ħisba, i, Paris 1931, 25). But there was very little which resembled the modern food-preserving industry, though one might so classify the sausage-sellers (naḥānīshī‘iyūn), and the sellers of confectionery (halāwānīshī‘iyūn), traders who themselves preserved food for sale. Among them should also be included the bawdīrādī‘iyūn, makers and sellers of bawārīd, cooked green vegetables preserved in vinegar or other acid liquids (cf. M. Rodinson, Recherches... 142 and the treatises of ħisba).

3. Preparation. Foods often went through varying degrees of preparation before reaching the consumer, thus reducing the work done domestically (cf. S. D. Goitein, in JESHO, iv (1961), 193-7). Flour-grinding, work done by the women in country districts, was often in towns done by mills which provided flour ready prepared (taḥkān “miller”). Kneading of dough was generally done at home, but sometimes by bakers (khābābāsīn). The Mālikī and Abādī schools sometimes stipulated that a wife could not be obliged to grind corn and that her husband, in this case, was to supply her with flour and not grain (‘Abd al-‘Azīz al-Muṣṭaf‘ī, K. al-Nīl, tr. E. Zeyn, Droit mosâbîle, Le Nil, Du Mariage, i, Algiers 1891, 71; Saḥnūn, apud M. Ben Cheneb, in Revue indigène, xxxiv (1909), 68). But in most cases dough was taken to the owner of a bakehouse (farrān) to be cooked (see, e.g., R. Le Tourneau, Fès avant le protectorat, Casablanca 1949, 327 f.). Pastries and sweetmeats were also made by craftsmen, as were the various dishes which were sold ready cooked by the ‘abbādībī‘ān “keepers of cook-shops”, the ḥarrāṣīn or barṭī‘iyūn, sellers of harīsa in its popular form (barṭī‘ “wine”), the bawārdīdī‘iyūn “sellers of bawārīd” (see above), etc., to be taken away or eaten in the shop (lively description of a shauwīd, proprietor of a restaurant where all kinds of food could be cooked, in the Maḥāma baqāddī‘iyūna of al-Hamādhānī, ed. M. ‘Abduh, Beirut 1889, 57 ff.). European visitors to Cairo in the Middle Ages speak of 10,000 to 12,000 cooks in the streets, the ‘Saracens’ seldom doing any cooking at home (G. Wiet in Revue du Caire, August 1944, 351 f.). Meat was dealt with by specialists who carried out the slaughter (dhabbāb), the cutting up and the final marketing (bāṣṣāb, bīṣṣār with variations in terminology). More specialized products were prepared by the maker and seller of sausages (naḥānīshī, see above), or of slices of meat (gārādī, see above), the roaster (ṣauwi), the seller of cooked livers (bābādī), of cooked sheep’s (or other animals’) heads (rawa‘da, etc. The manufacture of oil gave rise to a real industry, using presses which were sometimes very costly (P. S. Girard, apud Description de l’Égypte, État moderne, ii/1, Paris 1821, 605 ff. = 2nd ed., xvii, Paris 1824, 229 ff.). The industries of wine and other fermented drinks were widespread, for the use of Christians and Jews, although varying numbers of Muslims did not fail to take advantage of them; thus in the Mamlūk period Syria was a wine-growing country while Egypt was not (al-Kalāqṣāndī, Šaḥīr, tr. Gaudfroy-Demobnyennes, La Syrie à l’époque des Mamlouks, Paris 1925, 28). The prohibitions applied to this manufacture were of fairly limited extent; e.g., under the Ottoman empire in the 11th/12th century it was forbidden to make wine or rābī (rābī) within Istanbul (A. Refik, Hicret on birinci asırdan İstanbul hayatı, Istanbul 1931, 32, no. 63; cf. R. Mantran, Istanbul dans la seconde moitié du XVIIe siècle, Paris 1962, 205 ff., 257, 448 f.). The extraction and refining of cane sugar formed an important industry; Ibn Dīkūmī mentions 58 factories at Fustāt (iv, Būlāk 1309, 47-6); it is known that it was an important state monopoly under the Mamlūks (M. Sobernheim, Das Zuckermonopol unter Sultan Barbar, in ZA, xxvii (1912), 75-84; A. Darrag, L’Égypte sous le règne de Barbars, Damascus 1961, 146-51); later it was at Cairo that sugar was refined for the use of the palace of the Ottoman Sultan (Kāmnānām, in Digeon, Nouveaux contes turcs et arabes, Paris 1781, ii, 276 f.). Sugar was also refined in Syria (al-Kalāqṣāndī, ibid.), in Sicily (M. Amari, Storia dei Musulmani di Sicilia, Florence 1854-68, ii, 445, iii, 785 f.), in Iran (Spuler, Iran, index), etc. The confectioners used sugar and honey in various ways (see, e.g., a good description of the work of the maker of kundf, a kind of vermicelli with sugar or honey, etc., in G. Martin, Les bazars du Caire et les petits métiers arabes, Cairo-Paris 1910, 60). Fish was dried and salted so that it could be transported long distances (Spuler, Iran, 407; Gibb-Bowen, i/1, 299); in Egypt the production of botargo (batrakh, bātrīkh) from mullet roes, was of fairly limited extent; it should be noted that the handbook on trade by Abu ‘l-Faḍl Dījarīr b. ‘Allī al-Dimīshqī (5th/6th/11th-12th centuries?) classifies grocers as half traders and half craftsmen (see H. Ritter, in Jfj., vii (1917), 6). The peasant producers came to sell their produce either in the country and often already set up regional markets (cf. R. Brunschvig, Coup d’œil sur l’histoire des foires à travers l’Islam, in Recueils de la Société Jean Bodin, v (1953), 43-75; F. Benet, Weekly suqs and city markets, in Research for development in the Mediterranean Basin, a proposal, ed. C. A. O. van Nieuwenhuize, The Hague 1961, 86-97), or in the towns, in markets which were more or less permanent.

In the larger towns there were wholesale markets supplying the large markets which served the whole of a large town district and also the small local markets. Private householders bought their provisions from the two latter types (good description by R. Le Tourneau, Fès avant le protectorat, Casablanca 1949, 368-97 and R. Mantran, Istanbul ... , 185 ff.). These retail markets consisted of specialized little shops: fruit and vegetable sellers, butchers, dried fruit merchants, sellers of spices (ṣaffār), grocers who sold various kinds of fats (bakhīl in Morocco, elsewhere usually sayyid, ṣammān, etc. with many variants, cf. Djāmāl al-Dīn al-Kaṣmī, Kāmās al-ṣindā‘ī al-ḥāmīšiyā, Paris-The Hague 1960, 48), etc. There are found in the works on the corporations extensive lists of these retailers (e.g., L. Massignon, Enquête sur les corporations musulmanes d’artisans et de commerçants au Maroc, an offprint from RMM, Paris 1925). As we have said, many variations are
to be found in the demarcation and naming of specializations in the different regions. In certain countries at certain times the state played an important part at several stages in the distribution of commodities.

5. Food consumption and its variations.

In the sociological study of food, special attention must be paid to how consumption varies with different groups and categories of individuals (R. Firth, *The sociological study of native diet*, in *Africa*, vii (1934), 410 f.). These variations are due either to natural, geographical and economic differences in the food resources available to each group, or to cultural traditions of varying origins. Muslim civilization provides many instances of this phenomenon, which is worthy of more detailed study; here we shall give only some examples.

The geographical variations are obviously due to the variety of the resources available, and thus to natural conditions. But, at the sociological level, based on these conditions and extending beyond them, the establishment of cultural traditions regarding the choice and the preparation of dishes has created regional specialization. Thus, in the Middle Ages, Egyptian cuisine had a high reputation (cf. H. Zayyāt, *al-Khṣāṣa al-ثاركِيَّة*, iv, Beirut 1948, 14). In Turkey, the cooks of Boulu and remain very famous (see *Bozlu* and Nazım Hikmet, *Les traditions alimentaires franco-turques*, Fr. tr. by J. Chabas, Paris 1950, 155 f.). Cooks from places which were renowned for their food were employed in far distant regions. Al-Tāhir brought to Bagdad a Khursānī cook (Tayfūr, *apud* Spuler, *Iran*, 510), and Egyptian women-cooks were employed everywhere (even in the household of an orientalized Frankish knight of Antioch, cf. Usāma b. Munkīd, *K. al-Ṭibīb*, ed. P. K. Hitti, Princeton 1930, 140; tr. P. K. Hitti, *New York* 1929, 169 f.). This specialization gave rise to the numerous adjectives of geographical origin which accompany or represent the names of many dishes: e.g., there are cakes called *akhmīmīyā*, *as-yātīyya*, a sweet called *halwāt makkīyya*, etc. (cf. M. Rodinson, *Recherches*, ..., 150). For the regional specialities of Andalus, see A. Hūci Miranda, in *Revista del Instituto de Estudios Islámicos en Madrid*, i (1935), 139; a recent ethnographic survey in Turkey traces the local variations of the same dish, see Z. Koşay and A. Ülkücan, *Anadolu yemekleri ve Türk mutfağı*, Ankara 1961; similarly, on local varieties of *pelāb* (Ottoman *pişev*, *pastıf*) in Uzbekistan, see Karim Mahmudov, *Uzbekhsı bilya*, Tashkent 1963, 6, 77 f., and cf. N. K. Alhazov, etc., *Azerbaijanian kitchen*, Baku 1963, 65 ff. Regional foods or dishes were made far from their place of origin, the recipes being transmitted orally or in writing. Thus as early as the 7th/11th century we find in the East recipes for Maghribi couscous (ibid., 138; for the longing for couscous felt by Maghribi exiles in the East, see Maškārī, Būlāk, iii, 137; cf. H. Perès, in *Bull. des Études Arabes*, iii (1943), 140; R. Brunschvig, *La Berbérie orientale sous les Hafsides*, Paris 1940-7, 271). Food today one of the channels for patriotic fervour. In literature and films, Egypt’s national food (ta’mīyya, Egyptian beans—*fūl mudammās miṣrī*, Jew’s mallow or *muš’tābīyya*) is contrasted with the cosmopolitan dishes affected by snobs (see, e.g., Mahmūd Taymūr, *La belle aux lièvres charmées*, Fr. tr., Paris 1952, 87). A school textbook relates how an Egyptian student is delighted to find in Oxford an anachronistic Egyptian country hotel in a restaurant kept by an Egyptian and serving *fūl mudammās* (Sa’d al-Uryān, A. Duwaydār and M. Zahrān, *Mudammās Uṣūlīd*, Cairo 1950). Egyptian emigrants returning home dream of a good hot *ta’mīyya* rissole (*Yusuf Idrīs, Umm al-dunyā, in his collection *Dilmūk al-layyīd*, Cairo 1954, series *al-Kiṭāb al-ghāhabi*, 94).

When massive emigrations take place, the emigrants introduce their traditional dishes into their new habitat. Thus, the great emigrations of Muslims from Spain at the time of the Reconquista brought many Andalusian recipes to the Maghrib (see E. Gobert, in *Cahiers de Tunisie*, iii (1935), 529 ff.), for example the famous *bābāla* (from Span., *pastel*) of Morocco (see L. Brunot, *Les textes arabes de Rabat*, ii, Paris 1952, 52; detailed recipe in Z. Guinaudeau, *Fès vu par sa cuisine*, Rabat 1957, 33 f.).

Variations according to the different religious groups are of more importance ideologically. We shall deal later with the development of the principles laid down in the *Kūrān*, and it is necessary to mention here only that each group tended to mark itself off distinctly from the others by having its own series of rules concerning food. To eat just like others implied, generally speaking, that a group did not consider itself completely split off from them. In principle one should not eat with the *kāfīr* (Goldziher, *Vorlesungen*, 182, Fr. tr. Paris 1920, 152), which gave rise to the vast question of who exactly is to be regarded as *kāfīr*. The *Kūrān* allowed Muslims to eat the food of the *kāfīr* mentioned and vice versa (V, 7, see above). But there is attributed to the Prophet a letter to the Mazdeans of Hadjar according to which Muslims were not to eat meat which they had killed as a sacrifice (*Ibn Sa’d*, ii/2, Leiden 1917, 19, 1, 8; *al-Balādūrī*, *Futūḥ*, 80; cf. Spuler, *Iran*, 154, n. 5). Even in relation to the *Aḥī al-kīṭāb*, the law was more restrictive than the *Kūrān*, at least concerning animals killed while hunting or by ritual slaughter. It was not forbidden but reprehensible (*makrūḥ*), according to certain Mālikīs, to eat what a *Kitāb* had slaughtered for himself; according to others, on the contrary, this applied to meat slaughtered by a *Kitāb* for a Muslim. In all cases it was reprehensible to obtain meat from a non-Muslim butcher (Mālikīs). It was advisable to make sure that the name of Allāh had been invoked. However, a *jātā‘* of Muhammad *Abūd* supporting the same position, issued in about 1903, seems to have provoked heated arguments (M. Rashīd Riḍā, *Ṭabīb al-ustād al-imām*, iii, Cairo 1924, 84, 767; see also C. C. Adams, in *Macdonald presentation volume*, Princeton 1953, 13-29).

But it was reprehensible to eat anything destined for the synagogues, the churches or the feasts of the *Aḥī al-kīṭāb*. In any case meat obtained from a idolater, a Mazdean, a pagan or an apostate was prohibited. To this list was sometimes added Christian Arabs (prohibited by Shafī‘īs, and reprehensible according to certain Mālikīs) (*Abūd al-Raḥmān al-Dijāzīrī*, K. al-Fībī *ala ‘lamadāḥīb al-arba‘a*, ii/3, Cairo n.d., 21-6, etc.). The application of these principles has remained fairly strict until the present day. In China, many of the Muslim carriers take their own bread with them on journeys in order to avoid eating food prepared by infidels (M. Bromhall, *Islam in China*, London 1910, 230 f.). Usāma chose his food carefully in the house of the *kāfīr*, and vice versa (V, 7, see above). However, it is well known that Jewish food conforms to the Muslim rites and thus may be eaten, unlike...
that of Christians, hence a well-known proverb giving the advice to sleep in Christian beds (which are clean), but to eat Jewish food (Freytag, Arabum prosobria, iii, 13, no. 73; W. Marçais and A. Guilha, Textes arabes de Tabarodna, ii, Glosses, vii, Paris 1959, 259, ed. E. Westermarck, Ritual and belief in Morocco, London 1926, ii, 4). However the eastern Christians often tended to conform with the Muslim regulations (Barhebraeus, Nomocanon [in Syriac], ed. P. Bedjan, Paris 1898, 463 ff., tr. J. A. Assenmain apud A. Mai. Scriptorum veterum nova collectio, x, Rome 1838, 229 ff.; Ibn al-Asqâli, Nomocanon, ch. 23, ms. Paris, ar. 315, fol. 94 ff., fol. 14, Fatha Nagâdî, apud I. Guidi, Rome 1877, 147 ff., tr., Rome 1890, 209 ff.), at the same time Christians and Jews often avoided Muslim food. The Christians of Ethiopia reproached Europeans with eating meat killed by Muslims, which they considered as amounting practically to apostasy (Abba Tekla-Halmanot, Abouna Jacob ou le vénérable De Jacobis, Milan 1877, 333, Eng. tr. Constantinopoli, London 1878, 234 f.). The excursions of groups of women of leisure for picnics etc. were accompanied also by purchases of cakes, fruit, ices, etc. (ibid., 306 f., Engl. tr., 214 f.; L. M. J. Garnett, Turkish life in town and country, London n.d., 67). Hence a regulation of the 10th/16th century forbidding women to go into the shops of the kaimakchis of Eyyub and laying down that the Christians should avoid them (A. Refik, On alliances asrida Istanbul hayatsu, Istanbul 1935, 40, no. 5; cf. R. Mantran, Istanbul dans la seconde moitié du XVIIème siècle, Paris 1962, 68). Similarly when in the baths women ate sweetmeats and special dishes (Kulsam Naneh, Le livre des dames de la Perse, tr. L. Thonneller, Paris 1881, 28, 35 f.). In Iran, the offerings to Fatîma are eaten only by men, at least in one of the first phases of the rite (H. Massé, Croyances et coutumes persanes, Paris 1938, ii, 302). Moreover, in some places, customs based on magic forbid certain foods to women (E. Westermarck, Ritual and belief in Morocco, London 1916, ii, 363). Differently from the above, the following anecdotes are based on theoretical (and even scientific) opinions concerning food. We shall deal with them below.

On the other hand a certain number of differences according to social classes can be traced to economic and social factors. Naturally considerations of price alone restricted the food of the poor both in quantity and quality and had the same effect on that of misers, who were voluntarily poor. In some of the literature about misers, particularly in the master-piece of al-Dîbâhî, the K. al-Bukhâlî, much is said about their meagre diet. The food of the poor and of misers was apt to include in particular “filling” dishes which were, at least in appearance, rich in nutritional value while consisting of inexpensive ingredients, like Harpagon’s haricot of mutton. Several such dishes are mentioned in the time of al-Dîbâhî: tifghâla, harisa, fudjisîya, hurumbiyya (Bukhâlî, ed. Hâdîjîrî, 60; tr. Pellat, 99). At the beginning of the 17th/18th century lentils also were mentioned as a dish of poor people (M. Rodinson, Recherches ..., 133) and they were again despised as the food of the fallâbî by al-Shirîbînî. The distinction between the dishes of the poor and those of the rich was clearly understood by the collective consciousness, as expressed in proverbs, popular literature,
Examples of this are found in current proverbs about burghul (Turkish bulgur) "crushed wheat", a dish of the poor and peasants in Syria-Palestine and Turkey in contrast to rice, the dish of the wealthy town-dwellers. (M. Feghali, Proverbes et dictons syro-libanais, Paris 1938, 248, no. 1097; cf. X. de Planhol, De la plaine pamphylienne aux lacs pittois, Paris 1938, 177.) The K. al- Harb al-ma'āṣik has precisely as its main theme the contrast between the food of the poor and that of the rich (J. Finkel, in Zeitschrift für Semitistik, vili (1932), 122-48, ix (1933-4), 1-18; cf. M. Rodinson, Recherches..., 113 ff.). The food of the rich was distinguished by the variety of the dishes, their complexity, their expensiveness, the length of time needed for their preparation, an ostentatious freedom of choice expressed by eating foods of little nutritional value. There was obviously an effort to improve the quantity and quality of the diet, but still there were applied the rules of "conspicuous consumption" in food (Thorstein Veblen, The theory of the leisure class, ch. iv, New York 1934, 73 f.) intended to set apart the elite from the masses. The members of the elite were expected to be familiar with the most esoteric dishes, and they either wrote themselves such treatises on cookery as those produced by people of importance in the ʻAbbāsīd period (M. Rodinson, Recherches... , 99 ff.) or had these books written for them (cf. introduction of the book of Ibn Sayyūr al-Warārä in H. Zay'yāt, al-Khizāna al-sharqiyya, iv, Beirut 1948, 10). Those who aspired to refinement in 4th/10th century Baghdad, the juruḍa, had strict rules in this matter (Al-Washshā, K. al-Muwæṣṣah, ed. R. E. Brünnnow, Leiden 1886, 94 f., 130 f., etc.; cf. M. F. Ghazi, in Studia Islamica, xi (1959), 61). The rulers had huge kitchens for themselves and their court, well stocked and equipped, staffed by numerous cooks and their assistants, under the direction of officers such as the ḏījaḏmān, the ʿabd al-gharāb- khāna and the uṣṭādār al-sūba at the court of the Mamūša (Gaudefroy-Demombryne, La Syrie à l'époque des Mamelouks, Paris 1923, LX f.). the ḥiļārjī bāği, "master of the larder" and his assistants like the ḫeṣqīk bāği, etc., all supplied with their provisions by the muḥākkām emīn and his staff at the Ottoman Palace (Gibb-Bowen, i, 78, 85, 332 f., 336 f.). The quest for the exotic, the partial adoption of the cuisine of foreigners, especially when their civilization enjoys a certain prestige, is another means by which the elite may demonstrate its distinction from ordinary folk. Hence, in the Arab world, the vogue for Iranian dishes, which have begun in pre-Islamic times (cf. ʻAbd Allāh b. Ǧuḍān's introduction of fāṭḥādā at Mecca, Alūsī, Bulğa', i, 381) and was very pronounced in the ʻAbbāsīd period (Rodinson, Recherches..., 148 ff.), and later the fashion for things Turkish (ibid., 151). European influence began in the period of the Crusades (ibid., 150; Rodinson, in Comptes Rendus du Glecs, ix (1960-3), 106 f.), and has naturally been very powerful since the 19th century, as all modern cookery-books demonstrate (see, e.g., H. Stummer, in Islamica, ii (1926), 538-49). Deep though its influence has been (see, for example, on the influence of Russian diet in Central Asia, K. Mahmudov, Uṣbekskie blyuda, Tashkent 1963, 6, with illustrations of how this trend has been resisted by the Muslim 'dergi', who call potatoes 'food of Satan and tomatoes 'fruits made of human blood'), in all countries the tradition of disdain for popularity has not disappeared. Conversely, Muslim diet exercised a pronounced influence on Christian Europe in the Middle Ages (see M. Rodinson, in Romanus, lixi (1950), 433-49, in Scritti orientalistic in onore di G. Levi Della Vida, Rome 1956, ii, 425-35, and in Études d'orientalisme... , Ldti., iii, Cairo 1949, 320 f.). But generalizations of a "magic" type are often found: they can grow up from a basis of real attributes which have been observed (birds are timorous, testicles are connected with sexual activity, honey is sweet, etc.), or be deduced from systems of symbolic connexions (yellow is beneficial, black is ill-omened, etc.; cf. the remarkable and unfortunately unique study by J. Jouin, Valeur symbolique des aliments et rôles alimentaires à Rabat, in Hesperis, xlv (1957), 299-329). But these wide and rash generalizations are based on the magic principles of contagion by propinquity, the law of similarity and of opposites, etc. Thus we have seen that in north-western Arabia it is believed that whoever eats birds' hearts becomes himself timorous (see above, col. 1059 b); similarly medical treatises explain that sheep's liver, heart or kidneys strengthen the liver, heart or kidneys of whoever eats them, while to eat sheep's brains causes loss of memory and stupidity because the sheep is senseless and stupid (Dāwūd al-ʾAntākī, Taḏḥīḥa, Cairo 1356/1937, i, 207; cf. the conversation recorded by Na'mān (anno 1663, A.H.) and translated by B. Lewis, Istanbul and the civilization of the Ottoman Empire, Norman Okla. 1963, 171-2); in present-day Morocco young boys newly-circumcised are made to drink soup made from sheep's testicles to strengthen them, and it is also the recognized diet for people who are exhausted (J. Jouin, op. cit., 309). Ḫalēṣ made with saffron has been recommended because yellow is a source of gaiety (Nizāmī, Haft paykar, Tehran 1334, 197b, tr. C. E. Wilson, London 1924, i, 156). Honey with its sweetness assuages mental suffering (J. Jouin, op. cit., 315) as does takbīna, a dish made with honey (see above, col. 1059 a), hence their consumption at funerals. It is possible that the dictum attributed to the faḥāṣ of Medina, Raḥīma b. ʿAbd al-Raḥmān (d. 136/753-4), according to which the eating of ḥabāṣ (jelly made with starch) fortifies the brain (Ibn ʿAbd Rabbih, Al-ʿĪḍ al-فارīd, vi, Cairo 1949, 293), belongs to this class of popular opinions. But as well as these there was also the corpus of scholarly opinions, transmitted by books and stemming for the most part from the scientific medicine systematized by the Greeks. It consisted of generalizations based sometimes on systematic research on data which were certainly not self-evident (such as the presence in the human body, besides blood, of the pituitary glands, yellow and black bile), from which the Greeks had drawn up a carefully worked out system, avoiding symbolic
The prohibitions concerning food are part of the vast system of Muslim ethics. For this reason there are used for them the usual categories, which include all the degrees, from obligation to prohibition, by way of recommendation, indiffERENCE, permission and reprobation. Efforts are made to state the attitude to be taken in every possible case, and even in some very unlikely cases. Procedures are established to settle doubtful cases, all else failing, by ordeal: drawing lots to indicate which animal of a flock has been the object of an act of bestiality and is therefore impure (Abu 1-Kásim Dá'ífr b. Mūh. al-Hillī, Shá'arā’ 1s-Is-lām, al-Qal’at 1839, 402, tr. Querry, Droits musulman, ii, 233, § 17); in cases of doubt as to the provenance of birds' eggs, which would decide whether they were lawful, to use those whose ends differ in width (ibid., 403 = Querry, ii, 233 f., § 37 [Shāfī’i]).

The categories of the permitted and the forbidden in this field are (apart from some exceptions) identical with those of the clean and the unclean. There follows from this the obligation to apply to these cases the general idea of contagion, of the contaminating power of uncleanness, which gives rise to a number of delicate problems to determine the limits of this contagion. The milk and the eggs of unclean animals are obviously unclean; but does an animal who has drunk wine or sow's milk, both of them unclean, become by this act unclean itself? (al-Hillī, op. cit., 402; tr. Querry, ii, 230 f.). A dog, being unclean, makes unclean any liquid which it has begun to lap or game which it has begun to eat (D. Santillana, Le précis de droit d'Ibn Qudāma, Beirut 1950, 230). The question was much discussed as to how far a mouse (or other unclean animal) which had fallen into a food which was clean caused it to be unclean (al-Dārī, viii, 47; Abū Dāwūd, xxvi, 47; cf. Santillana, Istituzioni, i, 321). In general it is admitted that the uncleanness is transmitted to the whole of any liquid or fluid matter, but only to the parts of any solid matter which are near to the part touched (unless the mouse has remained there for a long time, according to the Mālikī Saḥnūn: Ibn Abī Zayd al-Kayrawānī, Risāla, ed. and tr. L. Bercher, Algiers 1948, 158). The crossing of a clean with an unclean animal makes their progeny unclean (e.g., the mule; see also, e.g., Ibrāhīm b. ‘Alī al-Shirāzī, K. al-Tannīb, ed. and tr. Bouquet, i, Algiers 1949, 123 [Shāfī’i]). It became necessary also to lay down the course to be followed when there arose a conflict between the system of regulations concerning food and other principles and exigencies of social life, and to make general rules also for borderline cases. Thus, suicide being forbidden, man has a duty to keep himself alive and in good health. From this is deduced the prohibition of injurious substances, notably intoxicants (cf. al-Ghazālī, Ihyā, ii, § 83, 16 f.; concerning bandīg [g. ‘ychane’], in the Mughal Empire, non-Muslims as well as Muslims were, from social and humanitarian motives, forbidden to use it, see Sri Ram Sharma, The religious policy of the Mughal Emperors, London 1962, 25 f., 93, 109 f.; but nowadays this prohibition is stressed especially with regard to opium, hashish, cocaine, etc., cf. 1s-Abd al-Raḥmān al-Dāzīrī, K. al-Filsa ’l-madhabīh al-arba’a, ii, 85 n. 24). But in cases of famine and of extreme necessity, the
principle of keeping one's self alive conflicts with the prohibition of what is unclean, and it is acknowledged that the latter must be sacrificed, at least to the minimum degree necessary to maintain life. But limits are set, and also a graduated table of degrees of uncleanness is established (cf. al-Hilli, 406-8, tr. Querry, *Droitmusulman*, ii, 242-6, which is especially detailed). The question arose and still arises particularly in relation to medicines prescribed by doctors. In the same way a compromise is established between the duty to keep alive and the rights of property: in certain conditions and within certain limits it is permissible to seize by force from a reluctant owner the means for sustaining one's life. In some cases the duty of acting humanely towards animals can also have an influence on what food is eaten (e.g., the recommendation not to slaughter a sheep which is suckling, *Muslim*, xxxvi, 1408).

The fiqh naturally upheld the food prohibitions laid down by the Kur'\textsuperscript{a}n, endeavouring only to define their scope. The prohibition of blood, linked with that of the meat of animals which are dead without having been ritually slaughtered, led to many developments. It was necessary to define very precisely the method and conditions of slaughter [see *ma\textsuperscript{d}h\textsuperscript{a}*, etc. Although "carriorn" (may\textsuperscript{a}ta), an animal simply found dead, remains completely free from impurity (\textit{munkar}, etc.), attempts have been made to mitigate a little the more precise prohibition, given in Kur'\textsuperscript{a}n, V, 439, of the flesh of animals found strangled or gored, victims of a fall or killed by a blunt instrument. If even a breath of life remains in them they may still be ritually slaughtered and thus rendered lawful to eat. This is the "purification" mentioned in the Kur'\textsuperscript{a}n. It was necessary to define in the greatest detail the signs by which the presence of this flicker of life could be recognized or presumed to exist (a good summary of the position of the Sunni schools in al-Djaz\textsuperscript{a}r, *K. al-Fikh*, iii, 4 and n. 3). More serious difficulties are caused by hunting. In general it is necessary to perform the ritual slaughter of the animal before its death, if this is possible. But where this is impossible it is conceded that the fact of having killed an animal while formulating the intention of slaughtering it ritually and pronouncing the *tasmiya* ("in the name of God") at the moment of sending off the missile may take the place of this ritual slaughter. Naturally the pilgrim who has entered the state of ritual purity (\textit{fihr\textsuperscript{a}}) is defined by the intoxicating power of the liquor concerned (taking advantage of the meaning of *kh\textit{\textsuperscript{a}}mar\textit{a}* "to be mixed together"), and that on the other hand the prohibition makes it, in accordance with the logic of the system, a drink impure in itself to produce drunkenness. The result is a logical contradiction, which is illustrated when al-Ghaz\textsuperscript{a}l\textsuperscript{i} contrasts the Muslim law with the supposed prohibition of wine by Jesus, based solely on its ability to intoxicate. G\textsuperscript{a}h\textsuperscript{a}z\textsuperscript{a}l gets over the difficulty by asserting that the drinking of small quantities leads to that of large quantities and drunkenness (*ih\textsuperscript{a}n*, iv, 81, l. 31), which is the line taken in the modern interpretation, which emphasizes the moral, hygienic and social justifications for this prohibition (cf. al-Djaz\textsuperscript{a}r, K. *al-Fikh*, ii, 6-9).

Food can sometimes be affected by impurities which have nothing to do with the food itself. Thus the impurity of menstruation (Kur'\textsuperscript{a}n, II, 222, and much developed later) leads to the conclusion that the meat of menstruating female animals is impure (e.g., the hare: Ab\textsuperscript{u} D\textsuperscript{a}w\textsuperscript{d}w, xxvi, 269), just as the impurity of women in this state can be transmitted to the food which they prepare (al-Hilli, 406, tr. Querry, *Droitmusulman*, ii, 242, § 97 f.; a regulation which was applied at Nabulus according to Jaussen, *Napoule*, 311). The same applies to food prepared by infidels (including the *ahl al-dhimma*, according to certain authors), perhaps even to that eaten in their company (ibid., 404, 405, tr. Querry, ii, 236, 239, and col. 1065 b above) or, in practice, that prepared in utensils which they have used (a pathetic case cited by M. Broomhall, *Islam in China*, 226).

The M\textsuperscript{a}lik\textsuperscript{a}i school endeavoured to limit the prohibitions to foods declared impure by Kur'\textsuperscript{a}nic prescription, with only those restrictions set out above: that the food eaten should be neither harmful nor the property of others. But in general the idea of uncleanness was extended, as we have seen, to other foods. It concerns always animal food, except where it relates to edible earth, which was sometimes discouraged or forbidden, and, among the Shi\textsuperscript{a}is, to water from hot springs, which was discouraged. Lists are given of the impure parts of animals, generally faecal matter and urine (the urine of the camel is, however, permitted as a medicine); to these are sometimes added the sexual organs and other parts. Similarly, acts of bestiality make unclean the meat of the animal concerned, also the eating of excrement. This leads to the case of the *di\textit{\textsuperscript{a}}ll\textit{\textsuperscript{a}}* (Ab\textsuperscript{u} D\textsuperscript{a}w\textsuperscript{d}w, xxiv, 24-33, etc.) and developed in great detail by the fiqh, which specifies in particular the length of time which the animal must be kept in supervised isolation and fed with clean food in order to regain its cleanliness and be eaten lawfully.

But, above all, a certain number of animals are added to the pig, which is the only one actually prohibited as such by the Kur'\textsuperscript{a}n. For some of these, such as humans and dogs, it is obvious that all that is being done is to make explicit prohibitions which are implicit in the sayings reported from the Prophet. In the case of certain others, a thorough study would be necessary to determine which are of pre-Islamic Arab origin and which arise from the customs already existing among peoples who have become Islamicized. In general, however, Islamic jurisprudence has developed extensively the chapter on the juridical classification of the various animals, with perceptible divergences among the schools: a summary of the attitudes adopted by the principal juridical schools will be found in the article *hayaw\textsuperscript{a}n* —iv.
Over and above the categories elaborated by the schools, on the basis of the Kur'an and Tradition, of foods whose consumption is forbidden or reprehensible, the zealous Muslim may wish to carry the imitation of the Prophet so far as to abstain from foods which, according to Tradition, displeased him personally, but which he did not forbid to others (at least according to most of the texts), although he forbade those smelling of them to enter the mosque: garlic, onion and often leeks (kurrâh; cf. references apud Wensinck, A handbook of early Muhammadan tradition, Leiden 1927, s.vv.; recommendations to wash before and after paid today, cf. J. Jomier, Le commentaire coranique du Mandar, Paris 1954, 142), which is probably the reason why according to the commentators (ad. loc.) leeks are excluded from the bukhâl laid out on the "spread table" sent from Heaven to Jesus and the apostles (Kur'ân, V, 111 ff.). Perhaps the lizard should also be added to this list (see above, col. 1058 b).

In the course of the centuries there have come to be added to this list of prohibited goods new edible products; the fact that they were bid'â reinforced their qualities of being harmful, intoxicating etc., to induce—but in vain—their prohibition. This has been the case with coffee (see ҚAHWÂ), bât [q.v.], tobacco [see ҭўтыт], etc.

Each Muslim sect, formulating for itself a complete doctrine on all points of dogma and practice, has had to make its decisions on the problem of prohibitions concerning food. In general the Kur'ânic prohibitions have been adhered to, but some have considered them to have only an allegorical significance or that an era was beginning in which there was no further justification for them. The extra-Kur'ânic prohibitions have been deliberately criticized in some circles. The consumption of dogs, habitual in the Saharan Maghrib, was regarded with indulgence by some jurists (cf. M. Canard, in Herestîrî, xxxix (1952), 298, n. 1; H. R. Idris, La Berbérie orientale ..., 592, 631). The Қaрматîs of Bahrayn allowed the meat of cats, dogs, donkeys, etc. to be sold, dogs to be fattened for the table and, at one time at least, seem to have permitted wine (De Goeje, Mémoire sur les Cermatîches du Bahrayn, Leiden 1886, 174 f.; cf., e.g., M. b. Malik al-Ҳamâdi, Kashf asrâr al-bûtînîyya, ed. M. Zâhîb, Cairo 1933, 133). But Ӆaatorial dogma follows the classical pattern of regulations concerning food, forbidding the flesh of carnivorous animals and birds of prey, that of the hyena and the fox, the mule and the donkey, disfranchising that of the lizard and the hedgehog, authorizing that of the hare and the horse (on condition that the latter should not be ritually slaughtered unless it is exhausted with fatigue) as well as that of locusts and fish with scales, both to be caught alive; condemning the eating of marrow, spleen, kidneys or the genital organs of animals, etc.; forbidding all fermented drinks and discursing the use of wine-vinegar (Қâdî Қumân, K. al-Ӣîtîsâr, ed. M. Wahid Mirza, Damascus 1957, 95-7). Al-Ҳâkim forbids in addition to this some plants: mulâkhiyya ("Jew's-mallow"), rashâd (cress or rocket), mutawakkhiyâ (a dish related to the turnips, because of their name or because they were liked by ҜAıha, Abû Bakr, Mutawakkil, etc. (S. de Sacy, Exposé de la religion des Druses, Paris 1838, i, CCCIX f.). As a further example we may mention the prohibition among the Yazidis of the chicken and the gazelle, of cauliflower and lettuce, accompanied by a tolerance towards the use of alcohol (R. Lescoat, Enquête sur les Yazidis de Syrie et du Djebel Sinjar, Beirut 1938, 76 f.). Among the Ңusayrîs are found in general at least those Muslim prohibitions which are very widespread (camel, eel, cat-fish), the prohibition of the hare, which is strictly Ҝifî, and, among the Shamsîyya, a tendency to interpret them in a rational way. Thus, at Maârîn and often among the Bedouin of Arabia, there are eaten crows and eagles, which are forbidden by the majority of the schools (A. Jaussen, Coutumes des Arabes au pays de Moab, Paris 1908, 67, n. 1; C. Doughty, Travels in Arabia Deserta, Cambridge 1888, i, 604). Rich Ottomans had sent to them by Christians (to celebrate Bayram) mussels, concealed under green cloth (Marie Sevadjian, L'amira, fr. fr. T. Macder, Paris 1927, 35 f.), etc.

In the category of religious prohibitions should be included those which the ascetics imposed on themselves, and which are now prescribed by the Law. Among these is abstinence from meat, which is an ancient practice (Goldscheider, Vorlesungen, 150, 152, Fr. tr. Le dogme et la loi de l'Islam, Paris 1920, 122, 124), probably adopted in order to rival the zeal of Christians, Manicheans, etc. (L. Massignon, Essai sur les origines du lexique technique de la mystique musulmane, Paris 1954, 61), and which may have been reinforced by Hindu and Buddhist influence (for Abu 'l-Âlâ al-Maârî, see H. Laoust, in BEÔ, x (1943-4), 152). The dervish-orders too propagated various prohibitions, thus provoking the protests of the reformers (J. Jomier, Le commentaire coranique de Mandar, Paris 1954, 209).

It would be interesting to study the way in which the jubâh, the theologians, the mystics and the philosophers have attempted to justify the prohibitions concerning food. We cannot do it here, but it would merely mean that there has always existed a tendency to interpret them in a rational way. Thus al-Marghinâni points out that the aim of the prohibition is to preserve the nobility of the human body by preventing its being sullied through absorbing the substance of base animals (Hidîya, ms. Paris ar. 6763, fol. 247v., tr. C. Hamilton, London 1791, iv, 74). This tendency has developed particularly in modern times, when the apologists lay especial
stress on the social advantages and the benefits to health of the prohibition of wine (e.g., J. Jomier, Le commentaire coranique du Mandr, Paris 1954, 209 f., and above, col. 1069 a.) Then Ibn 'Abbas recited the Kur'an, VI, 146/145" (Abū Dāwūd, xxvi, 30; cf. M. Rodinson, in Trudi fiqh al-lugha, Thāminatione, 1, Moscow 1962, 362-6). The mystics favour rather alibi, c Fikh al-lugha, Tha

The art of cooking consists in preparing and combining the basic elements in such a way as to produce a pleasant flavour. The combinations take into account the distinction between the sensory qualities, mentioned above, which are attributed to the foods, and the compatibility (with a hierarchy of degrees of compatibility) and incompatibility of ingredients, whether together or eaten following each other. Europeans have often remarked on the use in Muslim cooking of combinations in one dish of foods not in accordance with their own taste, for example that of highly-spiced with sweet and bland ingredients, without a sauce of intermediate flavour to lessen the contrast; there have even been drawn from this deductions, not beyond dispute, on collective psychology (E. F. Guattar, apud L. Massignan, in RMM, livii (1924), 151). In fact these combinations are not confined to Muslim cooking; they are found in European and American cooking, and were used in the past even more than today. Much use is made of sauces for combining ingredients, as was done in the Middle Ages. Present-day Turkish cooking seeks to avoid having in one dish the taste of meat (roasted or grilled) and that of cooked vegetables (I. Orga, Turkish cooking, London 1958, 14). Vegetables cooked in oil are often eaten cold in the Middle East. As among the Romans, meat in the mediaeval Muslim world was usually boiled before being baked or roasted, and for some meat this was a necessity, either because of tradition or in order to make it tender (cf. J. André, L'alimentation et la cuisine à Rome, 233 f.). The art of cooking consists in preparing and combining the basic elements in such a way as to produce a pleasant flavour. The combinations take into account the distinction between the sensory qualities, mentioned above, which are attributed to the foods, and the compatibility (with a hierarchy of degrees of compatibility) and incompatibility of ingredients, whether together or eaten following each other. of dishes of varying flavours. It was introduced in Cordova in the 3rd/4th century by the Baghdadl Ziryab (E. Lévi-Provençal, Hist. Esp. mus., i, 571). This arrangement seems to have been less generally adopted in the East than in the West.

It is natural that some preferences and abstentions which have a national or religious origin or are the result of an arbitrary social tradition should sometimes be justified also by aesthetic arguments. The preferring of mutton to beef is perhaps an example of this.

Aesthetic considerations which have nothing to do with taste are also important. Among them is the visual appeal of dishes, to which there are many references in the mediaeval culinary treatises. Great care is always taken over how a dish is served, and saffron, for example, is often used more for its "rich" golden colour than for its flavour. Also with the aim of delighting or surprising the beholder there were evolved an increasing number of the "disguises" (to use a term from ancient cookery) which were so popular also in Europe in the Middle Ages.

Hence dishes with such significant names as musawwar(a) "counterfeited", maynâ "artificial", etc., and recipes such as those for "mock brain" or omelette in a bottle (M. Rodinson, Recherches ..., 157 f.), or the dish composed of 5 animals each inside the other which was devised for Abu l-Ula, the governor of Ceuta and brother of the Almohad caliph Yusuf I (A. Huici Miranda, in Revista del Instituto de Estudios Islámicos en Madrid, v (1957), 140, 142, n. 3). Nowadays, on the contrary, names of this sort are given rather to economical dishes which are imitations of the more luxurious ones (e.g., Turkish yalanç dolma). But attention is always paid to the appearance of a dish, so that even one so common as purée of chick-peas (hummus be'dhime), a specialty of Damascus, is always decorated with powdered red pepper, whole chick-peas, etc.

The systematic discrimination of the foods with the pleasantest taste, the drawing up of the rules which govern this according to increasingly subtle criteria, and the search for the most delicious combinations of food, formed the preoccupations not only of head cooks but of a whole distinguished circle of gourmets and gastronomes. Gastronomy was especially esteemed in the 'Abbasid period, hence the gastronomical gatherings organized by several of the caliphs (cf. H. Zayyât, al-Khizâna al-gharbiyya, iv, 4 ff.). Gourmets at the highest level of the social hierarchy took pleasure in preparing and in inventing dishes which were often called by their names (cf. M. Rodinson, Recherches ..., passim and, for the Muslim West, A. Huici Miranda, op. cit., 138 ff.). The abundance and the popularity of their writings on this subject were already arousing the anger of Sâlih b. 'Abd al-Kudôd (d. 167/783); Goldziher, Transactions of the 9th International Congress of Orientalists, London 1893, ii, 104 ff.; they wrote especially many treatises on cookery (Fikrist, 317, l. 6-10; cf. M. Rodinson, Recherches ..., 100 ff.) which are now unfortunately lost; poems were composed to celebrate certain dishes (op. cit., 112). The interest of the 'Abbasid upper classes has left its trace in the names of dishes created by its most eminent members, for example the 'ibrâhîmiyya, which is named after the prince (at one time anti-caliph) Ibrâhîm b. al-Mahdî. Within the Muslim world, gastronomy, although later less widespread and certainly less paraded because of the growth of puritanism, nevertheless always had its adherents and its poets (cf. Rodinson, op. cit., passim).

Bibliography: In the article. For the manuscript works on cooking mentioned (especially the Wusla ila 'l-habb), see M. Rodinson, Recherches sur les documents arabes relatifs à la cuisine, in REI, 15, 1943, passim; Rodinson, 175, 1943.

Banû Ghifar b. Mulayk b. Đamra b. Bake b. 'Abd Manât b. Khinana, a small Arab tribe, being a subdivision of the Banû Đamra b. Bake, who in their turn formed a branch of the Khinana. The Ghifar lived in the Hijaz between Mecca and Medina; some of their abodes are mentioned by the geographers. Very little is known of their history in pre-Islamic times: one of their members is mentioned (Aghdani, xix, 74, 5) in the brawls preceding the Fidjar-war [q.v.]. A quarrel between the Ghifar and the Banû Tâlîbâ b. Sa'd b. Dhubayân is referred to in a poem quoted by Yâkût, Muđdam, ii, 202 f. A woman of the Ghifar was wife to the poet 'Urwa b. al-Ward al-Abîl (Ibn Hishâm, 653 f.). A confederacy (bif) between them and the Banû Mallik of Khinana is mentioned in 'Aghdani, xi, 126 ff. Living as they did in the neighbourhood of Medina it was essential to the Prophet that they should not take sides with the Kûryaš; he therefore guaranteed them in one of his letters the protection (ghimma) of Allâh and His messenger for their lives and goods (Ibn Sa'd, 1, 2, 26 f.). In this treaty Muhammad did not insist on their conversion; but by 8/690 they had embraced Islam and took part in the conquest of Mecca. Some of them had settled at Medina, e.g., Abû Dharr [q.v.] and his nephew 'Abd Allâh b. al-Sâmî; Sibâ' b. 'Urfaša as well as Abû Ruhm are even said to have been left by the Prophet as his representatives in Medina during some of his expeditions (Ibn Hishâm 668, 810, 896, 966).

After the Prophet's death the Banû Ghifar did not join in the revolt (ridda), nor were their deeds outstanding in the time of the conquests (jâhîd). We hear of the quarter (khifta) they had in Fustât, when 'Amr b. al-As conquered Egypt in 20/641 (Yâkût, Muđdam, ii, 745).

In 45/665 Ḥakam b. 'Amr, a younger Companion of the Prophet (see Ibn Ḥaḍâr, Isbâb, s.v.), was appointed to the governorship of Khurâsân; he died at Marw in 17/671. He was called al-Ghifâr, though his ancestor was not Ghifar, but the latter's brother Nu'sâyla, whose descendants being few in number had affiliated themselves to the Banû Ghifar (Tabâri, ii, 80 f., 84 f., 109-11).

(G. W. F曦C)

GHILZAY [see GAJALAY].

GHINA' (a), song, singing. This is the specific meaning of the word, although it stands for music in its generic sense, an interpretation accepted by the Tkhâwân al-Sâfâ' (16/18th century) who say (Bombay ed., i, 87): "mâsîkît is ghînâ', and the māsîkîr is the mughannî" (see R. Payne-Smith, Thes. Syr., 977, s.v. hedhrula). The origin and development of the song must be traced through the folk. From a musical point of view there is no difference between the simple chant of the farâb and the artless song of the sakkâ (water-carrier), or between the elaborate cantillation of the mūsâ'īdât (caller to prayer) and the highly festooned vocal work of the professional
mughanni (singer). In some lands ghinda is classified according to the structure of the music whether classical or popular, whilst in other lands it is grouped according to the class of the music used. In Morocco the song is divided into folk song or popular song called hartha (natural talent), and the art song called ala (classical) or jan’a (art work). In Algeria it is grouped under kaldim al-hasli (profane song) and kaldim al-ididd (serious song).

The Dhahiliyya. Just as we see the double meaning of the Latin carmen (charm, song), so the Arabic labana and ghirta (from which we derive lahn (melody) and ghirr (poetry) have, in some of their pristine significance, the meaning of ‘be understood’ in the cryptic sense. Perhaps the huda (caramel driver’s) song was, at first, a ‘charm’ against the djinn (genii) of the desert. The huda’i hidda was not confined to the caramel driver. The toil or industrial song was to be found on every hand. Indeed we read of the Arabs of old singing at toll for their Assyrian taskmasters. That dominating factor of repetition not only relieved the monotony of work but it regulated the water carrier, the boatman, the weaver, the gleaner, and even the water of the tent or household song at work just as they do today. Al-Mas’udi avers that the huda was developed out of the labana (lament) of the women. Out of this came the nasb (elegy) and the nasb (secular song) which found expression on all occasions of joy, and would include wedding songs, children’s songs and lullabies.

We know nothing of the verse or music of these early folk songs, any more than we know the character of those mentioned in Exodus, XV, 21 or Numbers, XXI, 17, although the names of some singers have been preserved. Al-Djawhari (d. 396/1002) and Ibn Sida (d. 458/1066) reaffirm that the nasb was peculiar to the Arabs but was no more than a refined huda’, and al-Ghazzali (d. 505/1111) says that its measure (nasb) was based on the prosody (tartil) of the verse. Probably much of pre-Islamic poetry was sung, as Brochelmann suggested. Only by this means could full justice be done to the poetic language. It was not a mere guess which prompted St. Guyard and Landberg to suggest that Arabic prosody was based on musical principles. That verse was originally in the colloquial may be accepted, hence the term labana came to imply the colloquial. Certainly the folk song is partly responsible for perpetuating corruptations in speech, and both melody and measure are sovereign perpetuators, as we see in the mughan of Morocco. The melodic framework of folk song is quite simple, a solitary musical phrase being the general rule, and that is repeated with each bayt (verse) or even each mihrd (hemistich). The compass is generally tetrachordal or pentachordal, although even two notes might carry the limit of a toll song. Adornments (laqsin) of the melody by means of grace-notes—always the mark of ability in the professional mughanni (singer)—is rarely indulged in by the folk. Three types of ghinda are practised—

- the solo, chorus, and antiphon. Both the measured (mihr al-khir) and unmeasured (ghyur mawzin) are in use. The former is called the nasb, inshad, unshida, and the latter the tariji.

Needless to say the art song existed with the baynnda, dalqinat, mughanita, or barinda (professional singing-girls) of the tribes, wine shops, and private families, the term musmari, found in al-Ash’ah Maymün, being probably post-Islamic. History—or legend— mentions these singing-girls among the old Banu ‘Amalik (see al-Tabari, i, 231; al-Mas’udi, Muradi, iii, 296), and certainly the himis was known to ancient Assyria. That all played a prominent part in social life is evident from the story of the Prophet Muhammad himself. Lyall, in his Mufaddalishiyat (XXVI, 87), opines that these baynda were ‘all foreigners’ and that they sang ‘probably to foreign airs’, but he gives no evidence; whilst the statement of von Kremer that they did not even sing in Arabic is likewise unacceptable. That some of them came from Persia, or more likely, al-Hira, and even Byzantium, and that some of their songs were sung in an alien tongue is quite admissible, but we know that some came from Mecca. Al-Nābiha the poet was corrected by a bayna for using faulty rhymes (iwm). That one—at least—was scarcely a foreigner (Aghani, ix, 164; xvi, 15). Most of the great pagan poets were entranced by those singing-girls, and among them Bishr b. ‘Amr, al-Ash’ah Maymün b. Kays, and ‘Abd Vaghfū. Even Tarafa, Labīd, and ‘Abd al-Mas‘i were overjoyed to hearken to the djuhan (harp) and tariji (refrain) of the tavern bayna. Perron says that before Islim, ‘music was little else than unpretentious psalm-singing (taranorum), varied and embroidered by the singer’. Everyone sang in unison or octave, harmony—in our sense of the term—being unknown. What took its place was what the Arabs called kād (rhythm) supplied by a ḥadī (rhythmic wand), duf or mishar (tambourines), or, failing the latter, a ḥirbāl (a parchment-bottom sieve). Every singer decorated her melody with vocal ornaments (sawd). ‘Tarafa reveals how the song began on a low note, whilst another describes a singer who ‘prolonged the final vowels with a high trill (tufdir)’ and clearly enunciated the syllables in the tartil fashion.

Under Islām. At the birth of Islam there was no opposition to singing, since even the Prophet Muhammad himself had joined in the toll-song at the digging of the trenches at Mecca, yet the four Orthodox Caliphs are reported to have been more— or less—in opposition to any indulgence in listening (al-samād) to singing or any music. As a result, the rigid school of religious law in ancient Assyria, and that, more accommodating, of Madina, allowed singing, and a whole library of literature—both for and against—came into existence on al-samād. Indeed a legal fiction arose which argued that the cantillation (taṣbīr) of the Kurān was not the same as singing, as we read in Ibn Khaldūn. Yet, as Ibn Kutayba pointed out, the rule and practice of cantillation and singing were identical; and—as we read in the ‘Jd of Ibn ʿAbd Rabbīh—if the artistic song was illegal, so was the chanting of the Kurgan. Human nature, being what it is, could not accept the bigoted ruling of the pious, and so there arose, in addition to the privately owned bayna or singing-girl, the professional musician (mughanni), the first recorded being Tuways (10/632-92/711). He, and a mughaninya named ‘Aziz al-Mayād (10/632), are said to have introduced a new type of song called the ghinda al-muθab (artistic song) or ghinda al-rabīk (graceful song). According to Ibn al-Kalbi, ‘the ghinda is of three kinds—

1. the nasb, which was the song of the riders (ghinda al-rudabīn) and the singing-girls (kaynā); (2) the sinād, which had a slow refrain (tarjīs), but was full of notes (naghmād); and (3) the kusarī which was quick (kafirī). Yet a new element had arisen, called ‘alr (rhythm), which was distinct from ‘araḍ (metre), and was external because it was supplied by tafsīb (handclapping), or...
a pulsatile instrument such as the ḥabd (wand), ḏuff, mishar, or ḡhirāb (tambourine). All the aswdt (songs) contained in the Kitāb al-ʿAḏghīn are in the ḥabd (wand) or ḏuff (fiddle) forms. All the aswdt (songs) were made by Yūnus al-ʿAṭbī (d. c. 1487/1565), Ibn Djamī (d. c. 1873/1893), Yahya al-Makki (d. c. 205/819), Ḥishāk al-Mawṣīlī (d. c. 235/850), Ḥasan b. Mūṣā al-ʿAṣīrī (d. c. 245/850), Ibn Bāna (v.r.) or Bānata (d. c. 278/892), and al-Wazīr al-Maghribī (d. c. 417/1026). Later new popular forms of songs appeared such as the muwāṣṣāt, sadīq, manāwī, būnaq, ḍāḥānīn. Indeed the first named were lifted to a premier position by Muslim Spain. Alas! not a note has been preserved. All that we know of the songs in the Kitāb al-ʿAḏghīn of al-ʿIṣfāhānī, is the name of the tonal mode (tashīʿ) and rhythmic mode (darb) in which they were sung. It is not until the time of ʿṣāfī al-Dīn ʿAbd al-Muʿmin (d. 693/1294) that we get a notation—or rather a tablature—of a song in Arabic books on music, whilst ʿAbd al-Kādir b. Ghaythī (d. 836/1435) is the earliest of the Persians to use a notation or tablature for a song. In the 8th/14th-9th/15th centuries three definite types of vocal music were recognized—the naṣīq, the ṣawī, and what was contained in the nawba, the latter being a vocal and instrumental suite of pieces. The naṣīq comprised two parts, the first being an un-rhythmic setting of two verses called the naṣīq al-ṣawī. The latter is complete in itself, i.e., it contains a compact phonic, rhythmic, and melodic setting called the naṣm al-naḥḥāmī. The ṣawī was a ṣawī in one of the ʿṭalā rhythms. All singing in the Islamic East is basically homophonic, i.e., purely melodic. Harmony, in our connotation of the term, is unknown. The greater part of the Islamic East conceives music horizontally, whereas Europe views it vertically. All melody is modal. In the days of Ibn Muḥirīz (d. c. 961/1551) there were but eight modes, but with the later impingement of Iranian culture there were eighteen or more. These were originally called asāṣī (fingers), but later were named nāḥmāt (notes), māḥkāmāt (places), or ṣawī (natures), the latter term revealing the belief in the innate character of a particular mode. Then there are the melodic or patterns in the melody, some being both in 2nd and 4th antiquity. As every verse is complete in itself, i.e., it contains a compact thought, it originally consisted of the same melodic phrase, but from the time of Ibn Muḥirīz (d. c. 961/ 715) the second verse was set to a different melody. These factors do not imply monotony, because the singer varies her or his rendition of the melody differently by means of ornaments (raʿād, fākhdīn or ṣawīwāt). For vocalizing these latter, special syllables are introduced such as ah, yā, and lā, when the more conventional yā layli or tīr tār do not suffice. These occur in various places, viz., in the bosom of a word, and the end of a phrase, or the close of a hemistich, verse, or song, and in the last position it is called ʿuqūl (work). Of course in the folk or toll songs none of the above artifices occur, although some chants of the pearl fishers off the Bahrain coast reveal something of the sort. It is highly probable that the metric melodies (nāḥmāt al-būḥīr), which are still used in North Africa to probe the scansion of verse, may be survivals of many of the old types of songs, even as far back as the days of early Islam.

GHIYAR (Arabic: distinguishing, distinction, cognition) is a term denoting the compulsory distinctive mark in the garb of dhimmis (q.v.) subjects under Muslim rule. It is considered probable that the ghiyar became the prototype of the Jewish badge in Christian Europe.

In Islamic lands it was part and parcel of the dispositions concerning the status of the dhimmis which can be traced back to the time of Mutawakkil's enactments (233/849), but had been known even earlier; thus under Harun al-Rashid they were stipulated colour (red, blue, yellow) placed over the garment which bears the mark. Both the wider connotation and indeed the garment itself the badge of the Jew. On the other hand, in various sources the word denotes any kind of garb distinction imposed upon dhimmis, and indeed the garment which bears the mark. Both the wider connotation and the narrower seem well attested. Thus the zuwar (a special belt) of the Christians often comes down as the badge of the Jew. In the Maghrib the name ghiyar occurs for the distinctive mark in the garb of dhimmis.

The Tâfiq mentions that some considered it the badge of the Jew. On the other hand, in various sources the word denotes any kind of garb distinction imposed upon dhimmis, and indeed the garment which bears the mark. Both the wider connotation and the narrower seem well attested. Thus the zuwar (a special belt) of the Christians often comes down as the badge of the Jew. In the Maghrib the name ghiyar occurs for the distinctive mark in the garb of dhimmis.
GHIYAR — GHIYATH AL-DIN TUGHLUK I

GHIYATH AL-DIN [see dihil SULTANATE, KAY-KHUSRAW, MUHAMMAD].

GHIYATH AL-DIN NAKKASH, Timurid courtier. If he was an artist, as the name indicates (naksh = painter, etc.), his speciality is unknown. He was a protegé of Bâysonghor, etc., the gifted son of Shâh Rukh, and was attached by his patron to the Timurid embassy to China in 823/1420-825/1422, with the special duty of drawing up a day-to-day descriptive account of the embassy. This report of the journey from Harât to Khânbâliq (Pekin) and back, giving first-hand information about China is not to be found elsewhere, at one time consigned to the archive of the Zudbat al-tauârikh of Hâjî Abru, the Mâtia' al-sa'dayn of 'Abd al-Razzâk al-Samarkandî, etc. On the 15th century Turkish translation, called Aqâ'ib al-latâ'ij, by Kücük Celebizade, see Babinger 293-4.

Dunlop, Hâtish-i Abrâ's Version of the Timurid Embassy to China in A.D. 1420, in Glasgow University Oriental Society Transactions, xiv, 1946, 158 (Persian); D. M. Dunlop.

GHIYATH AL-DIN TUGHLUK I (Ghâzî Malik), founder of the Tugluq dynasty and ruler of India from 720/1320 to 725/1325, was by origin a Karawân Turk and an immigrant from Shâh Rukh, who took service under the Khalîjis. In 705/1305 he was appointed governor of Dipâlpur in the Punjâb, and as warden of the marches he held the Mongols at bay for fifteen years, conducting annual raids against them in the Kâbul and Ghaznîa areas. The prestige thus gained was his main asset when he rose against Khusraw Khân, a Khalîji general of low-caste Hindu Parâwâr origin, who had massacred the last Khalîji ruler, Kûtib al-Din Mubârâk (726/1326-720/1320) and all the Khalîji princes, seized the throne, apostatized from Islam and begun a reign of terror in Dihîl. Most of the Muslim governors had accepted Khusraw Khân's rule passively, probably owing to the lack of reliable intelligence from Dihîl. Ghâzî Malik addressed his da'wâ' of dâhikâ to only six governors of western India, of whom one joined him, two who refused to join were murdered by their own troops, while another who promised to help was restored to authority by his formerly rebellious troops. The Tugluq revolution was therefore the work of the rank and file of the Muslim army, rather than of the Muslim ruling elite. Three decisive victories ending in the capture and execution of Khusraw Khân left Ghâzî Malik the undisputed master of the Sultanate. Despite his refusal, he was raised to the throne by the idgâh of the nobles, as the defender and restorer of Islamic power in India against the double challenge of Mongol threat and Hindu subversion. He assumed the title Ghiyath al-Din.

Contemporary Muslim historiography eulogises him as the saviour of Islam in India, and Barânî presents him as the ideal sultan who combined a heroic rôle-personal virtues of continence, chastity and piety. The hagiographical tradition is much less complimentary owing to the Sultan's differences with the Chîshîtî mystic Niżâm al-Din Awlîyâ on two points: acceptance by the latter of a large gift of money from Khusraw Khân, which he was unable to restore to the treasury when called upon; and the practice of the Chîshîyya (q.v.) to listen to music (sâma') To settle the second point the Sultan convened a great congress of 'âlamî and Şûfîs, and finally imposed some restriction on the sâma' of the heterodox Şûfîs, without interfering with the practices of the Chîshîtî leader. Anecdotes of subsequent bitterness seem to be later apocryphal legends connected with the death of Ghiyath al-Din which found their way from later hagiographical writings like those of Ŝâmîlî to the serious historical works of Firîshât and others; they are not traceable either in contemporary chronicles or near-contemporary hagiographies like Hamîd Kalandar's Khâyr al-majâlis.

Administratively Ghiyath al-Din's first problem was to restore the economy of the state after its upheaval and thorough fiscal chaos under Khusraw Khân. He had to resort to a policy of confiscation of dâjâirs granted by his reckless predecessors, and to the more unpopular measures of appropriating land-grants and army pensions (İsâmî, 389-91). His taxation policy, which affected mainly the Hindu agricultural and land-owning classes, was to strike a via media, denying them opportunities of accumulation of wealth which might lead to rebellion, but granting them security of subsistence to enable them to pursue their husbandry; between 722/1322 and 723/1323, consolidation and expansion of the Sultanate was effected by this son Diawân Khân (also known as Ulûg Khân, later Sultan Muhammad b. Tugluq (q.v.)), who re-subjugated the rebellious Kakâtyâ radja Prâtaparavurava II of Warangal after an initial reverse; annexed the Pândyâ Hindu kingdom of Madura (Ma'bar); invaded Dwâdînagar and made incursions into the independent Hindu principality of Orissa. Ghiyath al-Din personally led an expedition intervening in the civil war in Bengal, which was partly annexed to the Sultanate and partly placed under a vassal ruler Nâşîr al-Dîn. During his five years' rule Ghiyath al-Din had thus consolidated the sultanate and extended its borders considerably beyond the Khalîji frontiers.

On his way back from Bengal in 725/1325 Ghiyath al-Din was crushed to death under the roof of a wooden pavilion constructed hastily upon the orders of his son Diawân Khân, which collapsed during an elephant parade after a banquet. Diawân has been accused of parricide by two near-contemporary chroniclers, Ibn Bâttûtâ and İsâmî, both with strong prejudices against him. Other historians of the age, Barânî and İyâbî b. Âhmâd Sarhanî, make no such accusation. Sir W. L. Haig's theory of the assassination of Sûfîs in this alleged intrigue seems to be far-fetched.
GHIYAH AL-DIN TUGHLUK I — GHUDJDUWAN

GHUBAR [see ḤISĀḤ, KHAṬṬ].

GHUBRIN, nisba of the B. ʿGhurbīn, a branch of the Ṭawwāb Berwās who formerly inhabited the eastern end of Great Kabylia in Algeria (Ibn Khālid, Berbères, Index s.v. ʿGhurbīn) and who are still represented in the same area by the Ait Ghoubi (Brunschvig, Berbérie orientale, i, 436). Two ʿGhurbīnīs played a rôle in Ḥafṣīd history: (1) Abu ʿl-ʿAbbās ʿAbd Allāh b. ʿAbd Allāh, b. 644/1246 at Bidjāya (Bougie) where he spent all his life and attained the rank of kābīr ‘l-kudādāt. In 704/1304 he was sent by the Ḥafṣīd ruler of Bougie, Abu ʿl-ʿBaṣk Kāḥīl, as an emissary to establish friendly relations with the rival Ḥafṣīd at Tunis, ʿAbd Allāh. On his return he was accused of treason and of having been implicated in the death of Abu ʿIsāḥ Ḥāwī (whom had been captured in ʿGhurbīnī territory 22 years previously) and was put to death. He wrote a collection of biographies of Bougiotes entitled ʿUmnān al-dīrāya . . . which was edited by ʿAbd Allāh b. ʿAbd Shāh (Mohammed Ben Cheneb) and published at Algiers in 1910.

Bibliography: Ibn Farhūn, Dībādī, Cairo 1352/1932, 80 (correct the date to 704); Nubāhī, Ta’rikh kudāt al-Andalus, 132; Ibn Khālid, Berbères, ii, 394, 418; Ben Cheneb, Iṣdāq, no. 354. (2) ʿAbd Mahdī ʿĪsā, who became kābīr ‘l-jamā‘a at Tunis in 787/1385 and died there about 813/1410.

Bibliography: Ibn Nāḍī, Maʿṣūmus al-īlm, Tunis 1406, ii, 40. (Azīz Ahmad)

GHUDUWAN (today Gidjduwan), a large village in the northeastern part of the oasis of Būkhārā, on the tributary of the Zarafshān River at present called Pirmas, formerly the Kharān Kūdā.

The origin of the village and etymology of the name are unknown. It is mentioned several times in the town of Rāmītān by Muḥammad b. ʿAlī Khālid (267/879), but no notices are found in other geographies. Al-Samʿānī (460/1069) says the village was six farsakhs from Būkhārā, and was an important commercial centre. It is mentioned several times in Islamic texts as the home of several learned men. A lieutenant of the heretic Muḥammad-ʿīnāmah came from there according to Nārāghāl (see below). Bābur in 918/1512 was defeated here by the ʿOzbekīs. Thereafter little is heard of the village although the citadel was the scene of fighting several times. At present the village is sixteen kilometres/10 miles from the railroad station of Kyzyl-Tepe and ca. 50 km/3o m. from Būkhārā.

GHIYAH AL-DIN TUGHLUK SHAH II IBN FATH KĀHAN IBN SULTĀN FIRDĀS SHĀH TUGHLUK [q.v.] (790/1385-791/1389) succeeded to his grandfather's throne according to his will, superseding a number of relatives. This led to the internecine dynastic wars which drove to the decline, and finally the overthrow of the Tugluq dynasty. The Sultan's inexperience, his love of pleasure and his tactlessness in imprisoning his own brother Sāḥīr Kāhān led to the revolt of his nephew Abu Bakr son of Zafar Kāhān, who defeated and killed him with the aid of the wāzir Rukn al-Dīn Canda. The reign of Ghiyāh al-Dīn Tugluq II marks the acceleration of chaos and civil strife in which the Delhi Sultanate rapidly disintegrated: a process which also marks the provincialization of Muslim culture in India during the 15th/16th century.

GHIYAH AL-DIN TUGHLUK IIBN AMR ALI AL-MUWALLAD, famous sūfī Ṣayyīd b. Ḥishām b. al-Muẓaffar b. Muḥammad b. ʿAbd al-Ṣāliḥ, b. 643/1246 in Ghudjduwan (according to al-Samʿānī) or Ghudjduwan (according to Ūkūt). His father, whose name is sometimes written as Abu Bakr, was born in ʿGhurbīnī and lived at Malātāya (Melitene); he migrated from there to the vicinity of Būkhārā, where his son received his education. Certain writers trace his
ancestry to a royal dynasty of Rûm (Asia Minor); others consider him to be a descendant of the imām Mālik b. Anas and another source traces him back through ten generations to Abu ʿAmir al-Husayn b. Maslama al-Nakhrānī, a famous šīfī Shaykh who died in 424/1033; this seems inadmissible, since only 193 years separate the date of death of Kharākānī from that of the death of Ghuḍjduwānī (which appears the more exact) and during that time ten generations cannot be admitted; moreover Kharākānī lived in Khurasan (exact) and during that time ten generations cannot seem inadmissible, since only 193 years separate what is more correct because he twice mentions the date 600/1204 in his Risāla-i Ṣabībiyya, which is more, his successor in the tarība, Khādija Ahmad Siddīk, died in 657/1259, so that if Ghuḍjduwānī had died in 1259 his successor would have disappeared 80 or 82 years after him, which is hardly likely. He was buried in Ghuḍjduwānī.

He has left a work in Persian comprising: several quatrains, the Risāla-i tariqat, the Waṣīyyat-dīna (which was the subject of a commentary composed by Fadl Allah b. Rūzbihān Isfahānī, known under the title of Khādija Mawlānī, died after 921/1515), the Risāla-i Ṣabībiyya, eulogies of his master Yūsuf Hamadānī, a Dīkorī Khādija Muhammad Parsa, Faṣl al-Khāʿīb, Tashkent 1311, 518-20; The Naṣṣāfah al-Ins min Hadarāl-qods by Mawlānī Noor al-dīn Abī al-Khāliq, Dāhījī, Kāshān, 1329, 15-22; Cawnpore 1912, 18-27; Muhammad Murād b. ʿAbd Allāh Kāzānī, Tarjaman-i Ṣabībiyya, Mecca 1307, 25-23; Dārā Shakhū, ʿAyn al-ʿawānī, Bittern 159, 76; Amlān Ahmad Rāzī, Ṣabīl ilim, Tehran, iii, 425-3; Rīdā Kūrī Khān, Hidayat, Maṭbāʿ al-fusahd, Tehran 1329, 15-32; i, 1055; Said Naficy, Tarikh-i nazm wa nathr, Tehran 1342/1963, 110-1, 220, 252.

**GHUFRAN.** The Kurʾān contains none of the above terms, but the Prophet was aware of popular beliefs on the subject of the ghul, according to one ḥadīth he denied their existence, but some commentators consider that he denied only their ability to change shape, all the more because, according to another ḥadīth, he advised the repetition of the call to prayer.
as a way of escaping their evil deeds (cf. La, s.v.; al-Damlrl, s.v.). Hence it is not surprising that this belief survived in Islam to the point that al-Kazwlni, followed by al-Damlrl, does not hesitate to state that these beings are not uncommon in the thickets and reedy marshes and that if they can seize a man they play with him “like a cat with a mouse”.

However, the Mu'tazila, in the first place al-Dāḥibī, but also for example al-Zamākhshāri (commenting on Kur'an, XXXVII, 46), set out to demonstrate that this fabulous being did not exist. Al-Dāḥibī considers that the poets, in their vanity, have bolstered up the legend, for the interpretations, in which the imagination of the ruūdū has had a free rein, are based to a great extent on verses such as those of Taʾābbaṭa Shāriʿa who boasts of his familiarity with the saʿūlī or the ghiṭān which he met in the desert (cf. Ağhānī, xviii, 209 ff.). Al-Masʿūdī (Murūdī, iii, 314-22) devotes to the ghiṭān a whole chapter in which he tries to bring the discussion on a higher level; unable to deny their existence, for ʿUmar b. al-Khaṭṭāb himself is said to have seen and killed one (and other Companions too, see al-Kazwlni and al-Damlrl, s.v.), he reports a philosophical opinion—taken up later by al-Kazwlni—according to which the ghiṭān is a freak animal, naturally defective, which has strayed from all other orders of creation to rise from the deserts; he suggests also that these beings are the offspring of the constellation Perseus (Ḫūmīṯ raʾs al-ghiṭān) which, on rising, begets shapes and objects which are to be seen in deserts and even in inhabited regions.

In Berber lands, belief in ogres and other fabulous creatures is of great antiquity and manifests itself in a great many stories, where, however, they tend to be islamized (see Westermarch, Ritual and belief in Morocco, ii; E. Laoust, Des noms berbères du Maroc, 65; idem, Essai sur la lifi des Berberes, ii, 2 vols.; H. Basset, Cones berberes du Maroc, 65, and Mayer, Metalworkers, 14).

Every person of a certain rank in Arab Muslim society of the first centuries had in his service, sometimes in addition to free ghiṭām an, a number of ghiṭām of servile status whose exact origin is not usually indicated and who are usually distinguished from the eunuchs, khudam (see Khādīm) (as for example in the description of the household of the vizier al-Ṭārib under al-Muktafl, preserved in the Niğār of al-Tanḏūqī, ii, 159). Rulers owned an often impressive number of slave ghiṭām who served as attendants or guards and could rise to fairly high office in the hierarchy of the palace service, as well as others who formed a component of varying importance in the armed forces. It is with these latter ghiṭām and the role which they played in the running of various eastern and western Muslim states that this article is chiefly concerned.

1.—THE CALIPHATE

We find hardly any mention of ghiṭām at the court or in the palace of the Umayyad caliphs, but Slavs and Berbers who were or had been slaves are already found in the entourages of certain princes or in their armies (T. Lewicki, in Folia Orientalia, iv (1962), 319 ff.). Certainly from the time of the foundation of the “Round City” of Baghdād, there is no mention of the presence of ghiṭām in quarters inside the wall of the main fortification. But it is only under al-Muʿtaṣīm that the ghiṭām proper took their place in the history of the Muslim world, after the slave element, notably in the person of the famous eunuch Masrūr, had begun to play a rôle in the processes of government under Hārūn al-Raṣīl.

At the end of the reign of al-Maʿmūn, his brother, the future al-Muʿtaṣīm, had caused to be bought at Samarkand about three thousand Turkish slaves who were to form the nucleus of the new guard of the caliph and of the new army. The constitution of this guard is said to have been the cause of the transfer of the capital to Sāmarrā in 221/836, although there must also have been other causes, connected with the policy followed by the caliph at that time. To the Turks recruited in Transoxania were added various slaves, also Turkish, who were in the service of certain dignitaries of Baghdād and who, according to al-Yaʿṣūbī, were bought by the caliph. The new militia thus grew rapidly and, at Sāmarrā, the Turkish ghiṭām were housed in special quarters, away from the Arab or Arabicized population, and obliged to take for wives young slaves of the same origin as themselves from whom they were never allowed to separate. They were divided into several groups under the command of leaders such as Aṣḥān, Wāṣfī and Aṣḥān who were themselves

GHULAM (A., pl. ghiṭām), word meaning in Arabic a young man or boy (the word is used for example of the ʿAbdāl princes al-Muʿtazz and al-Muʾayyad, sons of al-Maʿmūn, but not necessarily, a slave servant (on this use see Aṣḥān); or a bodyguard, slave or freedman, bound to his master by personal ties; or finally sometimes an artisan working in the workshop of a master whose name he used along with his own in his signature (cf. D. S. Rice, in BSOAS, xv (1963), 67, and Mayer, Metalworkers, 14).
freedmen, and whose duty it was to lead their troops when on campaign.

What was the reason for the establishment of this force of slaves? What was its importance? It was not supplant not only the earlier Arab contingents but also the Khurṣānī troops who had appeared with the 'Abbāsid dynasty and who, not long before, had effectively supported al-Ḥārūn? It was almost certainly the anxiety of the Abbasid dynasty about the possibility of the eunuch freedman Dājdhar [q.v.], also a Slav, who was the right hand man of the caliph al-Muqāziz, are well known by enabling it to rely on forces free from all local attachments. In fact, these ghilmān, whose numbers grew rapidly to several tens of thousands (20,000 or 70,000 according to the estimates of Arabic writers), did not remain aloof from partisan struggles; their appearance, though it caused profound changes in the functioning of the political régime, did not make the caliphate any more stable.

It was not long before their commanders, usually freedmen, who enjoyed the unconditional loyalty of their troops, began to occupy important positions, either as governors in the provinces, or at the court where they ended by interfering in affairs of government and in the problems of the succession to the caliphate. It was some of these officers who assassinated the caliph al-Mutawakkil in 247/861 and, during the following years, their disputes were the basic cause of the dynastic troubles which constantly recurred until the reign of al-Muwaffak and then his son al-Mu'tādīd succeeded in imposing their authority on the solideri. Meanwhile there were numerous quarrels between these Turkish officers and the representatives of the secretarial class which they tried to dominate.

Although the situation appears calmer during the reign of al-Mu'tāṣid (279-89/892-902), the military chiefs still belonged to the new aristocracy formed by the descendants of the first ghilmān; thus Bārī, who was the caliph's supreme general and was often given the title of ghūlām—in the broadest sense—of the Caliph, was the son of a freedman of al-Mutawakkil. The regiments of ghilmān, whose importance had grown during the war against the Ẓanī, were at this time very numerous. Each regiment bore the name of the commander officer who commanded it (thus the Buğārīya was no doubt called after the name of an officer of al-Mutawakkil, Buğār al-Ṣāfārī [q.v.] and the Nāṣirīya after that of the regent al-Muwaffak al-Nāṣir li-dīn Allāh), though this name did not indicate with any certainty in whose service they actually were. Among these ghilmān of the army of the caliph, those of which we know most, thanks to the list of the court expenses preserved by Ḥīlāl al-Sāfī (K. al-Wusārā, 11-18), are the ones who formed the various detachments of the guard. There was first of all a group of former slaves of varying origins, white such as Daylamis and Berbers, or black such as Nubians and former Zandī prisoners taken by al-Muwaffak during the preceding reign, who were employed to form a line of troops (masāf) in the reception rooms and who were probably the origin of the corps of the Maṣā'īfīya mentioned below. There were also others bought especially by al-Mu'tāṣid to be on duty in the "halls" (buqjar) of the Palace, from which they took their name (al-Buqjarīya), and placed under the command of eunuchs called ustādāh; to these were later added an elite of soldiers chosen from among the various detachments. In addition to these the personal guard of the caliph was made up of freedmen of al-Muwaffak, called al-ghilmān al-ḥāṣaṣa.

During the reign of al-Muqāzīd (295-320/908-32), these corps of ghilmān, the respective size and importance of which it is difficult to assess (we know that only the Maṣā'īfīya, who were under the command of the Chamberlain, numbered 10,000), commanded by leaders who were often rivals, once again influenced political events and the palace intrigues. Thus in the two abortive coups d'état of 296/908 and 317/929 against the caliph, the guards played a decisive rôle and, in 317/929, it was the Maṣā'īfīya who forced al-Kāhir to flee. In addition, the demands of the ghilmān, on whom in large measure the fate of the caliphate depended (in the capital as well as in the provinces where they were often sent as reinforcements), gave rise to financial difficulties and several times they procured the removal from the vizierate of figures such as 'Ali b. ʿĪsā, who tried to restore financial order by making cuts in this expenditure. The interference of the ghilmān in political affairs led to the elimination of one regiment after another. The Maṣā'īfīya were massacred in 318/930, then the Sādāqīya (on the origin of the name, see M. Canard, tr. of al-Suli, Aḥḥār ar-Raddī, i. 49 n. 3) were imprisoned in 324/936 by the amīr al-umārī Ibn Rābiʿ, who shortly afterwards had the Ḥudjariyya exterminated in order to deprive the caliph of all power.

By this time the caliph had lost practically all control over the regiments of ghilmān. At Baghdād their commanders no longer respected his authority. Furthermore, persons such as the viziers were in a position to form in due course for themselves personal bodyguards capable eventually of repulsing the troops of the caliph. The provincial governors, who more and more often combined military and fiscal functions, for their part maintained troops who were completely loyal to them. Thus certain governors went so far, with the aid of their own regiments, as to seize effective power for themselves, and a number of them forced the caliph to recognize them as amīr al-umārī; after several years they were replaced by the famous Buwayhid amīrs, whose Daylam contingents were from then on installed in the palace of the amīr side by side with the Turkish ghilmān who were still used.

In the western provinces it was the same development that had already given rise to local attempts to attain autonomy from the second half of the 3rd/9th century onwards. Thus ʿAbdād b. Ṭūlān [q.v.], who in Egypt achieved a large measure of independence from the central government and managed to establish a short-lived dynasty there, was the son of a slave bought at Buğārā under al-Maʾmūn. Similarly al-Ikhshīdī [q.v.], who was later to repeat this success in the same country, was the descendant of a Turk who came to Sāmārā under al-Muʿṭasīm. The ephemeral dynasties thus formed themselves formed slave armies. The army of Ibn Ṭūlān is said to have included 24,000 Turkish and 42,000 black slaves in addition to the smaller number of free soldiers; al-Ikhshīdī also had a large slave army, and had as minister, as regent for his sons and ultimately as successor, the famous black slave Kafur [q.v.].

The tradition continued in Fāṭimid Egypt. There were at the Palace, as retainers holding more or less honorific offices and as guards, black or white slaves, some eunuchs and some not, most of the former originating from the Sudan and the latter from the Slav countries. The rôles of Diwārī [q.v.], who was a freedman of Slav origin, and of the eunuch freedman Diwārī [q.v.], also a Slav, who was the right hand man of the caliph al-ʿUmrī, are well...
known. Later Turkish and Daylami units were added. (On the rivalries between the different ethnic groups see FATIMIDS, 858.)

A little later, the Saldjukids, who were not of slave origin, but employed slaves of various origins for their personal bodyguard, such as those who assassinated Zangâd q.v.), but their army does not seem to have been based on the recruitment of slaves. On the other hand, their successors the Ayyûbid, who were the descendants of a Kurdish officer, recruited Turkish slaves along with the Kurdish contingents, and the former slaves who were finally to found the first regime in which the power was officially wielded by the slave militi, that of the Mamlûks q.v.

In Muslim Spain, the slave element of European origin had also played an important rôle both in the army and in the palace service. The freedmen, usually called fud'ûn [see FATÁ], but also ghilmân as in the East, came to control the main governmental offices and even to found, as the Umayyad state disappeared, small local dynasties [see AL-ANDALUS, 495].

In the Maghrib the name ghulâm does not seem to have been in current use for the slave mercenaries, and although the rulers of the Maghrib had almost all had, since the Aghlabid period, black bodyguards (the members of which are generally called 'abdâd) and employed, in proportions which varied and which are difficult to ascertain, slave mercenaries of diverse origins, often Europeans, the slave militias never had in this region the importance which they had in the East. See further DÂYIH, MAMLŪK.

Bibliography: There is no thorough study of the subject. General information is given in R. Levy, The social structure of Islam, London 1958, 416-51 passim. On the situation at Sâmarra and at Baghdad under the Achaemenids, Seleucids, Arsacids and Sasanids, it was essentially for temple service, for state purposes like building or for domestic duties. At no time in the pre-Islamic period does slavery seem to have been as widespread in the Persian world as in other parts of the Middle East (R. N. Frye, The heritage of Persia, London 1963, 152-3). Military organization under all the historic pre-Islamic dynasties of Persia was based on the classes of greater nobility and lesser nobility or gentry (vuturgân and da'âghân in Sasanid terminology), and the free cavalryman was the backbone of the army. Within the army there was usually an elite body surrounding the Emperor, the Achaemenid "corps of immortals" or the Sasanid gyûn-avespar "those who sacrifice their lives", but there is no indication that these were anything but freemen and probably they were sons of the nobility (cf. Christensen, L'Iran sous les Sassanides, 206 ff., 368). Any slaves in these armies can only have been employed in the little-regarded infantry rump, which was basically a rabble of conscripted peasants.

The carrying of Arab arms beyond the borders of Armenia and Persia opened up vast reservoirs of slave labour from the South Russian, Central Asian and northern Indian worlds. In particular, the Turks early acquired the reputation of being fierce fighters, skilled riders and archers, who because of their nomadic way of life in the basins of the Euphrates, Tigris, and the rivers of the Eurasian steppes were inured to danger and discomfort (cf. Dâhî, Risâlah fi manâkıb al-Turk, tr. C. T. Harley-Walker, JRAS, 1915, 631-97, analysed by F. Gabrieli, RSO, xxxii (1957), 477-83). Turkish prisoners-of-war began to fall into the hands of the Arab governors of Armenia and Khurâsân, and it is with the military use of these captives—a writer of the 5th/11th century, Ibn Hassâil, emphasizes that the Turks are too proud a race to make good domestic slaves—that the institution of the ghulâm in Persia begins. The Tâhirid governors of Khurâsân forwarded to the 'Abbâsid caliph in Baghdad Turkish slaves for use in the Caliphal palace guard. Whilst details of the Tâhirids' own use of ghulâms are lacking, their example here must have been decisive for succeeding dynasties in Persia.

The spread of military slavery in Persia also reflects the growing economic and commercial prosperity of the land during the 3rd/9th and 4th/10th centuries, for this enabled rulers to pay professional, slave armies rather than to rely on the Arab elements settled in the garrison towns or on local Persian troops. The advantage of slave troops lay in their lack of loyalty to any owners but their master and the fact that they had no material stake in the country of their adoption. Such ties were deliberately avoided

by the most strictly professional of slave commanders: the Sámanid ghulám general Karátigin Isfídjabí (d. 317/929) laid down that "a soldier must be able to take with him everything which he possesses wherever he may go, and nothing must hold him back" (Ibn al-Áfír, viii, 157).

Juridically, the slave soldier belonged to his master and was heritable property like any other chattel. In practice, personal loyalties and attachments were usually taken into account. When in the middle of the 9th/16th century the Saffárid Amr of Sástán, Ábd b. Áhmad ʻUsáýn b. ʻAbd, died, his ghuláms should have pushed to his successor ʻAbd al-Áhmad b. Áhmad, but the latter gave them the choice of entering his own service or of seeking independent careers; in fact, they elected to stay with Khálaš, and he assigned them houses, estates and concubines (Tárikh-i Sástáni, 341). One of Masʻúd I of Ghaznázi’s old and trusted ghuláms commanders was manumitted before his death and the Sultan respected his last wishes concerning the disposal of his personal ghuláms (Bayhaḵl, cited by C. E. Bosworth, Ghaznavid military organisation, in Ist., xxxvi-ii, 2 (1960), 49-50). It was clearly in the interest of the master to treat his slaves well, for the particular concern of the ghuláms was normally to act as a dependable elite force within the wider body of the army and as a personal bodyguard. Under such dynasties as the Ghaznavids and Saljuqs, the ghuláms filled such important household and palace offices as Keeper of the Stables, Keeper of the Wardrobe, Keeper of the Sultan’s Armour and Weapons, Bearer of the Ceremonial Parasol or ʻátár and Keeper of the Racing Vessels (cf. Bosworth, op. cit., 47-8; I. H. Uzuncársili, Osmanlî devleti teskildtten medhal, İstanbul 1941, 35-41; I. Kalesoğlu, Sultan Melikşah devriinde Bûyûk Solyuklu imperatorluğu, İstanbul 1935, 143-5).

This last office of taq̄-dar was held during the reign of the Saljuq Malik Sháh by the ghulám Anûthiğin Gharçáli; it was the stepping-stone to his appointment as governor of Kháraḵš, the consolidation there in the 6th/12th century of his descendents as Kháraḵš-sháhs. When a ruler or commander lost the loyalty of his ghuláms, his position could become very insecure. The Zíyárid Mardáviḏ b. Zíyár was not always successful in bad times (Eclipse of the ʻAbbáсид Caliphate, ch. xv, for more recent information. Yaʻqúb b. Layṭ’s known skill as a military organizer makes it unlikely that he would pass over the adoption of an institution so useful for buttressing a despotic ruler’s power. Both Masʻúd I, Murád b. ʻAbd, viii, 49-54, and the Tárikh-i Sástáni, 222, say that he had a corps of 2000 ghuláms who on ceremonial occasions paraded on either side of his throne, richly clothed and armed with golden and silver shields, swords and maces, all captured from the treasury of Muḥammad b. Táhir at Nisháhpúr. Masʻúd I adds that there was within this general body the Amr’s personal bodyguard, the ghuláms of the khsás, who slept round his tent and executed his personal orders. The equipment and functions of these Saffárid ghuláms bear a remarkable resemblance to those of the Ghaznavid ghuláms of 150 years later as depicted on the walls of Lashkár-i Bázár (see below).

Contemporaneously with the Saffárids, the Sámanids in Transoxania and later in Kháraḵš were making a slave guard the nucleus of their army. Nášr b. Áhmad (d. 331/943) is said to have had as many as 10,000 ghuláms. The Amrs hoped that these Turkish troops, with their personal bond of fealty to the ruler, would counterbalance the military influence of the indigenous Iranian díkhán class, which was hostile to the dynasty’s centralizing policy, but the rôle of the ghuláms in various palace revolutions and assassinations shows that this hope was not always realised. However, the geographer İṣṭáḵhrí praises the Sámanid slave army for its discipline and boldness in battle. It was, of course, from the slave guard of the Sámanids that Alptigin, the conqueror of Ghazná, and Sibúkštigín, founder of the Ghaznavid dynasty in Afghanistan and northern India, arose.

In the course of the 21st/17th century, the use of military slaves spread throughout the Persian world to such Daylam dynasties as the Zíyárís and Búyíds and to Arab ones like the ʻHamidánís. The Turkish cavalry of the Búyíd armies soon grew more numerous than the free Daylamí infantrymen, and under Muṣíż al-Dawlá (d. 556/967) were preferred above the Daylamí in pay and the granting of ʻišá’s (Miskawáýh, ii, 99-100, 163-4, 166-7, 234, tr. v, 104-5, 175-6, 178, 186-8, 248; Ibn al-Áfír, viii, 343).

Amongst the Persian dynasties of ʻAḏharbayjáñ and the eastern Caucasus, as amongst the Christian principalities of Georgia and Armenia, slave troops were drawn from the Kházar and Russian lands to the north. The Yazídí Shárván-Sháhs had personal guards of ghuláms, and the Hâshiím ruler of Darbánd, Maymún b. Áhmad, had Rúš ghuláms who were still pagan, although these may have been adventurers of Slav-Scandinavian origin (cf. Minorsky, A history of Shárván and Darbánd in the
The Ghaznavids, themselves of servile origin, built their multi-racial army around a slave core, mainly of Turks but also including some Indians. In the reign of Mas'ud b. Mahmud (d. 432/1041), the ghulāms numbered between 4,000 and 6,000. Headed by their own general, the Sādār-i Ghulāmān, they were used in battle as a crack force, and on ceremonial occasions they had rich uniforms and bejewelled weapons; the depiction of these ghulāms in the recently-discovered murals of the palace of Lashkar-i Bāzār at Bost accords well with the descriptions of them in the written sources. We also see at work at this time, as under the later Sāmānis, the process whereby provincial governors and commanders themselves collected extensive slave guards (cf. Bosworth, Ghaznavid military organisation, 40–50).

The Turkish dynasties who in the 11th/12th century irrupted into the Persian world from the Central Asian steppes soon adopted slave troops as a more reliable fighting instrument than the tribal bands who were their original following. As early as 398/1008 the Kārkhandī Ilīg Khān Naṣr had a body of Turkish ghulāms archers which he used against Māhmūd of Ghazna (Utbī-Manṣīr, Yāmīnī, ii, 85), and in the next century, the Kārkhandī ghulāms numbered several thousand (Māhidūs al-bāndāh), whose amirs are described as being especially influential under Mas'ud b. Mahmud (ibid., 193, cf. R. R. Waddell, 243). The great Saljūq found that a paid, professional army was necessary to extend and protect their empire, since their original supporters, the Turkmen, were an anarchic and uncontrollable force. Within this professional army, the Saljūq ghulāms were prominent; their commanders were active on ghaww in the Cauca- casus and Armenia and against the Arab dynasties of the west. They usually remained loyal to their masters the Sultans even when the fidelity of other Turkish and Turkmen troops wavered, e.g., in Malik Shāh’s battle of 465/1073 with his uncle Kāwūr and in the battle of 526/1132 of Dāūd b. Māhmūd and Aḵ Sonḵūr Aḥmadīlī against Toghīrī b. Shihāb al-Dīn Muhammad (Bundārī, 48, 160–1). As well as Turks, the ghulāms of the Saljūqs included Greeks, Armenians and even negroes (al-khuddām al-hubush), whose amirs are described as being especially influential under Mas'ud b. Muhammad (ibid., 193, cf. R. R. Waddell, 243). The great Vizier Niţār al-Mulk collected around himself a corps of ghulāms of regal dimensions, and after his death this body, the Niţāmīyya, still acted as a cohesive body in politics. In the 10th/11th century we see the seizure of power by ghulām commanders of the increasingly ineffective Saljūq Sultans, nominally as Atabaks or tutors for young Saljūq princes. Hereditary lines of slave Atabaks tended to form in such parts of Persia as Ādharbāyjān, Fārs, Khūzistān and Khūrāsān, and in this latter province the ghulāms of Sandjār claimed to carry on the admin- istrative traditions of their old master before they were swept away by the rising tide of the Ghurids and Khārīzms-Sāhās.

Both the Ghurids and the Khūrīzms-Sāhās relied heavily on slave troops. Dīlahī al-Dīn Mīngburnu’s ghulāms were armed with the traditional weapon of such troops, the mace (Nasawi, 232, tr. 386: ḥumābdārīyya). The Turkish ghulāms of the Ghurids did not always act harmoniously with the native Ghūri troops (cf. Duidaynī-Boyle, 461), but the troops of Muʿīz al-Dīn or Shihāb al-Dīn Mūhammad, the Māhidūs, continued to revere that Sultan’s name and in the 11th/12th century the palace of Lahjārdi, which they founded in northern India were ostensibly constituted in his name.

The invasions of the Mongols brought into Persia an entirely new set of military traditions. The Mongol commanders used the captured populations of towns as auxiliaries and as professional and sappers (cf. Spuler, Mongolen, 402, 416–19), but ghulāms in the older sense of professional slave soldiers did not reappear until the Mongols and their successors had been assimilated to Persian ways. The institution may be discernible in the 9th/10th century amongst the Turkmen Aḵ Koyūnlu in western Persia and eastern Anatolia. In an ʿArdā-nāma dating from the time of Uzbek Ḥasan (d. 883/1478) are mentioned 3,000 kulluḫğīlī “servants” in the total of some 10,000 for the Right Wing of the army; it is unclear whether these were mounted or went on foot (W. Hinz, Iran. A ufentst zim zum Nationalstaat in fünfzehn Jahrhundert, Berlin-Leipzig 1936, 107–8; Minorsky, A civil and military review in Fārs in 881/1476, in BSOAS, x (1939–42), 153, 164).

The military basis of the Ṣafawī state was originally the Kūfī-bāgh tribal divisions, but Shāh ʿAbbās I (995–1037/1587–1628) invited men of all tribes and nations to enroll in a new salaried body of troops, the Shāh-sawāns, who would be entirely devoted to the sovereign and free from tribal ties (cf. Minorsky, EP, s.v.). Also notable in this reign was the increased rôle of the Ṣafawī state of Geor- gians, Armenians and Caucasians; in particular Khāchars were swept away by the rising tide of the Ghurids and entered the Ṣafawī state as slave converts to Islam. In 994/1586 a Georgian was lala or tutor to the Ṣafawī prince Tahmāsp b. ʿAbbās, this office corresponding in many ways to the old one of Atabak (R. M. Savory in BSOAS, xxiv (1961), 84–5). With such soldiers and officials as these, the institution of the ghulām takes on a new lease of life as an important component of the new troops. The Ṣafawī “slaves” (kullar or ghulāmān-i ḥassā-yi sharīf) were mainly slaves or sons of slaves. The military ghulāms were numbered by Chardin at 10,000 and by Tavernier at 18,000 (a substantial proportion of the whole body of ghulāms was used for court and administrative service; in the Ṣādghīrat al-mulūk, tr. Minorisky, 56–7, 127–8, the term ghulām is also used for the young eunuchs and pages of Shāh’s private household). The ghulām in general was headed by the extremely influential Kullar Āghāšt, and there was for it a special Vizier and Mustawfī of the Department of the Ghulāms (Ṣādghīrat al-mulūk, tr. 46–7, 73). Tavernier noted that the ghulāms very rarely rebelled, “For being all Slaves, and of different Nations, there are no ties of Affection or Kindred between them: And if the King has an occasion to punish any of them, the chief of their Body is to execute his orders” (Travels, Eng. tr. London 1684, i, 224–5).

In the reign of the Kādārī Fath ʿAll Shāh (1211–50/ 1799–1834), the term ghulām was still applied to the royal bodyguard, and Georgians were still prominent here (Sir Harford Jones Brydges, An account of the transactions of His Majesty’s mission to the court of Persia in the years 1807–11, London 1834, i, 325, 331, 382); but in the course of the 19th century, as western influences grew in Persia and personal slavery disappeared, ghulām simply came to denote a runner or messenger employed by a foreign diplomatic or consular agency.

The term is still in current use in Persian Balūcīs- tin, where until recently the ghulāms were slave retainers of the local Balūc chiefs or sardāls; and even now legally free, they are still regarded as a socially inferior class (see B. J. Spooner, Kūch u Balūcī and

Bibliography: given in the article. There are no special surveys of the institution in the Persian world up to and including the Ghaznavids are given by C. E. Bosworth, Ghaznavid military organisation, in IsI, xxxvi:i-2 (1960), 40-50, and idem, The Ghaznavids: their empire in Afghanistan and eastern Iran 954-1040, Edinburgh 1963, 98-106. (C. E. Bosworth)

iii. — India.

The Muslim conquest and occupation of Hindustan at the end of the 7th/13th century, although initiated and directed by the free chiefs of the Ghurid dynasty, was mainly the achievement of Turkish ghulams (more frequently referred to as bandagān in the Indo-Persian histories). In the frequent absences of Mu'izz al-Dīn Muhammad ibn Sām, his slave Kutb al-Dīn Aybak, who began in India as military commander (sipāh-sādār) of Kuhrām, led the Ghurid forces against Rādōpūr strongholds. On the death of Mu'izz al-Dīn in 602/1206, Kutb al-Dīn assumed power in Lahore, at that time probably without having been manumitted. The so-called Ta'rīkh-i Fāhrāl-Dīn Mubārak Shāh, ed. E. Denison Ross, London, 1927, 35-6, intended for Kutb al-Dīn, has a remarkable eulogy of Turkish slaves for their fidelity and for their capacity to win advancement to the rank of amīr and sipāh-sādār, without regretting their former free life in Turkistan.

Hindustan was not, however, conquered exclusively by slave agents of the Ghurids whether as commanders or as troopers. Lakhnawī was conquered by the free Khādījī Muhammad Baḥāthīyār; Khādījī also formed part of the Ghurid armies.

Until the reign of Djalāl al-Dīn Khādījī (689-99/1290-6) the sultans of Delhi were all either military slaves or their descendants. Iltmīshī was not manumitted until after appointment as amīr of Gwāliyār, mālīk of Badā'ūn and after functioning as ikhtāṣ of the baṣra of Banī (Minhāj al-Sirāḍā, Taḥābāt-i Nāṣīrī, Calcutta 1864, 159-70). Balban had presumably been free before his marriage to the daughter of Sultan Nāṣīr al-Dīn Mahmūd. Under Iltmīshī (and there is no reason to conclude that his successors changed the practice) Turkish slaves rose to provincial military command through service in the royal household as Keeper of the Stables, Keeper of the Washing Vessels, Keeper of the Leopards or royal bodyguard (Taḥābāt-i Nāṣīrī, 229-324, passim). Slaves did not, however, enjoy a monopoly of office; Barani, Ta'rīkh-i Fīrūz Shāhī, Calcutta 1862, 26, speaks of the Turkish slaves ousting the free officers (muṣālik-i aḥrār) in the reigns of Iltmīshī's children. Some of these officers were fugitives from the Mongols. Antagonism appears to have been evinced by Turkish slaves towards certain non-Turkish slaves, the habbātī Djamāl al-Dīn Yākūt and the Hindu eunuch Imdād al-Dīn Rayhān. Minhājī (Taḥābāt, 300) specifically states that Turkish and Taglīk slaves resented Rayhān because he was of the tribes of Hindustān (as habbātī-i Hindustān).

Under the Khādījī and Tughlūq sultans, slaves continued to become high officers and to form an important component of the sultan's army. The Turkish element among the slaves appears to have been diluted somewhat and the rise to power of Hindu slaves is noteworthy in this period. How far the historian Barani's hostility to their elevation was shared by his contemporaries is a moot point. The Hindī Khusraw Khān Barwārī, recipient of the homo-

sexually-inspired favours of Sultan Muhārāk Shāh Khādījī, murdered his master (720/1320) and assumed the throne before being deposed by the free mālīk, Ghiyāsh al-Dīn Tughlūq. The Telengana Brahman, Khān-i Diāhān Mākbūl, became wazīr to Fīrūz Shāh Tughlūq. Slaves were apt to resent a former member of their number usurping the position of the ruling family. Slave commanders of fifty and a hundred, raised by Sultan 'Alā' al-Dīn Khādījī, successfully plotted the overthrow of the famous eunuch, Mālik Kāfrūr, conqueror of the Deccan, when he began to kill off the sultan's family after 'Alā' al-Dīn's death (Barani, Ta'rīkh-i Fīrūz Shāhī, 370).

Sources for the Khādījī and Tughlūq periods give figures for the number of slaves in service. The army of Muhammad ibn Tughlūq was reputed to have 20,000 Turki ghulams, 10,000 eunuchs as well as large numbers of slave bodyguards always accompanying him (al-'Umarī, Masālik al-abṣār fi mamālik al-amārī, edited text and Urdu translation by Khānīshī Ahmad Fārūkī, Delhi 1962, 25).

'Affī, Ta'rīkh-i Fīrūz Shāhī, Calcutta 1891, 267-73, gives the most elaborate account available of the slave establishment in the sultanate period. Fīrūz Shāh is said to have encouraged the provincial mukta's to collect slaves to present them to the sultan, receiving in return an allowance from the revenue to be remitted to headquarters equal to the value of the slaves. Such slaves stationed in the principal fortress towns (e.g., Multān, Dīpalpur, Sāmlān) and were paid both in cash and by the grant of revenue from villages. 'Affī says that Fīrūz Shāh had 180,000 slaves in the capital and in the provinces. A diwan separate from the diwan-i wazārat existed to manage the slaves. They were to be found not only in such familiar household offices as Keeper of the Washing Vessels, Keeper of the sultan's armour and weapons, Bearer of the Ceremonial Parasol, but also employed in the diwan-i wazārat and as mukta's, parganādārs and ghānānagān (market overseers), becoming amīrs and mālīkhs. Under the Sayyid sultans too, slaves are found as mukta's and parganādārs. Under the Lodīs, the sources yield the impression that the majority of officers were free Afghans.

The role of military slaves in the provincial Muslim kingdoms did not differ substantially from that in the Dīlī sultanate. Indeed, Ahmad Nizām Shāh, founder of the independent sultanate of Ahmadnagar, Yusuf 'Alī Shāh of Bidājpūr, Kullā Kōhī Shāh of Golkonda and Malik Sarwar of Dīwānpūr had all been ghulams. Habbātī [q.v.] slaves were prominent in the politics of Gudjarāt, Ahmadnagar, Bidājpūr and Bengal. In Bidājpūr, habbātīs took over the regency (nizābat) in the last phase of the sultanate, while in Bengal the former habbātī slaves Shāhāzāda and Sidi Bāzir seized the throne at the end of the 9th/13th century. The latter had 5,000 habbātīs in his service. Under the Fārūkids [q.v.] of Khāndesh, habbātī slaves were employed to guard the junior members of the ruling family in enforced seclusion (cf. C. F. Beckingham, Amin, Gelen and Astragarh, in JSS, ii (1957), 182-8).

Under the Mughals, slaves played a very minor part in administration and in the army, though not in the household. Mughal rule was established by free Mughal, Turkish and Persian officers and the Mughal army was commanded by mānsābdārs, the vast majority of whom were free in origin. A test-sample of 225 of the 730 biographies of Mughal dignitaries in Šamsān al-Dawla Shāh-nawī Khān, Ma'dār al-amārī, Calcutta 1888-91 (pānāsīs and
upwards under Akbar, *sit hazāris* and upwards thereafter to the middle of Aurangzib's reign and then *pandār* (e.g., *khaf hazāris*) shows that only one of Khān's *sīh-hazdris* or *haft hazdris* existed under Khān as a system. Of *sīh-hazdris* or *haft hazdris* shows that only one of Khān's *sīh-hazdris*, the system of Shahānshāh, had been a slave. One, *Uṭrūz Khān* a eunuch, and two, *Āṭīkh Khān* and *Hābsh Khān*, were *habāshis* who had entered Mughal service from the Deccan sultanates. The *Ma'ādhir al-umār*’s list is, however, not exhaustive; a number of slaves, including three of Bābur’s and Hūmāyūn’s, were given *mansāb* and *gājīs* under Akbar and one, *Ṭūbān Khān*, was appointed provincial governor of Dihlī (see *Āṭīn-i Akbari*, tr., Calcutta 1872-39, 442, 444, 481, 485, 488, 491). Such promotions, however, form a very small proportion of Akbar’s appointments.

Mughal *mansābādārs* did on occasion, however, employ slaves as their own subordinate commanders. Mirzā Nathan, *Bahāristān-i ḡulām*, a history of Bengal in 1262/1842–1843’s time (trans. M. I. Borah, two vols., Gauhati 1936) shows a slave, Islām Khūl Gūlām, and a slave, *Īlibān Khān*, was thus employed as *Mir Bāḥr* (Commander of the fleet of boats). Examples of slaves holding minor military commands may be met with in the *Bahāristān-i ḡulām* under the names (see index) *Ṣa’adat Khān* Khādīja, Khādīja Lal Beg, and Shīr Maḍyān. Akbar employed a contingent of slave foot soldiers, described as *telas* in the *Āṭīn-i Akbari*, Calcutta 1872, 190. An interesting account of the *talas* by a provincial governor in the period of the decline of the Mughal empire under Farrukhshīyār and Muḥammad Shāh is given in W. Irvine, The Bangash Nawāb of Farrukhabad, *a chronicle* (1173-1857), Calcutta 1927-39, 442, 444, 483, 484, 594-6 *passim*; see also Muhammad Khan, *Ṣa'īda*, ed. E. Denison *ṣafar al-wadlih*, b. Umar al-Makki, Istanbul 1941, 85-94, 108-22; M. F. Kopriilu, *Bizans miyesselerinin Osmanlı miyesselerine tesiri*, in *THİTM*, i (1931), 208-21, 242-6; idem, *Osmans İmparatorluğunun etnik menseli meseleleri*, in *Belleten*, viii/28 (1943), 273; the names of various prominent commanders of *ḡulām* origin in the service of this Seljuk Sultanate are known, e.g., Ṣahār al-Dīn Gūlām, Khāṣṣ Balaban and the brothers Karatay (see Ta'rīkh-i Ḭālīl Solṭān, facsimile of Paris, Bibl. Nat. M.S supp. pers. 1553, publ. F. Uzluķ, Ankara 1952, 52, 57, 66, 71). These *ḡulāms* were used only for military duties; when Kaykāvūs II granted important posts as *amr* to various of his *ḡulāms*, the other *amirs* opposed him (ibid, 52-3).

*oghān Ghażī* appointed *hī ṣal Balabanbīd Bahādūr* to supervise the investment of Bursa (Neğhri, *Ghiyāsīnāmeh*, ed. Fr. Taeschner, i, Leipzig 1951, 35). Barāk Baba, who was flourishing at this time (ca. 725/1325), advises in his *Ḳiṣṣāt* that on the *ḳhās* the leaders of the Christians should be flung into the sea and their ‘*우브irds*’, i.e., the young men following them, should be taken into the army. In documents surviving from the reign of Orkhan there are indications that the training of slaves as Palace and administrative officers existed. Under the first Ottoman rulers (e.g., the names Evrenkush Khādīm and Shabīn b. Ṣāḥib Allāh, in Orkhan’s
The explicit statements of contemporary Western and Ottoman writers show that this system was developed from the practice of taking into Palace service or into the army the young sons of members of the local military class in newly-conquered regions. It is natural that in the Ottoman Empire and in Ottoman society, an adj state always in contact with the dār al-karb, slaves gained a more important place than in other Muslim societies.

Under Bâyezîd I [q.v.], who endeavoured to found a centralized Empire, the ghulâm system came to full development. Notes in taht-i-registers of the 9th/15th century which refer to conditions in his reign show that in all parts of the Empire he granted to buhls trained by the ghulâm system not only important military and administrative posts but also timârs. Reactions to this radical innovation are to be detected in the anonymous Tawdšh-i Āl-i 9th/15th century which records reactions made a weighty contribution to his fall. Circles; and these reflect the sentiments of Tewdrikh-i Al-i C.Z. (ed. Fr. Giese, Breslau 1922, 31), which does not show that the Grand Vizierate included, to buhls (see H. Inalcik, art. Mehmed II, in IA, fasc. 75, 512): the "ul âmâ" of the period regarded the vizierate as a post reserved to those of slave origin (see Tashkîrîzâde, al-Shâbâ'î al-nüvâmîyya, Arabic text, i, 144, Turkish version by Medjdl, Istanbul 1269, 104). According to Angloello, most of the military commanders and other holders of important offices were, during the reign of Mehmed II, persons trained by the ghulâm system. Literary sources and archive documents enable us to visualize in detail the system as it prevailed in this period (for Western descriptions, see Donado da Lezze [G.-M. Angloello], Historia Turchesca, ed. J. Ursu, Bucharest 1909; Fr. Bahinger, Die Aufzeichnungen des Genuesen Iacopo de Promontorio-de-Caro, Munich 1957; J. B. Telfer, The Palace School of Muhammed the Conqueror, Cambridge Mass. 1941, 10 ff) that the Palace system (in 880/1475 the kapi-kullari numbered 18,300) and on "passing-out" (Turkish: heft-i sak-a, caravan) in the Palace, where they received privileged treatment, and on 'passing-out' (Turkish: dâmâ, or below) were appointed, with the title of beg to the most important offices. Thus at this period many members of the Greek, Bulgarian, Serbian and Albanian aristocracies served the Ottoman state in high posts. Nevertheless, as it had been under the Seljûks of Rûm, only military posts were granted to these products of the ghulâm system; the post of Grand Vizier and the posts of head of the financial department and of the chancery were usually reserved to Muslim-born Turks of the 4imâyî cÎsâf circles; and these reactions made a weighty contribution to his fall. Under Bayezid II, a highly-influential palace of 'selected children' belonging to various circles; and these reflect the sentiments of the title of beg, or vizier. The sons of the local nobility in newly-conquered regions. It is natural that in the Ottoman Empire and in Ottoman society, an adj state always in contact with the dār al-karb, slaves gained a more important place than in other Muslim societies.

For the reign of Murâd II we possess abundant information about the system, not only from contemporary chronicles (e.g., Ducas, ed. Grecu, 179, 187, 191, Turkish tr., 83, 88, 90; Chalcocondyles, book 5, Fr. tr. by Blaise de Vigenère, Histoire de l'empire by Mehemmed II under the influence of Byzantine models after he had taken Constantinople, 187, 191, 201-3, 210, 214) exaggerates the degree of rivalry between native-born Turkish statesmen and the converts, it is indisputable that such a rivalry was an important element in the early centuries (see H. Inalcik,Fatih devri . . ., 69-136). In pursuit of his policy of establishing an absolutist and centralized empire, Mehemmed II expanded the ghulâm system (in 880/1475 the kapi-kullari numbered 18,300) and on 'passing-out' (Turkish: heft-i sak-a, caravan) in the Palace, where they received privileged treatment, and on 'passing-out' (Turkish: dâmâ, or below) were appointed, with the title of beg to the most important offices. Thus at this period many members of the Greek, Bulgarian, Serbian and Albanian aristocracies served the Ottoman state in high posts. Nevertheless, as it had been under the Seljûks of Rûm, only military posts were granted to these products of the ghulâm system; the post of Grand Vizier and the posts of head of the financial department and of the chancery were usually reserved to Muslim-born Turks of the 4imâyî cÎsâf circles; and these reactions made a weighty contribution to his fall. Under Bayezid II, a highly-influential palace of 'selected children' belonging to various circles; and these reflect the sentiments of the title of beg, or vizier. The sons of the local nobility in newly-conquered regions. It is natural that in the Ottoman Empire and in Ottoman society, an adj state always in contact with the dār al-karb, slaves gained a more important place than in other Muslim societies.

Seat of the local military class in newly-conquered regions. It is natural that in the Ottoman Empire and in Ottoman society, an adj state always in contact with the dār al-karb, slaves gained a more important place than in other Muslim societies.
applied and expanded with a conscious appreciation of the advantages it offered. In the reign of Murad II 'Yaz'gii-oghlu 'Ali wrote (Sel'uk'hnme, Istanbul Topkapı Sarayi, MS Revan Koskii 1390, fol. 560) that in order through the possession of slaves that a sultan could exercise power (cf. Machiavelli, The Prince, chap. iv); according to Kemal Paşa-zâde (Istanbul, Millet Lib., MS 25, fols. 11-12), because all the ghulâm were equal at the Porte of the Sultan, none tried to rise above his fellows or dreamed of laying claim to the throne; in the 11th/17th century Paul Rycaut noted (Trattato de costumi et vita de Turchi, 1528), according to Menavino (Trattato de costumi et vita de Turchi, 1534), those who excelled at these would become mujahid, a personal interest in the boys' education (Menavino, i, 75; Bobović, karatasi, i, 75; Bobović, 31, 70, 73-4; these are still unexploited).

In the early days the principal source for ghulâm was the penelik [q.v.], supplemented by prisoners purchased on the slave-market for the Palace; the most important of these sources were a powerful counterpoise to the provincial troops. The ghulâm system reached its fullest development under Süleyman I and his first two successors. The close link which the Ottoman administrative system aroused in Europe in this period led to the writing of numerous detailed descriptions (for a fairly complete bibliography see K. Göllner, Turcica, i, Bucharest and Berlin 1961; for the Venetian relations, see Lybyer, 305-22). These descriptions, especially the memoirs of persons who, like G. A. Menavino (Trattato de costumi et vita de Turchi, Florence 1548), had served as ic-oghlan in the Palace, are of great value for filling out the rich but bare data of the Ottoman archives (for the principal collections relating to the Palace see M. Sertoğlu, Muhteva bakımdan Basvekle Arşivi, Ankara 1955, 31, 70, 73-4; these are still unexploited).

According to Yunis Beg (apud B. Miller, 263), in 944/1534 there were 700 ic-oghlanlar, aged between 8 and 20, in the Sultan's palace (but Ramberti speaks of only 500 in 340/1534). An official account of expenditure, dated 900/1494, mentions 3 aqgas of the Enderun and only 178 ghulmân-i eredân (Ö. L. Barkan, in Kitsat Fabuleesi Mecmuasi, xv (1953-4), 308), but the numbers grew to about 400 in the Büyük Oda and 250 in the Küçük Oda (Miller, 129-30; Uzuğurulu, 310-1); at the beginning of the 11th/17th century, 'Ayni-i 'All notes 709 persons, aqhas and ghulmân together (Kawdnin-i Al-i 'Oğlu, Istanbul 1280, 97).

The lads in these two odas spent all their time at lessons and physical training. Their teachers were the Palace mu'allims (mu'âllimân-i Enderun) and 'ulama and dânisgâms who visited the Palace at set times to give lessons; 12 of the lads were appointed khalife, 'tutor'. All had to begin by learning reading and writing, the principles of the Muslim faith, and the Kur'an; after that each could 'specialize' according to his own capabilities and inclinations (‘Atâ, i, 155). As they advanced, they learned the Muslim sciences, and the sarf, nahuw and literature of Arabic, Persian and Turkish. Bâyezid II used to take a personal interest in the boys' education (Menavino, apud Miller, 83). Those who made great progress in the religious sciences were allowed to pursue the 'simaye' career (‘Atâ, i, 75; Bobović, apud Miller, 180). All kinds of skills were also taught in the Odas: calligraphy, inşâ, arithmetic and siyâhat, music; those who excelled at these would become hübe. One point stressed both by Ottoman and European writers is the emphasis given to physical training, and to horsemanship and the management of arms (the Hasan bâhşih dwells on this). The chief sports were weight-lifting and putting the weight, wrestling, archery, riding, throwing the lance, and the games of jereid and djerid [q.v.] (‘Atâ, i, 177; Ramberti, 119); on feast-days competitions would be held at the Djerid-Meydân in the Palace garden and at the
Oğ-Meydani and the Sultan would award prizes. Literary works with such names as Sildfyshor-ndme, Bdz-ndme, ... bonus (Kemankes İdyühasi, 472-4). All promotions and awards were made according to efficiency and seniority.

were composed mainly for craft; many masters of miniature-painting, drawing, who had exercised by the Kaplı-oğlanl ketkhuddsl, Ali, Mendkib-i hiinerverdn, (training was to inculcate absolute loyalty and obedience. It was they who maintained discipline and service. It was they who supervised the overall supervision of the odas was exercised by the Kaplı-oğlanl kekbudsl, who had under him eunuchs (between 16 and 30 in number).

The White Eunuchs (Ab Aghalar) constituted the permanent staff of the palace; these were slaves who had been castrated to make them eligible for this service. It was they who maintained discipline and were responsible for the lads' behaviour. Under Mehemmed II they were 20 in number (Angirolello), under Selim I, 40 (Ata, i, 164). Their chief, and the general overseer of the palace, was the Kaplı-aghasi or Bâb al-sâda aghasî. Beneath him were three odâ-bağâl, in the order of precedence: Khâs-oda baghi, Kaplı-aghasi (or Ser-khâsînîn), Külâr-ı baghi. The Khâs-oda baghi might be an ic-oğlanî. These eunuchs were responsible for the protection of the Sultan. The numbers of its members was to care for the Kaplı-sîcâl (shadows); to them was later added a miftdh- (or anakhtar-) ghulâmî (or aghasî). These five aghasî were also called the zülufü aghasî. The numbers in the Khâs-oda were increased to 40 under Selim I. In 880/1475 these three higher odas together numbered 80 pages (I de Promontorio, 40). In 1090/1679 the Khâs-oda comprised, besides the Oda-bağî, 6 aghasî, 12 eski (i.e. senior) pages and 22 sâdemsîs (juniors). Later still, there was more specialization in the duties carried out and new ranks were introduced (for details, see Ata, i, 139-97).

Early in the 16th century, a fourth oda, known as Şeferrî odasî, was created from among the attendants with various duties in the Buyuk Oda (according to Ata, i, 153, it was created under Ahmed I, cf. Kemankes îdıyhasî, 472; according to Uzuncarsîlî, 311, in 1045/1635). Its head was the Ser'dâ aghasî. It comprised first those who washed the Sultan's clothes, and included later the bath attendants, the clowns, the mutes, the teachers, the musicians and the singers; the total numbers were in 1090/1679 134 and in 1186/1772 149. The bandsmen (Endêrûn mehterîhânesî) also belonged to this oda.

All matters relating to the pages—promotions, transfers, etc.—were settled by a kaplı-i humâyûn of the Sultan in response to a proposal (ârd) made by the Kaplı-aghasî or the Khâs-oda baghi (Uzun- çarsîlî, 304, 324). From time to time the Sultan would visit the odas, attend competitions, and encourage the pages by awarding prizes. Each oda had a fixed complement, known as gedîk. Appointments and promotions went usually by seniority (known as oğah yölüyle); even the Sultan was obliged to respect this principle (Kemankes îdıyhasî, 473), but exceptions were made in promotion to posts which required special aptitude, e.g. the position of imam, clerk (wazîdî), bandmaster (mehterbâshî). Each oda has its own bath, imâm and mi'eddîhîn. There were special libraries in the palace for the use of the pages (M. Reîfîk, in TOEM, vii/4o, 236; I. Baykal, in Tarih Veskîalarî, i/9, 188). Messages were carried by hollûkîlîlar. Food for the pages and their clothes were provided by the Sultan. Each received, according to his rank, a stipend (zülufû), an issue of clothes, and the occasional bonus (Kemankes îdıyhasî, 472-4). All promotions and awards were made according to efficiency and seniority.
When the Sultan went out on campaign, the Enderun kâhil were provided with horses and weapons and accompanied him, only the Sârây ağaçalı remaining behind to guard the palace.

Besides the 'Inner Service', the Enderûn, which we have considered above, there was a second complex of departments in the palace known as the Birûn, the 'Outer Service'. The Enderûn was the milieu in which the Sultan spent his private life, and at the same time a school where the ghulâms were educated and trained. The Birûn was the section composed of the services concerned with the Sultan's relations with the outside world. According to the Kânûnînâmë of Mehmed II, the heads of departments of the Birûn were, in order of precedence: the Yeñi-lerî ağaçalı, the Mir-âlem, the Kapîdî-bashlî, the Mûskâne-bashlî, the Kûshûdî-bashlî, the Yeçil-bashlî, and the Topîl-bashlî (in 933/1527 the order was: Yeñi-lerî ağaçalı, Mir-âlem, Kapîdî-bashlî, Mir-âkhrû, Mûskâne-bashlî, Sûvûdi bülûkler ağaçalı, Kûshûdî-bashlî, Wûhûdî-bashlî, Cawçuh-bashlî, Cadîr mehterleri bashlî, Kapîdîlar-kêtKHudsûdûsûdûlûsûdû, see Ö. L. Barkan, in Ikitâsî Fak. Mecm., xv (1953-4), 308. Since (with the exception of the Kâtîl-ashbîr-kêtKHudsûdûlûsûdû and the Dîbedjî-bashlî) these officers were entitled to ride beside the Sultan, they were known as ozengi-aghalî or rûkî-abâlgâlî (‘Agas of the Stirrup’). In addition to the bodies of men under these officers, the Birûn included also the müteferrika[see mutafarrika]under the Müteferrika-bashlî, the Cawçuh-âgashlî, the bâqiaîddîs [q.v.] under the Dâr al-sa’dîdî ağaçalı, and the topângâs [q.v.] under the Bostandîjs-bashlî [q.v.] (for details on these and other groups belonging to the Birûn see Uzuncarsîlî, 336-9). All these bodies belonged to the ghulâm organization of the Ottoman Empire.

groups comprising the Birûn can be obtained by

comparing the data of an official list of 933/1527

(published by Ö. L. Barkan, in Ikitâsî Fak. Mecm.,

xxv (1953-4), 300) with the data for 1018/1609 given by ‘Aynî-i ‘Alî (82-99): the table shows

that in less than a century the number of the kâpli-bûlîrî of ghulâm origin increased well over three times.

The institution which ensured that these ghulûm groups and the provincial administration should function together as a harmonious whole was the Çîmûma, that is, the promotions and transfers which were made at intervals (of from two to eight years) and at each accession (according to Ta’rîkhi-i Çîmûma, TOEM, supp., 99, every 7 or 8 years; according to Miller, 128, every 2 or 3 years in the Bûyük and Kültûk Odas; cf. Uzuncarsîlî, 330-9). At the Çîmûma, the most senior (eskî) of the pages in the Bûyük and Kültûk Odas were promoted to higher odas, i.e. (in ascending order) the Seferî, the Kûlî and the Khasîn. The best of the Bostandîjs in the provinces. We

At the time of a Çîmûma each group in the Enderûn and in the Birûn was on the move. The Ozengi Aghalari of the Birûn moved to the command of a sandjak or a beglerbegli; ordinary members were granted zîmîms in the provinces. But after the 10th/16th century they too, like the ağaças of the Enderûn, began to receive appointments as beglerbegi and vizier; in fact an Ağa of the Janissaries might be appointed directly Grand Vizier. Çâşûฏîrîns and müteferrika of the Bostandîjs were given zîmîms; cauçuhes, bâqiaîddîs and senior Janissaries were generally given timârs; thus they passed into the ranks of the ‘feudal’ sipâhîs in the provinces. The best of the Bostandîjs and the ağaças of the Birûn could reach was a timâr in the provinces. We
IQT10 GHULAM
have seen that so early as the first half of the 9th/15th century kuls of the Sultan and of beggs were granted not only posts as sandiğ-begi and beylerbeği, but also sandiğ-begi and beylerbeği to have his own forces of hası-bullari, their numbers being regulated by hânum. To own slaves was regarded as a necessary qualification for the exercise of executive power. Even the timarito had a small 'Porte', composed of şeybeğis and ghulams (əğlamın), its strength determined by the value of his timâr (the proportions are given in the Kânûnname of Suleyman I, but the text published by M. 'Arif, TOEM, sup., contains many errors; cf. Sưret-i Deftet-i sanâhi-i Arwandî; thus in 835/1431 the ghûlâm-i mir 'Yungûçî held a timâr of 6089 akbîr, and hence had to put in the field one şeybeği and one ghûlâm (Arwandî, 34). Paşgas and beggs endeavoured to support more şeybeğis and ghulams than the hânûn obliged them to (when Rüstem Paşa died he left 1700 slaves). Diebelis, ghulams and nôkers, in origin prisoners of war or purchased slaves, were, like their masters, subject to the regulations that applied to the 'asâr class (see H. İnalci, 15. asr Türkiye ihtisâdî ve şimatî tarihi kaynaklari, in Iktisat Fak. Mecm., xv (1953-4), 53), and thus their status in society differed from that of the ordinary 'âbd; all the same, the şari'a rules relating to the 'âbd, to 'âšh and to wa'âlî (qq.v.) applied to the relations between the ghulam of the military class and his master.

Some of the boys levied by the devshîme were placed in the mansions of prominent men. Beggs and paşgas, after training their ghulams in various duties in their konâbâh, each a microcosm of the Sultan's pashas, but also to beggs, after training their slaves who rendered military service, while ghulams, in amounts proportionate to the hânûn and its strength determined by the value of his timâr, had to have his own force sandiak-begi su-bashi (fasc. 49, 1960), 91-3). One factor encouraging this was the legal principle of wa'lî (qq.v.). The şari'a was supplemented by detailed 'urfi regulations relating to slaves (see O. L. Barkan, Kamalînlar, i, Istanbul 1943, index s.vv. 'ül, ece). The Ottomans did, in practice, extend the benefits which the şari'a ensured to the 'âbd. Slaves, whether in the service of the state or in private ownership, were not regarded as composing a base class in society: indeed in certain circumstances the name of ḵul procured influence and esteem. The hâds' registers reveal that 'âšks, who had grown up in an active world of business and enriched themselves, without encountering any social obstacles, were surprisingly numerous in the upper classes of Ottoman society. Right from the time of Orkân Ghaţl, prisoners of war had also been used by the state as slave-labourers, being settled on agricultural land and in villages with the name ortaţel-kul (qq.v.) (see O. L. Barkan, Külâhlar ve Ortâşhî kullar, in Iktisat Fak. Mecm., i (1939), 29-74, 108-245, 397-447). There is no resemblance at all between these and the ghulams belonging to the military class.

The classical Ottoman administrative system, based on the use of ghulams, developed greatly in the second half of the 10th/16th century, the number of the hası-bullari passing 80,000. With the decline in the authority of the Sultan at the end of this period, the hası-bullari lost their monopoly of the palace, the government and the provincial administration, and endeavoured to monopolize the military fiefs and the other sources of state-revenue. Their power became such that they could depose, appoint, and even murder (Oğhnum II) the Sultan. Although the ghulams of the palace sometimes made common cause with them, in general it was to their advantage to support the authority of the Sultan. Thus the palace attempted to pit the cavalry regiments against the Janissaries. Ottoman historians and writers on government in dealing with this period (Kâtib Cebeli, Hasân Beg-zâde, Na'imâ, Koç Beg (qq.v.)) attribute the anarchy in the first place to the disruption of the ghulam system. The revolt of Abaza Mehmed Paşa (see ABAZA-i, and H. İnalci, art. Hüsrev Paşa, in IA, fasc. 49, 606-9) is to be explained as a violent manifestation of the reaction which this domination of the kul provoked in Anatolia. Later attempts on the part of the palace and the government to reduce the numbers of the hası-bullari troops and bring them under discipline were fruitless; only when Köprüli Mehmed Paşa (qq.v.) assumed dictatorial powers was it possible to make some resistance to them. The lack of discipline among the hası-bullari was reflected in the Enderen: when the Şîma due at the accession of Mehmed IV was delayed, the şê-
Ghulam — Ghulam Husayn Khan Tabaṭābāt

Sayyid Ghulam Husayn Khan Tabaṭābāt was born in Delhi (Shahjahānābād) in 1140/1727-8 in a poor family. When he was five years old the family migrated to Murshidābād and settled there. Gradually he acquired extensive property and eventually became the naib of the province of Azīmābād under Zayn al-Dīn Ahmad Khan Ḥaybat Djang. In 1156/1743 his father lost his post and returned to Delhi with his family. Early in 1158/1745 Ghulam Husayn Khan went to Azīmābād, married a daughter of his maternal uncle ʿAbd al-ʿAll Khan, who was employed in the army of Ḥaybat Djang, and took part in the defence of the town against Muṣṭafā Khan. In 1161/1748 Ghulam Husayn entered the service of Saʿīd Ahmad Khan Šawlat Djang, son-in-law of Allah Wirdī Khan, who was then at Moughyr. Soon afterwards he went to Purniya where Šawlat Djang had been deposed and appointed himself governor of the province. In 1160/1745 Ghulam Husayn refused to serve under his son and successor Šawkat Djang, but was prevailed upon to change his mind. In 1170/1756, when Šawkat Djang revolted against Sirāḍī al-Dawla [q.v.], the independent ruler of Bengal, and was defeated and slain in battle, Ghulam Husayn, fearing reprisals at the hands of the victor, fled to Benares and took refuge with his relations living there, who had earlier been banished by Sirāḍī al-Dawla.

In 1170/1757, on Mir Dīnār’s assumption of power as the de facto governor of Bengal, Ghulam Husayn returned to Azīmābād and through the intercession of Rādā Rām Nārāyān, the local governor, recovered some of his family estates and was allowed to live in the town. He soon gained favour with Rām Nārāyān, but when prince ʿAlī Gūhar (Ṣah Shāh ʿAlī II) attacked Bengal in 1172/1759 he threw in his lot with the invaders. The attack having failed, he again went to Benares but soon sought the pardon of Rām Nārāyān and returned to Azīmābād. Thereafter he involved himself in Bengali politics, siding now with Mir Kāṣīm [q.v.] and now with the British, gaining favours from both sides. In 1176/1762 Mir Kāṣīm gave him a cash present of Rs. 5000 and also ordered the payment of the arrears of his salary with a view to retaining his allegiance, for he was intimate with the British and Mir Kāṣīm entertained strong suspicions of his loyalty (cf. Siyar al-mutaḥādhrin, Eng. transl. 1926, ii, 436). His subsequent rôle as an intermediary between the various contending groups is a very dubious one (cf. Siyar . . . , Eng. transl. 1926, ii 458, 513, 517, 524-5, 532, 535-7, 553). It was through his efforts that the baṣīrāt of Rūḥān arranged to surrender the fortress to the British. In 1187/1773-4 he was in Calcutta making preparations for a pilgrimage to Mecca but having been suddenly impoverished, gave up the intention. Some four years later he tried to ingratiate himself with Warren Hastings, the British Governor-General, but, without success. In 1194/1780 he again approached the British but with the same negative results. The exact date of his death is not known, but according
to the Bankipur MS. (No. 282) he was alive till 1230/1815. According to Nuzh:at al-baday'at (vi, 200) he died at Huzaynabad, a village founded by his father, Mir Muhammad. His descendants are still living in Patna.

An Iranian by extraction, he was thoroughly conversant with the art of Persian letter-writing. He was a munshi by profession and his letters and writings drew praise from, among others, Warren Hastings (Mislar 1112sh ... mubarradat-i fahr-râ mi-stidqad, Siyar ... , ii, 674). Among all his activities as a Mir Munshi, a political negotiator, a soldier and an intermediary, he found time for literary activities, undaunted by periods of penury and vicissitudes of fortune. His fame rests chiefly on the Siyar al-muta'ahkhârin, his magnum opus, a detailed history of India from Awrangzib's death in 1118/1705 to 1195/1781, begun in Sha'dar 1194/February 1780 and completed in Rama'dân 1195/August 1781. An autograph copy of this work is preserved in the Oriental Public Library, Bankipur (vii, 582). Editions: Calcutta 1248/1836; Lucknow 1282/1866, 1314/1897; Eng. transl. by Hájjí Mu'stâfá, originally Raymonald, Calcutta 1789 (most of this edition was lost at sea); reprint Calcutta 1926.

Urdu translations: (i) Ikhâl-nâma by S. Bakhshish (Ed. Delhi 1233/1817). (ii) Mu’tadîdîn by Góñná Dábîtâ, Prádád, Lucknow 1874. There are also several partial translations into English and one Persian abridgement: Mulakkhásat al-tawâirîkh (ed. Calcutta 1243/1827, Agra 1247/1831). His other works include (i) Bigdrât al-imâlma, a muñâwâni on the lives of his ancestors, especially the miracles of his grandfather S. 'Alîm Allâh Tâbâbâ't (d. 1156/1743) and his great-grandfather S. Tâyî Allâh (MS. Bankipur Suppt., i, no. 1901); (ii) a theological work on the prerogatives of Allâ and his descendants, being a commentary of certain hadîthi quoted in the Fâwa'dî of Mir Huzâyin al-Maybûddî (defective MS. of unknown title, Bankipur, xiv, no. 1319); (iii) a tafsîr of the Kur'ân in 'idomatic' Arabic (tafsîr dar tâzî-i bâ-ma'âwara); (iv) a commentary on the Mu'ániwi of Dájjâl dîn Rûmî; (v) a dawân of poems; and (vi) various other theological works. MSS. of nos. (i) to (vi) are known to exist. A historical work of doubtful authenticity entitled Sharâf-nâma, written in 1221/1806-7 (MS. Ásâfîya, iii, no. 1314) is also attributed to him.

Biography: Siyar al-muta'ahkhârin, Lucknow 1866, li (iii), 945-52; an abridged Eng. transl. of the above appeared in The Asiatic Annual Register ... for the year 1802, London 1802, Characters, 28-32; Dhu'l Fakhr 'All Khán "Mast", Riyâd al-wifâk (MS.); Elliott and Dowson, History of India as told by its own historians, vii, 194-7; Buckland, Dictionary of Indian biography, 164; Storey, ii, 652-640 (the most detailed account), 1207; 'Abd al-Hâyy Lahhânwi, Nuzhât al-khidwâtî, Haydarâbâd 1378/1957, vii, 199-200.

GHULAM KADIR ROHILLA

This work is divided into a muhadâdima and four rawâds (i) the viceroys of the Sultans of Delhi, (ii) the independent kings, (iii) the Nâzîms (governors) under the Timúrs and (iv) the British. Edition: The Riyâd-s-Salatin ... ed. by Maulavi Abdul Hak Abîd, Calcutta 1890-1; Eng. transl., The Riyâd-s-Salatin ... translated ... with notes by Maulavi Abdus Salam, Calcutta 1902-4.

A man of considerable learning, he devoted his spare time to teaching. One of the pupils of a pupil of his, S. 'Ilâhî Bahshî, 'All Bakhshî al-Huzâyini Afgârâzâbî wrote Râ'murâdî dî dâhân-nûmâ, a general history of the world, based on a brief account of Ghulâm Huzâyin, his teacher's student (cf. H. Beveridge, JASB, lviv/1915, 196, 198). Other references are to be found in Riyâd al-salâtîn, Engl. transl., 2-5; 'Abd al-Hâyy Lahhânwi, Nuzhât al-khidâwi, Haydarâbâd, 1378/1958, vii, 352. He died in 1233/1817. See also Storey, i, 178.

GHULAM KADIR ROHILLA b. DÂBITA KHÂN b. 'ÂMR AL-UMARÀ b. NADÎB AL-DÂWILA [q.v.], founder of the town of Nadli'hâbad, remembered chiefly for his cruel treatment of the Mughal emperor Shâh 'Alîm (reg. 1173-1221/1759-1806), and his family. While still young Ghulâm Kâdir Khán was left at the Imperial court as his father's representative, most probably as a hostage. He escaped from custody, however, in 1190/1776 on the defeat of the imperial forces by Dâbîtâ Khán, and joined his father at the fort of Ghawthgâh, the family headquarters near Thâna Bhowan, the birth place of Asfâr 'Âlî Thânâwî [q.v.]. The very next year Dâbitâ Khân was defeated by the Marâthás and Ghulâm Kâdir was taken prisoner and brought to Delhi. There he was lodged in the palace (Red Fort) and, to the amusement of the courtiers, was obliged to appear before the emperor clad in women's attire. All this seems to have been done to humiliate his father, the Robilla chief Dâbita Khân. A handsome lad, he attracted the attention of the ladies of the harem, but was punished by castration. On the death of his father in 1199/1785 Ghulâm Kâdir succeeded in defeating the Maratha collector of revenue and seized the Marâthâ leader, Sîndhîvây (Seindia), entered into a pact with Ghulâm Kâdir for controlling the Sikhs who were giving trouble in the Doâb. Instead of observing the pact Ghulâm Kâdir began to drive out the Marâthâ collectors of revenue and seize imperial territory, enjoying all the time the patronage of the eunuch Hâfîz Manzûr 'All Khán, who had a strong hold over the emperor and wanted to throw off Marâthâ control. In August of the same year Ghulâm Kâdir succeeded in defeating the Marâthâ forces at Shâhdâra, near Delhi. He laid claim to the post of Mir Bakhshî and the control of the imperial administration. The next month he occupied the capital and forced Shâh 'Alîm to appoint him Mir Bakhshî and Amir Al-Umârâ, offices once held by his father and grandfather. He then began his despotism in the Doâb and even usurped the crowns lands reserved for the privy purse of the emperor (sarî-i khâss mahdîl). In Shâhwâl 1202/July 1788 he again appeared before Delhi and through the treachery and intrigue of his friend, the eunuch Manzûr 'All, superintendent of the royal household, was able to have an audience with the unwilling but helpless emperor. This audience proved to be the beginning of a period of great troubles for the imperial family—the House of Timâr. Shâh 'Alîm was taken prisoner and deposed on 26 Shâhwâl 1307, and
ten days later he was blinded. In a moving Persian poem Shâh 'Alam laments the loss of his eyes (cf. Şâbû al-Dîn 'Abd al-Rahmân, Bazam-i Timûrisiya, among others, 275-8). Children and women of the harem were starved to death, princes flogged and the bezgams dishonoured. For days together every conceivable cruelty was perpetrated on the royal family in vengeance for the act of castration to which the Rohilla chief had been subjected during his boyhood. Retribution, however, soon overtook him. In Dîumâd-i 1203/February 1279 he was captured by the Maratha leader, Mahâddî Sîndhî, and after a short imprisonment was put to death; his body was dismembered and hung from a tree.

(A. S. BAZMEE ANSARI)

**GHULÂM AL-KHALÂLÎ**, usuat apppellative of Abû Bakr 'Abd al-'Azîz b. Djâ'far b. Ahmad, a highly-esteemed Hânlî traditionist and jurisconsult (d. 366/1007). He owes his by-name to the fact that he was the principal disciple of Abû Bakr al-Khalâlî (d. 311/923 [q.v.]). He transmitted his master's *Kitâb al-Dîmât*, the first great *corpus juris* of Hanbâlîm, and he is often to be accused of forgery and dishonesty, but, to judge from some anecdotes, his detractors seem to have been wasting their time; this was notably the case with Ibn Durayd [q.v.], who was one day shown up in public by Ghulâm Thâlî and until his death never spoke to him again. He had an answer for everything and was even able to find a meaning, from the old Bedouin vocabulary, for words which mischievous pupils invented as a joke.

Politically, it is particularly interesting to note that he became a supporter of the Umayyad caliph in it the beginnings of a veiled hostility to the life of luxury and pleasure which was led by the courtiers and tradition has it that he dictated from memory a page of exceptional interest on the way in which the Umayyad caliph, which he insisted on his pupils reading before he allowed them to attend his lectures; al-'Askâlahî himself (Liçîn al-mâzîn, v, 268) passes a rather severe judgement on this work because it contains apocryphal data, but he places the responsibility for these on other transmitters. It is precisely because of his hostility towards 'Alî and the Shî'â that Ibn al-Nadîm is by no means favourable towards him; all the same he devotes to him a long notice (*Fihrist*, Cairo ed., 113-4), which includes a page of exceptional interest on the way in which at that time a dictated text gradually acquired the form of a finished work, thanks to the care of the listeners and the final intervention of the master.

Ibn al-Nadîm and the other biographers list a total of more than 25 works among which the *Kitâb al-Yâbût* (or al-Yawâkît) *fi 'l-nugha* seems to be the most important. In this list he draws particular attention to a commentary (*gâhar*) and a supplement (*jârî*) to the *Fihrist* of Thâlî and a "very good" *Gâhar* al-Khâdîj based on the *Musnad* of Ahmad b. Hanbâl, a supplement to the *Kitâb al-'Ayn* of al-Khâlîl b. Ahmad, a criticism of Abû Ubayda (ma 'ankarahu 'l-Abrâ 'lâl Abû Ubayda fimâ rawîhî) and a critical supplement to the *Dînâmara* of Ibn Durayd.

(CH. PELLAT)

**GHULÂM THÂLî** (singular, GHÂLÎ), "extremists", a term of disapproval for individuals accused of exaggeration (ghûţ) in religion. By heresiographers it was applied particularly to those Shî'îs [q.v.] whose doctrines Ijtâmâ'âshârî Imâmî orthodoxy has regarded as exaggerated in reverence for the *imâmî* or in other ways. In practice, the term has covered fairly numerous speculative Shî'îs except those later accepted by Ijtâmâ'âshârî tradition, as well as all later Shi'i
groups except Zaydis, orthodox Imāma'shāhīs, and sometimes Ismā'īlīs. During the early period, what are called the Ghulāt offered a distinctive speculative tendency within the general Shi'ī political orientation; their speculations continued to influence most later Shi'ī (and even some Sunni) thought, and formed a reservoir of ideas from which many later Shi'ī movements drew their main inspiration. Accordingly, the term Ghulāt, if understood as a proper name without parti pris, may be made to serve for a heterogeneous but interconnected group of Shi'ī religious leaders and for the later tradition which went back to them.

Traditionally, the first of the Ghulāt was 'Abd Allāh b. Siba? [q.v.], whose Ghulāt may have consisted in denying that 'Allāh had died, and predicting his return (radī'a), as the later Imāmins did that of the Twelfth Imām. In any case, the notion of the absence (ghayba) of an īmām who is due to return and establish justice as māzīl [q.v.] or ḥulūl means to have appeared first among the Ghulāt. Other positions which seem to have been labelled Ghulāt by early writers were the (public) condemnation (sabb) of Ābū Bākr and 'Umar as usurpers of 'Allī's right, and the notion that the true īmāms were divinely protected (maʿṣūm) against any sort of error. The Ghulāt were especially concerned to define the nature of the īmām, and to assert varying positions on this: that the īmām was the waṣī', executor, of the Prophet; that he possessed a prophetic authority (nubuwawwa) himself, though one secondary to Muḥammad's; that he (as well as Muḥammad) possessed a spark of the divine light (naʿīr iḍāḥī) inherited from Adam through a line of prophets; or that he represented divinity itself, perhaps as a lesser god in the earth, or by infusion (ḥulūl) of the divine spirit in him.

They were almost equally concerned to define the nature of the true believer. Some seem to have expected all the truly faithful to receive some expectation of continuing prophecy and the hope of the various Shi'ī ideas, finally seem to have affected certain Zoroastrian sectarian movements, especially through reverence for Abū Muslim (cf. Gholam Hossein Sadighi, Les Mouvements religieux iraniens, Paris 1938). By the 3rd/9th century, at latest, there developed, among the Ghulāt, bītīnī [q.v.] systems of symbolical Kūrān interpretation. These seem to have been influenced by philosophy, and the Ghulāt differed, according as they asserted the supremacy of one or another principle, among those agreed to be embodied in certain religious offices and persons. The Mīmīyā exalted the mim, or Muḥammad, embodying as prophet the principle of declared truth and outer reality; the 'Aynīyya exalted the 'ayn, or 'All, embodying as smām the principle of inward meaning; a third principle was represented by the sin, or Salīm Fārid, the Gate through whom men came to the truth. Several of these groups played something of a rôle in the declining years of the ʿAbbāsīd caliphate, when an enthusiast like Shalmaghanī held high political position.

Much of the Ghulāt heritage was absorbed into the Imāmī and Ismāʿīlī movements and disciplined by the exclusion especially of notions implying any compromise of the unity of God; thus the term ḥulūl seems to be rejected by surviving authors, along with the idea that the smām could be a god or a prophet. But even such ideas continued present within Imāmī and Ismāʿīlī circles and in sects like the Nuṣayrīyya [q.v.]; in later centuries, numerous apocalyptic movements developed in which various of the ideas of the Ghulāt were used, and which often resulted in more or less long-lasting sects, some of the Nizāris and Druzes from the Ismāʿīlī fold, and the 'Allī-Ḥāšī or Abī al-Ḥākī, who saw 'Allāt as God. The first Şafawīs likewise interpreted Shi'īsm in a
manner which orthodox Imamism must term ghulu. Transformed into complex symbolic lore, as at the hands of the Hurufis, much entered the broad sweep of Shi'ite writings, both ImamI and especially texts of the 2nd/8th century adopted Kharidji doctrines and took part in the revolt of Maysara. Even after the defeat of the Khurdis they showed an inclination towards heresy: "Their countrified customs and rustic habits", says Ibn Khalbūn, "prevented them from recognizing the true principles of religion". Thus they gathered in multitudes around the false prophet Ha-Mīm [q.v.]. Later another prophet appeared, by name ʿAṣīm b. Djamīl al-Yazadijumī, who rebelled and expressed his claims by his adept lama, among the Maslama tribes and attributes to them among the Maslama tribes and attributes to them as ancestor Ghumār son of Masūm or, according to another tradition, son of Meṣṭāf, son of Masūm. The Ghumār were divided into a large number of clans—B. Humayd, Mattalwa, Ighsawa (= Ghawār), Madikasā, etc.—whose names are still borne by certain tribes of the Rif. It is rather difficult to determine precisely the territory occupied by the Ghumār. According to Ibn Khalādūn it was five days long, from the region of the plains of the Maghrib to Tangier, by as many broad, from Qaṣr Kutamā to the river Wanghā. It was bounded by the Atlantic between Ašlā and Anfā and was adjacent on this side to the territory of the Barghūšī. Al-Bakrī excludes the regions of Tangier and Ceuta from it and gives as its limits Nakūr on the east and Karshāt on the west.

The Ghumār had been long established in this part of the Maghrib when Islam was introduced. When conquered by Muṣār b. Nuṣayr they became converted to the new religion but in the 2nd/8th century adopted Khurdisī doctrines and took part in the revolt of Maysara. Even after the defeat of the Khurdis they showed an inclination towards heresy: "Their countrified customs and rustic habits", says Ibn Khalīdūn, "prevented them from recognizing the true principles of religion". Thus they gathered in multitudes around the false prophet Ha-Mīm [q.v.]. Later another prophet appeared, by name ʿAṣīm b. Djamīl al-Yazadijumī, who rebelled and expressed his claims by his adept lama, among the Maslama tribes and attributes to them among the Maslama tribes and attributes to them as ancestor Ghumār son of Masūm or, according to another tradition, son of Meṣṭāf, son of Masūm. rebels who ask for their protection". From the 9th/15th century onwards we lack exact information about the Ghumara. Their name, mentioned by Leo Africanus in the 10th/13th century, is borne today by a powerful tribe of the Dižabäa.

---

**Ghûmdân** (epigr. GHNDN, CIIH 429), the castle of Sanâ' (Asâl) in the Yaman, famous for its antiquity, its size, and its splendour. Arabian geographers give detailed descriptions of it (v. infra), esp. Hamdânî (in Iklîl, viii), who attributes its building to the king Dhuqarâa Dhuqîbd (about 25 B.C.), probably correctly (cf. CIIH 429). The castle was situated between the twin mountains Nukûm and 'Abydân. It is said to have been destroyed by the Abyssinian conquerors in 525 A.D., but was rebuilt and served as the residence of Sayl b. Dhu Yazan after the Persian occupation in 570. It was finally demolished in connexion with the Muslim conquest of the Yaman, alleged either by a certain Muhammad b. Ughmân or by Alkama b. Dhu Dzadan, celebrate Ghumdân of the name.

Legend attributes the foundation of 'Ghumdan to 'Sâm b. Nuh, more seldom to Solomon or al-'Zabba b. al-Dîn Sam, established as the residence of Sayf b. Dhu Yazan after the Muslim occupation in 570. It was finally demolished in connexion with the Muslim conquest of the Yaman, alleged either by a certain Muhammad b. Ughmân or by Alkama b. Dhu Dzadan, celebrate Ghumdân of the name.

The nickname was transferred to a later scholar, the homograph Alkama b. Dhu Dzadan, celebrate Ghumdân of the name.

**Ghur (epigr. GHURAB, GHMBR).** The Arabo-Persian word does mean "rouged", but its single root, and it is probable that in the course of time it came to be used in connexion with the Muslim conquest of the Yaman, alleged either by a certain Ahmad b. Muhammad b. Sulaymân al-Bukhârî said to have died a hundred years earlier, in 312/924 (Hadîdî Khalifa, ii, 116 f.), and to have been the author of a *History of Bukhârâ* which is, in fact, identical with this Ghumdân.

**Ghur (epigr. GHURAB, GHMBR).** The mountainous territory in Afghanistan about the headwaters of the Farah Rud, Hari Rud, and Murghab, from which is named the mediaeval dynasty of the Ghûrîds [q.v.]. The establishment of Islam came late in Ghur, and raids by Arab generals continued until the 4th/10th century. A tradition of the existence of Jewish settlements finds confirmation in the discovery of a Judeo-Persian inscription of A.D. 752-3 at Tang-i Aza, near Cîght. In 372/982 the *Hudud al-'alam* claims that most of the inhabitants had accepted Islam. Originally the chief place was Mandaysh, in a district called Sanga, the chief place was in a district called Sanga near the mountain Zâr-i Margh. These localities were placed by Maricq near Ahangaran—the name, still mentioned by the earlier historian of Bukhara, cf. Wüstfenfel, *History of Bukhara*, iii/2, 394; Dimishki, tr. Mehren, 31. For the alleged earlier historian of Bukhara, cf. Wüstfenfel, *History of Bukhara*, iii/2, 394; Dimishki, tr. Mehren, 31.

---

**Ghurâb**, (a.) "crow." In view of the diversity of their meanings the Arabic words formed from the three consonants gh, r, and b cannot be traced to a single root, and it is probable that in the course of the history of the language there came about a convergence of terms with different origins; thus, *ghurâb* is too reminiscent of the Latin corvus for us to consider it a mere coincidence; moreover, early Arab philologists considered *ghurâb* to be independ-
ent, since they made to derive from it such words as ghurba, ightirdb, etc. which imply an idea of estrangement, of separation; later authors go so far as to regard the root gh. r. b. as being made up from the consonants gh, r, b which appear initially in words meaning a misfortune or something unpleasant.

Such theories are explained firstly by the place which the crow occupies in the literary tradition of the Arabs, secondly by its place in ornithomancy, where it is pre-eminently the bird of ill omen.

In poetry, although its black colour may symbolize the night (ghurdb al-layl) and be the object of favourable judgements, the crow is fundamentally synonymous with separation, with an unhappy event, and the poets make sometimes an immediate use of the stereotyped expression ghurab al-bayn, which strictly means the carrion crow, but which owes its origin to the fact that crows are led by instinct to encampments which their occupants are preparing to leave, and announce by their croaking the imminent departure (basyan) of the tribe—more particularly of the beloved—before swooping down on the deserted places, where the poet, arriving too late, is struck with grief on seeing them.

The mere sight of a crow is in itself unpleasant, and one can readily understand, without feeling the need to postulate a borrowing, that the early Arabs should have made it into a bird of ill omen and in addition applied themselves to observing and interpreting its flight and its croaking, in the context of what is called hra [q.v.]. Examples from literature of these predictions, which were deduced more or less spontaneously, cannot be quoted here; but it is worth mentioning that they are the sign of a fairly rudimentary ornithomancy which only at a relatively late date was perfected and systematized, although the Fihrist (Cairo ed., 436) already refers to Arabic treatises of ornithomancy, one of which is the work of al-Madâ'innî. T. Fahd has studied a treatise attributed to al-Dîhîz, comparing it in a very illuminating fashion with two Assyro-Babylonian texts; in spite of differences of detail, it does not seem that the Arabic text is the result of an enquiry carried out among the Bedouins: rather one has the impression that it is an attempt, made probably at a late date, to give some order to elements of diverse provenance. Nevertheless, it is strange that al-Dîhîz, who is one of the few authors to have considered that the belief in the malicious influence of the crow and in the possibility of drawing omens from its flight and its cry is only a superstition based on verbal similarities (Hayawdn, iii, 444), should have been later credited with two treaties of divination: the text studied by T. Fahd (found in al-Nuwayri, Nihâya, iii, 130-2) and the Bûb al-Ilrîfa wa l-sâqîr wa l-farsâ sa-lâ madhbâb al-Furs (published and translated in Russian by K. A. Inostroatgev, in Materials from Arabic sources for the history of the culture of Sassanian Persia, St. Petersburg 1907, text, 3-27, tr. and comm., 28-120).

In the context of Islam the word ghurab is used in the Qur'ân (v, 34/37) with reference to the crow sent by God to show Cain how to bury his brother Abel whom he had just killed; although rationalists see in this a manifestation of divine favour towards the bird considered to be of ill omen, they do not succeed in stifling the prejudices made still stronger by the legend of the crow (ghurab Nâh) which Noah sent out to reconnoitre, but which, having found a carcass, did not return.

The malevolent character of this bird explains the considerable number of nicknames which it has in Arabic; but it is proverbial also for sharpness of vision, its suspicion, its pride and the blackness of its plumage, and the word ghurab appears in a number of expressions such as "that will only happen when the crow turns white" (hâdît yâqîb al-ghurab).

The Arabs knew several varieties of crow, including one which can learn to speak, and had observed their hostile relations with cattle, donkeys and owls; their habit of perching on tombs and parting the beaks into the pustules which form on their backs tended to increase the Bedouins' dislike for this bird, about which in any case they knew little, since some maintained that it reproduced itself by pecking the female with its beak.

The crow is among the animals that must be killed, and its flesh is forbidden; it possesses however certain medicinal properties, the dried blood in particular being a specific for haemorrhoids. A crow's beak carried on the person gives protection against the evil eye, but to see the bird in a dream is of course a sinister portent.

(Ch. Pellat)
laṭa-sarayi, the Palace of Ibrāhīm Pāša, or the palace at Edirne [see ghulām]; (2) from suitable sons of members of the Ālī Būlūk; (3) from young Muslims from other Muslim lands who had come to fight the ghāsh in the Ottoman army and distinguished themselves (according to Idrīs Bīlīsī, Ḥaṣāt bīḥīqīṭ, MS Nuriosmaniye 300, they were "Arab, ʿAḡjem and Kurd"; according to Angiolello they came from Persia, the land of the Tatars, Cappadocia, the land of the Turcomans and Egypt). The name shows that the original source of recruits for these bōluḵs was the last (the only case where Muslims were taken into the ranks of the Kāḥṭ būlūḵ [see ghulām].

In about 860/1455 (I. de Promontorio, 30) the two bōluḵs numbered 1000 men (but Ordo Portae, of about the same date, mentions only 400; Angiolello speaks of 500-1000). In the 10th/16th century they numbered 1000 each, 2000 together (Ḥaṣāt bīḥīqīṭ; Ramberti, apud A. H. Lybyer, The government of the Ottoman Empire . . ., Cambridge 1913, 251: about 2000 together; in a document of 970/1568, see Uzuncarsılı, op. cit., 196, the Ṣagh Gharibler are recorded as 1000 men, 2000 together). By the beginning of the 11th/17th century (ʿAyn-i ʿAll, Kauṇānīn, Istanbul 1280, 9), the Diṃḍaʿat-i Gharibd-i yemin numbered 928, the Diṃḍaʿat-i Gharbēd-i yemin numbered 975.

Their organization was the same as that of the other bōluḵs of Ḳāḥṭ būlūḵ. In each bōluḵ there was an aḡha in command, a kēthūḏu (kākya; according to Angiolello and Ramberti he was paid 30 akṣes a day), a kāḥṭ or kāḥīsī to attend to the paper work (with 20 akṣes, according to Angiolello; according to Ramberti, half a century later, he received 25), and a tuwush or baẓḥ-tuwush responsible for discipline (for the organization see Sadra’un Kemankeš Kura Mūṣṭafā Paşa Lāyḥās, ed. F. R. Naṭ, in Taʾrīḫ Veskileri, v/6 [1942], 457). In the 10th/16th century the aḡha of the Ṣagh Gharibler was appointed from among the ṭāḥṣeṅlis. At a ʿṭāma, the aḡha of the Sol Ṣagh Gharibler was promoted aḡha of the Sol Ṣagh Gharibler, and the latter aḡha of the Sol ʿUlufedżiler. Sometimes by exception, and contrary to the kānūn, towards the end of this century the aḡha of the Ṣagh Gharibler was promoted directly aḡha of the Silāḥdārār, or sandğaŋ-begi, and even begerbegi (see documents apud Uzuncarsılı, 172). Whereas each of the aḡhas had in the times of Muḥammad II and Sulaymān I received an ʿuluf of 80 akṣes (see Angiolello and Ramberti), at the end of the 10th/16th century they received 100; in addition they held zeḵdjets.

The two divisions were sub-divided into 260 bōluḵs, each with its bōluḵ-bāṣḥ (Kemankeš Lāyḥās, 457).

Since their horses needed grazing land, the majority of them were scattered in the outskirts of Istanbul, Edirne, Bursa, Kütahya and Konya; an officer appointed jointly by the aḡhas of the six regiments, with the title kēthūḏu-yeīrī, was in command of each of these scattered groups of members of the six regiments and maintained discipline. The ʿulufes of the men varied between 6 and 20 akṣes (Ordo Portae, p. 9; Angiolello: 10-20 akṣes; I. de Promontorio: 12 akṣes; Ramberti: 7-14 akṣes). At each promotion the Sol Ṣagh Gharibr (sandğaŋ) at the beginning or their sons, if they showed themselves fit, could be appointed to the Gherbed régiments. Their weapons were bow and arrow, shield, scimitar (pala), dagger, lance and axe. Though some carried muskets, fire-arms were not popular with them. They had assistants known as ʾṣqrān (Ramberti, 251). Each of the two bōluḵs had a flag (bāyraḵ) and a tuqâ; the flag of the Ṣagh Gharibler was white and that of the Sol Ṣagh Gharibler of two colours, white and red or white and green. Duties. Like all the Ḳāḥṭ būlūḵ, at first they served in the field only when the Sultan himself went on campaign, but in the 10th/16th century it became the practice for them to serve also under a sāṭrār-e chem, i.e., a commander with the rank of vizier. The Gherbōvjetiler had a reputation for valour, and so in the course of the fighting were sometimes entrusted with difficult tasks like penetrating the ranks of the enemy (Ḥaṣāt bīḥīqīṭ). Their principal duty on campaign was to guard the Sultan’s standards (Ḥaṣāt bīḥīqīṭ and later the sandğaŋ-begi ʿṣqrān); they took their station as the rearmost of the cavalry regiments guarding the Sultan’s tent and protected the rear (Ordo Portae, 9). These two bōluḵs formed the rearguard of the Ḳāḥṭ būlūḵ, stationed in the centre, and guarded the tents and baggage. From the end of the 10th/16th century onwards, when, during a siege, a battle developed it was their dangerous duty to guard the entrenchments.

With the general decay of the akṭūm system, the order and discipline of these bōluḵs too began to break up. Already in the 10th/16th century, the places of Ḳāḥṭ būlūḵ in their ranks were in time of war increasingly filled by ‘outsiders’ known as serdengedā; at the same time the principle was abandoned of enregistering mūḏaḏm candidates for future vacancies in the bōluḵs.

When in the 11th/17th century these bōluḵs began to partake in the mutinies and revolts, steps were taken to reduce the importance of the bōluḵat-i erbaʿa. In 1071/1660, under Kōprülü Muḥammad Pāša the numbers of the Ṣagh Gharibler were reduced to 410, those of the Sol Ṣagh Gharibler to 312. Later still, the Ṣagh Gharibler ʿAquṣ was made subordinate to the Sipaṭi ʿoğluṅlār Aḵāṣ, and the Sol Ṣagh Gharibler ʿAquṣ to the Silāḥdārār ʿAquṣ. In a list of 1123/1711, the Ṣagh Gharibler are shown as numbering only 180 men and the Sol Ṣagh Gharibler 162. On campaigns, however, these two bōluḵs maintained their entity as guardsians of the sandğaŋ-begi ʿṣqrān. In Ṣafar 1242/ September 1826, very shortly after the abolition of the Janissaries, all six of the Ālī Būlūk were disbanded (for the text of the firman, see Uzuncarsılı, 210-2).

The so-called ḡworat tāfsezi, groups of men who, from the 10th/16th century onwards, left their homes and sometime roamed the country as brigands, are quite unconnected with the Gherbed.

Bibliography: in the article.

GHURABĪYÁ, a branch of the Shiʿī "aggregators" (gūlāt [q.t.]). Its adherents believed that ʿAll and Muḥammad were so like in physical features as to be confused, as like “as one crow (gūlāt) is to another” (a proverbial expression for great similarity, cf. Zeitschr. f. Assyr., xvii, 53), so that the Angel Gabriel when commissioned by God to bring the revelation to ʿAll gave it in mistake to Muḥammad. ʿAll was, they say, appointed by God to be a Prophet and Muḥammad only became one through a mistake. According to Ibn Hāza ne, ʿAll is the one that ʿAquṣ Gabriel erred in good faith; others held he went astray deliberately, and cursed him as an apostate. According to al-Baghdādī, the sectaries greeted one another by cursing Gabriel. According to the Bayān al-adīyān, the Ghurabīyya were so called because they believed that ʿAll was in heaven in the form of a crow. Ibn Kūyayba (Maḏārif, ed. Wüstenfeld, 300) remarks that this
GHURABIYYA — GHURIDS

is one of the few sects the origin of which is not attributed to an individual.

It is related that in the 4th/10th century the followers of this sect in Kunn raised a serious revolt against the decision of the judge Abû Sa'îd al-I斯塔khîrî (died 336/949) when he divided an inheritance equally between two claimants, one of whom was the daughter and the other the uncle of the deceased. The Ghurabiyya demanded that the whole estate should go to the daughter and the uncle be quite excluded; as our source rightly observes, this was the result of their political creed, according to which the succession to Muhammad was legitimate only in the line of his only daughter Fâtimah and not in that of his uncle (Abbasî) (Subkî, Tabâbî al-Shîfiyya, ii, 194). Cf. the regulations made by the Caliph al-Mu'izz according to a report of Ibn Hîdar, Raif al-Iṣrâîlî, ed. Guest (in the appendix to al-Kindi, Governors and Judges of Egypt, Gibb-Memorial, xi), 567, l. 3 from end. Ibn Diubayr, who visited Damascus in 580/1184, mentions the Ghurabiyya among the minor sects to be found in Syria.

GHUR [see DILAWAR KHAN and MAWLAWI].

GHURIDS, the name of an eastern Iranian dynasty which flourished as an independent power in the 7th/13th and the early years of the 7th/14th century and which was based on the region of Ghur (q.v.) in what is now central Afghanistan with its capital at Firuzkuh (q.v.).

1. Origins and early history. The family name of the Ghurid Sultans was Shansab/Shansab (< MP Gushnasn; cf. Justi, Iranisches Namenbuch, 282, and Marquart, Das Reich Zulfin, in Festschrift E. Sachau, 289, n. 3), and in the time of their florescence, attempts were made to attach their genealogy to the ancient Iranian epic past. The 7th/11th century historian of the Ghurids, Dîjâzânî, quotes a metrical version of the genealogy of the family composed by Fakhr al-Dîn Mubârâkshâh Marâvardî and completed in the reign of Sultan Ghiyâth al-Dîn Muham- mad (âxîl. in the last third of the 6th/12th century). In this, the family is traced back to the tyrant-of-Iranian mythology, Azhd Dahak, whose descendants were supposed to have settled in Ghur after Farîdîn’s overthrowing of Dahak’s thousand-year dominion. Within this genealogy, Shansab himself is placed in the first century of Islam, and the family now brought within the ambit of the new faith. Shansab is said to have been converted by the Caliph âAllî, who formally invested him with the rulership of Ghur; his son Fâlîk later espoused the cause of Abî Muslim in Khurâsân and in this way obtained the support of the Ghurids. A further alleged episode can be directly connected with the political position in Ghur in later times.

According to this, the Caliph Hârûn ar-Rashîd received at his court the Amir Bandî b. Nahârân Shansabânî and a rival chieftain from Ghur, Shîh b. Bahrâm. But it was awarded the insignia of political sovereignty (imdrâîl) over Ghur, together with the title Kasim Amir al-Muwî’îmûn, whilst Shîh was awarded the military command (pâhâlânî) of the forces of Ghur, “an arrangement”, says Dîjâzânî, “which has continued thus till the present time” (see further, below).

All these fabrications clearly aim at giving some lustre to a dynasty which had arisen from very obscure and localized origins, or as in the latter episode, they attempt to project into the past an explanation for the political situation of later times (cf. C. E. Bosworth, The early Islamic history of Ghur, in Central Asiatic Journal, vi [1961], 125-7). Ethnically, we can only assume that the Shansabanis were, like the rest of the Ghûrs, of eastern Iranian stock. We are equally in the dark about the language which they spoke, except that in the early 5th/11th century it differed considerably from the Persian of the Ghaznavid court. It is possible that the earliest Ghurids spoke some south-east Iranian language, one of the group which has been all but eliminated in modern times by the spread of Persian and Pashto (communication from G. Morgenstierne).

We know nothing really definite about the Shansabanis until Ghaznavid times, i.e., the 5th/11th century; it was only in the early part of this century that Ghur, and presumably the Shansabanis, began to adopt Islam. The Hûdâ al-Islâm (372/982-3) mentions a Ghur-Shâh who was tributary to the Farîghûnî Amir of Ghaznâw. It is notable that the north of Ghur (q.v.), but there is nothing to show that this ruler was necessarily a Shansabânî. Within the empire of Sultan Mahmûd of Ghaznâ (338-421/948-1030), Ghur remained an unabsorbed enclave; hence during his reign, at least three expeditions were sent by him to Ghur. In 401/1011 a force attacked the Shansaban chief Muhammâd b. Sûrî, capturing him at his stronghold of Ahangaran. He was now deposed, his pro-Ghaznavid son Abû ‘Allî set up as the Sultan’s vassal and teachers left to instruct the people in the precepts of Islam (cf. Utbi and Dijâzânî in M. Nâzîm, The life and times of Sultan Mahmûd of Ghaznâ, Cambridge 1931, 70-2, and Bosworth, op. cit., 123-2, 127-8). From this, and from other information in Dijâzânî, we can firmly identify the Shansabanis as petty rulers of the region of Mandeh on the south bank of the upper Herî Rûd, with its centre at Ahangaran, the place still known today by that name. According to Dijâzânî, the stronghold of the Shansabanîs of Mandeh lay at the foot of the Zar-i Marsh, one of the five great mountain massifs of Ghur, and believed by the Ghuris to be the mountain where the Simurgh nurtured Rustam’s father Zal. At this time, the term “Ghur” seems to have had a restricted meaning and to have been synonymous with Mandeh, i.e., the north-eastern corner of the Ghur of the early Islamic geographers.

The existence of several other chieftains of Ghur (in the larger sense of the term) is known in the 5th/11th century. Of at least equal importance with the Shansabanis were the lords of the region further down the Herî Rûd, around the later Ghurî capital of Firuzkuh and the modern Khâlîq or Khâlîq-i-Ghur (in the narrow sense) and called Bidâd al-Dîjalî. Bayhaki, ed. Ghanî and Fayyâd, 74-20, gives a detailed
account of the Ghaznavid expedition of 411/1020 under Mas'ud b. Ma'mūd, which marched up the Heri Rud from Herāt, captured the fortress of Dūrāw and made the local chieftain Wārmesh-Pat submit. The occurrence at a later date of this name in the Shāhānūš family (see above) points to the fact that this district of Dūrāw was in the north-western corner of Ghūr was the centre of the Shansabanīs’ rivals, the Shāhānūsh. Bayhaḵī mentions the names of other chieftains in Ghūr, and it is clear that, despite Dūrāw’s attempts to inflame the early Shansabanīs’ sphere of authority, these last were only one lot of petty chiefs amongst several in this inaccessible region. Moreover, it seems that the primacy of the Shansabanīs at a later date was only achieved after much jostling for power and local warfare, although explicit information on this process is meagre.

2. The period of vassalage to the Ghaznavids and Saldjūqs. Ma’mūd of Ghazna’s nominee Abū ʿAli b. Ma’mūd is praised for his beneficent rule and his encouragement of the newly-introduced Islamic religion; he built mosques and madrasas and endowed them with awkāf. But during the reign of Mas’ud of Ghazna (421-32/1030-41) an internal revolution took place in Māndehš and, Abū ʿAli was deposed by his nephew ʿAbbas b. Shih. ʿAbbas devoted his efforts to fortifying and rebuilding the castles and strongholds which were such a feature of the landscape of Ghūr, but his tyranny provoked an appeal of discontent Ghūrī chiefs to Sultan Ibrāhīm b. Ma’mūd. Ibrāhīm therefore marched into Ghūr, deposed ‘Abbas and set up the latter’s son Muḥammad. Muḥammad was succeeded by his own son ʿUṣūl al-Dīn Hasan (the first Shansabanī known to have a lakab or honorific). Within this period, c. the second half of the 5th/11th century, the Shansabanīs were trying to extend their authority beyond Māndehš and over the lands of rival chieftains. Dūrāwī speaks of the feuding and turbulence which went on within Ghūr both at this time and until much later; and it was during the suppression of a rebellion in Waḏlristān, the district to the west of Ghazna, that ʿUṣūl al-Dīn Hasan was killed.

With the accession of his son, ʿĪz al-Dīn Husayn (458/1066-9) the Shansabanī dynasty becomes fuller. Since four of his many sons eventually became rulers, Dūrāwī calls him ʿAbu ʿUzz-ʾal-Salādīn, “Father of Sultans”. By now, Ghūr had become a buffer region between the truncated Ghaznavid empire, reduced after the middle years of the 5th/11th century to southern and eastern Afghanistan and northern India, and the powerful empire of the Saldjūqs. In particular, Salādīn Kūrāḏānī was after 490/1097 under the rule of the forceful Sandjar b. Malik Shāh. With the relative decline of the Ghaznavids after Ibrāhīm’s death in 492/1099, Ghūr was drawn towards the Saldjūq sphere of influence. ʿĪz al-Dīn Husayn was initially confirmed in power by Mas’ud III b. Ibrāhīm of Ghazna, but in 501/1107-8 Sandjar led a raid into Ghūr and captured ʿĪz al-Dīn, and there after the Ghūrid maintained close relations with the Saldjūq, sending him as tribute the specialties of Ghūr, including armor, coats of mail and the local breed of fierce dogs.

On ʿĪz al-Dīn’s death, his son Sayf al-Dīn Sūrī succeeded as chief in Ghūr and overlord of the Shansabanī family. He now made a general division of territories amongst his brothers, an indication that political feeling amongst the Ghūrids was still tribal and patrimonial in nature, and unaffected by the administrative sophistication of their Ghaznavid neighbours, with their unitary state under one Sultan. Sayf al-Dīn retained the fortress of Istīy as his capital; ʿUṣūl al-Dīn Muḥammad was allotted Warshār or Wārshār, where he reigned with authority and fortress of Fīrūzkūh and assumed the title of Malīk al-Dībāḥ; ʿUṣūl al-Dīn Muḥammad took Mādīn; ʿAlī al-Dīn ʿUsayn took Waḏlristān; Bahāʾ al-Dīn Šāh took Sanga, the chief place of Māndehš; and Fakhr al-Dīn Mas’ud took Kātī on the headwaters of the Herī Rud. It was soon apparent that the Shansabanīs’ sense of family solidarity was not developed enough for this division to work, and fratricidal strife broke out. ʿUṣūl al-Dīn quarreled with his brothers, fled to Bahāʾr Shāh’s court at Ghazna, but was there poisoned. From this deed there arose, says Dūrāwī, the deep hatred and enmity between the Ghūrid and Ghaznavid families. In retaliation, Sayf al-Dīn Sūrī marched on Ghazna and temporarily expelled the Sultan, but in the face of popular sympathy for the Ghaznavids was unable to hold the city; and in a battle which took place when Bahāʾr Shāh returned, Sayf al-Dīn was captured and ignominiously executed.

Bahāʾ al-Dīn succeeded in Ghūr in 544/1149, and after finishing the fortifying of Fīrūzkūh, set out with an army for Ghazna, but died en route in that same year. ʿAlī al-Dīn Husayn had been left behind by his brother to rule Ghūr, and he now took over supreme power and tried to averge his dead brothers and, if possible, to reduce Ghaznavid power in Afghanistan, for the hold which they had on the routes through eastern Afghanistan from Kābul to Ghazna and Bust blocked any potential Ghūrid expansion there. Bahāʾr Shāh massed his troops in the region of Tīghābād (i.e., the modern region of Ḥandārā). ʿAlī al-Dīn moved into Zamīn-Dāwar and a great battle took place, in which the tactics of the Ghūrid infantry, with their walls of protective shields, overcame the Ghaznavids’ elephants. Bahāʾr Shāh was pursued to Ghazna and again defeated, retiring now to India. ʿAlī al-Dīn entered the city, and a frightful orgy of devastation and plundering followed, earning the Ghūrid his title of Dījān-Sūr “World Incendiary” (545/1149-50). He now moved into Zamīn-Dāwar and a great battle took place, in which the Ghaznavid Sultans were exhumed and burnt, and on the way back to Ghūr, the other great Ghaznavid centre of Bust was sacked in an equally savage manner. ʿAlī al-Dīn thus made no attempt at this moment permanently to annex the Ghaznavid territories in eastern Afghanistan, but he does seem to have aspired to a more ambitious position than that of a mere chieftain of Ghūr. According to Ibn al-ʿAthīr, he now copied Salādīn and Ghaznavid practice, calling himself al-Sultān al-Muʿāazzam and adopting the ʿādr or ceremonial parasol; previously, the Ghūrids had been content to style themselves Malīk or Amīr. It was natural that his success at Ghazna should embolden ʿAlī al-Dīn to throw off Saldjūq control. In 547/1152 he stopped paying tribute to Sandjar and endeavoured to support an anti-Saldjūq rising in Herāt. His army advanced from Fīrūzkūh down the Herī Rud, but was met at Nāb by Sandjar’s forces and crushingly defeated after the Turkish, Oghuz and Khaḷaḏī troops in the Ghūrid army had gone over to their co-nationals in Sandjar’s army. ʿAlī al-Dīn was personally captured and spent some time as a prisoner in Kūrāsān. The last years of his life, until his death in 556/1161, were spent firstly in consolidating his position in Ghūr against rival members of his family, and secondly in making conquests in Waḏlristān and the upper
3. The Ghurids as an imperial power. The expansionary policy of 'Ala al-Din's last years meant that the Ghurids were now breaking out beyond their mountain fastnesses in Ghur and would soon become a major power in the eastern Islamic world. There was, indeed, something of a vacuum of power there at this time: the Ghaznavid empire was in decay, and Sandjai's capture by the Ghurids and the consequent anarchy in Persia facilitated Ghurid expansion in the west. 'Ala al-Din's annexations gave the impetus towards a tripartite division of the Ghurid empire, each under a separate branch of the Shansabaní family, and this division remained characteristic until the final fall of the Ghurids.

The senior branch ruled over Ghur from Firuzkoh and was concerned with expansion westwards into Khurásan. When Ghazna was finally taken in 569/1173-4, another branch was established there and used Ghazna as a base for expansion into India. Finally, 'Ala al-Din installed in the newly-conquered town of Bamiyan his brother Fakhr al-Din Mas'ud, and the latter ruled over Tukharistán, Badakhshan and Shughnan, up to the Oxus bank. After Fakhr al-Din's death in 558/1163, he was followed by his son Shams al-Din Muhammad. The latter is said to have had a rival over Oxus to Caghāniyān and Wakhsh; he also received from Ghiyath al-Din Muhammad in Firuzkoh the title of "Sultan" and the privilege of having a "Fatr".

'Ala al-Din Husayn was succeeded at Firuzkoh by his son Sayf al-Din Muhammad, who took repressive measures against the Isma'ilis who had infiltrated into Ghur, and who also held a feud with the Shansabanís and their rivals in Ghur, the Shīhān. The Sultan treacherously murdered his Commander-in-Chief Warmem b. Shīth, and in revenge, Warmem's brother, now succeeded to the office of Shīhān. The Sultan treacherously murdered his Commander-in-Chief Warmem b. Shīth, and in revenge, Warmem's brother, now succeeded to the office of Shīhān. The Sultan treacherously murdered his Commander-in-Chief Warmem b. Shīth, and in revenge, Warmem's brother, now succeeded to the office of Shīhān.

Under Shams al-Din (later Ghiyath al-Din) Muhammād of Ghur (558-99/1163-1203) and Shihāb al-Din (later Mu'izz al-Dīn) Mu'izzād al-Dīn of Ghazna (559-602/1163-1206), the Ghurid empire reached its apogee. These two brothers maintained a partnership and amity rare for their age. Broadly speaking, the first was concerned with expansion westwards and the checking of the Khorāzmi-Shāhs' ambitions in Khurāsān, whilst the second carried on the ghāzist-tradition of the Ghaznavids in northern India. The Ghurids thus challenged the Khorāzmi-Shāhs for supremacy in the eastern Islamic world, and initially seemed to have an advantage in that they were completely free agents, whereas the Shāhs were vassals of the Kāra Khiṭay. Moreover, the Ghurids skilfully utilized the fears roused in the west by the Shāhs' imperialist ambitions. Ghiyath al-Dīn kept up cordial relations with the 'Abbāsid Caliphs, and embassies were frequently exchanged between Firuzkoh and Baghārd; Dīvānī's father took part in one of these. The Sultan was received into the Najda Fatwah under a condition, that the Caliph more than once urged the Ghurids to stem the advance of the Khorāzmi-Shāhs in Persia.

Ghiyath al-Dīn was joined at Firuzkoh by Mu'izz al-Dīn, who had been at Bamiyan. The two of them then fought over a coalition of Fakhr al-Dīn's last years meant that the Ghurids were now breaking out beyond their mountain fastnesses in Ghur and would soon become a major power in the eastern Islamic world. After Fakhr al-Din's death in 558/1163, he was followed by his son Shams al-Din Muhammad. The latter is said to have had a rival over Oxus to Caghāniyān and Wakhsh; he also received from Ghiyath al-Din Muhammad in Firuzkoh the title of "Sultan" and the privilege of having a "Fatr".

'Ala al-Din Husayn was succeeded at Firuzkoh by his son Sayf al-Din Muhammad, who took repressive measures against the Isma'ilis who had infiltrated into Ghur, and who also held a feud with the Shansabanís and their rivals in Ghur, the Shīhān. The Sultan treacherously murdered his Commander-in-Chief Warmem b. Shīth, and in revenge, Warmem's brother, now succeeded to the office of Shīhān. The Sultan treacherously murdered his Commander-in-Chief Warmem b. Shīth, and in revenge, Warmem's brother, now succeeded to the office of Shīhān. The Sultan treacherously murdered his Commander-in-Chief Warmem b. Shīth, and in revenge, Warmem's brother, now succeeded to the office of Shīhān. The Sultan treacherously murdered his Commander-in-Chief Warmem b. Shīth, and in revenge, Warmem's brother, now succeeded to the office of Shīhān.
Mu'izz al-Din's death, the Ghurid empire fell apart, passing for a brief while into the hands of the Khwarizm-Shahs before the coming of the Mongols enveloped the eastern Islamic world in a common catastrophe. The Ghurid armies comprised both native Ghur and Afghan troops, primarily infantrymen, and also Turkish ghulams, who supplied the cavalry element. Mu'izz al-Din's skill had kept these groups together, but dissensions occurred after his death. The Ghurid troops supported for the succession to the Sultanate the Bamiyan line, first Bahá' al-Din Sámi and then after his death in 602/1205, his two sons 'Ala' al-Din and Djála'l al-Din. The Turks, however, favoured Mu'izz al-Din's nephew Ghiyáth al-Din Mahmúd, who in the end prevailed over the governor of Ghur, Díyá' al-Din, candidate of the local adherents of the Karrámíyya sect. In contrast to the Ghurids, so far as we can ascertain from the paucity of surviving material, Ghazna rose again after the Ghurid sacked and flourished under Mu'izz al-Din, benefiting from the influx of Indian plunder; it is to the period of his rule there that U. Scevareto ascribes a unique type of glazed tile found at Ghazna (backed by Islamic glazed tiles with moulded decoration from Ghazni, in East and West, N.S. viii/4 (1962), 263-87). Ghiyáth al-Din Mahmúd was a great builder and patron of the arts, constructing mosques, madrasas and caravanserais in Khurásán. Above all, we now have the minaret of Djam/Firúzkuh as a museum of a backward mountain region. With the aid of his local Ghurí troops combined with Turkish ghulams, the Ghurids made Ghur for the first time and in its history the centre of a great empire. That this was not more durable may perhaps be explained by the over-straining of Ghurid military resources on the two fronts of Khurásán and India, and by the transitory achievement of their Ghurí rivals, the Khwarizm-Shahs, in taking advantage of conditions in Persia after the fall of the Sálimids. There was, nevertheless, a durable Ghurid legacy in India through Mu'izz al-Din's campaigns there, which formed a basis for later consolidation by such of his Turkish commanders as Kútb al-Din Abyákb, Yúqíyár al-Din Muhammad Kháldí and Náṣir al-Din Kábdá (for the Ghurid campaigns in northern India see DÍLMÍ SULTANÁTE). Ghiyáth al-Din Mahmúd sent Kútb al-Din a tár and the title of 'Sultán', and Kútb al-Din was accordingly installed in Lahore with this title. These ghuláms generally continued in India the Ghurid court and military traditions and added the word Mu'izz to their own titles, keeping Mu'izz al-Din's name on their own coins for many years after his death.

5. Ghurid culture. The ethos of the Ghurid empire was strongly Sunní. Sayf al-Din Muhammad persecuted Ismá'ílí adherents in Ghur. Ghiyáth al-Din Muhammad cultivated the moral support of the 'Abbásí Caliphs, as did the Ghuríd's epigoní in northern India. They thus secured an advantage over the Khwarizm-Sháhs, who suffered in the eyes of Sunní orthodoxies for their loose Caliphal policy and in the case of 'Alá' al-Din Muhammad at least, in their pro-Shí'í sympathies. In the earlier Ghuríd period, the doctrines of the last Karámiyya sect were dominant in Ghur, but Ghiyáth al-Din Muhammad and Mu'izz al-Din Muhammad adhered latterly to the Shí'í law school (see Bosworth, The early Islamic history of Ghur, 129-53).

The Ghurids followed the example of the Ghaznavids in being generous patrons of art and literature. In his section of the Lábáb al-álbáb on royal poets, 'Awfí cites 'Álá' al-Din Husayn, and states that after the Sultan's death, his dawrān circulated widely in northern India and Zábulistán; it is well-known that during the sack of Ghazna, 'Alá' al-Din was careful to preserve for his own library the works of the great Ghaznavid poets. The tábhirás of 'Awfí and Dawlat-Sháh preserve the names of a large number of Ghuríd poets, and Nízámí 'Arúdí cites them as immortalizers of the Sultans Abu'l-Kásim Ráfí', Abú Bakr Díawahrí, 'Álí Súfí and himself. In the case of the Ghaznavid period, from which we have several fairly complete Quáns, the great bulk of Ghuríd poetry has regrettably been lost. Fortunately, some of the work of Fákhúr al-Dín Múbaráksháh or Fákhúr-i Mudábbir has survived, cf. Storey, i, 116-47. All this literature was in Persian; the recently-discovered Fásho anthology, the Fajr khazáná "Treasury of secrets", claims to include Fásho poetry from the Ghurid period, but the significance of this work has not yet been evaluated (see arşan (iii) Fásho literature).

As in literature, the Ghurí architectural traditions of the Ghaznavid period were kept up by the Ghurids, so far as we can ascertain from the paucity of surviving material. Ghazna rose again after the Ghurí sacked and flourished under Mu'izz al-Din, benefiting from the influx of Indian plunder; it is to the period of his rule there that U. Scevareto ascribes a unique type of glazed tile found at Ghazna (backed by Islamic glazed tiles with moulded decoration from Ghazni, in East and West, N.S. viii/4 (1962), 263-87). Ghiyáth al-Din Mahmúd was a great builder and patron of the arts, constructing mosques, madrasas and caravanserais in Khurásán. Above all, we now have the minaret of Djam/Firúzkuh as a monument of Ghurid architecture, to add to the other surviving examples at Heráz, Çíšt and Láshqar-i Bázár (see the Ghurí ministrel and Persian theologian Hevád al-dín, who supposes that it is possible to speak of a distinctive Ghurid architecture (L'art ghirid d'Afghanistan à propos d'un livre récent, in Arabica, vii (1960), 273-80).

GHURUSH [see sīkka].

GHUSL, general ablution, uninterrupted
washing, in ritually pure water, of the whole of the
human body, including the hair, performed after
declaring the intention (niyya) so to do. For the
living it is a fairly simple process, though it applies
also to the washing of the corpse of a Muslim (see
below). For the living, the essential ghusl is that
which is obligatory before performing the ritual
daily prayers; this ghusl becomes necessary as a
purification following acts of a sexual nature which
produce ghanība (q.v.); intimate relations, normal or
not, emission of sperm and of feminine menses (except
in cases of unilateral marriage; this ordinary ablution,
wudu? is required). Ghusl is also required after
menstruation and lochia (other losses of blood do not
demand the ghusl for purification). Whoever is thus
in a state of major impurity is subject to the same
taboos as those incurred by minor impurity (hadath
(q.v.)); in addition, he may not recite the Kur
except in the presence of the ordinary ablution.

The rules for the washing of the dead are of course
important, the four orthodox schools agree in the
principles of the devolution of this duty on the
spouse of the deceased, then on his or her relatives;
in all cases, the legal nakedness of the dead person
('awwa) must be covered during the operation; if the
corpse of a man is washed by a woman who, being
his wife, is not forbidden to see him, the point is
disputed as to whether the corpse need be completely
covered (and vice versa for the body of a woman).
In the absence of water, here also recourse may be
had to tayammum, as in some other hypothetical
situations. The corpse of a martyr (ghālid [q.v.])
who has fallen in the Holy War is not washed.

As well as these legal dispositions, it is necessary,
with this as with all other institutions, to examine
what happens in practice in the Muslim world. In
our view, the ghusl of the dead is generally practised,
and the ghūsls which are only sunna are practised
rather seldom. Concerning the ghusl for ghanība,
it has not until now been sufficiently noticed that the
existence of the hamām is connected with the
purification from ghanība. As in other matters, the
effective practice is sometimes much more lax than
the theory: where the ritual prayer is neglected (this
is very often the case for example in North Africa,
particularly among women), the ghūsl will naturally
also be neglected; but sometimes the demands of
practice are much more rigorous than the law. In
Morocco, for example, in certain regions of
Morocco, whoever has relations with a Jewess must wash seven
times with water coming from seven different
streams. Throughout Islam, however, for every
minority very much preoccupied with observing the
prescriptions of the law, we find a majority who
often neglect them, although, in particular cases,
they have a curiously inadequate idea of what they
are: detailed systematic studies would thus show a
discrepancy between the regulations of the ghusl and
the practice.

(G. H. BOUSQUET)

GHŪTA, name given in Syria to abundantly irrigated
areas of intense cultivation surrounded by arid land. A ghūta is produced by the co-operative
activity of a rural community settled near to one
or several perennial springs, whose water is used in a
system of canalization to irrigate several dozens or
several hundred acres. Each ghūta has its own
particular system of irrigation based on cycles of
varying length. The soil in a ghūta is usually laid out
in platforms which form terraces of watered zones,
the levels sections of which are supported by stone
walls two to six feet high. In them is carried out a
closed agricultural economy, which provides an
assured subsistence for men and animals. Near
the source of the water there is an area in which
vegetables and fruit are intensively grown, then the
to which the land is exploited decreases in
proportion to the time it takes for the water to reach

fīhō gives detailed regulations concerning the
principles of the devolution of this duty on the
spouse of the deceased, then on his or her relatives;
in all cases, the legal nakedness of the dead person
('awwa) must be covered during the operation; if the
corpse of a man is washed by a woman who, being
his wife, is not forbidden to see him, the point is
disputed as to whether the corpse need be completely
covered (and vice versa for the body of a woman).

(G. H. BOUSQUET)
1. The minaret of Djām or Firūzkūh (reign of Sultan Ǧihāyāʾ al-Dīn Muḥammad, 558-99/1163-1203).
2. Detail of the minaret.

3. Surviving remains of the madrasa and mosque at Čisht in the Hari-Rud valley, also from the reign of Ghiyāth al-Din Muḥammad.
it. While birch-trees and poplars grow in the damp of the central area, as the distance from the spring increases, trees become sparser, unsheltered fields spider-are planted in rows and corks are reached; beyond this there will be the region which is flooded in winter, and further still some temporary fields. This is a schematic picture of the Ghūṭa of Dimashq, Nabak, Yabrud and Dimashq (see R. Thoumin, *Geographie humaine de la Syrie Centrale*, Tours 1936, 115-120; J. Weulersse, *Paysans de Syrie et du Proche Orient*, Paris 1946, 283-91).

The Ghūṭa of Dimashq (q.v.) is the area of gardens and orchards which surrounds the former Umayyad capital below the gorges of Rabwa and which is made fertile by a close network of irrigation trenches fed by the Baradā (q.v.). The Ghūṭa extends from the eastern slopes of Mount Kāsīyūn (q.v.) as far as the streams and the water brought in from the Baradā allow bushes to be grown. Beyond this to the east, is the Marḍi, a region of pasture and wide stretches of arable land. These grass-lands, which are green from December to June and dried up from July onwards, end at the lagoon of ʿUṭayba (q.v.), or “Lake of Damascus”. Still further to the east is the scorched land of the steppe, which man’s strenuous labour has pushed back to about 20 km/12 miles from Mount Kāsīyūn.

The Ghūṭa of Damascus, of which mention is made in the Qurʿān, which is considered by Muslim tradition to be one of the four earthly paradises, has been celebrated by many Arab poets (see Kūr ʿAḥī, *Ghūṭa*, 68-107) and described by more than one western traveller.

Consisting of a half of a basaltic basin filled with fertile limestone alluvions and facing eastwards, the Ghūṭa is intersected by the Baradā, which flows down from Mount Kalamūn, comes in below Birza and from that time onwards, end at the lagoon of ʿUṭayba (q.v.), or “Lake of Damascus”. Still further to the east is the scorched land of the steppe, which man’s strenuous labour has pushed back to about 20 km/12 miles from Mount Kāsīyūn.

writer gives a different list of them, and that of Ibn Tulun al-Salihi (10th/16th century) has only a certain number of names and sites in common with that of the present-day writer Kurd ‘Ali (Ghuta, 218 ff.). To the names already given can be added those of some villages which have become places of pilgrimage by reason of legends connected with them, such as Birza in the north-east where, according to a legend which stems from the Samaritans, the birthplace of Abraham (the Mahkâm Tor hakım) is to be found; Bayt Lahyâ in the north, also connected with the legend of Abraham; the hill of Rabwa in the west, a legendary stopping place of Isâ and his mother; and finally the village of al-Râwiya, in the south-south-east, where is the tomb of one Zaynab Umm Kulthûm (who has nothing in common with either the daughter of the Prophet or the daughter of ‘Ali and Fâtimah). There are also villages where the tomb of a Companion of the Prophet is revered; among these are Ḥâjlîqa, where Mudhrîk b. Ziyad is buried, al-Manâhî, where Sa’d b. Ubâd is buried, and Mizza where Dihya al-Kalbi is buried.

The history of the Ghûta is bound up with that of Dimashq [q.v.]. The excavations of Tell al-Sâlihiyya provide evidence that the first human settlements in this oasis go back to the fourth millennium B.C. Greek and Roman remains are found at various places. In the Byzantine period there existed a great number of churches and monasteries such as Dayr Murrân, Dayr Bâwâna and Dayr Buṭrus of which the combined effects of time and man have removed every trace; others are perpetuated in present place-names, such as Dayr Sa’dîb (now Dayr Khûlid) and Dayr al-Asâfîr. It was in the Ghûta, at Mardij Râhî [q.v.], that Marwîn, with his Yemenis, gave battle to theRAYâs in 64/683. Under the Umayyads, the Ghûta formed one of the districts of the province of Dimashq, and had an autonomous administration with a separate ‘ibâd whose chief activity was the collecting of the ḥadîd. Many of the attacks on Dimashq were made less effective by having to get past the orchards with their network of paths edged by low walls on either side, and Crusaders and Zangids were able to appreciate their defensive value at the end of the 12th/13th century, and even more in the 17th/18th century, under the Ayyûbîd [q.v.] princes. Many monuments were built; madrasas and mausolea arose in peaceful surroundings among the orchards between the Nahr Thawrâ and the Nahr Yazid. From west to east could be seen the double cupola of the mausoleum of Kitbuhgâ (9th/14th century), the Mâridâniyya madrasa (7th/13th century) at Dijl-Abayd, the Shîbiyya madrasa which formed part of a complex of buildings including the mausoleum of Shibli al-Dawla Kafîr, a khânqâh and a public fountain; the ribbed cupola of the Turbat al-Badîrî, built in the time of Nûr al-Dîn [q.v.], rises not far from the madrasa of Sitti Ḥâfîza (7th/13th century). Finally, below al-Sâlihiyya, the Ruknîyya madrasa (7th/13th century) overlooked the gardens. Vegetable gardens and orchards survived to the north of Dimashq until about 1950, since when they have been gradually supplanted by new housing estates.

AL-GHUZZ, ‘Allâ’ al-Dîn ‘Allâ b. ‘Abd Allâh al-Bahâ’î al-Dimashqî, an Arabic writer of Berber origin (d. 815/1412) who composed, under the title Matâli’s al-budûr fi manâsîl al-sûrûr, an anthology on the model of the adab books but which, as the author justly boasts in the preface, is in its content favourably distinguished from the great mass of these writings. He deals with the house and its different sections, all the pleasures of life and sport and the accessories required for their utilization; he illustrates these subjects with anecdotes and verses taken from later poetry but, at the same time he presents a very great wealth of material—still far from being exhausted—relating to the history of the civilization of the Muslim peoples. The book was printed in Cairo, in two volumes, in 1599-1600 (N. ELISSEFF).

GHUZZ, form generally used by Arabic authors for the name of the Turkish Oghuz people. The origin of the Oghuz, which for long was obscure because of the diversity of the transcriptions of the names of peoples in the Chinese, Arabic, Byzantine and other sources, seems to have been clarified by J. Hamilton, Oghuz and On-Uyghur, in JA, colt/ (1962), 23-64. At the beginning of the 7th century A.D. there was formed, among the eastern Turkish T’ie-lo tribes, a confederation of Nine Clans = To’ozh Oghuz (a form known to the Arabic authors), who revolted against the empire of the eastern Turks and helped to form the empire of the most important tribe among them, whose name is the earliest attested, namely the Uyghurs. During the period of the extension of this empire (9th/10th century) some groups of these peoples spread towards the west, losing their links with the structure of the Nine Clans and acquiring, in new countries and in their contacts with new peoples, distinctive characteristics: these are the people called by the western Turks and the author justly boasts in the preface, is in its content favourably distinguished from the great mass of these writings. He deals with the house and its different sections, all the pleasures of life and sport and the accessories required for their utilization; he illustrates these subjects with anecdotes and verses taken from later poetry but, at the same time he presents a very great wealth of material—still far from being exhausted—relating to the history of the civilization of the Muslim peoples. The book was printed in Cairo, in two volumes, in 1599-1600 (N. ELISSEFF).
We shall not deal at length here with the period of the history of the Oghuz/Ghuzz before they came in contact with Islam. It should however be mentioned briefly because, owing to their new habitat and the period during which they moved there, all that we know of them, admittedly very elementary and uncertain, is now based mainly on the Arabic (or Persian) authors. We shall ignore what these authors have said on the eastern Toçuz-Oguz (see V. Minorsky in his commentary and his translation of the Hudiid al-Islam, 1937, 268 f.) in order to concern ourselves here only with the western Oghuz/Ghuzz.

The earliest reference to the presence of Oghuz/Ghuzz (without the Toçuz) in Central Asia is found in al-Balâdhuri (432), writing of events belonging to the end of the reign of al-Ma’mûn, although Ibn al-Âthîr, writing much later, reports the opinions of authors who consider those Turks who, under the caliphate of al-Mahdi, had supported the movement of al-Mu’qanâ’i, as already then belonging to the Oghuz. In contrast to this, from the middle of the 3rd/9th century, nearly all the Arab geographers mention the Oghuz as occupying a territory roughly bounded to the south by the Aral Sea and the lower course of the Sr-Daryâ, to the west by the River Ural or the lower Volga and the Caspian Sea, to the north-east by the upper course of the Irtysh. They then had other Turkish peoples as neighbours: to the north the Kimâk, a branch of the Klîps, to the east the Karulîk (Karulî), to the west the Persîeg and above all the semi-Turkish state of the Khazar, and they were in constant communication with the Bulgars of the middle Volga who were also for the most part Turks; finally, to the south, and particularly along the Sr-Daryâ, they bordered on the Muslim world. For the most part they were nomads, herding camels (with one hump and resistant to cold though not to excessive heat), sheep, horses etc., and each tribe branded its animals with a special sign—a ṭughra, ṭamga (qq.v.). All the same, it should not be thought that they were exclusively nomadic, for both among the remains of the former populations and among the Oghuz themselves there were settled groups occupied with agriculture in the oases, and also, particularly on the boundaries of the Muslim world and along the routes leading to the Bulgars or the Khazars, markets which had often become small fortified towns where their chiefs and leading men came to barter, against the products of the civilized world to the south, animals, prisoners sold as slaves, and furs brought from the northern forests; and in the principal one of these little towns, Yânîkânt, probably the ancient Nau-Kârda of the pre-Turkish Indo-European inhabitants, the chief of the Oghuz/Ghuzz chose to live in the winter, though he may have stayed further upstream, at Dînd (near to the modern Perovsk): the recent archaeological investigations which have located the sites and the ruins of these towns along the former course of the lower Sr-Daryâ confirm that they were certainly urban settlements and not the camps of nomads. It is difficult to state precisely what the Oghuz were ethnically, but, however important the Turkish element was (and the Russian chroniclers know the Oghuz only by the name of Turks/Torkî), there is little doubt that there had been on the one hand inter-marriage with the remains of the earlier populations, and on the other hand an integration into the Oghuz/Ghuzz of non-Turkish groups, incorporated just as they were and later Turkified: it has even been suggested that the name of the Oghuz/Ghuzz tribe of the Dînd (q.v.) preserves the ancient name of the Toghrâians; the result being that the Oghuz/Ghuzz of the west were no longer ethnically the same as the other Turks and particularly those of the east.

So far, then, as we can speak at all of a geopolitical configuration of Central Asia, it would seem possible to postulate, in the 4th/10th century, certain political and other interests in common between Khârizm, the semi-autonomous outpost of Muslim civilization to the south of the Caspian Sea, and the state of the Khazars, to the west of the Caspian Sea and the lower Volga, and that there was, in opposition to them, some form of alliance of the Oghuz/Ghuzz with the Bulgars (and at one time, with the "Russians" of Kiev). This is particularly the impression given by the account which has been preserved of the embassy to the Bulgars at the beginning of the century of the caliph’s envoy, Ibn Faḏlân, who passed through Khârizm. Moreover, although the Oghuz/Ghuzz formed only a very loosely-jointed federation of tribes, they nevertheless recognized, within the framework of a western Turkish world which maintained a certain feeling of uniformity, the supremacy of the Oghuz (q.v.) of Yabghu, who corresponded the Karluk Yabghu of the right: a title and idea inherited from the ancient Turkish empire of the 6th century A.D. and from the early Central Asiatic states. The Yabghu of the Oghuz/Ghuzz normally lived at Yânîkânt; he had a lieutenant (Kûhârdîkîn) and a head of the tribal army (subaštâfî).

Even if, as Ibn al-Âthîr believes, the Turks (whoever they may have been) who had helped al-Mu’qanâ’i had already embraced Islam, according to him Islam did not reach the western Turks, and in particular the Oghuz/Ghuzz, until the 4th/10th century and it was not until the end of that century that it became general among them. Before this the Oghuz/Ghuzz, like all the inhabitants of Central Asia, must have been influenced to some extent by Buddhism, Manichaeism, Nestorian Christianity and Khazar-Judaism, and the influence of the latter perhaps explains the later presence among the Saldûks of characteristically Biblical names; but there are no grounds for believing that they abandoned completely their vague ancestral Shamanism. The Oghuz/Ghuzz came in contact with Islam in various ways: first through the raids and counter-raids which they exchanged on the southern frontier of their territory with the Muslim ghâalis of the state of the Sâmânîds (q.v.), and the prisoners which were taken by both sides; then through some of the activities of the Șîifs of the frontiers; and finally, and probably most of all, through the merchants whom they met in the markets, or "protected" as they travelled along the roads leading across Oghuz territory towards that of the Bulgars, the Khazars and the Chinese. Political or other reasons had caused Islam to spread among the Bulgars, and probably among the lower classes of the Khazar population, from the first half of the 4th/10th century. The Karluk and the Oghuz/Ghuzz were not converted until the second half of the century, the former shortly after the middle and the latter at the end of the century, though it has of course still to be ascertained what form of Islam had been taught to them and how much of it did in fact absorb at first. Moreover Islam did not reach all the Oghuz/Ghuzz, and those in the extreme west escaped the Muslim propaganda: the remnants of
them were later, when incorporated in the Byzantine army, to receive Christian baptism.

The conversion to Islam, whatever form it may have taken, did not prevent the south of those of the Oghuz/Ghuzz who were not already too much engaged in the west are related phenomena. The drive towards the territories of the Muslim Mā warā al-Nahr, although these lands themselves were an attraction, may have been due also to pressure behind the Oghuz/Ghuzz from their other Turkish neighbours, for it is known that later the Kıpşak were to occupy the territories left vacant by the migration of the Oghuz/Ghuzz. But another result of their conversion to Islam was that it prevented the ghāzis from fighting against them as pagans and allowed the Muslim princes to enthrone them under their banners; it could even make them into ghāzis themselves to fight against the other Turks who were still pagan, and the part which the ghāzī formations were to play in the pattern of later Turkish history is indisputable even when, transferred to other fronts, they were directed against other adversaries. It is possible that there took place, between the supporters and the enemies of Islam, battles memories of which may be preserved in the (admittedly highly embellished) accounts concerning the origin of the Saldjuks; but Şah-Malik, the Yabghu against whom the Saldjuks fought, was nevertheless himself a Muslim, and we shall not exclude, merely for lack of evidence, the idea that the Oghuz/Ghuzz chiefs were attracted to Islam, as were those of the Karluq (the Karakhanids) and as has so often happened with peoples in a tribal stage of development, by the principle of authority which Islam conferred on them over the organization of the tribes, apart from the fact that they would soon be able to intervene in the conflicts of the traditional Muslim world itself.

As has just been said, the Oghuz/Ghuzz expansion towards the south took place mainly from the last years of the 4th/10th century, then especially in the fourth decade of the 5th/11th century, under the leadership of a family, the Saldjuks, which was to found a vast empire. This is discussed in other articles, so that we are not concerned to relate here the history of this expansion—contemporary with that of the Seljuks in the Near and Central East, and the Khwarizmians in the south—though it is impossible to state precisely in which contexts the term Oghuz/Ghuzz continued in use and in which Türkmen/Turcoman was preferred. Certainly it seems that at first the latter name was used exclusively of the Muslim Oghuz/Ghuzz in contrast to those who had not become Muslim and who continued to be called by their earlier name. But we find the name Oghuz/Ghuzz used later of those who had become Muslim. Broadly speaking it can be said that the name Türkmen/Turcoman is used by writers of the territories comprising the Saldjı̄ık empire and its successor states to indicate those of the Oghuz/Ghuzz who were the descendants of the groups which followed the Saldjuks (even although they later abandoned them to go, for example, into Byzantine Asia Minor); these writers applied the name Oghuz/Ghuzz to all the others, even later, when some of them in their turn were to come and settle in the Saldjı̄ık territory (but without really being incorporated in the state). Foreign writers, on the other hand, or those who were hostile to the Saldjuks and their successors, used the name Ghuzz universally, with pejorative intent, of all the Turks on whose military strength these regimes depended; this was the case with the writers of Fātimīd Egypt,
and even with those who, in the Yemen, wrote of the conquest (albeit half Kurdish) of the country by the Ayyubids, or with those in the Maghrib who related it for educated Turks, writers such as Yazdji-oghlu, the 9th/15th century adapter of Ibn Bibi in Asia Minor, or the famous prince Abu '1-Ghazi in Central Asia in the following century. But although the legend reflects after its fashion the regions in which it grew up, there would seem to be no justification for using it as a basis for a reconstruction of the authentic history of the early Oghuz/Ghuzz, though a future scholar may find a way of making some use of it in this respect.

Bibliography: The Oghuz/Ghuzz are known in varying degree to nearly all the geographers from Ibn Khurra'dibib. The main information, much of which is collected in Russian translation in V. I. Belayev, Arbatskie istoricheskie po istorii Turkmen i Turkmeni, i, Moscow-Leningrad 1939, is found in the following: Ištakhrī, 9 and 217-22, completed by Ibn Hawkal, ed. Kramers, 389, 512 and Mukaddasi, 274; works based on Diyāhān: Ḥudūd al-'ilm, 100-1 and 122, Marwazī 29 (both ed. Minorsky), and Gardizī; Ibn al-Athīr again; Diuwaynī, 548/1153). But whereas the Turcomans, led by the Saldūkīds, had founded an empire, the Oghuz/Ghuzz of this period merely helped to spread anarchy throughout Khūrāsān. Finally they were decimated and subdued by the Khārismshāhs, although one of them, Malik Dinār [q.v.], ousted other Saldūkīds, proceeded to make himself master for several years of their principality of Kirmān. The difference arises in part certainly from the fact that the Saldūkīds had been able to lead their Turcomans on to other conquests, while the absence of a great leader and the general political conditions of the 6th/12th century allowed the Oghuz/Ghuzz of Khūrāsān no prospect beyond that of converting Khūrāsān into a region of grazing lands for their convenience.

The above episode is the last in which we find the Oghuz/Ghuzz in action under this name; beyond the frontiers of Islam their place had been taken by the Ayyubids, a century earlier, was himself heavily defeated by them (548/1153). But whereas the Turcomans, led by the Saldūkīds, had founded an empire, the Oghuz/Ghuzz of this period merely helped to spread anarchy throughout Khūrāsān. It was at this time, however, that among these descendants of the Oghuz/Ghuzz, confronted with the Mongols, there developed, in an atmosphere of veneration of the past and of their ancestors, the legend known as that of Oghuz/Khan, the vast spread and possibly also the relative antiquity of which are attested by versions extending from Central Asia (in Uyyghur) to Asia Minor (in particular the popular Turkish story of Dede Korkut [q.v.] composed under the Ḥak-Ḵoyunlu in the 9th/15th century). It represents the descendants of Oghuz Khan as being divided into 24 tribes, and of these it is certain that 22 were already known, by name and by their ṭamghās, to Mahmūd Kāshghārī, the Muslim Turk of the second half of the 5th/11th century whose dictionary provides such noteworthy information about his fellow-Turks; a certain number of the ṭamghās, with only the Ḥindī (and then solely as the tribe of the Saldūkīds), the Ṭylva, Salghur, Avšār and the Döger appear before the Mongol period. The Saldūkīds conquest had taken place over their heads and broken them up. It was Rashīd al-Dīn, the great historian of the Mongols, who related it for educated Turks, writers such as Yazdji-oghlu, the 9th/15th century adapter of Ibn Bibi in Asia Minor, or the famous prince Abu '1-Ghazi in Central Asia in the following century. But although the legend reflects after its fashion the regions in which it grew up, there would seem to be no justification for using it as a basis for a reconstruction of the authentic history of the early Oghuz/Ghuzz, though a future scholar may find a way of making some use of it in this respect.
Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens, lectures delivered in 1926, and his developments... the columnaries of V. Minorsky in his editions of the Ḥudud al-ʾilām and of Marwazi cited above, and the anonymous Istoriya Turkmenii, Tashkent 1940.

Among the special works, for the origins we limit ourselves to referring to Hamilton cited above; for the history of the Oghuz/Ghuzz in Central Asia in the 4th/10th and the 5th/11th centuries, Houtsma, Die Ghuzzenvölker, in WZKM, ii (1888); J. Marquart, Uber das Volkstum der Komanen, Abh. d. K. Ges. d. Wiss. Göttingen, N.F. xii (1914); M. F. Köprüülü[çade], Oghuz etnoloshisine dair taʾrîhîk nollar, in Türkçiyâ Meşârîsî, i (1925), 185-211; A. J. Yakubovskiy, Seldjukskoe dovnïenie i Türkmeni v XI v. voo, in Izv. Ak. Nauk SSSR, 1936; S. P. Tolstov, Goroda Guizzov, in Sovetskaya Etnografija, 1937, and especially Po sledom drevnekhazarskoy tsvitolizatsii (German trans. Auf den Spuren der alchazarsischen Kultur), 1953, a basic synthesis of the results of the archaeological investigations carried out by the author and others up to that date, with significant historical implications; O. Pritsak, Der Untergang des Osogischen Jägues (see above in the art.); Cl. Cahen, Les tribus turques d’Asie occidentale pendant la paix byzantine (see above in the art., ii, 1956-57), and Le Malîkmâneh et l’histoire des origines seldjoukides, in Orients, ii (1949); Ibr. ii.—MUSLIM WEST

In the Middle Ages al-Ghuzz (or al-Aghzâs, or al-Ghuzziyûn) indicated the Turkish or Turkoman mercenaries who twice penetrated North Africa by way of Egypt. The first Aghzâs appeared, in the middle of the 6th/12th century, in the army which the Almohad ʿAbd al-Muʾmin sent to conquer Irîkîya (553/1158). A group of them was introduced into Irîkîya by Karâkîsh al-Ghuzzî [q.v.], an adventurer of Armenian descent, the freedman of a brother of Saladin, and Ibrâhîm b. Karâkîsh, who were sent by the ruler of Egypt and Syria, Kâthîr b. Senûr, and were eastern Maghrib. Karâkîsh had appeared in 568/1172-3 in Tripoli. After several adventures, including imprisonment in Cairo, he was again in Tripolitania in 573/1177-8 to fight beside the Banû Chârîya [q.v.]. But Ibn Karâkîsh was killed and the family of Karâkîsh, his sons, his possessions and some of his mercenaries fell into the power of the Almohad caliph ʿAbd Yûsuf Yaʾkîb al-Manṣûr, after the (fall of Gàsba [i.e. Gafsà in 568, 1172-3], October 1172) and of Gàsba, three months later. These Ghuzz, by proved courage, having given proofs also of their submission, were then transferred to Marrâkûsh and formed into a corps d’élite, regularly paid, which the caliph put at the service of the régime. Armed with a bow which was named after them (al-ghuzz), they fought in all the battles and were very much in favour, but without being absorbed into the population (they had their own cemetery).

About 660/1261, there appeared in North Africa a new wave of Ghuzz, but the name this time refers to Kurds, fleeing before the conquests of Hûlûddî [q.v.]. When the Almohad dynasty fell, some took service with the ʿAbd al-Wâlids of Tlemçen, others with the Hafsids of Tunis, others finally settled at Marrâkûsh where they passed into the service of the Marînid dynasty who made much use of them in their expeditions of the Holy War in Spain where, with the archers of Ceuta, they formed the front line; they constituted also the personal bodyguard of the sultan. With time and with the appearance of portable fire-arms the Moroccan Ghuzz lost some of their importance. In the middle of the 16th century they are no longer referred to as Ghuzz but as Turks, whether they were mercenaries or not; in the 17th century their name, retained in Portuguese (algot) with the meaning of hangman, is applied only to public executioners.

The Ghuzz used by the Almohads in their expeditions of the Holy War are mentioned by many of the mediaeval European historians.

(G. DEVERDUN)

iii.—SUDAN

In the Sudan the term Ghuzz was used of the hereditary kâfisfik of Lower Nubia (between the First and Third Cataracts of the Nile) during the Ottoman period; more generally, the tribe formed by their kin. The name, as in Egyptian usage, was equivalent to Mamiâk, and the Ghuzz should therefore be distinguished from the hereditary garrison-troops (kāfîsdis) of Bosnian origin in Aswân, Ibrîm and Sây, who were called Oṭmānymâls. The founder of the tribe is called by Buckhardt, Hasan “Coosy” (probably Kûsîr for Ghuzzî), and his coming, as commander of the Bosnians, is placed in the reign of Sultan Selîm I: this may be too early. The hereditary kâfisfik, which had its headquarters at al-Dirr, and was virtually autonomous, survived until the time of Muhammad ʿAll Pâša (1736-1803) and of the Turco-Egyptian invasion of the Sudan (1820-1), Ismâʿîl Kâmil Pâša
appointed a member of the tribe, Hasan, to administer the territory between Aswan and Wadi Halfa. The vestiges of the traditional authority of the Ghuzz tribal chiefs vanished some sixty years later, when the area was placed under military government at the time of the Mahdia.

**GIAOUR** [see GABB and KĀFI].

**GIBRALTAR** [see DJABAL TARIK].

**GILĀN, a historic region around the delta of the river Safid-rud [g.v.], was the homeland of the Gel people (Gelae, ḳalāṣ; = ḳalūdū) in antiquity. The present Persian inhabitants, who speak a special dialect (cf. G. Melgunoff, *Essai sur les dialectes... du Gilânl*, in *ZDMG*, xvii (1868), 195-224, and the article IRAN: Languages) bear the name Gilân (at an earlier period also Gill). The derivation of the name from *gil* "clay", in allusion to the marshes of the region, is a piece of folk etymology.

In the middle ages Gilân first extended as far as the Calîūs in the south east; later it ran parallel on its eastern side with the Pulû-rud and included Câbûksâr. In the north east Gilân verged on the region of Fūmân (cf. the title inscription of the Jamshidkâh from part of it). After Tâlâsh was ceded to Russia by the Peace of Gulistan of 1813, this frontier was replaced by the river Astârâ. For some 225 km. Gilân is bounded by the Caspian Sea; towards the interior the frontier is the mountain-chain forming the northern limit of the high plateau of Iran, and in this direction Gilân is between 25 and 105 km. wide. In the 10th-11th centuries the mountainous areas in the south of the region bore the name of Daylâm [g.v.]; their inhabitants were often the enemies of the real natives of Gilân. As the inhabitants see it, the area is divided by the Safid-rud into two regions; "beyond the river and before the river"—Bīya Pāsh in the east (land of the early Amardoi) and Biya Pas in the west (land of the Gelae). In the 19th century the area was divided into four and then five regions. In 1938 the population was estimated at 450,000, mostly Shîf璞 Persians (Gilân and Tâlâsh, particularly in the mountains) but also Jews, Armenians, and gypsies, who occupied an area of some 14,000 square km. In the middle ages the first capital was Dûlâb (= Gaskar? [q.v.] according to Muṣâaddâs), then Fūman [g.v.] and Lâhîdîān [g.v.] according to Mustawfî Kāwûnî, and finally, after Gilân was incorporated in the Ṣafīwî empire, Raqsî [g.v.], which remained the capital under Nâdîr [g.v.] and to the present day. Since 1938 Gilân has formed the administrative district of Raqsî in the first canton (Ostan) of the empire of Iran, linking the country with areas further south (see IRAN, with statistics and map).

Gilân has a warm, damp, often tiring climate. Even in the middle ages, accordingly, its people were often to be seen dressed in only short trousers or "almost naked" (Ibn al-Athîr, *Bulāfî ed.*, viii, 77). The luxuriant forest provided (and still provides) the materials for the wooden houses with verandas (*īṣṭaḡîr, 205, 211; Yâḵūt, i, 183) characteristic of Gilân and Māzandarân [g.v.]. In the middle ages agriculture (which was a profitable pursuit) was left mainly to the women (*ḥudūd, 136 f.) and consisted chiefly of rice-growing and silkworm-breeding, which has been introduced by Armenians; its products were exported to the Mediterranean area via Tâna on the northern shores of the Black Sea as early as the 14th century (W. Heyd in *Zeitschrift für Staatswissenschaften*, xviii (1864), 692). In modern times tobacco has come to be grown. Fishing made an important contribution to the inhabitants' food supplies; admittedly in the middle ages most journeys across the Caspian Sea began from Abâskûn [g.v.] and not from Gilân as in modern times (cf. B. N. Zakhodner, *Povestî i Yu. V. Kaspîya [The Volga Basin and the south-eastern part of the Caspian Sea]*, in *Folia Orientalia*, i/2, Warsaw 1955, 231-50). As for mineral resources, Gilân possesses a certain amount of copper and lead.

As with all the area along the southern shore of the Caspian Sea, the northern mountain-chain of the Iranian plateau and its climate have protected Gilân from inland invaders (Arabs as well as Turks and Mongols) throughout the whole of its history. However, in 301/913 the Vikings (Rûns) made a successful attack from the sea (Masʾîdd, ii, 20-4; B. Dorn, *Caspia*, St. Petersburg 1875 [Mem. Imp. Ac. of Sciences, 7th Series, xxii/1, idem, in *Quellen*, iv, p. IV I, 18) and in 1638 and 1667 the Cossacks followed their example in Raqsî. The inhabitants of the country, particularly the Daylamis [see DAYLAM], had a great influence (above all in the 10th century) on the history of their neighbours and even on that of the Caspian countries as part of it. After Gilân with her clans and her local rulers was nearly always independent, from the period of the Achaemenids and the Sasanians, the Zoroastrian faith and some Nestorian colonies could survive there for a long time (Thomas of Marga, *Book of the governors*, ed. E. A. W. Budge, London 1893, ii, 450; Jean Davelvlier, in *Mêlanges Cavallera*, Toulouse 1948, 279, with bibliography). The doctrines of the Shi′i Yazdis penetrated into Gilân from the neighbouring countries of Tabaristân [g.v.] and Mâzandarân [g.v.] and brought the Nâširwând dynasty into the country (on the literary productions of the Yazdis there see R. Strothmann, in *Isla*, ii (1911), 60-3). Little more is known as to the details of the history of Gilân in these centuries. The country came under the nominal rule of the states of the Ziyârids [g.v.], the Buysâds and the Kakûns [g.v.] as well as the Great Salûks [g.v.]; on this see Ann K. S. Lambton, *Landlord and peasant in Persia*, London 1953, 60. Hence Gilân paid tribute, at least for a time (for details see Spuler, *iran*, 469). In connexion with this development Sunni Islam found general favour and even occasional helpers in some of the many dynasties which shared the country until the end of the 16th century. Christianity and Zoroastrianism faded away. (L. Rabino di Borgomale, *Les dynasties locales du Gilân et du Daylam en JA*, ccxxviii (1949), 301-50, gives a full account of these dynasties, which is too detailed to be reproduced here). In 762/1361 the Hâšân Qâdjîyût [g.v.] succeeded in forcing the country to acknowledge his overlordship, but its native dynasty remained. In the western part of the country at that time the madhhab of the Ḥanâfîs and the less numerous Shiʿîs preponderated as did the now extinct madhhab of the historian and Kurʿân commentator al-Ṭabarî (who indeed came from this region). In the east the Zayâdîs had remained (cf. Kâshânî, *Taʾrîkh*, Paris, Bibl. Nat., supp. persan, ms. 1419, fol. 38r to 49v; this manuscript is to be published by Professor Horký of Prague). From 762/1361 the Kâ-Ṭîyâ dynasty managed to hold its own, and lost it only when Shāh ʿAbbâs I incorporated Gilân in the ʿAfastawí state in 1000/1592. In 160/1650
It was put under the direct rule of the central power (cf. Lambton, op. cit., 108). Since then Gilan has belonged to Persia, apart from the years between 1316/1724 and 1410/1734 when it was occupied by the Russians who, however, finally left it on account of its climate. From 1917 to 1921 the Bolshevists tried to impose their rule on it; in the end they succeeded with the help of intermediaries in founding a Soviet republic of Gilan (cf. Kurt Geyer, Die Sowjetunion und Iran, Tubingen 1955, 13-8, especially 14, note, sources and bibliography). All these attempts were finally brought to an end when Riḍa Shāh [q.v.] took over the government and, later on, the throne.

Bibliography: Apart from works named in the article: L. Rabino di Borgomale, Les provinces caspiennes de la Perse: Le Gǔllān, Paris 1917 (condensed version of a special number of RMM, ix-x (1915-6); a detailed historical and geographical account with a list of the older and specialized literature on the subject, including descriptions of travels and consular accounts, and special maps). GİRĀY, cognomen borne by the members of the dynasty which ruled in the Crimea from the beginning of the 9th/10th century until 1197/1253. The family was descended from Ţogha Temür, a younger son of Cingiz Khān’s son Diocl. Môngk Teimūr, the Khān of the Golden Horde (665/1267-670/1280), had granted the Crimea and Kafa as nantūlfah (appanage) to his son Uorang Temūr (Orēng Timūr) (Abu ‘l-Ġhumāt Bahādur Khān, Shehdīr-i Tūrk, St. Petersburg 1871, 173). During the civil wars which from 760/1359 onwards convulsed the domains of the Golden Horde, the descendants of Ţogha Temūr joined in the struggle and laid claim to the Khānate; they finally succeeded in establishing a state in the Crimea, independent of the other Khāns, ruled by its capital Uluğ Yurt, the centre of the Golden Horde. The Khānate’s capital was placed on the throne as a client of the Ottoman Sultan Mehmed II in 858/1454 (see HĀDĪJĪ GĪRĀY), and this alliance was maintained by his successors. In 880/1475, called in by Eminēk Mīrzā to assist him against the Genoese, who were stirring up internal troubles, the Ottomans responded immediately and, when opportunity offered, on seizing Sarāya and thus acquiring the Khānate of the Golden Horde.

According to a local tradition in the Crimea (al-Sağī al-sayyūd [see Bibl.], 72), Gīrāy Khān, in accordance with the customs of the Golden Horde (see ‘Umādat al-tawārīkh, 204), was brought up by his atālīkh [q.v.], who belonged to the Kĕreb Khans, and, later on, out of respect for his atālīkh, gave his first son the name Ḥādījī Kĕrey; thereafter the members of this family bore the cognomen (lākāb) Kĕrey Gīrāy. According to G. Nēmeth (A Honfoglaló Magyarság Kalabahida, Budapest 1930, 265-8), the name is composed of ker, ‘giant’, with the diminutive suffix -ēy. As a name borne by various sections of the tribe, it is found among the Kazaks, the Turkmen, the Bashdjirt, the Buriats and the Mongols, with various pronunciations: Kĕrey, Kīrey, Kīray, plural: Këret. When Cingīz Khān defeated the powerful Kĕrēt ruler Oŋg Kĕn, some of the Kĕret fled to the West, the rest being scattered among the Mongol tribes (Secret history, § 186; Turkish tr. by Ahmed Temīr, Ankara 1948, 109; German tr. by J. Haensch, Leipzig 1948, 74). Thus the Kĕret, either fleeing before the Mongols or coming with them, were spread over a very wide area, as far west as the Crimea. Until recent times the Tarāḵī branch of the Uvak-Kīrey led a nomad existence among the Kăzaḳs in the valleys of the Irtish, the Sari Su and the Chu (H. H. Howorth, Hist. of the Mongols, ii, London 1876, 6, 21). The tāmgha of the Khāns of the Crimea (for its shape see the coins of Mengī Gīrāy in Mūzē-i Huymān, mēshkāt katalaghu, 3rd section, Istanbul 1318/1900, 211, and IA, iv, 774b) was called tarkā tāmgha.

The Kĕrey were one of the four main tribes (kēshī) upon which the Khānate of the Golden Horde depended. The Kĕrey, dwelling east of the Don and in the northern Caucasus, gave their support to Ḥādījī Gīrāy. Only one of his sons, Mengī, used the cognomen Gīrāy, but it was borne by all Mengī’s sons and descendants, and was assumed also by some of the begs of the Shirin who married into the ruling family (‘Umādat al-tawārīkh, 200). Ḥādījī Gīrāy made an alliance with the Ottoman Sultan Mehmed II in 858/1454 (see HĀDĪJĪ GĪRĀY), and this alliance was maintained by his successors. In 880/1475, called in by Eminēk Mīrzā to assist him against the Genoese, who were stirring up internal troubles, the Ottomans responded immediately and occupied the Genoese fortresses in the southern Crimea; Mengī Gīrāy [q.v.], released from prison, was placed on the throne as a client of the Ottoman Sultan (H. Inalcik, Yeni vekshaları göre Kırım Hanlığı’nın Osmanlı İlişkilişine girmesi, in Belleten, viii/30 (1944), 185-239).

At first, the Gīrāy Khāns were in alliance with the Grand Dukes of Moscow, against the Khāns of the
Golden Horde (ruling at Saray and hoping to recover control of the Crimea), and against the Jagiellons of Poland. But after 926/1520, the khans of the Crimea, led by his descendants as the rightful heirs, to the patri-mony of the Golden Horde, and when the Russians began to threaten Kazan embarked on an unrelenting struggle against them, which bore the character of a religious enterprise (ghazdi). In 927/1521 Sahib Giray [q.v.] became Khan of Kazan; three years later he went to Istanbul, being succeeded, until spring 938/1532, by Safa Giray (HadidjI, Kazan ibn Meheeddin, Kazan 1913, 125-35). When in Rabl I 939/October 1532 Sahib Giray returned as Khan of the Crimea, he attacked the Russians, and after a long struggle the Giray house were obliged to cede the Volga basin and the old capital of the Golden Horde, Takhti-Ili (Ulugh Yurt); Kazan was lost in 939/1532, Astrakhgan in 961/1554. It is from this period onwards that the Giray house, who had heretofore claimed to follow an independent policy, adopted Ottoman protection against the Russian threat, acting in ever closer cooperation with the Ottomans in the wars in Central Europe and against Persia [see sikhis].

The first joint military enterprise had been the Moldavian campaign of 881/1476, the second Suleymän I's Moldavian campaign of 945/1538.

Ottoman recognition of the Giray house as their intermediaries in their political relations with northern powers: ambassadors of Poland and Russia would first present themselves at the court of the Khan and then proceed to the Porte.

Domains. The capital is referred to in Hâddîjî Giray's yazilik of 857/1453 as "Orda-i mu'azzam Kırk-yırde Saray" (see A. N. Kurat, Altnordur, Kırım ve Türkistan Hâmiyata asl yariil ve bitikler, Istanbul 1940, 60-80, plate 173-84). His coin of 845/1441 was struck at "Bedelt-i Kârîm", that of 847/1443 at "Kırk-yîr" (for these towns see V. D. Smirnov, Krismskoye khansstvo pod vevkhozvostom ottomanskoy Porti do naçtla XVIII. veka, Odessa 1887, 102-22).

Under Mengli Giray the palace was moved from the strong citadel at Kırk-yîr into the valley, to the site now called Baghcesaray (Simferopol). In the strong citadel at Kirk-yir into the valley, to the right of the Kipcak and Kabartay. In their struggle against them, which bore the character of a jihad (ghazd), the attempt to establish their sovereignty over Taman, the Kipcak and Kabartay. In their yazilik the Giray rulers give themselves the title "Ulugh orda see Ulugh yarilil ve Dehst-i Klîplâcîi ve Tahtî-i Kirmîhî ..... Cerkesnîi ve Tal bîle Tavâghnîi Ulugh Fâdîkhanîh we kem Ulugh Kâhîn". In the attempt to establish their sovereignty over the Desert Klîplâcî (the steppe land to the north of the Black Sea) and Circassia the Khâns had to engage in long struggles, achieving partial success particularly under Sahib Giray I [q.v.]. Sultans of the Giray family, with the title Ser-asker Sultân, were sent to govern the Khânts' territories in Kuban, Budâjak and Yedisan. Like the Khâns of the Golden Horde before them, the Khâns exacted an annual tribute of money and furs (known as i lyâgh and âltî from the rulers of Russia and Poland. Since the Khâns always claimed sovereignty over the ports on the southern coast of the Crimea (Tat-îli), from 889/1484 onwards the Ottomans made them a yearly grant (sâlîyân) from the customs revenues of Kefe [q.v.] (a million and a half akçe annually). Meheeddin Giray I, and some later Khâns, attempted to establish direct control over these ports.

The dynasty first openly acknowledged the sovereignty of the Ottoman Sultan in Mengli Giray's letter of Rabl I 880 [July 1475 (see H. İnalçîk, op. cit.). Although the new relationship resulting from the strengthening of this sovereignty was later presented as arising from a special agreement, the terms adduced are clearly fabrications.

From Mengli Giray onwards, the Khâns each had a bağlay [q.v.] (also bağhalay) as wali 'sad, 'heir apparent', and from 992/1584 also a second wali 'sad known as Nûr al-Dîn (Nuraddin). According to the Khâns-i Dîngilî (târe, yasa), the bağlay should be the Khan's brother; when the throne fell vacant, the bağlay became Khan and the Nûr al-Dîn became bağlay. The attempts of some Khâns to appoint their sons to these posts caused disturbances and civil war. When the tribal aristocracy of the Crimea [see sikhis], following the târe and without reference to the Porte, appointed a bağlay as the new Khan (as in the cases of Ghazî Giray I and Toştamûşî Giray), the Ottoman Sultan withheld his recognition and fierce conflicts resulted, but in general the Porte was influenced in its choice by the claims of the existing bağlay. Of the forty Khâns, 24 had been the bağlay, and five the Nûr al-Dîn.

From the time of Saâdet Giray (930/1524-938/1532) onwards, it became customary that one of the Khâns' brothers should be sent to Istanbul as a hostage (Ferîdûn Beg, Munşu'dât al-sa'lânîn, i, 167; Müneneddin-bâgî, Sahîh al-akhbâr, ii, 69). Two of these hostages (Islam Giray II and Bahâdîr Giray I) were sent to the Crimea as Khâns. The Khâns chosen received his diploma direct from the hand of the Ottoman Sultan and was presented with the khânîk tehrîfî (a sword, a banner, a bağpash with a jewelled sârgulî and a sable robe) (see Sîldâhâr târîkhî, i, 131, 683). When there was a campaign, the Sultan sent the Khâns a gift of 40,000 gold pieces, known as ême-bahâ, which was distributed to the Khâns' household troops and to the men. The Sultan could depose, imprison or exile the Khâns; occasionally the Khâns was executed. When a Khâns had to be appointed, the Porte usually came to an agreement with the Shîrin Begi, the leader of the Crimean tribal aristocracy. When a Khâns succeeded to the throne, the hostage, together with other members of the dynasty who found themselves in danger, entered the Ottoman domains and were installed in various parts of Rumeli (İslîmîye, Yanbolu, Tekirdâgî, Çataldâg). When the succession to the Ottoman throne was threatened, the Giray family was regarded as having a claim to it (e.g., in the revolution of 1908/1687, see Sîldâhâr târîkhî, ii, 630).

The branch of the family known as Çoban Girâylar arose at the end of the 10th/16th century. The bağlay Feth Giray, in return for ransom, sent back to her country the daughter of a Polish boyar who had been captured; on the way, the girl gave birth to a son, but Feth Giray refused to acknowledge the child as his and tried to have it killed. A certain Hâddîjî Ahmed, who was travelling with the girl, hid the child in Moldavia and, when Feth Giray was killed in 1004/1596, brought him to the Crimean. He was appointed Nûr al-Dîn, with the name Dewlet Giray; his descendants were called (pejoratively) 'Çoban Girâylar'. Although one of this line, Adîl Giray, was appointed Khâns (1075/1665-1681/1670), the later Khâns denied that this branch was of royal blood and gave no further offices to its members.

By article 3 of the Ottoman-Russian treaty of Küçük Kaynarca (2 Dümâdâ 1188/17 July 1774), the signatories recognized the independence of the Giray house but in 1197/1783 the Russians occupied and annexed the Crimea. In 1199/1785 the Ottomans considered appointing a member of the house as Khan over the Tatar
tribes in Budjak (Dzewdet, Ta‘rikh, iii, 142); in 1201/1787, when war was declared on Russia, this plan was put into effect and Girgā Darāz, with the title of Kāhān, and later Bakht Girgā fought in the Ottoman ranks at the head of the Tatars of Budjak. By article 6 of the treaty of Jassy (Yash), in 1206/1792, the Ottomans recognized the Russian annexation of the Crimea.

GIRESUN, a town on the Black Sea coast of Anatolia about 110 miles west of Trabzon, the principal town of a vilayet, with a population (1960) of 19,902. It is the Kerasos of antiquity (for the classical names and their possible permutations see A. D. Mordtmann, Hanover 1923, 405); threatened by the Turks from the 8th/14th century onwards, it was exposed in the 17th century to the raids of the Cossacks (Ewliya telebi, Seyyidrafînd me, Nouvelle relation . . . d’un voyage fait en Egypte, Paris 1677, 21-5; ‘Abî Mubârâk, al-Khâtâf al-djdidâl, x, Cairo 1905, 53-5; H. A. B. Rivlin, The agricultural policy of Muhammad ‘Ali in Egypt, Cambridge, Mass. 1961, 87-8, 223-4. (P. M. Holt)

GIRGENTI [see GIGLIENTI]

GIRISHK, a town of ca. 10,000 inhabitants, altitude 865 metres/2830 ft, on the Helmand River in present Afghanistan.

Girishk is not mentioned in sources before the time of Nâdir Shâh, when he captured the citadel in 1737, but a fort probably had guarded the passage of the river at this site for a long time before this date. In the 19th century Girigâsh was the centre of the Barakzai Afghans, and as such assumed a new importance. The site was of strategic importance and Girigâsha played a role several times during the troubles of the 19th century. At present the town is an important centre for the irrigation of the Helmand basin.

GIRIT [see IKRITISH]

GIŠÇ DARAZH, SAYYID MUHAMMAD GIŠÇ DARAZH, a celebrated Ghâzal of the Deccan, was born at Delhi on a Radjab 727/31 July 1321. He was originally from Harat, from where they migrated to India and settled at Delhi. His father, Sayyid Yusuf Ḥusaynī alis Sayyid Râdžâ, was a disciple of Shâykh Nîzâm al-Dîn Awlîyâ [q.v.]. Gîśç Daraž was a small child when Sultan Muhammad b. Tughlugh (725/1325-754/1353) embarked upon his Deccan experiment and forced the ‘ulamâ‘ and maqādhîkh of Delhi to migrate to Daulatbâd. Sayyid Râdzâ left Delhi under duress and settled at Daulatbâd, where he died in 731/1330. In 735/1335-6 Gîśç Darâz left Daulatbâd with his widowed mother and returned to Delhi. He completed his study of the external sciences (‘ulamâ‘-zi’hir) under Sayyid Shâraf al-Dîn Kaythall, Mâwûlânî Tâdqî al-Dîn Bahûdûr and Kâdî ‘Abî al-Mâkthadr. His search for a spiritual master brought him to Shâykh Nîzâr al-Dîn Cirîgî [q.v.], whom he served for years with single-minded devotion, and from whom he received the šî‘âfah and the title of Gîśç Darâz (‘one possessing long locks of hair’).

When Timur turned towards India (800/1398), Gîśç Darâz hastened to quit Delhi. He stayed for some time in Gwâlînr and then left for Gudjârât where he was the guest of Khâqa Rukna al-Dîn Kân-i Shâhu. Later he migrated to Gulbârg and finally settled there. Flrûz Shâh Bahmanî (800/1397-
Gisu Daraz was a profound scholar and a prolific writer. He was well-versed in the studies of the Kur'an, hadith, fikih and tasawwuf, and knew several languages, including Arabic, Persian, Sanskrit and Hindi. He was fully conversant with Hindustani folklore and mythology and used to discuss religious problems with the Hindu yogis and scholars (Dijâwâmî al-kalâm, 118-9). He had correspondence and contact with eminent contemporary saints, such as Suyyid Nîdin son of Shâh Allâh Dihlawl in Mâhrâb and Bâkâ. He explained the Cîshît mystic principles in the Deccan and produced a large number of works on different branches of the religious sciences. It is said that the number of his writings corresponds with the number of years he lived (i.e., 109). No Indo-Muslim Cîshît saint has so many literary works to his credit.

Of the works produced by Gisu Daraz, the following are particularly noteworthy: (A) E'lâq: (i) a mystical commentary on the Kur'an (MS with Suyyid Muhammad Hîsawyn, sadgîjî dañâghî naqîsh, Gulbarga); (ii) another incomplete commentary on the lines of the Kâshîbah. (B) Hadîth: (iii) a commentary on the Ma'âshîr al-anwâr; (iv) Persian translation of the Ma'âshîrîk. (C) Fikih: (v) Sharh al-Fikih al-islahî, edited by 'Ata Hîsawyn, Haydarâbâd 1367. (D) Ta'sawwuf: (vi) Mu'âshîrîf, an Arabic commentary on the Mu'âshîrîf al-ma'âshîrîf fikih of Shâh Suyyid Shâhîb al-Dîn Shurwardî in MS in three volumes with the sadgîjî dañâghî naqîsh, Gulbarga; (vii) Commentary on 'Awrifîr al-ma'âshîrîf in Persian (MS in two volumes with the sadgîjî dañâghî naqîsh, Gulbarga); (viii) Sharh Ta'arruf, commentary on the Ta'arruf of Shâhîb Abd Bâkî Muhammad b. Ibrâhîm Bâkârî; (ix) Sharh Aâdîl al-muridîn, Arabic commentary on the Aâdîl al-muridîn of Shâhîb Dîwâ'î al-Dîn Abu 'l-Nâjîb 'Abd al-Kâhir Shurwardî; (x) Persian translation of Aâdîl al-muridîn; (xi) Commentary on the Fusûs al-bikam (this work is not extant, but from references to Ibn al-'Arâbî found in Maktûbdt (p. 22), Khîdima (pp. 18-9) and Dijâwâmî al-kalâm (p. 99) it appears that he did not agree with his views); (xii) Sharh Tâmîbhîdî, a Persian commentary on the Tâmîbhîdî of Ayn al-Ku'dâm Hâmadânî, edited by S. 'Ata Hîsawyn, Haydarâbâd 1364; (xiii) Sharh Risâla-i Kugâyryyisîa, Persian commentary on the Risâla of Kugâyryyisîa, ed. S. 'Ata Hîsawyn, Haydarâbâd 1361; (xiv) Sharh Risâla-i Kugâyryyisîa, in Arabic; (xv) Fisîkh al-kuds or Fisîkhî-nâmâ, edited by S. 'Ata Hîsawyn, Haydarâbâd 1356; (xvi) Aşmâr al-Ashârî, edited by S. 'Ata Hîsawyn, Haydarâbâd 1350 (commentary on a section of this work by Shâh Râfî al-Dîn Shâhîb Dîwâ'î al-Dîn Shurwardî, Maktûbdt Tis' Ra'sâbî, Delhi 1314); (xvii) Khîdima, edited by S. 'Ata Hîsawyn, Haydarâbâd 1356; (xviii) Mahbûbî, edited by 'Ata Hîsawyn, Haydarâbâd 1362 (contains 66 letters; the As. Soc. of Bengal MS 1232 contains 61 only); (xix) Mâ'dâmî's-i Yâsâda Rasâ'îî, edited by S. 'Ata Hîsawyn, Haydarâbâd 1360 (ru'âyat in this collection has been wrongly attributed to Gisu Daraz; it was written by Imâm Muâafar Bâkî); (xx) Dijâwâmî ‘Iwâshâbî, commentary on a ri'âdâh of Shâhykh 'Abî al-Kâdir Gîlânî, edited by S. 'Ata Hîsawyn, Haydarâbâd 1362; (xxi) Anîs al-wâshâbî, collection of poems, ed. S. 'Ata Hîsawyn, Haydarâbâd 1360.

Two early works—(I) Mîrâdî al-asghîhîn, (editions prepared by (i) Dr. M. 'Abî al-Hâkîk, Delhi, (ii) Dr. Qâ'id Nârân, Delhi, (iii) Khîlîk Anqûm, Delhi, (iv) Ta'sîmînârâ, (v) Dr. Nâdhîr Abîmâd, 'Allâghâr (typescr ipt)) and (II) Shîbâr nâmâ (editions) (i) Mûbârîz al-Dîn Râfî, Haydarâbâd, (ii) Thâmûlînaw Shawkat, Haydarâbâd—are also attributed to Gisu Daraz but no convincing internal or external evidence has so far been put forward to establish the attribution.

Though these works are mostly in the nature of commentaries and summaries of earlier mystic classics, they are not wholly devoid of originality. Gisu Daraz did not always conform to the traditional approach; in fact he had, as Shâhykh 'Abî al-Hâkîk Muâdîdî of Delhi has remarked, a peculiar ma'âshîrîf of his own. He went, to the extent of both Ibn al-'Aâmîr and 'Ayn al-Ku'dâm Hâmadânî. He did not agree with the author of the Ta'arruf that a mystic cannot have the vision of God (ru'âyat) here in this world. He did not permit his disciples to adopt indiscriminately the practices of the yogis. He was particularly fond of the Aâdîl al-muridîn and the Aâdîlîr al-ma'âshîrîf, since they were of great value for one who wanted to organize ðânâshîkî life in lands without any deep mystic tradition. There is a desire in his works to bridge the gulf between shîrî's and tarîkâ, which he considered complementary rather than contradictory to each other. He explained some of the much-criticized practices of the Cîshîtîs (e.g., prostration before the fir and audition parties) in such a way that orthodox opposition to them was toned down. Great as an organizer, erudite as a scholar, Gisu Daraz did not, however, succeed in maintaining the Pan-Indian character of the Cîshîtî sadgîjî dañâghî which he occupied. The era of the great Cîshîtî Shâhykhâ of the first cycle ended with his master, Shâhykh Naşîr al-Dîn Cîraîghî of Delhi.

Bibliography: 'Abî al-Azîz b. Şîrî Malik Wâîzi, Ta'ârîkh Habâbî wa-Σhâhîkârâ Mûrîâdhî, a biography of Gisu Daraz, completed in 849/1445-6 (MS As. Soc. of Bengal 246); Urdu translation of the above published from Rawdatayn, Gulbarga; Suyyid Muhammad Hîsawyn, Dijâwâmî al-kalâm, Kânpur 1356; Muhammad 'Allînî, Semi'îyyî Muhammadi, Allahabad; Niżâm Yamanî, Lâyîfî-i Aghrafî, Delhi 1295; Shâhykh 'Abî al-Hâkîk, Aâbârâh al-akhyarî, Delhi 1309, 139-134; 'Abî al-Râhîm Cîshîtî, Mûrî'îr al-âsîrîr, MS in personal collection, 73-4-42; Suyyid 'Allî Tahâbârâî, Bâkînî ma'âshîrîf, Haydarâbâd 1355/1396, 43-44; Firishta, Ta'ârîkhî Fîrishta, Nawal Kishore, i, 316, ii, 399; Ghulâm Muînî al-Dîn 'Abî Allâh, Ma'âshîrî âl-âsîrîr, MS in personal collection, i, 366-438; Aýzâd Bilgramî, Rawdat al-awlîyâî, Awrangâbâd 1892, 18-25; Muhammad Ghawthi Šhâshâîtî, Gulbarisi abrîr, MS As. **GIZA, GIZEH** [see al-Sa’hirah].

**GLASS** [see zvdj].

**GLAWA** [Arabicized form of the Berber Iglwa (sing. glawa).] Berber tribe of Morocco, belonging to the linguistic group of the askalikh. Population (1940) about 25,000 including 1,600 Jews. Their territory, which straddles the centre of the High Atlas chain, is crossed by the ancient road which, at an altitude of 2,300 metres/7,500 feet, passes over the Tishka col, which straddles the centre of the High Atlas chain, and which, from earliest antiquity, has provided communication between southern Morocco and the great palm-groves of the Wad Di Dar. Although the tribe considers itself to be of Munidh origin, its native chiefs trace their origin to the marabout Abd Muhammd Sldib, the patron saint of the Moroccan town of Safi. With heads uncovered but with a black band round their foreheads, the Glawa formerly wore the akhnif, a short burnous of black wool, woven in one piece, with a large red or orange medallion on the back. The Glawa do not weave carpets; it is thus in error that their name has been given to the greatly internationally known.

**GÖK TEPE** (Turkish “blue hill”), transliterated in Russian “Geok Tepe,” a fort in the oasis of the Akhal-Teke [q.v.] Turkmen, on the Saslk su (Saslk Ab), situated about 45 km. west of Aghkabbd, today in the Soviet Republic of Turkmenistán. It consists to join the French. In 1913, with the accession of Mawlay Ysuf, he was restored to his high office and built an imposing palace at Marrakush where he died suddenly on 13 August 1918.

Ma-ikhdz-ahmad, the younger brother of Gldw Madnli, who appointed him pasha of the town of Marrakush by a zhhr of 8 July 1909. He shared in his brother’s disgrace in 1911 but was restored to office at the time of the French occupation of Morocco, in September 1912. When his brother died he succeeded him in his high office and, with the help of his son, held the double appointment until his death. A courageous and experienced warrior and a devout Muslim (he twice performed the Pilgrimage), this harsh ruler kept the tribes and the town which he governed in fear and in poverty, but also in peace. Settled at Marrakush, in the triple palace which he had built for himself, he loved to offer extravagant hospitality to illustrious guests from all parts of the world, who would then proclaim afar his power, his generosity and his political acumen, thus contributing to the rise of tourism in Morocco. During the war of 1939-45 he was unspeakably faithful to the Allied cause and one of his sons, an officer in the French army, was killed in Italy. In 1953 he led a conspiracy of Berbers and Marabouts which resulted in the expulsion of the sultan Sayyidh Muhammd. When the latter returned, in November 1956, he obtained amdn, and died in his palace on Monday 23 January 1957.

(G. Deverdun)
of a series of isolated places, one of which, Dengil Tepe (4½ km. in circumference), was defended from its isolation, near Dengil Tepe; since 1893 the Trans-Caspian Railway has also reached this place in which a museum commemorates the battle.

**GÖKALP, ZIYA**, Turkish thinker, born Mehmed Diya? (Ziya) at Diyarbakr in 1875 or 1876 and known by his pen name after 1912. Ziya became acquainted with the Young Ottoman ideas of patriotism and constitutionalism through his father, who died having entered him in the modern high school to learn modern sciences and French. From his uncle he learned Arabic, Persian, and the traditional Muslim sciences and became acquainted with the works of the Muslim theologians, philosophers, and mystics. The clash of orthodoxy, mysticism and modern science in his mind, heighted by the uncle’s opposition to his aspirations for a higher education in Istanbul, led Ziya to attempt suicide from which he was saved by his elder fellow-townsmen Dr. ‘Abd Allah Djewdet [q.v.]. His subsequent career was an intellectual sublimation of his struggles between the three influences, and may be separated into three phases.

His liberal and revolutionary phase began with his coming to Istanbul to attend the school of veterinary medicine, and entrance into the secret Society of Union and Progress. He was arrested in 1897, sentenced to one year of imprisonment, and exiled back to Diyarbakr.

Following the Revolution of 1908, Ziya became the leading Ottomanist liberal writer and lecturer in Diyarbakr. His change into an idealist populist and nationalist, marking the second phase of his career, occurred in Salonika where he went in 1909 as a delegate to the convention of the Union and Progress and remained, having been elected to its central committee. He became associated with a group of young writers connected with the periodicals *Geni Kalem* (Young Pens) and *Yeni Felâse Medîme* (New Philosophical Review) who were interested in the democratization of the language and literature, and in the development of a new ideology to serve as a guide in the social transformation believed to have been begun by the Revolution of 1908. The group crystallized two tendencies, one materialistic and socialistic and the other idealistic and nationalistic.

Gökalp became the leader of the second while the first soon disappeared.

From 1912 to 1919, Gökalp lived in Istanbul, this being the most influential phase of his career. His acquaintance with émigré intellectuals from Kazan, the Crimea, and Azerbaijan gave a more pan-Turkist colouring to his nationalism, though he did not subscribe to their racist tendencies. He remained primarily the nationalist ideologist of the Turks of the Ottoman Empire, who he believed had to cultivate national consciousness in face of the chal-

GÖKÇAY [see GÖKÇE].

GÖKÇE-TENGIZ, Gökçe-Göl or Gökçe-Deniz; otherwise Sevan, from Armenian Sevanak, ‘Black monastery’; a great lake in the Armenian Soviet Socialist Republic, approx. 40° 20' 32" and 45° 30' E. Triangular in shape, Lake Gökçe lies 6,000 feet/1830 metres above sea level and is surrounded by barren mountains; its area was formerly reckoned at 540 sq. miles and maximum depth 67 fathoms, but the level of the lake is being systematically lowered in connexion with the important system of hydro-electric stations on the river Zanga, which flows from the lake into the river Aras, and supplies a large part of the energy requirements of Soviet Armenia. A lava island (now peninsula) at the north-west corner is surmounted by two ancient Armenian monasteries, the monks of which were much persecuted following the Arab conquest in the 1st/7th century (cf. J. Muyldermans, La domination arabe en Arménie, Louvain 1927, 95). Lake Gökçe is scarcely mentioned in Islamic sources prior to Ḥamd Allah Mustawfi Kaşmâl [g.v.], but subsequently features in the accounts of Ottoman-Persian conflicts in this area, as well as during the Russian conquest of Transcaucasia early in the 19th century. The lake is famous for its succulent fish, particularly a trout called sîbahan, which form the basis of an important industry. Lake Gökçe is not to be confused with several rivers called Gökçay (‘Blue stream’), e.g., one in Shahl [q.v.], another in Anatolia between Sivas and Edirne, a third in the eastern part of Transcaucasia early in the 19th century. These rivers are nominally Muslim by religion.

(G. W. BARTHOLOM.-[D. M. LANG])

GÖKLÂN, a Turkmen tribe mainly inhabiting the country between Bokhara and Khiva in northern Persia, but with some elements in the Turkmen SSR and the Kara-Kalpak ASSR of the Soviet Union. The number in Persia is difficult to determine but is probably about 60,000. Soviet sources now tend to avoid tribal distinctions, but according to the 1926 census there were 17,000 Göklân in the Kara-Kala district of the Turkmen SSR (South of Kizyl-Arvat) and some 35,000 in the area lying between İlyâly (S. of Khodzheyli) and Turtkul' in the Kara-Kalpak SSR. They have ten ‘barghans’ or ‘barangs’ of clans (Čakur, Kırık, Bayandır, Kavi, Yangak, Saghl, Kara-Balkan, Ay-Derviş, Erkeklî, Sheykh Khodâ) only traces of which now remain. The Göklân appear never to have been nomads, being occupied mainly with silk and more recently with cotton growing. Those in the Kara-Kala district are mostly market gardeners. They were in the past traditional enemies of the large Yomud and Tekke tribes and were wont to side with the Russians during the latter’s campaigns in the Turkmen country in the last quarter of the 19th century. They are nominally Muslim by religion.

GÖLKONDÀ, renamed Muhammednagar by Sultan Kull Kuth Mal-Mulk, the founder of the Kuth Shâhî [g.v.] dynasty, a hill fort about five miles west of Ḥaydarābād (Deccan) [g.v.], is situated in 17° 25' N., 79° 14' E. The hill rises majestically in a vast boulder-strewn plain. The site is a natural one for the construction of fortifications, as the summit,
called Bālā Ḥiṣār or acropolis, is about four hundred feet above ground level and commands the whole countryside. The name, Golkonda, is derived from two Telugu words, golla (shepherd) and konna (hill). There is no doubt that part of the fortifications go back to pre-Muslim times, for certain constructions, such as a wall by the side of the Faṭḥ Darwāza, are built of huge granite blocks piled one upon the other, which is characteristic of pre-Muslim citadels of Andhra Pradeś such as parts of the historic fort of Kondāpalli. Golkonda was ceded to Muhammad Shāh Bahmani by the Rādīq of Warangal in 764/1363, but did not become the capital of the taraf or province (later, kingdom) of Tilang-Andhra till the governorship of Sultan Kull Kūṭb al-Mulk in 900/1494-5. Golkonda’s glories were rivalled by the foundation of Ḥaydārabād [q.v.] in 1000/1592-3. In the heyday of its history Golkonda was the centre of trade and commerce where travellers, architects, calligraphers, learned men and men of the world thronged, and this inevitably resulted in a vast increase in the population of the walled city which led to the foundation of the new “City of Ḥaydār”. Golkonda, however, remained the emporium and centre of the diamond trade of the Orient.

The fortifications of the city and the Bālā Ḥiṣār are a unifying whole. The outermost circumvallation, which protects the whole city, is about 8,000 yards in circumference, enclosing a vast area, more or less oval in shape, with the rectangular nayā-kiśār, “new fort”, constructed in 1624, jutting out rather abruptly to the north-east. This wall, which is crenellated throughout, rises to an average of 55 feet, with 8 strong gates and 87 bastions, each with its own name. Four gates are still open: the Faṭḥ Darwāza or “Victory gate” (through which the conquering army of Awrangzib entered the city), the Makki Darwāza, “Mecca gate”, completed 967/1559, the Banjāra Darwāza leading to the Kūṭb Shāhī tombs (which form a majestic sky-line in the neighbourhood), and the Mōṭī Darwāza, “pearl gate”. A very interesting bastion is the Naw Darwāza, which juts out from the wall of the nayā-kiśār in a corrugated form, perhaps intended to provide a greater field for defence in all directions (but see Burton-Page in BSOAS, xxiii/3 (1960), 520). For other bastions see BURG, iii.

About 900 yds. above the Faṭḥ Darwāza is the Bālā Ḥiṣār Darwāza, “acropolis gate”, the entrance to the second line of defensive walls. A short distance to the north of this gate is the Dīlamī Masjīd, erected by Sultan Kull Kūṭb al-Mulk in 924/1518, in which he was assassinated some 25 years later. From this gate the road upwards is very steep, with hundreds of steps with recesses for resting. Half-way up the hill run the double walls which constitute the third line of defence. On the left are palaces, women’s apartments, mosques, arsenals, offices, granaries, magazines, and on the right, open ground, parks and groves, wherever a space could be found for them. Before the Bālā Ḥiṣār proper is a well-preserved mosque reputedly erected by Irāhbīl Kūṭb Shāh, and within a few yards of the Throne Room and the acropolis proper is an ancient Hindu temple which was renovated by the Brāhmīn ministers of the last Kūṭb Shāhī king. There is another very steep path, also served by a number of irregular steps, connecting the lower palaces with the Bālā Ḥiṣār, and by the side of this can be seen the system of raising water from the ground level to the topmost citadel. There is a series of tanks, at different levels; the water was raised by teams of oxen at each level pulling huge leather buckets by rope and pulley and pouring it into the higher cisterns. The waste water was brought down through earthen pipes which still exist.

The Bālā Ḥiṣār Darwāza is remarkable not merely for its mantlet but also for the figures and emblems of Hindu mythology which are worked in stucco between the arch and the lintel. Perhaps an even more remarkable structure is a small gateway piercing the penultimate fortification. It is a pillar and lintel gate surrounded by a fairly flat arch. In the centre of the broad stone lintel is a beautiful circular medallion with the lotus motif flanked by mythical figures of Yāli, half dog and half lion, and swans with snake-like worms in their beaks. Above the lintel is a simple pointed alcove surrounded by representations of lion-cubs, peacocks and parrots. The whole composition symbolizes the synthesized Indo-Muslim culture of the Kūṭb Shāhī period.

The Golkonda tombs, standing outside the fort to the north-west, are a group of some twenty buildings seven of which are tombs of the kings. Their appearance is uniform: typically a square building with an arced lower storey, supported on a massive plinth which may itself be arced; the lower storey bears a crenellated parapet with a small window at each corner, and centrally a tall drum, which may be arced and balustraded, supporting a single dome arising from a band of petal-like foliations as in the Bīḍāpur [q.v.] domes. The grey granite is usually covered with stucco and with encaustic tiles. The projecting cornices are elaborately worked with plaster designs; this, and the addition of miniature decorative arced galleries encircling the minars, are characteristic of the Kūṭb Shāhī buildings here and at Ḥaydārabād. An important early building in the group is the mortuary where the bodies were washed, the arches of which continue the Bahmani [q.v.] style. For illustrations of these buildings see HIND, Architecture.

The city of Golkonda was the most important mart for emeralds in Asia, as described by, e.g., Marco Polo in 1292, Nicolo Conti in 1420, Tavernier in 1651, and it was here that diamonds were cut, polished and shaped and then exported to all parts of the world.

GONDAR [see HABASHA].

GONDHEPBUR (Arabic form Ḫundaysbūb) a town in Khūṭistan founded by the Sāsānīd Shāpūr I (whence the name Ḫundaysbūb “acquired by Shāpūr”), cf. Nöldeke, Geschichte der
It is the town known as Beth-Lapat in Syriac, or Umur’s story in Tabari, i, 2557, and Ibn al-Athir, ii, 432, according to which the fall of the town was the result of a forgery made by the slave Mukhif, to be a romantic fiction. The skin of Mani [q.v.] was hung on a gate of the city. Gondeshapur was the capital of Ya’kub b. Layl al-‘Affar (262-3; see M. F. Koprulü, Les origines de l’Empire Ottoman, Teheran 1963, 366-74. (AYDIN SAYILI)

GONDESHAPOR — GONULLU
Perser, 41, n. 2), who settled it with Greek prisoners.

In the main fortresses they formed two diemdcats, suwdri (cavalry) and piydde (infantry). Each diemcat

There was a hospital at Gondeshapur where, unlike the Greek asclepieia and the Byzantine nosocomia, treatment seems to have been based solely on scientific medicine. At any rate, this was a characteristic of the hospitals of Islam, for which the hospital at Gondeshapur may have served as a model. The fourth Islamic hospital founded in Islam (by Hārūn al-Rashīd) was in fact built and run by Gondeshapur physicians. There was a medical school at Gondeshapur which was probably in close association with the hospital there. There is also evidence that the town was the Gondeshapur school for religious instruction. Systematic Gondeshapur influence on Islamic medicine seems to have started during the reign of Hārūn al-Rashīd, when Gondeshapur physicians began to take up their residence in Baghdad. Hārūn b. Kalada, the Arab doctor contemporary with the Prophet, is said to have studied medicine at Gondeshapur. This story presents certain chronological difficulties in its details, however, and is, very likely, of a legendary character.

Arabic sources contain stories which trace back the medical interest of the district of Gondeshapur to a physician who had come from India. These stories imply that this initial Indian influence found a fertile ground for development in the Byzantine settlers of Gondeshapur which included a group of doctors and that this medical knowledge was further enriched in time through cumulative experience in treatment and through contact with local medical traditions. It is difficult to determine the factual value of such reports. The transformation of Gondeshapur into an important medical centre was undoubtedly the work of the Nestorians. But this may not have effectively taken place before the reign of Khosrow I Anšahrāwan (531-579 A.D.).

In the 11th/12th century we find an organized body known as gōnūllūyān in most of the fortresses of the Empire, in Europe, Asia and Egypt. It resembled the bodies of muslimālīs and bešshīyāns; its characteristic features were that its members performed garrison duties, served for pay (‘ulāfe), and had for the most part begun as volunteers. It was organized, like the Kapt-kullārī, into djemāʿāt and bōlsāk. Reference is found to two main groups, the Sāf Gōnūllūlar (or Gōnūllūyāni-i yemin, ‘of the right’) and the Sār Gōnūllūlar (or Gōnūllūyāni-i yarash, ‘of the left’). In the main fortresses they formed two djemāʿāt, siwālī (cavalry) and piyāde (infantry). Each djemāʿāt

GONULLU, Turkish word meaning ‘volunteer’, in the Ottoman Empire used as a term (sometimes with the pseudo-Persian plural gōnūllūyān, in Arabic sources usually rendered djemāʿāt or hamāyūn) for three related institutions:

1. From the earliest times of the Ottoman state, volunteers coming to take part in the fighting were known as gōnūllūs; their connexion with the mutasawwir-‘a, ‘ghāzis (q.v.), of earlier Muslim states is evident (see M. F. Köprülü, Les origines de l’Empire Ottoman, Paris 1936, 102-3; I. H. Uzuncarşı, Osmanlı devleti teşkilatına medhal, Istanbul 1942, 59). A high proportion of the ‘ghāzis and ‘ašhāfs (q.v.) on the adf (the march-lands) of the Ottoman state were such gōnūllūs. With the promise of the grant of timars and ‘ulāfes (q.v.) the State encouraged men to join the army, especially when a major campaign was in prospect; the text of a firman, issued before the Moldavia campaign of 899/1494, by which the Sultan ordered such a proclamation to be cried in public, survives (in the registers of the bakīs of Bursa, A. 4/4), and it is recorded that a group of gōnūllū was taken by the Sultan. Such volunteers are found throughout Ottoman history, and this was the principal means by which native Muslims could become timarlıs or enter the ranks of the Kapt-kullar [see GHULAM], for volunteers who distinguished themselves were granted timars or ‘ašhāfs (q.v.) or admitted to the ‘gharabā’ (q.v.) regiments; the rest were appointed to the bodies of gōnūllūyān who performed garrison duties in the fortresses of the Empire, being supported by ‘ulāfe. In the 11th/12th and 12th/13th centuries, with the ever-increasing need for men, the gōnūllū bayraklı was unfurled and gōnūllū troops, serving for pay, were recruited; this must have been a continuation of the old tradition.

2. In the 10th/11th century we find an organized body known as gōnūllūyān in most of the fortresses of the Empire, in Europe, Asia and Egypt. It resembled the bodies of muslimālīs and bešshīyāns; its characteristic features were that its members performed garrison duties, served for pay (‘ulāfe), and had for the most part begun as volunteers. It was organized, like the Kapt-kullar, into djemāʿāt and bōlsāk. Reference is found to two main groups, the Sāf Gōnūllūlar (or Gōnūllūyāni-i yemin, ‘of the right’) and the Sār Gōnūllūlar (or Gōnūllūyāni-i yarash, ‘of the left’). In the main fortresses they formed two djemāʿāt, siwālī (cavalry) and piyāde (infantry). Each djemāʿāt

GONDÂSHĀPUR — GONDÂSHĀPUR
was commanded by an agha, and each was divided into bólikhs of 10-30 men each. The first bólikh of the cavalry was called Ağa bólikh, and the second Ketkhuđa (Kahya) bólikh; the first bólikh of the infantry was the Ketkhuđa bólikh. Every bólikh had a Boľük-bağlı (or Ser-bólikh). In 1025/1616 the daily pay of the Ağa was 50 akçe, of the Clerk (Kātib) 20-25, and of the Ketkhuđa 20-25; each Ser-bólikh received 10-20 (for details see Defter-i esaml-i gdnülüssün-i siiwdri we piydde-gdn饼干-i ^al^a-i eydlet, Istanbul, Basvekalet Arşivi, maliye 2/646). In 961/1556 the gdnulüss of Cairo received between 10 and 16 akçe, in 1310/1758 those of the fortress of Nīsh received 14 akçe a day. A establishment (known as gdnulüss or gedik) of each djemis'at was fixed. In the 10th/16th century, when there were vacancies, in response to a teşkidere [q.v. from the beg or the defterdar of the eydlet, a berat [q.v.] of the Sultan would be issued granting these vacancies to volunteers who had distinguished themselves on the frontiers, so-called varar yığitler and yoldaşlar, the sons of gdnulüss, and Janissaries. There were in the fortresses separate djemis'atı of pensioners (mutelhād) and bul-oghulları [see veçiçeri] connected with the gdnulüssün.

The gdnulüss in the fortresses might be called out to serve on a campaign or take part in frontier fighting. Those that distinguished themselves might be granted titmärs; in the 11th/17th century it could happen that distinguished aghas of the gdnulüss were appointed sandjak-begi.

3. In the 11th/17th century a body known as the gdnulüssün is mentioned also among the paid auxiliaries who, under various names, were recruited in the provinces to serve on a campaign. In 1130/1718 those of the fortress of Ser-bólikh, Ketkhuđ (Kahya) bólikh; in 1131/1718 those of the fortress of Snelige were abolished, and it was ordered that their place should be taken by the raising of divawegân (děltler), føríanülün, ûcbün and gdnulüssün; but the dismissed sëkbiins re-enlisted in the new formations and continued their misdeeds. These groups, the gdnulüssün included, frequently cast off all obedience and discipline and proclaimed the provinces with their depredations.

GUARDAFUI, the cape at the north-east tip of the Horn of Africa, in Somalia, known also as Ra's 'Ashr, and, according to 'Ali Celebi, as Ra's al-abmar. It was the 'Ahoumdîn depot, source of the Periplus and Ptolemy and the vòtovn xêpoc of Strabo. The origin of the name is uncertain; the present form is one of several variants occurring in the Portuguese writers. It may be connected with Mas'ûdîn's Dijafânû and it appears as Djîrfdûn in the rutters of Ibn Mağjîd and in 'Ali Celebi. Many absurd etymologies have been proposed. It may include the name Hafûn, given to a prominent cape further to the south. Guilian states that the local inhabitants gave the name Djurdafûn not to Guardafui but to a small promontory a few miles away. It belongs to the area in which the Somali are first found and was once populated by Dir, later expelled by Dârod (Mađîrên). There is a small group of Maĥr descent who have intermarried and speak Somali.

GUĐALA, a small Berber tribe belonging to the great ethnic group of the desert Sanhadja (the Berber phoneme g is usually rendered in Arabic script by a jîm but Ibn Khaldûn, in his system of transcription, writes it as a kaf which, in the original manuscript, presumably had a diacritical point placed above or below). They lived in the southern part of what is now Mauritania, to the north of the Senegal and in contact with the ocean. To the south their territory bordered the land of the Negroes; to the north, in the present Adrar of Mauritania, lived their Şanhadja "brothers", the Lamtûna and the Massûfa.

Like the other desert Şanhadja, the Gudula were essentially nomadic camel-drivers, and possessed fast dromedaries (nadjib, pl. nudjûb). Nevertheless they possessed a town, Naghîbar (reading uncertain), at a distance of about six stages from the river Senegal, and so probably in what is now Tâgánt.

Along the shores of the Atlantic they collected quantities of ambergris and caught enormous sea turtles the flesh of which they ate. There too they possessed, on the island of Awîlî, not far from the mainland, a famous salt-pan. As al-Idrîsî places this island at about one day's journey (at most 150 kilometres/100 miles) from the mouth of the Senegal, it cannot have been, as was suggested, either Arguin or Tidra. It may be connected with Mas'ûdîn's Djafânû and it appears as Djîrfdûn in the rutters of Ibn Mağjîd and in 'Ali Celebi. Many absurd etymologies have been proposed. It may include the name Hafûn, given to a prominent cape further to the south. Guilian states that the local inhabitants gave the name Djurdafûn not to Guardafui but to a small promontory a few miles away. It belongs to the area in which the Somali are first found and was once populated by Dir, later expelled by Dârod (Mađîrên). There is a small group of Maĥr descent who have intermarried and speak Somali.

who was to launch the Almoravid movement. After the death of Yahya b. Ibrahim the supremacy returned to the Almoravids in the person of Yahya b. Umar, and then of his brother Abu Bakr, who was to launch the Almoravid movement. After the death of Yahya b. Ibrahim the supremacy returned to the Almoravids in the person of Yahya b. Umar, and then of his brother Abu Bakr.

The Gudjals no longer made common cause with the Almoravid movement, in which mainly the Lamtuna and the Massufa took part. After the expedition against Siddiimmaa they retired to their territory in the Sahara, where they fought sometimes with the Negroes, sometimes with those of the Lamtuna who had remained on the spot. They undoubtedly ended by wiping out the latter. In the second half of the 8th/14th century Ibn Khaal'doon places them immediately to the south of al-Sâkîya al-Ḥamrâ', in contact with the Dhwâ-Ḥassân, nomadic Arabs of the Maʾšî group. Later on the latter were to advance towards the south and occupy present-day Mauritania. At this point the Gudjâla disappear from history.

Their name is now attested only by two very small fractions of Gudgâla, one in the north, in Thir, the other in the south, among the Brâkna.

Bibliography:

Besides the classical historians and geographers, see: A. Huici Miranda, "Un fragmento indéctio de Ibn 'Iadari sobre los Almorávides, in Hesperís-Tamuda, ii (1961), 43; P. Marty, L’émirat des Trarzas. [G. S. Colin] Gudjarat. [E. G. G. de P. Marty], Javân, Ghazar, Gudjjarat, which is obviously the Arabicized form of the Dájjal [q.v.], and the Ahirs, who are claimed by Gudjdjar historians as off-shoots of the main stock. Both Western and native writers agree that the tribe migrated to the plains of Hindustan from Central Asia sometime in the middle of the 5th century A.D. Tal, handsome, wirily-built, and of a fair complexion, they are believed to be descendants of either the Scythians or the White Huns. The view of a minority of Gudjdjar historians, that they are of indigenous origin, finds little support. Largely agriculturalists, they also herd cattle and sell milk and other dairy products, but with the spread of education and a desire for bettering their economic condition they have taken to other occupations, mainly in the un-divided Punjab, and in present-day Pratihar Pradesh (India), and adopted a settled way of life.

The word Gurdjdjar first occurs in Bâna's Haralšâtra where Harsha Vardhana's father Prabhâkara-vardhâna is described as "the one who kept Gurdjdjar awake" (cf. K. M. Munshi, Glory that was Gurdjara-Deśa, Bombay 1955, i, 3). Here Gurdjdjara stands for the "king of Gudgjars", the malîh al-djuzar of the Arab historians (cf. al-Sîrâfî, Silsilat al-tawdrikh, Paris 1881, 126-7; al-Balâdhurî, Futûh, 446; Ibn Rusta, al-Aʿdâb al-mafîsa, Leiden 1892, vii, 137; Ibn Khurradadhbih, 16, 66; al-Masûdî, Murûdî, i, 383-4), who ruled over Gudjâarâta, whose boundaries is it difficult to fix precisely but which extended not only to the Narmda but also included parts of modern Saurashtra and Râdjasânth, with its capital at Bhilamâla or Bihamâla (Bilamân during the Arab historians, perhaps representing the colloquial pronunciation) near the present Mount Abu. This was a famous centre of swordmaking. Swords made here were highly prized, and there are several references in Arabic literature to the sword of Bilamân (cf., e.g., al-Kindî, al-Suwâf wa adînîsâhû, ed. ʿAbd al-Raḥmân Žâld, Cairo 1932, 9-10, where it has been corrupted into Sulaymânîyya). In all probability this was the sword of pure Hindu origin, for many of the Muslim Gudjârs took pride in being converts from Hinduisim. They regard as their national origin, for many of the Muslim Gudjârs take pride in being converts from Hinduism. They regard as their national identity, for many of the Muslim Gudjârs take pride in being converts from Hinduism. They regard as their national identity.
heroes Djaypāl, the Hindu-Shahiyya ruler of Lahore, whom Mahmud Ghażnawi defeated, Mihir Bhodja Prathāra, whose grandfather Nāga Bhṭā (792-825 A.D.) has been described as the inveterate enemy of the Arabs, Rādja Dāhir of Alor, defeated and killed by Muhammad b. Sa‘īd, Rāna Sa‘īd, and Rāna Pratap of Mewār, and look upon their Muslim conquerors as despoilers and enemies of the Gūḍjārās, because they destroyed their kingdoms, raised and looted their territories and subjected them to all sorts of indignities (cf. ‘Abbās Cāwnān Gūḍjār, Tātirī Gūḍjār, Karachi 1960, iii, especially ch. iii and iv, which are full of the bitterest invective against the Muslim conquerors and invaders).

Bibliography: H. Abd al-Ḥakīm, Tawārīkh-i Gūḍjārā n ma‘a ansāb-i Gūḍjārāh, Lahore 1931, wherein he refers to two Persian MSS on the history of the Gūḍjārās—(1) Mir‘ād-i Gūḍjārān by Sayyid Djamāl Gūḍjār and (2) Murshid-i Gūḍjārān by Cawdhari Fāyḍ Muhammad, but no copies of these works seem to be extant; Abū l-Barakāt Muhammad ‘Abbād al-Mālik, Sāḥīh-i Gūḍjār, Aʿẓamgāh 1333/1934; Rāna Muhammad Akbar Ḵān, Gūḍjārī-Gūḍjāī, Lahore 1955; K. GUDJARAT, a province of India on the north-west of its coastline, lying east of the Ran of Kačh [q.v.] and broadly divided into Mainland Gudjarat and Peninsular Gudjarat (Kaṭhāvān, the ancient Sawrashtra, modern Sōrāṭ). Mainland Gudjarat is approximately the area of the plains in the lower reaches of the rivers Sābarmatī, Mahī, Narbārā and Tāptī, bounded north by the Mārwār desert, east by the line of hills running south-east from Aḥbū to the Vindhayas. It takes its name (Sanskrit Gūḍjārāṭa) from the widespread Gūḍjār (Skt. Gūḍjāra) tribe, who, it has been suggested, entered India with the White Huns at the end of the 5th century A.D., and who in many ways closely resemble the Čālīks [q.v.]; the name was even applied to the coast north of Adīmēr in the 9th century A.D., but by the 12th-13th centuries, just before the coming of Islam, Gudjarat referred particularly to the domains of the Solanki kings of Aḥāhilvādā whose boundaries were much as described above.

(a) The ancient history of Gudjarat covers a period of some 15 centuries before the advent of Islam at the end of the 7th/8th century: the Māwrya dominions extended to Sawrāṭhāra in the 4th century B.C. (inscription of Atoka at Dūnāgār [q.v.]); the region was under the Śāka states until the 4th century A.D. when it passed to the Guptas; after their overthrow by the Huns there followed the Valabha (perhaps overthrown by the Arabs from Kānṣhāra [q.v.] in Sūrāṭhāra, cf. the numismatic evidence adduced by G. P. Taylor in Gujarāt College Magazine, January 1919), Čāwdrās, and the Solankis or Cawlykuys. The last-named dynasty were worshippers of the Hindu divinity Śiva, whose splendid temple at Somnāth in Sawrāṭhāra was plundered by Mahmūd of Ghażnī in Dhu ’l-Ka’dā 416/January 1026, in the reign of Bīhām I the fourth Cawlykuq dynasty (Ibn al-Athlīr, ix, 242; so also the Bīrūns, ed. Sachau, ii, 9; Gardizi, ed. Nazim, 86-7; Haig in Cambridge history of India, iii, 23 ff., gives an incorrect date, presumably following Fīrūzā; gold and jewels worth two million dinārs, the sandalwood gates of the temple, and the stone phallic emblem of the god were transported to Ghażnī. The rebuilding soon commenced, this time in the fine stone for which the region is famous, and the temple continued in this genre which was to become very significant for the derivative architecture of the Gudjarat sultanate. The sixth dynasty, the great Siddhārājā, who ruled for over 50 years in the 12th and 13th centuries A.D., extended the dominions and built the famous temple at Siddhpur later converted into a mosque by Ahmad I; under his patronage the Dīyan [q.v.: religion] was firmly established in Gudjarat. The ninth ruler, Mūlārājā II, sent a large army which in 574/1178 vanquished the army of Mu‘izz al-Dīn Muḥammad b. Sām which was exhausted by its long march through Uchā, Mulān and the Mārwār desert (Muhammad historians show Bīhām II as the victorious ruler; but the Sanskrit Kirtikaumudi and Sahñassāk-kirīlana, and contemporary grants, leave no doubt that the invading army came from Mārwār); the short reign). The defeat was avenged in 593/1197 when Mu‘izz al-Dīn’s general Kūt b. Dīn Aybak [q.v.] plundered Anahīlvidā, the capital, forcing Bīhām II to take refuge in a remote part of Gudjarat, and returned to Dīhil laden with booty. Mūlārājā and his brother Bīhām both came to the throne as minors; the central authority thereby became weak, and the kingdom was virtually divided among the nobles and provincial chieftains. The most powerful of these, the Vāghelāls ruling at Dholkā, gradually usurped the royal power and transferred their capital to Anahīlvidā; this was the regnant dynasty at the time of the Muslim conquest, and it continued to hold pockets of territory in north Gudjarat for some time thereafter.

Pre-Muslim Gudjarat seems to have been well known to the Muslim, particularly the Arab world, for it is frequently referred to by travellers and geographers from the merchant Sulaymān onwards. Al-Baladhurī, 3rd/9th century, notices the pirates of the Sawrāṭhāra coast, and mentions the great ports of Bahr-Čī and Sānīn [q.v.]; al-Ma‘ṣīdī describes the strength of the kingdom and the power of its ruler, and mentions the gold and silver mines; Iṣṭākhrī, 4th/10th century, and Ibn Ḥawqāl, 4th/10th century, give itineraries and describe the topography; al-Bīrūnī, 5th/11th century, gives fuller details with greater exactness, as does Idīrīsī at the
end of that century; these two are the only geographers to describe the rivers of Gudiarat. Most of these authors are especially interested in the ports of the Zoroastrians.*

Most of us are now to be found all over the Indian sub-continent their concentrations has always been highest in Gudjarat and the Marachá country to its south, specially Bombay. For a general account of the Zoroastrians see MADJUS; for this Indian branch see PARS!, in addition to later references in this article.

(b) Gudjarat under the Dihli sultanate. Gudjarat fell to the Muslims in one decisive battle won by Muhammad b. Tughluk, which was defeated in 697/1298 (some textual confusion; cf. Hodivala, Studies in Indo-Muslim history, i, Bombay 1939, 248-9) by the armies of the Dihli sultan 'Ala' al-DIn Khâlid after the generals Ulugh Khân and Nuşrat Khân; Anahilwâda was sacked, the rebuilt Somnâth temple was despoiled, and local garrisons were established. Nuşrat Khân moved on to the sack of Khambâyât, where in addition to enormous booty he secured the slave Kâfrî, nicknamed Hazârâmârî, "bought for a thousand dinârs" [see KÄRÌ; DILH SULTANATE]. Asâwâl, Dholkâ, Randâr, Mahuwâl, Diwâ and Djuñâghâr were also overrun, and the invaders extended even to Kačchh. Karâna's queen Kawâldevî was sent to 'Alâ' al-Din, but Karâna escaped with his daughter the celebrated Devaldevi to Devagiri [see PARS!, in addition to later references in this article.

Some twenty years later bands of Afghan and New Muslim adventurers, under disaffected amîrs, rebelled against the Dihli authority and was replaced by Wahid al-DIn Kurayshi, under whom Gudjarat was subjugated and the Marachâ country to its south, specially Bombay. For a general account of the Zoroastrians see MADJUS; for this Indian branch see PARS!, in addition to later references in this article.

The imperial control of the provinces slackened during the struggles for the Tughluk succession, and by 793/1391 Farâb al-Mulk was known to be supporting Hindu practices to gain the confidence of the Râdîpûts before attempting to establish his independence; the 'ulamâ' protested to Dihli, and Muhammad II Tughluk sent Zafar Khân his son in law Malik al-Mulk abdicated in favour of another amîr-i sâda,旻an entitled Zafar Khân, who was shortly after divorced (748/1347) proclaimed as 'Alâ' al-Dîn Hasan Bahman Shah [see BAHMAN!S]. Taghi with drew to Sorath and thence to Thaffâh, but through Muhammad b. Tughluk's energetic pursuit of him the whole of Gudjarat was subdued as never before. The sultan pursued Taghi to Thaffâh where he had taken refuge with the Dîmân, but died in camp there in 752/1351, his nephew Fâriz Shâh Tughluk travelling to the camp for his enthroneinent. Fâriz made a difficult retreat to Dihli, and local events in Gudjarat did not concern the historians until some fifteen years later when he marched against the Dîmân in 767/1366 (for the date see Hodivala, op. cit., 322); the campaign was disastrous and he lost most of his army in the Ran of Kačchh. On finally gaining Gudjarat he dismissed the governor for failing to send him supplies and guides, and spent much time there in recruiting a new army, appointing as governor Zafar Khân the son-in-law of Fâhir al-Dîn Mubârâk [q.v.]. This efficient nâmâm was supplicated in 778/1376 by one Shâms al-Dîn Dâmghânî, who had promised a greatly increased revenue from the province; in spite of severe extortion Dâmghânî was unable to fulfill his promise, and the oppressed population rose against him. The sultan then appointed Malik Mufârâr Sultanî entitled Farâb al-Mulk, who remained governor for fifteen years. The imperial control of the provinces slackened during the struggles for the Tughluk succession, and by 793/1391 Farâb al-Mulk was known to be supporting Hindu practices to gain the confidence of the Râdîpûts before attempting to establish his independence; the 'ulamâ' protested to Dihli, and Muhammad II Tughluk sent Zafar Khân the son of Wadjîh al-Mulk as governor, with the title of Mużaffar Khân. Farâb al-Mulk defied the new governor, and the armies of both met in the decisive battle of Kambol, 30 km. west of Pâlan, on 7 Safar 794/January 1392, when Farâb al-Mulk was killed. Mużaffar Khân proceeded to Pâlan and diligently began restoring order and prosperity in the province, and quashed all tendencies to the toleration of Hindu idolatry. He several times besieged the fortress of the Râdjâ of Idar [q.v.] for withholding tribute, and destroyed the temple of
GUDJARAT

Somnath in 797/1395 and 804/1402; on the latter occasion he followed the Somnath Hindus to Dwarka where he established Islam.

When Ahmad was in Kathiawar his appointed governor his son Tätār Khān had been retained in Dihilī by Mūhammad II Taghlīk as his ważīr. On the death of the sultan, Tätār Khān was prominent in the intrigues for power, and in 800/1398 he came to Gudjarāt to raise an army in order to march on Dihilī. The invasion of Tīmūr prevented this immediately, and indeed Māhmand Shāh, the last Tīgūlīk, took refuge for a time at Pāṭan with Muẓaffar Khān. In 805/1400 Tätār Khān endeavoured to persuade his father to march on Dihilī, but the latter, now aged over 60, refused and attempted to dissuade his son. Tätār Khān then imprisoned his father, proclaimed himself sultan of Gudjarāt in Rabī‘ II 806/November 1403 with the title of Mūhammad Shāh, and marched on Dihilī; but Muẓaffar Khān’s brother Shams Khān caused Tätār Khān to be poisoned and released his brother from prison. Muẓaffar returned to Pāṭan and carried on the administration for several years before finally assuming the royal title.

(c) The sultanate of Gudjarāt. Muẓaffar Khān was persuaded by the nobles to assume the insignia of royalty in 820/1416, as the Tughlūk dynasty was virtually extinguished, and no coin had been struck in his father’s name; he therefore acceded as Muẓaffar Shāh. Shortly after his accession he invaded Mālwa [q.v.] and imprisoned sultan Hūḏang at Dāhr on suspicion of his having murdered his father Dīlāwār Khān [q.v.]; however, he restored him soon afterwards. Muẓaffar died in 831/1429 and was succeeded by his grandson Ahmad the son of Tätār Khān—not without the suspicion of having been poisoned by his nobles.

The reign of Ahmad I, which did much to consolidate the new sultanate, lasted 33 years, much of which was occupied in warfare against neighbouring Rāḍīgūt princes and the contiguous Muslim rulers of Mālwa, Khandesh [q.v.] and the Deccan: in 817/1415–16 against Dīnārgār, compelling the payment of tribute; and from this time the power of the sultanate was extended into the central regions of Sūrath, beyond the coastal towns already in its control; in 819/1416 a confederacy of Rāḍīgūt in the north-west, with the partial support of Hūḏang of Mālwa, was defeated, and two years later Ahmad marched against Cāmpānār and levied tribute; in 820/1417 the army of Naṣr Khān of Khandesh, supported by the Mālwa army, invaded the eastern border of Gudjarāt and invested the fort of Sūltānpur, but was repulsed by Ahmad Shāh who followed up and besieged Naṣr Khān in his fort of Afsgrāh; Naṣr swore fealty to Ahmad Shāh and his claim to Khandesh was in turn recognized by Ahmad. The instigator of the Khandesh attack and his claim to Khandesh was in turn recognized by Ahmad. The instigator of the Khandesh attack against Ahmad I which was subsequently found to be Hūḏang of Mālwa, Ahmad next attacked that kingdom in 822/1420 and 823/1420, effecting little but the plunder of outlying districts; in 825/1429, during Hūḏang’s absence from Mālwa on his notorious expedition to Utištā [q.v.], Ahmad again attacked, besieging the capital Māndū [q.v.] for some months without effect; the Gudjarāt and Mālwa armies confronted each other later that year in Sārangpur without a major engagement, and Ahmad returned to Aḥmadābād and undertook no further military action for two years.

From 829–31/1425–8 there were continued hostilities against Pundjāb the ruler of Idar. Ahmad built the walled city of Ahmadnagar (renamed Himatnagar in the 20th century) some 30 km. from Idar as a base of operations. In 831/1428 Pundjāb was killed by a fall and his son sought peace and promised tribute; nevertheless he and his successors maintained intermittent warfare with the Gudjarāt sultānate for generations thereafter. In 832/1429 a Hindu prince of the house of Dīlāwār (some doubt; his name does not occur in the dynastic lists), objecting to Ahmad’s discriminatory measures against the Hindus, attacked Nandurbār with the help of a Bahmānī army, later reinforced by one from Khandesh also; the attackers were utterly defeated by Ahmad’s superior skill. Two years later the Bahmānī ruler Ahmad Shāh Wallī sent an army to capture the island of Mālim (now a part of Bombay), which was held under general Gudjarāt suzerainty by a semi-independent Muslim prince; but the generals of the Gudjarāt force first invested Thāna, the most important town of the northern Konkan coast and in Bahmānī territory, by land and sea, and after its capitulation drove the invader from Mālim.

Ahmad died in Rabī‘ II 846/August 1442 after a reign devoted to consolidating Islam in his dominions by relentless iconoclasm and oppression of the Hindus. His justice was strict but impartial, and he was known for his piety and as a disciple of the great religious teachers Shāykh Ahmad Khattū of Sankhod and Būrānī al-Dīn Kūṭb al-‘Alām of Baṭwā. In 831/1428 he had founded his capital city of Ahmadābād on the left bank of the Sābarmati, with a citadel and spacious streets (Ahmad Rādīj, Haft ḳīlām, Bibl. Ind., 86–7), and struck coin there and at Ahmadnagar. His soldiers were paid half in coin from the imperial treasury and half by grants of land (dāḥār); for the mana system of land revenue applicable to Hindus, originating in his reign, see TENURE OF LAND.

Ahmad’s eldest son succeeded him with the title Muhammad Shāh, a mild and generous ruler. He followed his father’s policy in a further attack on Idar in 850/1446, the ruler buying peace by giving Muhammad his daughter in marriage, and in 853/1449 against Cāmpānār, from which, however, he withdrew after the ráḏīq had invoked the aid of Mālimdūr I of Mālwa; on the return journey he fell ill and died at the capital in Mubārram 859/February 1451. His eldest son Djalāl Khān succeeded him with the title Kūṭb al-Dīn Ahmad Shāh II and reigned for less than nine years. He won an early victory in the battle of Kapadwand against a Mālwa invading force; and in 861/1457 formed a Muslim alliance with Māhmand I of Mālwa against the Hindus rādān of Citawr, who had earlier defeated his forces (Sanstrick inscription on kirtistambha of Citawr; the defeat is not recorded by the Muslim historians). Otherwise his reign was occupied in building, and in attempts to secure the person of his young half-brother Fath Khān who was under the protection of the Baṭwā shaykh Shāh ‘Alām. Kūṭb al-Dīn Ahmad died suddenly in Radjab 862/May 1458, and is said to have been poisoned by his Wāzīr in order that his father, Shams Khān of Nāgawār, might succeed to the Gudjarāt throne. The nobles first raised to the throne Dāwūd Khān, a younger son of Ahmad I, but he was deposed after a reign of seven days of moronic
incompetence, and Fath Khan, then thirteen years old, succeeded as Mahmud Shah. Within months he showed the courage and judgement that were to characterize the 54 years of his reign when he thwarted a conspiracy to remove him; and he was early involved in clashes with Mula when he intervened to prevent a Mula attempt on the dominions of the infant Bahmani king Nizam Shah.

In 865/1461 Mahmud supported Ughmán Khán of Daulatabad in his struggle for the succession there, secured the extension of his domains—important for Gudjarat as Islam was thereby securely established in south Rájpútañá—and conferred on him the title of Zubdat al-Mulk. The extension of Islam in the south of the Gudjarat dominion was furthered in 869/1465 when an army was sent to take the hill forts of Bahirí and Pánera and the port of Dáman from the hands of their Hindú rídíd; and at this time the old Pársí settlement of Sangánán was destroyed. The years 871-7/1467-70 saw Mahmud gradually overcoming the strong Rájpúta power at Dijnágarí and its citadel-fort of Gírnár. The defeated rídíd embraced Islam, and Mahmúd remained some time at Dijnágarí, improving its beauty and its defences to make it a centre from which Afghan Islam could be propagated throughout the Soráh peninsula. He accordingly renamed it Mústáfábádí and settled sáyyídís and other divines there, and set it up as a mint town and as the headquarters of the thándádir or local administrator. To combat the laxity of the administration reported from Ahmadábád while the sultan was on his Soráh campaign he appointed one Díamál-al-Dín as faqír with the title of Muháfíz Khán. From his new headquarters of Mústáfábádí Mahmúd undertook military expeditions in 875/1472 into Sindh and Káčchí, subduing the predatory tribes and sending their leaders to Mústáfábád for instruction in Islam; on his return he marched against the sacred Hindú town and temple of Dwárká (gáh) where pirates had been harassing Muslim pilgrims, and sacked the town and the neighbouring island of Bel (see J. Burton-Palmer, “The two forts of Dwarka...” in BSOAS, xx [1957], 145-57). He returned to Ahmadabad in 878/1473 and undertook no major military operations for the next nine years; in this time he built the new city of Mahmúdábád 30 km. south-east of Ahmadabad.

In Ramádán 885/November 1480, when Mahmúd was making his yearly visit to Mústáfábád, an attempt to dethrone him and place his eldest son Ahmad on the throne was frustrated by the wazir and Muháfíz Khán; Ahmad seems to have been involved in the conspiracy, as he was passed over for the succession and Mám próbár’s youngest son Khállí became heir-apparent. In Sháwwál 887/December 1482 Mahmúd started his second great war against the Hindús. His allies included the Mamluk sultan Kánsawí al-Ghawrí, under the command of Amir Húsayn, and that of Gudjarat which arose in Khandésh on the death of ‘Adil Khán II, finally resolved in 914/1509 with the acceptance of the Gudjarat candidate, a kinsman of Mahmúd’s, as ‘Adil Khán III (for a detailed account see FARUKIDS).

Since the arrival of Vasco da Gama in Calicut in 1498 the Portuguese had extended their maritime influence over much of the Indian ocean and the Red Sea, to the great detriment of the lucrative trade which passed through the Gudjarat ports, especially Khandésh, and depriving Egypt of the revenues of much of her Eastern trade. Their first opposition in these regions came from the joint force of the fleet despatched by the Egyptian Mamluk sultan Kánsawí al-Ghawrí, under the command of Amir Húsayn, and that of Gudjarat, who won the first victory in Ramádán 913/January 1537 and took Dom Lorenzo, son of Francisco d’Almeida the Portuguese viceroy, who was killed in a battle off Cawí; but the combined Muslim fleets were defeated by d’Almeida in a battle outside Díwí harbour in Sháwwál 914/February 1539 (E. Denison Ross, The Portuguese in India and Arabí in 1307-1517, in J.R.A.S., 1921, 545-62). Mahmúd then attempted to establish diplomatic relations with the Portuguese (see W. de C. Birch (ed.), The commentaries of the great Afoisno Dálboquerque, Hakluýt Socy., especially ii, 210 ff.) but after Albuquerque’s capture and orgiastic sack and massacre of Síndábád (Goa), the port of the ‘Adil Sháhí sultanate of Biddíjúr, Mahmúd realized the impracticability of maintaining any alliance with such an intransigent enemy of Islam and, to avoid provocation, broke the Egyptian alliance and liberated his Portuguese prisoners.

Mahmúd died at Ahmadábád on 2 Ramádán 917/23 November 1511 and was buried at Sarkhéjí. In his reign the prosperity of the Gudjarat reached perhaps its greatest height; certainly it knew its greatest internal security in the towns and in the ports. The army was efficient and well equipped, and Mahmúd was solicitous for the welfare of his troops, including the families of those killed in battle, who were provided for by continuance to them of the assets of the late soldier’s diván, and consolded the next-of-kin of the dead in person after his battles. He was a great builder, and also laid out many gardens and orchards, and is credited with the introduction of many kinds of fruit trees into Gudjarat.

Mahmúd was a tall man with a prodigious appetite and a prodigious appetite and a prodigious appetite and a prodigious appetite and a prodigious appetite. He was a great builder, and also laid out many gardens and orchards, and is credited with the introduction of many kinds of fruit trees into Gudjarat.

In the years 986-9/1501-4 the activities of Bahádúr Gíllání, a renegade from the Bahmani court who committed repeated acts of piracy from Dabhöl in the south Konkan coast and had even ravaged Khamábay, and Mahmúd caused Bahádúr to arrest him by sea and call for Bahmani cooperation by land; eventually Gíllání was killed and full reparation was made to Gudjarat.

In the early 16th century Gudjarat was one of the powers to intervene in the dynastic rivalries which arose in Khánhós on the death of ‘Adil Khán II, finally resolved in 914/1509 with the acceptance of the Gudjarat candidate, a kinsman of Mahmúd’s, as ‘Adil Khán III (for a detailed account see FARUKIDS).
Beg with the Gudjarati diminutive suffix /a, -id, “the little Beg”; the form Baykara, used in the article पाखरा, seems to be a false Mughalization. Valahab, who usurped the Maval throne from his elder brother Sahib Khan, who had been proclaimed as Muhammad II by the rebel waara, had asked for Muzaftar’s assistance in coming to his throne. His claim was favourably reported on by the Gudjarat agents in Malwa, and Muzaftar had agreed to attack Maval in his support after the rains. Muzaftar was at the time entertaining an ambassador from Şah Isma‘Il of Persia, whose mission was apparently to induce Gudjarat to accept the Şah’s faith, and who had become acquainted with Şahib Khan; one evening after a dinner party the ambassador in a moment of pederastic enthusiasm assaulted Şahib Khan, who fled in shame first to Khândesh and then to Berâr; the ambassador was sent back to Persia after a scarcely cordial reception. Şahib Khan’s claim was quietly forgotten, and shortly afterwards he was called on to invade the province on behalf of Mahmud II who found himself no more than a puppet in the hands of his minister Medini Râi and his Râdpît army. Muzaftar accordingly marched on the capital Mândû with a strong Gudjarat force which was joined by the Khândesh army, hearing of which Medini Râi sought help from the powerful Mâhârârân Sângrâm of Citawr; the fort was taken by escalade in Şafar 920/February 1518, the Râdpît garrison massacred, and Mâhârâ Madinûn to his throne. The text of a letter from Muzaftar to the Ottoman Sultan Sellm I, congratulating the latter on his victory over Persia and announcing the capture of Mândû, is given by Ferîdân (Munâqa‘î, i, 359-7).

Muzaftar had been delayed in his actions in Mâlwa by several skirmishes in and around Idrâr, where a usurper had been established on the throne of the feudatory Hindu state of Sângrâm of Citawr; this interference was ill received in Gudjarat, and armies were sent to restore the rightful heir; the usurper continued, however, to harass the northern districts of Gudjarat until Muzaftar’s return from Mâlwa. Sângrâm, incensed by insults to his name offered by the Gudjarat commander at Idrâr, raidcd Idrâr, Ahmadnagar and other towns in 925/1519; Muzaftar retaliated with a large force early in 927/1521, and compelled the Râna to pay tribute and send a son to the Gudjarat court as a hostage. In Muzaftar II’s reign there was considerable diplomatic intercourse with the Portuguese at Goa, friendly at first. A mission sent to Gudjarat in 928/ 1522-3 sought permission to build a fort at Dîw, which the sultan, on the advice of Malik Ayâz [q.v.], governor of Dijunâgarh and Dîw, did not grant. The Gudjarat cause was pressed by one Malik Göpî at the Gudjarat court, but Malik Ayâz’s wiser counsels prevailed and the defences of Dîw were strengthened. Two attempts by the Portuguese to take Dîw by force, in 926/1520 and 927/1521, were thwarted, and an attempt to take Muzaftarâbâd, 30 km. east of Dîw, and establish a fort there, was foiled when some Muslim captives were used as a munitions ship in which they were travelling.

Muzaftar II died in Dijunâgarh II 932/April 1526. His eldest son Sikandar succeeded him but was murdered after six weeks and an infant son of Muzaftar II was placed on the throne as Mâhârâm MîrânMuhammad, the second son of Muzaftar II, who was formally installed as sultan in the Râmâdân/July following, the infant Mâhârâm MîrânMuhammad II and other princes of the royal blood were quietly disposed of, except for his younger brother Cand Khan who had taken refuge with Mâhârâm MîrânMuhammad II of Mâlwa.

The principal events of Bahâdûr’s reign—the attack on the Şînâr Şâhîs of Ahmadnagar in 935/ 1528 to settle a territorial dispute with Khândesh, his conquest of Mâlwa in 937/1531, the capture of the Râdpît strongholds Urdjidnâ, Bihlá and Râsin in 938/1532-3 and Citawr in 940/1535, the defeat of the Portuguese at Dîw in 937/1531 but the loss to them of Bassein in 941/1534 and the grant of permission to build a fort at Dîw in 942/1535, the long war with the Mughal Humâyûn from 941/1534 in which Bahâdûr lost Mâlwa and was dispossessed of most of his dominions until Humâyûn returned to face the threat of Şer Khan in 942/1536, and his death through Portuguese treachery—have been discussed above in the article BAHADUR SHAH GUDJARATI: see also HUMAYUN, MALWA, MUGHALS; and add to the Bibliography of BAHADUR SHAH GUDJARATI: Philip Baldaeus, Description of the East India coast, Churchill’s Collection of voyages and travels, London 1732, iii, 430 ff.

Bahâdûr’s murder by the Portuguese took place at sea outside Dîw in Râmâdân 943/February 1537, and with his death the greatness of the Gudjarat sultanate ended. The Portuguese seized Dîw with the palace and treasury, and it thenceforth passed out of Muslim hands. Bahâdûr left no heir, and in the first confusion after his death Muhammad Zamân Mîrân Humâyûn’s brother-in-law whose refuge with Bahâdûr had provoked the war with the Mughals, aspired to the throne, entered into a treaty with the Portuguese whereby he granted them Mangrâl and Damân and a strip of coastal land in exchange for their support, and the Môwa was read in his name in the mosque of Dîw, but the nobles of Bahâdûr’s court sent an army against him, and he was defeated and fled to Dihli. Bahâdûr had in his lifetime indicated that his sister’s son Mirân Muhammad Şâh, who since 926/1520 had been the ruler of Khândesh, should succeed him, and the nobles sent for him; but within weeks he died of grief for the uncle to whom he had been a constant and loyal companion for the previous ten years, and the eleven years old Mâhârâm Khan, son of Bahâdûr’s renegade brother Lattîl Khan, was then enthroned as Mâhârâm Şâh III.

Mâhârâm and his two successors were all mirrors, and the history of the sultanate after 943/1537 is mostly one of puppet monarchies and factious and suspicious nobles plotting for power against each other and against the best interests of the state. In 944/1538 the Ottoman sultan Suleyman I, apprehensive at the growing Portuguese threat because of Bahâdûr’s death, sent a fleet from Suez to attack them at Dîw; the Gudjarat land forces, fearing that the presence of the Turks at Dîw would be no more comfortable than that of the Portuguese, failed to give full cooperation, and on receipt of a fabricated letter announcing that the Portuguese main fleet was arriving from Goa, the Ottoman fleet raised the siege and sailed away; the Gudjarat generals negotiated a peace treaty with the Portuguese, and built a wall separating the fort from the town of Dîw (see further KÂNÂM SÜLEYMÂN PASHA).
In 950/1543 Mahmud III escaped from his custody at the hands of the powerful regent Darya Khan and fled to the protection of 'Alam Khan Lodhi, the sultan of the Mughal empire, who had fled to Gujarat. 'Alam Khan was a great-great-grandson of Ahmad I, whom Akbar's forces had taken prisoner on his first invasion of the Mughal empire, where apart from the commercial traffic there was a busy pilgrim traffic to the Holy Cities. The trade suffered a great loss in the Satya-siśa of 1687, 1040-1/1630-1), and took at least ten years to recover; an interesting account of Mughal famine relief is given by 'Abd al-Hamid, Bādāsh-nāma (text, Engl. trans., and comment in F. Saran, Provinciaal government of the Mughals, Allahabad 1941, 432-3).

The peace and prosperity of Gujarat under Mughal rule gave way to disorder after the death of Aurangzeb at the beginning of the 12th/18th century. Previously there had been sporadic raids on Gujarat territory, especially Surtah in 1074/1664 and 1081/1670, by the Marāthā chieftain Shivaji; now the Gāṅkār family rose to prominence in Gujarat affairs and wielded more power than the Mughal sāhābdar; by 1172/1758 they had started a reign of terror. Villages and towns were plundered, and in the next ten years the Marāthās had overrun almost all the province; eventually, with the fall of Ahmadābād in 1171/1758, Mughal rule was extinguished. For the history of the province to the Mughals see MUGHAL. The importance of the province to the Mughals was largely commercial. The region was famous for its silk weaving and, especially at Ahmadābād and Surtah, the production of velvets (although sericulture never seems to have been practised in the region; the silk was imported from Bengal and from China); fine cotton cloth (bafta) was produced at the coastal towns, Bāhārūn in particular producing fine bleached calico; Sarkhedj was the principal centre for indigo production in the Mughal empire; saltpetre was refined at Ahmadābād and Surtah; and salt was prepared by evaporation from many districts bordering on the Rāj of Kābūt. The conquest of Gujarat also gave ports to the Mughal empire, where apart from the commercial traffic there was a busy pilgrim traffic to the Holy Cities. The trade suffered a great loss in the Satya-siśa, the "famine of eighty-seven" (the Vikram year 1687, 1040-1/1630-1), and took at least ten years to recover; an interesting account of Mughal famine relief is given by 'Abd al-Hamid, Bādāsh-nāma (text, Engl. trans., and comment in F. Saran, Provinciaal government of the Mughals, Allahabad 1941, 432-3).

GUDJARAT

In 950/1543 Mahmud III escaped from his custody at the hands of the powerful regent Darya Khan and fled to the protection of 'Alam Khan Lodhi, the sultan of the Mughal empire, who had fled to Gujarat. 'Alam Khan was a great-great-grandson of Ahmad I, whom Akbar's forces had taken prisoner on his first invasion of the Mughal empire, where apart from the commercial traffic there was a busy pilgrim traffic to the Holy Cities. The trade suffered a great loss in the Satya-siśa of 1687, 1040-1/1630-1), and took at least ten years to recover; an interesting account of Mughal famine relief is given by 'Abd al-Hamid, Bādāsh-nāma (text, Engl. trans., and comment in F. Saran, Provinciaal government of the Mughals, Allahabad 1941, 432-3).

The peace and prosperity of Gujarat under Mughal rule gave way to disorder after the death of Aurangzeb at the beginning of the 12th/18th century. Previously there had been sporadic raids on Gujarat territory, especially Surtah in 1074/1664 and 1081/1670, by the Marāthā chieftain Shivaji; now the Gāṅkār family rose to prominence in Gujarat affairs and wielded more power than the Mughal sāhābdar; by 1172/1758 they had started a reign of terror. Villages and towns were plundered, and in the next ten years the Marāthās had overrun almost all the province; eventually, with the fall of Ahmadābād in 1171/1758, Mughal rule was extinguished. For the history of the
Marathā wars and their rule of Gudjārat see MARĀTHĀS. Some tracts of the province were not, however, under the Maratha rule of the Gākjātwar or the Khān prepared for battle in the absence of imperial support was unable to take effective action, and Maratha rule continued until Gudjārat was ceded to the British by the Gaikwar in 1817.

For the ethnology of Gudjārat see HIND, Ethnology. For religious developments see DAVN, PĀRṢ; for Islamic sects see BOHORAS, KHODJAS, IMĀM SHĀH, ISMĀ'ILIYA, MU'MIN, SĀPFANTI.

For the coinage of Gudjārat see SIKKA. For the monuments, see HIND, AḤṢ AHMADĀRĀD, BHAROČ, ČĀMPĀNĀR, DJUNAGĀR, KHAMBAYAT, MAḤMŪDĀBĀD, SÜRĀT.

**Bibliography:** Sources for Gudjārat history under the Dehil sultanate have been given in the bibliography to DILĪ SULTANĀT; especially important for Gudjārat are Dīyā' al-Dīn Barānī, Ta'Rikh-i Fīrūz Shāhī; Īsānī, Ma'n al-saldānī; Aḥmad Khān, Aṣṣ al-futūh; 'Abd al- Kaḍum Hamdānī, Ta'Rikh-i Maḥmūd Shāhī; 'All b. Maḥmūd al-Mīrmānī, Ma'āṣīhir-i Maḥmūd Shāhī, Bodi. Elliot 237.

Modern works: M.S. Commissariat, History of Gujarat, i, London 1938; ii, Bombay 1957; well documented with much cultural information. A research project of the history of Gudjārat under the Muslims is currently being undertaken at the M.S. University of Baroda, from which there has appeared S. C. Misra, The rise of Muslim power in Gudjārat, London 1963, which covers the years 697/1298 to 845/1442; idem, Muslim Communities in Gudjārat: preliminary studies in their history and social organization, New York 1964; both these with extensive bibliography. Pearson, 20164-80. Much general information in Bombay Gazetteer, i-x, xii, xiv; Baroda state gazetteer, 2 vols., Bombay 1923. On the coins of the Gudjārat sultanate, especially G. P. Taylor, The coins of the Gudjārat sālānat, in JBBRAS, xxi (1903) 278-383; and Pearson, 10482-97.

**GUDJĀRĀṬI,** language spoken in the state of Gudjārat (population 20,623,474) and in the communities of Gudjārātis which have settled in various parts of India; it has always been the first language of the many Gudjārti speakers in the region bounded by Dhāysalmer to the north, Mālwa to the east and Sawráshtra and Gudjārat to the west and south. It became a direct predecessor of modern Gudjārātī. Some of the dated documents of the 12th century are in Sawráshtra, the Ismā'il Khodias of Sawráshtra among the occupational jargons are the speech of the educated upper caste population. See also barsānī, also barsānī, also barsānī, also barsānī, also barsānī.

**GUDJĀRNĀVĀLA,** an industrial town of West Pakistan and headquarters of the district of the same name, situated in 32° 9' N. and 74° 11' E., on the main railway line between Lahore and Peshawar [qq.v.]; population (1961) 196,754. The town, a mere village till the middle of the 19th century.
century, owes its origin to a tribe of the Gūḍjars [q.v.] who were expelled by Sāhī Bāzām from Amritsar [q.v.]. On changing hands the village was renamed Khālpur, after the head-man of the Sārisī. But this name never gained popularity.

It was of little importance during Mughal days and consequently finds no mention in the Āḍīn-ī Akbarī. Early in the 19th century it was captured by Carat Singh Dījāl, grandfather of the Sikh ruler Randjīt Singh, who made it his headquarters. Randjīt Singh himself was born here and it continued to be the capital of the rising Sikh power until 1799, when the seat of government was shifted to Lahore. The Sikh general Harī Singh Nālwā, who led many punitive expeditions against the Áfricaños of the Khyber, was also a native of this place. His house, in a narrow street of the town, is still preserved.

The father and grandfather of Randjīt Singh both have their Samādhs, last resting places, in this town. The town remained quiet during the military uprising of 1857 but was badly disturbed during the Non-Cooperation and Khilafat movements of 1919-22, when rioters uprooted the railroad track, burnt down the railway station and indulged in widespread arson and looting. By way of punishment the new railroad was built at a considerable distance from the town. It is now used as a halting station for good trains while the passengers alight at the site of the destroyed station, which was rebuilt by the British Government. Politically unimportant, the town is a flourishing centre of iron, steel, copper and hand-loom industries and is rapidly expanding.

(A. S. Bazīm Ansārī)

GUDJĀRAT, a town, tahsīl and district in the northern plains of the Pākistān Panjāb lying between the rivers Dījjām and Cānāb. The district is thought to have once formed part of the ancient Gudjār town kingdom; but it is not specifically referred to in Islamic historical writing until the time of Bālāl卓 (855-941/1451-89) when the town of Bālāl卓pur, 36 km. north-east of Gudjārāt town, was founded; the settlement of the district was continued by Sāhī Dījāl in the middle of the 16th/17th century, and completed by Akbār with the refounding of Gudjārāt town.

There seem to have been at least two successive cities on the site of what is now Gudjārāt. Gudjārāt town was garrisoned by Gūḍjars to restore Gudjārāt and made it the headquarters of a large district; the local population is predominantly Dījāl [q.v.], but the fort (Gudjārāt-Akbārābād) was garrisoned by Gūḍjars.

The town and district remained under efficient Mughal control until the death of Awrangzēb, records of the period having been preserved by the hereditary kānīngōs of the region. In 1711/1738 it was ravaged by Nādır Sāhī [q.v.]; the Gakhkars of Rāwalpindī, under Sūlān Mūkarrāb Khan, established themselves there in 1711/1741, but the country was an open prey from 1711/1741 to 1725/1726 to the marauding armies of Aḥmad Sāhī Dūrrānī [q.v.] on whose route it lay. Mūkarrāb Khan was confirmed in his possessions by the Dūrrānī ruler, and nominally administered them on his behalf; but "nothing was left to the people but the food and drink in their mouths; the rest was Aḥmad Sāhī's". This nominal rule lasted until 1779/1785, when Gudjārāt fell to the Sikhs. The district came under British rule in 1846.

The town is largely agricultural, and produces some timber. Gudjārāt town has some reputation as a centre for fine furniture making, and had previously some renown as a centre of iron damascening. The shrine still exists of the pir Shāh Dāwā [b. 975/1370, d. 1725/1721 according to the local tradition], a saint whose intercessions were said to remove the curse of barrenness if the first-born were dedicated to his service. These children attached to the shrine are invariably freaks, of low intelligence and with absurdly pointed heads—deliberate distortion of the heads in infancy has been suspected; they are known as Čūh-i Shāh Dāwā, "Shāh Dāwā's rats".

The name Gudjārāt used here reflects the conventional spelling Gujarāt, adopted to distinguish this district and town from Gujarāt (Gudjārāt [q.v.]); the two names are really identical. For the etymology see GUDJARAT.

GUERSIF [see GARSIF].

GUILD(S) [see PUTUVWA, SINIF].

GUINEA, an independent republic on the West coast of Africa (246,000 sq. km), bounded on the north by Portuguese Guinea, Senegal and Mali, on the east by the Ivory Coast, and on the south by Liberia and Sierra Leone. Within these limits, between 7° and 15° N., and between 17° and 17° E., every type of terrain and climate is to be found, starting with Lower Guinea which has a width of from 40 to 90 km, and extensive deltas have been formed by the neighbouring rivers, often lined with mud-flats or streen with islands; Central Guinea corresponds with the Fûta Dîallon, dominated by residual high ground from 1200 to 1500 m. and distinguished by the bowal, a cap of laterite isolated by erosion, and where the introduction of cultivation has increased the sterility. Upper Guinea corresponds with the upper basin of the Niger, where the climate becomes continental; further south, in the Guinea forests, lies the mountain barrier containing Mount Nimba.

Guinea probably derives its name from the Berber ignawwn, pl. of agnaw, which means "mute" and does not imply any notion of colour (see G. S.
Colin in GLECS, vii, 93-5), contrary to the view expressed by M. Delafosse (Haut-Sénégal-Niger, ii, 377), the population of Guinea numbers about 3 million.

There are still some centres of population that are either indigenous or were established in very early times, Coniagu and Bassari in the north, Kissi and Guerze in the south.

The Baqa, Landuman, Mani or Mendenyi, and Nalu have been driven back from the Futa towards the coast by Mande, Sarakole, Malinke and Sussu elements, and by the conquering Fulani. The history of these settlements corresponds in general outline with the history of Islamization.

This process was accomplished only slowly, under the pressure of political and military events in the Nigerian Sudan, first with Malinke elements, and then through the Fulani who, as soon as they believed themselves to be sufficiently strong, were to proclaim a holy war and to maintain their ascendancy over the Futa until the French conquest.

It was in 1427/1030 that Baramendana Keita, the sovereign of Mali, was converted to Islam. From the end of the 9th/10th century the first Diola to be Islamized by the Sarakole penetrated into Guinea and began to spread Islam into the Futa and along the kola-nut routes leading to the coast. In the 6th/12th century, the Soninke Morikubala Dore introduced Islam into the Konian, Awrodugu and Kossadugu. In 1528/1230 Amari Sonko, one of the commanders of Mansa Ule, king of Mali, conquered and converted the Kangaran.

In the first half of the 10th/16th century came the Pouli from Macina and Tichitt, commanded by Bambi Diade. These first Fulani invaders were Kâdiriya Bakkâya (of the Kunta of Timbuctu). They set about converting or expelling the refractory elements. Koli Tenguela or Koli Pouli, great-grandson of Bambi Diade, created the first kingdom of Futa. Attracted by the mountain pasturages, the Fulani came in ever increasing numbers from Macina at the end of the 11th/17th century, and Islamization became more marked. However, the Muslim Mandingo, coming from Diafonou in particular, founded Kankan and the villages of Bate, Kufodie and Timbuktu. In 1528/1230 a powerful force of Fulani arrived from Macina, led by a certain Seri or Sidi. In about 1515/1700 leadership passed to Muhammadu Salî and then to Kikala, a man renowned for his piety. On the death of his son Sambigu, his grandsons Nuhu and Malik Si disputed the succession (1132-8/1720-6).

The Muslim penetration was, at that date, on so extensive a scale that it was tempting to make use of the religious pretext to evict the proprietors of the land. It was Ibrahim Musu, still known as Karamoko Alfo, a man of immense piety, who was called on to fight against the pagans. He inaugurated the permanent state of holy war which was one of the constant and fundamental policies of Futa. The first victories fell to the aggressive Fulani, but the pagans recovered and their chief, Pouli Garme, occupied Timbuktu when Karamoko became insane and died. In his place was chosen Ibrahim Sori ("the Wakeful"), known as mawo (= the Great), who in practice was to be the great war leader of Futa, defeating the Wassulonke and the Sulima in succession. He compelled the Fulani chief of Labe to recognize his authority over the Mandingo province of Niokolo in Upper Gambia, and forced Maka, Coniagu and Bassari to recognize Futa.

The progress of Islamization was thus advanced notably; in 1830 al-Hâdidji ‘Umar had established the Dinguiraye (cattle-park) before carrying out his conquests in the north, and his adherents had penetrated the frontier zone of the present northern Guinea. From 1830 a former Mandingo pedlar, Samory Toure, set up the empire of Onassubu, the capital of which, Bissimilah (or ‘Ilimah), occupied Timbuktu, and his 1500 warriors were defeated at Poredaka. It was the end of the independence of the Futa Djallon.

The progress of Islamization was thus advanced notably; in 1850 al-Hâdidji ‘Umar had established the Dinguiraye (cattle-park) before carrying out his conquests in the north, and his adherents had penetrated the frontier zone of the present northern Guinea. From 1830 a former Mandingo pedlar, Samory Toure, set up the empire of Onassubu, the capital of which, Bissimilah, was his place of refuge after expeditions to what later became Ghana and the Ivory Coast.

Samory's invasions produced a renewed Islamic infiltration. By the treaties of Kenieba-Koura (March 1886) and Bissandugu (1889), Samory made himself secure from the direction of the French Sudan and, to protect himself from the British, he requested a French protectorate. Operations started again from 1891. In 1898 Samory, captured by the Gourand force, was deported to Gabon where he died two years later.

French Guinea was established by a decree of 17 December 1891, and its boundaries were fixed in 1900 with the neighboring states, French Sudan (now Mali) and the Ivory Coast. Being included in 1904 in the Federation of West Africa, it became a
The Islamization of Guinea was continued throughout the whole French period with the frequent help of the President, although himself a Muslim.

In conclusion, we may say that in Guinea as a whole, according to the judgements of the anthropologist J. R. Molard, "the Fulani are Muslim born, the Mandingos are adopting Islam, while the forest peoples (Kissi, Toma, Guerzé) have remained hostile."

**GÜLBABA**, a Turkish title, with the sense of head of a Muslim cloister (tekke) of the Bektâşî Order; the name of a tekke at Buda and of another tekke in the neighbourhood of Edirne; the name of a legendary personality.

The name Gûlbaba, in connexion with the tekhe and the türbes so designated at Buda, appears in Turkish documents of 974/1566 with the form *Giilbaba* (Vienna, Flügel 1924); on a manuscript skecth-map of 1684 (E. Veres, *Marsîgı jileşmesi énd têktêpesi Budavêdê 1684*, 1686. evi âstomûrdâv [Report and maps of the fortress for the years 1684 and 1686], in Budaêst rûçõesâl [Antiquités of Budapeste], ix, 142) it occurs four times in the same form, though in each case without vocalization. Written in the same manner, it is found in several Turkish authors, e.g., in *Peçevlî* (ii, 141), *Ewwiîlî Cebeli* (vi, 244) and *Naîmînî* (i, 289); and in Silâhđâr it occurs a number of times in the form *Gülbulabî* (ii, 401, 799, 801). In the writings of European authors the name is encountered as Julipapa in G. Wernher and E. Brown, as Gûylpapa in the superscription—from a European hand—on the above-mentioned manuscript sketch-map, and as Ghiul Baba in the text of L. Marsigli; about 1830, after the rendering of a derishv from India, it was written down as Tülbaba. The forms given in the Latin script leave no doubt that the name, in its first syllable, has to be pronounced Gûlbaba, with the vowel ü. A man with the name Gûlbaba is known from the time of Mehemmed II (Baîbingê, GOW, 213) and a locality near Edirne is also called Gûlbaba. The word gûlî, as a component of personal names, is known, too, in other instances, e.g., Gûl Toûmâxî Khân, Gûl Rûstêm Khân.

The expression gûlî, in names of this kind, has not yet other partners. See for example the indexes in *Gr. I. Ph.*; Gibb, *op. cit.*; Browne, ii, iv. Further material might be provided by catalogues of oriental and western manuscripts, further Edwards, *Cat. of the Printed Books in the British Museum*, London 1922; A. J. Arbery, *Persian Books* (*Cat. of the Library of the India Office*, ii/6), London 1937, and similar works. From Persian poetry might be mentioned *Gül u Khusraw or Khusraw u Gül* (usually *Khusraw-nâmê* by Farâd al-Dîn Muhammâd ʿAttâr (d. 627/1231) [see *EP*, i, 755; H. Ethê, *op. cit.*, 286; in more detail H. Ritter, *Philologika*, opp. cit., i, 7 (1938), 160-72; *Gül u muli* ("Rose and Wine"); see *IA*, i, 734; *Gul u Naw-rûs* by Djalal al-Dîn Ahmad Tabbaj in 1734/1733, and the same title by Khâdhî Khirmanî in 1742/1741-2 (see H. Ethê, *op. cit.*, 249); *Gul u Sanawar* "Rose and Spruce", in prose and several times translated into Urdu (see H. Ethê, *op. cit.*, 321 and 323); Garac de Tassy, *Histoire de la Littérature Hindoue et Hindoustanie*, Paris 1870, i, 157 ff.; and translated by him in *Revue orient. et amer.*, vii, 69-130). From Ottoman poetry, *gül ili Khusrev* by Āhî (d. 923/1517; Gibb, *op. cit.*, ii, 291); *Gül u Şahâ, "Rose and Zephyr"*, by Neğdî (d. 914/1509; see Gibb, *op. cit.*, ii, 101); *Munâsara-i Gül u Khusrev*, "Contest between (the) Rose and Khusrev", also by Neğdî (see Gibb, *op. cit.*, ii, 100), and *Gül u Şahâ* (as to *Gül dâvul* by Mu'âdî (16th century); see Gibb, *op. cit.*, i, 160).

**GÜLBABA**, a Turkish title, with the sense of head of a Muslim cloister (tekke) of the Bektâşî Order; the name of a tekhe at Buda and of another tekhe in the neighbourhood of Edirne; the name of a legendary personality.

The name Gûlbaba, in connexion with the tekhe and the türbes so designated at Buda, appears in Turkish documents of 974/1566 with the form *Giilbaba* (Vienna, Flügel 1924); on a manuscript skecth-map of 1684 (E. Veres, *Marsîgı jileşmesi énd têktêpesi Budavêdê 1684*, 1686. evi âstomûrdâv [Report and maps of the fortress for the years 1684 and 1686], in Budaêst rûçõesâl [Antiquités of Budapeste], ix, 142) it occurs four times in the same form, though in each case without vocalization. Written in the same manner, it is found in several Turkish authors, e.g., in *Peçevlî* (ii, 141), *Ewwiîlî Cebeli* (vi, 244) and *Naîmînî* (i, 289); and in Silâhđâr it occurs a number of times in the form *Gülbulabî* (ii, 401, 799, 801). In the writings of European authors the name is encountered as Julipapa in G. Wernher and E. Brown, as Gûylpapa in the superscription—from a European hand—on the above-mentioned manuscript sketch-map, and as Ghiul Baba in the text of L. Marsigli; about 1830, after the rendering of a derishv from India, it was written down as Tülbaba. The forms given in the Latin script leave no doubt that the name, in its first syllable, has to be pronounced Gûlbaba, with the vowel ü. A man with the name Gûlbaba is known from the time of Mehemmed II (Baîbingê, GOW, 213) and a locality near Edirne is also called Gûlbaba. The word gûlî, as a component of personal names, is known, too, in other instances, e.g., Gûl Toûmâxî Khân, Gûl Rûstêm Khân.

The expression gûlî, in names of this kind, has not
the meaning of rose (i.e., the flower), but a mystical sense, in that it alludes symbolically to fiery zeal on behalf of the (Muslim) faith. This meaning underlies, moreover, the compound composed of the words dervish-kebek. In the life of the dervish, giil has the sense of "glowing iron rose", "particular ornament on the top of a dervish cap, especially in the case of the Kâdirî order"; it is the mark which distinguishes the head of a house of the order and which is to be worn on the cap (tâdî). M. d’Ohsson writes (Tableau général de l’Empire Ottoman, 1834, p. 134) that the red-hot iron is called giil, which the Rifâ’î dervishes grasp, kiss and bite in the ecstasy of their religious dances. Th. Menzel observes (Beiträge zur Kenntnis des Dervisch-tâg, in Festschrift G. Jacob, Leipzig 1932, 179 n.) that one of the objects in use amongst the dervishes is named "seneghî şîz = giil, scharb (Nadel spitze mit Kugel und Kettchen)", that part of the dervish cap is called giil, and this is regarded as the damgha of the erens (ibid., 191); and that, furthermore, giil in various contexts is the badge of different dervish orders and of distinct grades within the orders.

In elucidating the name Gulbaba we have therefore to set out from this mystical sense of the word giil, with the result that giilbaba means "a zealous dervish, a rose on the branch of his order", i.e., a man who, at the ceremonies held in his house, holds the red-hot iron as of a rose breaking into bloom—the iron whose touch is as pleasing as the fragrance of roses, one who keeps and handles this iron, a man who bears the mark of a religious head (giil) on his cap fashioned from wedge-shaped pieces of cloth, etc. Ewliya Celebi (vi, 244) alludes to this sense of the word, when he addresses Gulbaba, in verses composed in his honour, as giil-baba, i.e., as little father of the roses, as the baba recognizable by the rose. This meaning is also to be found in E. Brown, who notes that the head of the Buda tekhe was "called fulphpa, or Father of the Rose" (Edward Brown, A brief account ..., London 1673, 34, quoted in Budapest régiségét [Antiquities of Budapest], ix, 115); and in L. Marsigli, who remarks that the Turks, by means of the compounds giil-tesbiji, giil-benk, giil-baba, giil-tesbiji-ben, giil-tesbiji-ben, giil-tesbiji, the orders.

Gulbaba is therefore a Turkish title. It is only on the evidence of Ewliya Celebi that Gulbaba would seem to be a personal name, referring to a historical personage. Ewliya Celebi remarks (vi, 225) that Gulbaba died at the Ottoman conquest of Buda and that Sultan Süleyman had his corpse laid to rest and commended the fortress of Buda to his protection. Of such an important event no trace is to be found in the official historians of the campaign. Djalal-zade, the official historian of the campaign, states (in Ahmadi-ziid-i-Atywdl-i-i Akbar-ndma, the official memoirs, the seat of Babur’s government, Agra on 6 Dhu ‘1-Hididja, ion/7 May, 1603 at the age of 82 lunar years. Akbar himself accompanied and performed the hajj four times. She returned to India in 990/1582 after a perilous voyage involving a shipwreck off Aden, where she had to stay for a whole year. It was after her return home that she was asked by Akbar [q.v.] to write her personal memoirs, the Humayûn-nâma or Awal-i Humayûn Pâdghâh; as material for Abu ‘l Fadl’s Akbar-nâma. Only one incomplete copy, recording the events up to 960/1553, of this work survives; it is in the British Museum. It was published with a lengthy introduction and English translation by Annette S. Beveridge (London 1902). Another, but inferior edition containing only the Persian text, was published at Lucknow in 1925 under the title Humayûn-nâma-i Gulbadan Bégam. She died at Ágra on 6 Dhui ‘1-Hijdrya, 1011/7 May, 1603 at the age of 82 lunar years. Akbar himself accompanied and shouldered her bier a little distance from the city.

She was well esteemed both in Turk and Persian and was good at calligraphy and the art of insha’. She used to compose in Persian and two lines of hers still survive in manuscript (cf. A*m-i Akbari, TOEM, ii/926-5; On, Isparta 1935)."
have been quoted by Mahdi Shahriz in the Tadhkirat al-Khawdtin (not seen by me).

(A. S. Bazmee Ansari)

GULBÁNG, a Persian word meaning the song of the nightingale, and hence by extension fame, reputé, and loud cries of various kinds. In Turkish usage it is applied more particularly to the call of the muezzin [see ADHAN] and to the Muslim war-cry and loud cries of various kinds. In Turkish usage it is an ancient name. It is applied to the region where the town of Gulbargá is situated.

Bibliography: Pakaln, i, 638-5; Ismail Hakkí Uzuçuñaslı, Osmanlı devleti tekhiddinden kapılıklı ocahlar, i, Ankara 1945, 249, 375, 421-2, 533-4. See further MEKTÉRKHÁNE and NAWBAH.

GULBARGA, a town and district in the north of Mysore state in India on the western borders of what is known as the Deccan (Dakhkan [q.v.]); the town is situated at 17° 21' N., 76° 51' E. Of some antiquity in the Hindú period, it formed part of the domains of the Káthiyás of Warnagul before the Islamic conquest. It was annexed for the Dihli sultanate by Úzugh Khán, the future Muhammad b. Tughláq, early in the 13th-14th century, to pass first to the Bahmani dynasty on its establishment in 848/1447, whose first capital it became under the name Absahábád. It fell to the ʿAdil Sháhís of Bījpúr in 909/1504, and although it was recovered by Amir Barid ten years later it was soon retaken by the ʿAdil Sháhís; they held it until 1667/1657, when Mir Qámínia besieged and captured it for the Mughuls.

The majority of the monuments of Gulbargá belong to the period when it was the Bahmani capital, and have already been described in the article BAHMANIDS. Of the monuments not mentioned there the following are of some importance: Kalandár Khán's mosque (see Report of Archaeological Department, Hyderabad, 1335F./1925-6, 7 ff., Plates IIa, Xb), built by a Bahmani governor after the transfer of the capital to Bida; the mosque of Afḍal Khán, an ʿAdil Sháhí general of the late 10th/16th century (Mírzá Ibráhím, Basátíí Saládíín, 130 ff.), which stands in the court of the dargáh of Gésú Daráz, in the later stone Bījpúr style [see SĪJAPUR, Monument], similar to the mosque of Maliká Džélán, with hanging stone chains below the cornice (Report ... 1335F./1925-6, 8, Plates IIb, XIa), with a large chhánda mosque, possibly pre-Bahmani, with a vaulted arch-shaped ceiling with wooden ribs recalling the style of the Buddhist cave-temples (Report ... 1346F./1936-7, 7 ff., Plate Vla); a group of 5 mausoleas at Holkonda, once a suburb of Gulbargá on the Homnabad road, similar to those of the Haft Gunbadh (Report ... 1346F./1934-5. 1); the mosque and dargáh of Ḥadrát Kamál Mujdárrad (ibid. 5-6 and Plates IIIa and b); the tomb of Cánd Bbí, of Nízám Şáhí style (ibid., 6, Plates IVa and b).

Bibliography: and see Bibliography to the article BAHMANIDS.

GÜLEK BOĞHÁZ, Turkish name for the Cilician Gates, for which see CILICIA, col. 35a.

GULİSTÁN [see ʿAṢĪD].

GULİSTÁN, the name of a place in the Caucasus where, on 12 October 1813, a peace treaty was signed between Russia and Persia. In 1800 the Russians had annexed Georgia, and the Persians, in an effort to check their further advance southward, had suffered two defeats in 1812, at Aslandí and Lankurán, and had been forced to sue for peace.

The terms of the Treaty of Gulistán, which was negotiated through the mediation of the British ambassador Sir Gore Ouseley, were disastrous for Persia. The regions of Georgia, Kárábág, Şahkí, Şirwán, Darband, Bákí, Qádšgírán, Gandhiá, Múkán, and part of Táškí, were ceded to Russia, and the Sultan of Turkey was paid a subsidy of 500,000 piastres. The terms of the treaty provided for the navigation of the Caspian Sea by vessels of the Ottoman Empire, but they were never ratified. The ambiguous nature of the Article relating to the territorial settlement led to disputes and to the renewed outbreak of war in 1826.

Bibliography: A. Wahíd Mázarándarání, Ráhnamá-yi ʿUhad, Tehran 1341F./1962, 294, 306. For an English translation of the Treaty, and additional bibliography, see J. C. Hurewitz, Diplomacy in the Near and Middle East, i, 1956, 84 ff. (R. M. Sávory)

GÜLKİHANÉ, (modern Turkish Gülhane) the "House of roses", or Gülháne Meydání, is the name of a part of the gardens which lie along the sea of Marmora on the east side of the Topkapí Sarayí in Istanbul [q.v.]; the name is derived from the fact that in olden days the building, in which the rose sweetmeats for the use of the court were prepared, stood there. The place is famous in history because the celebrated firman of Sultan ʿAbd al-Majíd, the so-called Khálí-i šerif promulgating the reforms, was publicly proclaimed there on Sunday 26 Şabán 1255/November 1839; cf. the description in G. Rosen, Geschichte der Türken, ii, 14 ff.; Latif, Taiírigí, vi, 59 ff.; E. Lewis, The emergence of modern Turkey, London 1965, 104 ff., and article TANZÍMÁT; on the place itself cf. White, Three years in Constantinople, i, 110, and TOEM, i, 291 ff.: it is now a park.

(J. H. Mördtmánn*)

GULPÁYÁGAN, district and town in the fifth Ustán (Luristán). The central chain of the Zagros range traverses the district; the highest peak is Hájjí Dár (3650 m.). The district lies partly in the cold region and partly in the temperate one. The chief town, Gulpáyagán, which is situated in Long. 50° 18' W. and Lat. 33° 26' N., is 1924 m. above sea level and therefore has a cold climate in winter. It is an ancient town containing some buildings dating from the Sáḷdágó era. In 1931 the population of the town and the surrounding villages amounted to 22,000. The Arab geographers gave the name of the town as Gurbósghákán, i.e., Gurbósghakán. It is only in comparatively recent times that frequent mention of the town occurs. The Arab geographers referred to it merely as a stage or station on the
route uniting Isfahan with Hamadan. The chief industry of the town and its surroundings is agriculture.

Farhang-i Diwānī-yi Irān, v, 316; for a discussion of the etymology of the name, see Āhmād Kārsāv, Nāmā-yi shahkār u dīhā-yi Irān, Tehran 1335/1556, 68. (L. LOCKHART)

GULSHANI (Turkish: Gülşen), İbrahim b. Muhammad b. İbrahim b. Şihāb al-Dīn (?-940/1534), Turkish mystic, a successor of Djīlāl al-Dīn Rūmī and a prolific poet. He came of a family settled in Diyarbakr, where his father Muhammad al-Āmidī's türbe and a prayer-hall said to have been built by him still stand some 500 yards outside the Mardin gate (see Aʿl Ėmirī, Dīvānshīr u dīhā-yi hāšerī, 16; for the report that he came from Barda in Ādharbāyjān, see M. ʿAll Tārībiyāt, Dānīmāndān-yi Ādharbāyjānīyān, 318). Muḥyīʾī Gūlşenī, whose Mendībī-ʾī Bahāqel Gūlşenī and another source on İbrahim Gūlşenī’s life and circle, continues the genealogy given above with four more names: b. Aydoğhmush b. Gūndoghmush b. Kutlugdomhush b. Oghuz, thus making him a descendant of Oghuz Ata, but gives no information on his ancestors beyond his father and his grandfather. His father Muhammad al-Āmidī was the author of works on fīkh, hālām and māniḥ; his paternal grandfather İbrahimī wrote a shayḵī (on the Fārābī), completed the Faḵk al-muqaddab (on the solution of various problems in fīkh), composed much-esteemed works on ṭasawwuf, and was for a time kādī of Diyarbakr (Muḥyīʾī, Mendībī, fol. 63); his maternal grandfather Şahar al-Dīn was descended from a certain Kādī ʿĪsā and was a muḥaddīsī (Aynābī, Mendībī, fol. 67).

The date of Gūlşenī’s birth is not exactly known. Muḥyīʾī’s statement (Mendībī, 159v.) that when he died in 940/1534 he was 114 years old implies that he was born in 826/1422-3; but elsewhere he states that his father had survived into the reign of the Aḵsāʾīs (Mendībī-i İbrahim, fol. 63v.); he was present when Sultan Yā’qūb b. Iṣḥāq b. Saḥīḥ al-Muṣṭafī died in 940/1534 he was 114 years old implies that he was born in 859 or 860/1455 or 1456, but for reasons which will appear this statement on his age is unacceptable. Most probably he was born between 838 and 840/1434-7. His father dying when he was two, he was brought up by his paternal uncle Sayyīd ʿAll, who, according to the Mendībī (77r.), had more than 200 murīds. While still a child, Gūlşenī began to learn the Kurʿān and to read Turkish books of tafsīr and ṭadbīḥ. Concerning his later education the Mendībī gives only vague and confused information: it relates that he set out alone to study in Mā warā al-nahr, but when he reached Tabrīz he was adopted by Īzūn Ḥasan’s kādīʾīšakār, who told him that all the ūlāmāʾ of Īzūn Ḥasan’s realm would obey his guidance, and appointed him taḥfīzī. The stipend he received enabled him to help his uncle at Diyarbakr and, probably at this time, to buy his wāḥel (Mendībī, 77v., 78r.). (That he was given the post of taḥfīzī and still more important posts and was recognized already as a famous shaykh shows that the statement, also in the Mendībī, that he was only 15 when he went to Tabrīz must be rejected.) Elsewhere (13rv.-v.) it is stated that he travelled to Hārāt to resolve a dispute between Īzūn Ḥasan and Husayn Bāyḵārā and, on a similar mission, visited Shīrāzwī who, when he met Djīlāl al-Dīn Dāwānī (see Aʾl Ėmirī, he gives the impression to have been at this period a government official with an inclination to tašawwuf, who enjoyed special inward experiences and was searching for a suitable murīd has; soon afterwards at Karabakh, by the good offices of Īzūn Ḥasan’s brother Uways, he was introduced to and became the murīd of Dede ʿUmar Rūkhānī (q.v.), d. 892/1486 of Aydnī, who was the khalīfa of Sayyid Yābāʾī Shīrwānī, the piri-i ḥānī (‘second piri, i.e., founder’) of the Khwāṭitiyya. These encounters Gūlşenī devoted himself to taḥfīz and to ascetic practices: he would walk in the streets with a wine-cup in his hand to demonstrate his attachment to mādīnī doctrine and wore a sheepskin tālī (Mendībī, 28r.). After Īzūn Ḥasan’s death (882/1478), his successor Khaḷlād had little esteem for Gūlşenī, but the respect and fame which he enjoyed during the reign of Yā’qūb (883-97/1479-90) are demonstrated by a poem of Idrīs Bīdīlī (see Aʾl Ėmirī), quoted in the Mendībī (30v.-31t.); this respect was increased by the reverence in which ʿUrūbī’s ʿabd-i ḥadsakah, ʿĪsā b. Jā汗, held him. Gūlşenī, assuredly attended the sermons of ‘Urūbī Rūkhānī, who had come from Karabakh to settle at Tabrīz (Mendībī, 26v.); he was present when Sultan Yā’qūb b. Iṣḥāq besieged Akhiska, settled various disputes within the royal family, and witnessed the rise of Sayyīd Ḥaydar. When ‘Urūbī Rūkhānī died (894/1486), he succeeded him (not without opposition) as post-nishīn (q.v.) and began to teach his disciples in the Mursafīyya mosque at Tabrīz. This period of taḥfīz and taḥfīzī did not last long: Yā’qūb’s successors had little respect for him and even persecuted him. In 900/1495 he performed the Pilgrimage together with a numerous company of disciples and adherents. At Mecca he met some ‘ūlāmāʾ of Egypt and wished to visit Egypt on his homeward journey, but gave up the plan out of consideration for his family waiting for him at Tabrīz (Mendībī, 78v.-79r., 83r.). The Şafawī occupation of Tabrīz, consequent persecutions, and Alwand Beg’s defeat by Şaḥ ʿĪsā ʿĪsāʾī (907/1502) obliged him to hasten from Tabrīz with his family. He came to Diyarbakr, then governed by Kāsim Beg, but when, after Alwand’s defeat (910/1504-5), Diyarbakr too fell to the Şafawīs (912/1507), he was obliged to flee again to Persian territory where he spent a forty day retreat (see KHALWA) and then to Egypt, where he settled at Birkat al-ḥadidjī near Cairo. Timurtash, a Khwāṭti shaykh who had earlier come from Shīrwānī to settle there, procured for him the possession of Kubbat al-Muṣṭafī; while living there he met Sultan Kāṁṣaw al-Ghawrī while he was out hunting, and the Sultan granted him living-quarters at the Muʿāyyadīyya mosque by Bāb Zuwayla. Though deprived by the Ottoman invasion under Selim I of the patronage first of Kāṁṣaw al-Ghawrī and then of his successor Tuman Beg, Gūlşenī was held in great honour by the Ottoman troops (Shaʿrānī, Tabakāt, ii, 163), many of whom, encouraged perhaps by Gūlşenī’s old acquaintance Idrīs Bīdīlī, became his murīds; indeed his quarters at the Muʿāyyadīyya mosque could no longer accommodate his followers and students. Many of the students from Arab shaykhīs also lodged there. This enormous popularity was the cause of anxiety to the successive Ottoman governors, who feared a rising; and indeed when İbrahimī Pasha came to Egypt to investigate the situation after the rebellion of Ahmed Pasha (Khāʾīn [q.v.]) his adverse report to Sultan Suleyman prompted the Sultan to summon Gūlşenī in 934/
GULSHANI

1357-8 to Istanbul (see ‘Ali, Kunh al-akhbdr, Istanbul Un. Lib. MS T 2359, ii, fol. 24v.). The Sultan interviewed him, and his work Ma’nawi was sent to Istanbul with a reply, and on his return to Egypt, Gulshan died during an epidemic of plague on 9 Shawwl 940/24 April 1534; he was buried in a türbe at his convent, which still stands. Of his two sons Ahmed Khayîl and Mehmend, the former, whose Persian Divân contains many pleasing poems, succeeded him.

Works. Ibrahim Gulshani was a poet so prolific that he is said to have dictated poems in three languages (Persian, Turkish and Arabic) to three scribes at once. A. His works in Persian are (i) Ma’nawi: written in imitation of the Mathnawi of ‘Alî al-Dîn Rûmî, this work of 40,000 couplets was begun at Diyarbakr and finished in 10 months; like the Mathnawi, it contains many stories, and many couplets from the Mathnawi are quoted in it verbatim. There are also poems in the form of madâm. B. His works in Turkish are (i) Divân: in this collection of 17,000 couplets (almost as long as Djalal al-Dîn’s Divân-i kabîr) the influence of Djalal al-Dîn, Hâfiz, and sometimes Yûnûs Enme is to be detected; it has not been printed or thoroughly studied. MSS in Turkey: Istanbul, Fatih 8366 (copied 931); Millet, farşaça manzûm 418 (?) 10th/16th century; Ankara, Dil ve Tarhi-Coğrafya Fakültesi library (unnumbered, 19th century). (iii) Kazâ qlâzâshîr, a work of about 7,500 quatrains, some in rubûd, some in buyûk rubûd, some in fairly simple language, on the themes of Divine Love, fana2 and babâ2, and the author’s devotion to his murshid, ‘Umar Rûgjânî. Only one MS is known: Istanbul Un. Lib. F 1233 (according to the Menâbîb, 167, Gulshanî’s rubûdîn in Turkish, Persian and Arabic, amounted to 12,000 couplets). (iv) Sinmûrg-nâma, a work of 30,000 couplets, known only from references in the Menâbîb (83v., 167v.). B. His works in Turkish comprise only a Divân of about the same length (17,000 couplets) as his Persian Divàn. In some of his Turkish poems, Gulshani is clearly under the influence of Yûnûs Enme and Nesîmi (qq.v.). The work deserves study, both for its literary and for its linguistic interest. The best and fullest MS known is in the Library of the Dil ve Tarhi-Coğ. Fak. (Université kütüphanesi kitapları 928). Selected poems from the Divân are found in various libraries, e.g. Dil ve Tarhi-Coğ. Fak. (Mustafa Çon 289); Istanbul Millet (Carullah 1661 and manzûm 379); Istanbul Un. Lib. (T 890). Some of his ghazals were translated into Persian with a commentary by İdris Bîdîsî (Menâbîb, 30r.). C. The Arab ‘ulâmâ and poets of his day regarded Gulshânî as ‘ummîm’, and perhaps he did not speak Arabic well (Şa’rânî, Taḥâbat, ii, 163). His Arabic poems are to be found in 5,000 couplets (Menâbîb, 167v.). In form and content they are influenced by his Persian poems. The only known MS (of selections) is in the Library of the Dil ve Tarhi-Coğ. Fak. (Université kütüphanesi collection).

In his poetical works, especially in the final couplets of his ghazals, Gulshânî mentions, together with his own ma’khas or nisba, that of his murshid ‘Umar Rûgjânî, whose thought so strongly influenced him. Gulshânî did not escape criticism, any more than his murshid, who, under the influence of the works of Muḥyî al-Dîn al-‘Arâbî, adopted an extreme doctrine of wudûd-i wududî and, for his efforts to spread in Karabagh and its neighbourhood the ideas of the Fuṣûs al-khâm, was condemned and persecuted as a ‘Fuşût’. Condemnatory fatwâs were issued concerning Gulshânî and his murîds and successors, who preached the same extreme wudûd-i wududî (see Fatâz-yi Abû Swâd, Istanbul, Millet Lib., MS şer’îye 80, fol. 267v.).

Gulshânî’s tarîkh. The Gulshânîyâ tarîkh, which took its name from his nisba, was a branch of the Khaṭwâyiyya. It assumed its characteristic form only after Gulshânî had settled in Egypt and built his famous convent there. It diverges from the Khaṭwâyiyya, based on the principles of khaîla and ḍîhr, especially in its rules of behaviour (aḍādî). The Gulshânîyâ tarîkh, which at first adopted sama‘ and other practices of the Mawlawîyya (Şâhîb, ‘Menâbîb-i ‘Ilmînâ’-i islâmîn, 167), later absorbed practices from the Baktashîyya and other orders, and was thus regarded as having placed itself outside the tarîkh (Karaqâş-zâde ‘Omer, Nür al-hudâ li-man ithâdd, Istanbul 1286, 7). The rules of daily life in Gulshânî’s convent in Cairo, the weekly ceremonies held there and the practices of the tarîkh as a whole now appear peculiarities which may deserve study (see Şehmîlî-zâde, ‘Omar-i tarîkh-i Gulshânîyeyî, Millet Lib., MS şer’îye 888; for the convent and its buildings, see ‘Ali Bâshî Mübârak, Al-Khâlîf al-qâdîda, guv‘ vi, 54.).

L. Devonshire, Rambles in Cairo, 332.

GULSHANI (GULSHENI) ŞARUKHANI, Ottoman poet who flourished in the reign of Memmed II, was born in Şarûkhân, and lived a life of religious seclusion and devotion. His Ma’dalîî (variously entitled in the MSS Râz-nâmê, Pend-nâmê, Esrâr-nâmê) is written in seven chapters in the ma’shû‘în form, containing 950 couplets; completed in 864/1459, it consists of homilies, stories and parables. After each homily or admonition, Gulshênî includes stories to illustrate the point.

He is the author of a Persian divân: the text of the kâsides addressed to Memmed II and Bâyezîd

Encyclopaedia of Islam, II
GULSHANI — GOM

II is reproduced from the unique MS (Istanbul, Bayezid Um. Küt. 5280) by Tahsin Yazici (see Bibl.). He wrote also a poem celebrating the Prophet's birthday (mawlid). (GÖNAY ALPAY)

GÜLSHEHRİ, a Turkish poet of the beginning of the 8th/14th century. Hitherto, his personal name was taken to be Ahmed, on the evidence of a single entry in a manuscript of his poem Manṭik al-tayr. Recently, on the strength of several points in the same work, he has been identified with a certain Sheyk Süleyman, whose türbe is in Kırşehir. It can be easily supposed that this town from which as a poet he took his name Gülshehrı was his home. The date of the poet's death is unknown, but it must have been after 717/1317, the year when his work Manṭik al-tayr was completed.

Gülshehrı wrote two great didactic sâtı poems, melhewisi in remel metre, one in Persian entitled Falâk-nâmâ (completed 701/1301-2), of about 4,000 distichs (bayts), of which the so far unique manuscript is now in the Public Library (Genel Kitaplık), Ankara, as no. 817. The other work is written in Turkish and is entitled Manṭik al-tayr; this likewise consists of about 4,000 distichs, and now exists in a facsimile edition with introduction by Ağah Sırrı Levend (Ankara 1957). A dissertation on this work, by Mülçgan Cunbur, has not yet appeared in print. Gülshehrı's Manṭik al-tayr ("Speech of the birds") is a free adaptation in verse of the poem of the same name also in the remel metre, by the Persian poet Farid al-Din At'târ [q.v.], and not really a translation. The ideas and construction of the work are the same as with "Attâr; it is an allegory of sâtı monism (wahdani-i wudjud), in the form of a story of a journey by the birds under their leader, the hoopoe (hidâkûd), to their queen, the Simûrugh [q.v.], whose eyrie was far off on Mount Kaf, and their arrival there, after the hardships of the journey only thirty of them actually arrived (melhemet), whether they were finally compelled to recognize themselves to be the "Si mûrugh"—"thirty birds". In matters of detail, however, Gülshehrı often goes his own way.

In one place in his work Manṭîḫ al-tayr (text, ed. A. S. Levend, 297, l. 14), the poet names the Gülşenâme, as a work written by himself; it is, however, probable that the Manṭîḫ al-tayr itself is meant. Another small melhemet is also in existence, probably by Gülshehrı, consisting of 167 distichs and also in remel metre, by Ahkî Ewrân/Evrân (Kermâdî—Ahkî Ewrân tâba thârîhû), which is very closely linked with the Manṭîḫ al-tayr since they have whole verses in common. There is some difference of opinion as to whether this short melhemet on Ahkî Evrân derives from Gülshehrı himself, or whether it was composed by another poet who may have been a follower of Ahkî Evrân and who made use of lines from the Manṭîkh al-tayr and misappropriated the then famous name of Gülshehrı. It is a striking fact both that in the melhemet on Ahkî Evrân the Falâk-nâmâ is in fact named (verse 159b), but not the Manṭîḫ al-tayr, and also that the name of Ahkî Evrân does not figure in the latter work [see AHKî EWRA].—In another place in the Manṭîḫ al-tayr (text, A. S. Levend, 296 l. 12) Gülshehrı also speaks of a verse translation of a work by the poet Kudürî in Turkish as his own work. A manuscript of a further work of Gülshehrı, Arûd râdîsî, is in Istanbul (Millet Kitaplığı, All Emini, Farşa yazmalar, no. 517).—Finally, another small melhemet has been taken to be Gülshehrı. These have been collected together by Fr. Taeschner in his article Zwei Gazels von GÜLSHEHRİ, in Faûd KôÔRIû Armaγâns (Mélanges Faûd KôÔRIû), Istanbul 1953, 479-58.

(GÖNAY ALPAY)

GUM, GUM ARABIC [see TANGIINO]

GÜM (Arabic kawm; French goum), the usual form and pronunciation, in the Arab countries of North Africa, of the name given to a group of armed horsemen or fighting men from a tribe. The derivative güm signifies "a levy of gûms, troops, a plundering foray", "sedition", "revolt".

It was the Turks who, in the former Regencies of Algiers and Tunis, gave the gûms an official existence by making them the basis of their system of occupation of the country. All the tribes had been divided by them into makhzen or auxiliaries, who were exempt from most taxes, and ra'iyya, who were liable to all taxes. The latter were the more numerous. One or more of the latter tribes refused to pay a tax or revolted for some reason, the Turkish army rapidly advanced to the insurgents' territory. Though small in size, this army was reinforced by the exceedingly mobile cavalry groups of the gûms.

Soon after their occupation of the Algiers Regency, the French learnt how to make best use of the gûms. But once the country had been pacified, the makhzen tribes disappeared. The system of gûms was then extended to all tribes, without exception. Under the command of the chiefs, kudur or aggas, appointed by the French authorities, the gûms had to operate with the military police in the maintenance of peace in the country, and in protecting the migrations of the nomadic tribes and the safety of caravans.

In territory under military administration, the number of "goumiers", i.e., members of the gûm of a tribe, varied according to regional needs. The goumiers received a monthly wage and encamped on certain State lands whose revenues went to them, but they were obliged to equip and mount themselves at their own expense. On active service they were also entitled to the mu'ma, a special allowance for food.

In civil territory, the goumiers equipped and mounted themselves at their own expense. They did not draw any pay but, when called up, they received the special allowance for food. In civil territory gûms were called up only in the event of insurrection or European war. They were, in fact, a territorial militia under the command of the tribal chiefs and subject to the orders of the administration. The gûm from each mixed commune consisted of 120 horsemen. The goumiers had the right to carry arms. Their distinctive badge was a green and red cord fixed round the turban. The goumiers' horses were not subject to any tax charges, and the goumier himself was exempt from the tax on livestock.
After the inauguration of the French Protectorate in Morocco, a similar organization was created, and the Moroccan gourmiers particularly, distinguished themselves during the second world war, in Italy and the south of France [see also MAGIZEN].

GUMRÜK [see Maks).

GÜMÜSLİNFİA [see Supplement]

GÜMÜŞ-KHANE (modern spelling Gümüşha- ne), literally "the house of silver, the town of silver", mining centre and town of Asia Minor, principal town of a vilayet, on the road from Trabzon to Erzurum. The evolution of the town went through two distinct phases. (1) As a mining centre. It is probably Gümüş-khana to which Marco Polo refers when he writes (xxii) of silver mines in the region of Bayburt. In any case the town was known by this name (Kumish) in the time of Ibn Battuta (tr. Gibb, Cambridge 1962, ii, 436). Situated at an altitude of about 5,000 ft., built in an amphitheatre on the steep slopes of the Musalla deresi (a left tributary of the Harşit çayı), the ancient town, which during the whole of the Ottoman period was a busy centre: for the mining of argentiferous lead, under a system of state encouragement and supervision (see N. Çagatay, in AÇTDCD, ii (1943), 124), was "important and lively" in the 17th century (Hadjid Khalifa, Dikınınmümâ, 622, 623). But by the beginning of the 19th century the mines were in complete decline; in 1836, they employed no more than 50 or 60 workers and it was no longer profitable to work them. They were therefore closed, particularly because of the lack of fuel due to the dearth of wood in the region of Bayburt; then, after a last attempt to work them in 1853, closed finally a few years later. (2) As a town on a main route. The main centre of the town then gradually moved towards the Harşit valley 21/2 miles away, along which at first were scattered country houses surrounded by gardens and orchards, which provided at the end of the 19th century an important export of dried and preserved fruit (pears, plums, apricots, etc.). Gradually a commercial, and then an administrative, centre arose there along the main route from Trabzon to Erzurum. The decline of the old town was completed by the Russian occupation in 1916-18, which left it half in ruins, and by the exodus of the important Greek and Armenian minority (even so late as the beginning of the 20th century, the Greeks formed half of the 3,000 inhabitants). Today all the commerce and administration is concentrated in the new town. Pop., 1960, 5,312.

Bibliography: apart from the works cited and the articles of J. H. Mordtmann in ETI and of B. Darkot in IA, see Ewliya Celebi, Seyahatname, ii, 343. Gümüş-hâne, situated on the main route from Trabzon to Iran, was visited and described in the 19th century by many European travellers; see especially W. J. Hamilton, Researches in Asia Minor, London 1842, i, 168-9, ii, 234-8 (detailed analysis of the position of the mines before they were closed); Th. Deyrolle, L' voyage dans le Lassitan et l'Arménie, in Le tour du monde, Paris 1875 (xxix), 22-4 for the period of the growth of the new town and the trade in fruit in 1869.

GÜMÜŞTEGİN, name of various Turkish chiefs, particularly the Dânishmandid prince known also as Amîr Ghâzi [see DÂNİSHMENDİS] and the atabeg of Aleppo [see ZANDİS].

GUNBAHİ [see KUBRA].

GUNBAHİ-KAÇOS, the second town of Gurgân province, Iran, 110 km by road north-east of the provincial headquarters at Gurgân [q.v.], with an estimated population of 10,000 in 1956. Five km west of Gunbad (as it is popularly called) lie the ruins of the mediaeval city of Durgân, near the shrine said to be that of the 'Aldî Yahyâ b. Zayd. The modern town is named from the mausoleum of the Ziyârid Kâbus b. Washmîre, still standing at the northern end of the main street. It is a cylindrical brick tower 167 feet high, placed on an artificial mound 32 feet above the plain. Angular buttresses divide the sides into ten panels, the exterior diameter being 48 feet. Above the door a band of Arabic inscriptions in simple Kufic philosophically name the structure as the kaşr ('palace') of Kâbus, ordered during his lifetime in 397/1006-7, or 375 by solar reckoning (i.e., the Era of Yazdagird III commencing A.D. 632). The monument is nowadays much admired for its structural strength and simplicity.

GUNS, GUNNERY [see BARGE]

GÜNTÊKÎN, RESAT NÜRİ [see RESHAD NÜRİ GÜNTÊKÎN].

GÜRÂN, an Iranian people, now reduced to between 4,000 and 5,000 houses, inhabiting an area north of the main road from Kûrmânshâh to the Persian frontier near Kâş-i Şîrîn and comprising the slopes of the Kûh-i Şâhân—Dâlâhâh mountain. The Gûrân 'capital' is Gâhwarâ, lying 60 km. due west of Kûrmânshâh in the valley of the Zîmkân, a southern tributary of the Sîrwan. An isolated community occupies the village of Kandôla, 40 km. north-east of Kûrmânshâh, near the site of Dînavar. Other, more numerous branches are formed by the Bâdâlân and the tribes of the Haurmân [q.v.].

An older form of the name was certainly Gûrân (q.v. Gwârân), as it is so preserved in Kurdish dialects, while Gûrân itself has undergone the sound-change ğ > ʃ, ʃ > r, respectively (n. infra). It is thus difficult to reconcile the name with that of the Gûrâvîs, mentioned by Strabo, xi, 14, 14, as neighbours of the Medes. The origin of the name is more probably to be sought in a form *gaw-bûr-a-hân 'ox-riders' (n. Minorsky, op. cit. infra). This name is connected with the Caspian provinces, as also is the place-name Gîân, which is of frequent occurrence among the Gûrân. The inference that their original home lay near the Caspian is further supported by the evidence of their language. Just as the closely related Zâzâ [q.v.], or Dînîlî, people moved west into classical Armenia, so the proto-Gûrân appear to have migrated south and peopled the whole southern Zagros area. Later they were largely submerged by an expansion of the Kurds, also from the north, but their language has left its mark on the ('Central') Kurdish of their conquerors.

Ibn Khurrašâdhibîb, 14, preserves the older form
Gürân — Gûrâni

of the name as Diabaraka, and similar forms are used by Ibn Fakih and al-Masudi, always in close connexion with Kurds. Ibn al-Athir, ix, describing the rise of the Hanafîyyah principality (ca. 1005/1596), still uses the term Gûrân as if referring to the populace of Ardalan and Kirmâhâgh, and Sharaf Khan, in the Sharâr-nâma (1005/1596), still uses the term Gûrân as if referring to Sharazur, frequently mentions the exploits of Molla Khusraw in this office in 872/1467-68). In 885/1480-81 he was elevated to shâykh al-islâm, and he remained overlordship, however, have completely surrendered a regiment of between 1,000 and 2,000 men for the influence of the Khazir. These 'Seven tribes', as they evidently been transported from the Kirmâshah—ydwa, w-: H(awrami)

K(andulal)

K

v-: das-u wem (ca. 744/1343), mentions 'Kurds called al-

misken, m(a)-: B look for, 'blood', (b) initial w- < hw-: all wârd- 'eat', H, K war 'sun', warm 'sleep', (c) initial h-<s-: H, K har 'donkey', hâna 'spring', (d) -rd- > -r-, in words unmistakably NWIr.: H well 'flower', K stil 'heart'. In general H and B have preserved the mdâhîl vowels ě, ĕ, lost in the other Guram dialects: H ĕl[a, K hîla 'egg', H B ĕle, K ĕl[e 'ear', where ĕ generally becomes ğ: K dâr 'far', ğ 'quick'. In the nominal system masculine and feminine gender, and direct and oblique case, are normally distinguished. Most dialects have a defining suffix -akd, F. -âkhi (akhî). The indefinite suffix, generally -i, is -îu, F. -ûau, in Hawramî. H also preserves a genitive ëdâlâ form ù: das-i ûm 'my own hand', beside the epithetic i: yânêh-i kôm 'an old house'. The copula is characterized by the presence of an -n-, thus Sg. t. -and(n), 2. -amî, 3. -anî, etc. With the present tense the durative prefix is generally m(a)-: B makaro, K makara, but H karô 'he does', B, K mâchî, H mâchî 'they say (wâlî-). H has, in addition, a proper imperfect tense formed from the present stem: karênh 'I was doing', wâlî 'he was saying'. The majority of dialects have preserved the inverse formation of the past tenses of transitive verbs: H, B ēdêh- 'what did you say?', K bêwardane 'he has brought it'. Passive stems are formed in -ya: H wâlîyô 'it is said', K kîrîdn 'it has been made'.

Gûrân has attained literary status in the form of a xoûnî which, besides being the vehicle of a number of Ahi-i ūîk writings, was cultivated at the court of the Bursan. As such, the grammar of this literary language has been given by Rieu, Cat. Pers. MSS., ii, 728 ff. Poets of name range from Yûsuf Yâska (fl. 1010/1600) to Mavlaviw (d. 1300/1882). All Gûrân verse, epic, lyric and religious alike, is in a simple decasyllabic metre. Its former popularity is reflected in the fact that gûrânî is the common word for 'song' in the neighbouring Kurdish.

Gûrânî, Shamâf (or Shâbâf or Shams) al-Dîn Ahmad b. Ismaiîl b. Othman, known as Mollâ Gûrânî, 9th/15th century Ottoman scholar and shâykh al-islâm. [Sakhawi sometimes found his name given as Ahmad b. Yûsuf b. Ismaiîl et.; and in one place (ii, 1486) Hâddîl Khallîa mentions him with the kunya Abu 'l-'Abbas.] While noting that Mâkîzl gives another date and place (the latter obviously a copyist's error), Sakhawi in his copy of Bâbârî, ca. 1410-11 in the Gûrân district of the Shahrizor province of upper Irân, and it is probably only by inference from the ethnic character of this region that F. Babinger makes him a Kurd (Mehmed der Eroberer und seine Zeit, Munich 1953, 518). After having studied under local teachers, he pursued his further education in Hîn Kaytâ, Baghdad, Damascus (where he arrived in 830/1426-27), Jerusalem and, finally, Cairo (835/1431-2). Here he studied under such famous scholars as Ibn Haddîr and Kalkashandî, and he gained a reputation for learning which led to the patronage of important men and a teaching appointment at Bârkûkîyya madrasa. Because of an unseemly quarrel with another scholar, he was dismissed his post and exiled to Syria in 844/1440-41 whence, in the course of his further journeys, he went over to the Ottomans and changed his madhîbîî from Shâhî to Haranî. His first appointment was to the Kapîdîa madrasa in Bursa, and in 854/1450-51 he succeeded Karâdja Ahmad Efendi as professor at the Yildirim in the same city (Belifgï, 283). Later he was made tutor to Prince Mehmed of Magnisa, and when the latter ascended the throne in 855/1451 he received the post of bâdî 'l-'ashkar. He was present at the conquest of Constantinople ('Allî, Kûnî al-akhbâr, v, Istanbul 1277, 227) and composed in elegant Arabic a letter to the Sultan of Egypt announcing this great victory (Ferîdûn Beğ, Mûnshâ'î al-sâlûtîn, Istanbul 1274, 235). His intractable independence of attitude proving an annoyance to the new Sultan and his statesmen, he was removed from the centre of affairs by appointment to the bâdî-ship of Bursa, but here, too, he acted in defiance of the royal will and was finally dismissed from office. He left Ottoman territory for a while, but returned in 861/1457 after having performed the Pilgrimage and was once again appointed bâdî of Bursa with lavish monthly supplements to his salary from the Sultan. In 867/1462-63 he succeeded Mollâ Khûsraw as bâdî of Istanbul (Belifgî, 286), but of Taghprûzîdâ-Medîdî, 149 margin, where it is said that Kh*adîa-zåde succeeded Mollâ Khûsraw in this office in 872/1467-68). In 885/1480-81 he was elevated to shâykh al-islâm, and he remained
in this office until his death in the latter part of Radjab 983/1488. He is buried in the mosque he built in the quarter of Istanbul which still bears his name.

The independence of mind which he exhibited in his public life is also to be found in his works. Thus, in his commentary on the Kur'an entitled Kawthar al-d/irdi, which Hadidji Khalifa (i, 536) compiled his notes on the Kanz al-ma'dini of al-Djibari, the famous commentary on al-Shatibi's Hizr al-amami (Broekelmann, S I, 725; Hadidji Khalifa, i, 646); his Kadh al-arar, etc. (not completed in 890/1485 as Haidi Khalifa, ii, 1487, says, for a ms. of it in the Süleymaniye, No. 472, is dated 874/1469-70) is a commentary on al-Djazarl's Dihistan in the north. The rivers Atrak and Arizm, which Hadidji Khalifa (i, 553) implies is a palace in 795/1392-3 on the bank of the river, Bulak 1299, i, 143-51; Turkish version by Medjl, Istanbul 1269, nos. 11); German translation from the Arabic by O. Rescher, Istanbul 1927, 48-53 (see also 114). Despite his fame and importance, he is scarcely mentioned in the historical works of the period: see the bibliography to the article by Ahmed Ates in IA, viii, 406-8, and add: Bellgh Efendi, Güldes-i riyâdí-i irfân, Bursa 1302. For his buildings in Istanbul and elsewhere, see Husayn Aywânsarâyl, Hâdidai al-djâwâmi, Istanbul 1281, i, 187, 207, and Ekrem Hakki Ayverdi, Fâth devri mimarisi, Istanbul 1953, Nos. 73, 85, 90, 171, 199, 244, 384 and 416. He figures in a miniature among the illustrations to Sâmâh Ayverdi, Edebî ve Manevi Dünîyasî şinde Fâtih, Istanbul 1953, 10. (J. R. Walsh)

GORANJ [see Supplement]

GORJISTAN [see KURD]

GURGÂN, Old Persian vâkâna, Arabic qurban, the ancient Hyrcania, at the South-east corner of the Caspian Sea.

The province, which was practically equivalent to the modern Persian province of Astarâbâd [q.v.] (now part of Usân II) forms both in physical features and climate a connecting link between sub-tropical Mâzandaran with its deep heat and the steppe of Dihistan in the north. The rivers Atrak [g.v.] and Gurgân, to which the country owes its fertility and prosperity, are not an unmixed blessing on account of their inundations and the danger of fever which results.

Gurgân played an important part in the Sânsânid period, being the frontier province against the nomads press-ing in from the north. The fortresses of Şahristân-i Yazgidir and Şahr-i Pêroz (see Marquart, Erninâr, 51, 56) were built as a defence against the nomads of the Dihistan steppes; a long wall was built along the northern frontier to defend the lands. Sa'îd b. al-Âs is said to have left levied tribute from the "Malik" of Gurgân as early as the year 30/650-1; but the real conquest of the country was the work of Yazid b. al-Muhallab (98/176). At that time the ruler of Gurgân was a Marzbân but the real power seems to have been in the hands of the Turkish chief Şîl.

After punishing the unruly population of the valley of the navigable Andarâz, the modern Gurgân river, Yazdî founded the town of Gurgân, which henceforth was the capital of the province. It must have been a very prosperous place in the 3rd/9th and 4th/10th centuries. The gardens around it, irrigated by the waters of the river, were famous; its chief product was silk. Gurgân was also a station on the caravan route to Russia. The town was divided in two by the river, which was crossed by a bridge of boats; on the eastern side was the town proper of Şahristân, whose nine gates are detailed by Mukâddasi, and on the western, the suburb of Bakrâbâd (called after a settlement of the Arab tribe?). The prosperity of the town seems to have been early threatened by internal dissensions. Alîd propaganda had found a congenial soil in the lands along the Caspian, and the "Alîd dynasty of Tabaristân included Gurgân in its sphere of influence. In Gurgân itself the tomb of Muhammân b. Dja'bân al-Sâdîk, commonly known as Gür-i Şurkh (the Red Tomb) was an object of great reverence. The constant unrest in these lands enabled Mârdâvâdî b. Zîyâr in 316/928 to found a kingdom of his own in Gurgân with the help of the Daylamites: it survived for over a hundred years, although nominally dependent on the Sânsânids and later the Qâzânavids (see zivârîs). The dome-shaped tomb (Gurbânâl-Kâbûs [q.v.]) only the outer of the ruler Kâbûs b. Wasmâr (316/928-29/1032-3) still exists as a memorial of this period.

The population was massacred at the time of the Mongol invasion and Mustâwîfî (transl. Le Strange, 156) writing in the 8th/14th century describes the town as a heap of ruins. Timûr is said to have built a palace in 795/1392-3 on the bank of the river, but Gurgân never again attained its former prosperity. Hâdidii Khalifa (Dihân-numâ, Istanbul 1414/1732, 339), however, mentions Gurgân, which had been rebuilt since the Mongol period, as inhabited by fanatical Shîfs.

The position of Gurgân in the angle formed by the confluence of the Gurgân River and the Murmûr-rûd is marked only by extensive mounds, which have not yet been investigated. The very name of the town has recently been transferred to Astarâbâd. Only the Gunbad-i Kâbûs, about 2 miles to the north-east and about a mile away from the river, has withstood the ravages of time.

Bibliography: As in the article Astarâbâd. (R. Hartmann [- J. A. Boyle])

GURJAND, called by the Arabs Dûrjândiya, and also in the period about 600/1200 described as Khârazm (like the country round), the economic centre of the Khârazm [g.v.] area and for a long period also the political capital of the territory, lay to the west of the lowest reaches of the Oxus (Âmû
Daryā). The town, whose age is unknown, was captured by the Arabs in 93/712. They attempted to deprive Gurgandj of its importance, by founding a city, Fil (Fīl), on the lower bank of the Oxus; but the new settlement was gradually inundated by the river (for details see Kārg). In order to maintain their domination over Khārīzām, which was an area at that time on the outer fringe of the world of Islam, the Arabs divided the territory; the native dynasty, the Afrighids, who bore the title of Khārīzām-Shāh, were allowed to retain the northern part, with Kārg as their capital; Gurgandj became the residence of an Arab amīr, who had power over the south-west (Hudūd al-Ālam, 122, § 25, and 371; Gardizī, ed. M. Nāṣīmī, 1930, p. 57). This state of affairs lasted for over 250 years, until 385/995 (for details see Khārīzām). Then the Arab amīr of the time, Maʿmūn b. Muḥammad, was able to expel the old dynasty and unite the whole of Khārīzām under his own rule. From that time he took over the ancient title of the rulers of that country, Khārīzām-Shāh. Thereafter Gurgandj ranked after Kārg as the second principal city, but after the overthrow of Maʿmūn’s successors by the Ṣaljūqs in 434/1043, it exceeded Kārg in importance and became once more the real centre of the territory as well as the intermediary for commerce with the Oghuz and other northern Turkish tribes (Gardizī, 95; Iṣṭakhrī, 299f., 341; Ibn Ḥawkal, 350f., 477f.). At this period it had four gates and a large palace near the Bab al-Ḥududījā, on the edge of a huge market place, and consisted of an outer and an inner city (Hudūd, 122). According to Mukaddasī, 288, in the 4th/10th century the town ranked after Kārg as the second principal city, but after the overthrow of Maʿmūn’s successors by the Ṣaljūqs in 434/1043, it exceeded Kārg in importance and became once more the real centre of the territory as well as the intermediary for commerce with the Oghuz and other northern Turkish tribes (Gardizī, 95; Iṣṭakhrī, 299f., 341; Ibn Ḥawkal, 350f., 477f.). At this period it had four gates and a large palace near the Bab al-Ḥududījā, on the edge of a huge market place, and consisted of an outer and an inner city (Hudūd, 122). According to Mukaddasī, 288, in the 4th/10th century the town ranked after Kārg as the second principal city, but after the overthrow of Maʿmūn’s successors by the Ṣaljūqs in 434/1043, it exceeded Kārg in importance and became once more the real centre of the territory as well as the intermediary for commerce with the Oghuz and other northern Turkish tribes (Gardizī, 95; Iṣṭakhrī, 299f., 341; Ibn Ḥawkal, 350f., 477f.). At this period it had four gates and a large palace near the Bab al-Ḥududījā, on the edge of a huge market place, and consisted of an outer and an inner city (Hudūd, 122). Immediately thereafter, in 618/1221, Gurgandj was attacked by the Mongols and after a siege of many months was razed to the ground (there is a lengthy account in Djuwānī, i, 55; Barthold, Turkestān, 349f.) and at the beginning of the 7th/13th century it was included among the most prosperous cities of the Islamic Empire (an account dating from the period 613-6/1216-9 is given in Vāyūt, ii, 54, 486; ili, 933; iv, 260 f.). Shortly after, this verse romance which consists of a continuous narrative, but containing all manner of strange words, lacking in ideas and maxims—that is to say a prose narrative without any poetic ornament (perhaps like the Georgian translation of the poem). The governor having invited him to translate this story into Persian, “to embellish it as one adorns a flower-bed in April”, Gurgānī set to work, and finished, in 447/1055 or shortly after, this verse romance which consists of 8905 bayt in ḡazād, the metre most often adopted later by those who composed romances in the same genre. The question arises whether Gurgānī knew Pahlavī. It is impossible summarily to deny this after having read his account, imprecise though it is, of the conversation with the governor, and it is possible to conclude from one of the verses of the poem that he had some, though not a complete, knowledge of the language (“For one who knows Pahlavī, Khurāsān signifies the place from which we receive light”, ed. Minovi, 35; cf. also Mahdījūb, 60; tr., Massé, 431 bottom) that the author of this conversation, however, he refers to the prolixity and the strange (i.e., archaic) words of the Pahlavī text. For the question whether he worked directly from it or through a Persian translation, see Mahdījūb, 60.
GURGANI — GWALIYAR

1143

introd., 20. The important thing is that he gave new life to an original which otherwise would have disappeared like so many other Pahlavi texts. In his poem the subject of love is treated particularly in the frequent allusions to the divine or the evil powers, to the sacred fires (mentioned by their names) and to their maintenance, to the ancient months and feast days, and to legendary features; there is in it a case of trial by ordeal, and one of the seven noble families of the Parthian period.

In Gurgani's poetry there are realistic features contributing to knowledge of customs and folklore. At times his style is affected and precious (tr., 20-1), especially when, like other Persian poets, he is describing feminine beauty in conventional terms (ibid., 34) and some words which are close to the Pahlavi forms (ibid., 43). The poem had a lasting influence. Mahdjub points out similarities between some verses of Gurgani and those of later poets, and even some borrowings (introd., 98 ff.). The ten passionate letters written by Wits to Ramun (Minovi, 347-83; Mahdjub, 259-86; tr. 348-51) were imitated by the poets Awbadi, Ibn Imad, A'rif, ‘Imad Fakhi (ten letters), Amir Husaynii, Khatibi and Salim-i Savidji (thirty letters). Of more significance is the similarity evident in the plan of Nizami's rendering of the Gurkhans based on Eastern and Western sources; in written collaboration with K. H. Menges; K. Menges in Byzantion, xxvii/l (1951), 104-6; idem, in RO, xvii (1950), 61; Spuler, Iran, 360 n. 8. For the history of the Gurkhans see also the Biblia to Karya Khitay and Kirmân (13th century).

GURGANI [see DURQAM].

GWALIYAR, formerly capital of the Sindh state of Gwalior, now a town in Madhya Pradesh.-"Tradition assigns the foundation of the city to one Suhla Sen who was cured of leprosy by an ascetic named Gwalia. The latter inhabited the hill on which the fort now stands, and this was called Gwalior after him". The early history of Gwalior is, however, shrouded in myth and romance. The Huna adventurers, Toramana and his son Mihirkula, who partially overthrew the Gupta power in the 6th century A.D., are considered to be the first historical holders of this place. Later Raja Bohdi of Kanawdi, the Kachwaha Rathiputs and the Parhtars respectively held sway over it.

In 413/1022 when Sultan Mahmud of Ghazna marched against Ganda, the ruler of Kalingar, he passed the fort of Gwalior. Since the Raja of Gwalior was a feudatory of Ganda, the Sultan stormed the fort. The Raja, despite his successful resistance, was so alarmed that he sued for peace (Zayn al-akhdr, 79). In 592/1196 Kutb al-Din Aybak took the fort from the Parhtars (Tabakat-i Nasri, 145; Eng. tr., Raverty, i, 545-6, with note on other versions). Iltimish's first territorial appointment was as the amir of Gwalior (Tabakat-i Nasri, 609; Eng. tr. i, 604). It appears to have been lost to the Turks because in 629/1231 Iltimish is reported to have reconquered it and made appointments of the amir-i dād, the kolwāl and the kādd. But the history of the Muslim occupation of Gwalior is a chequered one. Early in her reign Rūdīyya (634-7/1236-40) had to send an expedition towards Gwalior against Tamur Khan, but the position became untenable and the fort had to be abandoned to Čahardeva. In 649/1251 Balban led a full-scale expedition against Gwalior, but does not seem to have achieved any permanent success, for the numismatic evidence shows that...
Gwalior was independent up to at least 657/1259. In the disturbances caused by Timur's invasion (809/1358) it was seized by the Tonwar Râjdûts. In 894/1489 Sultan Abūd-dîn Bahâlû Lûdî marched against Gwalior and forced the Râjdût, Mân Singh, to submit. When Sikandar Lûdî (894-923/1489-1517) shifted his capital to Ágrâ he considered the annexation of Gwalior necessary for the consolidation of his power, but he could not achieve his objective. Though subjected to frequent attacks by the rulers of Mâlwa, Džawnpur and Delhi, the Tonwars managed to retain it till 924/1518, when the fort was surrendered to Ábrên Lûdî. When Bâbûr turned his attention to the Áfghân principalities after his victory at Pânîpat, he found Tâtâr Khân Sarang Khân occupying the fort along with all its dependencies. It was through the help of Áfghân Muhammad Gwâth, a celebrated Şahtârî saint, that he succeeded in establishing his hold over it. In 934/1528 Bâbûr visited Gwalîyâr and spent some time examining the palaces of Mân Singh and Vikramâdîtya. He was impressed by their size and splendour although he grumbled a little at their want of taste and elegance. In 949/1552 Gwalîyâr fell to Shâh Shâh Sîrû (945-55/1528-45) who forced Áfghân tribes to settle there in large numbers (Rûkn al-Dîn, Latâ'if-i Kuddûsî, Delhi 1311, 85). This attack at Gwalîyâr conception in Gwalîyâr was closely linked up with his policy of consolidation in Râjdûpâtânâ. Besides, Gwalîyâr was also important as one of the principal stages on the great route from the Deccan which was passed by Sîrûndî, Narwar, Gwalîyâr and Dholpur to Ágrâ. His descendants practically made it the capital of their dominions.

In 965/1558 Gwalîyâr passed to Akbar. Abû 'l-Fadl* mentions it as a sârkâr in the province of Ágrâ and refers to its 'exquisite singers', 'lovely women' and 'iron mine'. Gwalîyâr was one of the 28 mint towns of Akbar for copper coins. Deuîrî rice for Akbar's kitchen was brought from here. There was a quarry of red clay for Akbar's kitchen. The shrine of Baba Kapûr (d. 979/1571), scientific Tânsên the Mughals used it in Gwalîyâr, and musicians from Malwa, the Deccan and other parts of India were hired to its courts. It was due to Mübâriz Khân, the future Sultan 'Abîl-Šâh, that music received great encouragement in Gwalîyâr, and musicians from Mâlwa, the Deccan and other parts of India were hired to its courts. One of the most important of these was the celebrated Shâtûtî saint, that he succeeded in establishing his hold over it. In 934/1528 Bâbûr visited Gwalîyâr and spent some time examining the palaces of Mân Singh and Vikramâdîtya. routed and put to flight at Gumbai and this was the turning point of the *djihad*. Shehu Usmanu was never again in serious danger and the Fulani forces, despite occasional reverses, proceeded to subdue most of an area in size approximate to (but not co-terminous with) that of the present state of Nigeria. Shehu Usmanu, the leader and inspiration of the *djihad*, fell sick in 1806 and remained in Gwandu, leaving the conduct of his campaigns to his Fulani commanders. His son, Muhammadu Bello, built a wall around the village to strengthen it and for the next two years it served as the capital of the incipient Fulani empire.

In 1808 Alkalawa, the capital of Gobir, was taken and Shehu Usmanu left Gwandu in favour of Sifawa. He then divided the administration of the conquered territories between his brother, Abdullahi dan Fodio, and his son, Muhammadu Bello. Abdullahi became responsible for the western dominions and Muhammadu Bello for the eastern. Gwandu was under Abdullahi’s authority but he preferred to build the town of Bodinga, close to Sifawa, for his headquarters so that he might remain near his brother. From Bodinga, however, he led a series of victorious campaigns until, in 1810, he administered most of Kebbi (but which the Fulani were able to subdue entirely) and had exacted allegiance from Nupe, Ilorin, Yauri, Gurma, Arewa and Zabarma.

In 1809 Muhammadu Bello created a township of the hamlet Sokoto, and built a wall around it so that it might serve as the administrative headquarters of the eastern dominions and it was there that Shehu Usmanu died in 1817. Abdullahi, on hearing of his brother’s death, hastened the fourteen miles from Bodinga to Sokoto, but found that Bello had been proclaimed *Sarkin Musulmi* (Commander of the Faithful) and the gates of the town were closed against him. By Fulani custom succession passed to a brother rather than to a son and Abdullahi withdrew to Gwandu aggrieved. On his arrival he found that the nearby town of Kalembena was in revolt, hoping to profit from his weakness after his rejection by Sokoto. His position was desperate but Bello went to his aid. In a celebrated scene, the two met outside the walls of Kalembena; Bello, the warrior and chief architect of the Fulani empire, mounted on a charger, Abdullahi astride the mare which as a *mallam* (Arabic: *mu'allim*) he always rode. In accordance with Fulani custom, Bello, as the younger man, went to dismount but his uncle waved him back into his saddle, and himself bent forward to salute his nephew as Commander of the Faithful. Together they put down the revolt. Thereafter Abdullahi retained the administration of the western dominions subject to the recognised authority of the *Sarkin Musulmi*, Bello, of Sokoto. This situation established in effect a dual empire which they bequeathed to their heirs, and led to a close friendship between the *amirs* of Gwandu and the Sultans of Sokoto which lasted unbroken until the British occupation of Nigeria and which still endures.

Abdullahi, who was born in 1766, was twelve years younger than his illustrious brother Shehu Usmanu and was instructed in the Kur’ân and the Mâlîkî rite by Mallam al-Hâjîdji Dîbrîlla, as was his brother. He was some thirty-eight years of age when, in 1804, he was the first to pay homage to Shehu Usmanu as *Sarkin Musulmi* and was instructed in the Kur’ân and the Mâlîkî rite by Mallam al-Hâjîdji Dîbrîlla, as was his brother. He was some thirty-eight years of age when, in 1804, he was the first to pay homage to Shehu Usmanu as *Sarkin Musulmi*. Deeply religious, he nevertheless played a prominent part in the Fulani wars of conquest; in the early campaigns he often served, as did Bello, in a subordinate capacity to other Fulani commanders but distinguished himself by bravery in hand-to-hand fighting. Always of a literary bent, he would celebrate his victories with an Arabic ode and may be said to have been the poet laureate of the *djihad*. After the submission of Kalembena in 1819 he left administrative matters in the hands of his son Mohammad (who was to succeed him) and his nephew Bohari and devoted his last years to study and writing. He did not himself adopt the title of *amir* but preferred the simple style “*mallam*” (which he retained until his death in 1828).

All these principal figures of the Fulani *djihad*,
Shehu Usmanu, Abdullahi and Muhammadu Bello, were prolific writers in Arabic but Abdullahi had the most felicitous command of the language. For lists of his works, both those which have survived and those whose titles are known but which may be no longer extant, see the writer's *Field notes on the Arabic literature of the western Sudan* (Abdullahi dan Fodio), in *JRSA*, 1956, and *A catalogue of the Arabic manuscripts preserved in the University library, Ibadan, Nigeria*, Ibadan 1953-58.

The mosques of Abdullahi in Birnin Kebbi and Gwandu, and his tomb and the tomb of a Shaykh Haliru in Gwandu, are important monuments of Fulani religious architecture (cf. J. Schacht, in *Travaux de l' Institut de Recherches Sahariennes*, 1954, 13 and pl. v, and in *Studia Islamica*, viii [1957], 136).

After the initial conquests of the Fulanis the various dominions of the dual empire were placed under the direct authority of Fulani amirs; those of the western empire paid tribute to Gwandu, and those of the eastern empire to Sokoto. However, neither empire was for long at peace and revolts were constant, especially among the Kebbawa and Gobiwara, whose total submission was never obtained. By the end of the 19th century the direct authority of both Gwandu and Sokoto extended little beyond the boundaries of their own amirates and when the British forces occupied the country in 1902 they found the Sarkin Kebbi sturdily maintaining the independence of Argungu, and the Gobiwara from Sabon Birni and Chibiri attacking the eastern and north-eastern districts of Sokoto itself. Argungu, the Kebbawa stronghold, was never occupied by the Fulani despite the fact that it lay between the twin capitals of Sokoto and Gwandu, being fifty miles from the former and less than thirty miles from the latter. The outlying dominions of both empires, however, still recognized the spiritual leadership of the descendents of Shehu Usmanu and a degree of temporal suzerainty pertaining to Sokoto and Gwandu.

The walled town of Gwandu remained the capital of the amirate until in 1860, the amir Aliu, the fourth of Abdullahi’s sons to succeed to the throne, transferred his headquarters to Ambursa in order to protect the towns along the south bank of the Gulbi against the attacks of the Kebbawa of Argungu. The other princes of the royal house continued to reside in Gwandu.

In 1864 Aliu died and was succeeded by his brother Abdulkadiri, the last of Abdullahi’s sons to reign over Gwandu. By this time the power of the Kebbawa had so increased that Gwandu was obliged to seek an end to the constant hostilities and Sarkin Musulmi Ahmadu Rufai, in 1866, negotiated a peace treaty, known as the Lafiyar Toga, between Abdulkadiri and Sarkin Kebbi Toga. The principal terms of the treaty were (a) that Argungu should be recognized as an independent state, (b) that all towns then held by Argungu should be retained by Argungu, and (c) that all slaves bitherto captured in battle should remain the property of their captors.

The peace obtained by the Lafiyar Toga lasted for eight years, when hostilities were resumed which were to continue until Argungu was occupied by British troops in 1902.

In 1876 Maliki, son of Mohamman and grandson of Abdullahi, acceded to the throne and reigned for twelve years, during which he was visited by Mr. Joseph Thomson on behalf of the Royal Niger Company, and was presented with cloth to the value of forty million cowries. The Company’s present to the Sarkin Musulmi was cloth to the value of sixty million cowries. After the death of Maliki in 1888, Umaru Bakatara, son of Mallam Halliu (1833-58) and grandson of Abdullahi, came to the throne and was visited by Sir G. Goldie and Mr. Wallace (afterwards Sir W. Wallace) who brought more gifts from the Royal Niger Company. In 1898 Bayero, son of Aliu (1860-64) and also a grandson of Abdullahi, came to the throne. He offered no resistance to the British occupation and died, two months later, in 1903.

To-day, Sokoto Province of the Northern Region of Nigeria is divided into three administrative divisions, Sokoto, Gwandu and Argungu. The headquarters of Gwandu Division is Birnin Kebbi (pop. 10,000) and the Division comprises the emirates of Gwandu itself (area 6,207 sq. miles, pop. 350,000) and Yauri (area 1,306 sq. miles, pop. 57,000). The present Emir of Gwandu, al-Muhammad Haruna, is President of the House of Chiefs of the Northern Region.
